The future ambulatory care services specialized in trauma will have to structure the organization of care, to establish a single French umbrella society (involving the national trauma centre and psychotrauma societies such as AFORCUMP-SFP, ALFEST and ABC des Psychotraumas), to be involved in qualifying training curricula, and to set up a French certification committee connected to the ESTSS accreditation committee, in order to meet modern European and international standards.

5. Psychotraumatology in Georgia

Georgia is a post-Soviet country, with a population of approximately 3.3 million. Since becoming independent in the early 1990s, it went through a prolonged series of civil war and ethnic-political conflicts followed by a war with Russia in 2008 and loss of control over more than 20% of the country's territory. Ongoing social, political and economic crises create pressure on the population, 20.6% of whom live under the poverty level and 7.3% of whom are internally displaced. Among the conflict-affected population, 23.3% suffer from PTSD symptoms, 14.0% from depression, 10.4% from anxiety and 12.4% have more than one mental health condition (Makhashvili et al., 2014). In addition, the population still suffers from the inter-generational effects of trauma related to the Soviet invasion and totalitarian past (Javakhishvili, 2014, 2018).

The large proportion of conflict-affected population led to the build-up of trauma care capacities and corresponding institutional developments, i.e. trauma-focused torture victim rehabilitation centres (GCRT), functional since 2000, with the head office in the capital city Tbilisi and branches in eastern and western Georgia. The multidisciplinary teams provide free of charge care for their clients that include forced migrants, ex-prisoners and others. There are a number of non-governmental organizations providing trauma-informed psychosocial services to socially disadvantaged groups, including forced migrants, domestic violence survivors and other target groups.

The Georgian Society of Psychotrauma (GSP) was founded in 2007 with the support of ESTSS. GSP builds capacity within the local professional community and has introduced such evidence-based treatment methods as Trauma-Focused CBT, Brief Eclectic Psychotherapy for PTSD (BEPP) and EMDR, as well as other relevant psychosocial interventions. Since 2008, GSP regularly conducts an annual international multidisciplinary conference 'Trauma and Society'. To assure capacity building and good quality care, an innovative Master Program in Mental Health was founded in 2012 at Ilia State University in Tbilisi, under the lead and with a main perspective on psychotraumatology.

The mental health treatment gap is about 90% in the country. There is a predominant focus on hospital care; community-based services are under-developed. Common mental disorders are under-recognized and under-treated by the state services. There is a need to develop a trauma-informed primary health care system, enlarge the trauma care infrastructure and establish corresponding referral pathways. Another challenge is low awareness of one's own mental health condition. According to a recent study, of those who suffered from mental health symptoms, only 24.8% sought care, 19.6% acknowledge mental health problems but did not seek care, and 54% did not acknowledge mental health problems (Chikovani et al., 2015).

Since most trauma survivors belong to socially disadvantaged groups who are often exposed to multiple traumatization as well as a series of everyday life stressors, we rarely find among these patients simple PTSD. The most widespread trauma-related condition are complex posttraumatic disorders. Therefore, the most urgent need is to evaluate effective methods of addressing complex trauma conditions. From 2016 to 2018, within the framework of an Erasmus Plus cooperation, the Trauma-Focused Cognitive-Behavioural Therapy Train of Trainers (ToT) module was developed, piloted and adapted to the Georgian cultural context in cooperation with Cardiff University. It has proved its effectiveness in the treatment of not only simple but also complex trauma-related disorders. There is a need to collect strong evidence to further prove the effectiveness of these approaches.

6. Psychotraumatology in the German-speaking countries

As in many European countries, the largest historical burden of trauma in Austria, Germany and Switzerland comes from the two twentieth century World Wars and the Holocaust. Over the decades, the different roles of the three countries in these catastrophic events had an influence on the perception of their traumatic impact. In contrast to Switzerland, discourses in Germany and Austria had been more focused on their role as perpetrators and their responsibility for these events. In general, Switzerland has been much less concerned by the two twentieth century World Wars than Germany and Austria. It took a longer time before the trans-generational consequences of war and displacement on parts of the German and Austrian population were also discussed (e.g. Glück, Tran, & Lueger-Schuster, 2012,

Kuwert, Brähler, Glaesmer, Freyberger, & Decker, 2009). Another population that requires expertise on psychotraumatology in the three countries is that of the refugees (e.g. Knaevelsrud et al., 2017; Spiller et al., 2017).

Services for trauma survivors are organized in a similar way in the three German-speaking countries. Non-governmental organizations play an important role in the psychosocial response to disaster and other mass incidents. Some of them also provide care for survivors of individual trauma in the form of local 'crisis intervention units' that closely collaborate with other emergency services. Specialized counselling agencies, usually funded by the local municipal authorities, offer low-threshold services for survivors of childhood abuse, sexual assault and domestic violence. In all three countries, there are also growing networks of clinical outpatient services for survivors of interpersonal violence that are frequently located at psychiatric hospitals. Psychotherapists in private practice play an important role for the treatment of posttraumatic disorders in both children and adults. Moreover, in each of the three German-speaking countries, a larger number of hospitals offer specialized inpatient care for patients with posttraumatic disorders.

The German-speaking Society for Psychotraumatology (DeGPT), the common trauma society of the three German-speaking countries (Germany, Austria and Switzerland), has developed curricula for the training of professionals in different settings (e.g. staff in counselling services, psychotherapists for children and adults) in trauma-related practices. The curricula for psychotherapists have been recognized by important national bodies, like the national chambers of physicians and psychotherapists in Germany. At present, about 50 training institutes in Germany, Austria and Switzerland offer the curricula. The society also coordinates the national German guideline for the treatment of PTSD. Such activities have contributed to the dissemination of evidence-based practices in different settings. However, as in other European countries (Kazlauskas et al., 2016), many psychotherapists still do not feel competent to deal with traumatized populations. As a result, patients can face substantial problems to find adequate help, for instance in the form of trauma-focussed interventions for individuals with PTSD.

The prevention of trauma in different settings remains a challenge. Recently, initiatives in all three German-speaking countries addressed the problem of institutional violence, e.g. in foster care settings, but more efforts are needed to sustainably implement preventive efforts and bodies like the independent commissioner into childhood sexual abuse in Germany (Bergmann, 2011). The dissemination of trauma-informed practices in all parts of the health care system and the social sector is another urgent issue. Finally, the provision of adequate care for the considerable number of migrants from contexts of war and persecution in the German-speaking countries is a challenge for the years to come.

7. Psychotraumatology in Italy

Trauma permeates the history of Italy: war, terrorism, major mass disasters, abuse and maltreatment deeply affected the Italian society across time and generations. During the Second World War, many Italians experienced the effects of torture and deportation leaving a scattered society (Favaro, Rodella, Colombo, & Santonastaso, 1999). In the 1970s, the Italian society faced the 'dark period' of *Brigate Rosse*, a terroristic group who caused many deaths and created a deep sense of fear in the population. Domestic violence is the most common crime against children; indeed, child abuse and maltreatment is a major public health problem. A recent report (Autorità Garante per l'Infanzia, CISMAI and Terre des Hommes, 2016) revealed that each year 950 children are exposed to sexual abuse. In the past year, the percentage of maltreatment and abuse increased by 6%. Italy has also experienced a significant number of natural disasters, like floods and earthquakes, that potentially increased the prevalence of post-traumatic syndromes in the communities. There are no robust data about the actual burden of such traumatic experiences and their effects on the society today.

Italian health and social care systems have not yet fully embraced a trauma-informed approach. This led to fragmented responses to the needs of survivors, especially in terms of preventive initiatives. There is some resistance to implement routine screening and assessment tools for the early detection and prevention of post-traumatic syndromes. For this reason, the system responds late and mainly to traumatization that became complex as a result of missed accurate diagnoses. It is a challenge to acquire a systemic vision of care for traumatized populations, with shared policies and protocols.

Exposure-based therapies are rarely used; EMDR is the only widely implemented intervention in the social care system at all levels. Other trauma-focused therapies (Ehring et al., 2014) – such as trauma-focused CBT or Narrative Exposure Therapy (NET; Schauer, Neuner, & Elbert, 2011) – struggle to be disseminated. Clinicians are asked to integrate different treatment approaches with a good understanding of assessment and psychoeducation techniques. Training of health and social care professionals is a key issue. In Italy, trauma is still seen as a 'psychologist/psychotherapist business', undermining the importance of multidisciplinarity. Furthermore, a synergy between clinical work and research should be

promoted to investigate the outcomes of treatment and to adapt service models accordingly.

There are a few important strategic points the Italian Society of Traumatic Stress Studies (SISST) should consider for the future. Highly traumatized migrants and refugees are one of the priorities requiring a long-term preventive plan to fight longer-term consequences for the society. The second point is the promotion of a more articulated reasoning about the implementation of evidence-based therapies. Furthermore, epidemiological studies are warranted to determine the actual prevalence and incidence of traumatic events in Italian society. Finally, another crucial issue is a comprehensive training in psychotraumatology. The new ESTSS certification represents a good opportunity for trauma-informed capacity building initiatives in the near future.

8. Psychotraumatology in Lithuania

The burden of trauma in Lithuania was largely influenced by the political situation in Europe in the twentieth century. Large-scale traumas associated with the two World Wars, the Holocaust and the prolonged Soviet occupation had a significant impact on the Lithuanian population, marked with suffering and oppression for several generations. Interest in trauma and trauma research in Lithuania was started soon after the collapse of the Soviet Union in the 1990s and several studies explored posttraumatic effects of political violence in the country (Kazlauskas & Zelviene, 2016).

Survivors of traumatic events can seek treatment for mental disorders in the public mental health care system, which includes about 100 primary mental health centres spread across the country, and in more severe cases in psychiatric hospitals. Several non-governmental organizations and crisis centres in the biggest cities in Lithuania are providing help for survivors of interpersonal violence, including psychosocial support and psychotherapy. Additionally, psychotherapists in private practice are also available for trauma survivors. Despite these positive developments, care organizations for trauma survivors are not developed in Lithuania and evidence-based trauma-focused treatments for trauma survivors are not available in the public mental health care system.

Mental health professionals are increasingly aware of the negative effects of trauma on individuals and are interested in learning new ways to help trauma survivors. There is significant progress regarding the implementation of evidence-based trauma-focused treatments, such as EMDR and BEPP, in Lithuania recently. The numbers of therapists trained in trauma-focused treatments are growing, but these treatments are not offered in the public health care system and are available predominantly in private practice which is expensive and not covered by national health care insurance.

Despite the high prevalence of traumatic experiences in Lithuania (Kazlauskas & Zelviene, 2016), it was reported that PTSD is not identified in the Lithuanian national health care system (Kazlauskas, Zelviene, & Eimontas, 2017). The lack of acknowledgment of trauma and PTSD in Lithuania is a major barrier for the development of treatments for trauma survivors in the country.

Future directions of the trauma field in Lithuania include ensuring access to evidence-based treatments for trauma survivors. There is a need of trainings for practitioners to update their knowledge about the impact of trauma, with a particular focus on how to diagnose stress-related disorders and how to provide trauma-focused treatments. Finally, health care and social policy changes on the national level are needed to acknowledge trauma survivors and include evidence-based treatments in the health care of survivors exposed to various traumas, particularly children and adolescents. The Lithuanian trauma society is taking an active role in raising awareness about the effects of trauma to facilitate the further development of care for trauma survivors.

9. Psychotraumatology in the Netherlands

The Second World War marks the largest historical burden and the starting point for psychotrauma care in the Netherlands. Occupation by German and Japanese (in the former Dutch East Indies) armed forces and subsequent post-colonial wars led to over 250,000 military and civilian lives lost. Public awareness for the psychological effects of wartime and other traumatic experiences started around 1975, with the awareness of the Holocaust. In response, Foundation Center ’45 was funded, first focusing on Second World War concentration camp survivors, but soon extending their services to other traumatized populations. The focus on post-war reconstruction, tensions between interest groups and an emphasis on heroics and the resistance, together with a poorly developed mental health care, contributed to this late societal response (Vermetten & Olff, 2013). Subsequent national and international disasters, such as the 1992 Bijlmermeer airplane disaster and the 2000 Enschede fire explosion, further increased professional and public awareness of psychotrauma, and fuelled the establishment of the Dutch Society of Psychotraumatology in 2006.

Mental health care for trauma-related disorders is covered by health insurance at little or no additional personal costs. Facilities for trauma care have been integrated at many levels of health care. Routinely, the first step for individuals with trauma-related symptoms is to consult their general practitioner for referral to secondary health care organizations.

A national standard of care for trauma- and stressor-related disorders is currently underway (Kwaliteitsontwikkeling GGZ, 2018).

Trauma-focused treatment is increasingly offered next to interventions directed at emotion regulation, day-night structure and social support (Vermetten & Olff, 2013). Examples are EMDR, CBT, NET, BEPP and Imagery Rescripting. There is a growing role for E-health interventions (e.g. Olff, 2015). Some institutions use treatment intensification (EMDR or CBT), with preliminary positive effects (Van Woudenberg et al., 2018; Zepeda Méndez, Nijdam, Ter Heide, van der Aa, & Olff, 2018). Although not yet implemented, other treatment innovations include hormonal enhancers (D-cycloserin, cortisol, oxytocin; e.g. Thomaes et al., 2016).

Effective treatment for PTSD due to events in adulthood in fairly well functioning patients seems available, as well as special services and care for the military and the police. One of the greatest practical challenges are the long waiting lists in secondary mental health care, limiting accessibility to care for vulnerable patient groups, such as individuals with multiple (childhood) traumatization, patients with severe physical, neurocognitive and/or psychiatric comorbidities or severe psychosocial problems, and (asylum seeking) refugees. The latter in particular experience difficulties accessing evidence-based care due to stigma, requirement of referral by general practitioners, and language and cultural barriers. Moreover, research on the (cost-)effectiveness of treatments for these target groups is relatively lacking (e.g. Sijbrandij et al., 2017), as well as on improving symptom recovery and treatment adherence of current PTSD treatments.

Topics which should be urgently addressed in the future include improving treatment outcome for specific target groups, i.e. patients with childhood trauma; implementing treatment for target groups that are currently excluded from regular PTSD treatments; family- or system-oriented interventions to prevent inter-generational consequences of trauma and enhance opportunities for social support; evaluation of e-mental health interventions for PTSD and comorbid disorders, including blended treatment options administered within routine clinical practice; increased use of transdiagnostic treatment options for trauma-exposed patients targeting a variety of psychopathology limiting psychosocial functioning; and the use of low-intensity interventions, carried out by non-professional helpers to increase coverage of mental health interventions.

10. Psychotraumatology in Poland

The recognition of the socio-psychological consequences of the Second World War in Poland is an extremely important issue. Poland belongs to the part of Europe which Snyder (2010) called the 'Bloodlands'. The number of ethnic Poles and Polish Jews who died or were murdered in connection to the Second World War amounted to about six million. Poland lost about 17% of its pre-war population (Materski & Szarota, 2009). Moreover, the Soviet invasion and the subsequent imposition of a communist regime led to large groups of people being persecuted. Many survivors of the war (e.g. resistance movement members, people deported to Siberia) were not even recognized as survivors, and speaking about many aspects of war experiences could lead to prosecution. Very little attention has been paid to Second World War issues in medicine and psychology, in comparison to the volume of analogous research in western countries (Lis-Turlejska, Szumiał, & Drapała, 2018). Psychological help for survivors of the war was practically absent, and the need is still not recognized today. Since the collapse of communism, neither war nor other traumas have been recognized on a broader scale. Research has been conducted on the consequences of the great flood of 1997 (Strelau & Zawadzki, 2005), however, other traumatic events, including the death of the president and other governmental officials in the Smolensk plane crash in 2010, have not yet been the subject of psychological research.

There is no coherent care system in Poland for survivors of various traumatic events. A number of crisis intervention centres provide help for 'families in crisis' – mainly for survivors of domestic violence (www.spoleczenstwoobywatelskie.gov.pl). There are non-governmental organizations working with survivors of trauma (e.g. battered women, abused children, survivors of crime). However, they are all underfunded and their capacity is limited. Access to psychotherapy under national health insurance is also limited. Despite the fact that there are many psychotherapists working privately, mainly in larger cities, there are still very few professionals who are specialized in psychotraumatology.

Crisis intervention is probably the most widely offered help to trauma survivors. Practitioners have the opportunity to be trained in different approaches in psychotherapy, including CBT, prolonged exposure therapy and EMDR. However, there is no clear emphasis on evidence-based treatments and they are not widely used in practice. There is also a lack of research on the effectiveness of trauma therapy. The issue of prevention is neglected in general, except training for professional groups (e.g. flight crews, emergency services).

Currently, the most important challenge is to increase access to professional care, specifically increasing access to therapists who offer evidence-based interventions. However, education of the general population about the importance of help seeking and potential benefits out of it is also crucial. It is necessary to further develop research on the

psychosocial consequences of both the Second World War and other large-scale traumatic events. It is also important to encourage the teaching of contemporary curricula on abnormal psychology, including content specific to trauma. This seems to be the most urgent task, alongside further development of the trauma care system and promotion of good practices in psychological care and psychotherapies for trauma survivors.

11. Psychotraumatology in Portugal

A colonial war of 13 years has left to Portugal an individual and collective traumatic heritage (Maia, McIntyre, Pereira, & Ribeiro, 2011). The consequences remain to this day through the intergenerational transmission of trauma (Dias, Sales, Cardoso, & Kleber, 2014). Throughout the years, clinicians, academics and other professionals discussed the psychosocial consequences and reactions to this trauma. Later, the coordinated response to two major accidents promoted a national approach to survivors of crisis and disaster. In 2009, the Centre for Social Studies of the University of Coimbra created the Centre of Trauma (CT), a society that brings together the country's leading organizations who directly deal with potentially traumatic events. Since 2010, CT is a full member of ESTSS.

In Portugal, the National Authority for Civil Protection provides central technical guidance to the organizations who deliver services to survivors of disasters or catastrophes. It is a governmental entity which coordinates the interventions developed and implemented by the different professional groups and organizations (fire fighters, medical emergency services, etc.). Clinical care to trauma survivals is provided by the National Health Service in the first place, but in cooperation with organizations (both non-governmental and governmental) who are specialized in trauma therapies and relevant psychosocial interventions. There is a core team of trained and certificated psychotherapists within CT whose service is accessible to people in need.

The most widespread therapy methods in Portugal are CBT, EMDR, Psychodrama and brief supportive psychotherapeutic strategies. Psychopharmacotherapy is also frequently used alone or in combination with psychological interventions. Treatment takes place in public and private health institutions. A number of governmental and non-governmental organizations currently invests in building the capacity of their staff in trauma care and designing and implementation of preventive interventions. CT is responsible for regular organization of conferences, seminars and the delivery of a biannual psychotrauma course. The course equips professionals from different fields with relevant knowledge and skills.

Professional and organizational preparation and knowledge to treat trauma consequences at the individual, family and social level needs to be optimized and updated. Minorities and refugees at risk may benefit from more integrated assistance. The ability to effectively respond to disasters and catastrophes through the provision of acute trauma care and coordination among the different organizations that are involved in disaster management has to be improved. There is room for improvement regarding the identification of populations at risk, screening for trauma related disorders and responding to the needs of the health care system. Family doctors and nurses, firemen and other professional groups have to be trained to assure their trauma-informed professional performance.

The topics to be addressed in the near future include creating a national plan for PTSD prevention and psychosocial interventions in case of crisis and disaster, as well as founding a network for specific treatment responses to trauma-related disorders, namely PTSD. Good practices have to be disseminated and young researchers and clinicians need to be motivated to work in the field of psychotraumatology. Finally, more effective and organized strategies to address potentially traumatic contexts such as unemployment, marital violence, cyber bulling and road accidents need to be developed, and the cooperative and coordinated work with national and European entities needs to be further increased.

12. Psychotraumatology in Sweden

The Swedish population has enjoyed peace for over 200 years. For a long time, the country did not experience the same increase in attention to psychotraumatology as other European countries with afflicted veteran soldiers from the nineteenth century wars. The impetus for trauma-informed services has instead come from disasters, large accidents and the increased attention to interpersonal abuse. A harrowing bus crash involving 12-year-olds on a school trip in 1988 (Arnberg et al., 2011) became the initiating event for the public organization of crisis support after large-scale events. Events such as the 1994 Estonia ferry disaster in the Baltic sea (e.g. Arnberg, Hultman, Michel, & Lundin, 2013) and the 2004 Southeast Asia tsunami (e.g. Michélsen, Therup-Svedenlöf, Backheden, & Schulman, 2017), both leading to hundreds of Swedish casualties, as well as the recent deployment of Swedish peacekeeping forces around the world, have highlighted the psychosocial consequences of trauma. More recently, the refugee crisis has set off many activities related to culturally informed trauma services.

In Sweden, every municipality has a psychosocial crisis team and there are psychosocial disaster contingency teams at the larger hospitals. A major step forward was the legislation passed in 2000 that

mandates employers to ensure that they have adequate knowledge of and plans for crisis support for their employees. Beyond the acute crisis support, however, access to qualified treatment of chronic traumatization varies across the country. In some regions there are dedicated trauma clinics; in others, there are trauma teams within the psychiatric services. Some regions lack both dedicated trauma clinics and teams.

The acute crisis interventions that are available in Sweden include Psychological First Aid, various forms of unstructured crisis support and a variety of debriefing methods including psychological debriefing (Witteveen et al., 2012). As for the treatment of PTSD, the Swedish National Board of Health and Welfare issues guidelines for public health care. In their latest guidelines from 2017 (The Swedish National Board of Health and Welfare, 2017), trauma-focused psychological treatments were given the highest priority; selective serotonin reuptake inhibitors (SSRIs) were prioritized as a potential but not necessary option for adults with PTSD, although they probably are the most widely used treatment in the country.

Several challenges lie ahead. The use of ineffective preventative interventions remains and the provision of psychosocial support beyond the acute phase is very limited, partly due to compartmentalized organizations. Further development of acute interventions in health care would benefit from robust evidence for early interventions. Trauma-related problems in patients too often go undetected in health care assessments (Al-Saffar, Borgå, & Hällström, 2002). In addition, access to prioritized treatments is underdeveloped in many parts of Sweden: the concentration of relevant competence in metropolitan areas is a salient issue in this country due to its large rural areas.

Another challenge related to the treatment of PTSD is that a large proportion of therapists are due for retirement in the next five years. It will become important for the field to continue to attract younger professionals. It is hoped that a stronger professional community, aided by the Swedish Society for Psychotrauma, can prevent fragmentation of the many regional initiatives, particularly in light of the many refugees across the country, and serve as a force for increasing the quality of and access to trauma treatments.

13. Psychotraumatology in Ukraine

The historical burden of trauma in Ukraine mainly consists of man-made catastrophes. They include the famines in the years 1933 and 1947, the Second World War, the explosion of the Chernobyl nuclear power station, and the current military conflict with Russia, which is officially called 'Anti Terrorist Operation (ATO)'. All events that happened during the Soviet times were hushed up and psychological support has never been provided to the people in need. It was not until the Maidan revolution and the beginning of the current war that psychological services in Ukraine were organized for victims of mass violence.

In Ukraine, care organizations for trauma survivors are currently under development. It presupposes an effective coordination of governmental and non-governmental organizations and professional institutions. The non-governmental organization Ukrainian Society for Overcoming the Consequences of Traumatic Events (USOCTE) was created to reach that aim. This professional organization aims at the development of crisis intervention services as well as capacity for provision of trauma-focused psychological therapies in Ukraine, in accordance with the international standards. Currently, USOCTE provides psychological help to wounded ATO soldiers and veterans, as well as other people who suffer from consequences of the ATO: those living in the ATO zone, internally displaced persons, families of killed soldiers and participants of the Maidan revolution. USOCTE is also engaged in developing training programmes for psychologists and psychoeducational materials for the general population. The methods used in trauma care are EMDR, CBT and the SEE FAR CBT treatment protocol of the Israeli coalition of trauma.

These treatments are offered in a strictly structured way. All clients sign an agreement, which determines the focus of the therapy. According to that agreement, a client has a right to attend 12 free-of-charge sessions. The first sessions are devoted to a detailed diagnostic interview, psycho-education on the signs and nature of posttraumatic disorders and providing information on therapeutic approaches. The following stabilization phase is intended to create a sense of safety by means of different techniques. It is followed by the trauma-focused interventions mentioned above. The final phase of treatment has the aim to integrate the experiences into daily life, assess the results and adapt to the achieved changes.

Challenges in this work are the very high level of psychological disturbance among the people living close to the conflict zone, and their reluctance to acknowledge this and to ask for psychological support (Roberts et al., 2017). It should also be mentioned that women are especially vulnerable on the front-line territory, and suffer multiple problems including high levels of psychological violence. These problems are often not recognized and the population has a tendency to believe that the end of military activities will solve all problems.

To overcome the consequences of the current military conflict in Ukraine, USOCTE is confronted with a number of tasks. They include building up a multilevel system of psychological assistance with the support of governmental and non-governmental organizations as well as monitoring and evaluating the activities of specialists in the psychological field on a regular basis. Moreover, the local communities need to be involved in supporting the aggrieved. Finally, there is a need for a more intensive cooperation and sharing of experiences with international organizations.

14. Psychotraumatology in the UK and Northern Ireland

The 2014 Adult Psychiatric Morbidity Study (APMS) provides the most comprehensive estimates of PTSD within the UK, although the sample is of English residents only (Fear, Bridges, Hatch, Hawkins, & Wessely, 2014). APMS found a PTSD prevalence of 4.4%, with similar rates observed between men and women. PTSD rates in women declined with increasing age; 12.5% of 16–24-year-old women had PTSD. In contrast, in men PTSD remained roughly consistent until declining from age 65. Northern Ireland (NI) has historically experienced a sustained period of political conflict known as the Troubles. The NI Study of Health and Stress identified that NI has one of the highest global rates of PTSD with lifetime and 12 month prevalence rates of 8.8 and 5.1%, respectively (Bunting et al. 2013). Lifetime prevalence in NI females (11%) was substantially higher than the rates in NI men (6.4%). Although there is no specific information on prevalence rates in Scotland and Wales, it is anticipated they are similar to English rates.

The UK's mental health services are provided by the National Health Service (NHS). Although regional variations exist, the first point of access is via family doctors. Community services, often available via self-referral, typically treat survivors of single incident traumas where a diagnosis of PTSD is present without co-morbid problems (e.g. substance misuse). Treatment of more complex cases (e.g. survivors of child abuse, refugees, etc.) is via specialist mental health teams. NHS treatment complies with best practice guidelines compiled by the National Institute for Health Care and Excellence. A range of other non-governmental organizations exist that are staffed by qualified health professionals and offer support to sub-populations of trauma survivors (e.g. survivors of domestic abuse, veterans, etc.). In NI, a Regional Trauma Service is under development to address the mental health legacy of the Troubles.

Interventions to treat PTSD in the UK are typically trauma-focused psychological therapies such as, but not limited to, trauma-focused CBT, EMDR and prolonged exposure (NICE, 2005). In addition, psychopharmacology support is given to manage co-morbid mental health presentations. Increasingly, e-technologies are being developed to help provide cost-effect support that also promote accessibility. For example, an online guided self-help tool for PTSD has been developed and internet-based video technologies have been successfully used to deliver PTSD treatments with much reduced therapist time required. Some providers also utilize compressed therapy where 16–-20 hours of TF-CBT are delivered over a week.

Currently, whilst there is often some delay in accessing specialist mental health assessment services, the biggest bottleneck is in the provision of specialist services for more complex cases of PTSD. Also, whilst APMS has shown that help-seeking for PTSD is improving, the majority of people with PTSD in the UK still do not seek any help.

Whilst, the UK has made considerable efforts to improve the public understanding of mental health, more needs to be done. Additionally, organizations which routinely expose staff to trauma (such as the emergency services, military and child social workers) need to address the issue of PTSD as a result of chronic trauma exposure as there has been limited work done on this topic.

15. Conclusion

The perspectives above show that important steps towards a better provision of care for survivors of trauma have been taken in the European countries. Given the cultural and economic diversity of the continent, there are still some differences between the countries, for instance with regard to the use of evidence-based treatments. Effective treatments have many elements in common (Schnyder et al., 2015) and the treatment of choice is often based on culture and history. The dissemination of evidence-based knowledge and skills has always been a priority of ESTSS (Ajdukovic, 2013, Bisson, 2013, Olff, 2013) and further strategic steps towards this aim have been made recently. In 2018, the first of a series of new ESTSS curricula, the 'Advanced Training in Treating Posttraumatic Disorders in Adults', was approved by the board. The curriculum comprises 120 hours of training and 20 hours of case supervision. It has a strong focus on evidence-based approaches and provides knowledge and skills for the treatment of acute stress disorder, non-complex PTSD and complex posttraumatic disorders (for more detail see www.estss.org). The curriculum has already been adopted by several member societies who are building up local structures to offer the trainings or adopt their national curricula to meet the requirements of the ESTSS curriculum. Other

curricula, for instance for the treatment of trauma-related disorders in children and adolescents, and more basic curricula to promote the idea of trauma-informed care among different groups of professionals, are currently being developed.

The country reports presented in this paper show that many countries share similar challenges and have topics in common that need to be addressed. These topics include, among others, the prevention of trauma, the promotion of trauma-informed practices in the whole health care system and standards of care for groups with special needs, including refugees and internally displaced people. Of increasing importance in the field of mental health is the involvement of trauma survivors in mental health care teams (Van der Schrieck-De Loos, 2013). It was beyond the scope of this paper to describe the large amount of research in the field of psychotraumatology in the European countries, which represents a significant proportion of the global research activities in this field (Olff, 2018). However, similar to the differences with regard to the use of evidence-based treatments, these activities are not evenly distributed between the different European countries. It is part of ESTSS's mission to stimulate and promote research Europe wide.

The current structure of ESTSS allows for a more direct exchange between the member societies and thereby provides the opportunity to effectively address such common issues. It has always been the aim of the society to provide a platform for all professionals in Europe in the field of psychotraumatology to connect, to develop together training and research, guidelines and actions where needed. ESTSS is constantly working towards this aim, for instance by identifying successful models in individual countries or regions and disseminating these experiences among all others. A recent example of this exchange is a series of movies providing information on the consequences of trauma and effective treatments tailored to the needs of the public, professionals from the health care system and trauma survivors that can be downloaded from the ESTSS website. They were developed by a national society (DeGPT) and translated into 10 European languages with the help of other member societies.

ESTSS can look back on 25 years of advocacy for the field of psychotraumatology in Europe. The first European Conference on Traumatic Stress, which can be considered one of the roots of ESTSS, was held three decades ago (Ørner, 2013). During these years, ESTSS has developed a unique profile as a truly international professional society that integrates the diversity of the European countries and greatly benefits from their cultural richness (Lueger-Schuster, 2013a; Olff, 2013). An important part of the society's success story are the ESTSS conferences that attract delegates from all parts of the world. Other important activities included projects like the European Network of Traumatic Stress (TENTS; Bisson, 2013) and the *European Journal of Psychotraumatology* (EJPT). EJPT has become an important platform for the dissemination of knowledge related to psychological trauma and, thanks to the relentless efforts of its founding editor Miranda Olff, has become one of the journals with the highest impact in the field (Olff, 2018).

Over the years, ESTSS had fruitful collaborations with large societies from other regions of the world. There is also a strong involvement of ESTSS in the global collaboration of trauma societies, an initiative that had initially been proposed by the International Society for Traumatic Stress Studies (ISTSS; Schnyder et al., 2017) and developed to a collaboration of all large trauma societies on an equal basis. It already has the function of a global umbrella for defined projects and holds promise to become a more formal global structure.

Only about half of the more than 40 countries on the European continent have established local trauma societies so far, most of which are members of ESTSS. In the coming decades, it will remain one of the most important aims of ESTSS to support the formation of new societies in countries where they do not exist yet, and to provide a common platform and a professional home for trauma specialists from the whole European region.

In their articles at the occasion of the twentieth anniversary of ESTSS, several former presidents described what some of them called the 'infancy and adolescence' of the society (Schnyder, 2013, Turner, 2013). At the age of 25 years, ESTSS has become a young adult. The society has 'grown up' and, with the latest change of its structure, has completed a developmental process that made it stronger and prepared it for the tasks ahead. This would not have been possible without the enthusiasm of a large number of dedicated colleagues from all over Europe. They invested their time and energy over the last 25 years to make the society what it is today. We congratulate ESTSS on its 25th birthday and strongly believe that it will successfully continue its 'adult life' for the good of psychotraumatology in Europe.

Acknowledgments

We wish to thank the Elfriede Dietrich Foundation, Freiburg, Germany, for supporting the production of the movie series 'Through memories – the road to trauma therapy' and the translations to a range of different European languages.

Important Course Dates

Today is 23 mar 2020 10:39 CET

Course End
in 3 mesi - 2 lug 2020

To earn a certificate, you must complete all requirements before this date.

- Θύματα θέασης της βίας
- Παραμέληση
- Παραμέληση σε συνθήκες σύγκρουσης
- Τραύμα και διατροφικές διαταραχές
- Προσκόλληση και το ψυχολογικό τραύμα
- "Νοητικοποίηση" και ψυχολογικό τραύμα

2. Προστασία και προαγωγή της υγείας και των δικαιωμάτων των επιζώντων τραυμάτων

Επανατραυματισμός: Αιτία, Πρόληψη και Θεραπεία

- Επανατραυματισμός από την μεταναστευτική πολιτική σε ιταλικό και διεθνές επίπεδο
- Διαθεματικότητα (intersectionality) και τραύμα
- Αντιμετώπιση τραύματος σε ομάδες εργασίας
- Ενσυναίσθηση
- Υιοθεσία και τραύμα
- Επανατραυματισμός
- Το τραύμα σε υιοθετημένα παιδιά
- Παιδιά κρατουμένων και τραύμα
- Έμμεσο ψυχικό τραύμα
- Επεξεργασία έμμεσου ψυχικού τραύματος με σχέδιο

Μαθαίνοντας από τα λάθη

- Μαθαίνοντας από κακές πρακτικές
- Επιπτώσεις από τραύματα οποιασδήποτε μορφής
- Διάχυση τραύματος
- Δυσμενής Εμπειρία Παιδικής Ηλικίας (ACE)
- Η προσέγγιση "trauma-informed"
- Trauma informed - Αρχή I
- Trauma informed - Αρχή II
- Trauma informed - Αρχή III
- Trauma informed - Αρχή IV
- Trauma informed - Αρχή V
- Trauma informed - Αρχή VI
- "Trauma informed" Σχολεία

Εστιάζοντας στους ανθρώπους: Φιλοξενία και ενδυνάμωση

- Εστιάζοντας στην δεξιότητα του παρόχου να προσφέρει ένα ασφαλές καταφύγιο και να ασχοληθεί με το τραύμα
- Παρέχοντας υπηρεσίες σε LGBT άτομα
- Η προσωπική ανάπτυξη είναι απαραίτητη: ανάπτυξη μετά από το τραύμα

Εργαλεία και υφιστάμενη κατάσταση στην Ευρώπη

- Η προσέγγιση της Virginia Axline
- Εργαλεία για την αξιολόγηση του τραύματος
- Ανασκόπηση της φροντίδας τραύματος στις χώρες της Ευρώπης.

Γεια σας.

Είμαι ο Αλμπέρτο Τζουκόνι,

ψυχολόγος, ψυχοθεραπευτής

και πρόεδρος του Ινστιτούτου Προσωποκεντρικής Προσέγγισης

που έχει επιμεληθεί

τα δύο πρώτα έντυπα αυτού του προγράμματος

στο οποίο θέλω να σας καλωσορίσω.

Κατ' αρχάς, θα ήθελα να πω δυο λόγια

ως Αλμπέρτο Τζουκόνι,

ως απλός πολίτης,

κι αυτά είναι λόγια ευγνωμοσύνης.

Ειλικρινά ευχαριστώ όσους εργάζεστε για την υποστήριξη και προστασία

των παιδιών

με ψυχολογικά τραύματα.

Η δουλειά που κάνετε έχει εξαιρετική σημασία,

ευαισθησία, λεπτότητα αλλά ενίοτε

και μεγάλο βάρος.

Γνωρίζουμε καλά

ότι

όταν δουλεύουμε με ανθρώπους που υποφέρουν

συχνά αυτό έχει ως αποτέλεσμα

να υποφέρουμε κι εμείς σε σημείο ολοκληρωτικής εξάντλησης.

Γι' αυτό

σας ευχαριστώ ειλικρινά γιατί

με τη δουλειά σας προστατεύετε

μια

πραγματικότητα πολύτιμη για έθνη και κοινότητες: το ανθρώπινο κεφάλαιο.

Όσοι φέρουν ψυχικά τραύματα έχουν απόλυτη ανάγκη από κάθε δυνατή φροντίδα

ώστε να βοηθηθούν στην πλήρη επανένταξή τους

ως μέλη της κοινότητας ενεργά

αλλά και

εποικοδομητικά για τους ίδιους και για τους συνανθρώπους τους.

Θα ήθελα να προσθέσω και κάτι ακόμα, ίσως προφανές, αλλά αξιοσημείωτο:

αυτό το εκπαιδευτικό πρόγραμμα

απευθύνεται σε όλους εσάς, που έχετε διαφορετική καταγωγή, επαγγελματική κατάρτιση και ικανότητες

και, ως γνωστόν, δεσμεύεστε από τους ισχύοντες νόμους, τους κώδικες δεοντολογίας

των διαφόρων επαγγελμάτων

και τους εσωτερικούς κανονισμούς των οργανώσεων στις οποίες συμμετέχετε

να ενεργείτε σύμφωνα με τις γνώσεις και αρμοδιότητές σας χωρίς να υπερβαίνετε

τα όρια και τους περιορισμούς καθώς αυτό θα αποβεί εις βάρος όσων βοηθάτε.

Θα προσθέσω και κάτι άλλο εξίσου προφανές.

Τα πράγματα περιπλέκονται καθώς οι νόμοι δεν είναι ίδιοι

σε όλες τις ευρωπαϊκές χώρες και το συγκεκριμένο πρόγραμμα

απευθύνεται σε διάφορα έθνη και γλώσσες.

Επομένως,

η προσδοκία μας είναι, προφανώς, να εκπαιδεύσουμε ανθρώπους που έχουν επίγνωση

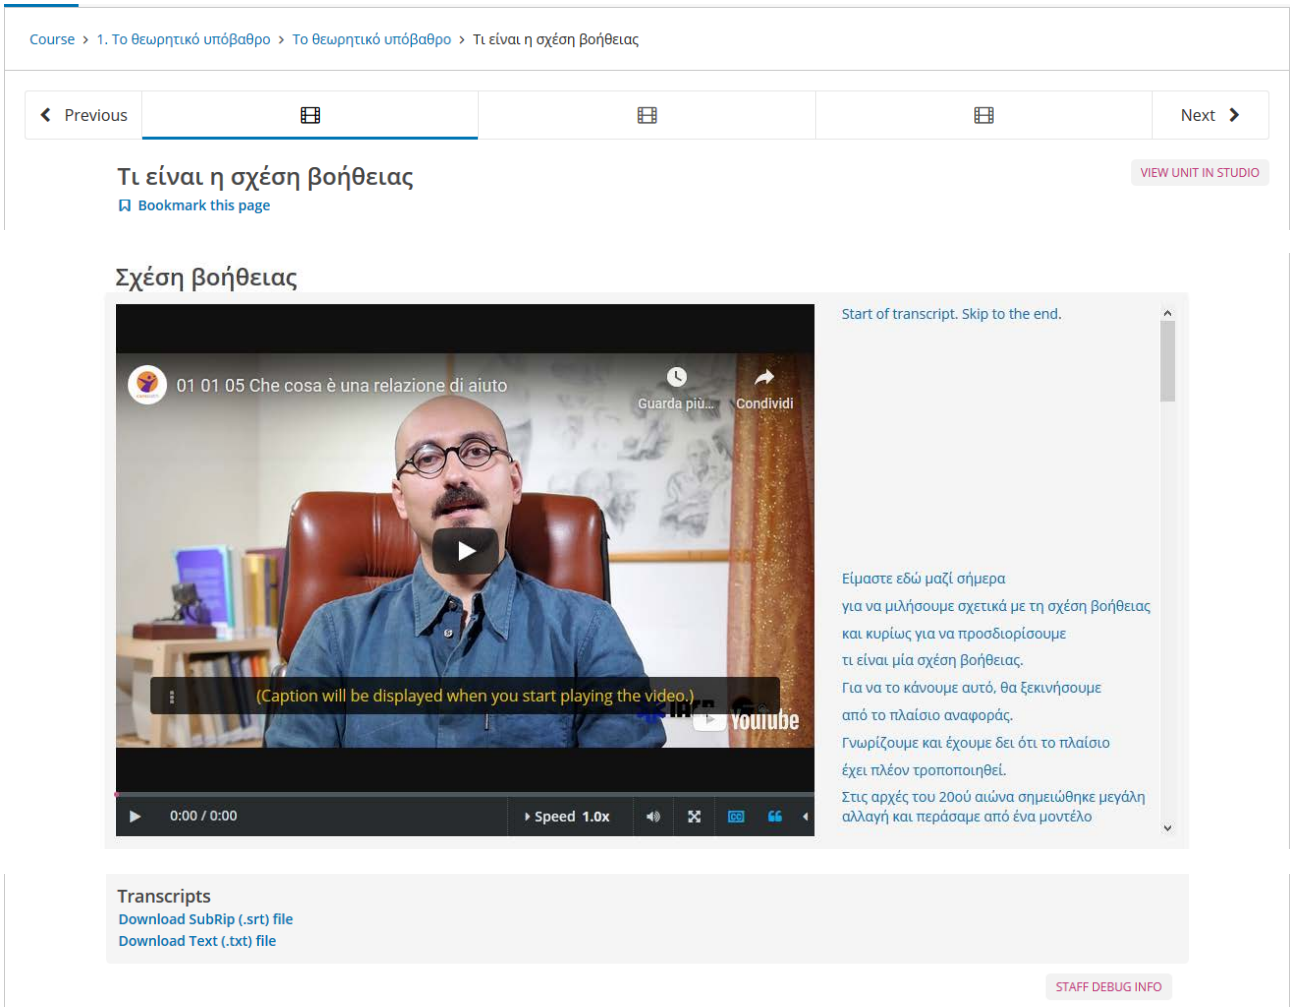
του γεγονότος ότι

ακόμα και ο σεβασμός των ορίων σημαίνει ότι δουλεύουμε αποτελεσματικά

και αποδοτικά.

Ευχαριστώ και πάλι που ξεκινήσατε αυτή την περιπέτεια και εργάζεστε

με τόσο πάθος καθημερινά.



Transcript

Είμαστε εδώ μαζί σήμερα

για να μιλήσουμε σχετικά με τη σχέση βοήθειας

και κυρίως για να προσδιορίσουμε

τι είναι μία σχέση βοήθειας.

Για να το κάνουμε αυτό, θα ξεκινήσουμε

από το πλαίσιο αναφοράς.

Γνωρίζουμε και έχουμε δει ότι το πλαίσιο

έχει πλέον τροποποιηθεί.

Στις αρχές του 20ού αιώνα σημειώθηκε μεγάλη αλλαγή και περάσαμε από ένα μοντέλο μηχανιστικό και απλουστευτικό σε ένα μοντέλο ολιστικό και συστημικό.

Άλλαξε ακόμα και η έννοια της σχέσης βοήθειας. Πράγματι, στο μηχανιστικό απλουστευτικό μοντέλο

η σχέση βοήθειας χαρακτηριζόταν από ασυμμετρία: ο θεραπευτής ήταν ο σημαντικός παράγοντας που επέβαλλε στον θεραπευόμενο την εικόνα της πραγματικότητας και αυτή η δική του εικόνα

κατά κάποιο τρόπο ασκούσε επίδραση στον θεραπευόμενο.

Άρα ο θεραπευόμενος είχε παθητική στάση έναντι του θεραπευτή.

Με την υιοθέτηση του νέου μοντέλου άλλαξαν πολλά πράγματα

γιατί γνωρίζουμε

ότι το κέντρο έγινε η ίδια η σχέση: σημασία δεν έχουν τα μέρη αλλά η σχέση

μεταξύ αυτών των δύο μερών

που τελικά χαρακτηρίζονται

μέσα στην ίδια τη σχέση.

Άραγε ποια μπορεί να είναι η σχέση βοήθειας

σύμφωνα με αυτό το μοντέλο;

Θα μας βοηθήσουν να την ορίσουμε όσα έγραψε, ήδη το 1951, ο Καρλ Ρότζερς, συγγραφέας

που κατέχει εξέχουσα θέση στην κατανόηση της σχέσης βοήθειας υπό αυτή την οπτική.

Ο Καρλ Ρότζερς μας λέει: "η σχέση βοήθειας είναι μία σχέση όπου τουλάχιστον ο ένας από τους δύο

πρωταγωνιστές έχει ως σκοπό να προάγει στον άλλο την εξέλιξη, την ανάπτυξη,

την ωριμότητα και την κατάκτηση

ενός πιο ολοκληρωμένου και κατάλληλου τρόπου συμπεριφοράς.

Υπό αυτή την έννοια, ως "άλλος"

νοείται ένα άτομο ή μία ομάδα.

Με άλλα λόγια, η σχέση βοήθειας θα μπορούσε να οριστεί ως μία κατάσταση

όπου ο ένας συμμετέχων ενθαρρύνει, σε ένα ή και στα δύο μέρη, μία μεγαλύτερη συνειδητοποίηση

των προσωπικών μέσων του υποκειμένου και μία μεγαλύτερη δυνατότητα έκφρασης".

Όπως προκύπτει, ξεχωρίζουν εδώ οι έννοιες ανάπτυξη, προώθηση, μέσα

και άρα ξεχωρίζει

μία νέα οπτική κατά την οποία η σχέση βοήθειας

είναι μία προσέγγιση που θέτει

τους δύο πρωταγωνιστές

της σχέσης σε μία ισοτιμία.

Έτσι, ο θεραπευτής δεν θα είναι

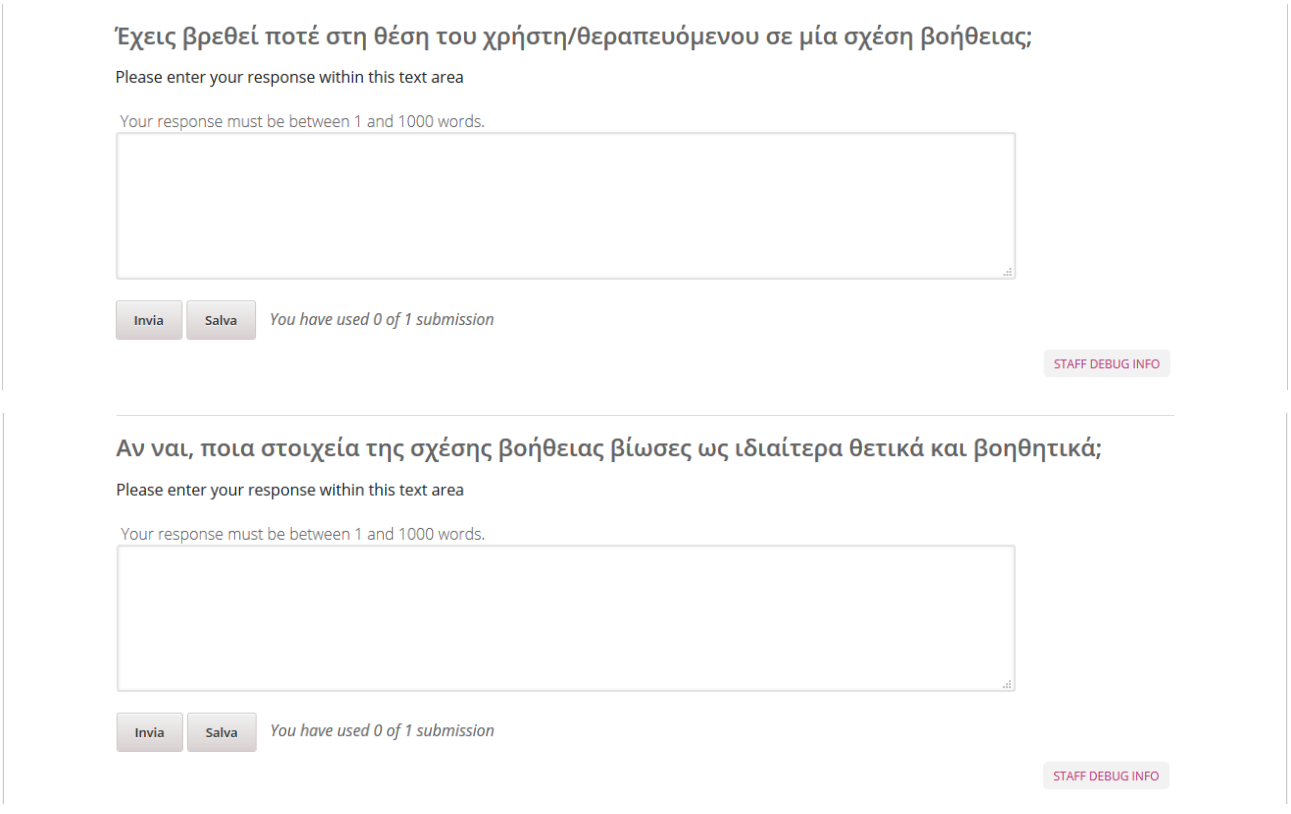
ο ειδήμων και ο σημαντικός παράγοντας

αλλά εκείνος που θα προάγει όλα τα διαθέσιμα μέσα

που είναι εγγενή στο άλλο πρόσωπο.

Με αυτό τον τρόπο θα μπορέσει να ενεργοποιήσει μία διαδικασία συνδημιουργίας μιας πραγματικότητας

πιο λειτουργικής για τον θεραπευόμενο
συνοδεύοντάς τον σε μία διαδικασία, αλλά παραμένοντας στο ίδιο σημείο με εκείνον.
Και ποια χαρακτηριστικά πρέπει να έχει ο θεραπευτής των σχέσεων βοήθειας σήμερα;
Θα πρέπει οπωσδήποτε να παραμένει δυνατός μέσω της γνώσης και άρα να στηρίζεται
σε ένα σύνολο θεωρητικών εννοιών.
Πρέπει
επίσης να γνωρίζει πώς να τις εφαρμόσει και άρα πώς αυτές οι θεωρίες
συγκεκριμενοποιούνται, γίνονται εφαρμόσιμες και τελικά εφαρμόζονται στη σχέση.
Πέρα από την τεχνογνωσία, εφόσον η εστίαση της σχέσης αφορά την ίδια την ποιότητά της,
είναι αναγκαίο να τηρεί την αρμόζουσα στάση, δηλαδή να επιστρατεύει όλες τις προϋποθέσεις
και τα χαρακτηριστικά που διευκολύνουν μία σχέση βοήθειας και την καθιστούν πιο αποτελεσματική.
Μεταξύ αυτών η πρώτη είναι η αυθεντικότητα, η δεύτερη είναι η ικανότητα να βλέπουμε
τον κόσμο με τα μάτια του άλλου και η τρίτη να μην κρίνουμε
τον θεραπευόμενο αλλά να καταφέρουμε να τον κάνουμε αποδεκτό.
Αν αυτό είναι δυνατό, αν αυτές οι τρεις προϋποθέσεις υλοποιηθούν από τον θεραπευτή,
όλα θα οδηγήσουν σε μία διαδικασία αλλαγής
και βελτίωσης.



Και ποια στοιχεία βίωσες ως μη βοηθητικά;

Η δύναμη είναι πάντα παρούσα στις ανθρώπινες επαφές.

Όπου αλληλεπιδρούν δύο ή περισσότερα πρόσωπα υπάρχει πάντα

μία δύναμη η οποία είτε καλύπτεται είτε αναδεικνύεται.

Γενικά η ιστορία μάς διδάσκει ότι όσοι έχουν πολλή δύναμη δεν αγαπούν ιδιαίτερα

να μιλούν σχετικά, από φόβο ότι θα μειωθεί η δύναμή τους, αν επικρατεί διαφάνεια

στις διαφορές δυναμικότητας.

Οι διαφορές δυναμικότητας

προφανώς και υπάρχουν πάντα και στις σχέσεις βοήθειας.

Ο θεραπευτής, ο ειδικός,

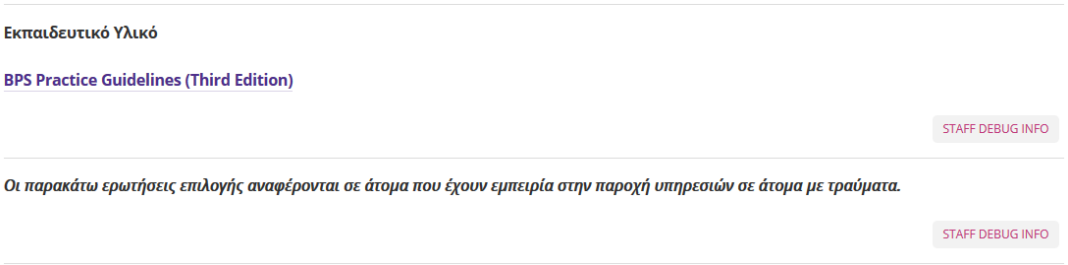
όποιος παρέχει μία υπηρεσία έχει περισσότερη δύναμη

από τον χρήστη, θεραπευόμενο, ασθενή ή όπως αλλιώς τον ορίσουμε. Γιατί;

Γιατί γνωρίζει κάτι του οποίου τα στοιχεία δεν γνωρίζει επακριβώς ο θεραπευόμενος

κι επίσης μπορεί να προσφέρει στον θεραπευόμενο κάτι που χρειάζεται.

Επιπλέον, ο ίδιος ορίζει τους κανόνες
του περιβάλλοντος (δηλαδή της χρήσης της υπηρεσίας) και, μάλιστα, μπορεί να αναστείλει
τη χορήγηση της υπηρεσίας.
Εν ολίγοις,
υπάρχει πάντα μία διαφορά δυναμικότητας μεταξύ του παρόχου και του παραλήπτη μιας υπηρεσίας.
Στο παρελθόν, με το μηχανιστικό-απλουστευτικό μοντέλο των σχέσεων βοήθειας
η διαφορά δυναμικότητας ήταν πολύ αυξημένη.
Είδαμε, σύμφωνα με το νέο μοντέλο της Χάρτας της Οτάβα και το βιοψυχοκοινωνικό μοντέλο,
ότι αυτό δεν ήταν επιθυμητό γιατί η υπερβολική διαφορά δυναμικότητας
μπορεί να οδηγήσει τον χρήστη της υπηρεσίας σε μια παθητική στάση που δεν βοηθά
στην επίτευξη των στόχων της υπηρεσίας.
Άρα σήμερα τείνουμε να εστιάζουμε στους χρήστες, τους θεραπευόμενους και να προάγουμε
την αλλαγή μέσα από πράξεις ενδυνάμωσης που ενθαρρύνουν τον θεραπευόμενο να αναπτύξει
τις ικανότητές του, τη δημιουργικότητά του, την αντοχή του.
Οι έρευνες καταδεικνύουν ότι αυτό είναι όντως χρήσιμο γιατί σε όλους τους τομείς
των σχέσεων βοήθειας επιτυγχάνονται καλύτερα αποτελέσματα σε μικρότερο χρονικό διάστημα
ενώ μειώνονται παρενέργειες και υποτροπές, όπως π.χ. στους τομείς της υγείας και της ευεξίας.
Άρα ο κόσμος προσανατολίζεται όλο και πιο πολύ στο προφανές: ότι όλοι βγαίνουν κερδισμένοι
αν η δύναμη μοιράζεται και αν όλοι συνεισφέρουν στην επίτευξη των στόχων.
Το ίδιο ισχύει και σε κοινωνικό επίπεδο. Άρα μία ενεργή και συνειδητή στάση των πολιτών
συνεισφέρει πολύ περισσότερο σε μία κοινωνική οικολογία και στη συνδιαμόρφωση μιας πολιτικής.
Βιώσιμες σχέσεις για μία βιώσιμη πολιτική.
Το ίδιο ισχύει στις υπηρεσίες που παρέχονται σε παιδιά. Πρόκειται για μικρούς ανθρώπους, όχι για μωρά
που δεν καταλαβαίνουν ή δεν είναι υπεύθυνα. Αυτό το κοινωνικό οικοδόμημα που θεωρεί
τα παιδιά ως "μικρά πράγματα" είναι εντελώς απαρχαιωμένο.



Ποια είναι η γνώμη σου για τη διαφορά δυναμικότητας μεταξύ του θεραπευτή και των θεραπευομένων του στις σχέσεις βοήθειας;

Σε τι χρησιμεύουν

οι σχέσεις βοήθειας

για όσους επωφελούνται από αυτές;

Έχουμε ήδη υπογραμμίσει, όταν επισημάναμε ότι, σύμφωνα με την Χάρτα της Οτάβα,

στόχος του βιοψυχοκοινωνικού μοντέλου δεν είναι μόνο να θεραπεύει ασθένειες

αλλά και να αναπτύσσει τη δυνατότητα υγείας και ευεξίας, την ικανότητα ενεργούς μάθησης

και την ανάπτυξη της δημιουργικότητας και της ανθεκτικότητας του ατόμου.

Ένας άλλος τρόπος ανάκλησης αυτής της ικανότητας, που είναι έμφυτη στον ανθρώπινο οργανισμό,

είναι το "coping", αγγλικός όρος που σημαίνει την ικανότητα διαχείρισης των ενδεχομένων της ζωής μας.

Δηλαδή, να διαχειρίζομαι όσο καλύτερα μπορώ τις ικανότητες να σχετίζομαι με τον εαυτό μου,

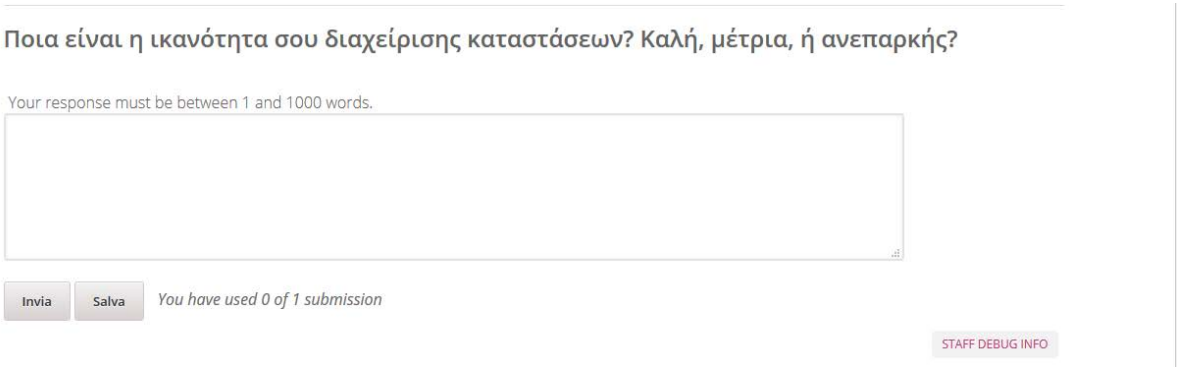
με τους άλλους και με τον κόσμο που με περιβάλλει.

Γνωρίζουμε ότι στις σχέσεις βοήθειας,

σε ό,τι αφορά τα χαρακτηριστικά του αποτελεσματικού θεραπευτή,

ανεξάρτητα από την προσέγγιση που υιοθετεί, για να είναι αποτελεσματικός πρέπει να μπορεί

στη σχέση με τον θεραπευόμενο να επιδεικνύει βαθύ και μη βλαπτικό σεβασμό,
να έχει ενσυναίσθηση και να κατανοεί όσα λέει και νοιώθει ο θεραπευόμενος,
το τι εννοεί, και να σχετίζεται μαζί του με ειλικρίνεια, αυθεντικότητα και διαφάνεια.
Ωστόσο, για να λειτουργήσει αυτό, πρέπει και ο θεραπευόμενος, ο ασθενής, να έχει
ορισμένα χαρακτηριστικά καθώς πρόκειται για ομαδική προσπάθεια.
Στις σχέσεις βοήθειας ως "αποτελεσματικοί" θεωρούνται οι χρήστες που είναι ειλικρινείς
και έχουν κίνητρο να αλλάξουν, ίσως γιατί δεν είναι καλά και θέλουν
με κάποιο τρόπο να μην υποφέρουν πια. Επίσης, έχουν την ικανότητα να έρχονται
σε ψυχολογική επαφή με τον θεραπευτή με τον οποίο συνεργάζονται και να κατανοούν
τα χαρακτηριστικά της σχέσης που θέτει ο θεραπευτής.
Μέσω αυτών των χαρακτηριστικών, μαζί με την επιμονή και την προθυμία
να μάθουμε από τα λάθη μας και το απαιτούμενο θάρρος να παραδεχτούμε
ότι σφάλλαμε, το λάθος μας μετατρέπεται σε σοφό δάσκαλο.
Έτσι, γίνεται σαφές ότι το "coping" είναι μία βέλτιστη κατάσταση λειτουργίας
και αποτέλεσμα μιας ομαδικής προσπάθειας θεραπευτή και θεραπευομένου που στοχεύει
σε μια καλύτερη ποιότητα ζωής και στην καλύτερη συνειδητοποίηση των εγγενών
δυνατοτήτων μας
που είναι καταγεγραμμένες στον γενετικό μας κώδικα και αναπτύσσονται περαιτέρω,
ανάλογα με τις συνθήκες του περιβάλλοντός μας αλλά και με την ιδιαίτερη κλίση μας
και με τον τρόπο που αντιμετωπίζουμε τη ζωή.



Σε επαγγελματικό επίπεδο, ποιά είναι η ικανότητα σου διαχείρισης καταστάσεων ? Καλή, μέτρια, ή ανεπαρκής?'

Your response must be between 1 and 1000 words.

Invia Salva *You have used 0 of 1 submission*

Πού να επικεντρωθούμε; Στην ασθένεια ή στην υγεία;

Οι έρευνες αποδεικνύουν ότι είναι πολύ καλύτερο

να επικεντρωθούμε στην υγεία

γιατί έτσι επιτυγχάνουμε καλύτερα αποτελέσματα

αλλά και μείωση του κόστους.

Γιατί συμβαίνει αυτό;

Γιατί στο προηγούμενο μηχανιστικό-απλουστευτικό μοντέλο

το πρόσωπο που έχρηζε βοήθειας ήταν σε κατάσταση παθητικότητας. Όντως, ο λεγόμενος

ασθενής

μπορεί κατά μία έννοια να γίνει πολύ υπομονετικός και παθητικός,

επιδεικνύοντας μια επίκτητη αδράνεια. Αυτός ο κίνδυνος μειώνεται κατά πολύ

στο νέο μοντέλο όπου το πρόσωπο ενθαρρύνεται να χρησιμοποιήσει τη δύναμή του

ώστε να εισέλθει σε μία συνεργασία όπου ακόμα και η εξουσία λήψης των αποφάσεων μοιράζεται

μεταξύ θεραπευτή και θεραπευομένου.

Επιπλέον, οι έρευνες αποδεικνύουν ότι με την προσέγγιση της προαγωγής

της υγείας και της ευεξίας

επιτυγχάνονται,

στις ίδιες κατηγορίες θεραπευομένων, καλύτερα αποτελέσματα.

Για παράδειγμα,

Υιοθετώντας μία πολιτική πρόληψης

των ασθενών σε συνδυασμό με μια καλή σχέση με το νοσηλευτικό προσωπικό,

σε περίπτωση υποβολής σε χειρουργική επέμβαση, με το νέο μοντέλο

μειώνεται η περίοδος νοσηλείας και όσο λιγότερες είναι

οι αρνητικές επιπτώσεις σε μεταχειρουργικό στάδιο,

τόσο μεγαλύτερη είναι η ανάπτυξη των ανοσοποιητικών μηχανισμών άμυνας

καθώς και η συμμόρφωση του ασθενούς,

δηλαδή, η συνεργασία με τον γιατρό και τους νοσηλευτές στην τήρηση των οδηγιών

σχετικά με το τι πρέπει ή δεν πρέπει να κάνει και στην τακτική πρόσληψη των φαρμάκων.

Το νέο μοντέλο αποδεικνύει επίσης ότι είναι πολύ λιγότερες οι αντιρρήσεις από τους ασθενείς

απέναντι στις υγειονομικές δομές και λιγότερο συχνή η αλλαγή θεράποντος ιατρού.

Ενισχύεται, λοιπόν, η ικανότητα συνεργασίας από πλευράς του ασθενούς

και αυτό το νέο μοντέλο έχει ευνοϊκά αποτελέσματα όχι μόνο για τον χρήστη και τους οικείους του,

αλλά και για ολόκληρη την κοινωνία: όταν αναπτύσσουμε πιο πολύ τις δυνατότητές μας

νοσούμε λιγότερο και ζούμε περισσότερο και με καλύτερη υγεία. Και η κοινωνία μας

ευημερεί. Άρα, η προαγωγή της υγείας και της ευεξίας είναι αμοιβαία επωφελής

γιατί όλοι βγαίνουν κερδισμένοι και τα αποτελέσματα μιλούν από μόνα τους.

Μπορείτε να παραλείψετε τις παρακάτω ερωτήσεις εάν δεν εργάζεστε σε κανένα ρόλο στον τομέα της βοήθειας στις σχέσεις.

Θα σας πω δυο λόγια για τις αποτελεσματικές ψυχοθεραπευτικές σχέσεις.

Η ψυχοθεραπεία είναι μία από τις πολλές σχέσεις βοήθειας,

αλλά ρυθμίζεται πολύ συγκεκριμένα από το νομικό πλαίσιο.

Για παράδειγμα, μόνο οι γιατροί ψυχολόγοι στην Ιταλία, μετά από μεταπτυχιακές σπουδές

τουλάχιστον τετραετούς φοίτησης, μπορούν να παρέχουν υπηρεσίες ψυχοθεραπείας.

Οι άλλοι γιατροί δεν μπορούν. Συνιστά αδίκημα, γιατί ό,τι μπορεί να έχει θετικές επιπτώσεις

σε έναν οργανισμό, αν δεν το προάγουμε με σωστό τρόπο, μπορεί να αποβεί επιζήμιο.

Παρόλα αυτά,

οι έρευνες αποδεικνύουν ότι η αποτελεσματικότητα στον χώρο της ψυχοθεραπείας δεν είναι αποτέλεσμα

συγκεκριμένης θεωρητικής προσέγγισης αλλά μάλλον της ποιότητας των σχέσεων των ψυχοθεραπευτών

που ανήκουν σε διάφορες ψυχοθεραπευτικές σχολές και, όπως και στις σχέσεις βοήθειας,

ισχύουν οι ίδιες μεταβλητές και παράμετροι και στις ψυχοθεραπευτικές σχέσεις.

Ένας ψυχοθεραπευτής είναι αποτελεσματικός όχι γιατί εφαρμόζει ένα ορισμένο θεωρητικό μοντέλο αλλά γιατί μπορεί να σχετίζεται με τον θεραπευόμενο επιδεικνύοντας αποδοχή,

χωρίς κριτική, με βαθύ σεβασμό,

και γιατί έχει

την ικανότητα

όχι να ακούει όχι μόνο ό,τι του λέει ο χρήστης/ασθενής/θεραπευόμενος,

αλλά και το τι σημαίνει ό,τι ειπώνεται για το πρόσωπο του θεραπευόμενου.

Επίσης, μπορεί να σχετίζεται με τον θεραπευόμενο με τρόπο γνήσιο, αυθόρμητο και διάφανο αλλά αυτό δεν αρκεί γιατί η ψυχοθεραπευτική σχέση, όπως και κάθε σχέση βοήθειας, είναι ομαδική προσπάθεια και συνδημιουργία. Πρέπει να δώσει και ο θεραπευόμενος,

διαφορετικά δεν λειτουργεί η σχέση.

Και τι δίνει;

Το κίνητρο για αλλαγή της κατάστασης, που συχνά προκύπτει από μια αίσθηση δυσφορίας

και την ικανότητα ψυχολογικής επαφής με τον συγκεκριμένο ψυχοθεραπευτή.

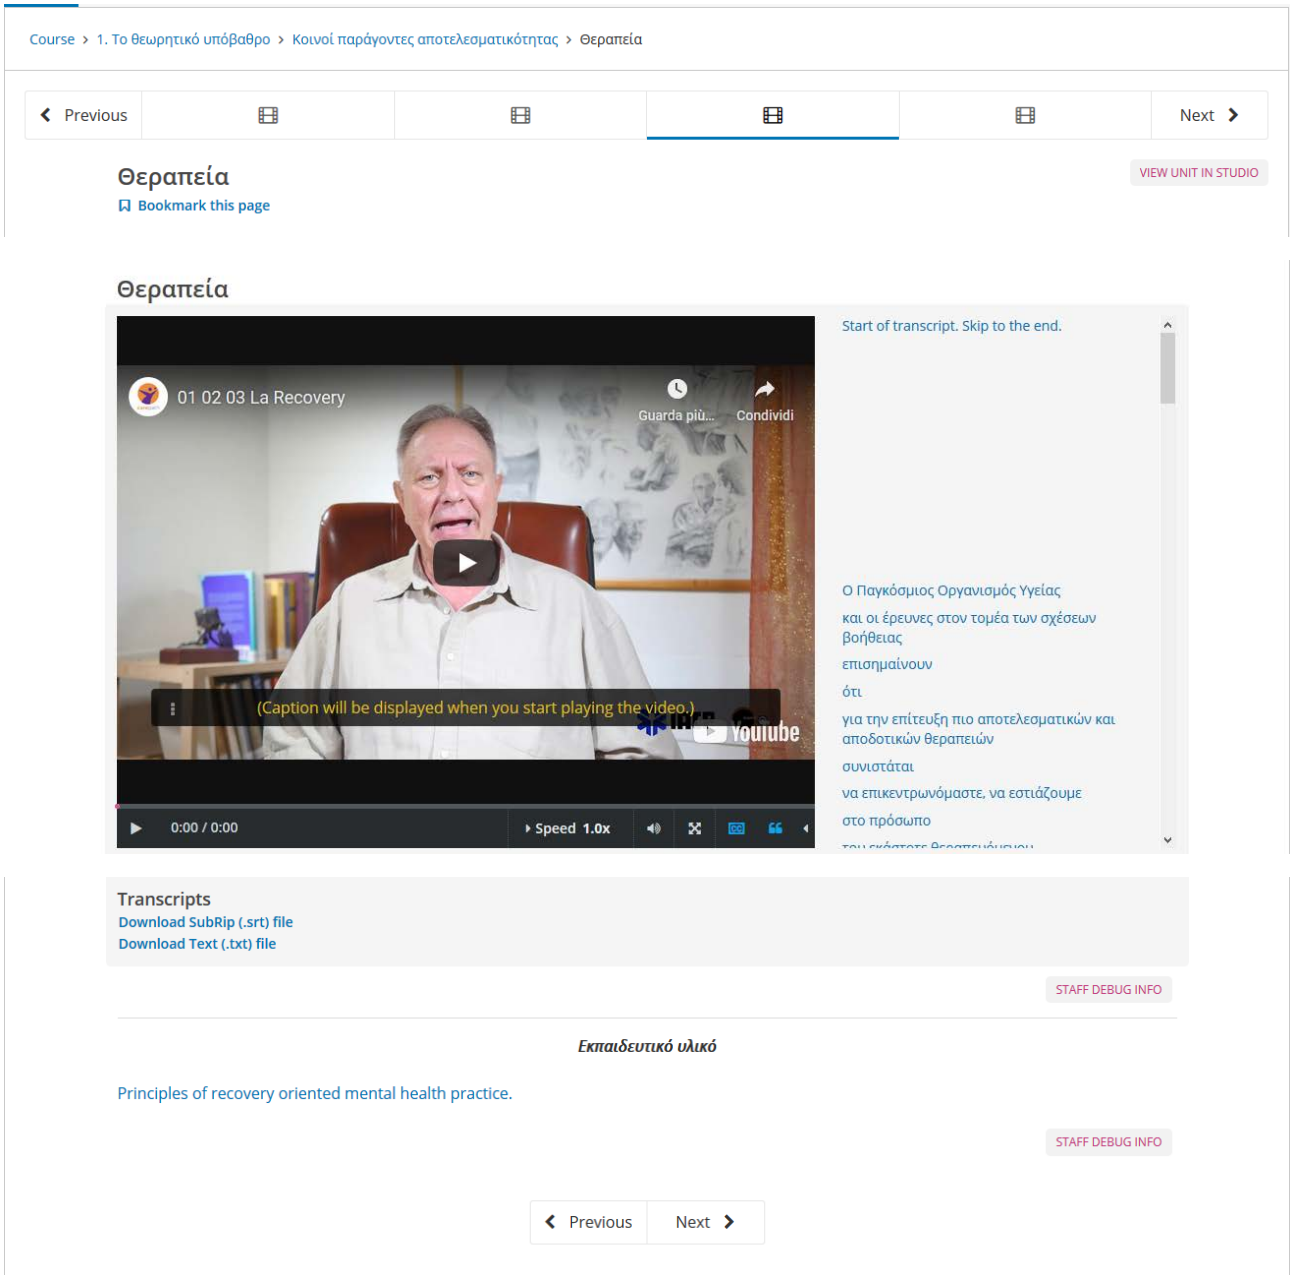
Επιπλέον, υπάρχει

μια τρίτη προϋπόθεση: να μπορεί να κατανοήσει τα χαρακτηριστικά που είναι θεμελιώδη

για τις σχέσεις: δηλαδή, τον βαθύ σεβασμό, την ακρόαση με ενσυναίσθηση και την αυθεντικότητα του ψυχοθεραπευτή του.

Έτσι, οι δυο τους μπορούν να λειτουργήσουν με πολύ θετικά και πιο ικανοποιητικά αποτελέσματα από ό,τι αν ο ασθενής για την ίδια δυσκολία λάμβανε μόνο φαρμακευτική αγωγή ή, προφανώς, καμία αγωγή.

Συνεπώς, και στην ψυχοθεραπεία είναι καλό "φάρμακο" η αποτελεσματική σχέση.



Transcript

Ο Παγκόσμιος Οργανισμός Υγείας

και οι έρευνες στον τομέα των σχέσεων βοήθειας

επισημαίνουν

ότι

για την επίτευξη πιο αποτελεσματικών και αποδοτικών θεραπειών

συνιστάται

να επικεντρωνόμαστε, να εστιάζουμε

στο πρόσωπο

του εκάστοτε θεραπευόμενου

που έχουμε αναλάβει.

Άρα έχει σημασία να προσωποποιούμε τις θεραπείες, να μην τις θεωρούμε ως λευκή μπογιά

με την οποία θα τα βάψουμε όλα λευκά, ανεξάρτητα από το ποιος είναι ο θεραπευόμενος.

Όπως και η ψυχοθεραπεία, προσωποποιούνται και οι σχέσεις βοήθειας

γιατί έτσι βοηθάμε περισσότερο τον Τζίνο, τη Μάιρα, τον Τζόζεφ, τη Μαίρη κτλ.

Γιατί

πρέπει

να εγκαθιδρύσουμε στο μέγιστο δυνατό μια ομαδική εργασία και να δεσμευτούμε σοβαρά σε μια πορεία

όπου ο άλλος θεωρείται πρωταγωνιστής σε αυτή την περιπέτεια αλλαγής.

Η "Task Force 29" του Αμερικανικού Συνδέσμου Ψυχολογίας, που έχουμε ήδη αναφέρει,

αποδεικνύει τη σημασία των προσωποκεντρικών θεραπειών

και

επισημαίνει, επιπλέον, μία εξίσου σημαντική πτυχή:

ότι οι θεραπείες, η φιλοσοφία τους, πρέπει να καθορίζονται

με βάση τις έννοιες της αποκατάστασης (recovery)

και όχι,

όπως γινόταν στο παρελθόν, με βάση έναν αβασάνιστο

και απαισιόδοξο

χαρακτηρισμό μιας κατάστασης ως χρόνιας.

Τι είναι η αποκατάσταση (recovery);

Η αποκατάσταση τις τελευταίες δεκαετίες κατάφερε, με τις ίδιες προβληματικές,

να είναι πιο βοηθητική

και γκρέμισε μια σειρά από μύθους,

όπως

το ότι

η σχιζοφρένεια

είναι μία χρόνια ασθένεια και παθολογία.

Στο παρελθόν υπήρχε αυτή η πεποίθηση,

αλλά ο συγκεκριμένος τρόπος σκέψης αποτελούσε παράλληλα

και μία

αυτοεκπληρούμενη προφητεία

και αυτό, αν το καλοσκεφτούμε, είναι κάτι μάλλον προφανές.

Μάλιστα,

πάντα στο παράδειγμα της σχιζοφρένειας, γνωρίζουμε ότι αυτή υπάρχει

σε κάθε χώρα, αλλά κάθε κουλτούρα την αντιμετωπίζει διαφορετικά.

Σε μερικές κοινωνίες και κουλτούρες ο σχιζοφρενής, ο ψυχωτικός, θεωρείται ως ένας άνθρωπος

που τον έχουν αγγίξει οι θεοί

και για αυτό η κοινότητα τον αντιμετωπίζει με σεβασμό και καλοσύνη και του προσφέρει

τροφή και στέγη όταν τις έχει ανάγκη.

Σε άλλες κοινωνίες, αντίθετα,

είναι ένας απόβλητος που τον εξορίζουν

από την κοινότητα και τον δένουν σε ένα δέντρο στο δάσος.

Στη δική μας κουλτούρα,

σε άλλες εποχές, αντιμετωπίζαμε

αυτά τα άτομα

με τρόπο πολύ διαφορετικό,

ενίοτε απάνθρωπο,

αλλά προφανώς το κάναμε για το καλό τους, όπως όταν πιστεύαμε

ότι το φαινόμενο οφειλόταν σε δαιμονοληψία και βασανίζαμε τους άμοιρους σχιζοφρενείς

με πυρωμένα σίδερα ελπίζοντας, αν το σώμα, σε κατάσταση ιδεοληψίας, γινόταν αφιλόξενο,

να βγει από αυτό ο Διάβολος.

Ή, πάλι,

αντιμετωπίζαμε αυτούς τους ανθρώπους με πολλά άλλα μέσα,

αλλά πάντα με την προφητεία της χρόνιας κατάστασης

και, με απόλυτη ακρίβεια, αυτές οι προφητείες

θα εκπληρωθούν.

Με τη θεώρηση της αποκατάστασης, που λέει, "Όχι, όποια κι αν είναι"

"η κατάστασή σου, αν και απελπιστική"

"όπως στη σχιζοφρένεια, μπορείς να αποκαταστήσεις τη λειτουργικότητα", εκπληρώνεται μια θετική προφητεία,

που, όπως όλες οι προφητείες, ως έναν βαθμό θα εκπληρωθεί.

Γι' αυτό σήμερα βλέπουμε ότι όποιος αντιμετωπίζεται πιο αισιόδοξα εκπληρώνει αυτές τις προφητείες.

Έχουμε, λοιπόν, άτομα που ακόμα βλέπουν πράγματα που δεν βλέπου οι άλλοι, ακούν φωνές

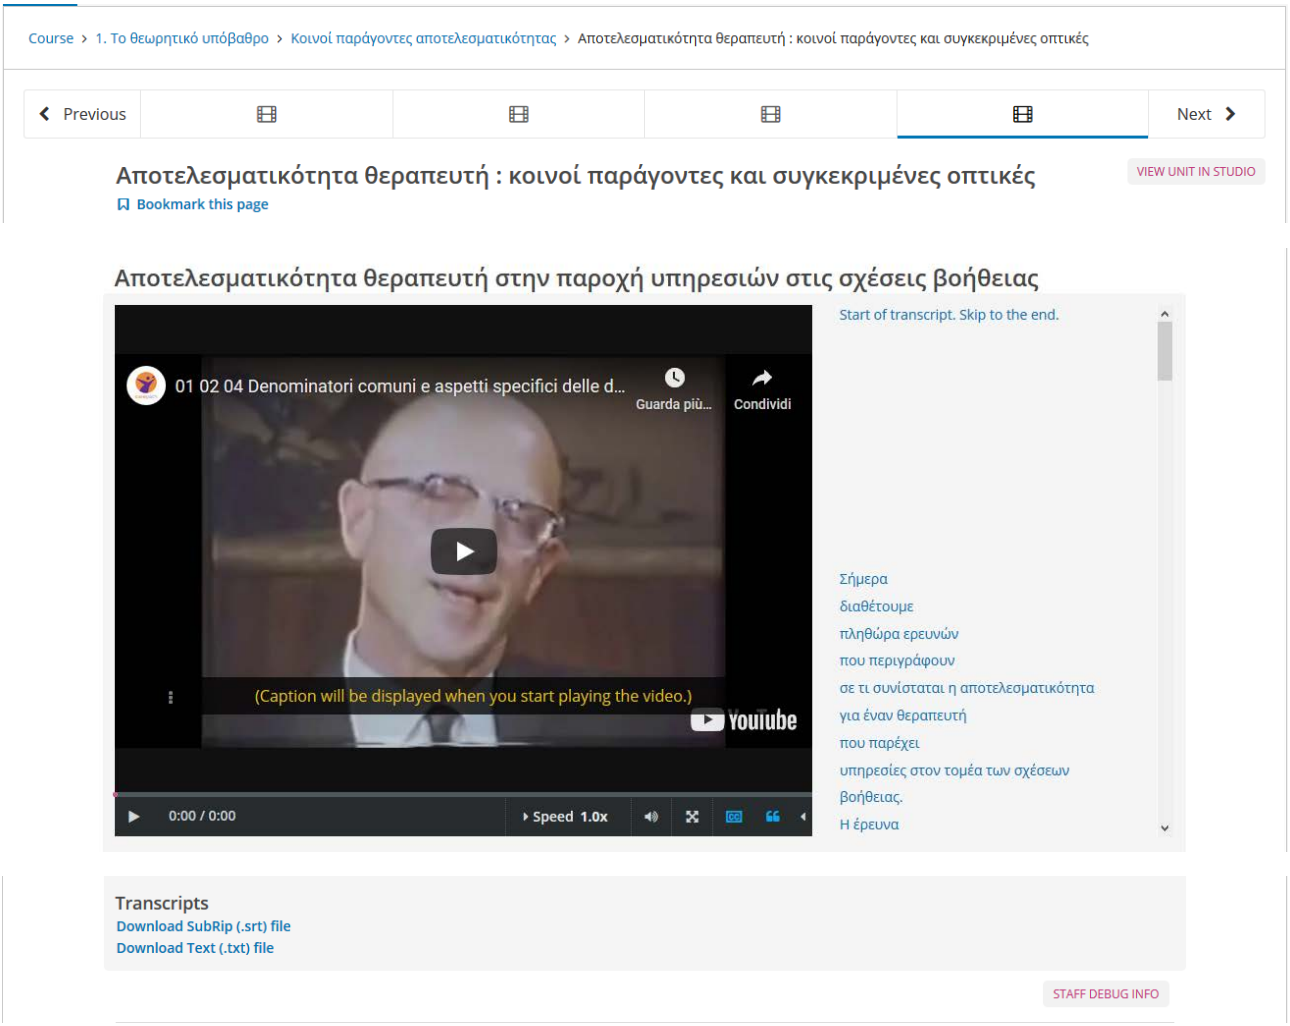
που δεν ακούν οι άλλοι, αλλά είναι έμμισθοι σύμβουλοι σε ιατρεία για το πώς να φερόμαστε

σε ομοιοπαθή άτομα με τρόπο πιο ανθρώπινο και αισιόδοξο, εκπληρώνοντας προφητείες

όχι αρνητικές αλλά θετικές, που είναι εξίσου

αυτοεκπληρούμενες.

Πράγματι, πρέπει να προσέχουμε πού μας οδηγεί η προφητεία.



Transcript

Σήμερα

διαθέτουμε

πληθώρα ερευνών

που περιγράφουν

σε τι συνίσταται η αποτελεσματικότητα

για έναν θεραπευτή

που παρέχει

υπηρεσίες στον τομέα των σχέσεων

βοήθειας.

Η έρευνα

έχει ως αφετηρία

τις υποθέσεις που τόσο ευφυώς διατύπωσε ο Καρλ Ρότζερς,

ο οποίος έμελλε να είναι

ο ιδρυτής της προσωποκεντρικής προσέγγισης

και ένας από τους πατέρες της ανθρωπιστικής φιλοσοφίας.

Το μακρινό 1942 ο Ρότζερς διατύπωσε με επιστημονικό τρόπο

μια σειρά από υποθέσεις

και πέρασε στην εμπειρική του επαλήθευση

σχετικά με το ποιες είναι οι απαραίτητες και επαρκείς προϋποθέσεις ώστε ένας θεραπευτής

να προάγει την αλλαγή.

Αυτές,

από τότε μέχρι σήμερα, επιβεβαιώθηκαν από τις έρευνες: η ικανότητα εγκαθίδρυσης

μιας σχέσης με τον ασθενή, τον θεραπευόμενο, που να χαρακτηρίζεται

από μία στάση χωρίς κριτική,

με βαθιά αποδοχή

και σεβασμό στο πρόσωπο του θεραπευόμενου,

από την ικανότητα

ακρόασης με ευαισθησία, ακρίβεια και ενσυναίσθηση, δηλαδή να καταλαβαίνει όχι μόνο τι λέει ο ασθενής,

αλλά και τι σημαίνει για εκείνον ό,τι ειπώνεται

αλλά και από μία στάση αυθεντικότητας, ευθύτητας

και ειλικρίνειας στη σχέση.

Αυτές οι υποθέσεις επιβεβαιώθηκαν άμεσα

αλλά και στη συνέχεια έχουν επιβεβαιωθεί και λειτουργήσει

σε όλες τις σχέσεις βοήθειας,

ουδεμίας εξαιρουμένης.

Άρα σε αυτό το θέμα

η συνεισφορά του Ρότζερς ήταν μεγάλη

στην εξέλιξη σχέσεων βοήθειας που να μη βασίζονται σε συμβάσεις

αλλά σε εμπειρικά και άρα επιστημονικά θεμέλια.

Νομίζω ότι είναι ακόμα πιο αποκαλυπτικό να ακούσουμε τον ίδιο τον Καρλ Ρότζερς

που περιγράφει τις τρεις απαραίτητες και επαρκείς προϋποθέσεις σε μια περίφημη ταινία του:

Από την πολύχρονη θεραπευτική μου εμπειρία έχω την αίσθηση

ότι αν μπορώ να δημιουργήσω το κατάλληλο κλίμα

την κατάλληλη σχέση, τις κατάλληλες προϋποθέσεις,

η θεραπευτική διαδικασία θα μπορούσε αναπόφευκτα να αρχίσει για τον θεραπευόμενό μου.

Θα αναρωτιέστε ποιο είναι αυτό το κλίμα.

Ποιες είναι αυτές οι προϋποθέσεις;

Θα υπάρχουν άραγε στη συζήτηση με τις γυναίκες ή τα πρόσωπα

που δεν έχω ξαναδεί ποτέ;

Θα προσπαθήσω να περιγράψω συνοπτικά ποιες είναι, κατ' εμέ, αυτές οι τρεις προϋποθέσεις.

Κατ' αρχάς, ένα ερώτημα είναι

αν μπορώ να είμαι αληθινός στη σχέση.

Αυτό αποκτούσε όλο και μεγαλύτερη σημασία για μένα

με την πάροδο των χρόνων.

Νοιώθω ότι

η γνησιότητα είναι άλλος ένας τρόπος να περιγράψουμε το επιθυμητό χαρακτηριστικό.

Μου αρέσειη λέξη "συνέπεια" με την οποία εννοώ πως ό,τι βιώνω μέσα μου είναι παρόν

στην επίγνωσή μου και εξωτερικεύεται μέσω της επικοινωνίας μου.

Κατά μία έννοια,

όταν έχω αυτό το χαρακτηριστικό,

είμαι ολόκληρος μέσα στη σχέση.

Υπάρχει μία άλλη λέξη που θεωρώ ότι το περιγράφει,

νοιώθω ότι μέσα στη σχέση

θα επιθυμούσα μία διαφάνεια, θα ήθελα ο θεραπευόμενος να μπορεί να δει μέσα μου,

να δει ότι δεν του κρύβω τίποτα.

Όταν είμαι αληθινός με τον τρόπο που προσπαθώ να περιγράψω,

ξέρω ότι τα δικά μου συναισθήματα

συχνά θα αναδυθούν στην επιφάνεια και θα εκφραστούν αλλά με κατάλληλο τρόπο

ώστε να μην επιβληθούν στον θεραπευόμενό μου.

Έπειτα,

το δεύτερο ερώτημα είναι αν τελικά θα επαινώ αυτό το πρόσωπο,

αν θα νοιάζομαι για αυτό το πρόσωπο.

Φυσικά, δεν θέλω να υποκρίνομαι ότι νοιάζομαι κάποιον χωρίς να το νοιώθω.

Μάλιστα, αν αντιπαθώ τον θεραπευόμενό μου, νομίζω ότι είναι καλύτερο αυτό να το εκφράσω.

Αλλά ξέρω

ότι η θεραπευτική διαδικασία είναι πιθανότερο να συντελεστεί,

και η εποικοδομητική

αλλαγή είναι πολύ πιο πιθανή,

αν νοιώθω ειλικρινή εκτίμηση για το άτομο με το οποίο δουλεύω.

Μια εκτίμηση για το συγκεκριμένο πρόσωπο ως ξεχωριστό άτομο.

Πείτε το αποδοχή, πείτε το έγνοια,

πείτε το μη κτητική αγάπη, αν θέλετε.

Νομίζω πως όλοι αυτοί οι όροι τείνουν να το περιγράψουν.

Ξέρω ότι η σχέση θα γίνει πιο εποικοδομητική αν υπάρχει κάτι τέτοιο.

Το τρίτο ερώτημα είναι αν θα μπορώ να καταλάβω τον εσωτερικό κόσμο του προσώπου,

εκ των έσω,

αν θα μπορώ να δω μέσα από τα δικά του μάτια,

αν θα είμαι

αρκετά ευαίσθητος

για να περιπλανηθώ

στον εσωτερικό κόσμο των συναισθημάτων του,

για να ξέρω πώς είναι να είμαι εκείνος.

Για να μπορώ να εντοπίσω

όχι μόνο τα επιφανειακά νοήματα αλλά και νοήματα που βρίσκονται

κατά κάποιο τρόπο κάτω από την επιφάνεια.

Ξέρω πως αν καταφέρω,

με ευαισθησία και ακρίβεια, να μπω στον κόσμο των εμπειριών του

τότε η αλλαγή και η θεραπευτική αλλαγή είναι πολύ πιο πιθανές.

Τι είναι το τραύμα; Πώς μπορούμε να το ορίσουμε;

Το τραύμα είναι, στην πραγματικότητα, μία εμπειρία, ένα φαινόμενο

αγχωτικό,

συχνά αιφνίδιο,

το οποίο υπερβαίνει

τις δυνατότητες του ανθρώπου/υποκειμένου

να αντιδράσει

και να αμυνθεί απέναντι στο ίδιο το τραύμα.

Στην πραγματικότητα, το τραύμα είναι κάτι το οποίο υπερβαίνει τις δυνάμεις

αντίστασης του προσώπου που εκτίθεται σε αυτό.

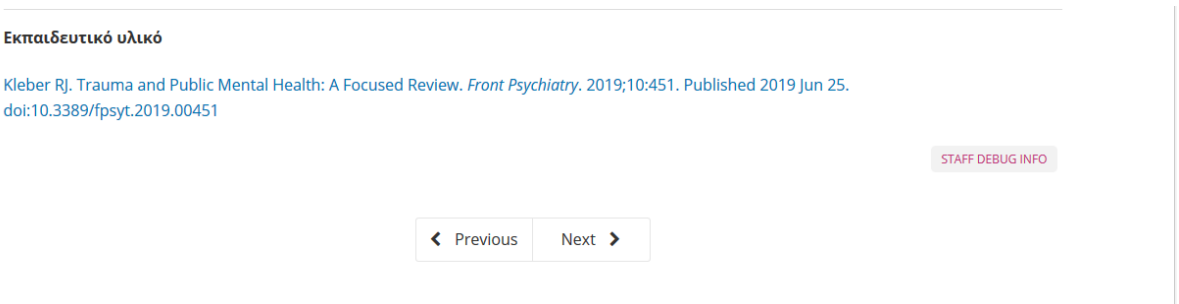
Το τραύμα έχει μελετηθεί

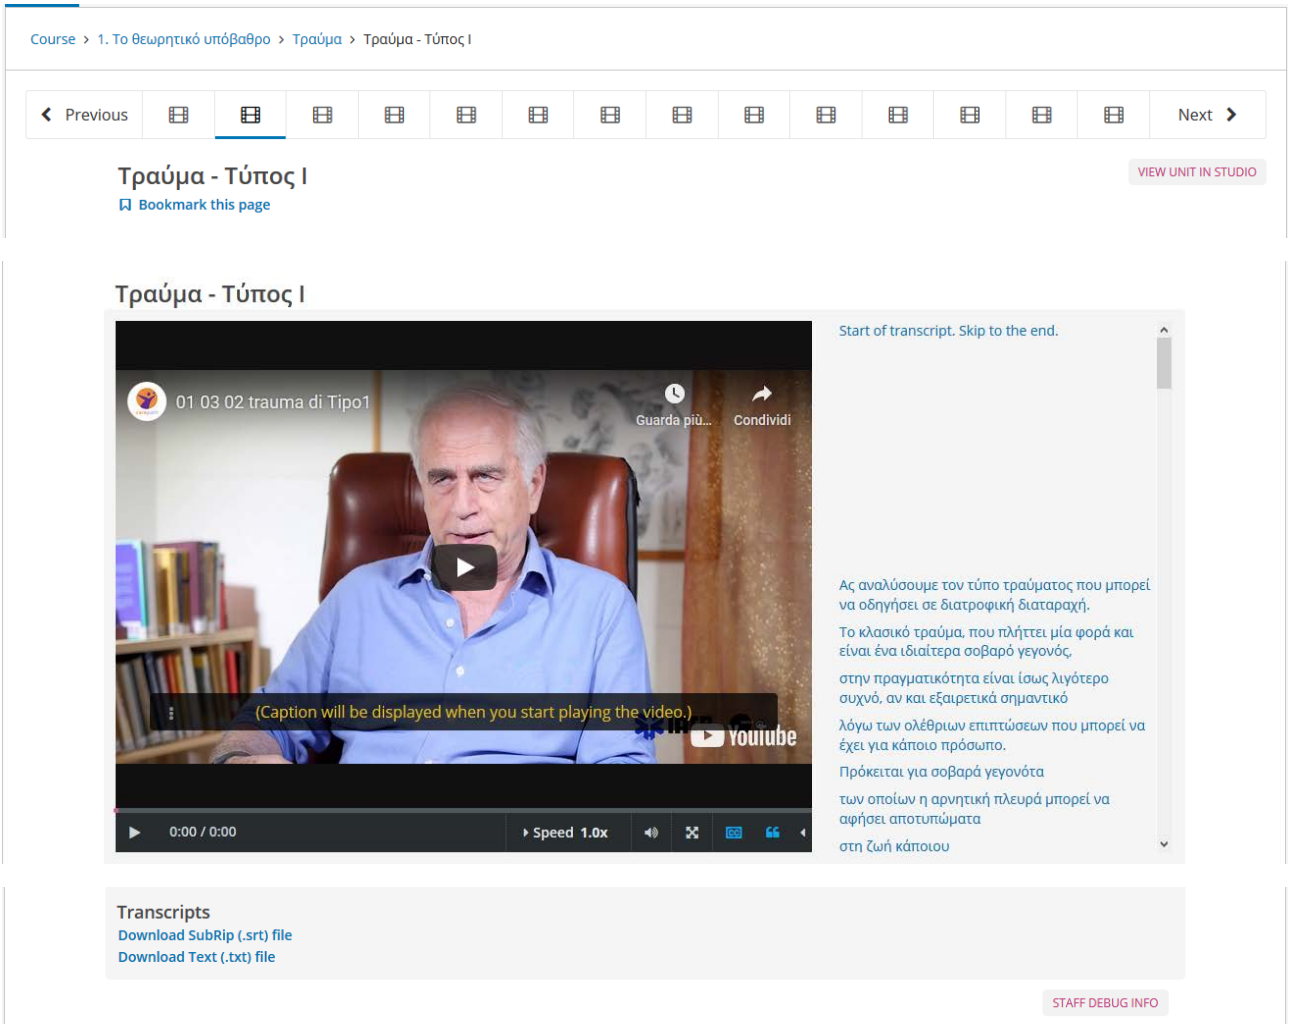
με διάφορους τρόπους.

Για παράδειγμα, υπάρχει το οξύ τραύμα, που οφείλεται

σε φυσικές ή τεχνολογικές καταστροφές, και η τραυματική κατάσταση που είναι
χρόνια/επαναλαμβανόμενη, όπως εκείνη στην οποία εκτίθενται τα μικρά παιδιά.
Ωστόσο,
μπορούμε να πούμε
ότι η ιστορία του τραύματος, από κλινική άποψη, αρχίζει με τη μελέτη των μετατραυματικών νευρώσεων,
που ερευνήθηκαν από τον Φρόιντ, και άρα σε ψυχαναλυτικό πλαίσιο,
και στη συνέχεια μελετήθηκαν εκ νέου από άλλους συγγραφείς.
Και γιατί μετατραυματική νεύρωση; Γιατί μετά από μεγάλους πολέμους, ειδικά
μετά από τον Α' Παγκόσμιο και άλλους πολέμους παρατηρήθηκαν πολλές διαταραχές από την έκθεση
σε πολεμικά τραύματα, που είχαν ψυχολογικές συνέπειες και στη συνέχεια
περιγράφηκαν από τα συστήματα ψυχιατρικής ταξινόμησης, δηλαδή τα συστήματα της ψυχοπαθολογίας,
ως διαταραχή μετατραυματικού στρες. Αυτού του είδους η διαταραχή
είναι η μόνη διαταραχή στην ψυχιατρική που οφείλεται με βεβαιότητα σε έναν εξωτερικό παράγοντα.
Αυτός ο παράγοντας είναι το ίδιο το τραύμα.
Άρα δεν είναι απαραίτητο
όποιος εκτίθεται, για παράδειγμα, σε έναν σεισμό ή σε μία πλημμύρα, να είναι
ο ίδιος αδύναμος, εύθραυστος ή ευάλωτος, γιατί το τραύμα είναι τόσο σημαντικό
και ισχυρότερο των δυνάμεων του ατόμου που από μόνο του μπορεί να έχει επιπτώσεις
σε ψυχολογικό και σωματικό επίπεδο. Σε σωματικό επίπεδο
από τα πιο σημαντικά συμπτώματα της διαταραχής μετατραυματικού στρες
είναι, ακριβώς, τα συμπτώματα νευροφυτικού τύπου.
Συμπτώματα επαγρύπνησης, υπερδιέγερσης,
δηλαδή υπερβολικής επιφυλακής και αντίδρασης στα εξωτερικά ερεθίσματα.
Αυτό, λοιπόν, σημαίνει ότι κάποιος φέρει μέσα του και μερικές αντικειμενικές ενδείξεις
των επιπτώσεων του τραύματος και όχι μόνο υποκειμενικά συμπτώματα.
Το τραύμα έχει μελετηθεί και από πλευράς των ψυχολογικών μηχανισμών,
οι οποίοι είναι πολύ σημαντικοί:
εκείνο που μελέτησε
η ψυχανάλυση, ήδη εξ αρχής,
είναι το γεγονός ότι το τραύμα,
ειδικά αν είναι πρώιμο, για παράδειγμα, στη νηπιακή ηλικία,
υφίσταται μία διαδικασία απώθησης.

Η απώθηση αυτή δεν σημαίνει ότι το τραύμα το ξεχνάμε,
το αρνούμαστε ή το θάβουμε. Το τραύμα μπορεί να εμφανιστεί, να ενεργοποιοηθεί εκ νέου αργότερα,
για παράδειγμα, στην ενήλικη ζωή,
πιθανώς
ως επίπτωση ενός άλλου τραύματος που κατά κάποιο τρόπο ανακαλεί
το προηγούμενο τραύμα. Αυτός είναι ένας μηχανισμός σε δύο στάδια που είχε μελετήσει ο Φρόιντ
διεξοδικά, κατά το οποίο έχουμε το πρώτο τραύμα, που κατά μία έννοια ευαισθητοποιεί το άτομο,
κι ένα δεύτερο τραύμα
που του επαναφέρει την κατάσταση της θυματοποίησης, της αδυναμίας
και της ευθραυστότητας στην οποία είχε βρεθεί,
επαναφέροντας εκ των πραγμάτων την κατάσταση
και οδηγώντας
σε νέα συμπτώματα
και σε μία κλινική κατάσταση που το υποκείμενο βιώνει σαν να ήταν η πρώτη φορά.
Επομένως, το τραύμα της διαταραχής μετατραυματικού στρες
διαπιστώνεται με ακριβή τρόπο
ο οποίος θέτει σε κίνδυνο τη ζωή του υποκειμένου.
Μπορεί να προκληθεί από πολέμους ή βασανιστήρια,
για λόγους τεχνολογικούς ή περιβαλλοντικούς,
αλλά αυτό το τραύμα είναι ακριβέστατο και εύκολα αναγνωρίσιμο
στη ζωή του υποκειμένου.





Transcript

Ας αναλύσουμε τον τύπο τραύματος που μπορεί να οδηγήσει σε διατροφική διαταραχή.

Το κλασικό τραύμα, που πλήττει μία φορά και είναι ένα ιδιαίτερα σοβαρό γεγονός,

στην πραγματικότητα είναι ίσως λιγότερο συχνό, αν και εξαιρετικά σημαντικό

λόγω των ολέθριων επιπτώσεων που μπορεί να έχει για κάποιο πρόσωπο.

Πρόκειται για σοβαρά γεγονότα

των οποίων η αρνητική πλευρά μπορεί να αφήσει αποτυπώματα

στη ζωή κάποιου

προκαλώντας ψυχική ή σωματική βλάβη, ή και τα δύο,

που μπορεί να διαρκέσει

πολλά χρόνια στη ζωή του.

Συνήθως αυτό το τραύμα το εντοπίζουμε στη διαταραχή μετατραυματικού στρες,

αλλά είναι πολύ συχνό και στη διατροφική διαταραχή

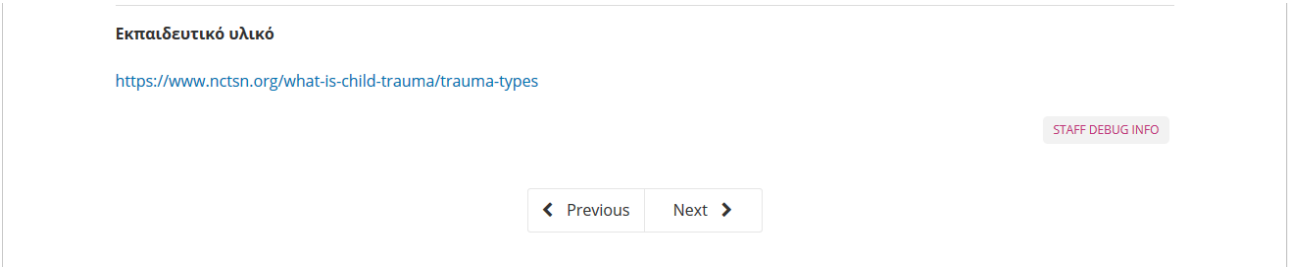
και ιδιαίτερα σε κάποιες μορφές της.

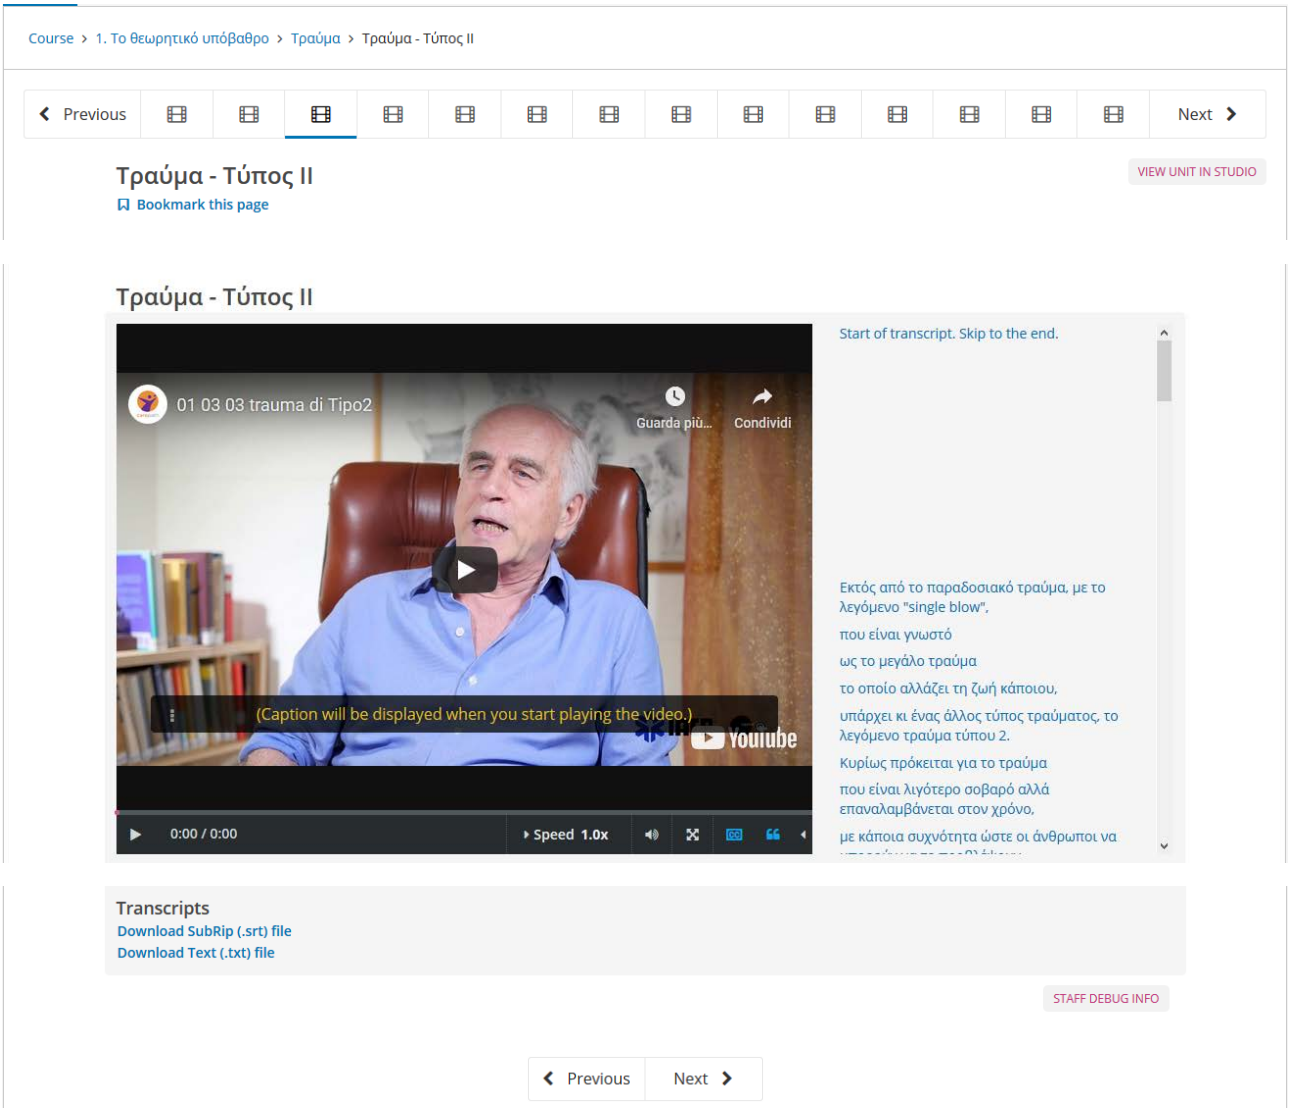
Το τραύμα διακρίνεται σε δύο τμήματα: στο σωματικό τραύμα που μπορεί κυρίως να συμβεί
στη ζωή σε στιγμές ιδιαίτερα δραματικές όπως είναι ο βιασμός,
η ληστεία, η σωματική βία, οι εχθροπραξίες στο πεδίο της μάχης,
μία φυσική καταστροφή, όπως τσουνάμι ή σεισμός,
ένα πολύ σοβαρό αυτοκινητιστικό δυστύχημα,
ένα σιδηροδρομικό ατύχημα,
και στο τραύμα ψυχικού τύπου: όταν η ζωή κάποιου τίθεται
σε σοβαρό κίνδυνο υπό την απειλή ενός προσώπου, μιας ιδιαίτερης κατάστασης
στην οποία μπορεί να περιέλθει,
όπου δεν προκύπτουν γεγονότα
με σωματικό τραυματισμό αλλά απλώς
συνιστούν μια τόσο ακραία και ισχυρή απειλή που δύσκολα μπορεί το πρόσωπο να τη διαγράψει
από τον νου του στο εγγύς μέλλον.
Για όσους υπόκεινται στο τραύμα 1ου τύπου, που αποκαλείται και "εστιακό τραύμα",
το τραύμα χαρακτηρίζεται ως "single blow",
δηλαδή χτυπάει μόνο μία φορά,
αλλά
αφήνει ίχνη ανεξίτηλα
και, μάλιστα, στα συμπτώματα
διατροφικού τύπου έχει επιπτώσεις
πολύ παρόμοιες με εκείνες της διαταραχής μετατραυματικού στρες.
Το τραύμα αυτό μπορεί να έχει μια σειρά από συνέπειες, όπως η διατροφική διαταραχή
που είναι η πιο συνήθης,
αλλά και μια σειρά από συμπτώματα
αρκετά εκτεταμένα
που μπορούν
να οδηγήσουν
σε ένα σύνολο χαρακτηριστικών
τα οποία, όλως περιέργως και ιδίως, είναι όλα παρόντα
στη διατροφική διαταραχή.
Με άλλα λόγια, η διατροφική διαταραχή δεν είναι αμιγώς διατροφική
και υπάρχουν ορισμένα συμπτώματα,

συχνά
και σε κάθε σχετική περίπτωση,
που μπορεί να συνοδεύουν όλες τις διατροφικές διαταραχές και είναι τα εξής:
χαμηλή αυτοεκτίμηση, εντονότατη τάση για κατάθλιψη,
εξαιρετικά διαστρεβλωμένη εικόνα για το σώμα
και τη σεξουαλικότητα,
υψηλός κίνδυνος αυτοκτονίας, αγχώδεις διαταραχές, χρήση αλκοολούχων ουσιών,
διαταραχές ύπνου και διασχιστικές, απώλεια μνήμης, επιθετικότητα και διαταραχές προσωπικότητας.
Είναι μια σειρά από συμπτώματα που δεν μας εκπλήσσουν όταν τα εντοπίζουμε
στις διατροφικές διαταραχές και δεν είναι μεμονωμένα αλλά πάντα συνοδεύονται
από τέτοιου είδους συμπτώματα ή από παθολογίες
που συμπληρώνουν την εικόνα της διατροφικής διαταραχής
και
σπάνια απουσιάζουν.
Πιο συγκεκριμένα, έχουμε
το τραύμα που αφήνει ένα ίχνος,
όπως αυτό το τραύμα τύπου 1,
το οποίο εκδηλώνεται κυρίως προκαλώντας αλεξιθυμία, μία συναισθηματική διαταραχή
που δεν επιτρέπει σε κάποιον να εκφράσει ανοιχτά τα συναισθήματά του
μέσω του λόγου.
Η τάση σε αυτή την περίπτωση, μετά από τραύμα τύπου 1, είναι η έκφραση συναισθημάτων
κυρίως σε επίπεδο μη λεκτικό,
μέσω του σώματος,
και αυτά τα αισθήματα
μπορεί να είναι
πολύ σοβαρά
και να οδηγήσουν
σε συναισθηματική απορρύθμιση, ενίοτε σημαντική, σε σημείο ώστε το άτομο
να επιδεικνύει μία παρόρμηση
ως έναν βαθμό,
και
γνωρίζουμε,

γιατί το συναντάμε
συχνότατα αυτό,
ότι υπάρχουν μορφές νευρικής βουλιμίας στις οποίες το τραύμα
αυτού του τύπου (όπως η κακοποίηση)
είναι
τέτοιας σοβαρότητας και μορφής ώστε να δημιουργεί
συμπτώματα
που μπορούν να οδηγήσουν σε σημαντική απώλεια ελέγχου η οποία επεκτείνεται
σε διάφορα επίπεδα.
Πιο συγκεκριμένα, κυρίως όσα συμβαίνουν σε ένα πρώιμο στάδιο ανάπτυξης,
όταν το τραύμα είναι δραματικό,
όταν οι συνθήκες της οικογένειας
είναι δύσκολα υποφερτές και υποστηρίξιμες,
σε αυτές τις περιπτώσεις
ελλωχεύει ο κίνδυνος της ψυχαναγκαστικής βουλιμίας:
πρόκειται για μία μορφή βουλιμίας
πολύ σοβαρής και επικίνδυνης
όπου μαζί με τις βουλιμικές συμπεριφορές
εκδηλώνονται μεταβολές στην προσωπικότητα
και στη διατροφική συμπεριφορά και κυρίως παρορμητικότητα
που μπορεί να αφορά
τη σεξουαλικότητα
και την τάση
κατανάλωσης τροφής
με τρόπο ανεξέλεγκτο και χωρίς αίσθηση της γεύσης.
Για παράδειγμα, μια τυπική συμπεριφορά
αυτών των ατόμων είναι
η διάπραξη κλοπών στα σούπερ μάρκετ και η κατανάλωση τροφής στο κατάστημα
πριν επιστρέψουν στο σπίτι για να φάνε, αν και έχουν τα χρήματα να αγοράσουν τροφή.
Μία έξαρση
των παρορμήσεων που είδαμε παραπάνω μπορεί να αφορά και τη σεξουαλικότητα,
αλλά κυρίως, πιο σημαντική και επικίνδυνη, είναι η αυτοκαταστροφική παρορμητικότητα

που αφορά αυτοκαταστροφικές συμπεριφορές, όπως το χαράκωμα ή την απόπειρα αυτοκτονίας.
Ο ψυχαναγκαστικός τύπος βουλιμίας είναι ο πιο επικίνδυνος γνωστός τύπος
κυρίως λόγω του υψηλού ποσοστού αυτοκτονιών.
Εν κατακλείδι, ένα τραύμα τύπου 1, ειδικά αν το περιβάλλον δεν είναι υποστηρικτικό,
οδηγεί σε αυτό τον τύπο βουλιμίας, που είναι αναμφίβολα και ο πιο επικίνδυνος,
ιδίως λόγω του υψηλότατου κινδύνου αυτοκτονίας.





Transcript

Εκτός από το παραδοσιακό τραύμα, με το λεγόμενο "single blow",

που είναι γνωστό

ως το μεγάλο τραύμα

το οποίο αλλάζει τη ζωή κάποιου,

υπάρχει κι ένας άλλος τύπος τραύματος, το λεγόμενο τραύμα τύπου 2.

Κυρίως πρόκειται για το τραύμα

που είναι λιγότερο σοβαρό αλλά επαναλαμβάνεται στον χρόνο,

με κάποια συχνότητα ώστε οι άνθρωποι να μπορούν να το προβλέψουν

αλλά να μην μπορούν να προβλέψουν επακριβώς

πότε θα συμβεί και αυτή η αναμονή, η προσδοκία είναι ψυχοφθόρα: προκαλεί

στο υποκείμενο μια ιδιαίτερα έντονη αδυναμία

που του δίνει την εντύπωση

ότι δεν είναι κύριος του εαυτού του.

Σε αυτό τον τύπο τραύματος εντοπίζονται συχνά διατροφικές διαταραχές.

Μπορεί να αφορά ένα ιστορικό

πολύ βίαιων συγκρούσεων στο άμεσο οικογενειακό περιβάλλον

στις οποίες

το παιδί, ο έφηβος,

ή και το νήπιο, έχει παραστεί για μεγάλο μέρος της ζωής του χωρίς σταματημό.

Αυτή η βίαιη σύγκρουση ίσως να οδηγεί σε μία αμιγώς βίαιη συμπεριφορά

που μπορεί να προκαλέσει

ακόμα και μεγάλη βλάβη, ίσως και απώλειες.

Αυτός ο τύπος επαναλαμβανόμενου τραύματος

δημιουργεί μία κατάσταση αναμονής

πολύ δραματική για το υποκείμενο που αναμένει

ότι μπορεί να επέλθει η αντίθεση,

αν και δεν είναι δεδομένο ότι θα συμβεί,

αλλά το ψυχικό τραύμα οφείλεται στην εξαιρετικά έντονη αναμονή

και επαναλαμβάνεται με τέτοια συχνότητα

ώστε η υπόλοιπη ζωή του υποκειμένου

ενδέχεται να φτάσει στο ίδιο είδος φόβου

ακόμα κι όταν έχουν εκλείψει αυτές οι τραυματικές εμπειρίες.

Σε ορισμένες περιπτώσεις υπάρχει η τάση να αναπαράγεται ο ίδιος τύπος τραύματος.

Για παράδειγμα,

μία νέα γυναίκα

που ήταν παρούσα όλη της τη ζωή σε καβγάδες των γονιών της

λόγω του ότι ο ένας απατούσε τον άλλο,

σε κάθε πραγματικότητα της υπόλοιπης ζωής της

επέλεγε μόνο συντρόφους

που εκδήλωναν συμπεριφορά απιστίας και οι προδοσκίες της αύξαναν

την ανάγκη της να ανακαλύψει αν όντως είχε συντελεστεί η απιστία.

Αυτού του είδους η συμπεριφορά

κατά κάποιο τρόπο γίνεται μια επαναλαμβανόμενη πρόβλεψη του βλαπτικού γεγονότος

με τον φόβο ότι μπορεί να συμβεί ανά πάσα στιγμή, λες και η εποχή

της παιδικής ηλικίας δεν πέρασε ποτέ.

Το τραύμα τύπου 2 παράγει, μεταξύ άλλων,

μία τάση μαζικής άρνησης, έναν συναισθηματικό λήθαργο,

σαν το υποκείμενο να τείνει να διαγράφει τα συναισθήματά του.

Άρα πρόκειται για υποκείμενα που φέρονται με τρόπο ψυχρό,

σαν να μην έχουν άλλα συναισθήματα

κάποιες συγκεκριμένες στιγμές της ζωής τους.

Αυτό ονομάζεται νέκρωση (numbing) συναισθημάτων και εκδηλώνεται ως συναισθηματικός λήθαργος.

Είναι ένα από τα βασικά στοιχεία

της λεγόμενης διασχιστικής διαταραχής όπου το υποκείμενο χάνει την ικανότητα

να νοιώθει

τα συνήθη συναισθήματα,

σαν να χάνει

τις βασικές αισθητηριακές ικανότητες,

σαν να είναι απών ή να μην συμμετέχει

στην καθημερινή πραγματικότητα της ζωής του

και της ύπαρξής του.

Επιπροσθέτως,

κυρίως στις διατροφικές διαταραχές

και ακόμα περισσότερο

στις διατροφικές διαταραχές

όπου εκδηλώνεται απώλεια ελέγχου και άρα μη περιοριστική ανορεξία ή ανορεξία

με βουλιμικές συμπεριφορές ή κανονικές βουλιμίες,

σε αυτές τις συμπεριφορές

κρύβεται πάντα μία βαθιά οργή:

το υποκείμενο είναι παθητικό,

μοιάζει να μην αντιδρά

αλλά όταν επιδίδεται σε μία πράξη

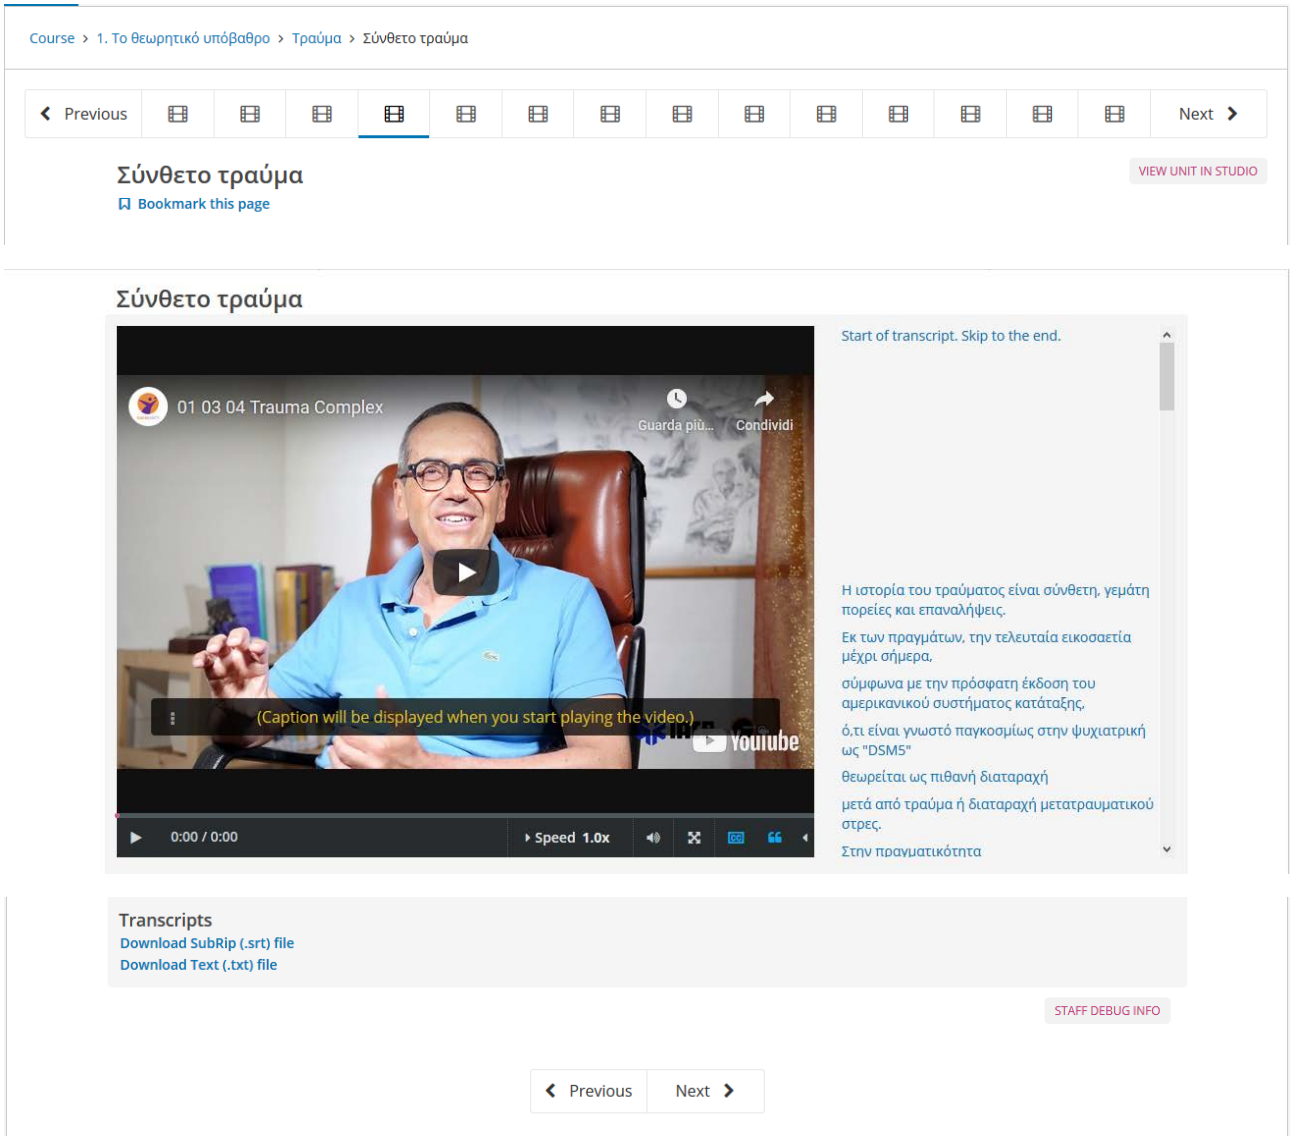
γίνεται αντιληπτή σε αυτόν

μία έντονη οργή,

όπως εκδηλώσεις επιθετικότητας προς τα έξω

αν και πολύ συγκρατημένες,

αλλά όταν το υποκείμενο έχει έντονα συναισθήματα μπορεί να εκφράσει
την βαθιά οργή του με τη μορφή ταραχής που έχει ως συνέπεια
ακόμα και βίαιες συμπεριφορές απέναντι στον εαυτό του ή στους άλλους.
Το υποκείμενο εκδηλώνει μια θλίψη συνεχή, όχι περιοδική αλλά σταθερή
μέσα του
σαν να υπάρχει
ένα παιδικό τραύμα που προκαλεί μία συνεχή παύση
η οποία με τη σειρά της προκαλεί μια αίσθηση απελπισίας
που οδηγεί σε θλίψη η οποία διαρκεί
μια ολόκληρη ζωή.
Πρόκειται, όπως είπαμε, για μικρά τραύματα
που συσσωρεύονται αλλά ονομάζονται
και σύνθετα τραύματα ή σχεσιακά τραύματα καθώς εξαρτώνται
από μια σειρά συνεχιζόμενων σχέσεων απέναντι στους άλλους.
Άρα στη ζωή κάποιου είναι πιθανό
όποιος έχει υποστεί αυτά τα τραύματα να έχει βιώσει στο οικιακό περιβάλλον,
και κυρίως στο οικογενειακό,
πολύ έντονες τραυματικές εμπειρίες.
Είναι διαρκή τραύματα που επαναλαμβάνονται και προκαλούν τα γνωστά μας διασχιστικά συμπτώματα
ή συναισθηματικές προσαρμογές.



Transcript

Η ιστορία του τραύματος είναι σύνθετη, γεμάτη πορείες και επαναλήψεις.

Εκ των πραγμάτων, την τελευταία εικοσαετία μέχρι σήμερα,

σύμφωνα με την πρόσφατη έκδοση του αμερικανικού συστήματος κατάταξης,

ό,τι είναι γνωστό παγκοσμίως στην ψυχιατρική ως "DSM5"

θεωρείται ως πιθανή διαταραχή

μετά από τραύμα ή διαταραχή μετατραυματικού στρες.

Στην πραγματικότητα

η προσοχή των ερευνητών,

πρωτίστως του Βαν ντερ Κολκ που εγκαινίασε

το σύνθετο ζήτημα του τραύματος,

η προσοχή των ερευνητών στράφηκε στα παιδικά τραύματα

που πραγματοποιούνται σε μία ηλικία κατά την οποία
το υποκείμενο
βρίσκεται σε θέση αδυναμίας
και κατωτερότητας, όπως ακριβώς η θέση των μικρών παιδιών.
Αυτός ο τύπος
τραυματικής κατάστασης, τα γεγονότα στα οποία εκτίθεται το μικρό παιδί,
από ψυχοπαθολογική αλλά και νευροβιολογική άποψη,
θεωρείται ως πιθανή προδιαθεσιακή αιτία της ανάπτυξης ψυχιατρικών διαταραχών
πέρα από τα όρια της διαταραχής μετατραυματικού στρες.
Αυτά
τα φαινόμενα
βρεφικών
τραυμάτων
είναι ποικίλου τύπου: μπορεί να είναι οξέα,
παρατεταμένα και επαναλαμβανόμενα στη βρεφική ηλικία
και χαρακτηρίζονται,
ακριβώς, ως κακοποιήσεις
όταν είναι τραυματικά φαινόμενα που αφορούν είτε μια πράξη,
όταν δηλαδή κάνουμε κάτι στο παιδί, όπως οι βρεφικές κακοποιήσεις,
η άσκηση σεξουαλικής ή σωματικής βίας ή η ψυχολογική άσκηση βίας,
είτε μπορεί να αφορούν
μια παράλειψη,
δηλαδή να οφείλονται σε ένα είδος παραμέλησης (neglect)στην παροχή ψυχολογικής
αλλά και σωματικής φροντίδας
στο παιδί οδηγώντας
σε γεγονότα
και καταστάσεις κακομεταχείρισης.
Άρα η κακομεταχείριση και η κακοποίηση είναι φαινόμενα με τα οποία θα ασχοληθούμε
μιλώντας για το σύνθετο τραύμα.
Το σύνθετο τραύμα ή, κατά άλλους, το πρωταρχικό αναπτυξιακό τραύμα,
που συχνά οφείλεται στην αποτυχία
των μορφών

πρωταρχικής φροντίδας,

δηλαδή, των γονέων,

για παράδειγμα.

Επίσης, ονομάζεται και σωρευτικό τραύμα, και ο ψυχαναλυτής Μασούντ Καν ασχολήθηκε

με αυτή την πτυχή του τραύματος: πολλά μικρά γεγονότα ή καταστάσεις τραυματικές

από πράξεις ή παραλείψεις επαναλαμβάνονται κατά τη βρεφική ηλικία οδηγώντας,

σωρευτικά, σε ένα κλίμα ή μια διάσταση τραυματική

την οποία το υποκείμενο θα νοιώσει εκ νέου

στην ενήλικη ζωή του όταν συναντήσει μία δυσκολία,

ένα πρόβλημα ή ένα άλλο τραύμα που θα θυμίζει το προγενέστερο τραύμα.

Ωστόσο, αυτό το προγενέστερο τραύμα είναι σύνθετο, ή μάλλον πολυσύνθετο, και μπορεί

να εκτείνεται χρονικά σε μία περίοδο

πολύ σημαντική και πολύχρονη, ακόμα και σε ολόκληρη την παιδική ηλικία.

Αρκεί να σκεφτούμε καταστάσεις όπου οι οικογένειες

στις οποίες βιώνεται ένα παρατεταμένο κλίμα

φόβου ή βίας εξαιτίας διαταραχών ή προβλημάτων των γονέων,

είτε του ενός είτε του άλλου,

οι οποόι δεν εγγυώνται την ανεμελιά, την αίσθηση ασφάλειας και προστασίας

που όμως είναι πολύ σημαντικές ώστε το παιδί να αναπτύξει

τη λεγόμενη

βασική εμπιστοσύνη που θα του χρησιμεύσει στη μετέπειτα ζωή του ώστε να σχετίζεται

με τους άλλους με τρόπο ήρεμο, ανοιχτό και γεμάτο εμπιστοσύνη.

Το υποκείμενο μπορεί να μην το συνειδητοποιεί αυτό γιατί όλες τις καταστάσεις

μπορεί, λίγο ως πολύ, να τις απωθήσει ή να τις ξεχάσει

και άρα

μπορεί

απλώς

αυτές να ενεργούν εκ των έσω, υπογείως,

ώσπου τελικά θα κληθεί το υποκείμενο να "πληρώσει τον λογαριασμό"

γιατί ανέρχεται στην επιφάνεια αυτή η κατάσταση

με τρόπο ενίοτε εκρηκτικό

και κάτι στην ενήλικη ζωή του υποκειμένου συμβάλλει

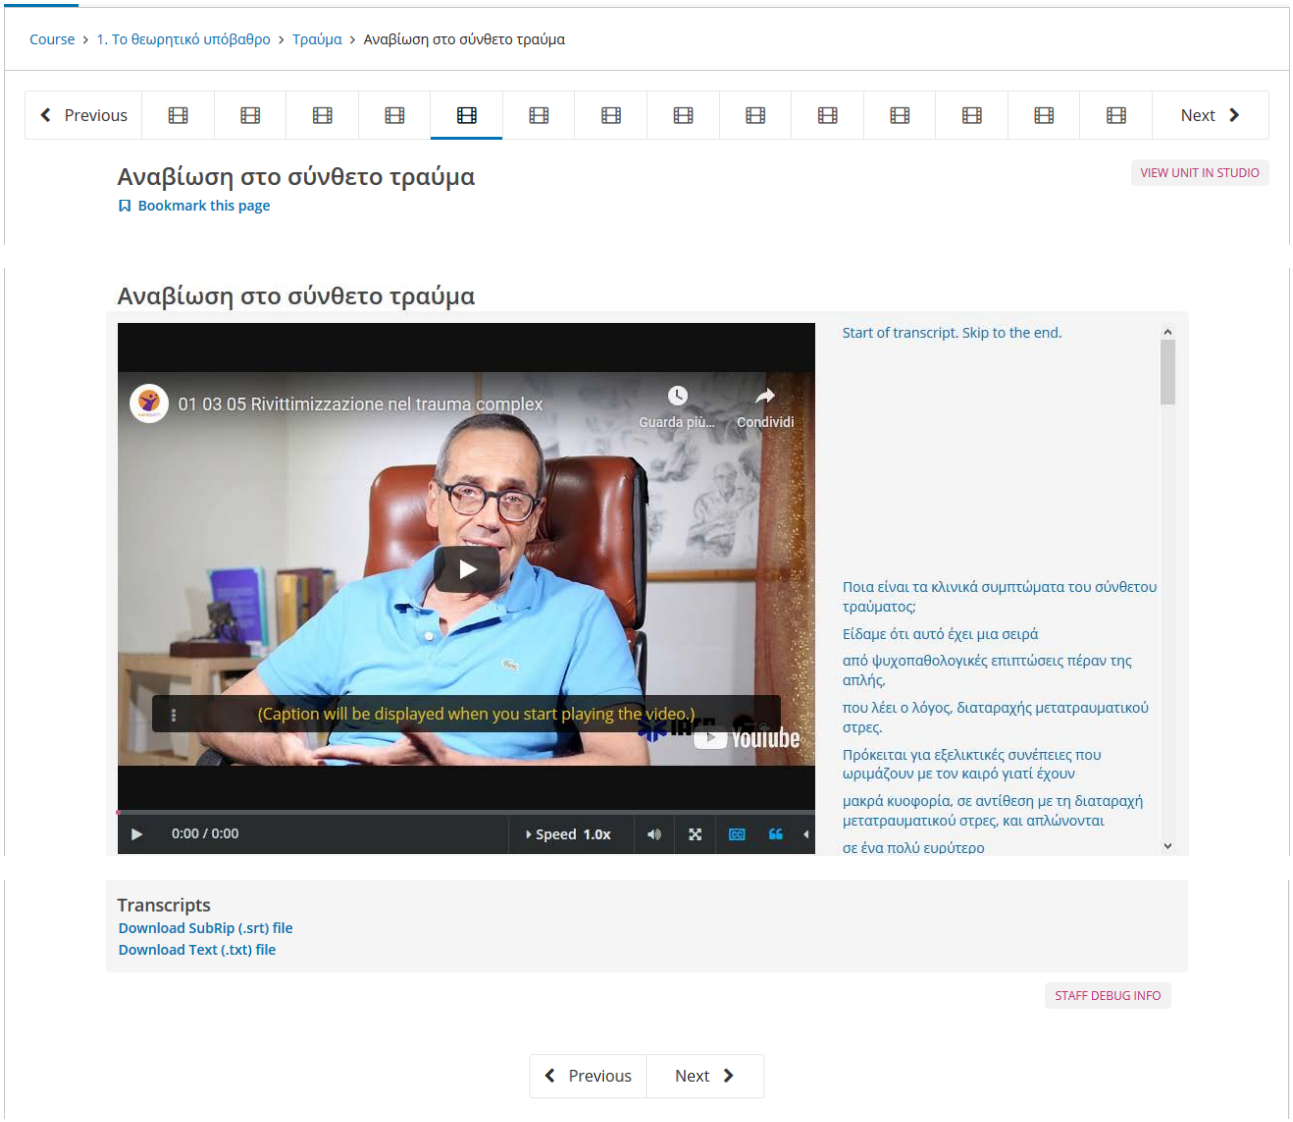
στην αποδόμηση του συναισθηματικού κλίματος

και στη δυσφορία του υποκειμένου, επαναφέροντας έτσι

το σενάριο του τραύματος του παρελθόντος.

Κι αυτό γιατί, όπως είπα, το νέο τραύμα μπορεί να προσελκύσει και να ανακαλέσει

το τραύμα του παρελθόντος, σε μια ολέθρια έλξη.



Transcript

Ποια είναι τα κλινικά συμπτώματα του σύνθετου τραύματος;

Είδαμε ότι αυτό έχει μια σειρά

από ψυχοπαθολογικές επιπτώσεις πέραν της απλής,

που λέει ο λόγος, διαταραχής μετατραυματικού στρες.

Πρόκειται για εξελικτικές συνέπειες που ωριμάζουν με τον καιρό γιατί έχουν

μακρά κυοφορία, σε αντίθεση με τη διαταραχή μετατραυματικού στρες, και απλώνονται

σε ένα πολύ ευρύτερο

φάσμα παθολογικών δυνατοτήτων,

όπως είναι οι διαταραχές

της συναισθηματικής ρύθμισης,

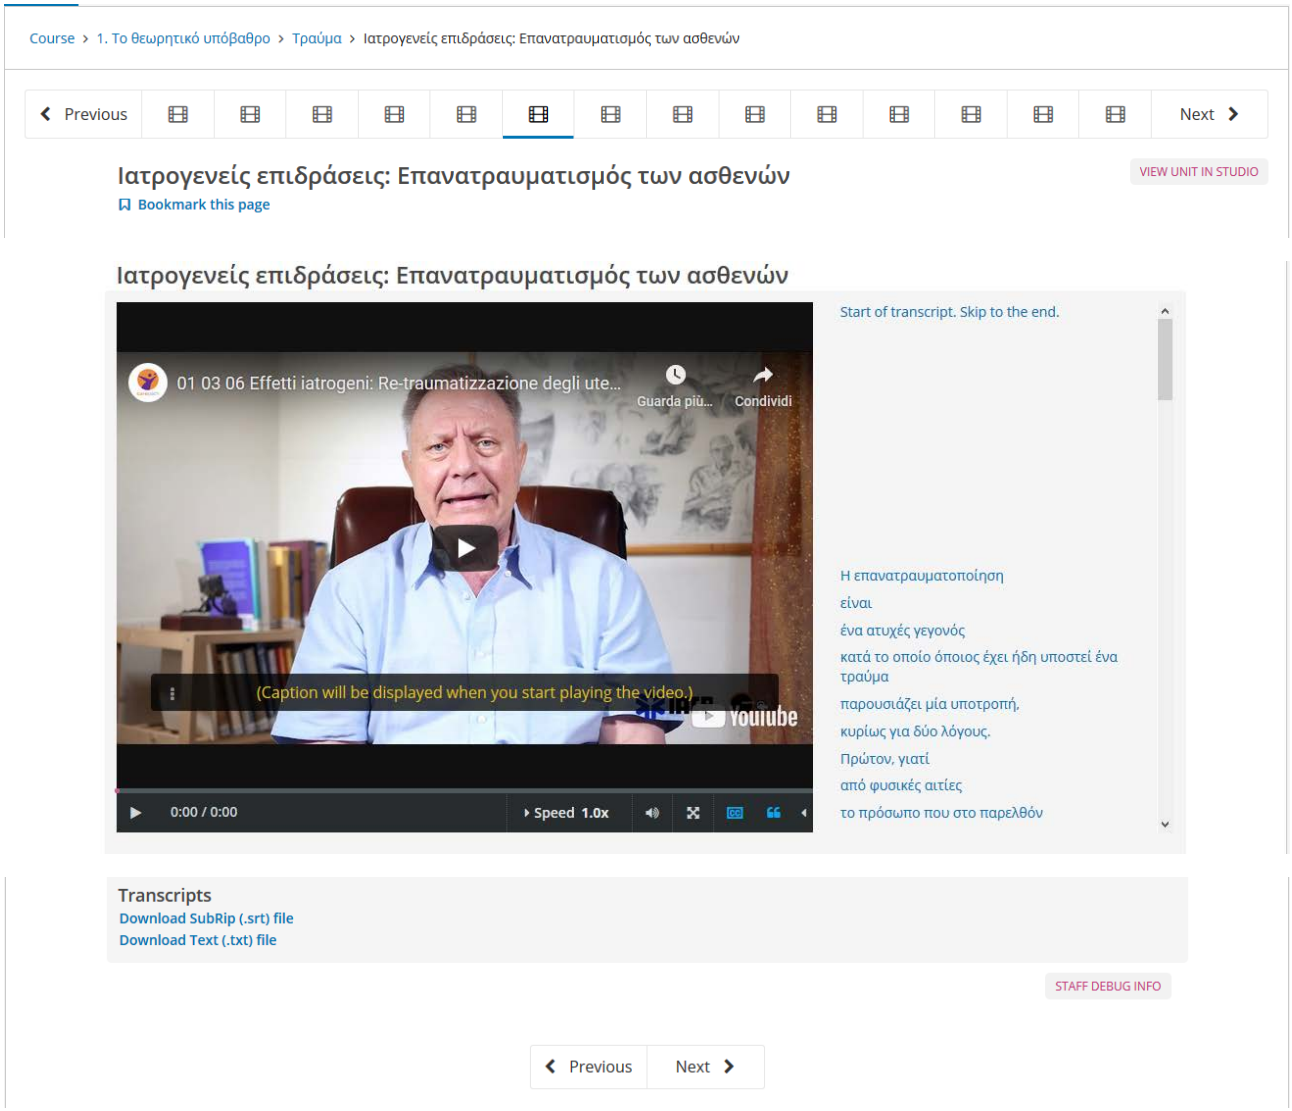
της συναισθηματικότητας

και της συμπεριφοράς.

Αυτό σημαίνει ότι συχνά αυτά τα άτομα,
που έχουν υποστεί κάποιο σύνθετο τραύμα,
αναπτύσσουν μία παρορμητικότητα που δεν οφείλεται στον χαρακτήρα τους
αλλά σε μία διαταραχή που ελέγχει τις παρορμήσεις. Αυτή μπορεί να εντοπιστεί
και να ενεργοποιηθεί
σε βίαιες συμπεριφορές προς τους άλλους ή προς τον εαυτό μας,
σε συμπεριφορές χρήσης ουσιών
με παρορμητικό τρόπο και άρα αφορά σε τοξικομανείς
και στον αλκοολισμό.
Ένας άλλος πολύ σημαντικός τομέας
αφορά τη συναισθηματική ρύθμιση υπό την έννοια
της αυτοεκτίμησης, της δυνατότητας κάποιου να εγκαθιδρύσει
μία βασική εμπιστοσύνη
στον εαυτό του
αλλά και πιθανές ενοχές, σε λανθάνουσα μορφή,
που φέρει μέσα του ήδη από τη βρεφική ηλικία. Σημειεώνουμε ότι ένα παιδί
που υφίσταται κακοποίηση, σεξουαλική, για παράδειγμα, συχνά νιώθει ένοχο
ότι διέπραξε κάτι πρόστυχο και δεν θα μπορέσει να αποδώσει σωστά την ευθύνη
για όσα συνέβησαν στον ενήλικα, ο οποίος εξακολουθεί την κακοποίηση.
Αυτές οι ενοχές μπορούν να αναπτυχθούν, να οδηγήσουν
σε μια καταθλιπτική ευάλωτη κατάσταση.
Η μεγαλύτερη κατάθλιψη μπορεί να επέλθει στην ενήλικη ζωή ως επακόλουθο
ενός σύνθετου τραύματος.
Άλλα πολύ σημαντικά επακόλουθα είναι οι ψυχοσωματικές διαταραχές.
Όντως, ένα τραύμα μπορεί να έχει συνέπειες σε σωματκό επίπεδο,
όπως είναι η σωματική αντιδραστικότητα, ακόμα και σε υπερβολικό βαθμό,
σε καρδιαγγειακό επίπεδο, όπως καρδιοπάθειες και υπέρταση,
η ρύθμιση του πόνου και των ορίων του,
όπως οι διάχυτοι πόνοι σε όλο το σώμα,
η υπερευαισθησία στα ερεθίσματα πόνου
και οι διάφορες σεξουαλικές διαταραχές
οι οποίες, από ψυχοσωματική άποψη,

συνδέονται με διαταραχές στον έλεγχο των παρορμήσεων
που οδηγούν σε ουσιαστικές διαστροφές
και άρα σε προβλήματα μη ελέγχου των σεξουαλικών παρορμήσεων.
Τέλος, σημειώνουμε τις διασχιστικές διαταραχές,
όπως η αποπροσωποποίηση και η αποπραγματοποίηση, φαινόμενα που σήμερα ταυτίζονται
με κάποια δυσκολία αλλά εκδηλώνονται με μια αίσθηση αποξένωσης
που βιώνει το υποκείμενο απέναντι στην πραγματικότητα
και απέναντι στον εαυτό του.
Αυτοί είναι μηχανισμοί άμυνας
απέναντι σε μία πραγματικότητα που για το υποκείμενο είναι ανυπόφορη
και δεν μπορεί να νιώθει ότι τη βιώνει.
Άρα διάσχιση σημαίνει τήρηση αποστάσεων από την πραγματικότητα.
Ο Φρόιντ είχε επισημάνει
αυτόν τον μηχανισμό,
θεμελιώδη για την "καταναγκαστική επανάληψη" όπου το υποκείμενο αποζητά το ίδιο τραύμα,
όχι τόσο
για να υποστεί και πάλι
τις αρνητικές επιπτώσεις του αλλά για να προσπαθήσει να το ξεπεράσει.
Αυτή η προσπάθεια να ξεπεράσει το τραύμα σημαίνει ότι μερικές συμπεριφορές
του υποκειμένου
μπορούν να οδηγήσουν στην αναβίωση καταστάσεων: κλασική η περίπτωση του παιδιού,
του θύματος ενός θύτη, που μπορεί να επανέλθει στην ενήλικη ζωή
σε ρόλους
ταυτόσημους ή και αντίστροφους.
Ο ενήλικας μπορεί να προσπαθήσει
να θυματοποιηθεί εκ νέου, δηλαδή, να δημιουργήσει καταστάσεις
που θα βιώσει και πάλι ως θύμα
των επιπτώσεων
των πράξεων
άλλων προσώπων ή να επιδοθεί σε συμπεριφορές για τις οποίες ο ίδιος
λειτουργεί ως θύτης απέναντι σε ένα θύμα.
Αυτό μπορεί να συμβεί, για παράδειγμα,

όταν ένα παιδί έχει υποστεί σεξουαλική βία και μάλιστα σε πιο προχωρημένη ηλικία,
στην εφηβεία ή στην ενήλικη ζωή.
Είναι μία κατάσταση που αναβιώνει,
για παράδειγμα, σε έναν βιασμό,
στην άσκηση σεξουαλικής βίας
σε μία γυναίκα
που μπορεί να έχει βιώσει
σε πρώτο πρόσωπο ως θύτης ή να επανέλθει ως θύμα,
δημιουργώντας μία κατάσταση
όπου, ακόμα και σε αντιτιθέμενους ρόλους, το τραύμα βιώνεται εκ νέου σε μια προσπάθεια
υπέρβασής του στη λεγόμενη "καταναγκαστική επανάληψη" του Φρόιντ.



Transcript

Η επανατραυματοποίηση

είναι

ένα ατυχές γεγονός

κατά το οποίο όποιος έχει ήδη υποστεί ένα τραύμα

παρουσιάζει μία υποτροπή,

κυρίως για δύο λόγους.

Πρώτον, γιατί

από φυσικές αιτίες

το πρόσωπο που στο παρελθόν

υπέστη ψυχικό τραύμα

εκτίθεται

σε εικόνες ή γεγονότα

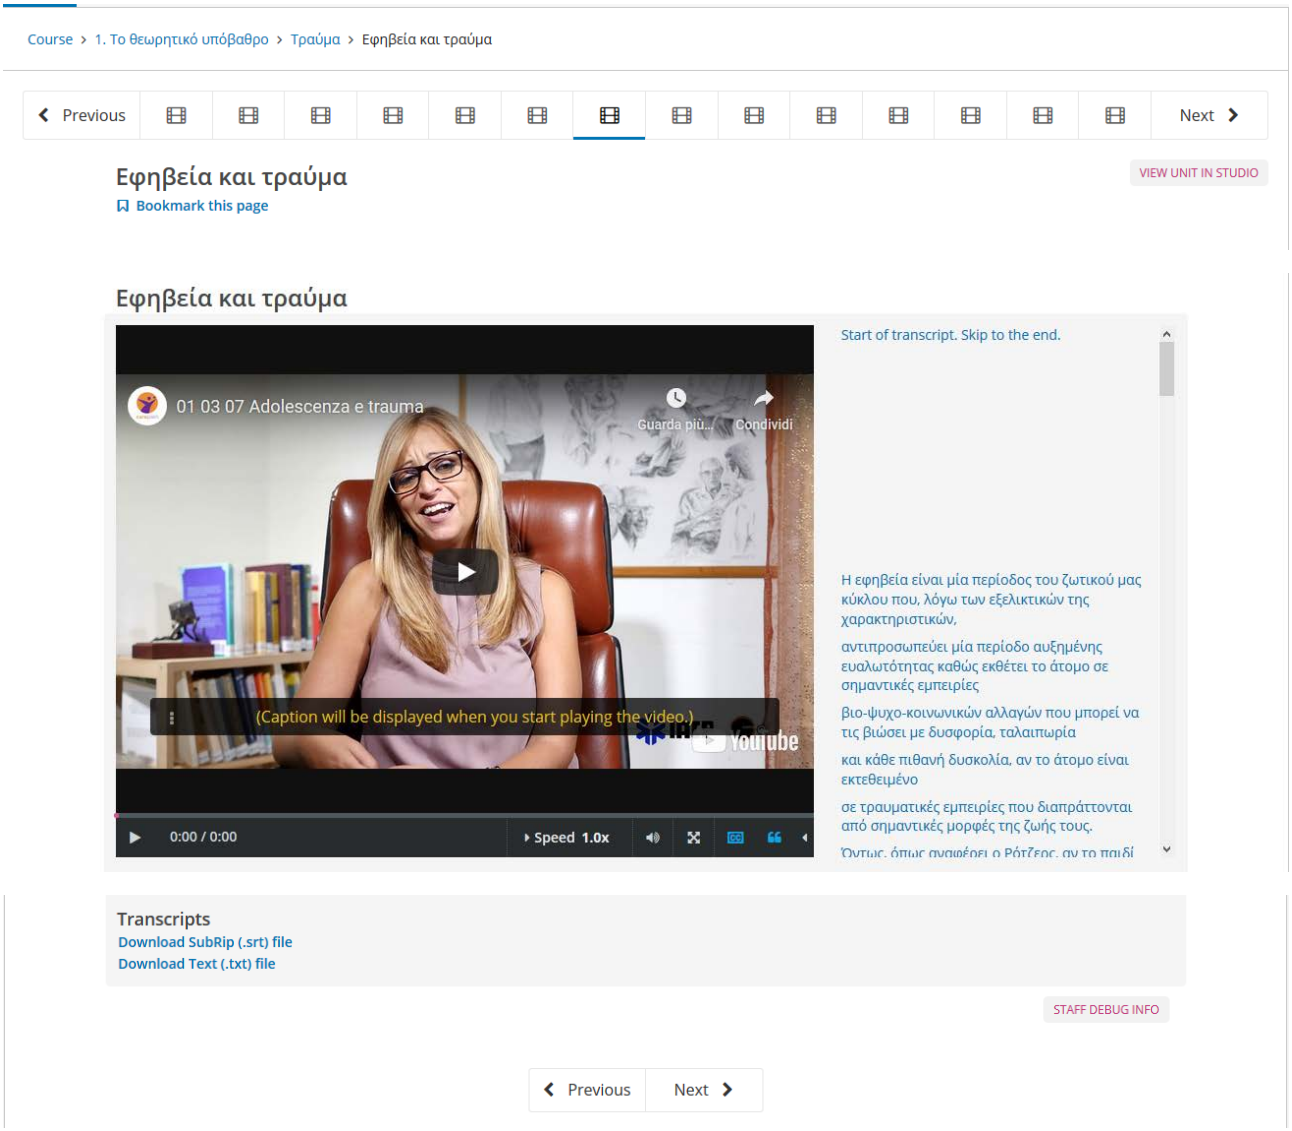
όπου άλλοι είναι θύματα τραύματος και έτσι
το υποκείμενο αναβιώνει
το τραύμα που έχει υποστεί στο παρελθόν.
Ο δεύτερος λόγος,
αντίθετα,
είναι
ένας τύπος επανατραυματοποίησης
που
έχει
ιατρογενή προέλευση,
δηλαδή,
οι θεραπείες
παρέχονται με τρόπο
μη λειτουργικό,
ίσως
όχι από κακή πρόθεση των θεραπευτών
αλλά από απλή άγνοια
του γεγονότος ότι το πρόσωπο που έχει υποστεί τραύμα,
αντί να βοηθηθεί
από την φροντίδα και τις παρεχόμενες θεραπείες,
τελικά
υφίσταται
ακόμα μεγαλύτερο τραύμα.
Με δυο λόγια,
συμβαίνει
όπως όταν
ένα πρόσωπο
προσέρχεται
στα Επείγοντα Περιστατικά
με ένα σπασμένο πόδι
και οι γιατροί δεν κάνουν σωστή διαχείριση
με αποτέλεσμα ο ασθενής να πέσει

από το φορείο και να σπάσει και τα δύο πόδια, διπλασιάζοντας το πρόβλημα,
αληθινή τραγωδία, δηλαδή.
Η ιστορία και η κοινωνιολογία
των θεραπειών
του τραύματος
αποκαλύπτουν ότι, δυστυχώς,
ήταν πολύ σύνηθες στο παρελθόν,
προφανώς από κακή πρόθεση αλλά και άγνοια,
να προκαλούνται
τέτοιου είδους βλάβες,
με ιατρογενή αποτελέσματα.
Οι θεραπείες σε όλο το φάσμα τους,
επειδή αφορούν το σύνθετο και ευαίσθητο σύστημα ενός ανθρώπου,
υπάρχει κίνδυνος να έχουν αποτελέσματα όχι μόνο θετικά αλλά και, ακούσια,
να επιφέρουν περαιτέρω βλάβη. Αυτό ισχύει στα φάρμακα, στις χειρουργικές επεμβάσεις
και σε κάθε τύπο σχέσης βοήθειας,
οι οποίες, αν δεν παρασχεθούν με αποτελεσματικό τρόπο,
γίνονται
αντιπαραγωγικές.
Σε ό,τι αφορά το τραύμα, αυτό είναι πολύ σοβαρό γιατί όποιος έχει δεχθεί τραύμα
είναι ιδιαίτερα
ευαίσθητος
και μπορεί να υποστεί σημαντική βλάβη με μία δεύτερη τραυματοποίηση.
Για αυτό κι εμείς σήμερα
έχουμε μάθει από τα λάθη μας, οι έρευνες έχουν αυξηθεί κατά πολύ
και διαθέτουμε
μία ευρεία γνώση
η οποία φυσικά θα επαυξάνεται στο μέλλον
ώστε να μη διακινδυνεύουμε την επανατραυματοποίηση
όσων έχουν ήδη υποστεί τραύμα.
Αυτές οι προφυλάξεις είναι συγκεκριμένες διαδικασίες
το λεγόμενο "trauma inform",

που επικεντρώνονται στο πρόσωπο του υποκειμένου

που έχει υποστεί τραύμα

και φροντίζουν να μην προκαλέσουν άλλες βλάβες.



Transcript

Η εφηβεία είναι μία περίοδος του ζωτικού μας κύκλου που, λόγω των εξελικτικών της χαρακτηριστικών,
αντιπροσωπεύει μία περίοδο αυξημένης ευαλωτότητας καθώς εκθέτει το άτομο σε σημαντικές εμπειρίες
βιο-ψυχο-κοινωνικών αλλαγών που μπορεί να τις βιώσει με δυσφορία, ταλαιπωρία
και κάθε πιθανή δυσκολία, αν το άτομο είναι εκτεθειμένο
σε τραυματικές εμπειρίες που διαπράττονται από σημαντικές μορφές της ζωής τους.
Όντως, όπως αναφέρει ο Ρότζερς, αν το παιδί μεγαλώσει σε ευνοϊκό περιβάλλον,
θα μπορέσει να μην αναπαράξει, να μην καταπνίξει όσα νοιώθει
και να μην παγώσει τις δραματικές εμπειρίες αλλά να κινηθεί στην πραγματικότητα ικανοποιώντας
τις ανάγκες του και αξιολογώντας τις εμπειρίες ως ευχάριστες ή δυσάρεστες
αναλόγως αν είναι ευνοϊκές ή όχι για την ανάπτυξή του, με εγγενή τη λεγόμενη, κατά Ρότζερς,
τάση επικαιροποίησης, που είναι η ικανότητα αυτοκατανόησης, αυτορρύθμισης και αυτοπραγμάτωσης.
Αντίθετα, αν το παιδί ζει σε ένα περιβάλλον όπου νιώθει ότι η εκτίμηση του αδύναμου

εξαρτάται αποκλειστικά από το πόσο μπορεί να ανταποκριθεί στις απαιτήσεις,
αυτό ίσως το οδηγήσει να "ακρωτηριάσει" αναγκαστικά ένα μέρος του εαυτού του
και να αντιμετωπίσει
την πραγματικότητα οικοδομώντας άκαμπτα κατασκευάσματα,
τα οποία γίνονται ακόμα πιο άκαμπτα
αν οικοδομηθούν με μια συνεχή αίσθηση ασάφειας, απειλών και φόβου, αν το παιδί
μεγαλώνει σε περιβάλλον με εντάσεις.
Σε αυτόν τον βαθύ πυρήνα αποξένωσης μεταξύ της αντίληψης, της βίωσης, του συμβολισμού
και της δράσης δημιουργείται και ενισχύεται η αίσθηση αποξένωσης από τον εαυτό του
στην οποία βασίζεται η αιτιοπαθογένεια.
Άρα βλέπουμε ότι ο έφηβός μας, που μεγάλωσε και ανατράφηκε στο δικό του πλαίσιο σχέσεων,
εκτίθεται στις εξελικτικές αλλαγές στις οποίες αναφερθήκαμε παραπάνω
και όλες αυτές οι καθοριστικές αλλαγές απαιτούν έναν εσωτερικό επανεκσυγχρονισμό,
έναν επανασυγχρονισμό που αφορά το ίδιο το άτομο και τις πιο σημαντικές σχέσεις του
και προϋποθέτει το υποκείμενο να ανακτήσει μία ισορροπία εξίσου ευέλικτη και δυναμική
απέναντι στις εμπειρίες που βιώνει, αλλά και συνεπή στην αίσθηση ταυτότητας που έχει διαμορφώσει
ως εκείνη τη στιγμή. Όλ αυτά απαιτούν έναν επαναπροσδιορισμό της έννοιας
του εαυτού του.
Ας δούμε ποιες είναι αυτές οι αλλαγές που αντιμετωπίζει ο έφηβος.
Η πρώτη από όλες αφορά σαφώς το σώμα: το σώμα του εφήβου είναι
ένα σώμα σε εξέλιξη, με αύξηση βάρους, εμφάνιση δευτερευόντων σεξουαλικών οργάνων
και οργάνων αναπαραγωγής και άρα είναι ένα σώμα που απαιτεί ένα νέο είδος σχέσης με αυτό,
ένα σώμα που ο έφηβος χρησιμοποιεί ως πρωτογενές και ενδιάμεσο όχημα
για να δηλώσει προς τα έξω τα βιώματά του.
Ένα σώμα, λοιπόν, που επιλέγει να το φροντίσει, να το εξωραΐσει,
αλλά και να το γρατζουνίσει, να το χαράξει,
να το ξεχάσει, που επιλέγει να μιλήσει για τον εαυτό του μέσα από αυτό.
Ταυτόχρονα είναι ένα σώμα ορατό στους γύρω του, που αιχμαλωτίζει το βλέμμα των άλλων,
με επιθυμία ή χλευασμό, και εκθέτει τον έφηβο σε νέες εμπειρίες,
νέες ευκαιρίες αλλά και νέους κινδύνους.
Υπάρχουν, επίσης, αλλαγές σε διαπροσωπικό επίπεδο.
Στην οικογένεια τού ζητείται να περάσει από την εξάρτηση, τη φάση φροντίδας και προσκόλλησης,

στην αυτονομία και την αναζήτηση ισορροπίας μεταξύ αυτών των δύο φαινομενικά αντίθετων εξελικτικών ωθήσεων που έχουν αντίκτυπο σε κοινωνικό επίπεδο. Στο εξωτερικό περιβάλλον αλλάζει ο ρόλος του νεαρού στην ομάδα των ομοίων του με άλλες σημαντικές μορφές. Επιπλέον, σημειώνονται αλλαγές σε εγκεφαλικό επίπεδο, όπως έχουν αποδείξει όλες οι πρόσφατες έρευνες.

Ο εγκέφαλος μεταβάλλεται σε επίπεδο δομικό και λειτουργικό κυρίως στις περιοχές του φλοιού που αφορούν τις διαδικασίες λήψης αποφάσεων. Όλα αυτά προκαλούν μία έντονα ευάλωτη κατάσταση που, όπως είπαμε, γίνεται ακόμα εντονότερη, αν το υποκείμενο βιώνει τραυματικές εμπειρίες που υπονομεύουν ή βλάπτουν την εσωτερική αίσθηση ασφάλειας, τη σίγουρη βάση, κατά Μπόουλμπι, όπου κατοικεί η συναισθηματική μας ασφάλεια και νιώθουμε, ορίζουμε, ικανοποιούμε τις ανάγκες μας. Εκεί δεν μπορούμε πάντα να επιστρέφουμε αλλά μπορούμε να βιώσουμε την πολύτιμη εμπειρία της αυξανόμενης αυτονομίας χωρίς να χάσουμε την αγάπη. Αντίθετα, γινόμαστε πλουσιότεροι γνωρίζοντας τους άλλους ανθρώπους.

Από την άλλη, όποιος έχει υποστεί τραύμα, έχει μειωμένη ικανότητα νοητικοποίησης και αυτορρύθμισης των συναισθηματικών καταστάσεων και δεν μπορεί, όπως λέει ο Μπρόμπεργκ, παρά να απομονώσει την τραυματική εμπειρία, όλα τα σχετικά με αυτή βιώματα και περιεχόμενα μέσω της διάσχισης. Η παθολογική διάσχιση, όπως αναφέρει ο Καρέτι, οδηγεί σε μαρασμό του υποκειμένου και των μέσων του γιατί δεν του επιτρέπει να ανασκευάσει τις τραυματικές εμπειρίες σε μια αφήγηση συνεκτική με την ιστορία της δικής του ζωής.

Για αυτό ακριβώς,
αν δουλεύουμε πάνω στην επαφή με τους εφήβους με συναισθηματικό στρες,
μπορούμε να εργαστούμε μαζί τους σε σημαντικό σχεσιακό βάθος,
προσφέροντάς τους σχέσεις με βάθος, βασισμένες στην ακρόαση,
στην ακρόαση με ενσυναίσθηση, στον βαθύ σεβασμό για αυτό που είναι οι έφηβοι, προσεγγίζοντας τις εμπειρίες με τη ματιά τους και προσπαθώντας να συλλάβουμε τις έννοιες που έχουν δώσει οι ίδιοι σε όσα βιώνουν και να τους προσφέρουμε πλαίσια σχέσεων όπου ο νεαρός θα μπορεί, σταδιακά, να επανασυνδεθεί με εκείνα τα κομμάτια του, με τις ανάγκες που αρνούνταν ως τώρα ώστε να τις ξανανιώσει και να επανασυντονιστεί με κάποια κομμάτια του,
με τις εξωτερικές εμπειρίες που βιώνει ως τώρα ως υπερβολικά παράφωνες.

Κάτι τέτοιο είναι δυνατό, αν τους προσφέρουμε πλαίσια σχέσεων στα οποία τους βλέπουμε

με βλέμμα διαφορετικό που δεν τους κολλά την ετικέτα

του νέου σε διαρκή επανάσταση και πάλη με τον εξωτερικό κόσμο ή της απαθούς μορφής

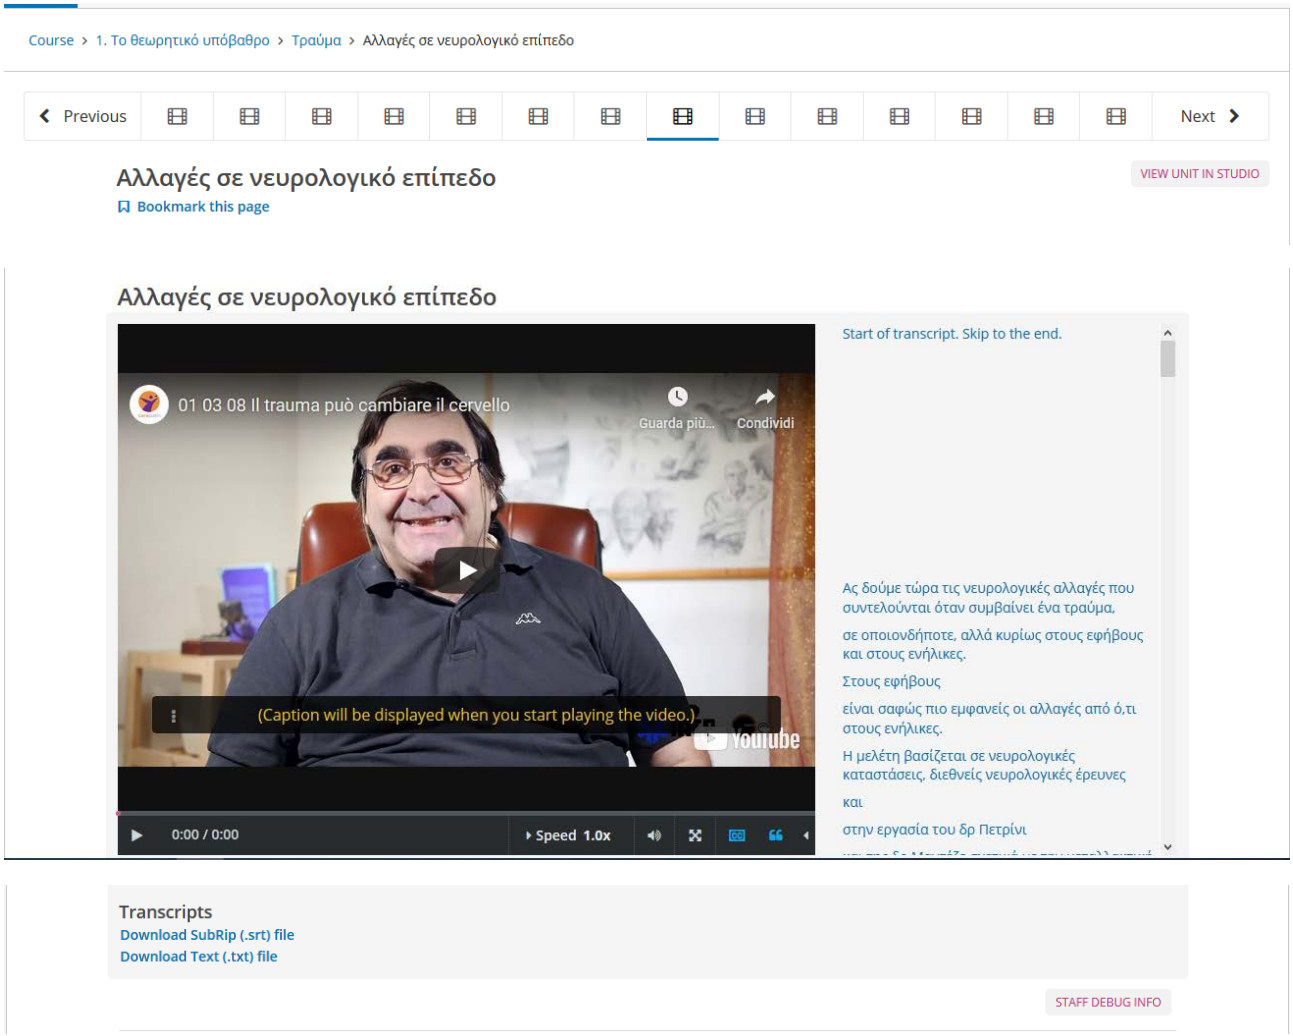
που αφυπνίζεται μόνο από τα κοινωνικά δίκτυα, αλλά τους βλέπουμε ως νέους με χαρακτηριστικά

και εργαλεία ανάλογα των εξελικτικών τους φάσεων, οι οποίοι κινούνται στον κόσμο με περιέργεια,

θέτουν ερωτήματα, παίρνουν απαντήσεις, εξερευνούν, προσπαθούν να υποκειμενοποιήσουν τις εμπειρίες τους,

ώστε στη συνέχεια να σταθούμε κι εμείς ως ενήλικες σε όλη την υπόλοιπη ζωή μας

και να τους προσεγγίζουμε πάντα με ένα βλέμμα που να τους υποστηρίζει.



Transcript

Ας δούμε τώρα τις νευρολογικές αλλαγές που συντελούνται όταν συμβαίνει ένα τραύμα,

σε οποιονδήποτε, αλλά κυρίως στους εφήβους και στους ενήλικες.

Στους εφήβους

είναι σαφώς πιο εμφανείς οι αλλαγές από ό,τι στους ενήλικες.

Η μελέτη βασίζεται σε νευρολογικές καταστάσεις, διεθνείς νευρολογικές έρευνες

και

στην εργασία του δρ Πετρίνι

και της δρ Μαντέζε σχετικά με την μεταλλακτική ψυχαναλυτική τεχνική-διαδικασία:

μία τεχνική

εν μέρει ψυχαναλυτική και εν μέρει νευρολογική

σε απόλυτη συμφωνία

με τις διεθνείς

νευρολογικές έρευνες και τη σχέση μεταξύ νευρολογίας και ψυχανάλυσης.

Είναι γνωστό ότι κάθε άτομο σε μία κατάσταση ευημερίας

αναπτύσσει καθημερινά 1.400 νέους νευρώνες

από τα βλαστοκύτταρα

σε επίπεδο ιππόκαμπου

αλλά και σε οσφρητικό επίπεδο.

Αυτό είναι πολύ σημαντικό γιατί ο ιππόκαμπος είναι το κεντρικό τμήμα της μνήμης

στον οργανισμό μας

που ανακαλείται σε παρόμοιες καταστάσεις, δηλαδή, σε καταστάσεις τραύματος,

ενώ σε οσφρητικό επίπεδο

παρατηρούμε

ότι οι λοβοί του εγκεφάλου μας

δεν είναι

παρά μία αναστροφή του οσφρητικού μας λοβού.

Τα ζώα λειτουργούν με την όσφρηση

κι εμείς λειτουργούμε με τη σκέψη.

Άρα η σκέψη, στον άνθρωπο,

δεν είναι άλλο από την όσφρηση

που έχει διευρυνθεί και αναπτυχθεί

σε αυτά τα εγκεφαλικά κύτταρα.

Σκεφτείτε ότι ο άνθρωπος έχει περίπου 30.000 γονίδια, ελάχιστα για να ορίσουν όλες τις καταστάσεις,

άρα υπεισέρχονται και καταστάσεις οικογενειακές, συναισθηματικές, σχεσιακές, πολιτιστικές και θρησκευτικές.

Πιθανότατα μόλις το 70% των γονιδίων είναι γενετικά προκαθορισμένο

και μόλις το 30% είναι διαχειρίσιμο από τους εξωτερικούς παράγοντες.

Η διαφορά των γονιδίων

μεταξύ ενός στενόμυαλου ανθρώπου κι ενός αρσενικού μπονόμπο είναι ένα 5%.

Ωστόσο,

αν και αυτό το ποσοστό είναι αποκαλυπτικό, η εξίσωση ανθρώπου και μπονόμπο

δεν συγκρίνεται, από κάθε άποψη, σε επίπεδο συναισθημάτων και εργασίας.

Ο πολιτισμός, η θρησκεία, όλες οι εξωτερικές καταστάσεις, η οικογένεια, η κοινότητα

όπου ζούμε είναι πολύ σημαντικά για τη διαμόρφωση του ατόμου.

Τι συμβαίνει

όταν παρουσιάζεται το άγχος;

Μία κατάσταση άγχους ή παραμέλησης (η παραμέληση είναι εξίσου αγχωτική)

σταματά τη δραστηριότητα των βλαστοκυττάρων στο επίπεδο του ιππόκαμπου

και είναι αδύνατη η αντικατάσταση νευρώνων οι οποίοι, υπό κανονικές συνθήκες, χάνονται.

Συνεπώς,

υπάρχει μία απώλεια νευρώνων

στο πιο σημαντικό και βαθύ σημείο του εγκεφάλου που είναι ο ιππόκαμπος.

Η συναισθηματική και διανοητική ρύθμιση που συνοδεύει και υποστηρίζει

αυτές τις εγκεφαλικές αλλαγές

χαρακτηρίζεται

από άγχη και καταθλίψεις

που συνδέονται

με την αμυγδαλή:

ένα μικροσκοπικό σωματίδιο στο εσωτερικό του εγκεφάλου

που υποστηρίζει όλες τις συναισθηματικές και συγκινησιακές καταστάσεις μας,

από την αγάπη ως τη σεξουαλικότητα, την κατανάλωση τροφής

και όλα όσα είναι σημαντικά από συναισθηματική άποψη.

Συντελείται μία μεταβολή των προμετωπιαίων φλοιών, που κατευθύνουν τους στόχους μας.

Αν αποφασίσω να πάω στο θέατρο για να δω έναν ηθοποιό, ο προμετωπιαίος φλοιός

με ωθεί προς αυτή την πράξη και ο μετωπιαίος την πραγματοποιεί αλλά ο προμετωπιαίος φλοιός

αφορά και τις παρορμήσεις. Όταν έχω την παρόρμηση να φύγω ή να παραμείνω

σε έναν τόπο, αυτό το οφείλω στον προμετωπιαίο φλοιό, ενώ ο μετωπιαίος αντιδρά και επικοινωνεί

την ανάγκη μου να παραμείνω, για παράδειγμα, λόγω μιας υποχρέωσης.

Το τρίτο σημείο που βλάπτεται είναι, φυσικά,

ο ιππόκαμπος στη μνήμη. Όπως είπαμε,

η έδρα της μνήμης είναι ο ιππόκαμπος.

Διαμήκεις μελέτες

έχουν αποδείξει ότι τα τραύματα δεν εκφράζονται μέσω μιας διαταραχής τύπου DSM 5 ή ICD 10

που ονομάζεται διαταραχή μετατραυματικού στρες,

αλλά ενίοτε,

μέσω των συμπτωμάτων του άγχους και της κατάθλιψης,

μεταδίδονται καταστάσεις παραίσθησης και αυτό εκδηλώνεται μέσω μεταβολών

στην έννοια του εαυτού μας στο πλαίσιο των διαπροσωπικών σχέσεων.

Ένας άνθρωπος που έχει υποστεί τραύμα

έχει περιορισμούς στη συμπεριφορά αλλά και ψυχικούς περιορισμούς,

δηλαδή, το πρόσωπο μοιάζει μη ικανό

να εκφραστεί

στο εργασιακό περιβάλλον,

στις σχέσεις στοργής,

στις σχέσεις γενικά, στις δραστηριότητες.

Σαν να έχει υποβιβαστεί σε ένα χαμηλότερο

επίπεδο λειτουργίας.

Αυτό οφείλεται στο σύστημα του ιππόκαμπου, της υπόφυσης και του φλοιού των επινεφριδίων (σύστημα HPA).

Στον εγκέφαλο υπάρχει ένας αδένας που ονομάζεται

υπόφυση

από όπου ξεκινούν

όλες οι ορμόνες του οργανισμού μας.

Η σύνδεση του ενδοκρινολογικού-ορμονικού μέρους

με το νευρικό μέρος

υπαγορεύεται

από τον άξονα υποθαλάμου-υπόφυση.

Όλα όσα

φθάνουν στον υποθάλαμο, μία περιοχή θεμελιώδους σημασίας, σχεδόν ένας εγκέφαλος

μικρότερος σε σύγκριση με τον εγκεφαλικό φλοιό,

μεταδίδονται στην υπόφυση και οδηγούν

σε ορισμένες αισθήσεις, δηλαδή, το νευρικό σήμα μεταδίδεται μέσω ορμονικών ουσιών.

Αυτές οι ορμονικές ουσίες

διακλαδώνονται σε όλο τον οργανισμό,

από την υπόφυση,

και ελέγχουν

τον θυρεοειδή,

τη σεξουαλικότητα μέσω των γεννητικών αδένων, την ανδρική και γυναικεία σεξουαλικότητα

με την ανδρική ορμόνη, που καθορίζει και τη γυναικεία σεξουαλικότητα,

κι έπειτα, ιδίως,

την έκλυση της κορτικοτροπίνης: της ορμόνης, ή μάλλον της προορεμόνης του άγχους,

καθώς η κατεξοχήν ορμόνη του άγχους είναι η ACTH, η κορτιζόλη,

για αυτό η χορήγηση κορτιζόνης βοηθά τον οργανισμό να αντιδράσει σε περίπτωση σωματικών δυσλειτουργιών.

Όντως, η κορτιζόλη έχει τα ίδια στοιχεία με την κορτίνη.

Επίσης, σε περίπτωση μάχης ή πολέμου, ο ανθρώπινος οργανισμός είναι προετοιμασμένος.

Η κορτιζόλη (ACTH, για την ακρίβεια) αποτρέπει την αίσθηση του πόνου,

οδηγεί σε μηχανισμούς επιθετικότητας, όπως συμβαίνει και στα ζώα,

και αυτή η κατάσταση είναι σαφώς μια κατάσταση επιθετικότητας.

Όταν αυτός ο μηχανισμός δραστηριότητας

επαναλαμβάνεται,

γίνεται χρόνιος και προκύπτουν καταστάσεις άγχους και οδύνης,

παρατεταμένες,

οι οποίες εξαρτώνται από την αμυγδαλή που αναφέραμε παραπάνω.

Η αμυγδαλή

είναι το "κομό"

της συναισθηματικής μας μνήμης, υπό την έννοια ότι εκεί φυλλάσσονται

όλες οι συναισθηματικές αναμνήσεις, μια φωτογραφική μηχανή της συναισθηματικής πραγματικότητας.

Άρα, για παράδειγμα, το πρώτο φιλί, η πρώτη δουλειά, η πρώτη αίσθηση ευεξίας,

η πρώτη νίκη σε ένα άθλημα, είναι όλα φωτογραφημένα στην αμυγδαλή και ανασύρονται από εκεί

όταν προκύπτουν ανάλογες καταστάσεις. Τη στιγμή που ο ιππόκαμπος

αρχίζει

να απελευθερώνει κορτιζόλη,

αυτή συνδέεται με τους υποδοχείς του ιππόκαμπου, της αμυγδαλής και της προμετωπιαίας περιοχής

και, όταν φτάσει σε ικανοποιητικό επίπεδο, αν η κατάσταση δεν είναι χρόνια,

μειώνει το επίπεδο ACTH και κορτικοτροπίνης (CRF).

Με αυτό τον τρόπο ο ιππόκαμπος ρυθμίζει την ανταπόκρισή μας

στο άγχος.

Όταν, αντίθετα,

είμαστε καλά, επικρατεί η σεροτονίνη. Η σεροτονίνη είναι η ορμόνη της ευτυχίας.

Όντως ισχύει πως, όταν ένα υποκείμενο τελεί υπό κατάθλιψη,

συνταγογραφούνται σεροτονινεργικά φάρμακα.

Η σεροτονίνη

αναστέλλει τις επιθετικές συμπεριφορές και προάγει την κοινωνικοποίηση.

Παράγεται από τη θρυπτοφάνη και εισάγεται στη διατροφή.

Η σεροτονίνη, μαζί με την ωκυτοκίνη, που είναι η ορμόνη του δεσμού, είναι για τον οργανισμό

η πιο θετική και η πιο χρήσιμη ορμόνη,υπό την έννοια ότι, ενώ η σεροτονίνη διεγείρει την κοινωνικότητα

και τις σχέσεις με τους άλλους,

η ωκυτοκίνη, που εκλύεται μετά από 5 δευτερόλεπτα αγκαλιάς με κάποιον άλλο,

είναι η ορμόνη

που διεγείρει τον δεσμό.

Οι έρευνες αποκαλύπτουν ότι οι αγαπημένες δραστηριότητες,

οι σημαντικές σκέψεις και συναισθήματα έχουν

βαθιά θεραπευτική επίδραση στο σώμα μας.

Συνεπώς,

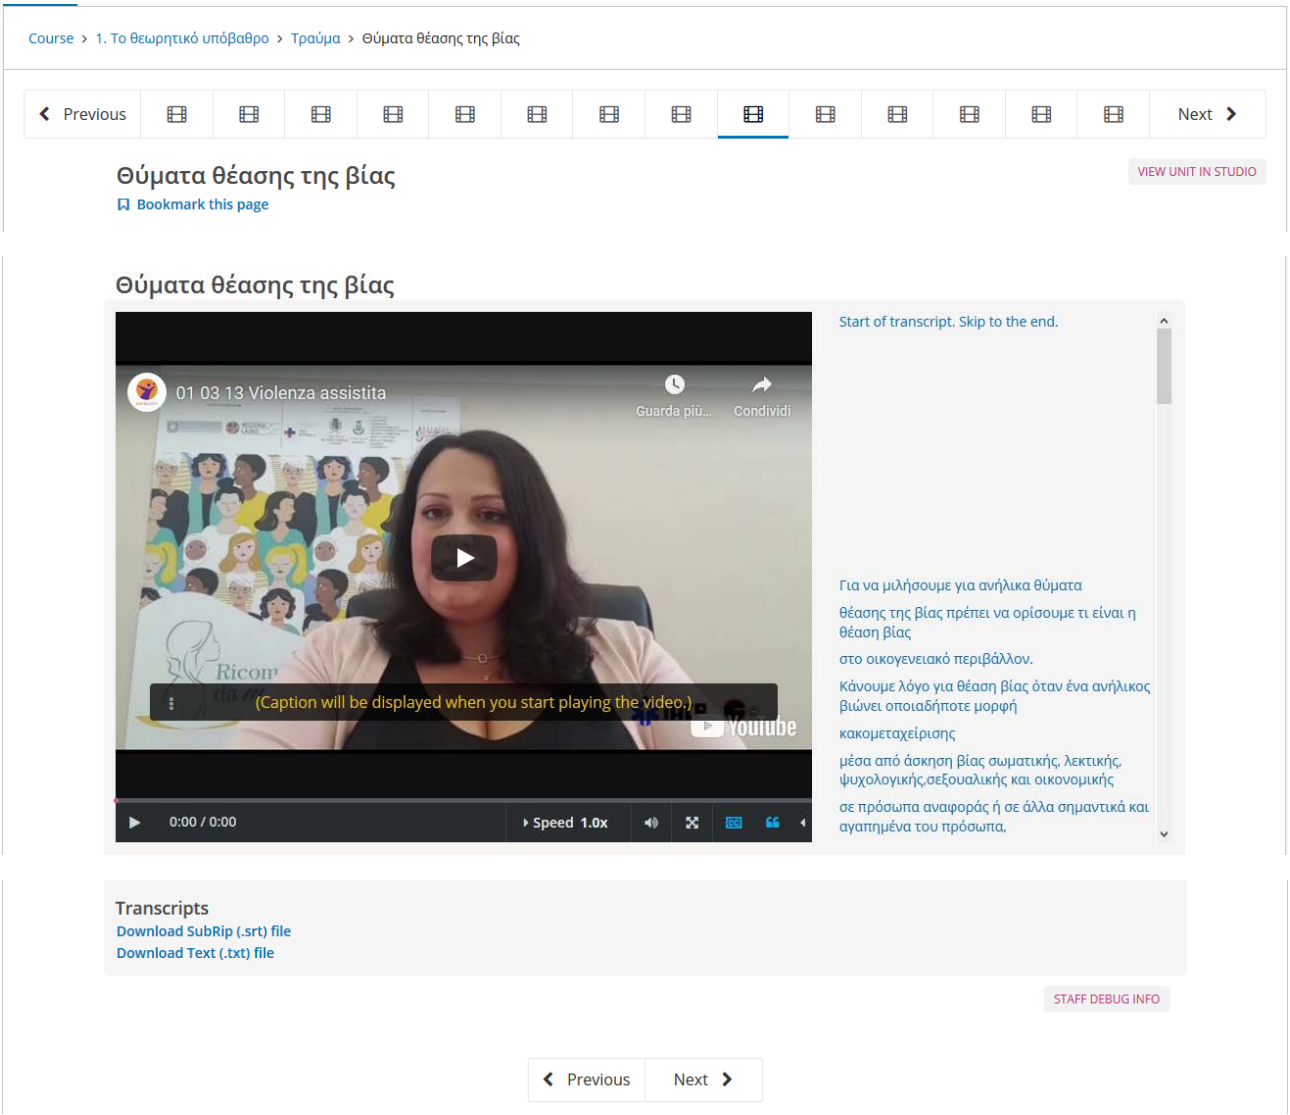
αναμφίβολα υπάρχει,

στον τρόπο ύπαρξής μας,

μια σειρά αντιδράσεων που μεταβάλλουν τον εγκέφαλο και μας ωθούν

στη μεταβολή του σώματος. Σε κάθε περίπτωση υπάρχουν ορμόνες συνδεδεμένες με τις νευροορμόνες

και τα νευρικά ερεθίσματα.



Transcript

Για να μιλήσουμε για ανήλικα θύματα

θέασης της βίας πρέπει να ορίσουμε τι είναι η θέαση βίας

στο οικογενειακό περιβάλλον.

Κάνουμε λόγο για θέαση βίας όταν ένα ανήλικος βιώνει οποιαδήποτε μορφή

κακομεταχείρισης

μέσα από άσκηση βίας σωματικής, λεκτικής, ψυχολογικής,σεξουαλικής και οικονομικής

σε πρόσωπα αναφοράς ή σε άλλα σημαντικά και αγαπημένα του πρόσωπα,

ενήλικες ή ανηλίκους.

Σε αυτό τον τύπο βίας περιλαμβάνονται και όσες ασκούνται από ανήλικο σε άλλους ανηλίκους,

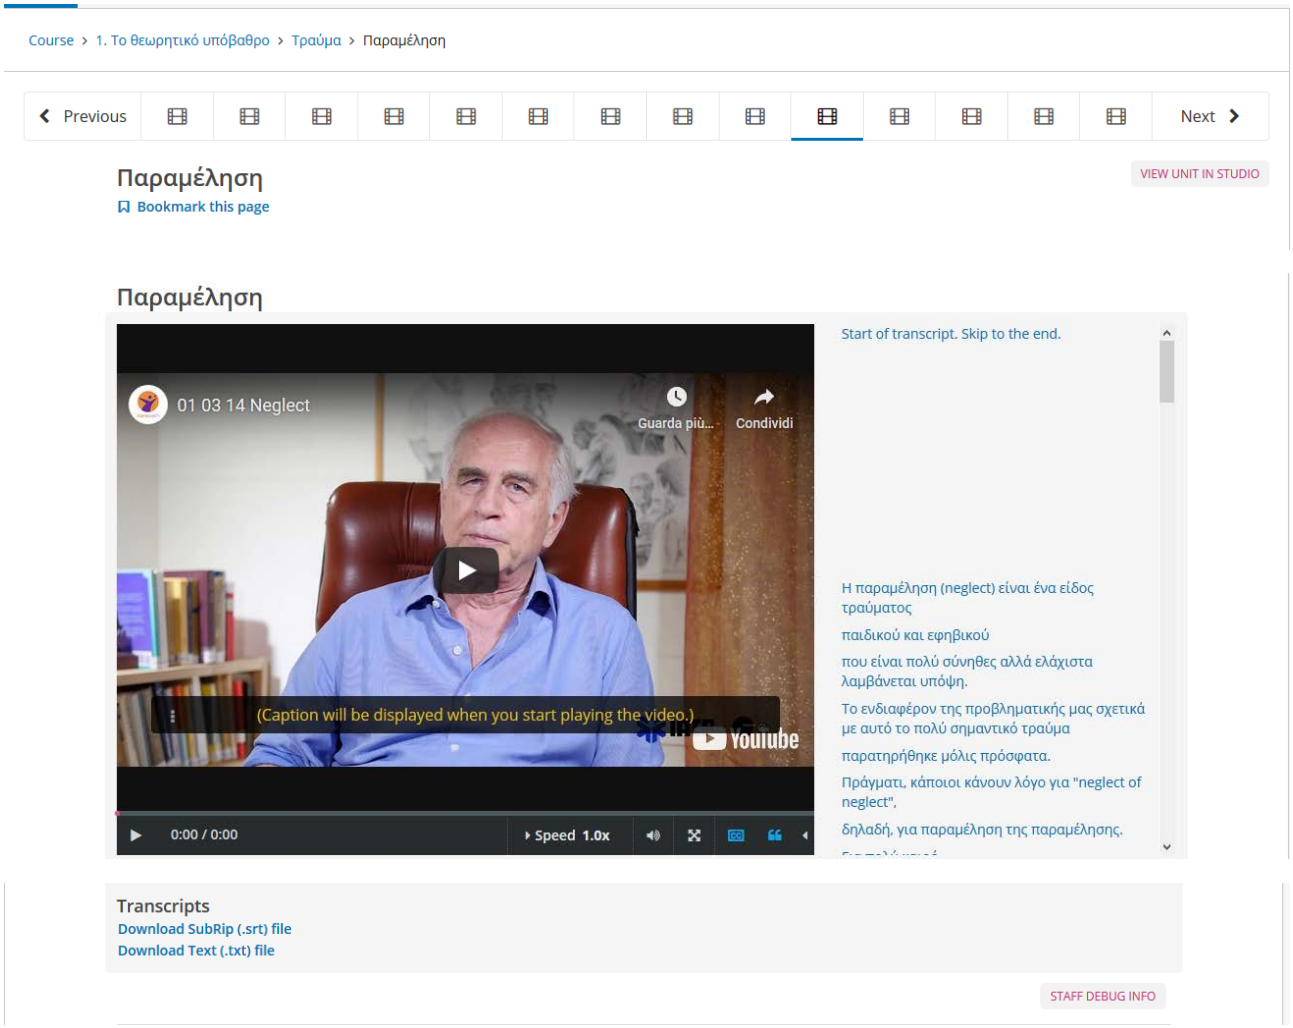
αλλά και σε άλλα μέλη της οικογένειας, όπως άσκηση βίας σε κατοικίδια ζώα.

Πρόκειται για πολύ τραυματικές εμπειρίες για τους ανηλίκους.

Τα χαρακτηριστικά αυτών των εμπειριών ποικίλουν.

Η βία μπορεί να είναι έμμεση: γίνεται αντιληπτή στο εσωτερικό του αντιληπτικού μας πεδίου
και άρα δεν βλέπουμε μόνο τη βία αλλά και την ακούμε.
Πρέπει να το υπογραμμίσουμε αυτό γιατί πολλά θύματα βίας αναφέρουν ότι τα παιδιά,
στη χειροδικία, βρίσκονταν σε άλλο δωμάτιο. Ουσιαστικά και σε αυτές τις περιπτώσεις
πρόκειται για μία μορφή άμεσης βίας σε περίπτωση που το παιδί έχει ακουστική επαφή.
Η εμπειρία μπορεί να είναι έμμεση
όταν ο ανήλικος γνωρίζει ότι η βία συντελείται
ή ότι πρόκειται να συντελεστεί. Είναι σαν να έχουν τα παιδιά κεραίες.
Καταλαβαίνουν πότε υπάρχει μία ένταση στο σπίτι
η οποία προηγείται του επεισοδίου βίας.
Η εμπειρία μπορεί ενίοτε να μην γίνεται αντιληπτή άμεσα ή έμμεσα,
αλλά ο ανήλικος μπορεί να αντιληφθεί τις συνέπειές της.
Για παράδειγμα, βλέπει τη μητέρα με μώλωπες
ή νιώθει τη βία να πλανιέται στο σπίτι. Αυτές είναι περιπτώσεις θέασης βίας.
Υπάρχουν κάποιοι μύθοι σχετικά με τη θέαση βίας.
Το παιδί δεν είναι αδιαπέραστο
από τη βία που ασκείται στο οικογενειακό του περιβάλλον.
Ακόμα κι αν η βία δεν ασκείται ενώπιόν του, μπορεί να το νιώσει ότι διαπράττεται
γιατί το μικρό παιδί δεν είναι ποτέ παθητικός και μη συνειδητός θεατής.
Η θέαση βίας αυξάνει τον κίνδυνο άμεσης άσκησης βίας σε ανηλίκους.
Ο ανήλικος που προσπαθεί να προστατέψει τη μητέρα και παρεμβάλλεται ανάμεσα στους γονείς,
μπορεί να χτυπηθεί από τον πατέρα. Σε αυτή την περίπτωση
η δρ Ανίμπαλι κάνει επίσης λόγο για θέαση βίας
καθώς στις περισσότερες περιπτώσεις η βία ασκείται
από τον άντρα προς τη γυναίκα.
Δεν αποκλείεται η βία να ασκηθεί
από τη μητέρα εναντίον του πατέρα ή γενικά από γυναίκα προς άντρα,
αλλά στατιστικά είναι πολύ λιγότερες αυτές οι περιπτώσεις.
Τα μικρά παιδιά που εκτίθενται στη βία διατρέχουν 5 φορές μεγαλύτερο κίνδυνο
από ό,τι τα παιδιά που δεν είναι μάρτυρες βίας, να γίνουν βίαιοι ως ενήλικες.
Οι επιπτώσεις της θέασης βίας είναι οι εξής.
Ένα αίσθημα φόβου, άγχους, φθοράς, θλίψης,

ουσιαστική κατάθλιψη, αίσθηση οργής, ενοχής, ανεπάρκειας και ντροπής.
Τα μικρά παιδιά χάνουν την εμπιστοσύνη στον εαυτό τους και στους άλλους,
μπορεί να εκδηλώσουν διαταραχές ψυχοσωματικές,
διαταραχές ελέγχου των παρορμήσεων, δυσκολίες στο σχολείο, διαταραχές στη μάθηση,
στο λεξιλόγιο,
στον έλεγχο των σφιγκτήρων, δυσκολίες στις σχέσεις και μπορεί να αναπτύξουν
πλήρη διαταραχή μετατραυματικού στρες γιατί αυτή η τραυματική εμπειρία αναπτύχθηκε
στο πλαίσιο μιας σχέσης εμπιστοσύνης, όπως είναι αυτή της οικογένειας.
Σε βιοψυχοκοινωνικό επίπεδο
οι επιτώσεις της θέασης βίας αντανακλώνται στη συμπεριφορά,
στα συναισθήματα, στη γνωστική λειτουργία, σε σωματικό επίπεδο αλλά και στις σχέσεις του παιδιού.
Το παιδί ζει σε έναν κόσμο σε πλήρη αναβρασμό,
η βία γίνεται κανονικότητα
και κατά συνέπεια το "φυσιολογικό" είναι η βία.
Κι αυτό είναι μέρος της κανονικότητας του παιδιού,
να αναγνωρίζει ως κανονική και φυσιολογική μια βίαιη συμπεριφορά
υποβαθμίζοντας έτσι τη δραματική του εμπειρία και, πιθανώς, αναπαράγοντας
αυτές τις συμπεριφορές.
Πρέπει να εστιάζουμε όλο και περισσότερο στη θέαση της βίας και στις επιπτώσεις της
στους ανηλίκους και στους ενήλικες που πρόκειται αυτοί να γίνουν.



Transcript

Η παραμέληση (neglect) είναι ένα είδος τραύματος

παιδικού και εφηβικού

που είναι πολύ σύνηθες αλλά ελάχιστα λαμβάνεται υπόψη.

Το ενδιαφέρον της προβληματικής μας σχετικά με αυτό το πολύ σημαντικό τραύμα

παρατηρήθηκε μόλις πρόσφατα.

Πράγματι, κάποιοι κάνουν λόγο για "neglect of neglect",

δηλαδή, για παραμέληση της παραμέλησης.

Για πολύ καιρό

αυτή η κατηγορία δεν θεωρούνταν ως καθαυτό τραύμα,

αλλά στην καλύτερη των περιπτώσεων ως μικρό μέρος των γνωστών τραυμάτων.

Στην πραγματικότητα, σήμερα θεωρούμε ότι είναι το πιο διαδεδομένο, το πιο σύνηθες τραύμα

με τις χειρότερες συνέπειες σε ό,τι αφορά τη διάρκεια μες στον χρόνο.

Από αυτή την άποψη, η παραμέληση δηλώνει την υιοθέτηση συμπεριφορών παράλειψης

από όσους θα έπρεπε να παρέχουν φροντίδα
και ναι μεν σε αυτές τις παραλείψεις δεν υπάρχει
κίνδυνος σοβαρής βλάβης αλλά υπάρχει μια σειρά παραλείψεων
που παρατείνονται για μία μακρά χρονική περίοδο.
Πρόκειται για παραλείψεις που μπορούν να συνοδεύουν ένα τραύμα τύπου 1.
Μία κακοποίηση
θα μπορούσε να γίνει διαχειρίσιμη,
τουλάχιστον με έναν κατάλληλο τρόπο,
αλλά
αυτό δεν συμβαίνει, αν το παιδί δεν έχει στο πλάι του έναν γονέα ικανό
να καταλάβει
και να βοηθήσει, να υποστηρίξει, να προστατέψει
το παιδί που υπέστη αυτόν τον τύπο τραύματος.
Η παραμέληση μπορεί να είναι συμπληρωματική του τραύματος τύπου 1,
αλλά και από μόνη της είναι βλαπτική.
Έχουμε διάφορους τύπους παραμέλησης που μπορεί να αφορούν
την υγειονομική περίθαλψη,
την εκπαίδευση, την επίβλεψη του παιδιού,
την προστασία απέναντι στους κινδύνους του περιβάλλοντός του,
τις σωματικές του ανάγκες, τη συναισθηματική υποστήριξη
που παρέχεται κυρίως από την οικογένεια ή πάντως
από όποιον έχει αναλάβει τη φροντίδα του παιδιού.
Αυτός ο τύπος παραμέλησης
μπορεί να φαίνεται ήσσονος σημασίας,
αλλά στην πραγματικότητα δίνει στο πρόσωπο
την αίσθηση ότι δεν έχει καμία προστασία από τους άλλους
και ότι ζει σε ένα εχθρικό περιβάλλον που δεν του εγγυάται κανενός είδους ασφάλεια.
Προφανώς,
αν μιλάμε για διάφορους τύπους παραμέλησης,
είτε σε συναισθηματικό είτε σε σωματικό επίπεδο,
έχουμε δύο τελείως διαφορετικές πλευρές.
Σε μερικές καταστάσεις παραμελείται η συναισθηματικότητα όταν έχουμε

φροντιστές παιδιών ψυχρούς,
αδιάφορους και ελάχιστα συμμετέχοντες.
Η σωματική παραμέληση μπορεί να αφορά, αντίθετα,
αποκλειστικά και μόνο την υλική πλευρά,
τις βασικές ανάγκες
ή να επεκτείνεται και στις εκπαιδευτικές ανάγκες
του παιδιού όταν δεν μπορεί να λάβει από τους γονείς του
τις απαραίτητες πληροφορίες
για να ζήσει σε ένα πλαίσιο σχέσεων.
Επιπλέον, έχουμε την ιατρική παραμέληση,
όταν υπάρχει ανάγκη θεραπείας από παθολογίες
αλλά ο υπεύθυνος φροντίδας του εφήβου ή του παιδιού
δεν πράττει τα δέοντα με συνέπεια
οι παθολογίες να αυξάνονται πιθανώς
και να γίνονται ιδιαίτερα επικίνδυνες ή βλαπτικές.
Η ηθική παραμέληση είναι η έλλειψη συμβουλών για θέματα ηθικής
στη συμπεριφορά ενός ανθρώπου.
Οι συνέπειες αυτών των τύπων παραμέλησης είναι βλαπτικές για τη δημόσια υγεία,
αν και για πολλά χρόνια είχαν υποτιμηθεί.
Σήμερα γνωρίζουμε
ότι η έκθεση
για μεγάλο χρονικό διάστημα
σε παραμέληση μπορεί να οδηγήσει
όχι μόνο στις παθολογίες που προαναφέραμε, όπως η διατροφική διαταραχή,
αλλά και σε μία έλλειψη φαιάς ουσίας στον εγκεφαλικό φλοιό
και άρα σε πολύ μειωμένη γνωστική ικανότητα
σε σχέση με τα υπόλοιπα φυσιολογικά άτομα.
Με αυτά τα δεδομένα συνειδητοποιούμε πόσο σημαντικό είναι να ασχοληθούμε με την παραμέληση
και να προσπαθήσουμε
να επανεγκαθιδρύσουμε σε οικογενειακό και ατομικό πλαίσιο
το είδος της φροντίδας και της προσοχής
που παρέχουν ασφάλεια στο άτομο

και δίνουν την αίσθηση ότι το προστατεύουν και το καταλαβαίνουν.

Συμπερασματικά, σχετικά με τις διάφορες παθολογίες, από τις διατροφικές διαταραχές ως την παραμέληση,

σημειώνουμε ότι η παραμέληση είναι ιδιαίτερα διαδεδομένη σε όσους αναπτύσσουν διατροφή ελλειμματικού ελέγχου,

ακόμα και στην ακραία μορφή της πλήρους απώλειας ελέγχου.

Είναι αναγκαίο να σκεφτούμε μια θεραπευτική σχέση που να δίνει ιδιαίτερη προσοχή

στο πρόσωπο αποδεικνύοντας το ενδιαφέρον μας για τον θεραπευόμενο,

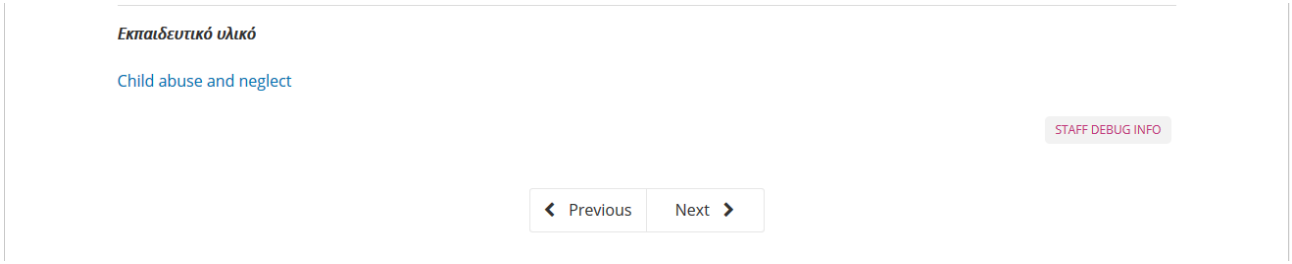
δηλαδή, μία στάση ενσυναίσθησης

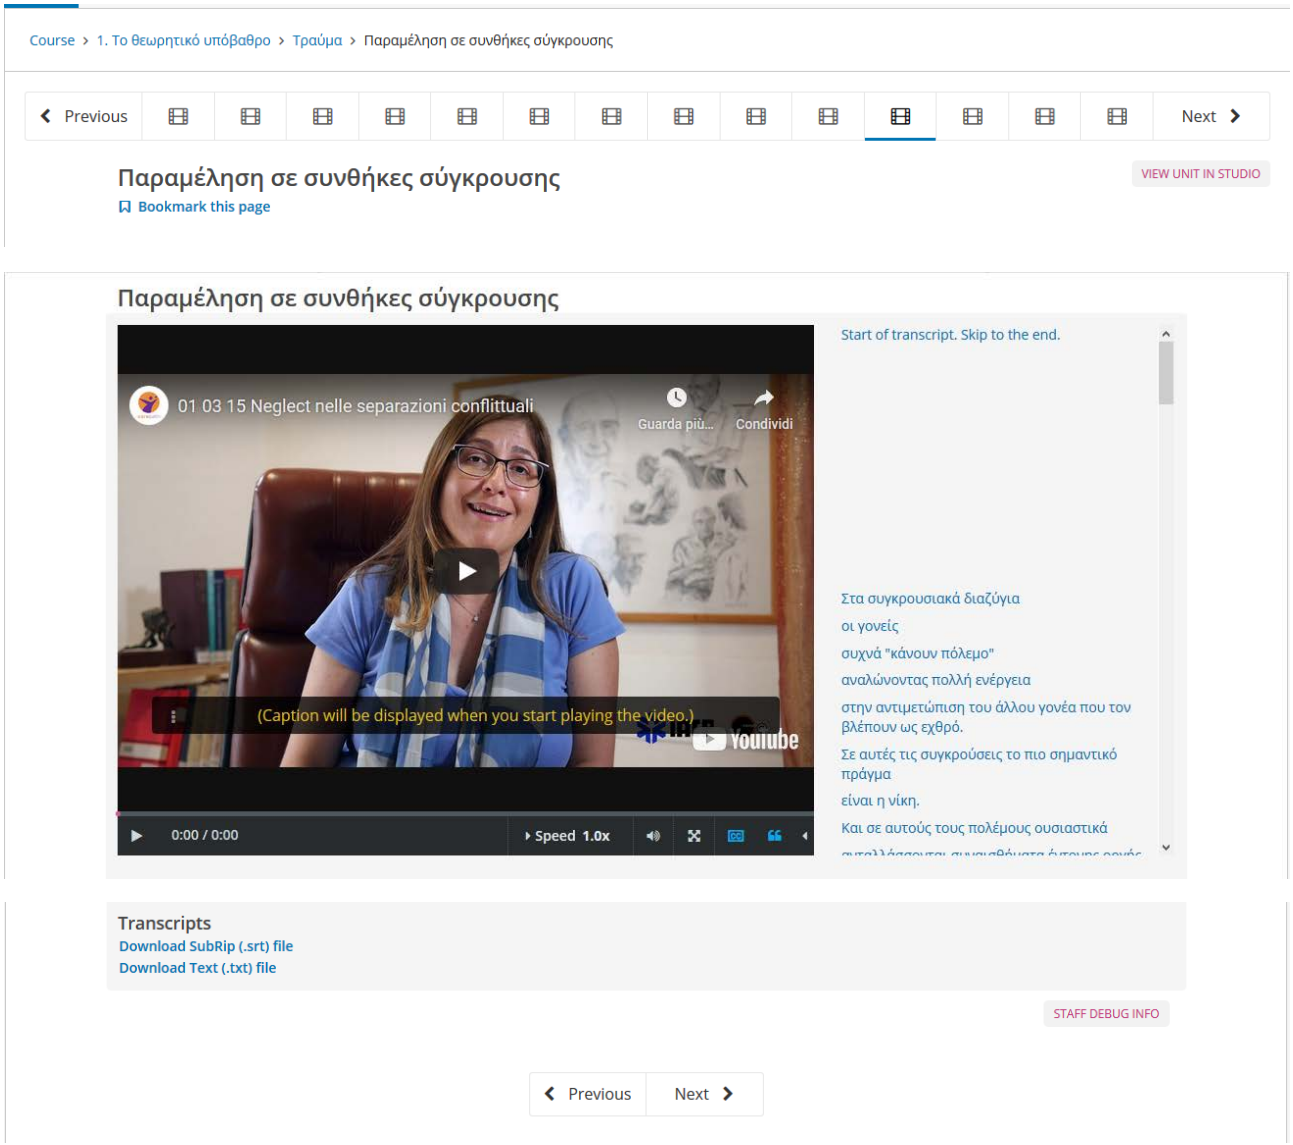
και κατανόησης.

Κι αυτό είναι από τα πιο σημαντικά στοιχεία για την αντιμετώπιση του συγκεκριμένου τραύματος,

που είναι ελάχιστα γνωστό αλλά ιδιαίτερα ύπουλο και εξίσου σημαντικό

με άλλα μεγαλύτερα τραύματα.





Transcript

Στα συγκρουσιακά διαζύγια

οι γονείς

συχνά "κάνουν πόλεμο"

αναλώνοντας πολλή ενέργεια

στην αντιμετώπιση του άλλου γονέα που τον βλέπουν ως εχθρό.

Σε αυτές τις συγκρούσεις το πιο σημαντικό πράγμα

είναι η νίκη.

Και σε αυτούς τους πολέμους ουσιαστικά

ανταλλάσσονται συναισθήματα έντονης οργής

που δηλώνουν, στην πραγματικότητα, πόσο δύσκολο είναι για αυτούς τους ανθρώπους

να έρθουν σε επαφή

με τα συναισθήματα που βιώνουν και που συνδέονται με τη διαδικασία του χωρισμού.
Συναίσθημα απογοήτευσης,
πόνος για την εγκατάλειψη, αίσθηση απουσίας, αίσθηση κενού, μοναξιά
και αίσθηση αποτυχίας.
Αυτά τα πρόσωπα ουσιαστικά εκφράζουν τη δυσκολία τους να επεξεργαστούν
το λεγόμενο ψυχικό διαζύγιο.
Σε αυτό το πλαίσιο
προβάλλει η μορφή του παιδιού
που, ως ανήλικο θα πρέπει να προστατευτεί.
Δυστυχώς, αυτό δεν συμβαίνει γιατί στην πραγματικότητα
ο ανήλικος γίνεται το υπομόχλιο της σύγκρουσης,
γίνεται το κεντρικό της στοιχείο
και, συνεπώς,
οι γονείς αρχίζουν να επικοινωνούν μέσω του ανηλίκου,
το παιδί γίνεται
η γέφυρα ανάμεσα στους δύο γονείς,
το θέμα της συζήτησης για το οποίο καυγαδίζουν οι γονείς
προσπαθώντας
να δηλώσουν
ποιο είναι το καλό
για το παιδί τους.
Σε αυτή την περίπτωση η ευημερία του παιδιού γίνεται μία δικαιολογία
πίσω από την οποία κρύβονται μομφές,
ζήλειες
και προσωπικές ενοχλήσεις.
Το μόνο που δεν υπάρχει
είναι η προστασία του παιδιού, το οποίο πρέπει να είναι πάντα παρόν,
αλλά
η προστασία είναι απαραίτητη
σε πλαίσια ρήξεων
όπως αυτό που προαναφέραμε. Οι γονείς θα μπορούσαν και θα έπρεπε
να συνεργάζονται σε όλα τα θέματα που αφορούν τη γονεϊκή λειτουργία

με στόχο
να ανακουφίσουν το παιδί από ένα βάρος γιατί τα παιδιά, στην πραγματικότητα,
φέρουν βάρος καθώς νιώθουν ένοχα για τον χωρισμό των γονιών τους
και υπεύθυνα για την ευτυχία τους
καθώς είναι η αιτία των καυγάδων τους.
Σε αυτόν τον ύφαλο το παιδί καταλήγει
να μη το βλέπει κανείς
και έτσι γεννιέται ένα παιδικό τραύμα.
Τη στιγμή που είναι ευάλωτο όσο ποτέ
το παιδί δεν το βλέπει κανείς,
οι ανάγκες και τα συναισθήματά του δεν αναγνωρίζονται και δεν καλύπτονται.
Το διαζύγιο είναι πάντα ένα τραυματικό γεγονός
καθώς είναι βλαπτικό
και προκαλεί ένα ρήγμα: ένα γονεϊκό ζεύγος, που στο παιδικό μυαλό
είναι ένας ενιαίος πυρήνας, για κάποιο λόγο
πρέπει να σπάσει στα δύο
και αυτό το εξωτερικό σχίσμα
μεταξύ του πατέρα και της μητέρας
θα προκαλέσει ένα εσωτερικό σχίσμα.
Ωστόσο, στο μυαλό του παιδιού
το γονεϊκό ζεύγος
δεν παύει να υπάρχει και παραμένει,
μόνο που χάνει τη δύναμή του,
την ταυτότητά του,
την αξιοπρέπειά του,
την ιδιότητά του να το καθοδηγεί.
Σε αυτή την περίπτωση υπεισέρχονται και άλλοι παράγοντες
που έχουν
πολύ έντονη φόρτιση
με την αρνητική έννοια.
Υπάρχουν πτυχές που μας δηλώνουν την ταυτότητα του τραύματος,
όπως η ιδιοσυγκρασία του παιδιού,

η ικανότητά του

να ανέχεται την απογοήτευση,

η ποιότητα της σχέσης και ο τύπος αφοσίωσης που οι γονείς

στάθηκαν ικανοί να δημιουργήσουν

πριν το γεγονός του χωρισμού.

Ο παράγοντας που πιο πολύ από όλους

μας μιλά για το τραύμα και το είδος του είναι η ηλικία του παιδιού.

Όσο πιο μικρό είναι το παιδί

τόσο μεγαλύτερο θα είναι το τραύμα

και οι γονείς,

αν και υποσυνείδητα,

ενεργοποιούν μια σειρά από δυσλειτουργικές δυναμικές

που παγιδεύουν το παιδί σε έναν άκαμπτο ρόλο

από τον οποίο δεν καταφέρνει να απαλλαγεί

γιατί,

λόγω του νεαρού

της ηλικίας του,

δεν έχει ακόμα το απαιτούμενο επίπεδο συνειδητοποίησης

ούτε και μια προσωπικότητα σταθερή

και ικανή να απελευθερωθεί, από μόνη της, από αυτή τη φυλακή.

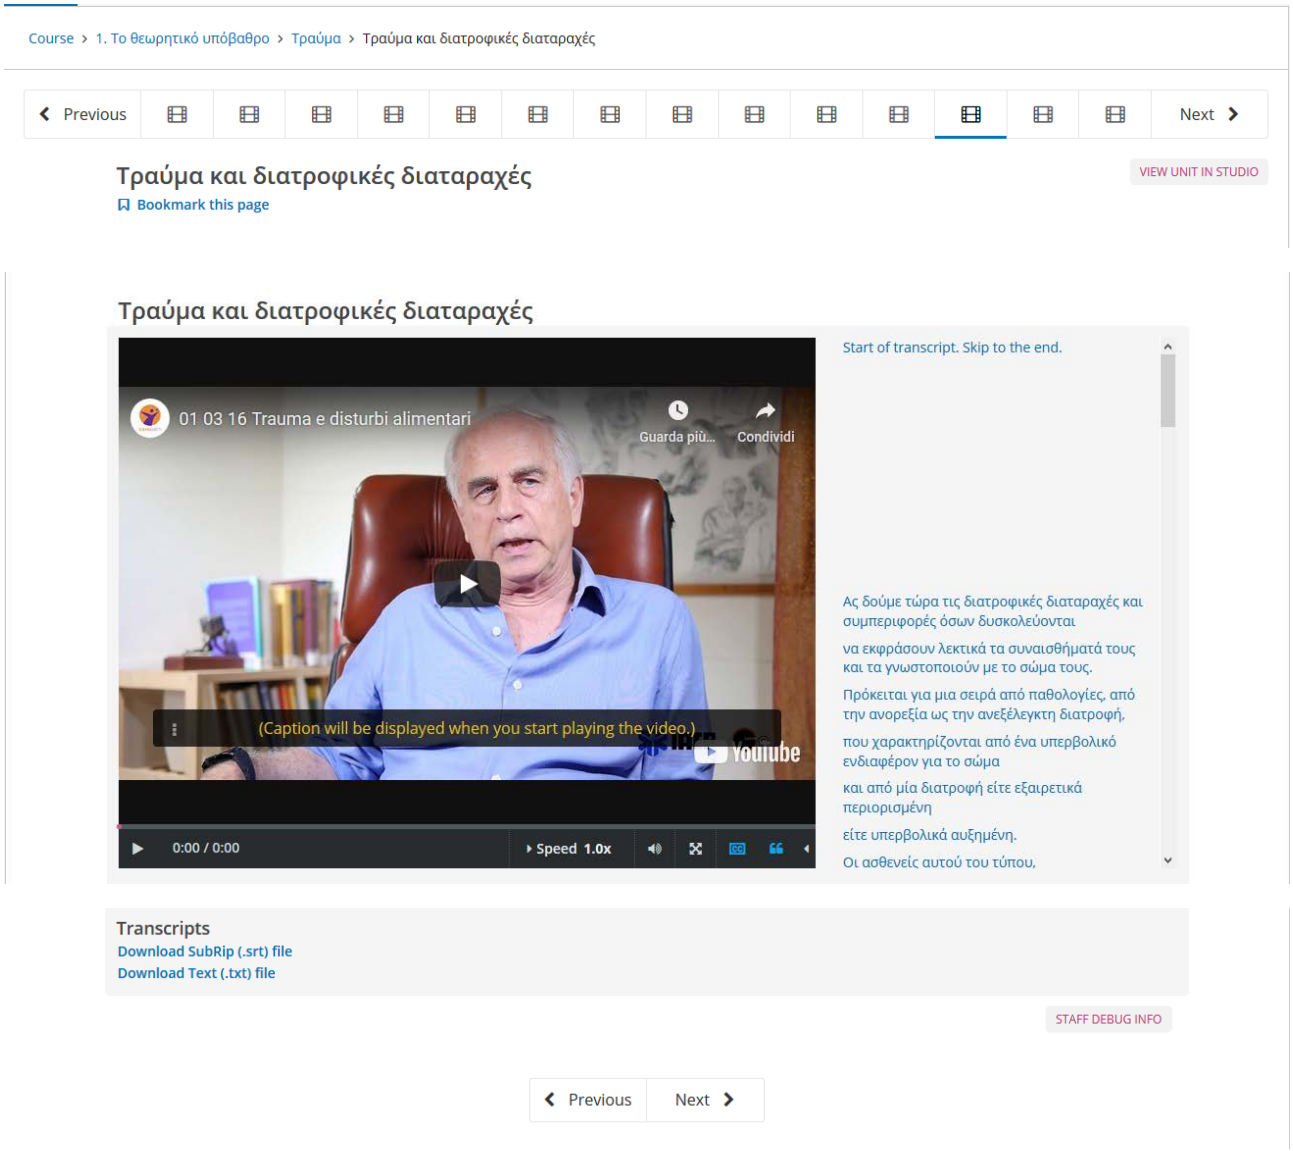
Για αυτό επεμβαίνει σε αυτές τις περιπτώσεις ένας σύμβουλος,

καθώς είναι ικανός να διακρίνει

τον τύπο της δυναμικής που υπάρχει σε μία οικογένεια

και να καταλάβει ποιες παρεμβάσεις πρέπει να κάνει στο γονεϊκό ζεύγος

ώστε να απελευθερώσει το παιδί.



Transcript

Ας δούμε τώρα τις διατροφικές διαταραχές και συμπεριφορές όσων δυσκολεύονται

να εκφράσουν λεκτικά τα συναισθήματά τους και τα γνωστοποιούν με το σώμα τους.

Πρόκειται για μια σειρά από παθολογίες, από την ανορεξία ως την ανεξέλεγκτη διατροφή,

που χαρακτηρίζονται από ένα υπερβολικό ενδιαφέρον για το σώμα

και από μία διατροφή είτε εξαιρετικά περιορισμένη

είτε υπερβολικά αυξημένη.

Οι ασθενείς αυτού του τύπου,

ιδιαίτερα στην περίπτωση της ανορεξίας, είναι κυρίως

θηλυκού γένους.

Η νευρική ανορεξία χαρακτηρίζεται από μεγάλη απώλεια βάρους

σε βαθμό που να είναι εξαιρετικά επικίνδυνο για τη ζωή τους.

Αυτή η απώλεια βάρους είναι επιθυμία και επιδίωξη του ασθενούς, που θεωρεί ότι το σώμα του έχει αναλογίες πολύ μεγαλύτερες από τις πραγματικές.

Στην ανορεξία μπορεί είτε να υπάρχει ένας αυστηρός περιορισμός,
η ποσότητα φαγητού που καταναλώνεται είναι πολύ περιορισμένη,
είτε το βάρος να διατηρείται σε χαμηλά επίπεδα με την πρόσληψη τροφής και στη συνέχεια
με ακραίες ενέργειες εκκαθάρισης
με τις οποίες η αποβολή τροφής είναι μεγαλύτερη από την πρόσληψή της
με συνέπεια την απώλεια βάρους.

Αμέσως μετά ακολουθεί
η νευρική βουλιμία.

Μία παθολογία κατά την οποία
η πρόσληψη τροφής είναι ως επί το πλείστον
μεγάλης κλίμακας,
έχουμε επεισόδια αδηφαγίας,
στιγμές κατά τις οποίες
ο ασθενής προσλαμβάνει τροφή
σε μεγάλη ποσότητα,
αλλά ταυτόχρονα ο ίδιος ασθενής έχει την ικανότητα να μειώνει
το σωματικό του βάρος μέσω της αποβολής
τροφής
και κυρίως
καταφεύγοντας σε ακατάλληλα εργαλεία ή μέσα όπως ο εμετός,
η χρήση καθαρτικών ή διουρητικών,
η χρήση ουσιών που μειώνουν την όρεξη
ή η σωματική δραστηριότητα.

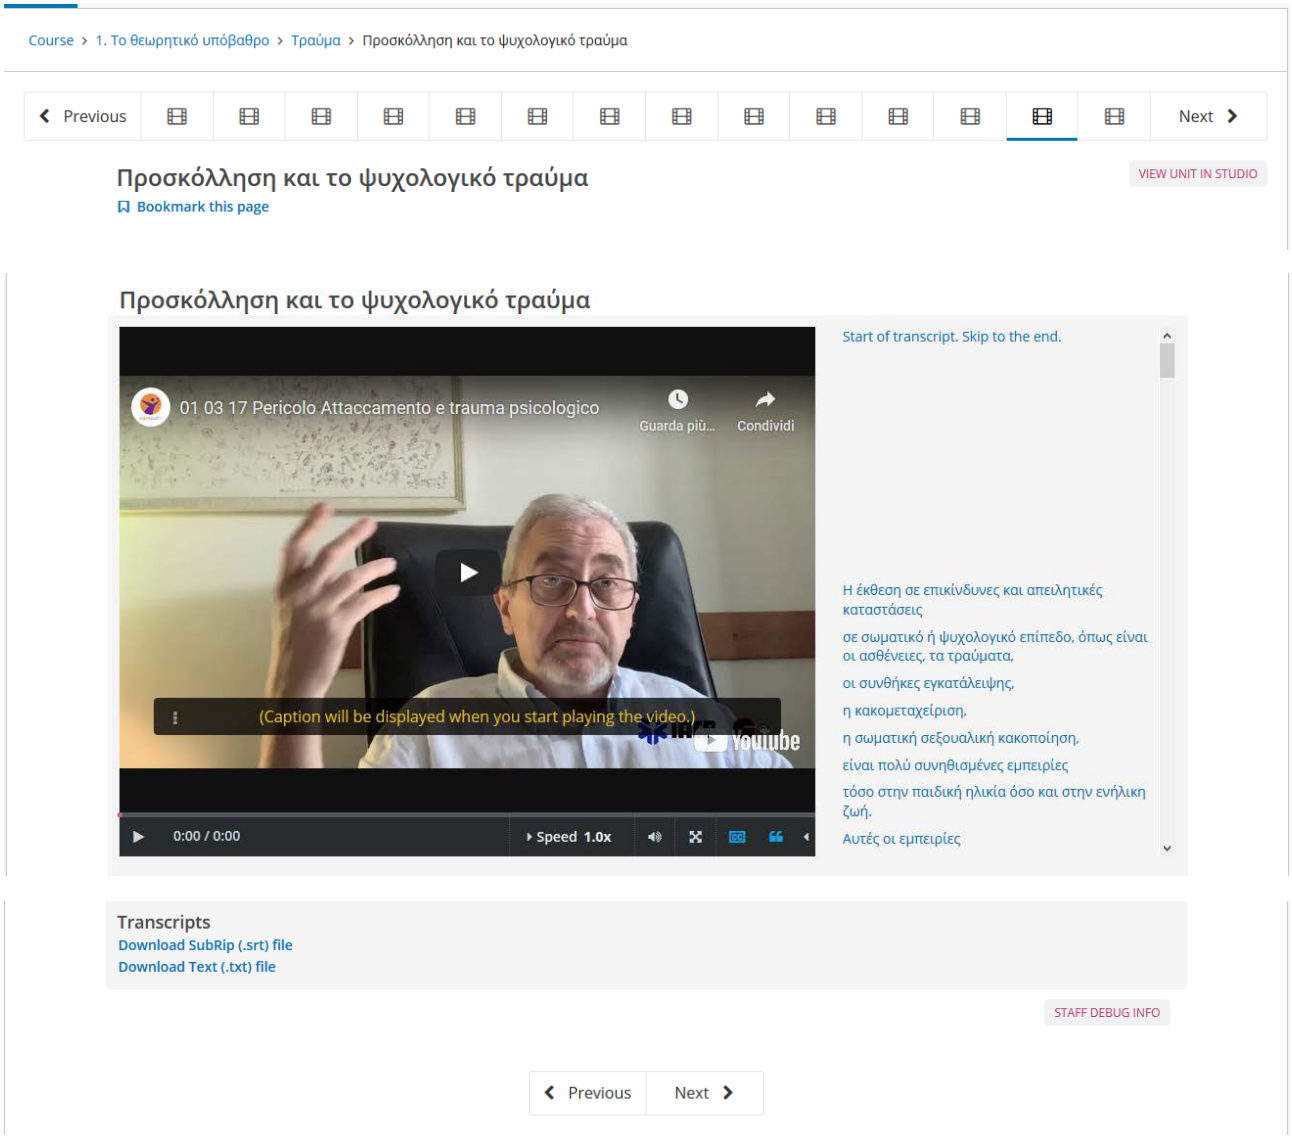
Σε αυτά τα πρόσωπα η ισορροπία του βάρους διατηρείται σε καλά επίπεδα
και σωματικά είναι σε φόρμα.

Το άκρως αντίθετο συμβαίνει
στην ανεξέλεγκτη διατροφή.

Η ανεξέλεγκτη διατροφή
συνίσταται σε έναν τρόπο πρόσληψης τροφής
που βασίζεται σε συνεχή αδηφαγία.

Η διαρκής στροφή στο φαγητό για πολλές ώρες της ημέρας,
μία διατροφή χωρίς φρένο, δηλαδή,
στερούν από το άτομο την ικανότητα
να μειώσει
τη διατροφή
και το βάρος του που ανέρχεται σε υψηλότατα επίπεδα, από 150 ως 200 κιλά,
με συνεπαγόμενους κινδύνους για το σώμα
καθώς το υπερβολικό βάρος μπορεί να προκαλέσει σωματικές παθολογίες
εξαιρετικά σοβαρές.
Αυτές οι τρεις παθολογίες διαδέχονται η μία την άλλη
κι έχουν
ως χαρακτηριστικό
η μία να αντικαθίσταται από την επόμενη όσο μειώνεται η ικανότητα ελέγχου.
Στη νευρική ανορεξία
ο έλεγχος είναι πολύ καλός
και τα άτομα μπορούν να μειώσουν τη διατροφή τους
ως τη διατήρηση ενός εξαιρετικά χαμηλού σωματικού βάρους.
Όταν ο έλεγχος μειώνεται
περνάμε στη νευρική βουλιμία
κατά την οποία,
οι νέοι ή οι νέοι που βιώνουν
αυτό το πρόβλημα,
τρέφονται μεν, και, μάλιστα, σε μεγάλες ποσότητες,
αλλά διατηρούν μια καλή ισορροπία
και έχουν μία ικανότητα ελέγχου που εμφανίζεται αμέσως μετά
την πρόσληψη τροφής, όχι πριν από αυτή,
και, παρόλα αυτά, τους επιτρέπει να διατηρούν
το βάρος τους σε αποδεκτά επίπεδα.
Στον τρίτο τύπο, στην ανεξέλεγκτη διατροφή,
αφιερώνουν όλη τη μέρα τους
αποκλειστικά στο φαγητό,
συχνά μπροστά στην τηλεόραση, χωρίς την επίγνωση της επαναλαμβανόμενης και διαρκούς

πρόσληψης τροφής. Σε κάθε περίπτωση, αυτές οι τρεις παθολογίες
έχουν κάποια κοινά χαρακτηριστικά
που αφορούν όλο το φάσμα των συναισθημάτων
αλλά και το γεγονός της έκθεσης σε ποικίλα τραύματα
τα οποία μπορούν να λαμβάνουν χώρα στις διατροφικές διαταραχές.



Transcript

Η έκθεση σε επικίνδυνες και απειλητικές καταστάσεις

σε σωματικό ή ψυχολογικό επίπεδο, όπως είναι οι ασθένειες, τα τραύματα,

οι συνθήκες εγκατάλειψης,

η κακομεταχείριση,

η σωματική σεξουαλική κακοποίηση,

είναι πολύ συνηθισμένες εμπειρίες

τόσο στην παιδική ηλικία όσο και στην ενήλικη ζωή.

Αυτές οι εμπειρίες

δεν συνεπάγονται αναγκαστικά

την ανάπτυξη ψυχολογικού τραύματος,

καθώς το είδος μας

έχει εξαιρετικά ανεπτυγμένες

ικανότητες

προσαρμογής,

οι οποίες του επιτρέπουν να αντιμετωπίζει ακόμα και ακραίες καταστάσεις

χωρίς να είναι απαραίτητο

να αναπτυχθεί μία κατάσταση ψυχολογικού τραύματος.

Αυτές οι επικίνδυνες καταστάσεις,

αν αντιμετωπιστούν αποτελεσματικά,

κατά κάποιο τρόπο, χάνουν

την ιδιότητά τους εκείνη

που οδηγεί σε έλλειψη προσαρμογής

κι έτσι το άτομο μπορεί να παραμείνει σε μία κατάσταση

ψυχικής

και ψυχολογικής υγείας.

Πιο συγκεκριμένα, το είδος μας έχει αναπτύξει,

με την πάροδο του χρόνου,

ορισμένες ικανότητες,

πολύ εξελιγμένες,

στις σχέσεις και στις συμπεριφορές,

οι οποίες έχουν ως βασική λειτουργία να μας προστατεύουν

όταν ερχόμαστε αντιμέτωποι με κινδύνους.

Αυτό το σύνολο

συμπεριφορών

και στάσεων προσδιορίζεται

με τον όρο "σύστημα προσκόλλησης".

Η λέξη "προσκόλληση"

προέρχεται από τη θεωρία της προσκόλλησης

που είχε αρχικά διατυπώσει κατά τη δεκαετία του 1950

ο Βρετανός ψυχαναλυτής Τζον Μπόουλμπι.

Η θεωρία της προσκόλλησης υποστηρίζει ότι ο άνθρωπος

έχει μία εγγενή προδιάθεση

να αναπτύσσει ιδιαίτερες σχέσεις προσκόλλησης

με πρωταρχικές μορφές, συχνά με τους γονείς,
που επιτελούν
τη βασική λειτουργία
της προστασίας από τους κινδύνους.
Αυτή η θεωρία δεν έχει προκύψει από ψυχολογικές και ψυχαναλυτικές παρατηρήσεις
αλλά από τις πρώτες γνώσεις
που αναπτύσσονταν εκείνη την εποχή
στον τομέα της ηθολογίας,
δηλαδή, της μελέτης της συμπεριφοράς των ζώων,
στη θεωρία της εξέλιξης
και σε νέες θεωρίες γνωστικιστικές,
συστημικές και της επιστήμης των συστημάτων.
Η θεωρία της προσκόλλησης προκύπτει από ένα χωνευτήρι σύγχρονων θεωριών
που άρχιζαν να διαδίδονται κατά τη δεκαετία του 1950.
Σε αυτή τη θεωρία γίνεται λόγος για προσκόλληση, που έχει τη βασική λειτουργία
να προστατεύει από επικίνδυνες καταστάσεις, αλλά όχι μόνο.
Το πρόσωπο που νιώθει ότι βρίσκεται
σε μία επαρκώς ασφαλή κατάσταση
έχει την υποστήριξη
ώστε να εξερευνήσει
το εξωτερικό του περιβάλλον,
γνωρίζοντας
τα προσωπικά του μέσα
και μαθαίνοντας πώς να προλαμβάνει τους κινδύνους που μπορεί να κρύβει το ίδιο το περιβάλλον.
Αυτές οι λειτουργίες
της προσκόλλησης μελετήθηκαν τόσο σε παιδιά κάθε ηλικίας,
ιδίως σε παιδιά 1 και 2 ετών στη σχέση τους με τη μητέρα,
όσο και σε πρωτεύοντα θηλαστικά,
όπως κάποιες έρευνες της δεκαετίας του 1950 σχετικά με μικρούς πιθήκους ρέζους,
οι οποίες
αποδεικνύουν
πόσο σημαντική είναι

και για τα πρωτεύοντα
η λειτουργία προστασίας
εκ μέρους της μητέρας,
περισσότερο και από τη διατροφική λειτουργία.
Η προσκόλληση συχνά διακρίνεται σε ασφαλή και ανασφαλή προσκόλληση.
Η ασφαλής προσκόλληση
χαρακτηρίζεται από μία αίσθηση
ασφάλειας, εμπιστοσύνης απέναντι στο περιβάλλον,
εμπιστοσύνης στα προσωπικά μας μέσα
και στη δυνατότητα λήψης βοήθειας και προστασίας σε περίπτωση κινδύνου.
Η ανασφαλής προσκόλληση
διακρίνεται, με τη σειρά της,
σε ανασφαλή
αμφιθυμική προσκόλληση,
στα παιδιά ορίζεται ως τύπος Γ,
και χαρακτηρίζεται
από μία υπερδιέγερση του οργανισμού
με έμφαση στα συναισθήματα,
με εκδηλώσεις θυμού,
με φοβίες,
με παράπονα
σχετικά με την ανάγκη προστασίας,
με δυσκολία στον αποχωρισμό από τη μητέρα.
Ο άλλος τύπος είναι η ανασφαλής αποφευκτική προσκόλληση,
γνωστή και ως τύπος Α.
Στον αντίποδα της προηγούμενης,
χαρακτηρίζεται από υποδραστηριότητα, ιδίως από μία τήρηση απόστασης
από τις συναισθηματικές αντιδράσεις
που μπορούν να ενθαρρύνονται
από μία κατάσταση κινδύνου,
δηλαδή, από τον φόβο, τον θυμό,
την αίσθηση της ευάλωτης θέσης,

τα οποία συναισθήματα είτε αναστέλλονται
όταν εκφράζονται,
για παράδειγμα, με μία στάση φαινομενικής αδιαφορίας,
είτε αλλοιώνονται και μετατρέπονται
σε εκφράσεις των αντίθετων συναισθημάτων, όπως όταν χαμογελούμε απέναντι σε κάτι τρομακτικό.
Όταν αυτοί οι τρόποι προσκόλλησης
είναι αποτελεσματικοί
προστατεύουν
από τον κίνδυνο
που προέρχεται τόσο από το περιβάλλον
όσο και από τις σχέσεις στις οποίες συμμετέχουμε.
Αν αυτές οι στρατηγικές
είναι αποτελεσματικές
και παρέχουν ικανοποιητική προστασία,
δεν υφίστανται καταστάσεις ψυχολογικού τραύματος
και το άτομο διατηρείται σε μία κατάσταση σχετικής ασφάλειας.
Η κατάσταση ψυχολογικού τραύματος εκδηλώνεται
όταν αυτοί οι τρόποι
είναι αναποτελεσματικοί,
για παράδειγμα, όταν η στάση αναστολής έκφρασης του φόβου, του θυμού
ή των αναγκών του ατόμου
δεν είναι αρκετή για να τον προστατέψει
από τις απειλές του περιβάλλοντός του.
Το ψυχολογικό τραύμα είναι μία κατάσταση στην οποία κάθε δραστηριότητα ψυχικής επεξεργασίας
είναι αρνητικά επηρεασμένη
από μία εμπειρία κινδύνου, είτε παρελθοντική είτε παροντική.
Αυτή μπορεί να προέρχεται από ένα γεγονός ιδιαίτερα έντονο και αιφνίδιο,
όπως ένα σωματικό τραύμα
ή μία κακοποίηση,
αλλά μπορεί να προέρχεται και από μια σειρά εμπειριών που επαναλαμβάνονται
και στο σύνολό τους λειτουργούν
ως τραυματικές:

σε αυτή την περίπτωση μιλάμε για ένα εξελικτικό τραύμα.

Είναι η κατάσταση κατά την οποία ένα παιδί,

για παράδειγμα, μεγαλώνει μέσα σε μία οικογένεια

ακατάλληλη

και με παραμέληση

και στο σύνολό τους αυτές οι παρατεταμένες εμπειρίες δημιουργούν ένα ακατάλληλο κλίμα

ανάπτυξης

που μπορεί να οδηγήσει σε μία κατάσταση ψυχολογικού τραύματος.

Η ικανότητα προσαρμογής και επανεπεξεργασίας μιας δυνητικά τραυματικής κατάστασης κινδύνου

εξαρτάται από ορισμένα χαρακτηριστικά.

Από το άτομο, την ηλικία του, την ωριμότητά του,

την προσωπικότητά του,

τα χαρακτηριστικά της προσκόλλησής του, αν είναι αποτελεσματικά για να το προστατέψουν ή όχι,

τη σωματική του δύναμη και την κατάσταση της υγείας του,

καθώς όποιος νοσεί είναι πιο εύθραυστος

σε ό,τι αφορά την επεξεργασία μιας κατάστασης κινδύνου.

Είναι πολύ σημαντική, επίσης,

η προστατευτική διαθεσιμότητα των μορφών προσκόλλησης, δηλαδή, το άτομο να μη νιώθει μόνο

απέναντι στον κίνδυνο αλλά να το συνοδεύουν σχέσεις προστασίας με ανθρώπους

πρόθυμους να το κάνουν

να νιώσει προστατευμένο

και όχι μόνο του κατά την επεξεργασία

μίας εμπειρίας επικίνδυνης φύσεως.

Σημαντικό ρόλο διαδραματίζει το κοινωνικό πλαίσιο. Είναι θεμελιώδες το άτομο να βρίσκεται

σε ένα φιλόξενο περιβάλλον, με πρόσωπα που το αποδέχονται και το υποστηρίζουν

με την κουλτούρα τους

με τελετουργικά τυπικά

ή με την προσωπική παρουσία, όπως είναι οι φίλοι.

Η διαδικασία προσαρμογής μίας κατάστασης τραύματος δεν είναι άμεση και απαιτεί χρόνο.

Για παράδειγμα,

ένα σοβαρό πένθος,

όπως του συντρόφου ή του γονέα,

απαιτεί συνήθως

ένα ή δύο χρόνια για να μπορέσει κανείς να το επεξεργαστεί με κατάλληλο τρόπο,

χωρίς να μετατραπεί σε μία κατάσταση

τραυματικού πένθους.

Όταν δεν επεξεργαζόμαστε

μία δυνητικά τραυματική εμπειρία,

συνήθως, αυτή συνοδεύεται

από συναισθηματική υπερδιέγερση,

με όνειρα,

εφιάλτες,

φόβους,

αίσθηση απειλής,

ανεξέλεγκτες αντιδράσεις,

όπως στην περίπτωση της διαταραχής μετατραυματικού στρες,

ή από μία κατάσταση υπερβολικής υποδραστηριότητας, δηλαδή μία υπερβολική τήρηση απόστασης

από όλα όσα αφορούν

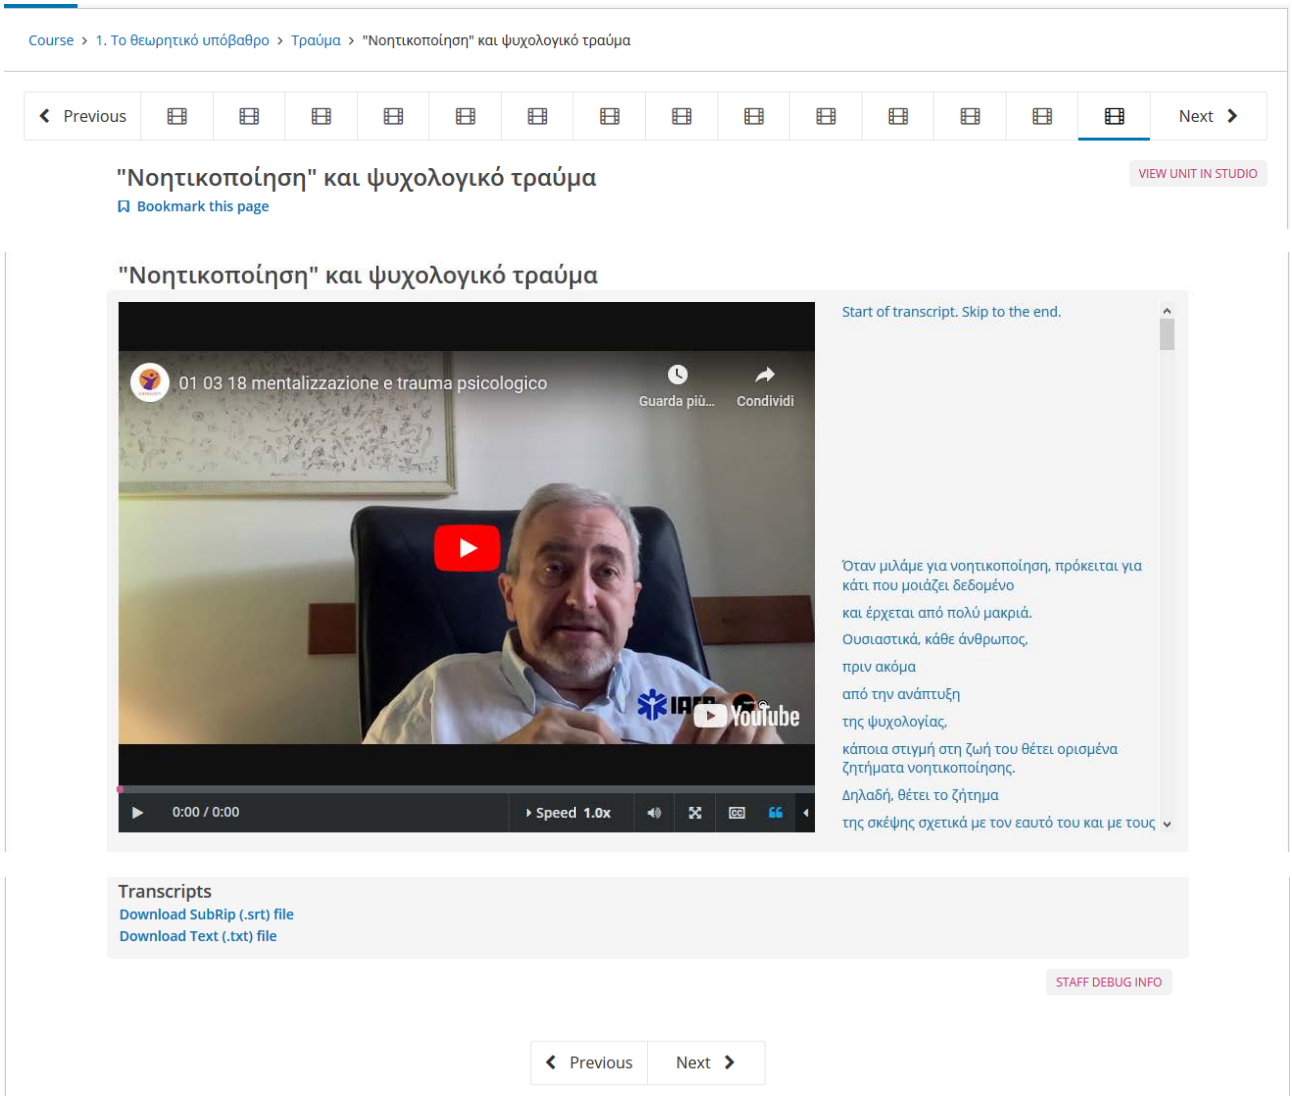
την επικίνδυνη εμπειρία,

καθώς και απουσία αναμνήσεων,

συναισθηματική αναστολή,

και αποφυγή της ομιλίας ή των τοποθεσιών που συνδέονται με την τραυματική εμπειρία.

Όταν έχουμε αυτές τις δύο καταστάσεις, μπορούμε να μιλάμε για ψυχολογικό τραύμα.



Transcript

Όταν μιλάμε για νοητικοποίηση, πρόκειται για κάτι που μοιάζει δεδομένο

και έρχεται από πολύ μακριά.

Ουσιαστικά, κάθε άνθρωπος,

πριν ακόμα

από την ανάπτυξη

της ψυχολογίας,

κάποια στιγμή στη ζωή του θέτει ορισμένα ζητήματα νοητικοποίησης.

Δηλαδή, θέτει το ζήτημα

της σκέψης σχετικά με τον εαυτό του και με τους άλλους,

θεωρώντας ότι εμείς και οι άλλοι

έχουμε νου,

σκέψεις,

συναισθήματα, ανάγκες,
προσδοκίες και πεποιθήσεις
που μας επηρεάζουν.
Ένας απλός τρόπος για να καταλάβουμε την έννοια
της νοητικοποίησης
είναι εκείνος
που αφορά τη θεώρηση
του εαυτού μας και των άλλων
από την άποψη των νοητικών καταστάσεων.
Αυτές οι ικανότητες του είδους μας
αρχίζουν να διαμορφώνονται
γύρω στην ηλικία των 4 ετών,
όταν το παιδί συνειδητοποιεί
πως ό,τι σκέφτεται
και νιώθει
δεν γίνεται απαραίτητα κατανοητό και δεκτό από άλλα πρόσωπα,
όπως όταν η μητέρα δεν γνωρίζει τι περνάει από το μυαλό του μωρού.
Τα μικρά παιδιά, όταν μαθαίνουν
αυτό το σημαντικό νέο, μαθαίνουν παράλληλα
να χρησιμοποιούν
έναν στρατηγικό
τρόπο
προσαρμογής στα προβλήματα
που είναι πολύ χρήσιμος
και σημαντικός. Μαθαίνουν, δηλαδή, τη σπουδαιότητα του ψέματος.
Ένα ψέμα μπορούμε να το πούμε αν νομίζουμε ότι ο νους των άλλων έχει μια θεώρηση
του κόσμου διαφορετική από τη δική μας
και ότι οι άλλοι δεν μπορούν να γνωρίζουν τις σκέψεις ενός ατόμου.
Η νοητικοποίηση
και οι διαδικασίες της βασίζονται σε μια σειρά
από στάδια.
Το πρώτο αφορά το γεγονός ότι είμαστε

σχετικά

ευαίσθητοι στην αντίληψη

των νοητικών καταστάσεων,

δηλαδή, στην αναπαράσταση των νοητικών καταστάσεων

των δικών μας και των άλλων, όπως το να καταλαβαίνουμε

ότι είμαστε χαρούμενοι ή λυπημένοι,

ότι έχουμε προσδοκίες

και προκαταλήψεις.

Επίσης,

η ικανότητα να ερμηνεύουμε τη συμπεριφορά τη δική μας και των άλλων

με βάση

αυτές τις νοητικές καταστάσεις

είναι θεμελιώδης για να μπορούμε να προσαρμοζόμαστε.

Για παράδειγμα, όταν κάποιος στέκεται αμίλητος μπροστά μας,

δεν σκεφτόμαστε ότι δεν έχει

τίποτα να πει.

Σκεφτόμαστε ότι από τον νου του

περνούν εικόνες και σκέψεις

και ότι με τη σιωπή δεν εκφράζει το κενό αλλά μια σειρά από νοητικές καταστάσεις

οι οποίες

αποτελούν τη βάση αυτής της στάσης σιωπής.

Μία δεύτερη σημαντική πτυχή της νοητικοποίησης

είναι ότι η νοητικοποίηση του εαυτού μας

ευνοεί τη ρύθμιση του οργανισμού μας.

Αν, για παράδειγμα, συνειδητοποιούμε

ότι είμαστε

θυμωμένοι

και αρχίσουμε να σκεφτόμαστε

κάτι που ειπώθηκε

και σχετίζεται με τον θυμό,

το γεγονός

ότι συνειδητοποιούμε,

θυμόμαστε,
έχουμε προσδοκίες
και προβλέψεις σχετικά με τις συνέπειες
μιας πράξης
ανοίγει έναν ψυχολογικό δρόμο για τη ρύθμιση του θυμού που έχει ενεργοποιηθεί μέσα μας.
Η καρδιά, η αναπνοή, η παραγωγή ορμονών
που συνδέονται με την ενεργοποίηση του θυμού
αρχίζουν να ρυθμίζονται
από μηχανισμούς ψυχολογικής φύσεως.
Για παράδειγμα, θα μπορούσα να νιώσω
ενοχές επειδή αισθάνομαι θυμό για κάποιον που αγαπώ.
Αυτό αναστέλλει την έκφραση του θυμού
και ρυθμίζει τον ίδιο μας τον οργανισμό.
Πρόκειται για μία θεμελιώδη λειτουργία.
Επίσης, τα πρόσωπα με ελάχιστη ικανότητα
νοητικοποίησης είναι περισσότερο εκτεθειμένα
στην απορρύθμιση του οργανισμού.
Η καρδιά
χτυπάει
πιο γρήγορα και ακανόνιστα,
οι συναισθηματικές αντιδράσεις είναι λιγότερο ελεγχόμενες
και αυτό μακροπρόθεσμα μπορεί να οδηγήσει
σε ασθένειες
που οφείλονται
στη συνεχή απορρύθμιση του οργανισμού.
Μία από τις πιο σημαντικές λειτουργίες του γονέα απέναντι στα παιδιά του
είναι να είναι ο ίδιος
νοητικοποίηση.
Δηλαδή,
να σκέφτεται τα παιδιά
σε σχέση με τις πιθανές
ανάγκες, τα συναισθήματα

και τους φόβους τους,
χαμηλώνοντας, κατά μία έννοια, στο επίπεδο της θέσης των παιδιών
και βλέποντας τα πράγματα και από τη δική τους άποψη.
Για παράδειγμα, ένα παιδί τριών ετών
θα έχει συγκεκριμένα επιχειρήματα
και θα ερμηνεύει λέξεις και συζητήσεις
σύμφωνα με τις ικανότητές του
ως παιδί
και είναι σημαντικό ο ενήλικας, από την πλευρά του,
να έρθει στη θέση του.
Αυτή η κατάσταση, που ορίζεται ως "mindedness"
είναι μία από τις καταστάσεις
που σχετίζονται περισσότερο
με την ασφαλή ανάπτυξη των παιδιών. Είναι μία θεμελιώδης κατάσταση
του καλού γονέα
να καταφέρνει
να έρχεται στη θέση των παιδιών και να αντιλαμβάνεται τις ανάγκες τους.
Την κατάσταση αυτή παρατηρούμε στη μητέρα ενός πολύ μικρού παιδιού
η οποία, για παράδειγμα,
έρχεται στη θέση
του παιδιού,
που κλαίει και είναι ταραγμένο, και σκέφτεται ότι μπορεί να κρυώνει ή να πεινάει,
εκφράζοντας μία κατάσταση του μωρού,
σαν να είχε το παιδί, κατά κάποιο τρόπο, οργανωμένες σκέψεις
και να μπορούσε να τις εκφράσει.
Η ικανότητα αναπαράστασης των νοητικών καταστάσεων των παιδιών
είναι μία βασική κατάσταση την οποία πρέπει να κατακτήσει ο γονέας.
Επίσης, η νοητικοποίηση αποτελεί τη βάση
της ικανότητας αντιμετώπισης του άγχους και των δυνητικά επικίνδυνων καταστάσεων
μέσω της προσαρμογής
χωρίς να αναπτύσσονται καταστάσεις ψυχολογικών τραυμάτων.
Για παράδειγμα,

όταν ένα μικρό παιδί αντιμετωπίζει
μία ασυνάρτητη συμπεριφορά του γονέα,
ο οποίος ίσως προβαίνει σε μια χειρονομία θυμού
ή σωματικής βίας
ή λέει αρνητικά πράγματα στο παιδί,
η ικανότητα αυτού του παιδιού να φανταστεί τη νοητική κατάσταση του γονέα
λειτουργεί ως αποσβεστήρας κραδασμών και του επιτρέπει να σκεφτεί
αυτά που κάνει και λέει ο γονέας
εντός ενός ορισμένου πλαισίου. Μπορεί να σκεφτεί,
"ο μπαμπάς
είναι κουρασμένος και ό,τι λέει δεν ανταποκρίνεται στην πραγματικότητα,
ο μπαμπάς συνήθως
είναι στοργικός και με αγαπάει,
αυτό που συμβαίνει τώρα ισχύει
τη συγκεκριμένη στιγμή και αφορά συγκεκριμένες διαθέσεις, δεν είναι απόλυτο".
Η στάση που μόλις περιγράψαμε προστατεύει από τις νοητικές καταστάσεις
των άλλων
και καθιστά την κατάσταση δυνητικά λιγότερο τραυματική.
Κάτι που παρατηρούμε σαφώς σε ενήλικες με χαμηλά επίπεδα
νοητικοποίησης,
όπως στην περίπτωση
ανθρώπων με οριακή διαταραχή προσωπικότητας,
που είναι πολύ πιο εκτεθειμένοι σε συνεχή ψυχολογικά τραύματα,
είναι πως ό,τι τους συμβαίνει δεν εντάσσεται σε κάποιο πλαίσιο,
δεν υποβάλλεται σε μια διαδικασία επαρκούς σκέψης,
κι έτσι όλα γίνονται
καθολικά, απόλυτα
και
δυνητικά τραυματικά.
Ορισμένες στιγμές
η ανικανότητα
των γονέων να έρχονται στη θέση των παιδιών τους

μπορεί να είναι ιδιαίτερα
επικίνδυνη
και να προκαλεί στάσεις που ένα μικρό παιδί ή ένας έφηβος
μπορούν
να εκδηλώσουν μέσα από συμπεριφορές έντονης επιθετικότητας.
Η επιθετικότητα και οι συμπεριφορές που αυτή υπαγορεύει
μπορούν,
εν μέρει,
να ερμηνευτούν
μέσω της έννοιας της νοητικοποίησης.
Αν, για παράδειγμα, κάποιοι γονείς είναι συνεχώς εκνευρισμένοι
από τις συμπεριφορές ενός παιδιού τους,
όπως όταν ένα παιδί
θέτει
ένα ζήτημα
ή έχει ένα νευρικό ξέσπασμα,
και ο γονέας αρχίζει να απευθύνεται στο παιδί
με αρνητικό τρόπο, λέγοντας ίσως ότι είναι χαζό, άρρωστο ή άχρηστο,
από την πλευρά του παιδιού
η εικόνα που αποκτά για τον εαυτό του αφορά ένα πρόσωπο άρρωστο,
διαταραγμένο,
ή ανίκανο.
Αυτή τη στάση το παιδί την τηρεί ανεξάρτητα
από τις επιθετικές του συμπεριφορές και άρα κάθε φορά που ένας ενήλικας πλησιάζει
ένα παιδί υπό αυτές τις συνθήκες με την πρόθεση να το γνωρίσει
και να του εμπνεύσει εμπιστοσύνη ώστε να ανοιχτεί, η πιθανή απάντηση θα είναι μία στάση
έντονης επιθετικής αντίδρασης,
που στοχεύει στην απομάκρυνση του ενήλικα
καθώς είναι δυνητικά τραυματικός.
Η ίδια περίπτωση αφορά τους νέους που στο σχολείο θεωρούνται ανίκανοι
και τιμωρούνται συχνότερα.
Οι καθηγητές τούς θεωρούν

ως αρνητικά

υποκείμενα

και στο σπίτι αυτά τα παιδιά έχουν γονείς που ενισχύουν

την αρνητική ιδέα για τον εαυτό τους. Αυτά τα παιδιά

απέναντι στους ίδιους ενήλικες που προσπαθούν

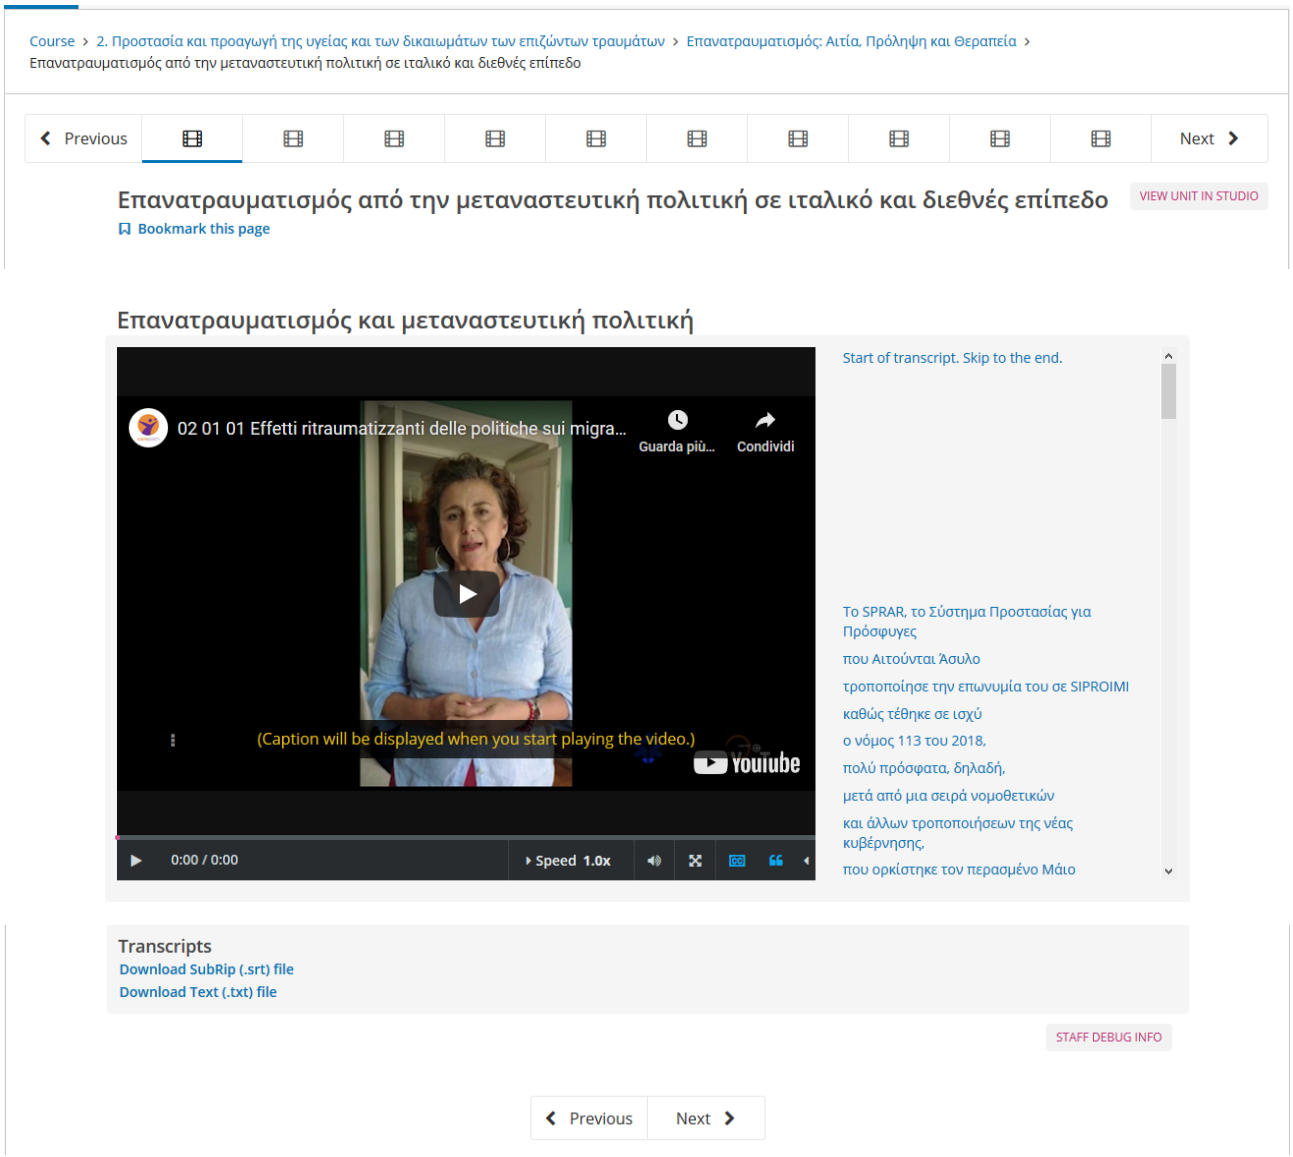
να τους βοηθήσουν (εκπαιδευτές, καθηγητές), έχουν την ίδια στάση έντονης αντιδραστικότητας

και θυμού με στόχο την απομάκρυνση

του άλλου

ώστε να μην επαναληφθεί η εμπειρία

να ακούσουν τα παιδιά να τα περιγράφουν ως πρόσωπα αρνητικά που κάνουν λάθη.



Transcript

Το SPRAR, το Σύστημα Προστασίας για Πρόσφυγες

που Αιτούνται Άσυλο

τροποποίησε την επωνυμία του σε SIPROIMI

καθώς τέθηκε σε ισχύ

ο νόμος 113 του 2018,

πολύ πρόσφατα, δηλαδή,

μετά από μια σειρά νομοθετικών

και άλλων τροποποιήσεων της νέας κυβέρνησης,

που ορκίστηκε τον περασμένο Μάιο

στην Ιταλία, επιφέροντας βελτιώσεις

στο θέμα της μετανάστευσης,

της αίτησης ασύλου και της υποδοχής.
Το SPRAR ιδρύθηκε το 2002 και αποτελείται
από ένα δίκτυο δήμων και τοπικών παραγόντων
οι οποίοι, σε συνεργασία με τις ενώσεις
του τριτογενούς τομέα και τις ΜΚΟ, διαχειρίζονται
σε εθελοντική βάση και με δική τους επιλογή
προγράμματα υποδοχής και ένταξης
για τους αιτούντες άσυλο
και τους πρόσφυγες.
Αυτό το δίκτυο με την πάροδο των χρόνων
είχε μία προοδευτική
και θετική εξέλιξη.
Από τις αρχικές 1.500 θέσεις υποδοχής
στις 35.000 θέσεις σήμερα,
η ιστορία του SPRAR
πέρασε από πολλά στάδια
που επέφεραν ορισμένες αλλαγές.
Η πρώτη αλλαγή αφορούσε
τη θεσμοποίησή του
μέσω ενός νόμου που το κατέστησε
σταθερό και τακτικό
ως κεντρικό σύστημα υποδοχής στην Ιταλία
εκεί όπου τα προηγούμενα χρόνια δεν υπήρχαν
άλλα δομημένα συστήματα υποδοχής
παρά μόνο παρεμβάσεις
επείγοντος χαρακτήρα.
Μία άλλη σημαντική στιγμή ήταν
όταν το 2003 η λεγόμενη "έκτακτη ανάγκη της Βόρειας Αφρικής"
ανέδειξε με ακόμα πιο προφανή τρόπο,
ακόμα και σε ευρωπαϊκό επίπεδο,
την αποτελεσματικότητα και αποδοτικότητα
του μοντέλου του SPRAR στην επίτευξη

των στόχων της κοινωνικής ένταξης
και ενσωμάτωσης.
Το τελευταίο βήμα είναι και το πιο πρόσφατο
και αφορά την τροποποίηση
της ταυτότητας του SPAR, που δεν μπορεί πλέον
να υποδέχεται,
με την έναρξη ισχύος
του νόμου που προανέφερα,
τους αιτούντες άσυλο στα ανθρωπιστικά προγράμματα
γιατί, μεταξύ άλλων, καταργείται η ανθρωπιστική προστασία
και το SPRAR μπορεί να υποδέχεται
αποκλειστικά ανήλικους ασυνόδευτους αλλοδαπούς,
δικαιούχους διεθνούς προστασίας,
που όμως αντιστοιχούν
σε ένα ελάχιστο ποσοστό του συνόλου
των αιτούντων άσυλο,
καθώς και κάποιους νέους τύπους άδειας παραμονής,
τις λεγόμενες ειδικές περιπτώσεις.
Άρα το SPRAR που τώρα μετονομάστηκε
σε SIPROIMI μπορεί πλέον να υποδέχεται
τις ειδικές περιπτώσεις που χρήζουν ιατρικής περίθαλψης,
τα θύματα εμπορίας ανθρώπων,
τα θύματα εργασιακής εκμετάλλευσης,
τα θύματα ενδοοικογενειακής βίας
και φυσικών καταστροφών και όσους διακρίθηκαν
για ιδιαίτερες πράξεις ηρωισμού,
κι όλα αυτά αφορούν αλλοδαπούς
και, φυσικά, όχι Ιταλούς πολίτες,
που έχουν άλλες δομές κοινωνικής προστασίας.
Μπορούμε, λοιπόν, να πούμε ότι το SPRAR
πλέον έχει τον χαρακτήρα
παροχής πρόνοιας προς τους αλλοδαπούς

και δεν είναι πια ένα σύστημα υποδοχής και προστασίας
των ανθρώπων οι οποίοι με κάποιο τρόπο
σχετίζονται με το δικαίωμα ασύλου.
Συνεπώς, αλλάζει ο χαρακτήρας του
κι αυτό θα μπορούσε να είναι θεωρητικά
μια μερικώς θετική εξέλιξη,
αν σκεφτούμε ότι αφορά την προστασία
ανθρώπων που βρίσκονται σε εύθραυστη κατάσταση.
Η δυσκολία αυτή τη στιγμή
έγκειται στο γεγονός
ότι η άδεια παραμονής γίνεται καθοριστική
αλλά αυτό δεν σημαίνει ότι το θύμα εμπορίας ανθρώπων
μπορεί αυτομάτως να αποκτήσει
την άδεια παραμονής ως ειδική περίπτωση
θύματος εμπορίας ανθρώπων.
Το ίδιο ισχύει και για τα θύματα
εργασιακής εκμετάλλευσης και πάει λέγοντας.
Δεν έχουμε σαφή κριτήρια
για το πώς πρέπει να είναι αυτές οι διαδικασίες
και για το πώς θα κατατάξουμε όλους αυτούς τους ανθρώπους
που βρίσκονται σε παρόμοια ευάλωτη κατάσταση
υπό τον ορισμό, νομικό και όχι μόνο,
της ειδικής περίπτωσης.
Μόνο με την τυποποίηση μιας άδειας παραμονής
για ειδική περίπτωση, μπορεί ο ενδιαφερόμενος
να έχει πρόσβαση στο SPRAR
και να επωφεληθεί όλων των υπηρεσιών προστασίας,
κάλυψης και συνοδείας
προς την ένταξη και την ενσωμάτωση
που προβλέπει το SPRAR.
Επιπλέον, δεν έχουν ακόμα προσδιοριστεί
τα κριτήρια και τα προαπαιτούμενα με βάση τα οποία

κάποιος μπορεί να λάβει την άδεια

για ιατροφαρμακευτική περίθαλψη.

Για ποιο τύπο ψυχικού ή σωματικού προβλήματος;

Για ποιο μέγεθος σοβαρότητας;

Για ποιο χρονικό ορίζοντα προβλέπεται αυτή η κάλυψη;

Βρισκόμαστε, λοιπόν,

σε μια πολύ κρίσιμη μεταβατική περίοδο

γιατί πάρα πολλοί άνθρωποι,

οι οποίοι μέχρι πριν από λίγους μήνες

δικαιούνταν πρόσβαση στα προγράμματα του SPRAR,

πλέον δεν τη δικαιούνται.

Αντίστροφα, όλοι όσοι θεωρητικά

φαίνεται ότι μπορούν να έχουν

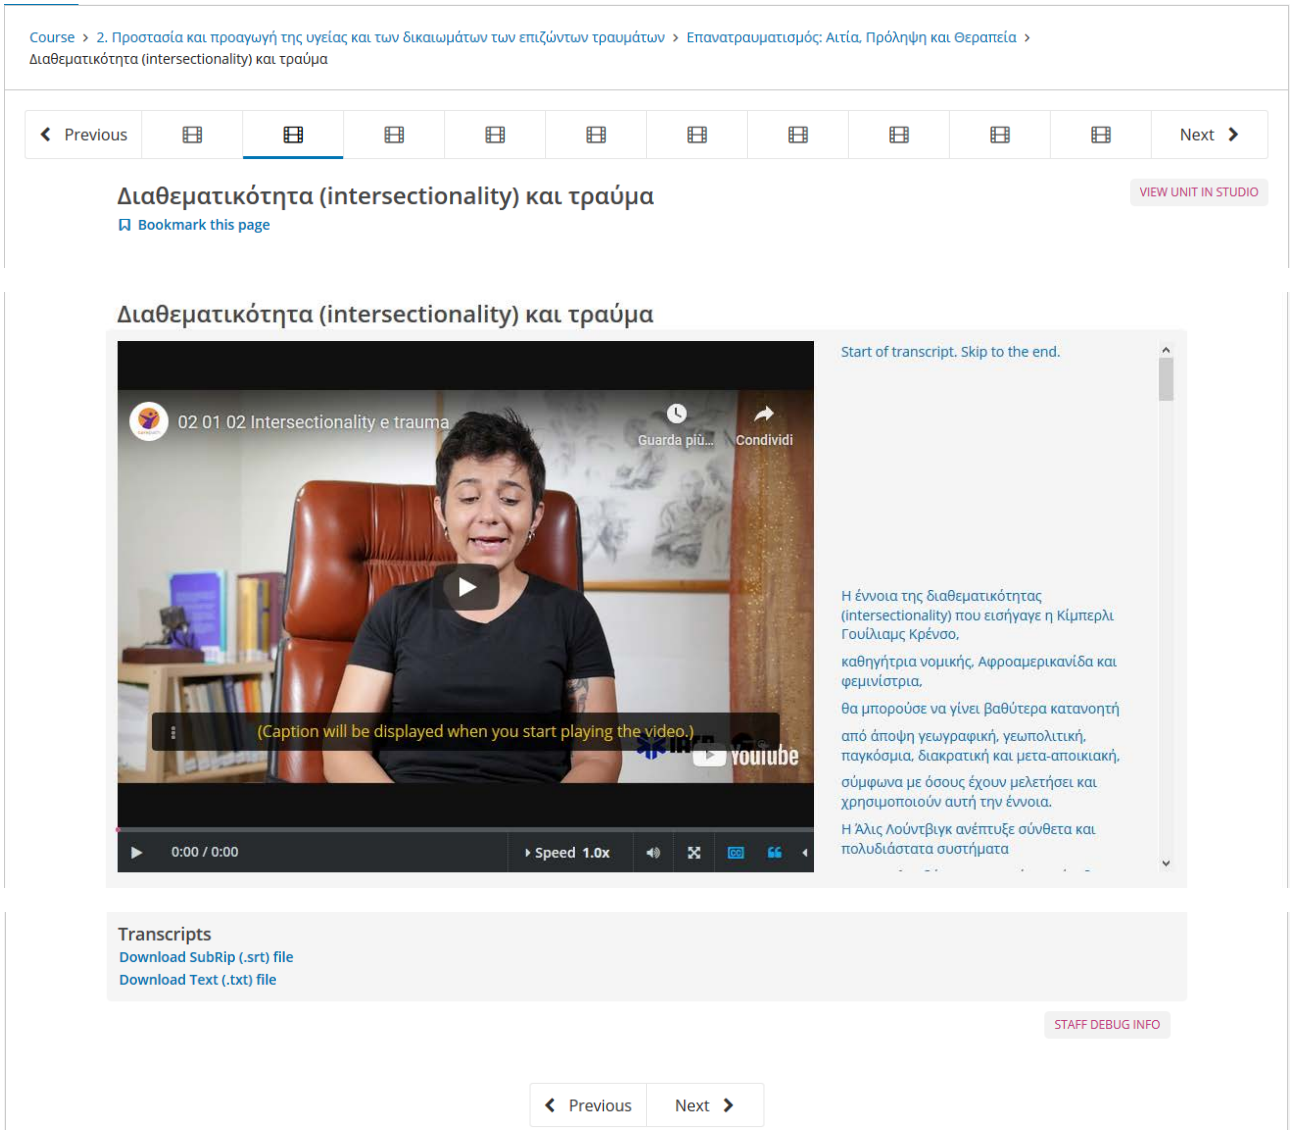
αυτή την πρόσβαση, στην ουσία δεν γνωρίζουν

και ούτε εμείς γνωρίζουμε πώς μπορούμε να τους δώσουμε

τη λεγόμενη "βεβαίωση" με την οποία

ουσιαστικά θα επωφεληθούν

αυτού του δικαιώματος.



Transcript

Η έννοια της διαθεματικότητας (intersectionality) που εισήγαγε η Κίμπερλι Γουίλιαμς Κρένσο,

καθηγήτρια νομικής, Αφροαμερικανίδα και φεμινίστρια,

θα μπορούσε να γίνει βαθύτερα κατανοητή

από άποψη γεωγραφική, γεωπολιτική, παγκόσμια, διακρατική και μετα-αποικιακή,

σύμφωνα με όσους έχουν μελετήσει και χρησιμοποιούν αυτή την έννοια.

Η Άλις Λούντβιγκ ανέπτυξε σύνθετα και πολυδιάστατα συστήματα

που περιλαμβάνουν περαιτέρω επίπεδα διαφοροποίησης,

όπως ίσως το φύλο, η σεξουαλικότητα, η φυλή, το χρώμα του δέρματος, το κράτος, η κοινωνική τάξη, η κουλτούρα

και πάει λέγοντας κι αυτό μας δίνει την έκταση των αναρίθμητων επιπέδων

που πρέπει να λάβουμε υπόψη και να προσέχουμε όταν βρισκόμαστε σε μια σχέση βοήθειας

με πρόσωπα που ανήκουν σε ό,τι κοινώς θεωρούμε ως μειονοτικούς πληθυσμούς.

Για να παραθέσω την Οντρ Λορντ,

θα λέγαμε ότι κανένας αγώνας δεν αφορά μόνο ένα πρόβλημα

γιατί δεν ζούμε ζωές μονοδιάστατες.

Η διεθνικότητα είναι όλο και πιο συχνά ένα στοιχείο ανάπτυξης πολιτικών ισότητας,

είναι μια δυνατότητα,

χάρη στην εργασία των Ηνωμένων Εθνών και της Ευρωπαϊκής Ένωσης, μεταξύ άλλων.

Ας μην ξεχνάμε τις οδηγίες για την καταπολέμηση των διακρίσεων

και όλες τις πρωτοβουλίες σε επίπεδο εθνικό, επαρχιακό και τοπικό

καθώς και τις πολιτικές και τη διαχείριση των διακρίσεων

που υιοθετούνται πλέον σε όλα τα έθνη

της Δύσης,

σε πάρα πολλές εταιρείες.

Προφανώς, αυτό δεν εξαλείφει τις αμφιθυμίες, τα δεινά και τις σιωπές

όσων βιώνουν πολλαπλές καταστάσεις μειονότητας,

έχοντας ίσως ήδη βιώσει τραυματικές καταστάσεις λόγω της μειονοτικής τους ιδιότητας.

Στο έντυπο "Fatto Quotidiano" της 17ης Μαΐου 2018

αναφέρεται μία φράση ενός παιδιού από το Καμερούν.

"Μια μέρα που βλέπαμε στην κουζίνα μια τηλεοπτική εκπομπή για τους ΛΟΑΤΚΙ μετανάστες,

οι Αφρικανοί συμπατριώτες μου άρχισαν να λένε

ότι η Ιταλία είναι μια άθλια χώρα γεμάτη ομοφυλόφιλους

και για άλλη μια φορά ένιωσα ότι δεν ήμουνα ελεύθερος".

Ο Άλεν είναι 22 ετών και δραπέτευσε από κάποιον που τον χτυπούσε και τον αποκαλούσε "δαίμονα",

αφήνοντας πίσω του το Καμερούν,

οπως αναφέρει η εφημερίδα,

όπου η ομοφυλοφιλία συνιστά αδίκημα,

για να ζητήσει στην Ιταλία διεθνή προστασία,

αλλά ο φόβος παρέμεινε για πολύ καιρό αμείωτος

γιατί η ομοφοβία τον ακολούθησε ως το κέντρο υποδοχής της Οδού Ματέα στη Μπολόνια

όπου φιλοξενήθηκε μαζί με τους ομοεθνείς του.

Οι μετανάστες ΛΟΑΤΚΙ, πολύ συχνά, είναι πολύ νεαρής ηλικίας,

δεν μπορούν να βασίζονται

στην υποστήριξη της κοινότητας καταγωγής τους,

με την οποία τυχαίνει να μεταναστεύουν
αλλά συχνά τη χαρακτηρίζει η ίδια ομοφοβία και τρανσφοβία από την οποία δραπέτευσαν.
Δεν μπορούν καν να είναι βέβαιοι ότι θα συναντήσουν μια πολυπολιτισμική πραγματικότητα
όπου θα βιώσουν με ηρεμία τον σεξουαλικό προσανατολισμό ή την ταυτότητά τους.
Όπως υπογραμμίζεται σε πολλές περιπτώσεις συνεντεύξεων στον Βιντσέντσο Μπραμάτο,
πρόεδρο του συλλόγου "Arcigay" της Μπολόνια,
σε μερικές ευρωπαϊκές χώρες, όπως η Γερμανία,
υπάρχουν προστατευμένες δομές υποδοχής διωκόμενων λόγω του σεξουαλικού τους προσανατολισμού,
όπου το προσωπικό έχει λάβει συγκεκριμένη κατάρτιση
με στόχο να μην αναπαράγει επικριτικές ή υποτιμητικές συμπεριφορές που θα αναβίωναν
το στίγμα και το τραύμα αυτών των προσώπων.
Στην Ιταλία, προς το παρόν, ο τρόπος υποδοχής δεν προβλέπει τέτοιες εξειδικεύσεις,
αλλά υπάρχουν θετικές πρωτοβουλίες, όπως το πιλοτικό πρόγραμμα,
που ξεκίνησε το 2017 στη Μόντενα, με ένα μικρό εξαθέσιο διαμέρισμα
μόνο για τους ΛΟΑΤΚΙ αιτούντες άσυλο,
καθώς και ένα γκισέ εξυπηρέτησης μόνο για ΛΟΑΤΚΙ μετανάστες στη Βερόνα.
Για αυτούς τους νεαρούς
μετανάστες
σε μία εξελικτική ηλικία
που ανήκουν στην κοινότητα ΛΟΑΤΚΙ
το ότι ανήκουν σε μία εθνική μειονότητα κάποιας χώρας που τους φιλοξενεί
είναι μόνο ένα μέρος του προβλήματος.
Πράγματι, πολύ συχνά πρόκειται για μία σιωπηλή και τρομαγμένη μειονότητα,
ακόμα και στο πλαίσιο της δικής τους κοινότητας αναφοράς.
Ένα τραύμα αορατότητας, όπως λέει ο Ρότζερς,
διπλασιασμένο,
ένα άγχος μειονότητας, "minority stress" κατά τον Βιτόριο Λιντζιάρντι,
που αφορά μια ασυμβατότητα, κατά τον Ρότζερς, επίσης διπλασιασμένη.
Άρα διπλασιάζεται και ο κίνδυνος για την ψυχοσωματική υγεία αυτών των ανθρώπων
και συνεπώς έχουμε μια ανεκτίμητη απώλεια ανθρώπινου κεφαλαίου.
Κατάρτιση στην υποδοχή σημαίνει κατάρτιση σχετικά με τα ανθρώπινα δικαιώματα
και τις ιδιαιτερότητες

που κομίζει ο μετανάστης ΛΟΑΤΚΙ

στη σχέση βοήθειας.

Η κατάρτιση πρέπει, λοιπόν, να επικεντρώνεται στο πρόσωπο,

να γνωρίζει και να αποδέχεται αυτές τις ιδιαιτερότητες, αν θέλουμε να μιλάμε για πραγματική ένταξη.

Επιπλέον, όταν οι υπηρεσίες προς τους μετανάστες

σχεδιάζονται και παρέχονται χωρίς να λαμβάνεται υπόψη

ο παράγοντας του σεξουαλικού προσανατολισμού και της ταυτότητας φύλου,

ενίοτε είναι μειωμένης αποτελεσματικότητας

τόσο σε ό,τι αφορά τη σχέση με τον θεραπευόμενο,

δηλαδή, οι νέοι αυτοί δεν μπορούν

να λάβουν την αποδοχή που θα μπορούσαν να έχουν,

όσο και σε ό,τι αφορά τη χρησιμότητα των διαδικασιών κατάρτισης ή πρόληψης.

Αναφέρουμε ενδεικτικά τα σεξουαλικά μεταδιδόμενα νοσήματα

και πόσο πολυδιάστατη πρέπει να είναι

η κατάρτιση και σε αυτό το σκέλος

όταν έχουμε έναν έφηβο μετανάστη που ανήκει στη ΛΟΑΤΚΙ κοινότητα.

Από την άλλη, οι υπηρεσίες που παρέχονται από την κοινότητα ΛΟΑΤΚΙ

συνδέονται στενά με ένα δυτικό μοντέλο του γκέι άνδρα και της λεσβίας γυναίκας

και πολύ συχνά αυτά τα μοντέλα δεν λαμβάνουν υπόψη

ένα μοντέλο με το οποίο τα παιδιά αυτά, προερχόμενα από άλλες κουλτούρες,

μπορούν όντως να ταυτιστούν.

Η εμπειρία των προαναφερθέντων πραγματικοτήτων

έχει αποδείξει ότι οι υπηρεσίες

υποστήριξης και συμβουλευτικής που παρέχουν τα ιδρύματα αλλά και οι οργανισμοί

ενδέχεται να μην είναι αποτελεσματικές για αυτά τα παιδιά.

Ως εκ τούτου,

η εργασία με αυτές τις πολλαπλώς μειονοτικές ομάδες

θα απαιτήσει μία διεπιστημονική προσέγγιση

σχετικά με τις πρακτικές των σχέσεων βοήθειας. Στη σχέση με αυτά τα άτομα είναι απαραίτητη

η εμβάθυνση στις διαστάσεις της ομοφυλοφιλίας, της αμφιφυλοφιλίας και της τρανσεξουαλικότητας

στην ιστορία της ψυχιατρικής και της ψυχολογίας,

στην έννοια του στιγματισμού,

της ομοφοβίας, της εσωτερικευμένης ομοφοβίας

και όλα αυτά σε συνδυασμό με διαρκή ενημέρωση των θεραπευτών

σχετικά με τη νομοθεσία

επί αυτών των θεμάτων,

τόσο στις χώρες υποδοχής όσο και στις χώρες προέλευσης όσων χρήζουν υποδοχής.

Επιπλέον, είναι απαραίτητη

η διαρκής εμβάθυνση και γνώση, λόγω της συνεχούς εξέλιξης και τροποίησης,

όλων όσα αφορούν τη νομοθεσία

που συνδέεται με το άσυλο.

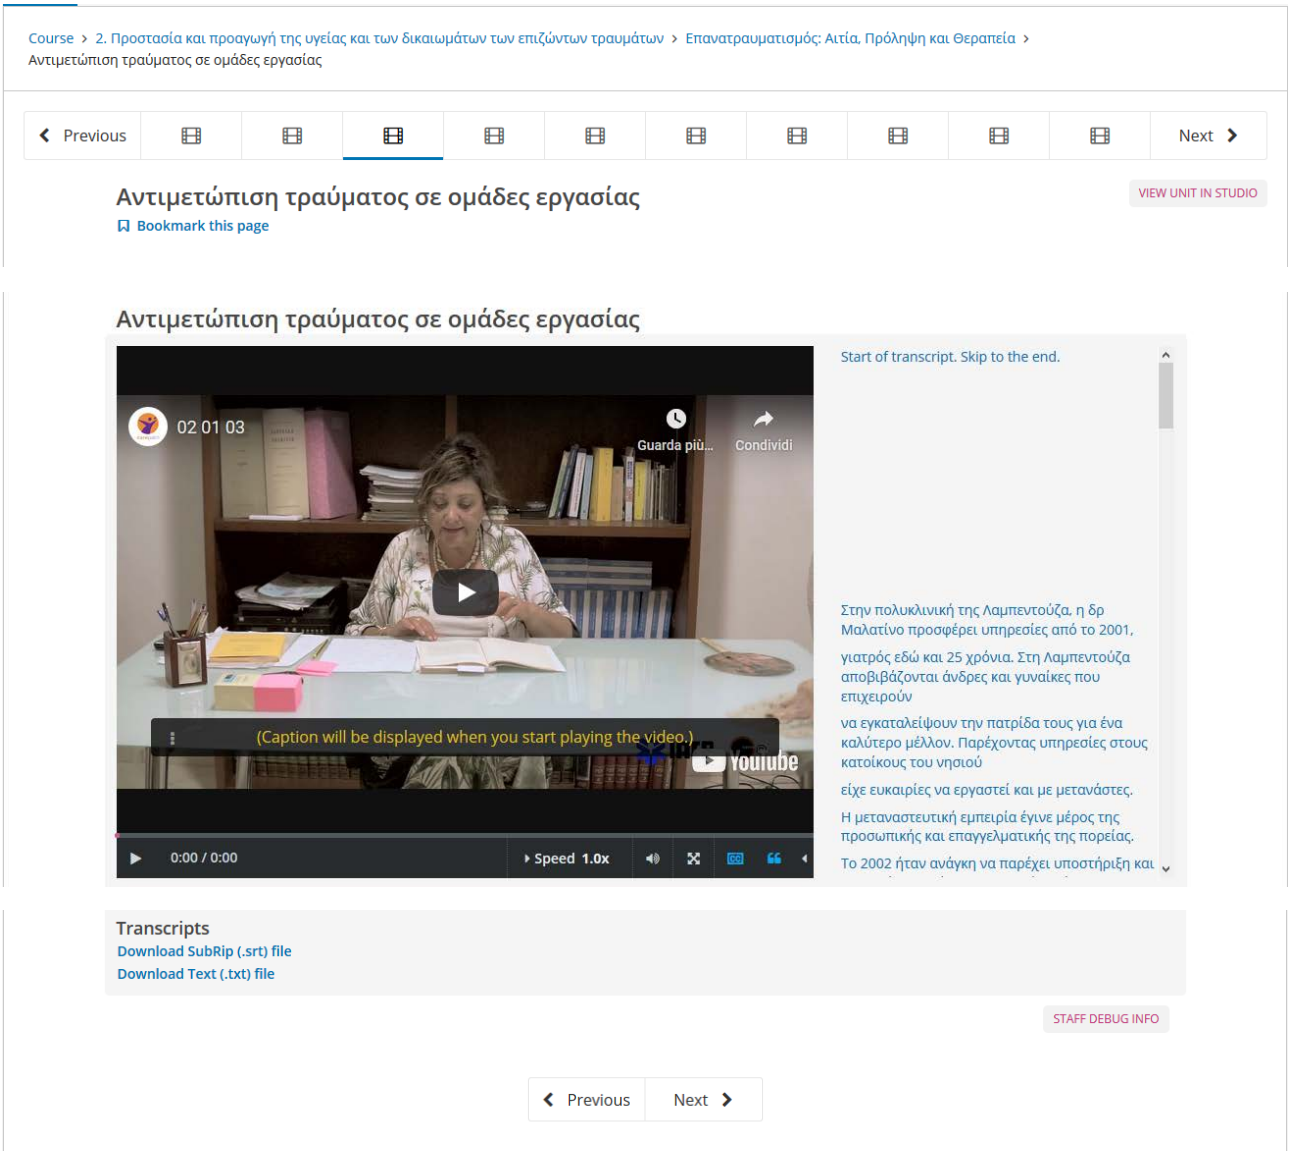
Σε συνεργασία με τεχνικούς εμπειρογνώμονες,

είναι ανάγκη να αναπτύξουμε και να παγιώσουμε, από μια άποψη πιο προσωπική,

μία προσέγγιση με ευαισθησία στο εκάστοτε φύλο

και να διατηρήσουμε ζωντανό μέσα μας και στην ομάδα εργασίας που υποδέχεταιτους εν λόγω νέους

τον στοχασμό για τα ανθρώπινα δικαιώματα ως μια σύμβαση της δυτικής κουλτούρας.



Transcript

Στην πολυκλινική της Λαμπεντούζα, η δρ Μαλατίνο προσφέρει υπηρεσίες από το 2001,

γιατρός εδώ και 25 χρόνια. Στη Λαμπεντούζα αποβιβάζονται άνδρες και γυναίκες που επιχειρούν

να εγκαταλείψουν την πατρίδα τους για ένα καλύτερο μέλλον. Παρέχοντας υπηρεσίες στους κατοίκους του νησιού

είχε ευκαιρίες να εργαστεί και με μετανάστες.

Η μεταναστευτική εμπειρία έγινε μέρος της προσωπικής και επαγγελματικής της πορείας.

Το 2002 ήταν ανάγκη να παρέχει υποστήριξη και θεραπεία στο κέντρο υποδοχής ατόμων

τα οποία, καταλήγοντας στο νησί μετά από ταξίδια πολύ δύσκολα, μακρόχρονα και επικίνδυνα

έως θανάτου, χρειάζονταν φάρμακα και η υπεύθυνη της δομής ζήτησε

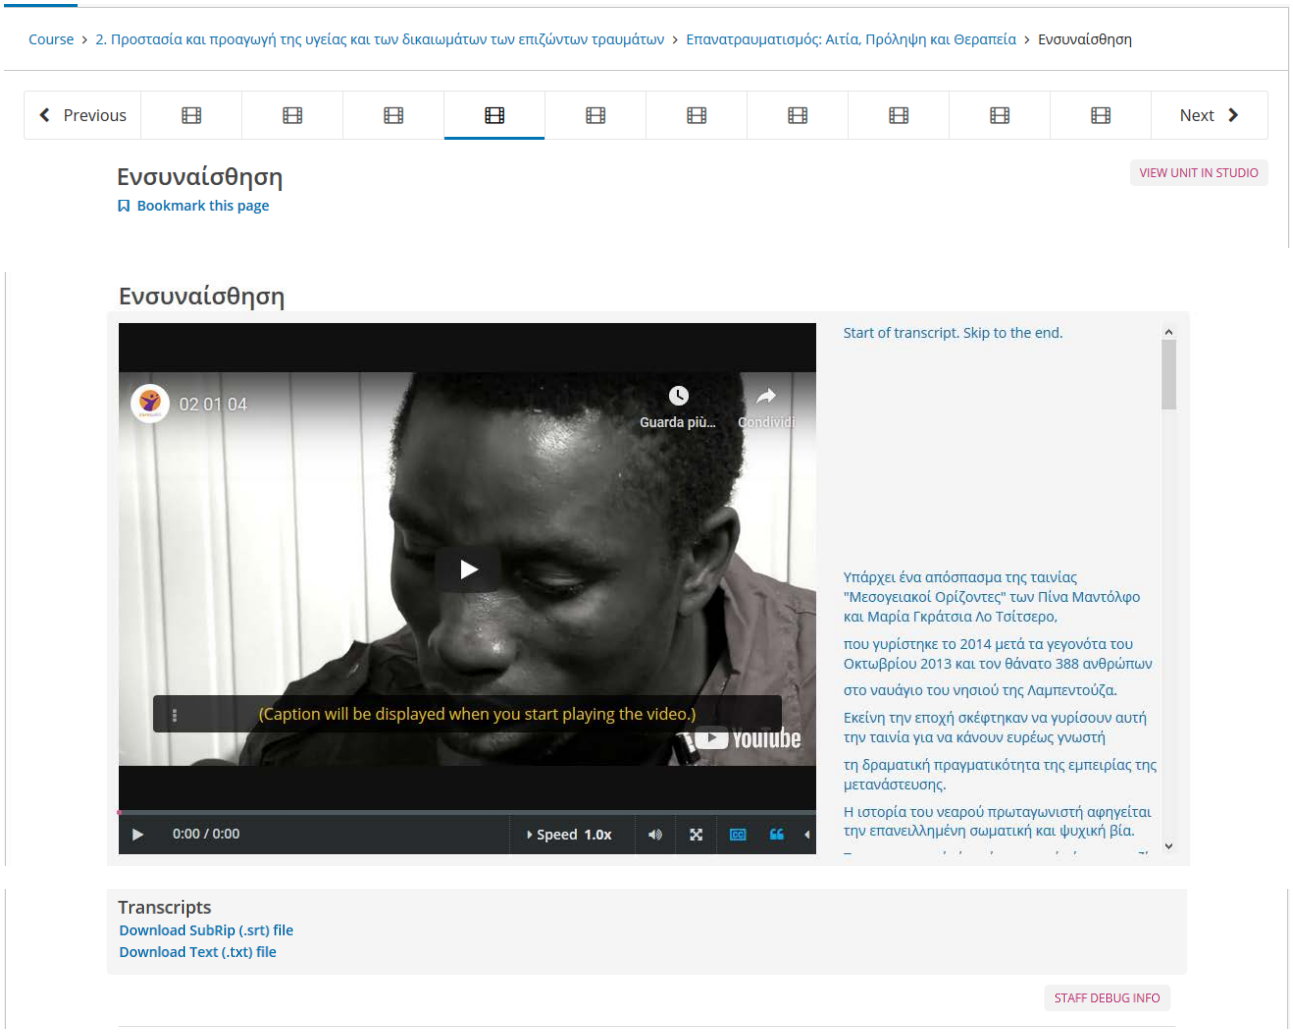
μία ψυχιατρική εκτίμηση των ατόμων που αποβιβάζονταν στο νησί.

Αποδείχτηκε σχεδόν αδύνατο να εκτιμηθεί η ψυχιατρική υγεία ατόμων που έχουν εκτεθεί

και υποβληθεί σε τόσο σοβαρά τραυματικά γεγονότα κι επειδή είχαν διαφορετική κουλτούρα

δεν ζητούσαν βοήθεια ή φαρμακολογική υποστήριξη, καθώς προέρχονταν από περιβάλλοντα
όπου δεν θεωρείται συμβατική η δυτική ιατρική. Εκείνο που στήριζε και βοηθούσε περισσότερο
αυτά τα άτομα σε ορισμένες περιπτώσεις ήταν η προσφυγή σε τελετουργίες μαγικές
ή πολύ σχετικές με την προληπτική μαγική νοοτροπία που κόμιζαν πολλοί από αυτούς.
Η υποδοχή ατόμων τόσο ταλαιπωρημένων ήταν ιδιαίτερη πολύπλοκη όπως και η παροχή
βοήθειας και υποστήριξης. Έτσι, προτάθηκε η οργάνωση ομάδων ακρόασης.
Ήταν μια εξαιρετική εμπειρία για μία ψυχοθεραπεύτρια και ψυχίατρο της μεθόδου του Ρότζερς
που ως εκείνη τη στιγμή συντόνιζε ομάδες ακρόασης σύμφωνα με το μοντέλο του Καρλ Ρότζερς.
Σε αυτές τις ομάδες οι συμμετέχοντες κάθονται σχηματίζοντας κύκλο
και ακούν αμοιβαία, ενώ το βασικό στοιχείο είναι η πλήρης απουσία κριτικής
και ο απόλυτος σεβασμός οποιουδήποτε θέματος θελήσει να πραγματευτεί η ομάδα.
Έτσι, δημιουργείται ένα κλίμα εκμυστηρεύσεων που διευκολύνει πολύ την εμπιστοσύνη και βοηθά
τους συμμετέχοντες, ακόμα και σε ιδιαίτερα προβληματικές συναισθηματικές καταστάσεις, ώστε να επανεπεξεργαστούν
την εμπειρία τους και παράλληλα να βρουν μια μορφή αλληλεγγύης, διαπιστώνοντας πως ό,τι βίωσαν προσωπικά
δεν είναι αναγκαστικά κάτι ατομικό αλλά το βιώνουν και το κατανοούν και άλλα άτομα.
Αυτό και μόνο ευνοεί την ανάλυση, ενίοτε, της δυστυχίας, της σύγκρουσης
ή του επώδυνου γεγονότος. Αυτό ακριβώς συνέβη σε αυτές τις ομάδες.
Ένα στοιχείο σημαντικό και θεμελιώδες ήταν η επίτευξη ισορροπίας με τον πολιτιστικό διαμεσολαβητή,
τον διερμηνέα, γιατί ο θεραπευτής δεν μιλούσε τη γλώσσα των υποκειμένων και οι βασικές συνθήκες
στις οποίες μπορούσαν να δουλέψουν ήταν απολύτως απαγορευτικές λόγω έλλειψης υλικών,
δεν υπήρχαν καρέκλες, ή λόγω απρόβλεπτων καταστάσεων, κάποιες ομάδες είχαν μόλις διασωθεί από ναυάγιο
και μερικοί φορούσαν μόνο κουβέρτες διάσωσης.
Παρά την αλλόκοτη αυτή κατάσταση, όλως περιέργως, διαπιστώθηκε ότι η βαθύτερη αξία
δεν αφορά μόνο τη μορφή αλλά την ουσία. Απέναντι σε ανθρώπους που κόμιζαν
τη δική τους ιστορία
μετά από τρομερά και ατελείωτα ταξίδια, στην έρημο, στη Λιβύη ή με κίνδυνο πνιγμού, οι εμπειρίες
που αφηγήθηκαν ήταν εξαιρετικά τραυματικές ακόμα και για τον θεραπευτή που άκουγε τις ιστορίες,
ο οποίος δυσκολευόταν να βγει από αυτή την κατάσταση δυστυχίας και πόνου
που είχε γίνει εμπειρία και του θεραπευτή. Ανακαλούσε στον θεραπευτή
ένα γεγονός, που είχε ξεχάσει, από την παιδική του ηλικία,

όταν είχε φύγει μία θεία προκαλώντας τόσο πόνο ώστε να φτάσει να απωθήσει αυτή την ανάμνηση.
Υπό το πρίσμα όλων αυτών, όταν υποδεχόμαστε κάποιον
που έχει ζήσει ένα παρόμοιο δράμα, είναι θεμελιώδες να προσπαθούμε πάντα να δίνουμε
το στοιχείο της ακρόασης, που είναι βασικό για να μπορέσει κανείς να ανοιχτεί και να εκφράσει
τα βιώματά του. Επίσης, είναι αναγκαία η ύπαρξη βαθιάς αποδοχής για το πρόσωπο
και η απουσία κριτικής γιατί έτσι ευνοείται η εμπιστοσύνη. Επίσης, είναι σημαντική
η ενσυναίσθηση, που είναι βάλσαμο ψυχής, η αίσθηση ότι ο άλλος έρχεται στη θέση σου
και ακούει σε βάθος σαν να ένιωθε κι εκείνος όλο σου τον πόνο.
Αυτές είναι οι τρεις βασικές προϋποθέσεις κατά Καρλ Ρότζερς για να εργαστούμε με ομάδες
αλλά και στις σχέσεις βοήθειας της ψυχοθεραπείας. Κλείνοντας αυτή την ανάλυση σχετικά με την αξία
των ομάδων τύπου Ρότζερς για την επανεπεξεργασία του τραύματος με μετανάστες, θα επιμείνω
σε ένα ενδιαφέρον στοιχείο: κανένας δεν χρειάστηκε να λάβει φαρμακευτική αγωγή
μετά τη συμμετοχή του στις ομάδες ακρόασης. Ιδιαίτερα βοηθητική είναι η φυσική διάσταση
της ομάδας σε κυκλική διάταξη. Η κυκλικότητα ίσως να αναπαρήγαγε
μέρος των εμπειριών που βιώνουν οι θεραπευόμενοι στις χώρες τους,
όπως στην Ερυθραία, όπου είθισται οι ηλικιωμένοι και οι άνδρες του χωριού να συγκεντρώνονται
κυκλικά γύρω από ένα μεγάλο δέντρο, το λεγόμενο "δέντρο των λέξεων".
Σε αυτή τη συνάντηση, μέσα από τις λέξεις, αποκαταστάθηκε ο ιστός
σε ένα υφάδι που είχε σχιστεί.



Transcript

Υπάρχει ένα απόσπασμα της ταινίας "Μεσογειακοί Ορίζοντες" των Πίνα Μαντόλφο και Μαρία Γκράτσια Λο Τσίτσερο,

που γυρίστηκε το 2014 μετά τα γεγονότα του Οκτωβρίου 2013 και τον θάνατο 388 ανθρώπων

στο ναυάγιο του νησιού της Λαμπεντούζα.

Εκείνη την εποχή σκέφτηκαν να γυρίσουν αυτή την ταινία για να κάνουν ευρέως γνωστή

τη δραματική πραγματικότητα της εμπειρίας της μετανάστευσης.

Η ιστορία του νεαρού πρωταγωνιστή αφηγείται την επανειλλημένη σωματική και ψυχική βία.

Το εντυπωσιακό είναι ότι ο νεαρός έφτασε μαζί με την αδελφή του,

που επίσης υπέστη βία και βιασμό αλλά δεν είχε μιλήσει ποτέ στον αδελφό της

για αυτή την εμπειρία, όπως κι εκείνος είχε βιαστεί και δεν είχε ποτέ μιλήσει για αυτό

στην αδελφή του.

Παρατηρήσαμε ότι ο ίδιος ντρεπόταν πολύ να μιλήσει για αυτή την εμπειρία

για αυτό και ζήτησε να μην είναι παρούσα η αδελφή του, γιατί δεν ήθελε να γνωρίζει εκείνη,

αλλά, όπως ομολόγησε αργότερα, και επειδή ντρεπόταν που ήταν άντρας

και είχε υποστεί τέτοιου είδους βία.

Επισημαίνουμε ότι αυτός ο νεαρός ήταν μόλις 16 ετών.

Στη μαρτυρία του νεαρού ακούμε τι συνέβη κατά τη διάρκεια του ταξιδιού του.

Ο μοναδικός τρόπος για να μη διακοπεί η συναισθηματική του ροή

ήταν να τον ακούμε χωρίς να διακόπτουμε ποτέ την αφήγηση.

Σε ελάχιστες περιπτώσεις, με τρόπο εικονικό, ένα νεύμα του κεφαλιού ή ένα βλέμμα συμφωνίας

πιο βαθύ τον βοηθούσε να μπορέσει να συνεχίσει να μιλάει

για την προσωπική του ιστορία.

Παρατηρούμε, λοιπόν, ότι η ενσυναίσθηση δηλώνεται

όχι τόσο λεκτικά αλλά με εικόνα, δηλαδή, με οπτική επαφή, νεύματα, κλίση του σώματος

προς το μέρος του.

Αυτό ήταν αναγκαίο για να τον βοηθήσουμε να μιλήσει

χωρίς να τον αγγίζουμε ποτέ γιατί το άγγιγμα το θεωρούσε πηγή ντροπής, σαν ένα μωρό ανίκανο

να διερευνήσει μία δύσκολη ιστορία και να την υποστηρίξει. Ήταν μικρότερος

από την αδελφή του αλλά θεωρούσε ότι έπρεπε να υποστηρίξει και να ενθαρρύνει την αδελφή του.

Κι εδώ παρατηρούμε πώς η λεπτότητα, η διακριτικότητα, η ενσυναίσθηση και η ακρόαση ευνοούν

σε βάθος το άνοιγμα στις σχέσεις επείγοντος χαρακτήρα.

Το βίντεο αφορά την εμπειρία

ακρόασης δύο ιστοριών: μιας κοπέλας

ή ενός νεαρού, που είναι αδέλφια.

Αυτά τα δύο αδέλφια ξεκίνησαν από την Ερυθραία,

αποβιβάστηκαν στη Λαμπεντούζα το 2014 και μεταφέρθηκαν στο κέντρο υποδοχής του Μίνεο

όπου και παρέμειναν για να λάβουν την άδεια παραμονής,

αλλά όταν επιχειρήθηκε η συνέντευξή τους για να δώσουν τη μαρτυρία τους

σχετικά με τις εμπειρίες και τις ιστορίες τους, έγινε αντιληπτό, με βάση αυτό το είδος αφήγησης,

ότι έπρεπε η ακρόαση να είναι πολύ προσεκτική και με λεπτότητα γιατί αυτά τα δύο παιδιά

είχαν υποστεί βασανιστήρια και περιστατικά βίας πολύ έντονα και δραματικά.

Ο καθένας τους είχε ζητήσει να μιλήσει χωρίς την παρουσία του άλλου.

Η ιστορία της κοπέλας αφορά την εμπειρία του ταξιδιού που έκανε για να δώσει τη δυνατότητα

στον αδελφό της να αποφύγει την υποχρεωτική στρατιωτική θητεία στα 16 του χρόνια.

Στην αφήγησή της γίνεται κατανοητό ότι λέει κάτι θεμελιώδες: "δεν μπορώ να ξεχάσω,

δεν βρίσκω τη δύναμη να μιλήσω". Πρόκειται για λέξεις - κλειδιά και τότε η ακρόαση

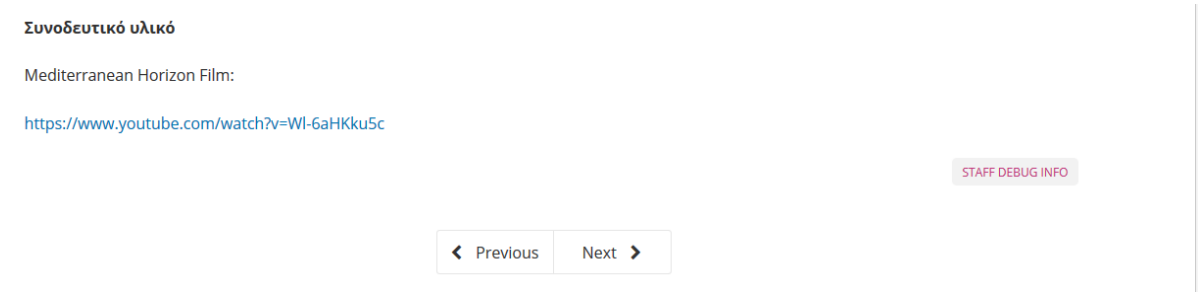
συνοδεύτηκε από την επαφή των χεριών του θεραπευτή και της κοπέλας.

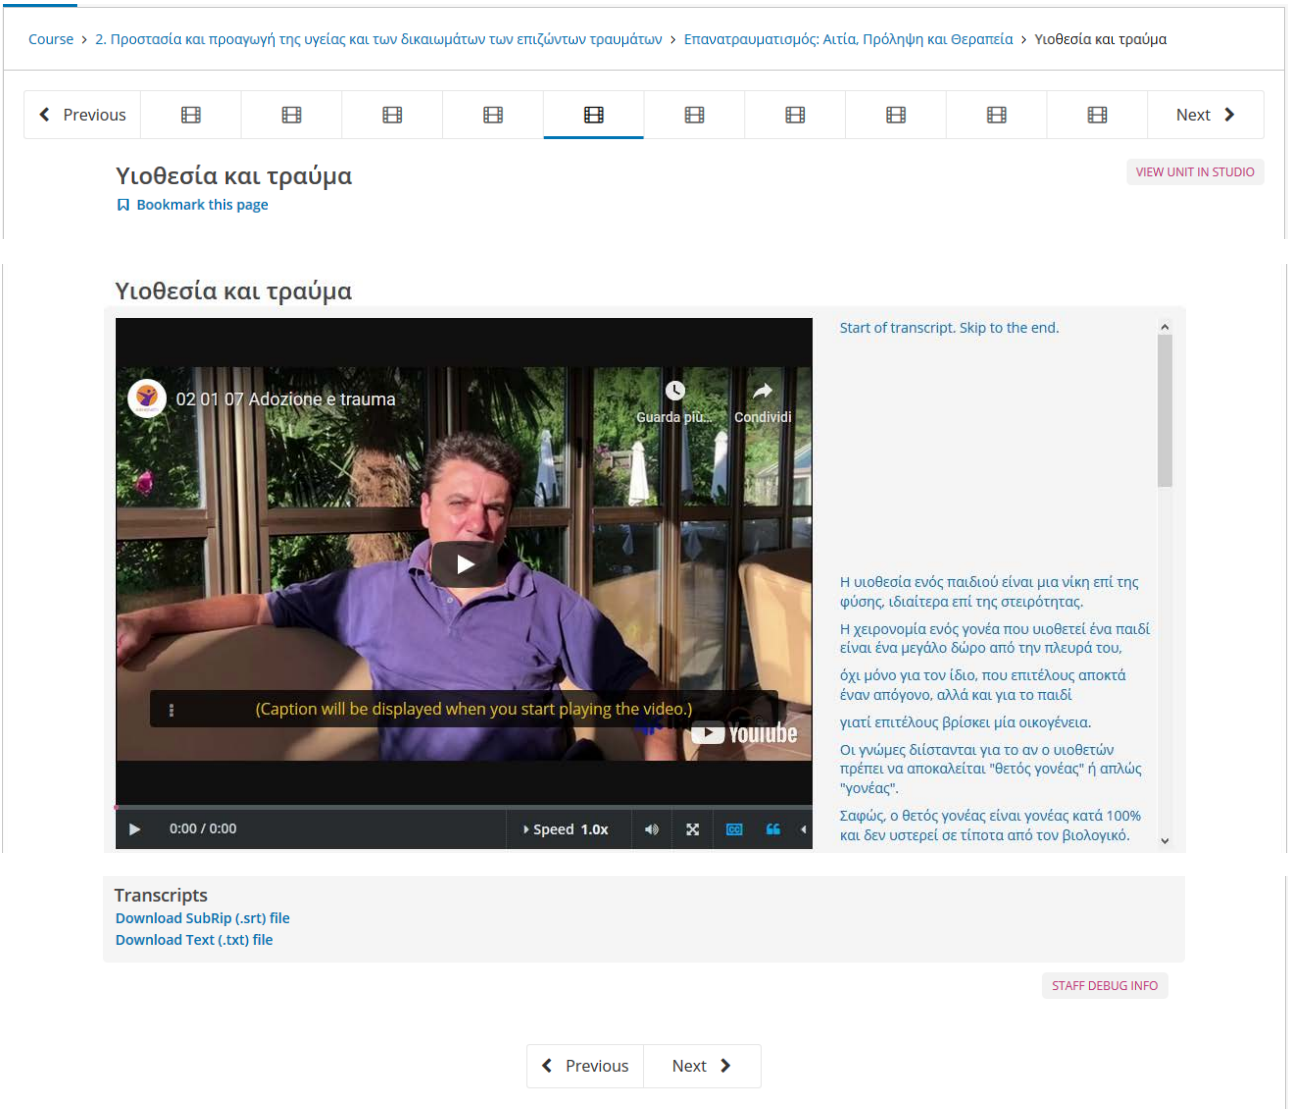
Η δουλειά με σωματική επαφή σε τέτοιες εμπειρίες είναι δύσκολη. Μάλλον είναι προτιμότερο να μην αγγίζουμε τα πρόσωπα που έχουν υποστεί τραύμα και σωματική βία. Στη συγκεκριμένη περίπτωση συνειδητοποιήσαμε ότι η κοπέλα είχε ανάγκη από υποστήριξη σε βάθος για να μπορέσει να αφηγηθεί αυτή την ιστορία κι έτσι ο θεραπευτής ρώτησε αν μπορούσε να της κρατήσει τα χέρια. Το γεγονός ότι τη ρώτησε και δεν το έπραξε παρά τη θέλησή της έκανε πιο πιθανή την περίπτωση να δώσει τη συγκατάθεσή της.

Με αυτή την επαφή δημιουργήθηκε ένα κανάλι ισχυρής και δυνατής ενέργειας όποτε η κοπέλα έπρεπε να μιλήσει για πολύ τραυματικές και επώδυνες πτυχές και είχε την τάση να σταματάει. Έτσι, ο θεραπευτής της έσφιγγε τα χέρια προκαλώντας τη συνέχιση της ενεργειακής ροής, απαραίτητης για να συνεχίσει την ιστορία της.

Κλείνοντας την περιγραφή αυτής της εμπειρίας μπορώ να διαβεβαιώσω ότι η αφήγηση κάποιου, που έχει υποστεί τραύματα, δεν μπορεί ποτέ να αντιμετωπίζεται με απαξίωση ή αγανάκτηση ή τάση υπερβολής. Το θεμελιώδες είναι η ακρόαση της ιστορίας, όπως ακριβώς την αφηγείται, ακούγοντας με μεγάλη ευαισθησία και κυρίως με ενσυναίσθηση και αναγνώριση του πόνου του άλλου.

Αυτό ήταν το θεμελιώδες στοιχείο που επέτρεψε την πρόσβαση σε μια συναισθηματική έκφραση ακόμα πιο έντονη και βαθιά από την ίδια την αφηγούμενη ιστορία.





Transcript

Η υιοθεσία ενός παιδιού είναι μια νίκη επί της φύσης, ιδιαίτερα επί της στειρότητας.

Η χειρονομία ενός γονέα που υιοθετεί ένα παιδί είναι ένα μεγάλο δώρο από την πλευρά του,

όχι μόνο για τον ίδιο, που επιτέλους αποκτά έναν απόγονο, αλλά και για το παιδί

γιατί επιτέλους βρίσκει μία οικογένεια.

Οι γνώμες διίστανται για το αν ο υιοθετών πρέπει να αποκαλείται "θετός γονέας" ή απλώς "γονέας".

Σαφώς, ο θετός γονέας είναι γονέας κατά 100% και δεν υστερεί σε τίποτα από τον βιολογικό.

Αυτό αποδεικνύεται από τις έρευνες αλλά και από τη σχέση που δημιουργείται

μεταξύ παιδιού και γονέα.

Η υιοθεσία ενός παιδιού περιλαμβάνει περισσότερα από ό,τι η σχέση με ένα βιολογικό παιδί.

Για έναν θετό γονέα κάθε φορά που τον αποκαλούν "μπαμπά" είναι μια έκπληξη,

ενώ για τον βιολογικό πατέρα ίσως αυτό να είναι κάτι δεδομένο.

Αυτό σημαίνει ότι ίσως η θετή γονεϊκότητα να είναι πιο έντονη

από ό,τι μπορεί να είναι η βιολογική.

Ωστόσο, αυτό σημαίνει επίσης ότι πρέπει ο γονέας να είναι προσεκτικός: το υιοθετημένο παιδί

έχει το δικαίωμα να είναι ευτυχισμένο. Για να συμβεί αυτό πρέπει να ληφθεί υπόψη

ποια είναι η ιστορία του, που δεν μπορούμε πάντα να γνωρίζουμε γιατί κανείς δεν μας τη διηγείται

και το ίδιο το παιδί δεν τη θυμάται.

Ωστόσο, πρέπει να λαμβάνουμε υπόψη, με ευαισθησία, τα προβλήματα που ενδέχεται

να "κουβαλάει" μαζί του το παιδί.

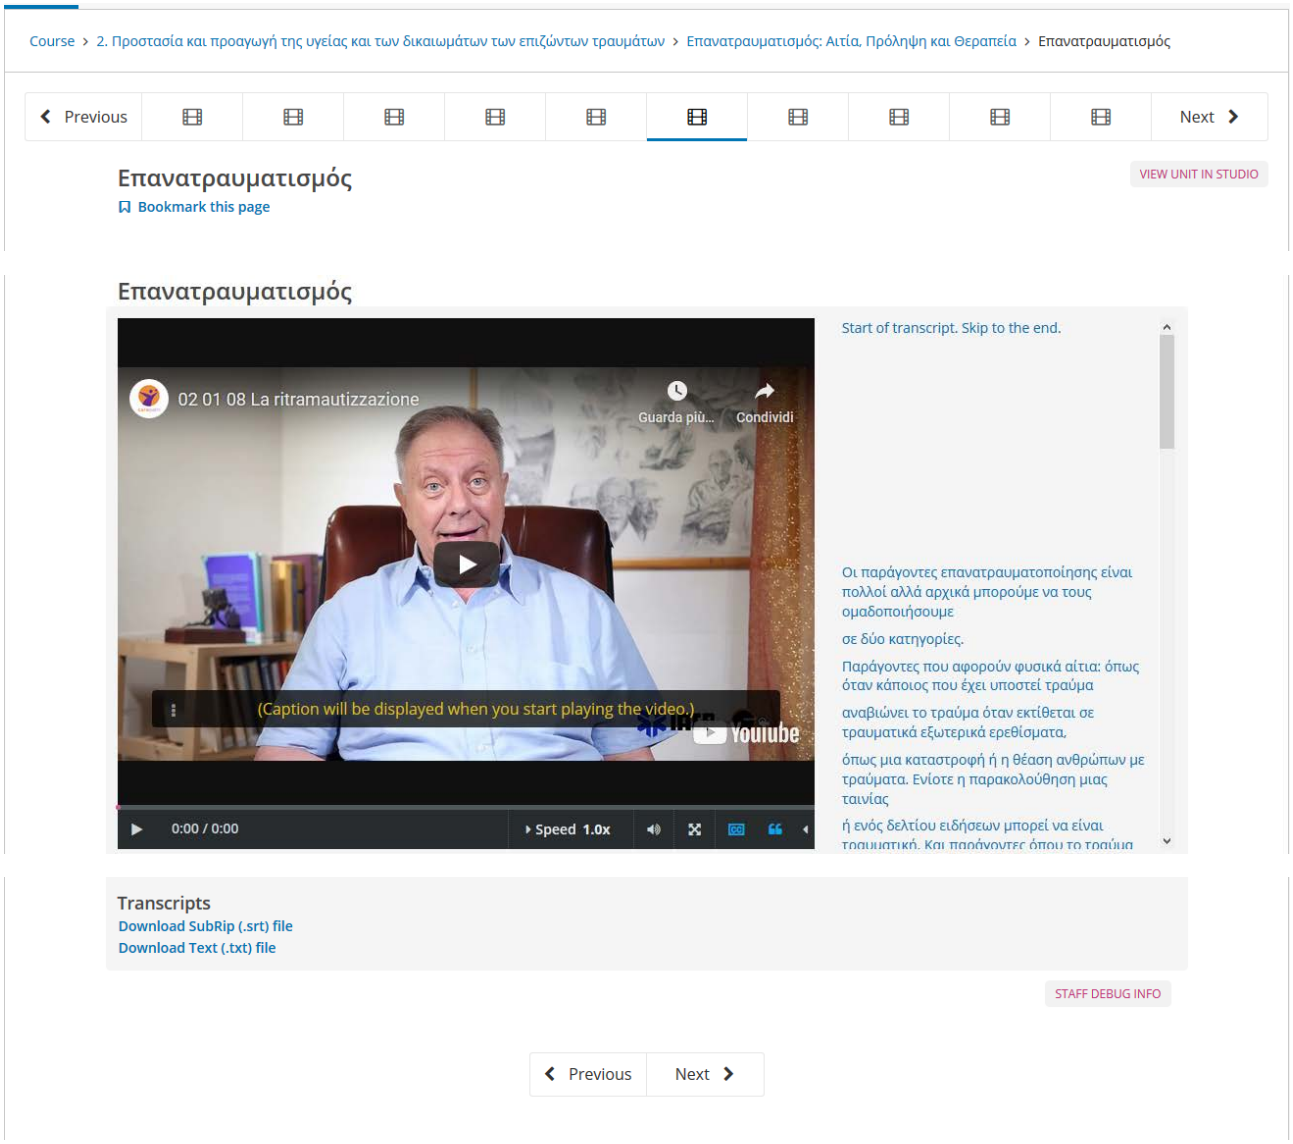
Ο υιοθετημένος, αρχικά ως παιδί κι έπειτα ως ενήλικας, συχνά αντιμετωπίζει υπαρξιακά θέματα.

"Ποια είναι η καταγωγή μου;"

"Γιατί με εγκατέλειψαν;"

Εξηγήσεις δεν μπορούν να δοθούν για τα παραπάνω αλλά αυτό δεν αποκλείει το γεγονός ότι η ζωή είναι ωραία

και ότι όλοι πρέπει να προσπαθούμε να ζούμε όσο το δυνατό καλύτερα.



Transcript

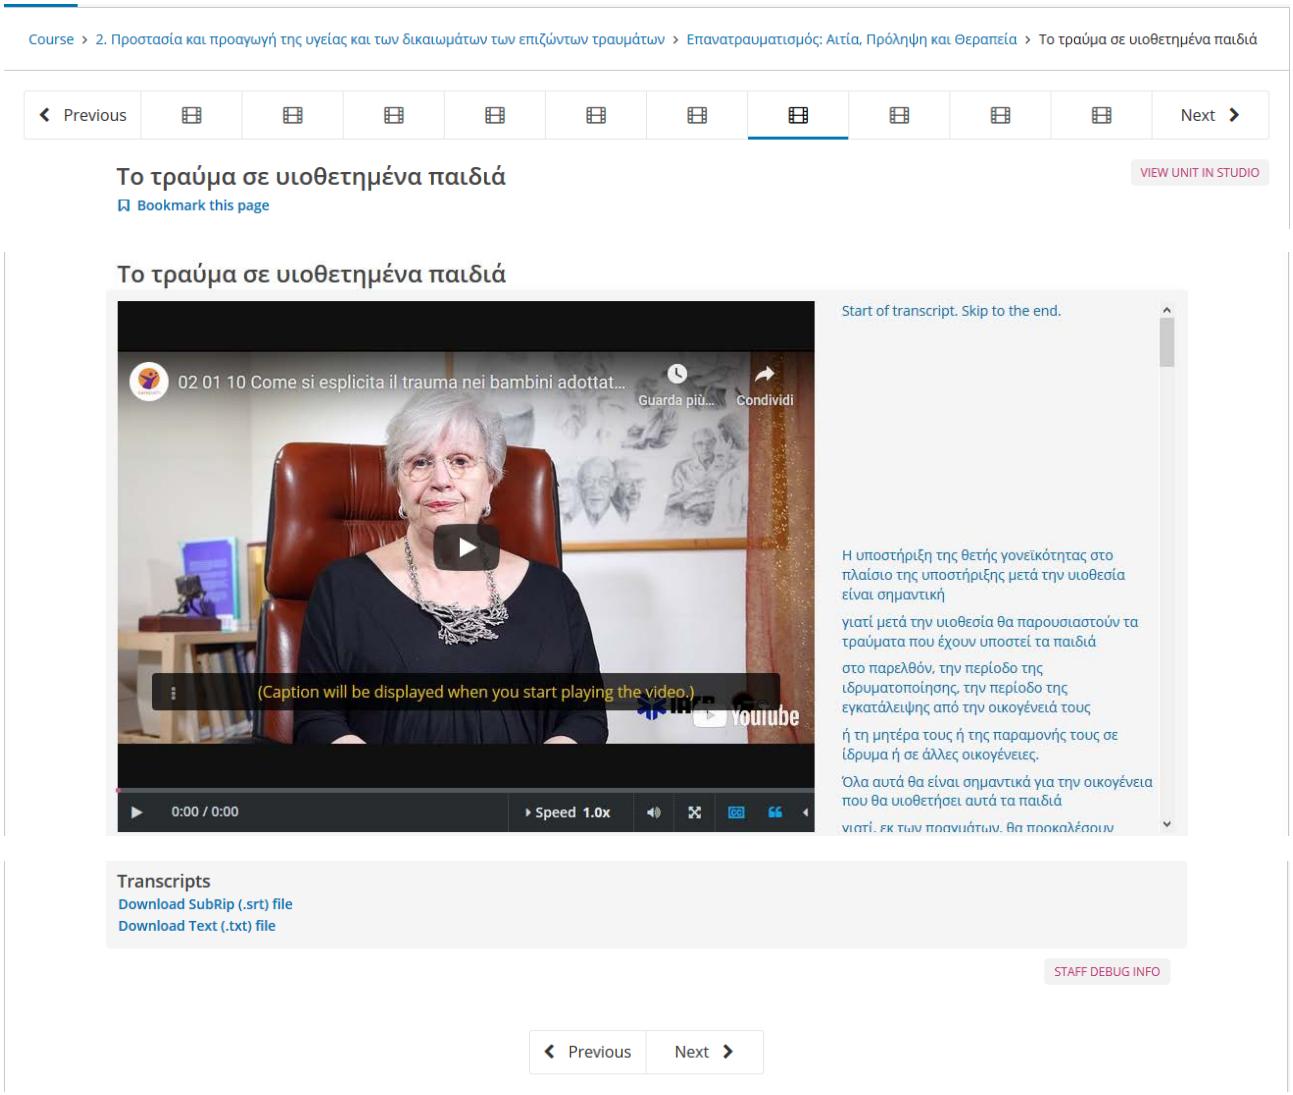
Οι παράγοντες επανατραυματοποίησης είναι πολλοί αλλά αρχικά μπορούμε να τους ομαδοποιήσουμε σε δύο κατηγορίες.

Παράγοντες που αφορούν φυσικά αίτια: όπως όταν κάποιος που έχει υποστεί τραύμα αναβιώνει το τραύμα όταν εκτίθεται σε τραυματικά εξωτερικά ερεθίσματα,

όπως μια καταστροφή ή η θέαση ανθρώπων με τραύματα. Ενίοτε η παρακολούθηση μιας ταινίας ή ενός δελτίου ειδήσεων μπορεί να είναι τραυματική. Και παράγοντες όπου το τραύμα βιώνεται από κάποιον που έχει ήδη υποστεί τραύμα γιατί του παρέχονται υπηρεσίες και θεραπείες από ανειδίκευτα άτομα ή οργανισμούς μη σχετικούς με το τραύμα που, χωρίς να το θέλουν, προκαλούν βλάβες επανατραυματοποιώντας το άτομο.

Όντως, με τον όρο "trauma inform" εννοούνται όλες οι προφυλάξεις και διαδικασίες που υιοθετεί ένας θεραπευτής ή ένας οργανισμός για να αποτρέψει την επανατραυματοποίηση των θεραπευομένων.

Στο παρελθόν, δυστυχώς, έχουμε προκαλέσει τραύματα σε όσους έχουν ήδη υποστεί τραύμα
όχι από κακή πρόθεση αλλά από άγνοια.
Χάρη στις έρευνες και τα κλινικά στοιχεία έχει παρατηρηθεί ότι αυτά τα άτομα,
αν πιέζονταν να κάνουν πράγματα που δεν ήθελαν, αν δεν γίνονταν σεβαστοί οι χρόνοι τους,
αν εξαναγκάζονταν να θυμηθούν τις τραυματικές εμπειρίες τους, προφανώς με καλό σκοπό,
τελείως ασυναίσθητα, υφίσταντο ιατρογενείς βλάβες.
Για αυτό, με τον όρο "trauma inform" εννοούμε σήμερα όλα τα προληπτικά μέτρα,
το δίκτυο ασφαλείας που αναπτύσσεται μέσω των ερευνών, που μας απέδειξαν ότι είναι πολύ σημαντικό,
για να προστατέψουμε όσους έχουν υποστεί τραύμα από τον κίνδυνο επανατραυματοποίησης,
να σεβόμαστε τους χρόνους τους, να επικεντρωνόμαστε στην παροχή υπηρεσιών προς το πρόσωπό τους,
ανάλογα με τις ανάγκες και την ευαισθησία τους, και ποτέ να μην πιέζουμε τους θεραπευόμενους
να κάνουν κάτι για το οποίο δεν είναι ακόμα έτοιμοι.
Ο λόγος είναι πολύ απλός: έχουμε διαπιστώσει ότι τα άτομα που έχουν υποστεί τραύμα
χρειάζονται αποδοχή, καλοσύνη και ασφαλή λιμάνια όπου θα ανακτήσουν τις δυνάμεις τους
και τους ρυθμούς τους στη διερεύνηση, η οποία, λόγω του τραύματος είναι αναγκαστικά επιφυλακτική
λόγω της προηγούμενης εμπειρίας τους.
Άρα η εμπιστοσύνη στις ικανότητες αυτορρύθμισης των θεραπευομένων που έχουν υποστεί τραύμα
αποτελεί θεμελιώδη καλή θεραπεία.
Ο σεβασμός των ατόμων, το σημειώνουμε αυτό, μοιάζει κάτι τόσο απλό αλλά είναι συχνά δύσκολο
στον τομέα των θεραπειών.



Transcript

Η υποστήριξη της θετής γονεϊκότητας στο πλαίσιο της υποστήριξης μετά την υιοθεσία είναι σημαντική γιατί μετά την υιοθεσία θα παρουσιαστούν τα τραύματα που έχουν υποστεί τα παιδιά στο παρελθόν, την περίοδο της ιδρυματοποίησης, την περίοδο της εγκατάλειψης από την οικογένειά τους ή τη μητέρα τους ή της παραμονής τους σε ίδρυμα ή σε άλλες οικογένειες.

Όλα αυτά θα είναι σημαντικά για την οικογένεια που θα υιοθετήσει αυτά τα παιδιά γιατί, εκ των πραγμάτων, θα προκαλέσουν δυσκολίες στη σχέση με τη νέα οικογένεια.

Από την έρευνα γνωρίζουμε ότι τα τραύματα είναι ικανά να διακόπτουν σχέσεις και να τις καθιστούν προβληματικές και δύσκολες. Τα παιδιά δεν αποτελούν εξαίρεση σε αυτό.

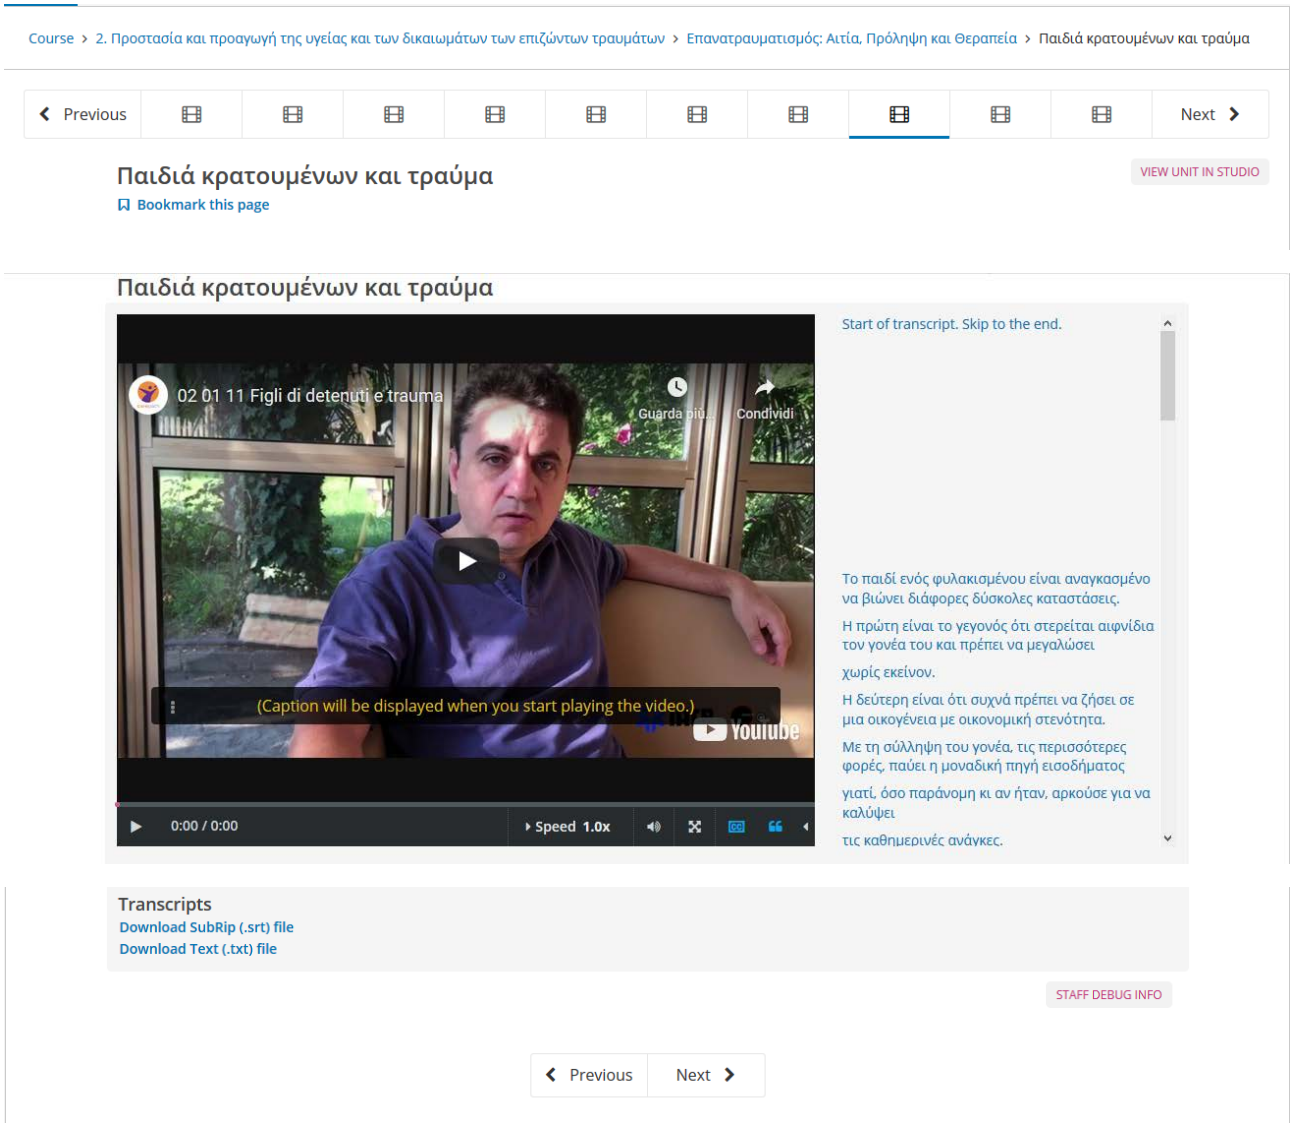
Η συνειδητοποίηση της δυσκολίας που συναντά ένα παιδί στη νέα οικογένεια υιοθεσίας μπορεί να διευκολύνει ή τουλάχιστον να καταστήσει πιο συνειδητό τον γονέα στη διαδρομή που καλείται να ακολουθήσει.

Στις ανταλλαγές που συνιστούν τη σχέση, στις διαδραστικές ανταλλαγές, τα παιδιά

θα είναι δύσκολα διαχειρήσιμα. Μπορεί να δώσουν συγκεχυμένα και ασαφή μηνύματα,
να μοιάζουν αδιάφορα και απόντα.
Όλα αυτά είναι πτυχές που θα αναλυθούν μία προς μία και θα αποτελέσουν μέρος
της ιστορίας κάθε υιοθετημένου ατόμου.
Υπό αυτή την έννοια γνωρίζουμε, από την έρευνα πάντα, ότι κάθε διαδραστική ανταλλαγή διαμορφώνεται
από μικρογεγονότα που, αν αναλυθούν,επηρεάζουν την ανταπόκριση ενήλικα-παιδιού και αντίστροφα.
Η σχέση μεταξύ γονέα και παιδιού στην υιοθεσία δεν αποτελεί εξαίρεση
Για αυτό θα είναι πολύ σημαντική η χρήση του βίντεο, γιατί ειδικά σε αυτή την κατάσταση,
όπου το τραύμα έχει δημιουργήσει δυσκολίες στην ερμηνεία των μικροαναλυτικών στοιχείων διάδρασης,
θα είναι σημαντική η καταγραφή τους σε βίντεο και η παρακολούθησή τους για να δούμε πού και πώς
κινείται το παιδί στη διαδραστική ανταλλαγή και πώς μπορεί να απαντήσει ο γονέας.
Άρα πρέπει να επισημάνουμε και να συστήσουμε τη χρήση του βίντεο
γιατί έτσι θα τεθούν οι βάσεις και θα μπορούμε να κοιτάζουμε με λεπτομέρεια, ανά πάσα στιγμή,
όλα όσα συντελούνται στη σχέση ανταλλαγής μεταξύ παιδιού και γονέα.
Είναι σημαντικό να διευκρινίσουμε ότι αυτή η χρήση του βίντεο πρέπει, και αυτό ισχύει πάντα,
να πραγματοποιείται και να προβάλλεται μόνο από ειδικευμένους θεραπευτές και για αυτή τη χρήση.
Δεν θα μπορεί να χρησιμοποιηθεί από όποιον δεν έχει την απαραίτητη ειδίκευση,
λόγω της ιδιαίτερης λεπτότητας του υπό εξέταση θέματος.
Σημειώνουμε ότι, όπως προαναφέρθηκε, τα υιοθετημένα παιδιά εκπέμπουν μηνύματα
λιγότερο εμφανή, πιο σύντομα και συγκεχυμένα, από ό,τι τα μη υιοθετημένα παιδιά.
Υπό αυτή την έννοια, η χρήση του βίντεο θα είναι πολύ σημαντική γιατί θα επιτρέψει στον γονέα,
παρακολουθώντας, στιγμή προς στιγμή, τη διάδραση, να δει πού και πώς το παιδί είναι σε θέση
να συνδεθεί σχεσιακά μαζί του.
Αυτό θα αποτελέσει ορόσημο στη διαδραστική ανταλλαγή και θα είναι η αρχή
μιας πιθανής νέας δομής κι ενός δεσμού προσκόλλησης.
Μια άλλη πολύ σημαντική πτυχή της έκφρασης του παιδιού είναι η υπερεγρήγορση.
Είναι πολύ σημαντική γιατί μας αφηγείται την ιστορία του, τους φόβους του, την εγκατάλειψη
και παραμέληση που έχει βιώσει, αλλά κυρίως αφηγείται αν αυτό το παιδί έχει υποστεί σωματική βία,
ίσως και κακοποίηση, ή αν ήταν μάρτυρας βίας στην καλύτερη των περιπτώσεων.
Η υπερεγρήγορση είναι μια πτυχή στην οποία το παιδί είναι υπερβολικά εστιασμένο στην έκφραση
του ενήλικα, τον παρακολουθεί συνεχώς για να ερμηνεύσει μέσω της έκφρασης του ενήλικα
αν θα συμβεί κάτι που μπορεί να είναι επικίνδυνο για το παιδί ή αν αυτό που κάνει

μπορεί να αποβεί κατά κάποιο τρόπο επικίνδυνο ή πηγή απειλής.
Είναι, λοιπόν, μια σαφής ένδειξη έλλειψης εμπιστοσύνης του παιδιού απέναντι στον ενήλικα.
Αυτό σταδιακά θα τείνει να εκλείψει πλήρως όσο δουλεύεται η σχέση ενήλικα-παιδιού,
αλλά όχι πάντα με τρόπο οριστικό.
Μία άλλη πτυχή που θα παρουσιάσει το παιδί θα αφορά τη συναισθηματική αδεξιότητα,
ένα στοιχείο πολύ βασανιστικό για τον θετό γονέα γιατί θα νιώσει ότι αυτό το παιδί δεν είναι
ποτέ απολύτως ελεύθερο να εκφράσει την αγάπη και τη συναισθηματική εγγύτητα προς τον ενήλικα.
Δεν είναι ευθύνη του παιδιού αυτό. Είναι κι αυτό ένα μικρό κομμάτι, που εκφράζεται στη σχέση,
μιας ιστορίας του παρελθόντος ιδιαίτερα επώδυνης.
Τα παιδιά είναι συνηθισμένα να μην πλησιάζουν τον ενήλικα, να φροντίζουν ώστε ο ενήλικας
να γίνεται λιγότερο επικίνδυνος στη σχέση, για αυτό δεν είναι συνηθισμένα να τον αγγίζουν
ή να τον αγκαλιάζουν, κάτι που στη νέα σχέση θα μπορούσε να συμβεί.
Επίσης, υπάρχουν παιδιά που είναι ιδιαίτερα κοντά, ίσως και υπερβολικά, ενίοτε κολλημένα,
αλλά αυτό συμβαίνει επειδή δεν ξέρουν πώς να ρυθμίσουν τον τρόπο προσέγγισης του ενήλικα,
δεν γνωρίζουν το υπερβολικά πολύ ή λίγο και είναι αποπροσανατολισμένα και σε αμηχανία.
Άλλες φορές το παιδί πλησιάζει εξαιρετικά αδέξια, με τρόπο σχεδόν ψεύτικο και ελάχιστα αυθόρμητο
κι αυτό το αντιλαμβάνεται αμέσως ο γονέας και τείνει να του προσδώσει έναν χαρακτηρισμό.
Αυτό που συστήνουμε είναι να το βλέπουμε πάντα ως έκφραση μιας στιγμής της ιστορίας του παιδιού.
Δεν ήταν ποτέ ελεύθερο να πλησιάσει, όπως θα ήθελε και όπως θα ένιωθε,
έναν ενήλικα κι αυτό συνεχίζει να γίνεται με τρόπο ελάχιστα αυθόρμητο και πολύ αδέξιο.
Μια άλλη πτυχή που θα αντιμετωπίσει ο γονέας θα είναι η κούραση και η δυσκολία στον ύπνο
αλλά και ο πολύ ταραγμένος ύπνος που δεν ξεκουράζει και η δυσκολία να αποκοιμηθεί.
Ένα επιπλέον στοιχείο αφορά τη δυσκολία στη συγκέντρωση,
που συχνά ερμηνεύεται ως μαθησιακή δυσκολία γενικού τύπου.
Το παιδί δεν έχει μαθησιακή δυσκολία
αλλά η υπερεγρήγορση του προκαλεί συναισθηματικά στοιχεία τόσο δύσκολα, αρνητικά
και κουραστικά που του αποσπούν την προσοχή από το καθήκον που του έχει ανατεθεί.
Για άλλη μια φορά θα δούμε ότι το παιδί είναι συγχρονισμένο στο πρόσωπο του ενήλικα,
στην έκφρασή του, σε ό,τι εκφράζει ο ενήλικας, στην επικινδυνότητα που μπορεί να εκδηλώσει.
Όλα αυτά θα δυσκολέψουν το παιδί στην προσπάθειά του να συγκεντρωθεί.
Όλα αυτά τα στοιχεία είναι εξαιρετικά σημαντικά, αυτές οι συμπεριφορές είναι η αφήγηση
μιας ιστορίας του παρελθόντος. Θα πουν στον θετό γονέα όλα όσα αφορούν την ιστορία του παιδιού

τα οποία ίσως αυτό το παιδί να μην μπορεί να εκφράσει παρά μόνο
μέσα από αυτές τις συμπεριφορές.
Ίσως, για αυτό να είναι σημαντικό να θυμόμαστε ότι πρόκειται για πολύτιμες πληροφορίες
που μπορούν να μας επιτρέψουν να γνωρίσουμε ένα κομμάτι του παρελθόντος απόλυτα άγνωστο
που όμως έχει διαμορφώσει το παιδί ως έχει, στη συγκεκριμένη σχέση ως έχει
με τον νέο θετό γονέα.
Είναι συμπεριφορές που δεν πρέπει να διορθώνουμε αλλά να αποδεχόμαστε στον μέγιστο βαθμό
για να μπορέσουμε να ερμηνεύσουμε κατά το δυνατό τι έχουν να μας πουν για μια παρελθοντική ιστορία
που μπορεί να γίνει, μαζί με αυτό το μικρό παιδί, η κοινή μας ιστορία.
Έτσι, η αφήγηση του παρελθόντος θα λειτουργήσει ως γέφυρα με το αφήγημα του παρόντος.



Transcript

Το παιδί ενός φυλακισμένου είναι αναγκασμένο να βιώνει διάφορες δύσκολες καταστάσεις.

Η πρώτη είναι το γεγονός ότι στερείται αιφνίδια τον γονέα του και πρέπει να μεγαλώσει

χωρίς εκείνον.

Η δεύτερη είναι ότι συχνά πρέπει να ζήσει σε μια οικογένεια με οικονομική στενότητα.

Με τη σύλληψη του γονέα, τις περισσότερες φορές, παύει η μοναδική πηγή εισοδήματος

γιατί, όσο παράνομη κι αν ήταν, αρκούσε για να καλύψει

τις καθημερινές ανάγκες.

Μια άλλη τραγωδία, δευτερεύουσα αλλά εξίσου σημαντική, οφείλεται στο γεγονός ότι το παιδί

κατακλύζεται από κριτική.

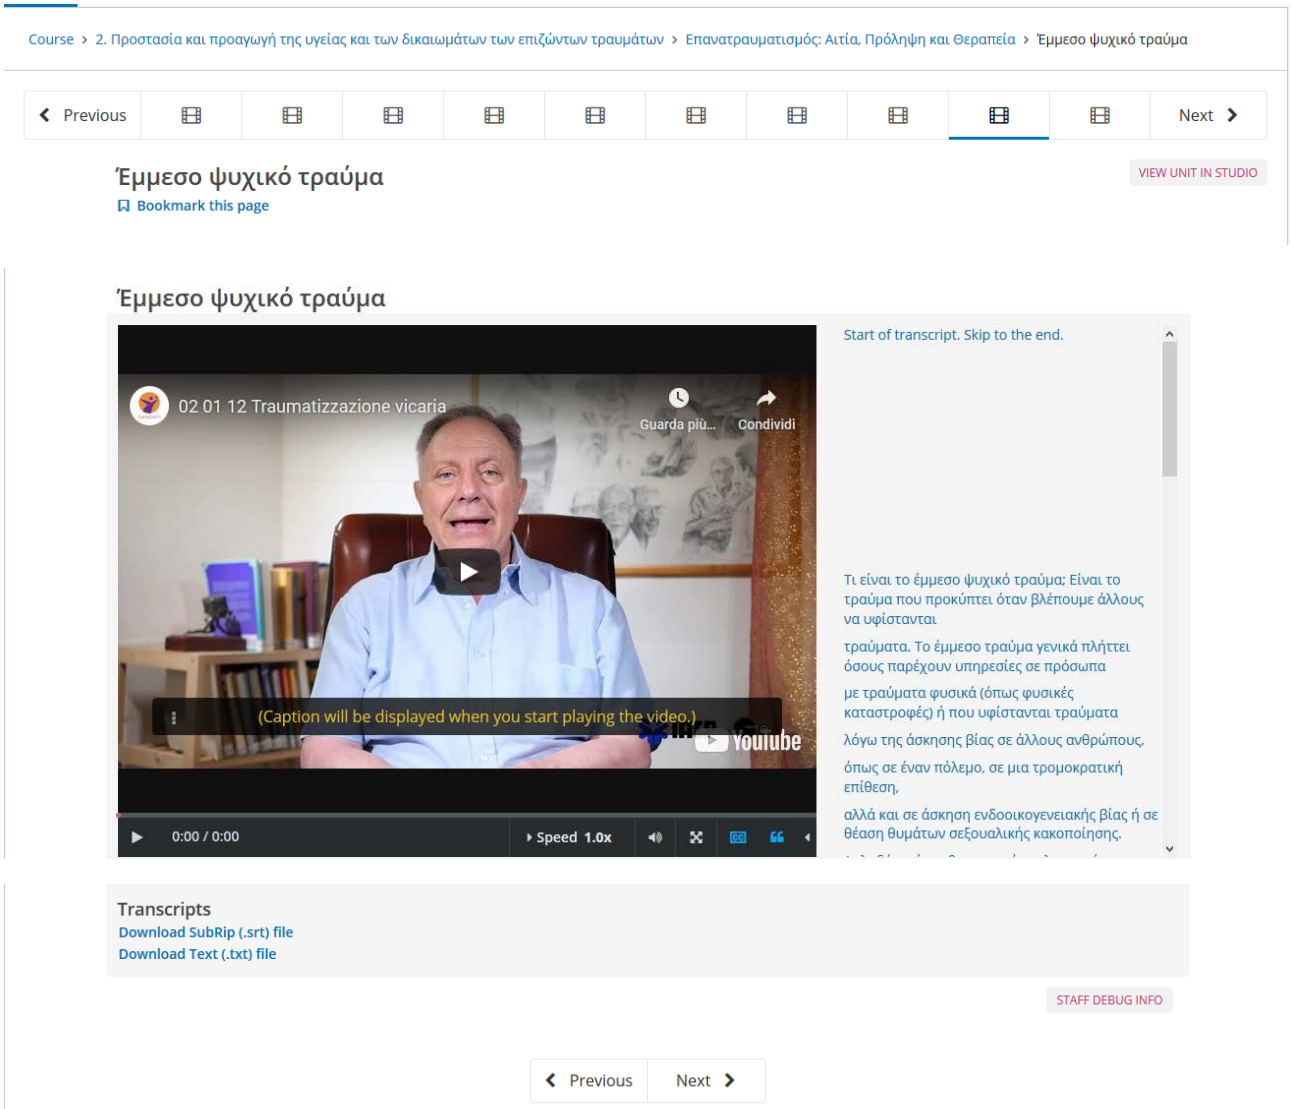
Όταν είσαι παιδί φυλακισμένων γονέων

είσαι και παιδί της ενοχής.

Το παιδί σταδιακά συνδέεται με αυτή την κοινωνική διαδικασία

και οικειοποιείται την κριτική ώσπου πείθεται ότι είναι κι εκείνο άξιο τιμωρίας.
Επίσης, συχνά τα παιδιά φυλακισμένων γονέων είναι αναστατωμένα. Η ταραχή του παιδιού οφείλεται και στο γεγονός ότι δεν έχει έναν γονέα, συχνά τον πατέρα, να το εκπαιδεύσει και να θέσει όρια στις υπερβολικές του απαιτήσεις.
Είναι ένα παιδί αναγκασμένο να ζει μόνο, η μητέρα δεν μπορεί να λύσει όλα τα προβλήματα που συσσωρεύονται πάνω της χωρίς να μπορεί να βασίζεται στη συνεισφορά του συζύγου της.
Είναι μια πρόκληση που πρέπει να αντιμετωπίσει γιατί, δυστυχώς, και οι κοινωνικοί λειτουργοί πέφτουν στην παγίδα του στιγματισμού του παιδιού αντί να δείξουν ακόμα περισσότερη κατανόηση, γιατί το ότι ζει μόνο με τη μητέρα του, σε δυσκολία, οπωσδήποτε δεν είναι κάτι καθόλου εύκολο.
Οι γνώμες διίστανται σχετικά με τον τρόπο πληροφόρησης του παιδιού ότι ο γονέας του έχει συλληφθεί.
Πολλοί γονείς, από ντροπή ή λόγω δυσκολίας, διηγούνται στο παιδί το σενάριο ότι έπρεπε να φύγει ξαφνικά για να εργαστεί.
Ως γνωστόν, "το ψέμα έχει κοντά ποδάρια" και το παιδί δεν πείθεται, γιατί ως τότε ο πατέρας επέστρεφε καθημερινά στο σπίτι από τη δουλειά και είναι περίεργο να άλλαξε ξαφνικά εργασιακή κατάσταση και να έφυγε για μέρες, μήνες, χρόνια, στα Χριστούγεννα, στα γενέθλια κτλ. Έτσι, το παιδί καταλαβαίνει ότι πρόκειται για ψέμα.
Σε αυτές τις περιπτώσεις το καλύτερο είναι να λέμε στα παιδιά την αλήθεια: "ο μπαμπάς έσφαλε, διέπραξε κάποια σφάλματα και δυστυχώς πρέπει να πάει σε έναν τόπο για να απαντήσει για τη συμπεριφορά του αλλά είναι καλά, του παρέχονται όλα τα απαραίτητα, μην ανησυχείς, σύντομα θα μπορείς να τον δεις".
Αυτό είναι ένα άλλο θέμα που αφορά τα παιδιά φυλακισμένων γονέων: αν πρέπει ή όχι να δουν τον γονέα στη φυλακή.
Μερικοί κοινωνικοί λειτουργοί υποστηρίζουν ότι δεν ενδείκνυται αυτό γιατί το περιβάλλον της φυλακής δεν αρμόζει στις ανάγκες του παιδιού.
Είναι αλήθεια πως μπαίνοντας στη φυλακή, βλέπει αστυνομικούς και χώρους όχι πάντα αξιοπρεπείς, αλλά είναι επίσης αλήθεια ότι δεν υπάρχει κάτι πιο σημαντικό για ένα παιδί από το να μπορεί να βλέπει τον γονέα του.
Ουσιαστικά, λοιπόν, θα πρέπει να διευκολύνουμε τις συναντήσεις των φυλακισμένων με τα παιδιά τους.
Μέχρι πριν από λίγα χρόνια ορθώνονταν τοίχοι ανάμεσα στους κρατουμένους και τους επισκέπτες.
Σήμερα πολλά έχουν αλλάξει: σε πολλές φυλακές υπάρχει αίθουσα αναψυχής ή χώροι πιο πολύχρωμοι,

με παιχνίδια, ενώ οι σωφρονιστικοί υπάλληλοι είναι πολύ πιο προετοιμασμένοι
να υποδέχονται παιδιά.
Ωστόσο, δεν είναι αυτό το θέμα μας. Το ζήτημα δεν είναι αν το παιδί πάει ή όχι
σε έναν κατάλληλο χώρο αλλά να διευκολυνθεί η συνάντηση γονέα και παιδιού.
Φυσικά, όλα αυτά δεν ισχύουν αν ο γονέας κρατείται για αδίκημα κατά του ανήλικου παιδιού.



Transcript

Τι είναι το έμμεσο ψυχικό τραύμα; Είναι το τραύμα που προκύπτει όταν βλέπουμε άλλους να υφίστανται τραύματα. Το έμμεσο τραύμα γενικά πλήττει όσους παρέχουν υπηρεσίες σε πρόσωπα
με τραύματα φυσικά (όπως φυσικές καταστροφές) ή που υφίστανται τραύματα
λόγω της άσκησης βίας σε άλλους ανθρώπους,
όπως σε έναν πόλεμο, σε μια τρομοκρατική επίθεση,
αλλά και σε άσκηση ενδοοικογενειακής βίας ή σε θέαση θυμάτων σεξουαλικής κακοποίησης.
Δηλαδή, εγώ ως θεραπευτής καλοπροαίρετα ανοίγομαι και παρέχω βοήθεια, ανθρώπινη υποστήριξη και ψυχολογική επαφή σε ένα θύμα τραύματος αλλά, σε καθημερινή βάση, παρά τη βαθιά σημασία της γενναιοδωρίας του ανοίγματος ακόμα και σε υπαρξιακό επίπεδο, αυτό μπορεί
να επηρεάσει την ψυχική μου υγεία, τις αντοχές μου, τον μεταβολισμό μου και να γίνει η πηγή ενός καθεαυτού τραύματος, με όλες τις γνωστές συνέπειες των τραυμάτων.
Για αυτό είναι σημαντικό να αποτρέπουμε την πρόκληση έμμεσου τραύματος οι θεραπευτές

και όλοι όσοι λόγω εργασίας εκτίθενται σε θύματα τραυμάτων ή βίας,

όπως οι αστυνομικοί, για παράδειγμα, ή οι δημοσιογράφοι και όσοι για διάφορους λόγους έρχονται σε επαφή

με πρόσωπα που έχουν υποστεί τραύμα.

Ένας χρήσιμος κανόνας, λοιπόν, είναι να μπορούμε να αποτρέπουμε το έμμεσο τραύμα,

όπως και ό,τι γενικά αποκαλούμε "burn out" που επίσης πλήττει όσους συμμετέχουν

σε σχέσεις βοήθειας και, μάλιστα, με σφοδρότητα, ιδιαίτερα όταν δεν μπορούμε να επαναφορτίσουμε

τις μπαταρίες μας, να κάνουμε ένα διάλειμμα από τη βαριά, επαχθή αλλά όμορφη εργασία μας

και να έχουμε ισορροπία ανάμεσα στη λεγόμενη ανθρωπιστική εργασία και στην ιδιωτική μας ζωή, την οικογένεια,

τους φίλους και την ψυχαγωγία. Με δυο λόγια, αποτελεί είναι πρόκληση για όσους

παρέχουν επάξια τις υπηρεσίες τους με πάθος, γενναιοδωρία και ενσυναίσθηση να τηρήσουν

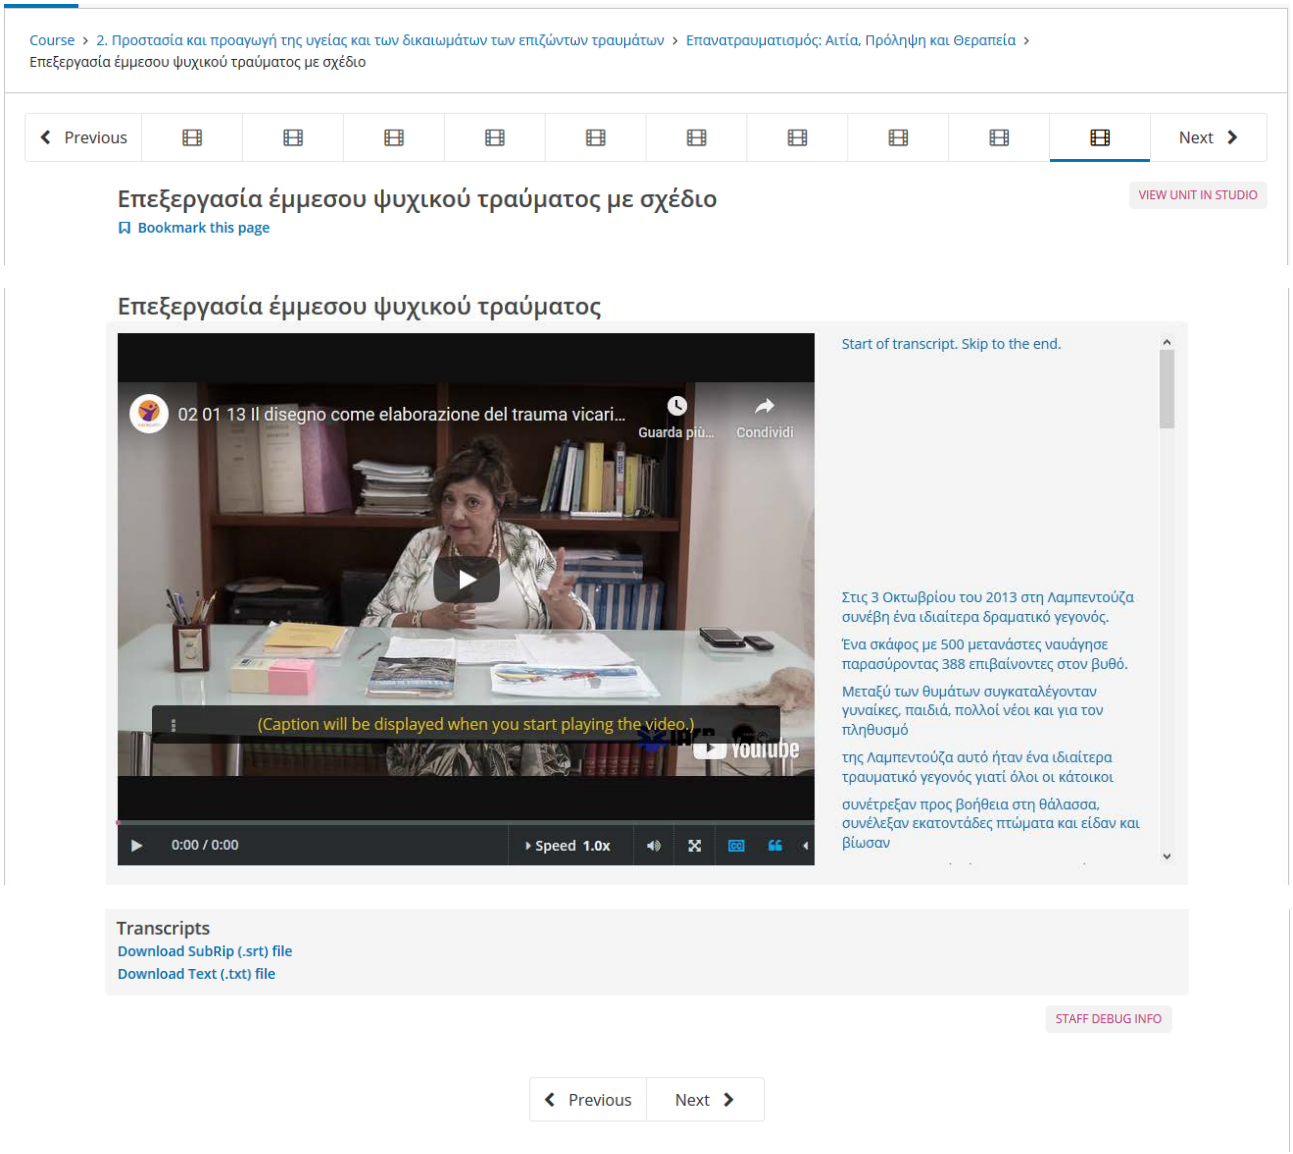
τον ίδιο σεβασμό και για τον εαυτό τους,

γιατί, δυστυχώς, δεν μπορούμε να δώσουμε στους άλλους κάτι που δεν έχουμε.

Άρα έχουμε ηθική υποχρέωση να προάγουμε την αντοχή, την υγεία και την ευεξία μας

γιατί, αν θέλουμε να δώσουμε πολλά, πρέπει να συμπεριλάβουμε και το πρόσωπο

που δεν θα μας εγκαταλείψει ποτέ κάθε στιγμή της ζωής μας: τον εαυτό μας.



Transcript

Στις 3 Οκτωβρίου του 2013 στη Λαμπεντούζα συνέβη ένα ιδιαίτερα δραματικό γεγονός.
Ένα σκάφος με 500 μετανάστες ναυάγησε παρασύροντας 388 επιβαίνοντες στον βυθό.
Μεταξύ των θυμάτων συγκαταλέγονταν γυναίκες, παιδιά, πολλοί νέοι και για τον πληθυσμό
της Λαμπεντούζα αυτό ήταν ένα ιδιαίτερα τραυματικό γεγονός γιατί όλοι οι κάτοικοι
συνέτρεξαν προς βοήθεια στη θάλασσα, συνέλεξαν εκατοντάδες πτώματα και είδαν και βίωσαν
το συγκλονιστικό μέγεθος της τραγικότητας του θανάτου. Μάλιστα, υπήρχε μία μητέρα
που γεννούσε τη στιγμή του ναυαγίου και εντοπίστηκε με το μωρό της
ακόμα συνδεδεμένο με τον ομφάλιο λώρο.
Ένα τέτοιου είδους γεγονός αναπόφευκτα
προκάλεσε ένα έμμεσο ψυχικό τραύμα στον πληθυσμό και έγινε προσπάθεια,
κατά κάποιο τρόπο, στην πολυκλινική, να δοθεί η δυνατότητα ακρόασης,

επισκέψεων και υποστήριξης σε όσους βίωσαν τραυματικές εμπειρίες
και να τους παρασχεθεί βοήθεια,
αλλά μία από τις πιο δύσκολα διαχειρίσιμες περιπτώσεις αφορούσε
την τραυματική εμπειρία των παιδιών, ιδιαίτερα της πρωτοβάθμιας εκπαίδευσης.
Η μετανάστευση στη Λαμπεντούζα είναι μια πολυετής εμπειρία και όλοι, ακόμα και οι νέοι,
γνωρίζουν ότι συχνά τα ταξίδια της ελπίδας καταλήγουν στην απώλεια ζωής,
αλλά τα παιδιά 6 και 7 ετών είναι ιδιαίτερα ευαίσθητα σε τέτοιου είδους εμπειρίες
και πολλά από αυτά άρχισαν να έχουν φόβους, άγχος και φοβίες, χαρακτηριστικές αντιδράσεις
όσων εκτίθενται σε τραυματικές εμπειρίες
στις οποίες η ζωή τίθεται σε κίνδυνο καταλήγοντας στην απώλειά της.
Για αυτά τα παιδιά το συγκεκριμένο γεγονός συνέβη στη δική τους θάλασσα, την οποία βιώνουν
ως πηγή χαράς, παιχνιδιού και διασκέδασης. Η θάλασσα που για τα παιδιά ήταν
ένα στοιχείο χαράς και ανεμελιάς, ξαφνικά μεταμορφώθηκε σε θάλασσα θανάτου.
Μία από τις μεθόδους που εφαρμόστηκαν
για τη διαχείριση αυτού του έμμεσου τραύματος των παιδιών ήταν η πρόταση
να φιλοτεχνήσουν ζωγραφιές και οι ζωγραφιές αυτές τώρα καταδεικνύουν πώς τα παιδιά
απαντούν και αντιδρούν σε αυτό το τραύμα.
Εδώ πρέπει να κάνω μια μικρή εισαγωγή.
Η τέχνη είναι ένα ισχυρό εργαλείο για να κάνει απτά τα επώδυνα και τρομακτικά γεγονότα.
Η τέχνη είναι απελευθερωτική και βοηθά στη διαχείριση των τραυματικών γεγονότων.
Πρέπει να αναρωτηθούμε
τι είναι ένα τραυματικό γεγονός μέσα από τα μάτια των παιδιών.
Σε αυτή την περίπτωση
εξαρτάται από το είδος του γεγονότος. Το τραυματικό γεγονός έχει ποικίλες μορφές.
Μπορεί να είναι ανθρωπογενές (πόλεμοι, τρομοκρατία) ή να προκαλείται από τη φύση (κυκλώνες, σεισμοί).
Όλα τα παραπάνω αφήνουν συγκεκριμένα αποτυπώματα και φόβους στον νου και την ψυχή
των παιδιών.
Από αυτή την άποψη, ήταν αναγκαίο στην περίπτωση του ναυαγίου στη Λαμπεντούζα
να επουλώσουμε το συναισθηματικό εσωτερικό ρήγμα που υπέστησαν τα παιδιά και συνδεόταν
με το ότι το γεγονός θα μπορούσε να ξανασυμβεί εμπλέκοντας, μάλιστα, και τις οικογένειές τους.
Κι αυτό γιατί ένα παιδί 6 και 7 ετών δύσκολα κατανοεί το νόημα του θανάτου και ξέρουμε

ότι τα παιδιά τα ανάγουν όλα στον εαυτό τους.

Αυτά τα γεγονότα και οι ιστορίες θανάτου είχαν ως αποτέλεσμα

πολλά παιδιά να φοβούνται να φάνε ψάρι, γιατί τα ψάρια θα είχαν φάει τα νεκρά παιδιά

και τις μητέρες τους, ή να φοβούνται να πάνε στη θάλασσα όπου ίσως να υπήρχαν πτώματα.

Ήταν αναγκαίο να ανασυνθέσουμε αυτό το παζλ της δικής τους διάστασης ανεμελιάς

στον αντίποδα του φαντασιακού παζλ που κατασκευαζόταν στο νησί της Λαμπεντούζα.

Αυτό κατέστη δυνατό με τη ζωγραφική, όπως είπα παραπάνω.

Με τη ζωγραφική μπορούμε να ανασυνθέσουμε μια αφήγηση του πώς κάθε παιδί ατομικά

αντιλήφθηκε αυτό το γεγονός, γιατί το γεγονός ήταν συλλογικό αλλά η αντίληψή του

ήταν συγκεκριμένη για κάθε παιδί.

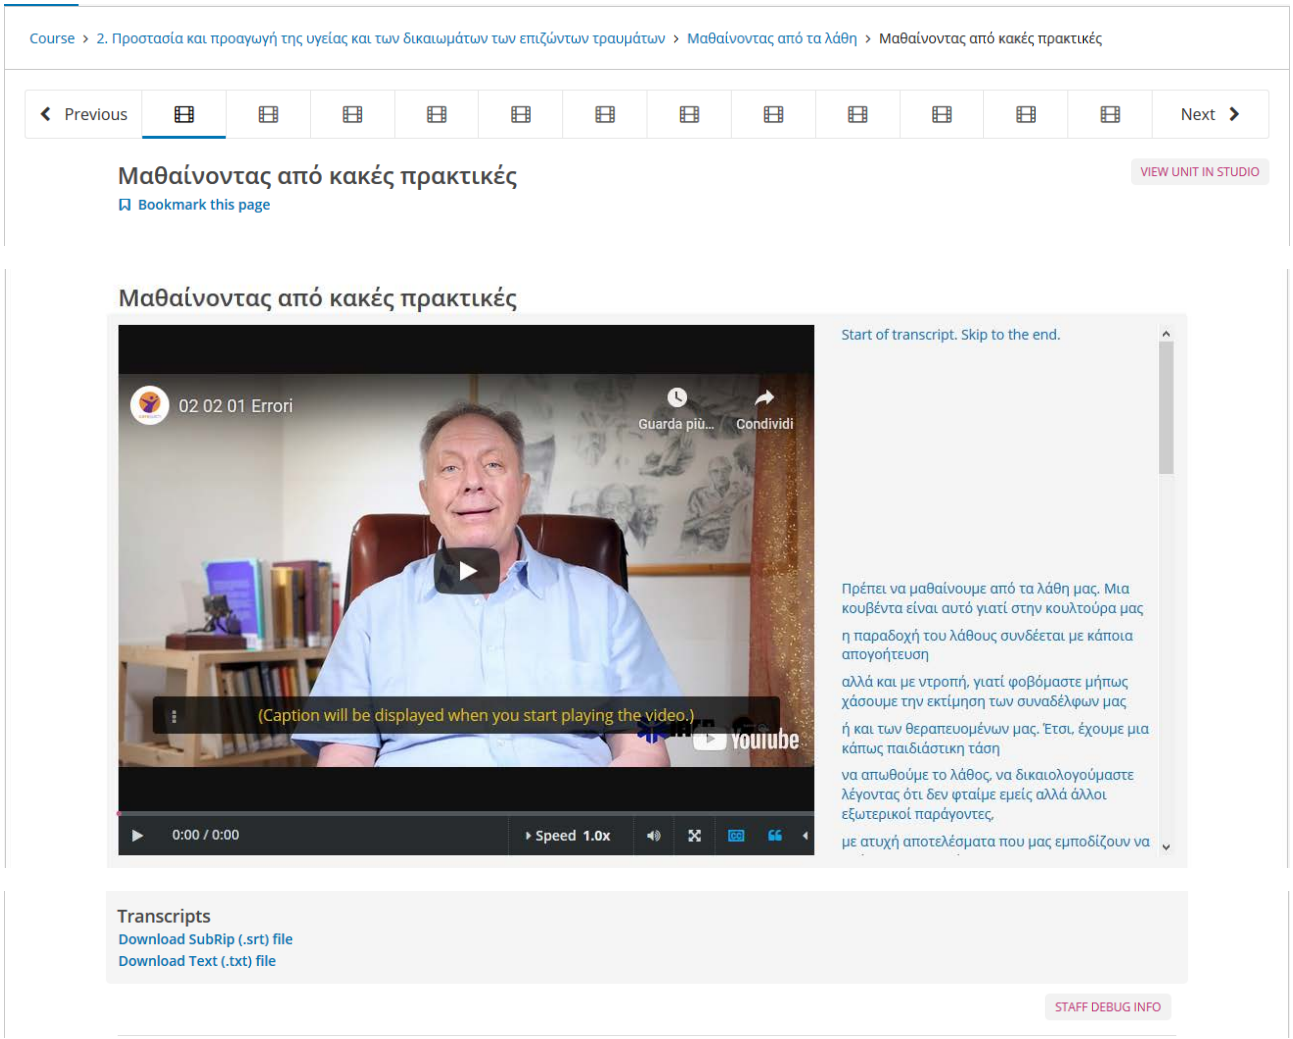
Ήταν σημαντικό να μην προσφέρουμε στοιχεία άμεσης ανακούφισης και επίλυσης

αλλά να αφήσουμε κάθε παιδί, μέσα από γραφιστική και λεκτική επεξεργασία,

μέσα από την ακρόαση και τη ζωγραφική, να βρει τις δικές του προσωπικές λύσεις

σε ένα έντονα βασανιστικό στοιχείο όπως η διάσταση του θανάτου και της απώλειας

που στην ηλικία των 6 - 7 ετών είναι ό,τι πιο οδυνηρό για ένα παιδί.



Transcript

Πρέπει να μαθαίνουμε από τα λάθη μας. Μια κουβέντα είναι αυτό γιατί στην κουλτούρα μας

η παραδοχή του λάθους συνδέεται με κάποια απογοήτευση

αλλά και με ντροπή, γιατί φοβόμαστε μήπως χάσουμε την εκτίμηση των συναδέλφων μας

ή και των θεραπευομένων μας. Έτσι, έχουμε μια κάπως παιδιάστικη τάση

να απωθούμε το λάθος, να δικαιολογούμαστε λέγοντας ότι δεν φταίμε εμείς αλλά άλλοι εξωτερικοί παράγοντες,

με ατυχή αποτελέσματα που μας εμποδίζουν να δούμε το προφανές.

Ότι πίσω από κάθε λάθος κρύβεται ένας θησαυρός σοφίας.

Με τη σωστή μας στάση, δηλαδή τη μη αμυντική, μπορούμε να ανοιχτούμε και να μάθουμε από τα λάθη.

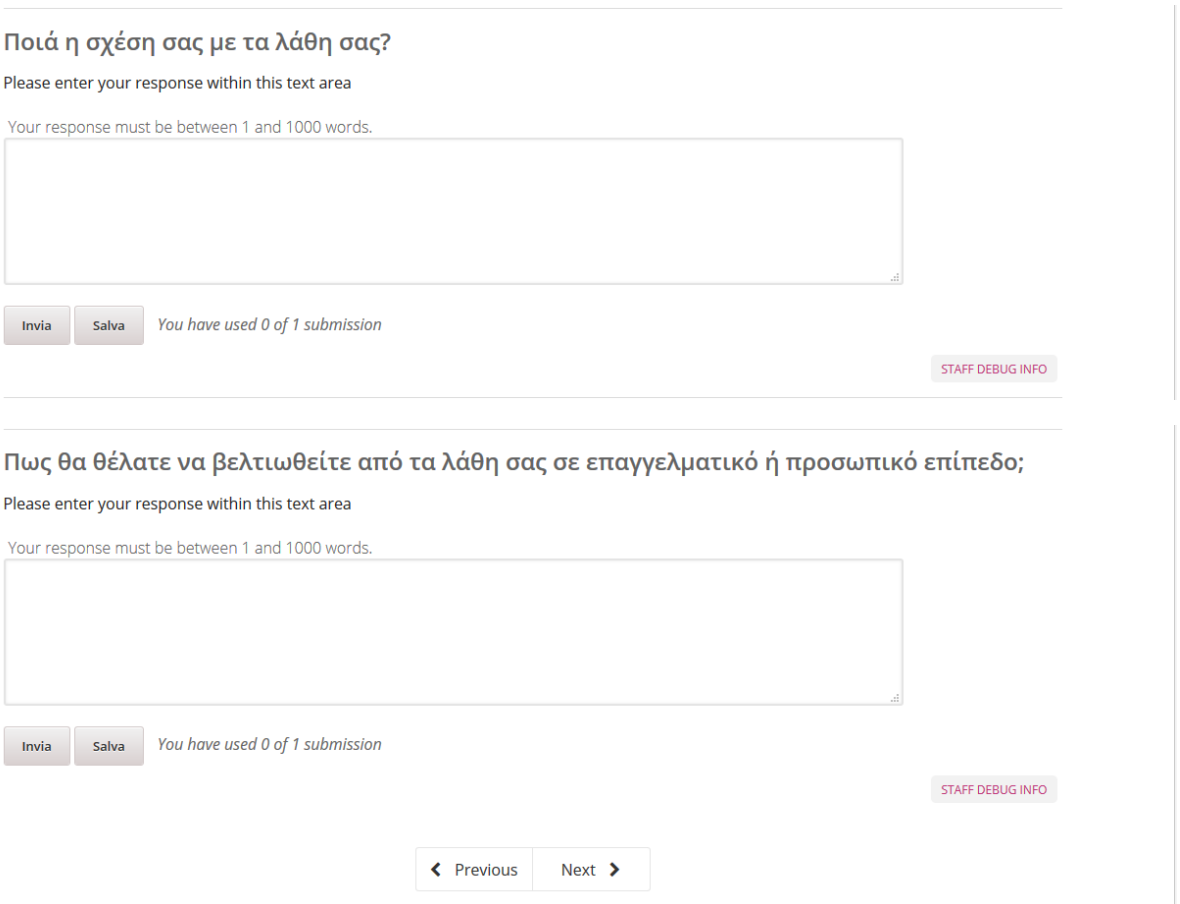
Τα λάθη είναι δάσκαλοι που μας βοηθούν να γίνουμε θεραπευτές

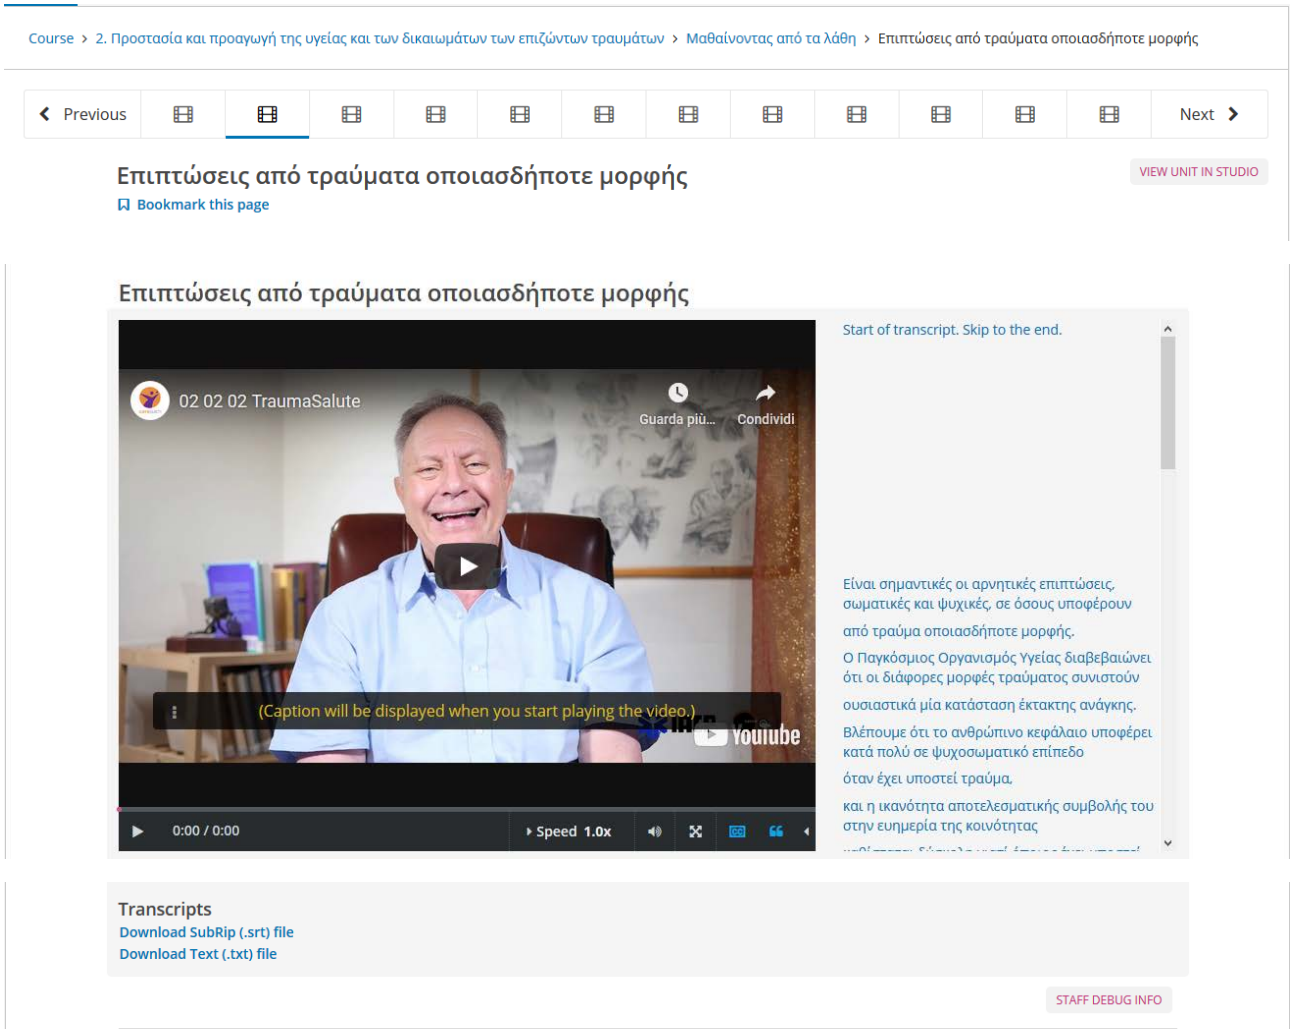
και να κάνουμε ό,τι μας προτρέπουν να πράξουμε

οι θεραπευόμενοι και οι ασθενείς μας, δηλαδή, να κάνουμε την εμπειρία μάθηση.

Η κατάσταση είναι κωμικοτραγική: εμείς οι θεραπευτές της σχέσης βοήθειας ενθαρρύνουμε ολόψυχα

τους θεραπευόμενους να μάθουν από τις εμπειρίες και τα λάθη τους
αλλά αυτό ισχύει για εκείνους και λιγότερο για εμάς. Είμαστε απρόθυμοι να αποδεχτούμε
τη μη άμυνα και να παραδεχτούμε ότι το λάθος είναι δικό μας
και άρα να είμαστε ανοιχτοί στο δίδαγμά του.
Ο δυσλειτουργικός τρόπος αξιοποίησης της εμπειρίας από το λάθος οδηγεί στην απώλεια αυτοεκτίμησης,
ενώ θα έπρεπε να αυξάνεται, σαν να συνέβαινε το εξής παράλογο: όποιος φοβάται
νομίζει ότι είναι δειλός αγνοώντας ότι ο θαρραλέος φοβάται εξίσου αλλά δεν επιτρέπει
στον φόβο να τον αδρανοποιήσει, άρα ο έξυπνος και σοφός αποδέχεται το λάθος και μαθαίνει από αυτό.
Έχουμε πολλά να μάθουμε από τους θεραπευόμενους που συχνά είναι πιο έτοιμοι από εμάς να δεχτούν
ταπεινά να μάθουν από την εμπειρία τους, προσπαθώντας να μην κάνουν πάντα τα ίδια λάθη.
Εμείς, αντίθετα, είμαστε καταδικασμένοι στην επανάληψή τους αρνούμενοι να παραδεχτούμε
ότι με τα λάθη μειώνεται η αυτοπεποίθησή μας γιατί όταν αυτοπροσδιοριζόμαστε ως θύματα
ορίζουμε αυτόματα για τον εαυτό μας μια κατάσταση αδυναμίας.
Για αυτό, λοιπόν, καλωσορίζουμε τα λάθη ως δασκάλους σοφίας.

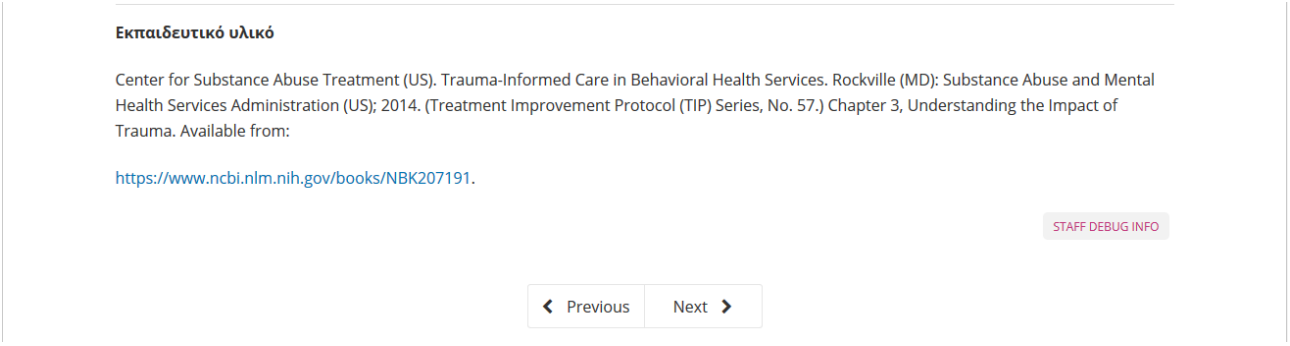


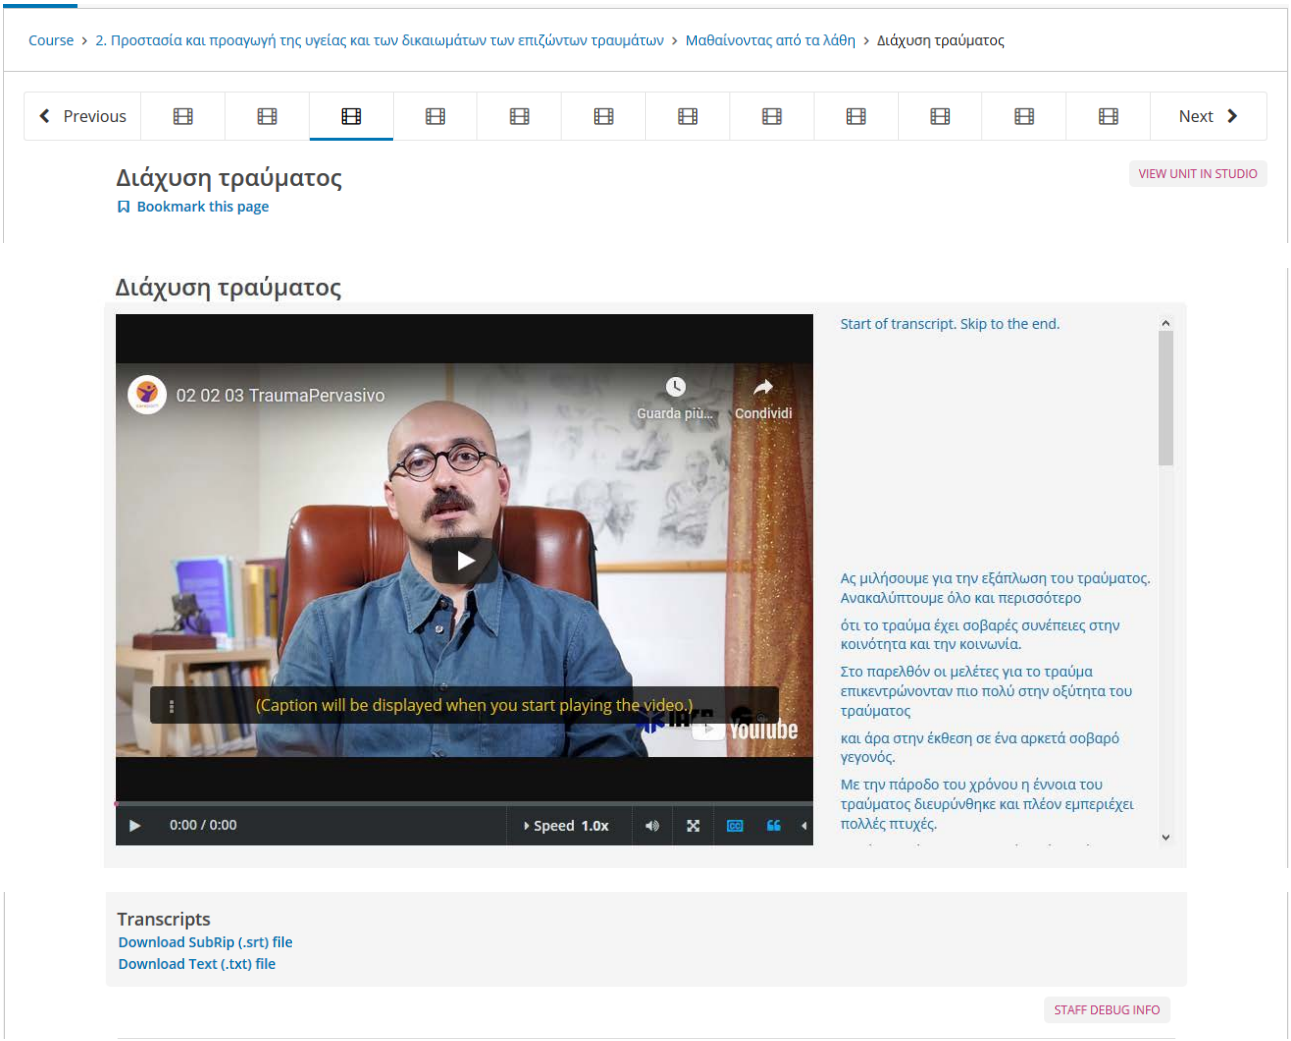


Transcript

Είναι σημαντικές οι αρνητικές επιπτώσεις, σωματικές και ψυχικές, σε όσους υποφέρουν
από τραύμα οποιασδήποτε μορφής.
Ο Παγκόσμιος Οργανισμός Υγείας διαβεβαιώνει ότι οι διάφορες μορφές τραύματος συνιστούν
ουσιαστικά μία κατάσταση έκτακτης ανάγκης.
Βλέπουμε ότι το ανθρώπινο κεφάλαιο υποφέρει κατά πολύ σε ψυχοσωματικό επίπεδο
όταν έχει υποστεί τραύμα,
και η ικανότητα αποτελεσματικής συμβολής του στην ευημερία της κοινότητας
καθίσταται δύσκολη γιατί όποιος έχει υποστεί τραύμα χρήζει θεραπείας
και αυτή, με τη σειρά της, απαιτεί οικονομικούς πόρους και χρηματοδότηση,
ενώ παράλληλα ο ίδιος αδυνατεί να παράξει ευημερία για τον εαυτό του,
την οικογένειά του, την κοινότητα και τη χώρα του.
Επίσης, επισημαίνουμε και άλλη μία πτυχή, πολύ ανησυχητική για τα θύματα τραύματος.
Ότι το θύμα όχι μόνο γίνεται

ένα άτομο με βλάβες στη σωματική και ψυχική του υγεία, αλλά συχνά,
κυρίως για κάποια είδη τραύματος, όπως στα θύματα βίας, σεξουαλικής ή άλλης,
είναι πολλά τα περιστατικά στα οποία γίνονται οι ίδιοι δράστες και τραυματίζουν αθώα άτομα
και από θύματα γίνονται θύτες. Αυτό είναι τρομερό, λες και το τραύμα είναι ένας ιός που εξαπλώνεται
αν δεν εξαλειφθεί, δεν προβλεφθεί, δεν θεραπευτεί αποτελεσματικά στην κοινότητα: γίνεται πανδημία.
Θα μπορούσαμε όντως να μιλήσουμε για πανδημίες, για κάτι που εξαπλώνεται από άνθρωπο σε άνθρωπο
αστραπιαία σε όλο τον πληθυσμό, με αποτέλεσμα η απώλεια ανθρώπινου κεφαλαίου να γίνεται
ολοένα και πιο σοβαρή.
Επίσης, είναι προφανές ότι σε μία βιοψυχοκοινωνική προσέγγιση δεν μπορούμε να αναθέσουμε μόνο
στον τομέα της υγείας την πρόληψη και θεραπεία του τραύματος, αλλά αυτό είναι καθήκον
της πολιτικής όλων των θεσμών: στο σχολείο, στον χώρο εργασίας, στους οργανισμούς και στον κόσμο
της δικαιοσύνης ανηλίκων, οι οποίοι πρέπει να ευαισθητοποιηθούν απέναντι σε αυτά τα ζητήματα
και να συμμετάσχουν σε ένα αποτελεσματικό δίκτυο πρόληψης και αντιμετώπισης του τραύματος.
Κάτι τέτοιο θα αποβεί ευεργετικό για όλους.

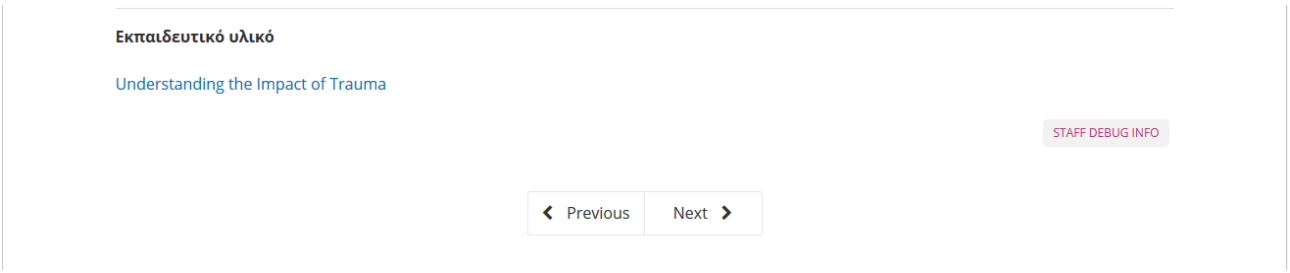


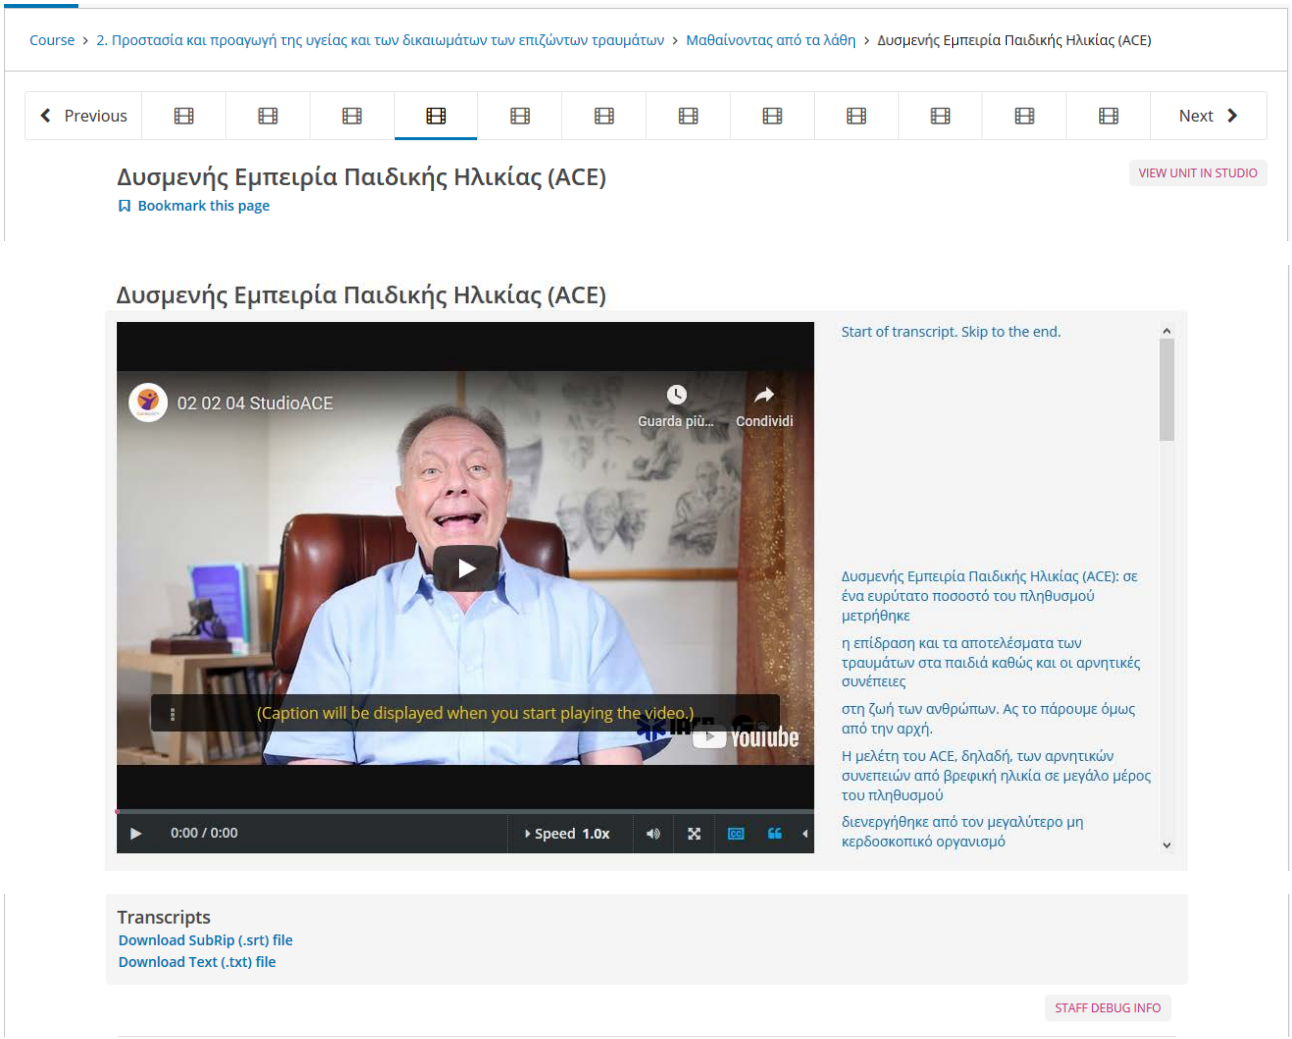


Transcript

Ας μιλήσουμε για την εξάπλωση του τραύματος. Ανακαλύπτουμε όλο και περισσότερο
ότι το τραύμα έχει σοβαρές συνέπειες στην κοινότητα και την κοινωνία.
Στο παρελθόν οι μελέτες για το τραύμα επικεντρώνονταν πιο πολύ στην οξύτητα του τραύματος
και άρα στην έκθεση σε ένα αρκετά σοβαρό γεγονός.
Με την πάροδο του χρόνου η έννοια του τραύματος διευρύνθηκε και πλέον εμπεριέχει πολλές πτυχές.
Σε κάθε περίπτωση, το τραύμα είναι κάτι που έχει την ιδιότητα να εξαπλώνεται
στις κοινωνίες μας. Γνωρίζουμε ότι ένας ενήλικας έχει εκτεθεί, και θα εκτεθεί και στο μέλλον,
τουλάχιστον μία φορά σε κάποιο τραυματικό γεγονός.
Από μελέτες, γνωστές στη βιβλιογραφία ως μελέτες του Μπένγκετ, γνωρίζουμε
ότι το ποσοστό του τραύματος είναι πολύ υψηλό σε διάφορες χώρες, με διαφοροποιήσεις,
αλλά παραμένει, παγκοσμίως, σε υψηλά επίπεδα.
Άρα είναι σημαντικό σήμερα να εμβαθύνουμε σχετικά με τα στοιχεία που λειτουργούν προστατευτικά
αλλά και με όσα αυξάνουν τον κίνδυνο έκθεσης σε τραύμα.

Γνωρίζουμε από άλλες σχετικές μελέτες ότι το τραύμα αποτελεί επίσης τη βάση
πολλών χρόνιων διαταραχών που σήμερα έχουν σοβαρές επιπτώσεις σε οικονομικό επίπεδο
και στη δημόσια υγεία αλλά κυρίως υπονομεύουν τις ικανότητες του ατόμου
να εκφράσει τις δυνατότητές του και να γίνει ένας πολίτης απόλυτα συνειδητός
και χρήσιμος στην κοινότητα και την κοινωνία όπου ζει.
Ακόμα πιο σοβαρό είναι το τραύμα, αν θεωρήσουμε ότι όλα αυτά τα τραύματα λαμβάνουν χώρα
στην αναπτυξιακή περίοδο του ατόμου.
Εκεί ακριβώς, την περίοδο που το άτομο χτίζει
τις ικανότητές του σε επίπεδο συναισθηματικό και κοινωνικό/σχεσιακό, ένα ενδεχόμενο τραύμα
μπορεί να αναστείλει κατά πολύ την ανάπτυξη αυτών των ικανοτήτων,
υπονομεύοντας σημαντικά
τη μελλοντική ανάπτυξη του ατόμου.
Θα είναι, λοιπόν, θεμελιώδες, και είναι ήδη, να εμβαθύνουμε στις γνώσεις μας σχετικά με το τραύμα,
δηλαδή να είμαστε ενημερωμένοι, όπως ακριβώς κάνουμε τώρα από αυτό το βήμα.





Transcript

Δυσμενής Εμπειρία Παιδικής Ηλικίας (ACE): σε ένα ευρύτατο ποσοστό του πληθυσμού μετρήθηκε

η επίδραση και τα αποτελέσματα των τραυμάτων στα παιδιά καθώς και οι αρνητικές συνέπειες

στη ζωή των ανθρώπων. Ας το πάρουμε όμως από την αρχή.

Η μελέτη του ACE, δηλαδή, των αρνητικών συνεπειών από βρεφική ηλικία σε μεγάλο μέρος του πληθυσμού

διενεργήθηκε από τον μεγαλύτερο μη κερδοσκοπικό οργανισμό

ασφαλίσεων υγείας: η "Kaiser Permanente", ιδιωτική μη κερδοσκοπική ασφαλιστική εταιρεία

στην Καλιφόρνια, επένδυσε πολλά εκατομμύρια δολάρια για να εκπονήσει αυτή τη μελέτη

που απέβη επωφελής για όλη την επιστημονική κοινότητα γιατί τώρα γνωρίζουμε, και πλέον παρόμοιες μελέτες

έχουν επιβεβαιώσει τα πρωταρχικά στοιχεία, ότι κατά μέσο όρο τουλάχιστον το 1/3

του πληθυσμού, δηλαδή των πολιτών, πλήττεται σε παιδική ηλικία τουλάχιστον

από ένα δυσμενές επεισόδιο και άρα από ένα τραύμα.

Μικρότερη μερίδα των πολιτών πλήττεται

από δύο τύπους τραυμάτων

και ακόμα λιγότεροι έχουν υποστεί μεγαλύτερο αριθμό τραυμάτων.

Όσο περισσότερα πολλαπλά τραύματα έχει υποστεί κάποιος τόσο περισσότερο υποφέρει από τις αρνητικές επιπτώσεις,

όπως όταν μια μαχαιριά είναι πολύ επώδυνη αλλά ακόμα χειρότερες είναι οι πολλαπλές μαχαιριές.

Τα τραύματα είναι χειρότερα από τις μαχαιριές, γιατί έχουν αρνητικές επιπτώσεις στο σώμα,

όπως οι μαχαιριές, αλλά και στην ψυχή του θύματος της συγκεκριμένης βίας

και επιπλέον είναι, κατά κάποιο τρόπο, σαν ένας ιός που οδηγεί τους πληγέντες

από τραύματα,

κυρίως από τραύματα στα οποία υπήρξαν θύματα βίας, σεξουαλικής κακοποίησης κτλ.,

να γίνουν οι ίδιοι θύτες ως ενήλικοι.

Επιπλέον, τα προβλήματα είναι τόσο ψυχικού όσο και σωματικού τύπου,

αν και συχνά αυτά τα δύο αλληλοσυνδέονται. Δηλαδή, τα άτομα που έχουν υποστεί τραύμα

προσπαθούν ενστικτωδώς να επιδιορθώσουν το τραύμα, να κάνουν το λεγόμενο "coping",

να διαχειριστούν το γεγονός και κάποιες πτυχές αυτής της διαχείρισης του γεγονότος ίσως να είναι

αποτελεσματικές αρχικά αλλά έχουν μεγάλο μακροπρόθεσμο κόστος. Για παράδειγμα,

για να διαχειριστούν τις επιπτώσεις του τραύματος, κάποιοι προσπαθούν να ανακουφιστούν καταναλώνοντας

αλκοόλ ή ναρκωτικές ουσίες, οι οποίες όμως αμέσως δημιουργούν

άλλο πρόβλημα και επιδεινώνουν την κατάσταση,

γιατί τα άτομα γίνονται όλο και πιο εξαρτημένα από το αλκοόλ και τις ουσίες. Σε επίπεδο συμπεριφοράς,

είναι γνωστό ότι αποφεύγουν τους άλλους, αλλά όσο απομονώνονται χάνουν την ευκαιρία

να "γεμίσουν τις μπαταρίες τους" ή επιδίδονταισε σεξουαλικές ασυδοσίες.

Άρα οι δυσμενείς εμπειρίες της παιδικής ηλικίας είναι κοινωνική μάστιγα και, μάλιστα, δαπανηρή

γιατί το κόστος των θεραπειών είναι επαχθέστατο. Προς όφελος όλων, όλοι πρέπει να προσπαθήσουν

για μια αποτελεσματική πρόληψη και θεραπεία των τραυμάτων που υφιστάμεθα ως παιδιά.

Γιατί αυτό θα αποβεί ωφέλιμο

όχι μόνο για τα θύματα αλλά και για όλη την κοινωνία.

Transcript

Τισημαίνει να είμαστε "trauma informed"; Απλό: να είμαστε ενήμεροι σχετικά με το τραύμα.

Αυτό στοχεύει στην πρόληψη της επανατραυματοποίησης και στην παροχή υπηρεσιών και δομών που μειώνουν

τον κίνδυνο επανατραυματοποίησης, μεγιστοποιώντας τη δυνατότητα παροχής αποτελεσματικών υπηρεσιών.

Γνωρίζουμε πλέον κάποιες καλές πρακτικές, τις λεγόμενες "trauma informed" πρακτικές,

χάρη στην ανοιχτή στάση και την αναγνώριση των λαθών του παρελθόντος.

Λάθη που διαπράξαμε όχι εσκεμμένα, φυσικά, αλλά από άγνοια,

επειδή ακριβώς δεν γνωρίζαμε

ότι κάποιες πτυχές των θεραπειών του παρελθόντος ήταν μέρος του προβλήματος και όχι της λύσης.

Για παράδειγμα, όταν οι θεραπευόμενοι πιέζονταν, παρά τη θέλησή τους, να θυμηθούν παλαιότερα τραύματα

βίωναν εκ νέου τις τραυματικές στιγμές και πάει λέγοντας.

Σήμερα, χάρη σε όσα μάθαμε από τα λάθη του παρελθόντος,

έχουμε μια σειρά από κατευθυντήριες οδηγίες,

από παραμέτρους που βοηθούν στην πρόληψη των βλαβών και στη μεγιστοποίηση των ωφελειών

από τις παρεχόμενες υπηρεσίες.

Κι αυτό, όχι μόνο στον τομέα της υγείας, της ψυχικής υγείας,

αλλά σε κάθε τομέα,

όπως στα σχολεία, στους οργανισμούς, στη νομοθεσία της δικαιοσύνης ανηλίκων

ή και στη γενικότερη νομοθεσία. Η "Trauma Informed School" είναι μια σχολή με ευαισθησία

στην προβληματική του τραύματος κι έτσι οι διδάσκοντες θα ξέρουν πως ένας άτακτος μαθητής

δεν είναι πάντα μόνο άτακτος αλλά εκφράζει μια δυσκολία που οφείλεται σε ένα τραύμα

και με αυτή τη γνώση θα έχουν ένα διορθωτικό εργαλείο, παραπέμποντας τον μαθητή στον ψυχολόγο

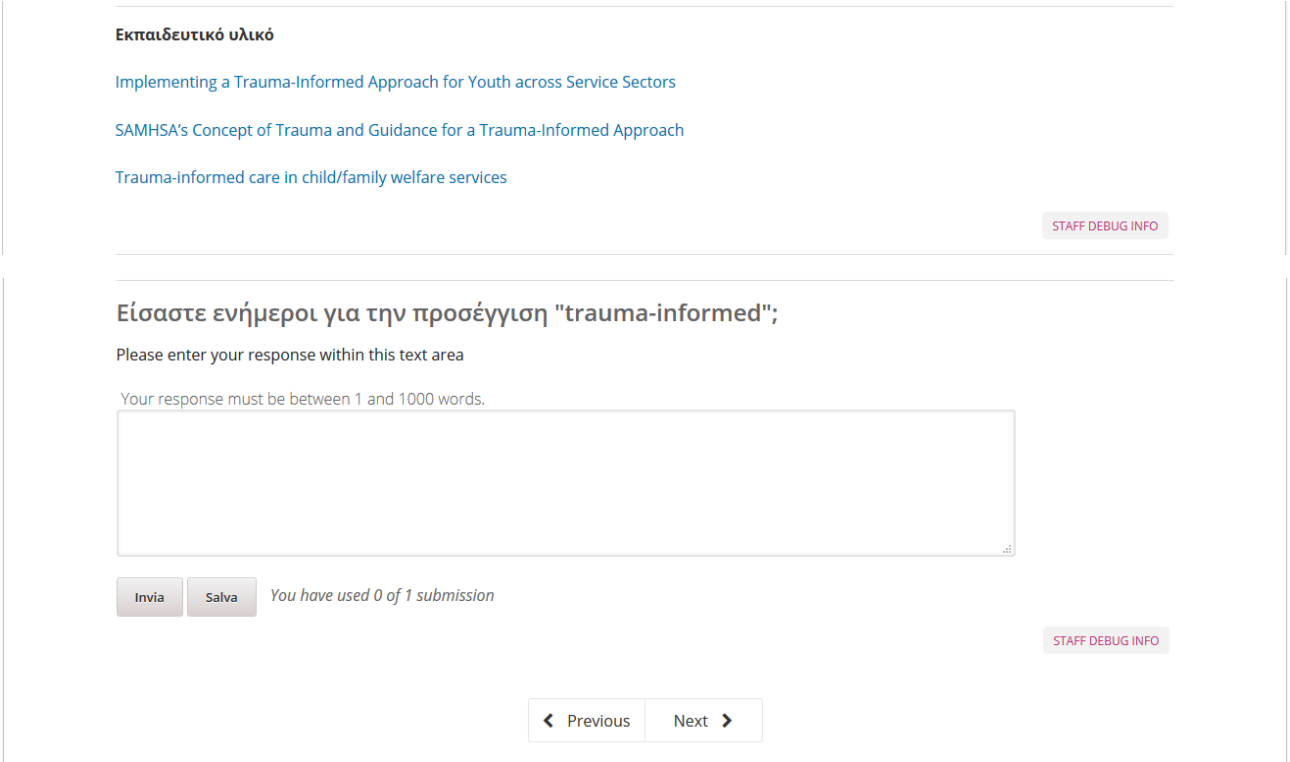
για να λάβει βοήθεια και για να μη γίνει το πρόβλημα ακόμα σοβαρότερο από ό,τι ήδη είναι.

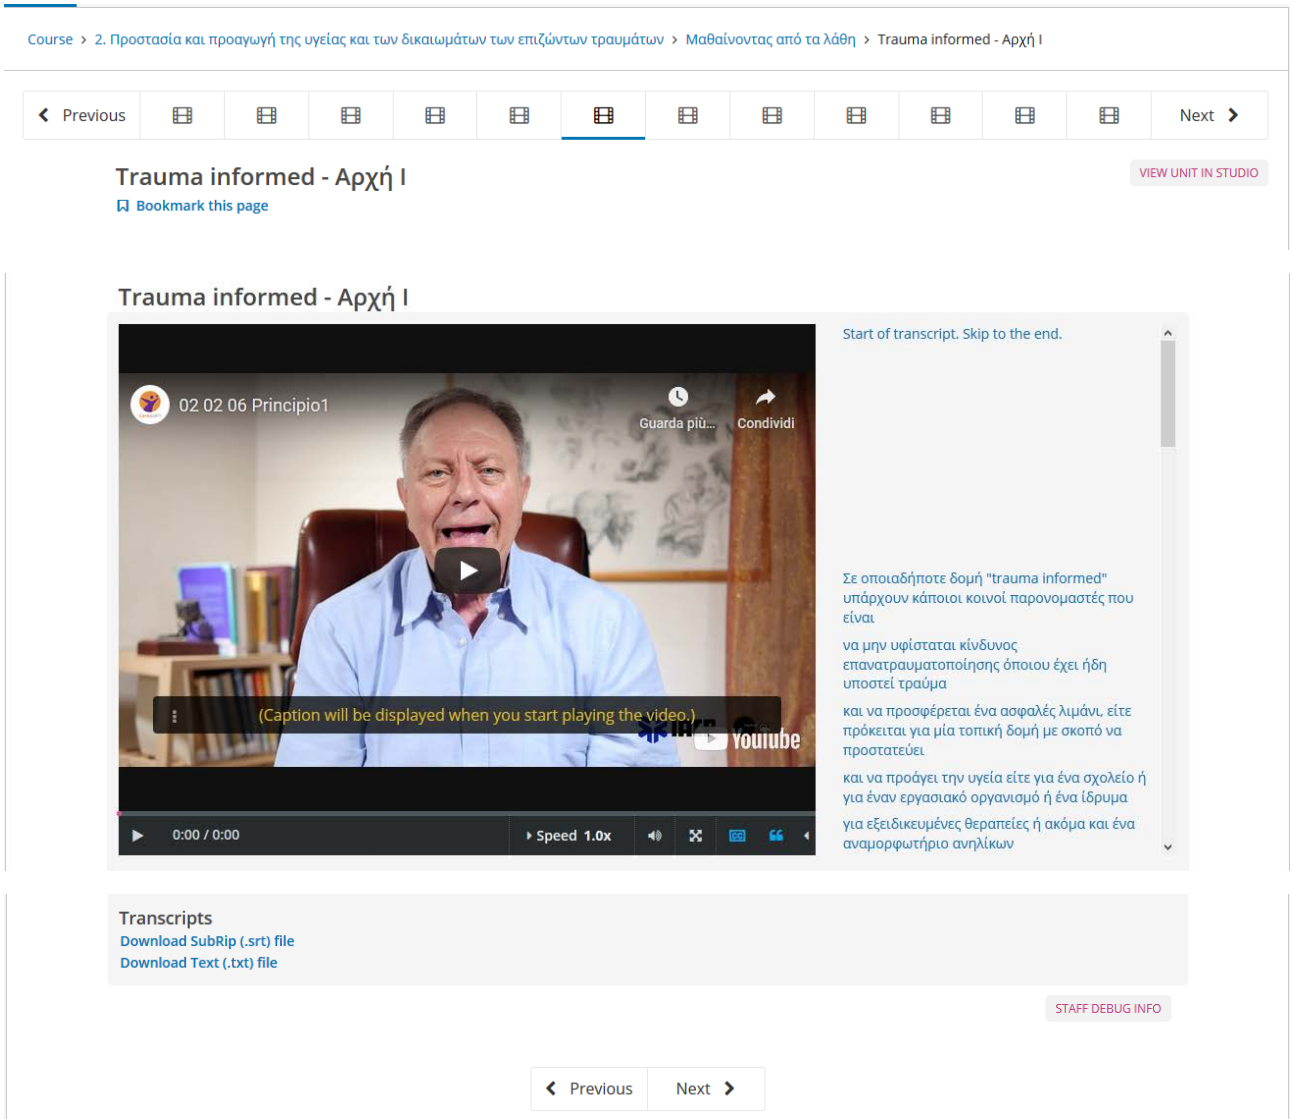
Κατά βάθος, η "trauma informed" προσέγγιση δεν είναι μόνο υποχρέωσή μας, από άποψη ηθική,

κλινική και ψυχικής υγείας, αλλά και αποδοτική στη σχέση κόστους-ωφελειών,

γιατί η παροχή θεραπειών που μειώνουν τις βλάβες αποβαίνει προς όφελος όχι μόνο των θυμάτων

που έχουν υποστεί τραύματα αλλά και ολόκληρης της κοινωνίας.





Transcript

Σε οποιαδήποτε δομή "trauma informed" υπάρχουν κάποιοι κοινοί παρονομαστές που είναι

να μην υφίσταται κίνδυνος επανατραυματοποίησης όποιου έχει ήδη υποστεί τραύμα

και να προσφέρεται ένα ασφαλές λιμάνι, είτε πρόκειται για μία τοπική δομή με σκοπό να προστατεύει

και να προάγει την υγεία είτε για ένα σχολείο ή για έναν εργασιακό οργανισμό ή ένα ίδρυμα

για εξειδικευμένες θεραπείες ή ακόμα και ένα αναμορφωτήριο ανηλίκων

και μέρος του δικαστικού συστήματος.

Ακόμα και μία κοινότητα, για να είναι "trauma informed", πρέπει να έχει αυτούς τους κοινούς παρονομαστές

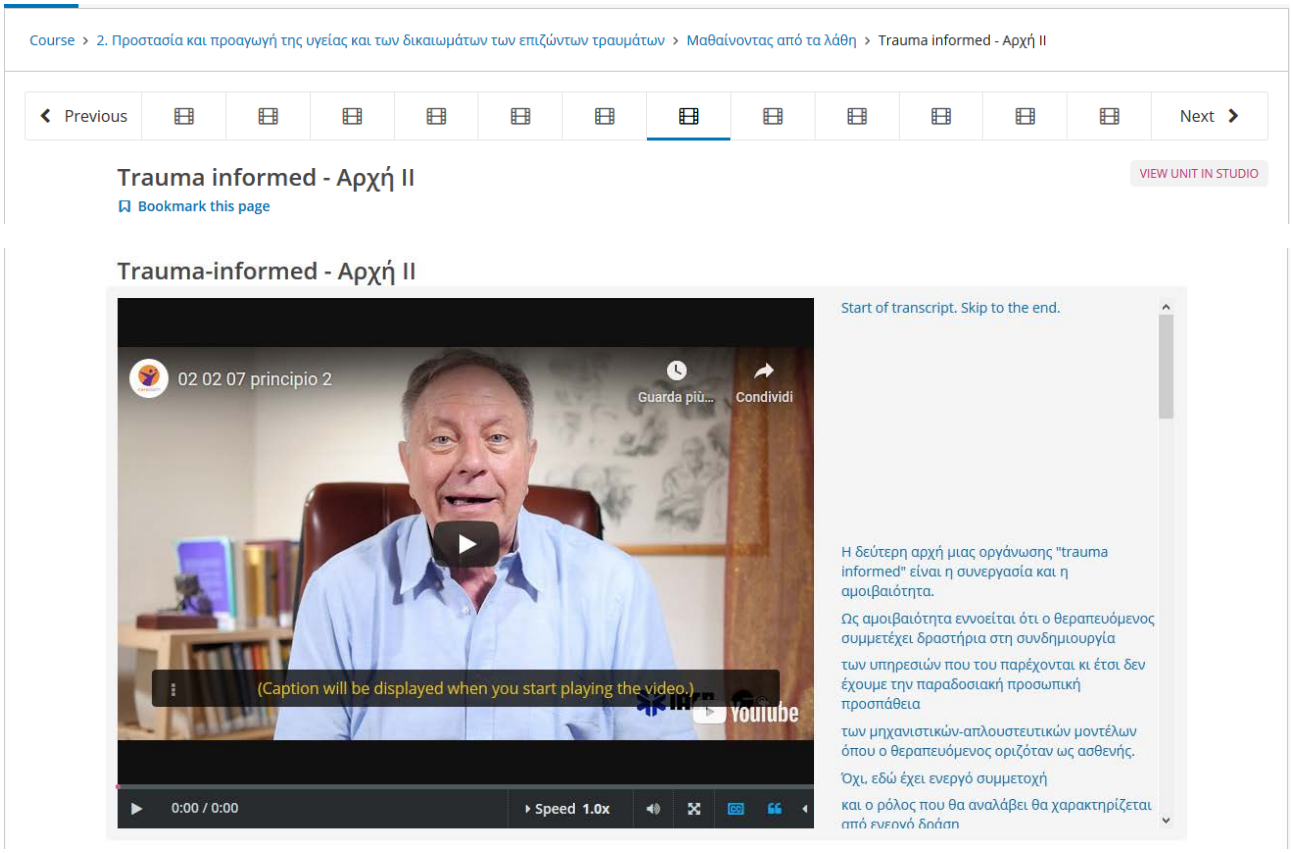
που χαρακτηρίζονται από την εξής κόκκινη γραμμή.

Όλοι οι κοινοί παρονομαστές ενοποιούνται στην επιθυμία να ενημερώσουμε σχετικά

και να εξασφαλίσουμε στον θεραπευόμενο που έχει υποστεί τραύμα

μια πλήρη αίσθηση ασφάλειας,

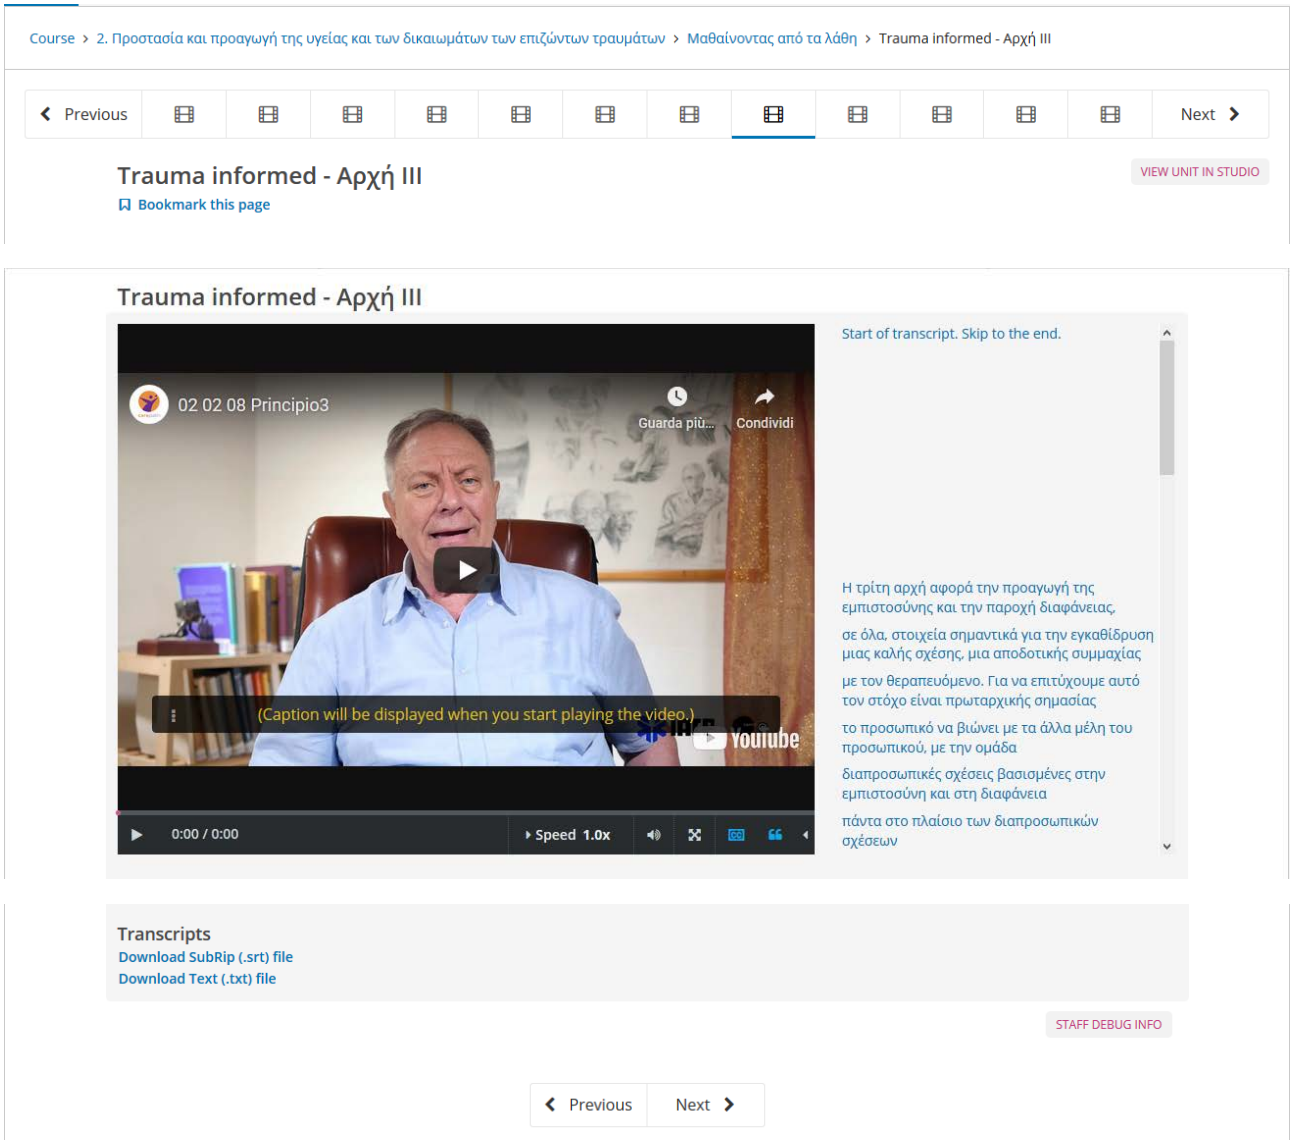
σωματικής και ψυχολογικής, να είμαστε ένα ασφαλές λιμάνι.
Η πρώτη "trauma informed" αρχή είναι ότι η δομή πρέπει να παρέχει ασφάλεια, σωματική
και συναισθηματική, και το πρόσωπο να έχει, αφού ενημερωθεί σχετικά, τη βεβαιότητα
αλλά και την εμπειρία ότι όλα είναι καλά, δεν υπάρχει καμία πιθανότητα επίθεσης εις βάρος του,
βρίσκεται σε έναν ασφαλή τόπο όπου δεν χρειάζεται να είναι σε επιφυλακή
ή να ζει μέσα στην αγωνία.
Η "trauma informed" δομή είναι επίσης πολύ φιλόξενη, σε κάθε πτυχή επικοινωνίας
και μετεπικοινωνίας και άρα ο θεραπευόμενος είναι ευπρόσδεκτος, του λέμε "καλώς ήρθες"
ή "καλώς ήρθες πάλι", και όλοι είναι πεπεισμένοι ότι ο θεραπευόμενος είναι ένα πρόσωπο
που όντως καλωσορίζεται στον χώρο.
Μία δομή, για να κερδίσει την εμπιστοσύνη και να προσφέρει ασφάλεια στους θεραπευόμενους,
πρέπει να είναι συνεπής: όλα της τα μηνύματα πρέπει να αντιστοιχούν πλήρως στις πράξεις της
και να έχουν διάρκεια στον χρόνο.
Μόνο έτσι ο θεραπευόμενος θα μπορέσει να θρέψει και να αναπτύξει αληθινή εμπιστοσύνη
και να νιώσει ότι η δομή όντως είναι φιλόξενη, ένα ασφαλές λιμάνι που μπορεί να εμπιστευτεί.
Σε μία "trauma informed" δομή δεν υπάρχει χώρος ή θέση για τη βία, τη ντροπή και την ενοχή,
όλα τους στοιχεία πολύ προβληματικά που μπορούν να επιβαρύνουν ή να επανατραυματοποιήσουν
όποιον έχει ήδη υποστεί τραύμα.
Επίσης, μια δομή "trauma informed" διασφαλίζει την εχεμύθεια και το επαγγελματικό απόρρητο
και την ιδιωτικότητα του θεραπευόμενου, που δεν θα εκτεθεί σε τέτοιου είδους
κινδύνους και βία.
Επιπλέον, η γλώσσα
σε μία δομή "trauma informed" επικεντρώνεται στο πρόσωπο,
δηλαδή, πρόκειται για μια γλώσσα με σαφήνεια και συνοχή,
την οποία θα μπορεί να καταλάβει ο θεραπευόμενος
και όχι αινιγματικά επαγγελματικά ιδιώματα
που χρειάζεται κανείς τρία πτυχία για να μπορέσει να τα κατανοήσει.



Transcript

Η δεύτερη αρχή μιας οργάνωσης "trauma informed" είναι η συνεργασία και η αμοιβαιότητα.
Ως αμοιβαιότητα εννοείται ότι ο θεραπευόμενος συμμετέχει δραστήρια στη συνδημιουργία
των υπηρεσιών που του παρέχονται κι έτσι δεν έχουμε την παραδοσιακή προσωπική προσπάθεια
των μηχανιστικών-απλουστευτικών μοντέλων όπου ο θεραπευόμενος οριζόταν ως ασθενής.
Όχι, εδώ έχει ενεργό συμμετοχή
και ο ρόλος που θα αναλάβει θα χαρακτηρίζεται από ενεργό δράση
στην πορεία ανάκτησης των ικανοτήτων και των δυνατοτήτων του.
Μία δομή "trauma informed" θα προάγει
την ανάκτηση του αυτοσεβασμού,
που αποτελεί κρίσιμη πτυχή σε όσους έχουν υποστεί τραύμα,
αλλά και την ελπίδα, την ανάρρωση,
την ανάκτηση των δυνατοτήτων τους.
Μία δομή σαν αυτή θα κάνει πάντα σαφές, κυρίως στον εαυτό της,
ότι η ανάκτηση της υγείας, της λειτουργικότητας ενός ατόμου που υποφέρει
από διαταραχή μετατραυματικού στρες,
από τραύματα, μπορεί να επιτευχθεί μόνο μέσα από τις αποτελεσματικές σχέσεις
που το προσωπικό της δομής καταφέρνει να εγκαθιδρύσει με τον θεραπευόμενο.
Πρόκειται, δηλαδή, για ένα ομαδικό παιχνίδι, για μια συμμαχία εργασίας.
Η από κοινού λήψη αποφάσεων είναι κεντρική για τη διασφάλιση της καλής λειτουργίας
της παρεχόμενης υπηρεσίας.
Κατ' αρχάς ξέρουμε καλά, το έχουν αποδείξει οι έρευνες του Κάρασεκ σχετικά με το άγχος,
ότι αν έχω κάποια αγχογόνα ερεθίσματα αλλά αυξημένη δύναμη ελέγχου,
το άγχος μειώνεται,

ενώ αν έχω περιορισμένο έλεγχο της κατάστασης το άγχος αυξάνει.
Αυτή την αρχή εφαρμόζουμε.
Άρα η παραχώρηση στον θεραπευόμενο εξουσίας λήψης αποφάσεων και ελέγχου είναι μέρος της θεραπείας.
Με άλλα λόγια, όταν ο θεραπευόμενος έχει μεγαλύτερο έλεγχο,
είναι ικανός να ξεπεράσει καλύτερα την κατάστασή του.
Μία δομή επικεντρωμένη στην παροχή υπηρεσιών τύπου "trauma informed" δεν ενθαρρύνει υπερβολικές ανισότητες εξουσίας ή επίπεδα διαφοράς δυναμικότητας μεταξύ της δομής,
των θεραπευτών της και του θεραπευόμενου, αλλά ενισχύει ενεργά το άτομο και αναγνωρίζει στον θεραπευόμενο το δικαίωμα να ασκήσει προσωπικό έλεγχο και εξουσία κατά τη συνδημιουργία
της πραγματικότητας που συμβιώνεται.
Η δομή "trauma informed" είναι συστημική και ολιστική υπό την έννοια
ότι έχει απόλυτη επίγνωση
πως πρέπει να λειτουργήσει βασιζόμενη στην κοινωνική οικοδόμηση μιας πραγματικότητας τύπου "trauma informed". Κάθε πτυχή συμβάλλει προς αυτό τον σκοπό.
Συνεπώς, θα υπάρξει σχετική φροντίδα, από το άλφα ως το ωμέγα,
από την έναρξη της εισόδου και την υποδοχή
ως και τα πρόσωπα που έχουν υποβληθεί σε θεραπεία,
καθώς ο θεραπευόμενος θα συνοδεύεται και θα έχει βοήθεια ώστε να ζήσει αποτελεσματικά το μεταθεραπευτικό στάδιο, το λεγόμενο "after care".



Transcript

Η τρίτη αρχή αφορά την προαγωγή της εμπιστοσύνης και την παροχή διαφάνειας,
σε όλα, στοιχεία σημαντικά για την εγκαθίδρυση μιας καλής σχέσης, μια αποδοτικής συμμαχίας
με τον θεραπευόμενο. Για να επιτύχουμε αυτό τον στόχο είναι πρωταρχικής σημασίας
το προσωπικό να βιώνει με τα άλλα μέλη του προσωπικού, με την ομάδα
διαπροσωπικές σχέσεις βασισμένες στην εμπιστοσύνη και στη διαφάνεια
πάντα στο πλαίσιο των διαπροσωπικών σχέσεων
μεταξύ των εργαζομένων, των θεραπευομένων και των οικογενειών τους.
Ένα άλλο σημαντικό στοιχείο είναι ο σεβασμός και η τήρηση των ορίων, γιατί όταν έχουμε
σαφή όρια, δημιουργούμε και σαφή πεδία. Αν δεν σεβόμαστε τα όρια
σημαίνει ότι μολύνουμε τα "περιβάλλοντα" εργασίας και τα καθιστούμε δυσλειτουργικά.
Η διαφάνεια είναι θεμελιώδης και οι πολιτικές πρέπει να είναι σαφείς,

όπου όλα θα διατυπώνονται με γλώσσα όχι γραφειοκρατική αλλά σαφή και διάφανη.

Η σαφήνεια είναι απαραίτητη και για άλλο λόγο.

Όλοι, και κυρίως οι θεραπευόμενοι, πρέπει να γνωρίζουν σε τι χώρο βρίσκονται,

ποια είναι τα δικαιώματα και οι υποχρεώσεις, ποια είναι η δομή και το προσωπικό

με το οποίο δουλεύουν.

Για αυτό είναι αναγκαία η απόλυτη σαφήνεια ρόλων αλλά και η γνώση ότι οι διάφοροι επαγγελματίες

που εργάζονται σε μία δομή έχουν ποικίλα καθήκοντα

και παρέχουν διάφορες υπηρεσίες, κανένας δεν είναι παντογνώστης.

Όπως και σε μία δομημένη κοινωνία ο φούρναρης φτιάχνει το ψωμί,

ο γαλατάς διανέμει το γάλα, ο μηχανικός κάνει το καθήκον του και πάει λέγοντας.

Θεμελιώδης για μία δομή "trauma informed" είναι ο σεβασμός των δικαιωμάτων και η προαγωγή

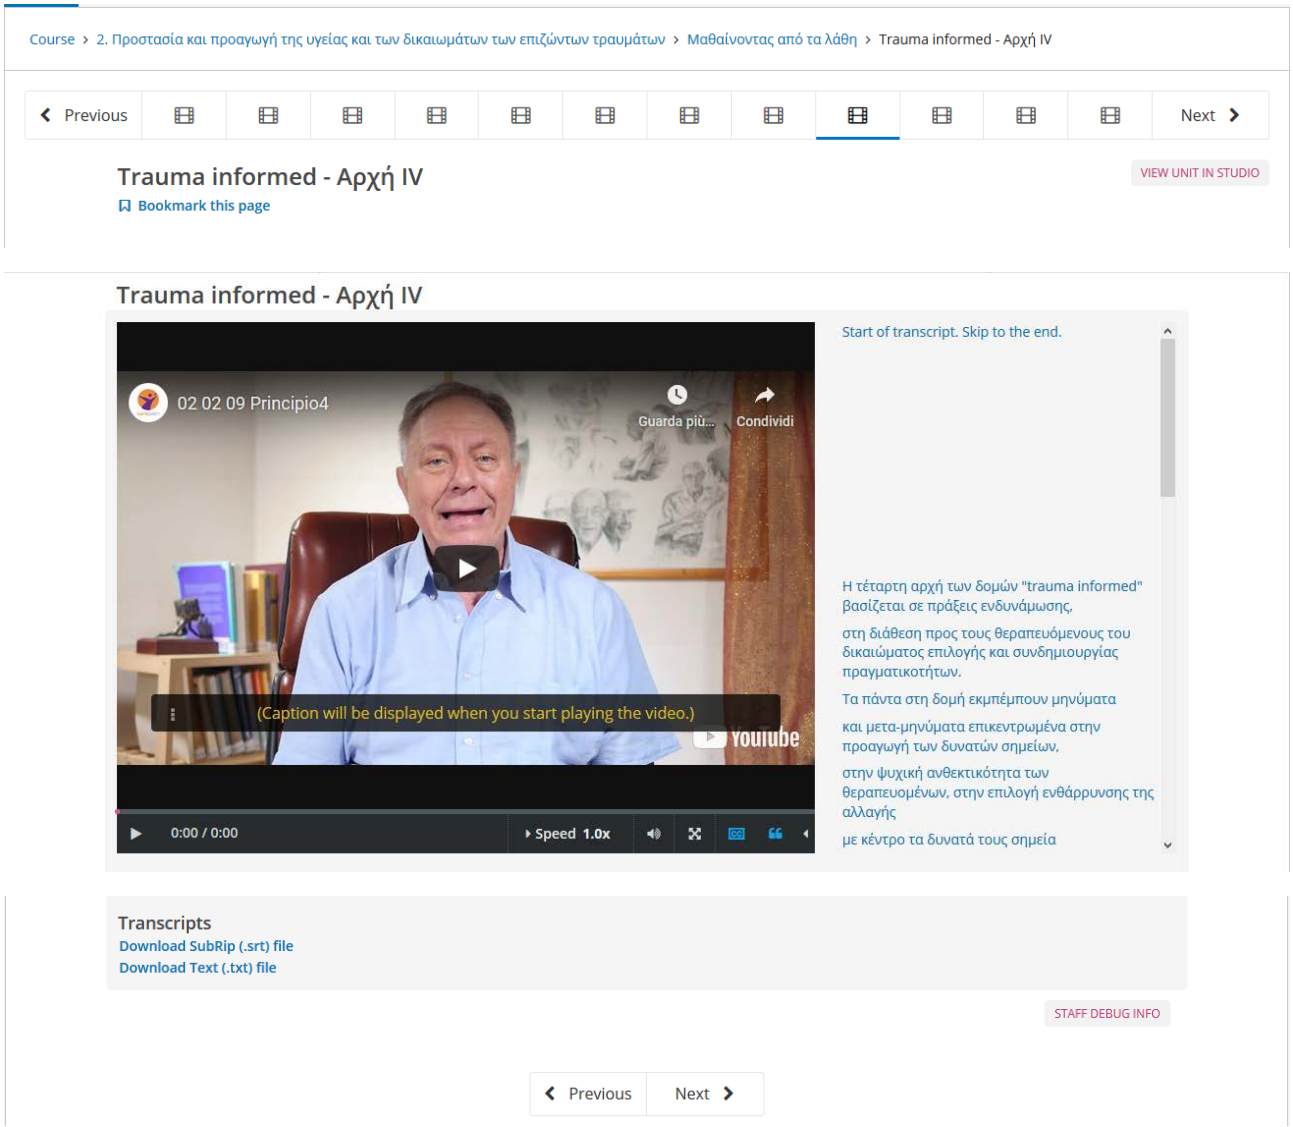
ιδίως των δικαιωμάτων των θεραπευομένων. Είναι, λοιπόν, θεμελιώδης

η λήψη μίας ειλικρινούς, κατόπιν πληροφόρησης, συναίνεσης

εξηγώντας στον θεραπευόμενο πώς αντιμετωπίζονται οι διαδικασίες και η παροχή υπηρεσιών

και κάνοντας ό,τι είναι δυνατό για να διασφαλίσουμε ότι η κατανόηση και η συναίνεση

είναι όντως πραγματικές και όχι απλώς τυπικές διαδικασίες.



Transcript

Η τέταρτη αρχή των δομών "trauma informed" βασίζεται σε πράξεις ενδυνάμωσης,

στη διάθεση προς τους θεραπευόμενους του δικαιώματος επιλογής και συνδημιουργίας πραγματικοτήτων.

Τα πάντα στη δομή εκμπέμπουν μηνύματα

και μετα-μηνύματα επικεντρωμένα στην προαγωγή των δυνατών σημείων,

στην ψυχική ανθεκτικότητα των θεραπευομένων, στην επιλογή ενθάρρυνσης της αλλαγής

με κέντρο τα δυνατά τους σημεία

και όχι τις αδυναμίες ή τις δυσλειτουργίες του θεραπευόμενου.

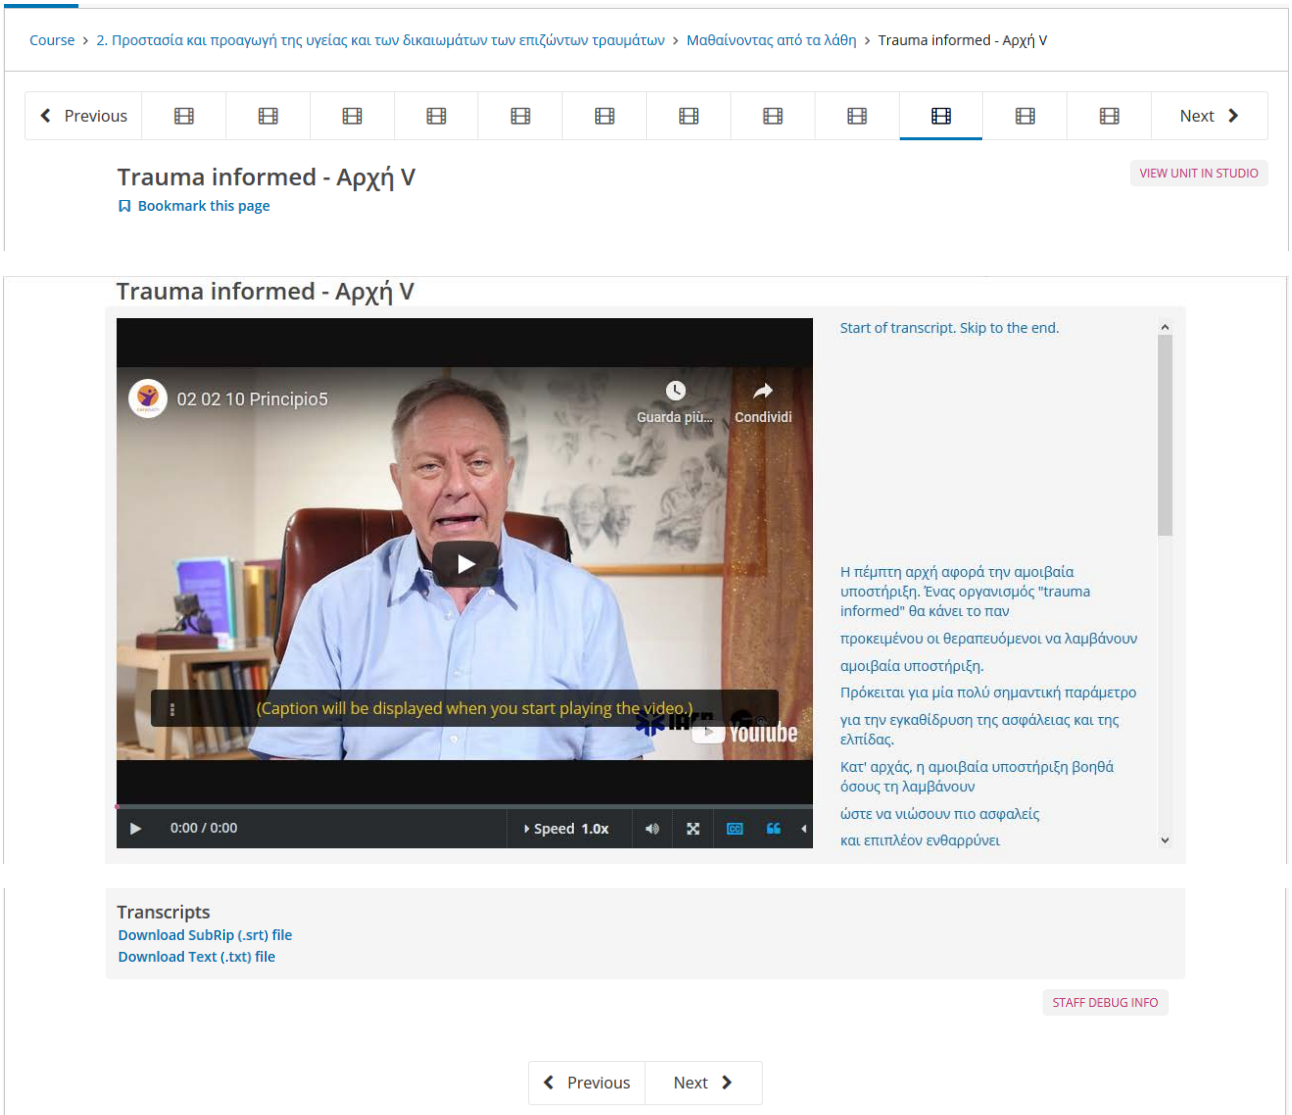
Η έμφαση δίνεται στην προαγωγή της συνειδητοποίησης από τον θεραπευόμενο

του τρόπου με τον οποίο έχει αντιμετωπίσει στο παρελθόν,

ενίοτε αποτελεσματικά, τις διάφορες καταστάσεις, δηλαδή, στη διαχείριση.

Πρόκειται, λοιπόν, για την εφαρμογή μιας φιλοσοφίας με έμφαση στη χρησιμότητα

των δυνατών σημείων ως βάσης. Με άλλα λόγια, στο παρελθόν επικεντρωνόμασταν στις παθολογίες και στον περιορισμό τους,
ενώ τώρα βασιζόμαστε στην υγεία και στη δύναμη προάγοντας την επέκταση και τη διεύρυνσή τους.
Επιπλέον, δίνεται αξία στους κοινωνικούς ρόλους γιατί είμαστε κοινωνικά θηλαστικά
κι αυτό είναι πολύ σημαντικό για την ταυτότητα και την ανάπυξη των δυνατοτήτων μας.
Ο στόχος, όπως δηλώνεται και επιδιώκεται,
είναι να προάγουμε τις ικανότητες αυτορρύθμισης,
αυτονομίας και αυτοδιαχείρισης των θεραπευομένων και έτσι θα τονίσουμε την πιθανότητα ανάπτυξης ακόμα και μέσα από τις τραυματικές εμπειρίες.
Δεν δίνεται έμφαση στο ότι κάποιος είναι ένα άμοιρο θύμα,
αλλά στην ικανότητά του να είναι ψυχικά ανθεκτικός.



Transcript

Η πέμπτη αρχή αφορά την αμοιβαία υποστήριξη. Ένας οργανισμός "trauma informed" θα κάνει το παν
προκειμένου οι θεραπευόμενοι να λαμβάνουν
αμοιβαία υποστήριξη.
Πρόκειται για μία πολύ σημαντική παράμετρο
για την εγκαθίδρυση της ασφάλειας και της ελπίδας.
Κατ' αρχάς, η αμοιβαία υποστήριξη βοηθά όσους τη λαμβάνουν
ώστε να νιώσουν πιο ασφαλείς
και επιπλέον ενθαρρύνει
την ελπίδα τους ότι υπάρχει η πιθανότητα βελτίωσης της κατάστασής τους.
Η αμοιβαία υποστήριξη, λοιπόν, είναι σημαντική για να αυξήσουμε την αυτοπεποίθηση,
την πίστη στις δυνατότητές μας και την αυτοεκτίμηση.
Η αμοιβαία υποστήριξη προάγει επίσης τη δυνατότητα συνεργασίας

και άρα ό,τι είναι θετικό για την προαγωγή του κοινωνικού ρόλου και της δραστηριοποίησης.

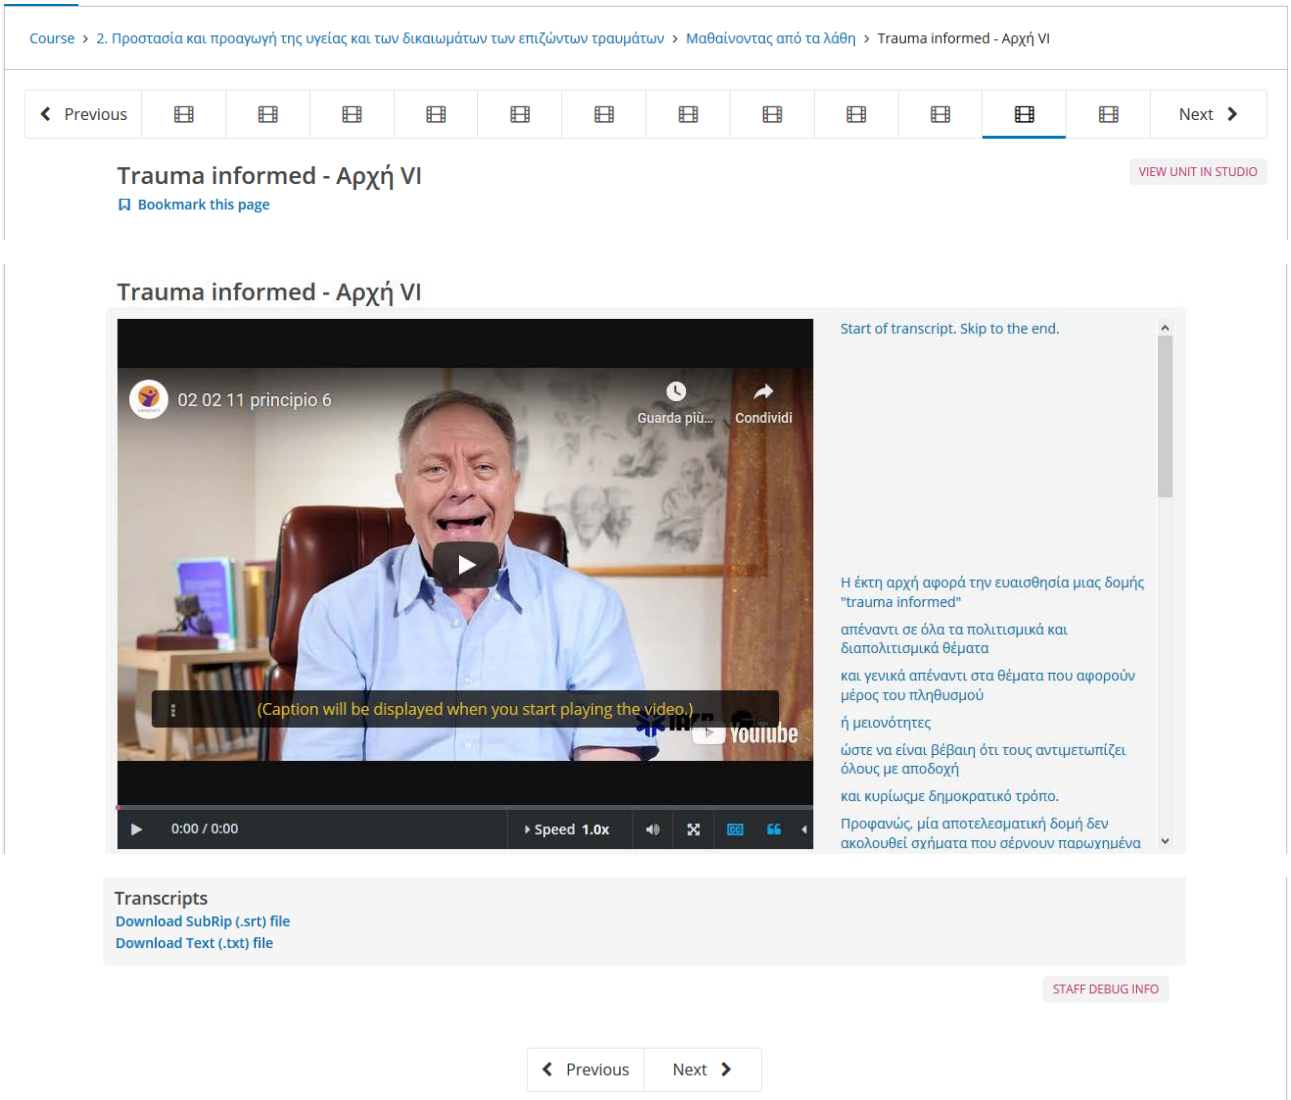
Αναμφίβολα, η αμοιβαία υποστήριξη οδηγεί σε μια διαπροσωπική επικοινωνία

που μπορεί να αξιοποιήσει τη δημιουργία αφηγημάτων,

ως μέρος ενός πολύ πλουσιότερου παζλ

και να αναπτύξει αφηγήματα

ελπίδας και ίασης.



Transcript

Η έκτη αρχή αφορά την ευαισθησία μιας δομής "trauma informed"

απέναντι σε όλα τα πολιτισμικά και διαπολιτισμικά θέματα

και γενικά απέναντι στα θέματα που αφορούν μέρος του πληθυσμού

ή μειονότητες

ώστε να είναι βέβαιη ότι τους αντιμετωπίζει όλους με αποδοχή

και κυρίωςμε δημοκρατικό τρόπο.

Προφανώς, μία αποτελεσματική δομή δεν ακολουθεί σχήματα που σέρνουν παρωχημένα στερεότυπα,

απολύτως άδικα και καταστροφικά απέναντι στις μειονότητες.

Η παρεχόμενη υπηρεσία θα είναι, για παράδειγμα,

πολύ ευαίσθητη απέναντι στη διαφορετικότητα των φύλων

και στον δίκαιο σεβασμό τους

καθώς η αξιοποίηση της διαφορετικότητας θα διευκολύνει και την αξιοποίηση

του πολιτισμικού υποβάθρου, των παραδόσεων,

της κουλτούρας και των εθνών καταγωγής των θεραπευομένων.

Θα δημιουργήσει μία πραγματικότητα πιστή στη φιλοσοφία τους κι έτσι η οργάνωση

και οι διαδικασίες θα είναι στο σύνολό τους

αμερόληπτες και ευαίσθητες απέναντι στις διαφορετικότητες.

Επιπλέον, θα μπορεί να αναγνωρίσει και να αντιμετωπίσει αποτελεσματικά το ιστορικό τραύμα.

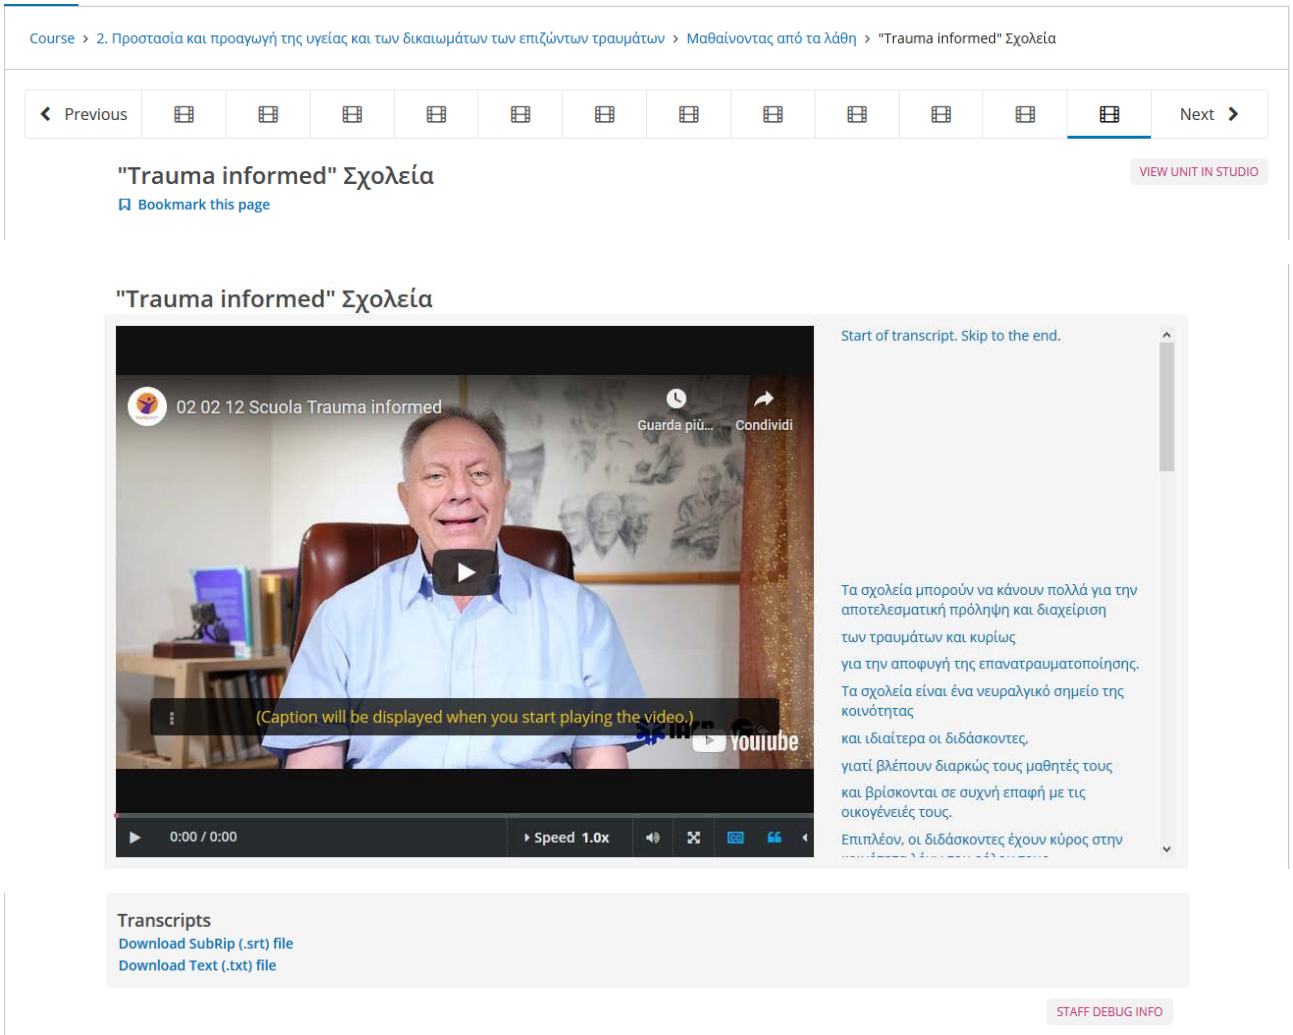
Τα ιστορικά τραύματα συνίστανται σε γεγονότα

μαζικά τραυματικά που έχουν επιπτώσεις ακόμα και σε όσους δεν τα βιώνουν άμεσα. Δραματικό παράδειγμα αποτελεί το ολοκαύτωμα.

Όχι μόνο υπήρξαν εκατομμύρια θύματα του ναζιστικού παραληρήματος

αλλά ακόμα και τα παιδιά και τα εγγόνια τους

υφίστανται τον αντίκτυπο αυτής της κτηνωδίας.



Transcript

Τα σχολεία μπορούν να κάνουν πολλά για την αποτελεσματική πρόληψη και διαχείριση

των τραυμάτων και κυρίως

για την αποφυγή της επανατραυματοποίησης.

Τα σχολεία είναι ένα νευραλγικό σημείο της κοινότητας

και ιδιαίτερα οι διδάσκοντες,

γιατί βλέπουν διαρκώς τους μαθητές τους

και βρίσκονται σε συχνή επαφή με τις οικογένειές τους.

Επιπλέον, οι διδάσκοντες έχουν κύρος στην κοινότητα λόγω του ρόλου τους.

Για αυτό, αν οι διδάσκοντες και όλο το προσωπικό του σχολείου

είναι ευαισθητοποιημένοι

σχετικά με τις παραμέτρους ενός σχολείου "trauma informed"

και ίσως έχουν συμβουλευτεί

έναν ειδικό που θα τους βοηθήσει να κάνουν τις απαραίτητες βελτιώσεις

οι οποίες θα μετατρέψουν το σχολείο από σχολείο με άγνοια της προβληματικής
σε σχολείο ενημερωμένο σχετικά με την προβληματική του τραύματος,
αυτό το σχολείο δεν θα είναι μέρος του προβλήματος αλλά της λύσης.
Κι αυτό, όχι μόνο επειδή οι διδάσκοντες,
ευαισθητοποιημένοι στις προβληματικές του τραύματος, θα μπορούν να είναι πανέτοιμοι
ώστε να αντιληφθούν τις ενδείξεις
τις οποίες, χωρίς τη σχετική εκπαίδευση, θα μπορούσαν να ερμηνεύσουν
απλώς ως προβλήματα πειθαρχίας, αλλά ως διδάσκοντες "trauma informed" θα μπορέσουν
να είναι ευαίσθητοι και να παραπέμψουν σχετικά
τους μαθητές τους, ζητώντας να επαληθευτεί
αν ένας μαθητής χρειάζεται επαγγελματική στήριξη, αν έχει υπάρξει θύμα τραύματος
ή όχι.
Μια άλλη σημαντική επίδραση μπορούν οι διδάσκοντες να ασκήσουν στους γονείς,
οι οποίοι σταδιακά γίνονται "trauma informed" γονείς
και θα μπορέσουν να συνεισφέρουν σημαντικά
σε αυτή την προβληματική.
Με δυο λόγια, ένα σχολείο "trauma informed"
αποτελεί εκπλήρωση του ρόλου του σχολείου, η οποία είναι να έχει
και να διαδίδει αποτελεσματικά τις γνώσεις
ώστε τα παιδιά να λειτουργούν ως προληπτικοί πολίτες της πόλης.
Συνεπώς, ένα σχολείο "trauma informed"
είναι απόλυτα έτοιμο να εκπληρώσει την αποστολή του
ως σχολείου με την καλύτερη έννοια της λέξης.

Εκπαιδευτικό υλικό

Creating Trauma Informed Systems - Schools

STAFF DEBUG INFO

Στην τοπική σου κοινότητα υπάρχουν σχολεία ενήμερα σχετικά με το τραύμα («trauma informed»); Στη χώρα σου;

Please enter your response within this text area

Your response must be between 1 and 1000 words.

Invia Salva *You have used 0 of 1 submission*

Προκειμένου να μας βοηθήσεις να βελτιώσουμε τη χρησιμότητα αυτού του σεμιναρίου για τους θεραπευτές στο πεδίο, θα μπορούσες να μας υποδείξεις πού μπορούμε να βρούμε πληροφορίες σχετικά με τα ενήμερα περί τραύματος («trauma informed») σχολεία στη χώρα σου, σε ευρωπαϊκό και σε παγκόσμιο επίπεδο;

Transcript

Θα σας παρουσιάσω τώρα μερικές παρατηρήσεις από την εικοσαετή εργασιακή εμπειρία μου

στις υπηρεσίες προς ανηλίκους και οικογένειες που αφορούν τη δημιουργία μαθημάτων βοήθειας,

υποστήριξης και παρέμβασης για ανηλίκους εκτεθειμένους σε καταστάσεις και θεάσεις βίας,

κακοποίησης ή και άλλες τραυματικές καταστάσεις.

Με την πάροδο του χρόνου τα πιο σημαντικά σημεία στα οποία εστίασα

ήταν τα εξής: η αναγκαιότητα και η σπουδαιότητα της δημιουργίας, εκτός από την επιστημονική

και τεχνική γνώση, μιας σχέσης που δημιουργεί ένα ασφαλές πλαίσιο για το παιδί.

Ο όρος "ασφαλές" αφορά τη διάσταση της ακρόασης

των αναγκών και απαιτήσεων και τον σεβασμό,

που είναι θεμελιώδης ιδίως σε περιπτώσεις στις οποίες το παιδί προέρχεται από εμπειρίες

που έχουν παραβιάσει την αίσθηση της ασφάλειας, του σεβασμού και της συνέχειας της ζωής.

Ειναι θεμελιώδες να εγγυηθούμε μία διάσταση σεβασμού ώστε να ξαναρχίσει η εξελικτική πορεία του παιδιού.

Τι σημαίνει όμως "διάσταση σεβασμού"; Σημαίνει μία ουσιαστική διάσταση ακρόασης,
ακρόασης με ενσυναίσθηση, όχι εστιασμένης
σε πρωτόκολλα και ανάγκες των θεραπευτών αλλά εστιασμένης
σε ό,τι είναι ολόκληρος ο κόσμος
του παιδιού: οι ανάγκες του, οι χρόνοι του,
που τους σεβόμαστε εφόσον έχουμε απέναντί μας ανηλίκους οι οποίοι έχουν αναπτύξει
μια στάση άμυνας και προστασίας του εαυτού τους.
Είναι, λοιπόν, σημαντικό ο θεραπευτής
να παρεμβαίνει χωρίς να απειλεί να καταρρίψει άμυνες, απορώντας, μεταφέροντας και ρωτώντας,
αλλά με σεβασμό στον χρόνο έκθεσης του παιδιού, έχοντας συνείδηση ότι η άμυνα δεν είναι
παρά ο καλύτερος τρόπος του ανηλίκου να αντιμετωπίσει μία δύναμη συντριπτική.
Στη συνέχεια, σταδιακά, καθώς οι άμυνες θα καθίστανται ανώφελες και λιγότερο αναγκαίες,
θα μπορούμε να συναντήσουμε τον πυρήνα της καρδιάς αυτού του παιδιού.
Η εμπειρία αποδεικνύει ότι είναι σημαντικό να είμαστε επικεντρωμένοι στις ανάγκες του παιδιού.
Θα περιγράψω τώρα τις εμπειρίες που αποκόμισα από τη δραστηριότητά μου ως κοινωνικός λειτουργός
υπηρετώντας επί 8 έτη στον Δήμο της Ρώμης, στον τομέα της πρόληψης, της προστασίας
και της υποστήριξης των ανηλίκων και των οικογενειών τους.
Σε συμφωνία με όσα ανέφερα ήδη σχετικά με την αναγκαιότητα εστίασης στις ανάγκες
του παιδιού, μπορούμε να μιλήσουμε για αναγκαιότητα εστίασης στα χαρακτηριστικά
και στη μοναδικότητα κάθε περίπτωσης, αλλά και όλων των εμπλεκόμενων ατόμων,
όχι μόνο του παιδιού αλλά και των γονέων του. Στην καθημερινή εργασία ως κοινωνικοί λειτουργοί
κυρίως δουλεύουμε με τους γονείς γιατί τα παιδιά που υφίστανται
ή έχουν υποστεί ένα ή περισσότερα τραύματα
συνήθως τα αναλαμβάνουν και τα παρακολουθούν ειδικοί
κατάλληλα καταρτισμένοι για να τα στηρίξουν σε αυτή τη διαδικασία.
Η δραστηριότητα του κοινωνικού λειτουργού είναι να συνοδεύσει τις οικογένειες
στη διαδικασία συνειδητοποίησης
των δυσκολιών, της κρισιμότητας και της ευθραυστότητάς τους,
αλλά και των ταραχών που επέφεραν βλάβες και δυσφορία στα παιδιά τους για να δημιουργήσουμε
δίκτυα υποστήριξης μέσα από τα οποία θα τους στηρίξουμε κατά την απόκτηση
και την αξιοποίηση των απαραίτητων γονεϊκών ευθυνών που εγγυώνται
στον ανήλικο το δικαίωμά του να μεγαλώσει

με ηρεμία στην οικογένειά του,
σε ένα περιβάλλον προστασίας και φροντίδας.
Σύμφωνα με την εμπειρία, ποια είναι τα κύρια αναγκαία στοιχεία ώστε ο θεραπευτής
να δουλέψει σε αυτό το περιβάλλον με αυτά τα άτομα; Σίγουρα είναι οι επιστημονικές γνώσεις
ως επαγγελματίας αλλά και γνώσεις και ικανότητες που αφορούν
πιο πολύ το προσωπικό επίπεδο. Αφορά, λοιπόν, όλα όσα περικλείει
η έννοια του εσωτερικού κόσμου ενός θεραπευτή: τα συναισθήματα, οι προκαταλήψεις,
οι ιδιοσυχνότητες, οι προβολές που τείνουμε να κάνουμε στις σχέσεις μας με τους άλλους.
Εκτός από επαγγελματίες στη σχέση βοήθειας είμαστε και πρόσωπα που συναντούμε
άλλα πρόσωπα.
Τι συμβαίνει όταν πρέπει να δουλέψουμε
με κακοποιητικούς ή βάναυσους γονείς; Δεν σας κρύβω ότι ενίοτε, συχνά θα έλεγα,
βιώνουμε συναισθήματα θυμού, οργής, αγανάκτησης, ακόμα και φόβου.
Σίγουρα αυτό που θέλω να σας πω
είναι ότι δεν πρέπει να υποκρίνεστε ότι δεν υπάρχουν αυτά τα συναισθήματα.
Είναι κομμάτι του εαυτού μας και σε κάθε περίπτωση θα υπεισέλθουν στη σχέση βοήθειας.
Σημασία έχει να τα αναγνωρίζουμε και να τα διαχειριζόμαστε ώστε να μην επηρεάσουν
την πραγματικότητα που έχουμε μπροστά μας και ώστε η προσωπική μας υποκειμενικότητα
να μην είναι η γλώσσα ερμηνείας όσων έχουμε απέναντί μας, συγχέοντας
πραγματικότητες ή ρόλους. Ενίοτε ο θεραπευτής, παρασυρμένος από τα συναισθήματα, τείνει
να δίνει κατευθυντήριες οδηγίες και ο γονέας γίνεται θύμα των αποφάσεων του θεραπευτή.
Αυτό σίγουρα μας απομακρύνει από την εγγύηση της φροντίδας και της προστασίας των ανηλίκων
γιατί, αν δεν είμαστε απόλυτα συγκεντρωμένοι στην πραγματικότητα της κατάστασης, δεν μπορούμε
να καταλάβουμε ή να αντιληφθούμε τις ανάγκες των παιδιών και να κατευθύνουμε τη διαδικασία.
Αντίθετα, όσον αφορά την άμεση σχέση με το παιδί, η παρέμβαση του κοινωνικού λειτουργού
στη συγκεκριμένη περίπτωση είναι πιο περιορισμένη,
αλλά και σε αυτή την περίπτωση υπάρχουν παράμετροι έντονων συναισθημάτων.
Είναι πιθανό να θέλουμε να ενδώσουμε στην προσωπική ανάγκη μας να δώσουμε στα παιδιά τη στοργικότητα
και τη φροντίδα που στερήθηκαν και άλλοτε προσπαθούμε να αντικαταστήσουμε τους θεραπευτές
που τα παρακολουθούν και τα βοηθούν να επεξεργαστούν τα τραύματά τους.

Μπορείτε να παραλείψετε τις ερωτήσεις εάν δεν εργάζεστε στον τομέα της βοήθειας στις σχέσεις.

Η σύνθετη κατάσταση των ΛΟΑΤΚΙ εφήβων οι οποίοι μεγαλώνουν σε περιβάλλον
οικογενειακό και κοινωνικό που πολύ συχνά αποκηρύσσει, προσβάλλει
θεμελιώδεις διαστάσεις της ταυτότητάς τους,
όπως η σεξουαλικότητα και η τρυφερότητα,
μπορεί να οδηγήσει σε ποικίλες ψυχικές ενοχλήσεις.
Η ευρύτατη επιστημονική βιβλιογραφία επισημαίνει ότι σε έναν μη κλινικό πληθυσμό
αυτά τα άτομα υποφέρουν ακόμα περισσότερο
από διαταραχές άγχους, κατάχρηση ουσιών, διαταραχή μετατραυματικού στρες
και παρουσιάζουν αυξημένο κίνδυνο αυτοχειρίας.
Οι ερευνητές συσχετίζουν αυτή την αυξημένη παρουσία ψυχικών διαταραχών
με τις διαστάσεις του άγχους μειονότητας και της ομοφοβίας της κοινωνίας.
Άρα το αόρατο και το ανείπωτο προβάλλουν ταυτόχρονα ως αίτια και αποτελέσματα
τραυματικών γεγονότων. Στο πλαίσιο της εμπειρίας αυτών των ατόμων

πραγματώνονται με δραματικό τρόπο οι έννοιες του συσσωρευμένου τραύματος,
του σχεσιακού τραύματος και οι σχετικοί χαρακτηρισμοί των σύνθετων εξελικτικών
διαταραχών τραύματος.
Υπάρχει, λοιπόν, μία κυκλική σχέση
μεταξύ της κοινωνικής προκατάλειψης, της αίσθησης διαχωρισμού, του αόρατου στοιχείου
αλλά και της ανθεκτικότητας σε μια μερίδα πληθυσμού στην οποία δεν αναγνωρίζεται, εκτός από όλα αυτά,
ούτε καν η ιδιότητα του πολίτη, του ανήκειν και της ενσωμάτωσης.
Είναι αναγκαίο, λοιπόν, ο υπέυθυνος για την αποδοχή και την υποστήριξη αυτών των παιδιών
να αναρωτηθεί σχετικά με το πώς θα τα διευκολύνει και πώς θα τα βοηθήσει
να κατακτήσουν το δικαίωμα στην ύπαρξη, στην αξιοπρέπεια, και το δικαίωμα στην αγάπη.
Οι αλλεπάλληλες έρευνες των τελευταίων 50 ετών, που συνεχίζονται, τα έγγραφα, τα εγχειρίδια,
οι οδηγίες που προέκυψαν από αυτές τις έρευνες
κάνουν αναφορά
στα ακόλουθα στοιχεία.
Οι ομοφυλοφιλίες είναι φυσιολογικές και θετικές παραλλαγές της ανθρώπινης σεξουαλικότητας
και δεν συνιστούν, αυτές καθαυτές, δείκτες ψυχικών διαταραχών
ή αναπτυξιακών διαταραχών. Η ομοφυλοφιλία και η αμφιφυλοφιλία
είναι αντικείμενο κοινωνικού στιγματισμού με πιθανές ποικίλες αρνητικές συνέπειες
κατά τη διάρκεια των εξελικτικών διαδικασιών.
Οι επιπτώσεις και οι ομοφυλοφιλικές συμπεριφορές
ενδέχεται να είναι παρούσες σε ποικίλους σεξουαλικούς προσανατολισμούς.
Τα άτομα ΛΟΑΤΚΙ μπορούν να βιώνουν ζωές ικανοποιητικές και ευτυχείς,
να συνάπτουν πολύχρονες σχέσεις ζεύγους και να δημιουργούν οικογένειες εξίσου σταθερές
με τις ετεροφυλοφιλικές. Καμία επιστημονική έρευνα δεν αποδίδει
την ομοφυλοφιλία στο τραύμα ή στη δυσλειτουργία των οικογενειών καταγωγής.
Δεν έχει αποδειχτεί ότι είναι αποτελεσματικές ή ακίνδυνες όλες οι θεραπευτικές προσπάθειες
με στόχο την αλλαγή του σεξουαλικού προσανατολισμού.
Οι οδηγίες του Αμερικανικού Συνδέσμου Ψυχολογίας (APA) του 2012 σχετικά με την ψυχολογική πρακτική
με άτομα ΛΟΑΤΚΙ υπογραμμίζουν πόσο σημαντικό είναι να λαμβάνουμε υπόψη
τη στάση του θεραπευτή και παρόχου βοήθειας απέναντι στην ομοφυλοφιλία
και στην αμφιφυλοφιλία, σε ό,τι αφορά όχι μόνο τη γνώση των επιπτώσεων του στιγματισμού

σε αυτά τα άτομα αλλά και την επίγνωση του κατά πόσον η δική του στάση,

σιωπηρή και ρητή, απέναντι στην ομοφυλοφιλία και την αμφιφυλοφιλία

και άρα η ικανότητά σε αυτά τα θέματα αλλά και το προσωπικό του βλέμμα

σε αυτά τα θέματα, μπορούν να τον επηρεάσουν

στην εκτίμηση και την παρέμβασή του.

Τα κοινά σημεία που μπορούμε να συνάγουμε

από όλα τα ως τώρα γραφόμενα μπορούν να συνοψιστούν στα ακόλουθα.

Προσφέρουμε αποδοχή και υποστήριξη

ενεργοποιώντας μία ακρόαση με σεβασμό και χωρίς κριτική, με ενσυναίσθηση,

η οποία βοηθά στη μείωση της δυσφορίας που οφείλεται στο στρες μειονότητας.

Υιοθετούμε κατάλληλα μέτρα στο στάδιο της γνώσης αυτών των ατόμων.

Η αξιολόγηση πρέπει να στοχεύει στη γνώση του νεαρού ή της νεαρής

σε όλη του την περιπλοκότητα, λαμβάνοντας υπόψη τις αλληλεπιδράσεις

και τις διασυνδέσεις μεταξύ του άγχους μειονότητας, της ψυχικής υγείας και της εσωτερικής

και πνευματικής διάστασης, καθώς και τη θέση που καταλαμβάνει ο σεξουαλικός προσανατολισμός

στη γενική λειτουργία του ατόμου.

Προάγουμε και υποστηρίζουμε ενεργούς τρόπους διαχείρισης.

Γνωρίζουμε ότι για τους εφήβους γενικά είναι πολύ σημαντικό να νιώθουν

δραστικοί παράγοντες στην ύπαρξή τους, ιδίως όταν έρχονται αντιμέτωποι

με αγχογόνα περιστατικά. Ο πάροχος βοήθειας πρέπει να προσπαθήσει να βοηθήσει

τον θεραπευόμενο και να προαγάγει στρατηγικές με στόχο τη γνωσιακή και συναισθηματική του επεξεργασία.

Κατανοούμε εκ νέου τη θεμελιώδη διάσταση

της εφηβείας,

τον ρόλο που διαδραματίζουν οι φιλίες και η ΛΟΑΤΚΙ κοινότητα.

Δεδομένου ότι το άγχος μειονότητας μπορεί να οδηγήσει

στην περιθωριοποίηση και την απομόνωση,

ένας θεμελιώδης στόχος είναι να αυξήσουμε την ικανότητα

αξιοποίησης της κοινωνικής υποστήριξης.

Εξερευνούμε και αναπτύσσουμε την ταυτότητα.

Οι δυναμικές απόδοσης ταυτότητας συνιστούν σημαντική και θεμελιώδη πτυχή

της εφηβείας γενικά αλλά και της εφηβείας των ατόμων ΛΟΑΤΚΙ.

Είναι σημαντικό αυτά τα άτομα να μπορούν να εξερευνήσουν και να ενσωματώσουν,
χωρίς να εξαναγκάζονται στην επιλογή, μία ταυτότητα, ανεξάρτητα από όποια άλλη,
όπως στην περίπτωση του διλήμματος μεταξύ αρσενικού και θηλυκού.
Κατανοούμε τις συγκρούσεις και προάγουμε την ένταξη των ατόμων.
Η σχέση βοήθειας θα πρέπει να ευνοεί
τον διάλογο και τη συγχώνευση των αλληλοσυγκρουόμενων πτυχών του ατόμου,
όπως στην περίπτωση του σεξουαλικού προσανατολισμού έναντι των θρησκευτικών πεποιθήσεων.
Κατανοούμε τα νοήματα που κρύβονται πίσω από τις αιτήσεις αλλαγής σεξουαλικού προσανατολισμού
ή της εφαρμογής μιας θεραπείας αποκατάστασης.
Σε αυτές τις περιπτώσεις είναι απαραίτητος ένας ειδικευμένος ψυχοθεραπευτής
που θα αναλύσει δεόντως την αίτηση του ατόμου αντιλαμβανόμενος το νόημά της,
εξερευνώντας τη συγκεκριμένη επιθυμία, με αναγωγή σε σύνθετες ψυχολογικές δυναμικές,
οικογενειακές και κοινωνικές, που ίσως να έχουν οδηγήσει τον νεαρό ή τη νεαρή
στο να θεωρεί απαράδεκτο ένα συστατικό στοιχείο
της ταυτότητάς του.
Κατανοοούμε και εξερευνούμε τη λεγόμενη διαδικασία "coming out".
Αποδεχόμαστε τα επίπεδα άγχους μειονότητας σε σχέση με τις συνθήκες διπλής μειονότητας
στις οποίες ένα άτομο υφίσταται διακρίσεις όχι μόνο εξαιτίας της ομοφυλοφιλίας
ή της αμφιφυλοφιλίας του αλλά και εξαιτίας άλλων συνθηκών
κοινωνικού στιγματισμού.
Λαμβάνουμε υπόψη το βάρος που έχει το άγχος μειονότητας
στις δυναμικές ζεύγους. Είναι σημαντικό να θυμόμαστε ότι τα γκέι και λεσβιακά ζευγάρια
δεν αναγνωρίζονται από τις κύριες θρησκείες
ή από τα έννομα συστήματα πολλών χωρών. Σε συνδυασμό με αυτό, λαμβάνουμε υπόψη
όλα όσα σχετίζονται με την ομογονεϊκότητα και την απουσία ή την ύπαρξη ελάχιστης
νομικής ρύθμισης για τον σχηματισμό οικογένειας αυτού του τύπου.

Transcript

Με τον όρο "growth after trauma" εννοούμε ένα φαινόμενο

προσωπικής ανάπτυξης κάποιων ατόμων που έχουν υποστεί τραύμα

ως συνέπεια του ίδιου του τραύματος.

Με άλλα λόγια, το τραύμα προκαλεί μεν σημαντικές βλάβες, σοβαρές για τον οργανισμό

και για την ψυχή των εν λόγω ατόμων,

αλλά, εκτός από όλες τις βλάβες, υπάρχει και αυτό το φαινόμενο

το οποίο βιώνουν αρκετά, αν και όχι τα περισσότερα,

θύματα τραυμάτων.

Επισημαίνουμε ότι αυτό δηλώνει για άλλη μια φορά την απίστευτη ανθεκτικότητα

του ανθρώπινου είδους ή ίσως να δηλώνει την ανθεκτικότητα

όλων των μορφών ζωής που έχουν αναπτυχθεί

στην εξέλιξη της ζωής στον πλανήτη μας.

Όποια κι αν είναι η τραγωδία του τραύματος, συγκλονίζει το άτομο, το "σφυροκοπάει",

το πλήττει και το πληγώνει.

Άρα πρόκειται για έναν αληθινό σεισμό, που οι δονήσεις του έχουν επιπτώσεις για το άτομο

τόσο σε σωματικό όσο και σε ψυχικό επίπεδο.

Ωστόσο, μέσα σε τόση αναστάτωση, όπως συμβαίνει συνήθως,

ισχύει το "ουδέν κακόν αμιγές καλού"

γιατί όταν ένα άτομο έχει συγκλονιστεί από κάποιο τραύμα

πρέπει να επαναρρυθμιστεί

στη νέα πραγματικότητα και κάποια άτομα επαναρρυθμίζονται,

αποκαθίστανται εκ νέου, ωριμάζοντας από την εμπειρία.

Άρα, σε υπαρξιακό επίπεδο, βιώνουν

μία εμπειρία ωρίμανσης, με άλλα λόγια,

είναι πιο ανοιχτοί, πιο βέβαιοι στις ηθικές και πνευματικές αξίες τις οποίες βιώνουν πιο ουσιαστικά

και σχετίζονται με τη ζωή,

με τον εαυτό τους, με τους άλλους και με τον κόσμο μέσα από έννοιες

καινούργιες και βαθύτερες.

Ένα προσωπικό παράδειγμα: θυμάμαι τη συγκίνησή μου όταν διάβασα το βιβλίο ενός συναδέλφου,

του Βίκτορ Φρανκλ, που είχε βιώσει την τραγωδία και όλα τα σχετικά τραύματα

ως θύμα του ναζισμού, καθότι Εβραίος,

έγκλειστος σε ναζιστικό στρατόπεδο εξόντωσης.

Λοιπόν, στα στρατόπεδα εξόντωσης, πριν δολοφονήσουν τους ανθρώπους, τους καταπίεζαν

προσπαθώντας να δολοφονήσουν την αξιοπρέπειά τους. Ωστόσο, ένας αριθμός, αν και απειροελάχιστος, ατόμων

όχι μόνο επιβίωνε σε σωματικό επίπεδο, παρόλα τα τραύματα και σε ψυχικό επίπεδο,

αλλά γίνονταν καλύτεροι άνθρωποι και, όπως αφηγείται ο Φρανκλ στο βιβλίο του,

"Ένας ψυχολόγος στα στρατόπεδα συγκέντρωσης", ο ίδιος και άλλοι συγκρατούμενοι ανά τετράδες

εξοικονομούσαν λίγη τροφή για να δώσουν

αγάπη και βοήθεια σε άτομα ακόμα πιο άτυχα από τους ίδιους

(αρρώστους ή αδύναμους), με κίνδυνο να σταλούν στους περίφημους θαλάμους αερίων

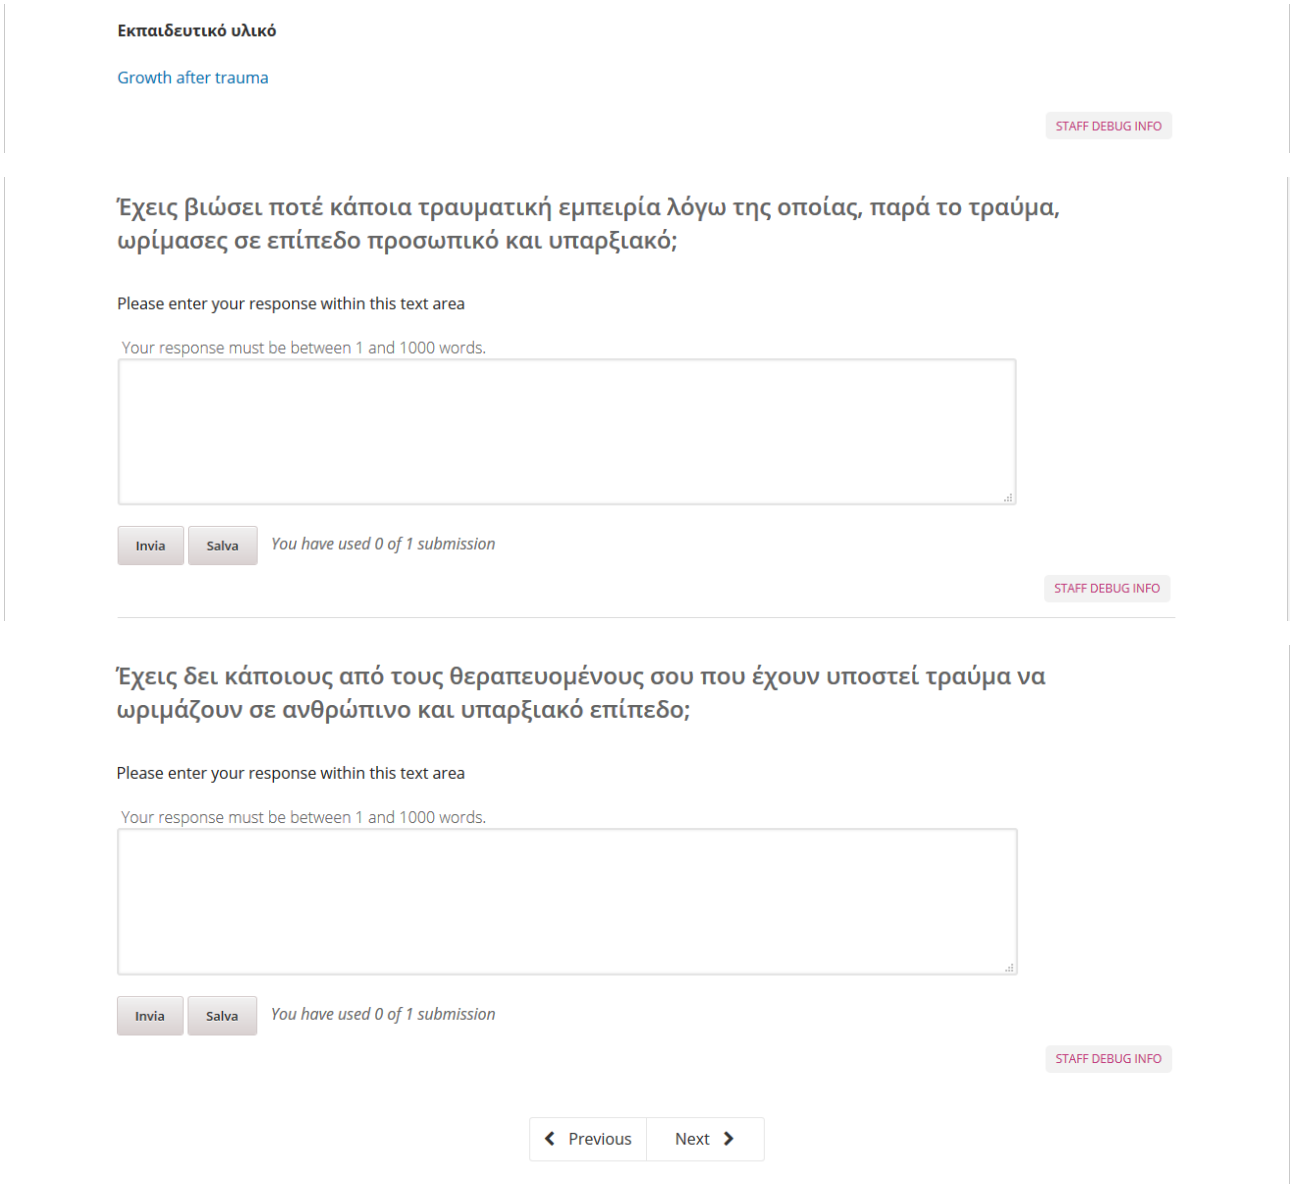
και άρα να θανατωθούν.

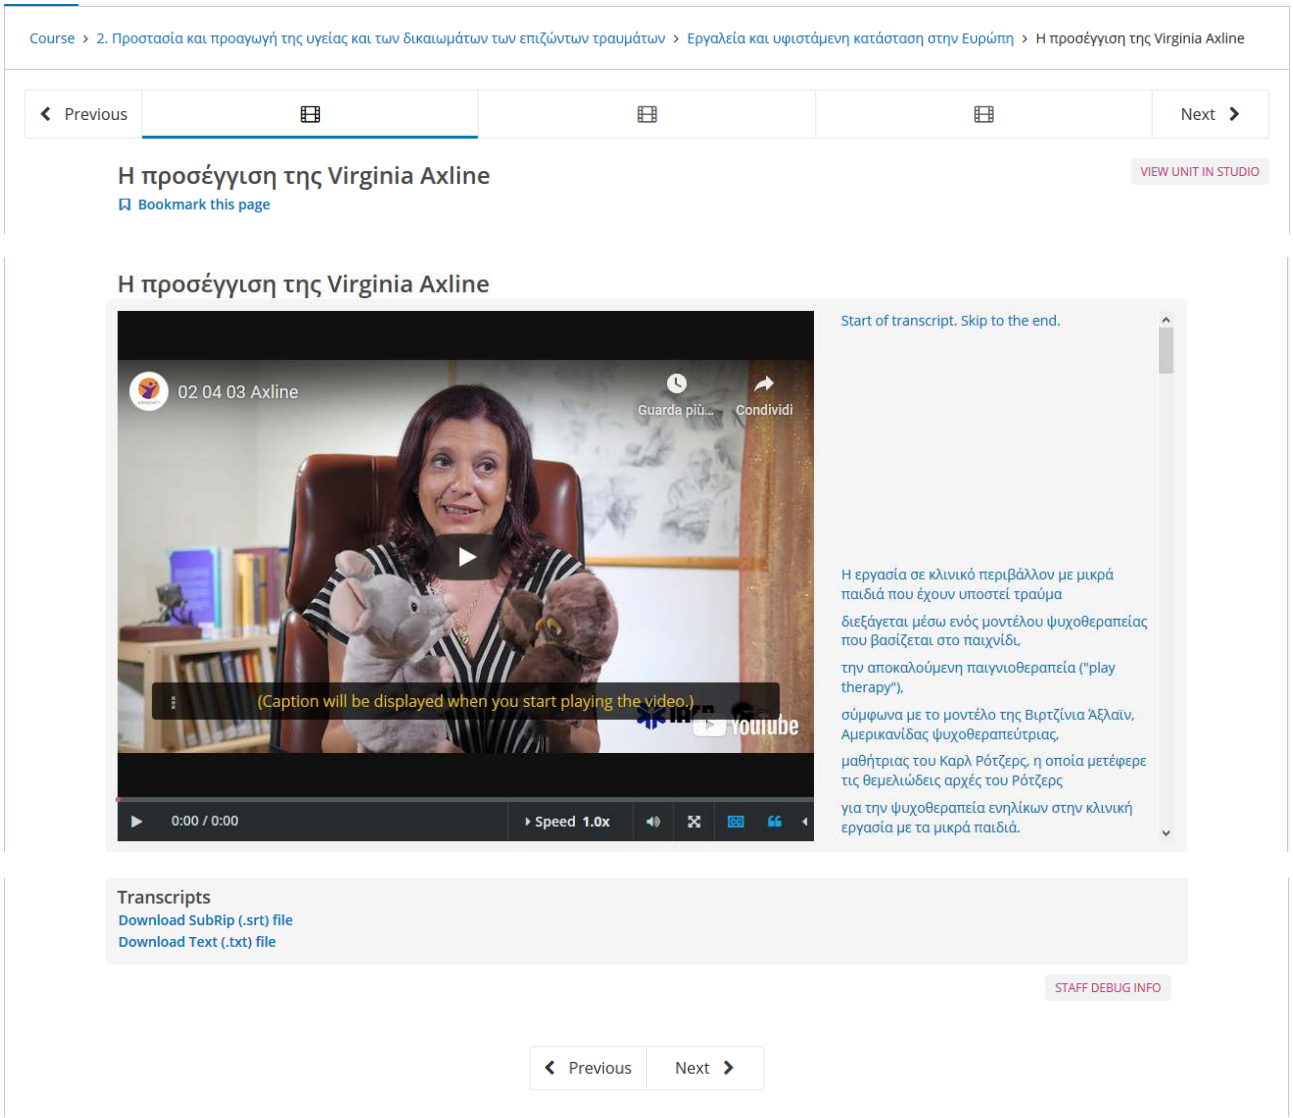
Όσοι από αυτή την ομάδα επέζησαν και απελευθερώθηκαν στο τέλος του ναζιστικού παραλογισμού,

παρά τη σωματική αδυναμία και τα πολλαπλά ψυχικά τραύματα, έγιναν καλύτεροι άνθρωποι

και με πιο ουσιαστική σχέση σε επίπεδο υπαρξιακό με τον εαυτό τους, τους άλλους, τον κόσμο.

Ένα στοιχείο άξιο στοχασμού που ίσως να ενισχύει τις ελπίδες μας.





Transcript

Η εργασία σε κλινικό περιβάλλον με μικρά παιδιά που έχουν υποστεί τραύμα

διεξάγεται μέσω ενός μοντέλου ψυχοθεραπείας που βασίζεται στο παιχνίδι,

την αποκαλούμενη παιγνιοθεραπεία ("play therapy"),

σύμφωνα με το μοντέλο της Βιρτζίνια Άξλαϊν, Αμερικανίδας ψυχοθεραπεύτριας,

μαθήτριας του Καρλ Ρότζερς, η οποία μετέφερε τις θεμελιώδεις αρχές του Ρότζερς

για την ψυχοθεραπεία ενηλίκων στην κλινική εργασία με τα μικρά παιδιά.

Η εργασία αυτή δημοσιεύτηκε στο βιβλίο "Play Therapy" το 1947.

Οι αρχές που επεσήμανε και υπογράμμισε ο Ρότζερς,

θεμελιώδεις για την κατανόηση του εσωτερικού κόσμου του παιδιού,

στις οποίες αναφέρεται η Άξλαϊν, κάνουν λόγο για ένα παιδί με εγγενή την τάση

αναπροσαρμογής των δυνατοτήτων του οργανισμού του

και όλες οι συμπεριφορές του

τείνουν προς αυτόν τον σκοπό.

Μία δεύτερη θέση κάνει λόγο για ένα παιδί ικανό
να αυτορρυθμίζεται γιατί κανείς δεν ξέρει καλύτερα τι είναι το πιο καλό για το ίδιο το παιδί.

Μία τρίτη θέση κάνει λόγο για ένα παιδί
που αναζητά ενεργά όλες εκείνες τις εμπειρίες
που μπορούν να είναι ευνοϊκές για την ανάπτυξή του, για την έκφραση των δυνατοτήτων του
και του οργανισμού του, ενώ θα τείνει να αρνείται όλες τις εμπειρίες που θεωρεί επιζήμιες.

Υπό αυτή την οπτική, η παιγνιοθεραπεία επιτρέπει στο παιδί
να εκφραστεί στις καλύτερες
δυνατές συνθήκες.

Χάρη ακριβώς σε ένα κλίμα ήρεμο, υποστηρικτικό και διευκολυντικό,
το παιδί έχει τη δυνατότητα να εκφράσει καλύτερα το δυναμικό του.

Το διευκολυντικό κλίμα που πραγματοποιείται
στο πλαίσιο της παιγνιοθεραπείας επιτρέπει στο παιδί να ενδυναμωθεί,
να έχει καλύτερη γνώση του εαυτού του και να συμβολίσει σωστά την εμπειρία του,
που σημαίνει, με άλλα λόγια,
να δώσει έκφραση στα αισθήματα και συναισθήματά του.

Η πρόσβαση στον εσωτερικό κόσμο του παιδιού
είναι δυνατή μέσα από τα λεγόμενα "προνομιακά κανάλια" που είναι το παιχνίδι, η ζωγραφική
και το παραμύθι. Μέσα από αυτά τα κανάλια το παιδί μπορεί να εκφραστεί με τρόπο
πιο αυθόρμητο και ελεύθερο, γιατί είναι κανάλια που κατέχει κι έτσι μπορεί
να εκφράσει τις ανάγκες, τις εμπειρίες και τα συναισθήματά του.

Στο πλαίσιο της διαδικασίας της παιγνιοθεραπείας ο θεραπευτής θα φροντίσει να αντανακλά
και να αντικατοπτρίζει στο παιδί όλα όσα προκύπτουν μέσα από το παιχνίδι και να συντονίζεται
με τα συναισθήματά του.

Αυτό επιτρέπει στο παιδί να διευρύνει τη συνειδητότητά του
σε ό,τι αφορά τη συμπεριφορά του.

Η δημιουργία του περιβάλλοντος χώρου στην παιγνιοθεραπεία είναι θεμελιώδης
γιατί είναι ο τρόπος με τον οποίο θα γίνει η ακρόαση του παιδιού. Υπό αυτή την έννοια,
για παράδειγμα, όταν διαθέτουμε μεγάλο υλικό παιχνιδιού, το παιδί μπορεί να εκφραστεί
ελεύθερα, να κινηθεί ελεύθερα στον χώρο
κι αυτό γίνεται για το παιδί μία εμπειρία

ιδιαίτερα σημαντική.
Τη στιγμή που το παιδί νιώθει ελεύθερο διευκολύνεται σε μέγιστο βαθμό
στην εξερεύνηση του εαυτού του
και, μέσω αυτής, συντελείται η αλλαγή
η οποία οδηγεί στην προσωπική ενδυνάμωση ("empowerment").
Επιστρέφοντας στη δημιουργία του περιβάλλοντος,
για παράδειγμα, η παρουσία πολλών υλικών, όπως φύλλα χαρτιού, διάφορα χρώματα, πλαστελίνη,
δοχεία με άμμο όπου μπορεί να σχεδιάσει εικόνες ή και παρουσία βιβλίων,
παραμυθιών που θα μπορείτε να αφηγηθείτε ή να διαβάσετε μαζί,
καθώς και μαριονέτες που επιτρέπουν
στο παιδί να εκφραστεί καλύτερα, όπως η χρήση δύο μαριονετών που το παιδί
και ο θεραπευτής μπορούν να ενδυθούν, σαν κούκλες,
κι όταν την ενδύεται το παιδί αυτή γίνεται μέρος του εαυτού του
κι έτσι μπορεί να διαδράσει με τον θεραπευτή, δίνοντας λόγο στην κούκλα ως κανάλι επικοινωνίας,
κι αυτό είναι σημαντικό γιατί έτσι το παιδί μπορεί να ανοιχτεί με τρόπο
πιο βαθύ και αποτελεσματικό.
Σε αυτή την περίπτωση οι μαριονέτες μπορούν να διαδράσουν
σαν αυτόνομες οντότητες. Είναι σημαντικό ο θεραπευτής να κοιτάζει απευθείας τις μαριονέτες
και όχι το παιδί, γιατί θα το διευκολύνει
να θεωρήσει την κούκλα ως κανάλι έκφρασης
που δεν είναι ο εαυτός του. Η αναπαράσταση ζώων είναι ένα διευκολυντικό στοιχείο
γιατί το παιδί είναι πιο εύκολο να ταυτιστεί με το ζώο από ό,τι με την ανθρώπινη μορφή.
Ο θεραπευτής στη συγκεκριμένη διαδικασία με αυτά τα υλικά παιχνιδιού
το μόνο που θα κάνει θα είναι να συνοδεύει
το παιδί σε αυτή την πορεία και, όπως λέει η Άξλαϊν,
κατά την ψυχοθεραπευτική πορεία το παιδί είναι εκείνο που θα υποδείξει τον δρόμο
και δεν θα το κατευθύνει ο θεραπευτής. Πράγματι, τη στιγμή που το παιδί είναι ελεύθερο
να εκφραστεί είναι δυνατή και η αυτορρύθμιση,
μία από τις θέσεις του Ρότζερς που αναφέραμε παραπάνω.
Υπό αυτή την οπτική, η παιγνιοθεραπεία είναι αποτελεσματική με παιδιά που έχουν βιώσει
τραυματικές εμπειρίες, γιατί η δημιουργία ενός περιβάλλοντος ασφάλειας, οριοθέτησης και ελευθερίας
επιτρέπει στο τραυματισμένο υποκείμενο να εκφράσει καλύτερα

τον εαυτό του και να ξεκινήσει μία διαδικασία

επεξεργασίας της εμπειρίας του.

Η σημασία του παιχνιδιού ενισχύθηκε κατά πολύ

με τις έρευνες στον τομέα της νευροεπιστήμης. Ιδιαίτερα σημαντική είναι

η συμβολή του Πάνκσεπ, που στο βιβλίο του "Η Οικολογία του νου" αναγνωρίζει

επτά θεμελιώδη συστήματα συναισθημάτων στα θηλαστικά.

Μεταξύ αυτών των συστημάτων, μας ενδιαφέρει εδώ περισσότερο

ο προσδιορισμός του κυκλώματος του παιχνιδιού, ενός κυκλώματος γενετικά προσδιορισμένου

που μεσολαβεί για τις θετικές συνέπειες στον εγκέφαλο των θηλαστικών.

Ο Πάνκσεπ διαπίστωσε

ότι σε γενετικό επίπεδο το κύκλωμα του παιχνιδιού υπάρχει σε όλα τα θηλαστικά και άρα τα συνδέει.

Αυτές οι έρευνες υπογραμμίζουν τη σπουδαιότητα του παιχνιδιού για τη γνωσιακή, τη συναισθηματική,

τη σχεσιακή ανάπτυξη του παιδιού

και έχει αποδειχτεί ότι το παιχνίδι διευκολύνει τις ικανότητες διαχείρισης,

όπως, για παράδειγμα, την κοινωνική συνεργασία.

Το γεγονός ότι το παιχνίδι έχει επιβεβαιωθεί

ως αυθόρμητη δραστηριότητα, γενετικά εκπορευόμενη, μας επιτρέπει να προβληματιστούμε στην περίπτωση

ενός παιδιού που δεν παίζει. Ένα παιδί που δεν παίζει είναι¨

κατά κάποιο τρόπο ένδειξη ότι το παιδί

εκείνη τη στιγμή εκφράζει μία δυσφορία.

Η παιγνιοθεραπεία θεωρείται μία ψυχοθεραπευτική παρέμβαση ιδιαίτερα αποτελεσματική

με παιδιά που υποφέρουν, που κομίζουν δυσφορίες, αλλά ακόμα περισσότερο

με παιδιά που κομίζουν

τραυματικές εμπειρίες.

Πιο συγκεκριμένα, στην παιγνιοθεραπεία η κεντρική οπτική γωνία

είναι εκείνη του παιδιού,

το οποίο θεωρείται ως ένα πρόσωπο που μπορεί

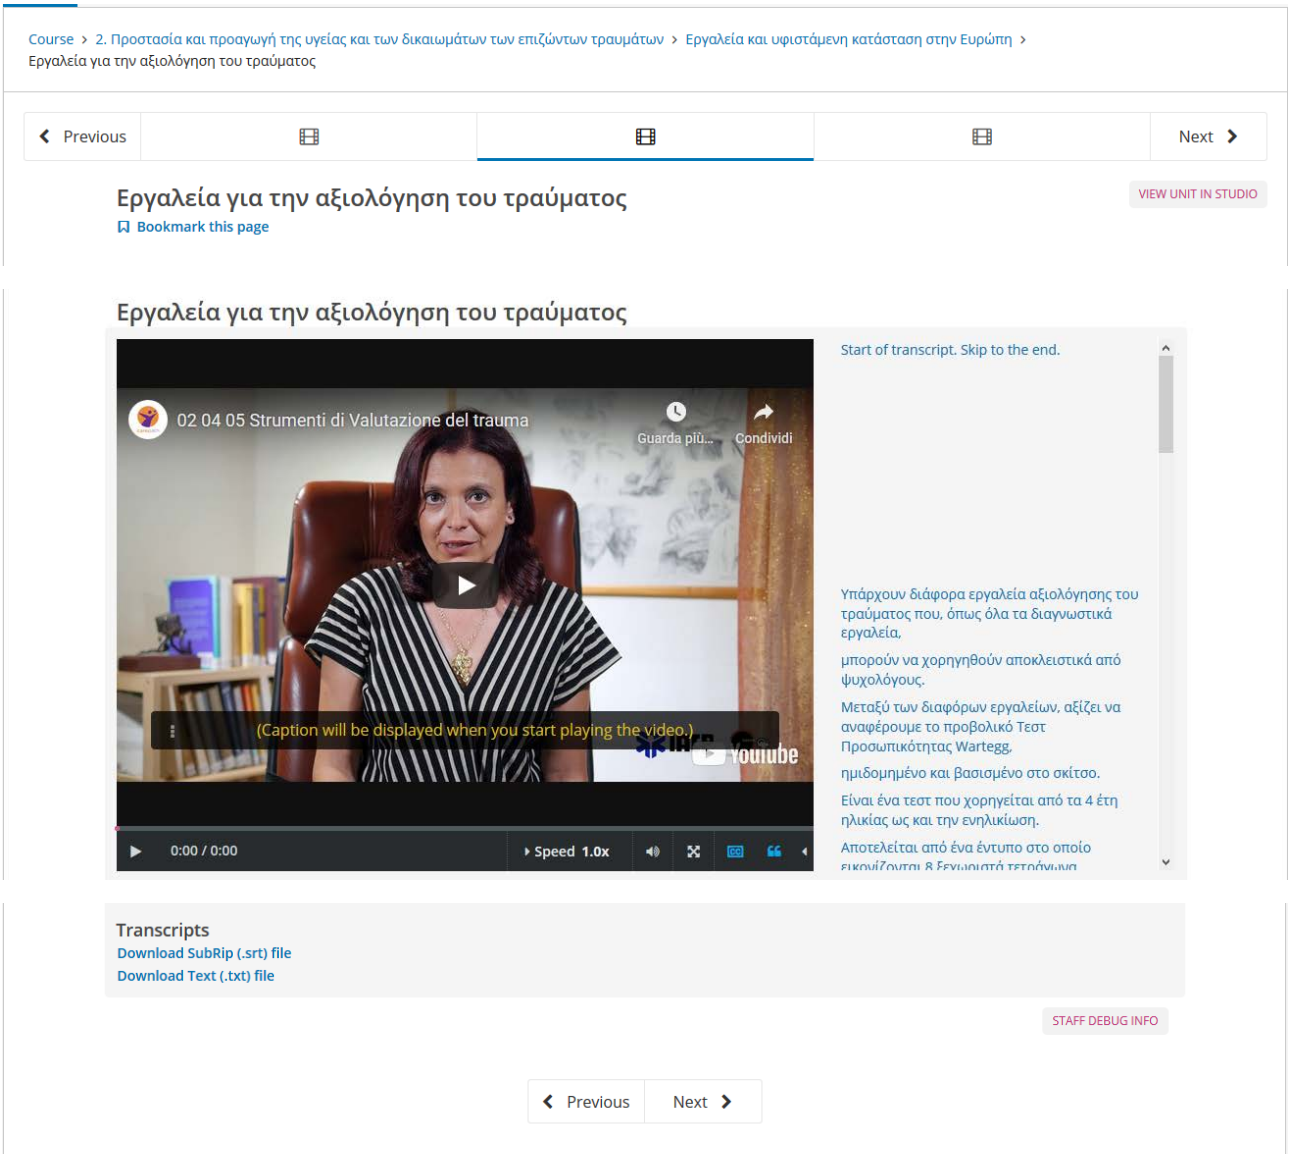
να αφηγηθεί, να μοιραστεί και να εκφράσει όλα του τα αισθήματα, ένα συναίσθημα, αγωνίες

και φόβους, αλλά σε ένα περιβάλλον προστατευτικό, ασφαλές που σέβεται τόσο το ίδιο το παιδί

όσο και τις ιδιαιτερότητές του.

Όλα αυτά μπορούν να βοηθήσουν το παιδί να ξεπεράσει την τραυματική εμπειρία

επιτρέποντάς του να αναπτυχθεί με υγιή τρόπο.



Transcript

Υπάρχουν διάφορα εργαλεία αξιολόγησης του τραύματος που, όπως όλα τα διαγνωστικά εργαλεία, μπορούν να χορηγηθούν αποκλειστικά από ψυχολόγους.

Μεταξύ των διαφόρων εργαλείων, αξίζει να αναφέρουμε το προβολικό Τεστ Προσωπικότητας Wartegg, ημιδομημένο και βασισμένο στο σκίτσο.

Είναι ένα τεστ που χορηγείται από τα 4 έτη ηλικίας ως και την ενηλικίωση.

Αποτελείται από ένα έντυπο στο οποίο εικονίζονται 8 ξεχωριστά τετράγωνα,

οριοθετημένα με μαύρο πλαίσιο, στο καθένα από τα οποία υπάρχει ένα μικρό σύμβολο - ερέθισμα.

Το άτομο που πραγματοποιεί το τεστ πρέπει να συμπληρώσει ένα σχέδιο με αφετηρία ό,τι ήδη εικονίζεται στο πλαίσιο, σε όλα τα πλαίσια, δηλαδή οκτώ σχέδια συνολικά.

Είναι ένα απλούστατο ψυχοδιαγνωστικό εργαλείο που προτιμάται, ακόμα και από άποψη ταχύτητας, και βασίζεται στο σκίτσο, επειδή αυτό προτιμάται ως διευκολυντικό κανάλι για το μικρό παιδί,

όπως αναφέρθηκε προηγουμένως στην παιγνιοθεραπεία (play therapy).

Ως προνομιακό κανάλι έκφρασης του παιδιού διευκολύνει την πραγματοποίησή του.

Το Τεστ Wartegg βασίζεται σε ένα ακριβέστατο σύστημα αποκωδικοποίησης και ερμηνείας.

Παρά την απλότητα της χορήγησης, το σύστημα αποκωδικοποίησης είναι πολύ σύνθετο και ακριβές

και αναφέρεται στο Σύστημα Crisi-Wartegg: μία διαδικασία που ανέπτυξε ο καθηγητής Crisi,

η οποία γενικά επιτρέπει την απόκτηση μιας περιγραφής της λειτουργίας της προσωπικότητας του ατόμου

στο οποίο έχει χορηγηθεί το τεστ.

Σχετικά με τον ειδικό χαρακτήρα του τραύματος το τεστ επιτρέπει, μέσω ερμηνείας καθοριστικών δεικτών,

τον προσδιορισμό της ύπαρξης ενός τραύματος, σε ό,τι αφορά τις επιπτώσεις στο άτομο,

και όλων όσα μπορεί να προκαλέσει η βίωση μιας τραυματικής εμπειρίας,

σε επίπεδο γνωστικό, σχεσιακό και συναισθηματικό.

Το Τεστ Wartegg δεν δημιουργήθηκε ως εξειδικευμένο τεστ εκτίμησης του τραύματος,

αλλά μπορεί να συμβάλλει σημαντικά προς αυτή την κατεύθυνση.

Η αναφορά προκύπτει μετά την αποκωδικοποίηση, η οποία πραγματοποιείται μέσω ενός αρχικού σταδίου

όπου τα σκίτσα μεταφράζονται σε σήματα και αυτά σε δείκτες, που ερμηνεύονται σε διάταξη

δεικτών και περιγράφουν πτυχές της λειτουργίας της προσωπικότητας.

Η δύναμη αυτού του τεστ έγκειται στην απλότητα και την αμεσότητά του και μπορεί να δώσει

μια περιγραφή των επιπτώσεων του τραύματος στην ψυχολογική λειτουργία

του ατόμου.

Εκτός από το Τεστ Wartegg, προβολικού τύπου, υπάρχουν και ερωτηματολόγια αξιολόγησης τραύματος.

Αναφέρουμε ενδεικτικά μερικά από αυτά. Ο Κατάλογος Συμπτωμάτων Hopkins 2,

ερωτηματολόγιο που ανέπτυξε το Πανεπιστήμιο του Χάρβαρντ και δημιουργήθηκε με σκοπό

την αξιολόγηση της παρουσίας συμπτωμάτων στα νεαρά προσφυγόπουλα (που έχουν βιώσει αυτή την εμπειρία).

Ένα άλλο ερωτηματολόγιο είναι ο Κατάλογος Συμπτωμάτων Τραύματος για Μικρά Παιδιά,

ένα ερωτηματολόγιο που συμπληρώνεται όχι άμεσα από τον θεραπευόμενο αλλά από τον θεραπευτή.

Και, τέλος, ο Κατάλογος Διαχειριστικής Ανταπόκρισης (CRI),

που χορηγείται σε άτομα 12 ετών και άνω και είναι ένα ερωτηματολόγιο αυτοαξιολόγησης.

Η Ευρώπη υπήρξε το σκηνικό μαζικών τραυματικών εμπειριών που είχαν αρνητικές επιπτώσεις

σε μεγάλες μερίδες του πληθυσμού.

Κατά τα άλλα, το τραύμα, σε όλα τα μέρη του κόσμου, είναι πολύ διαδεδομένο.

Σύμφωνα με τα στοιχεία, περίπου το 70% του πληθυσμού

στο χρονικό εύρος της ζωής του θα υποστεί

τουλάχιστον ένα τραυματικό γεγονός,

το οποίο θα του προκαλέσει βλάβες.

Πρόκειται για ένα είδος πανδημίας, μίας ευρύτατα διαδεδομένης επιδημίας,

και, ως τέτοιας, είναι τόσο σοβαρές οι βλάβες που προκαλούν οι συνέπειες των τραυμάτων

σε ψυχικό, σωματικό,

συμπεριφορικό, κοινωνικό και οικονομικό επίπεδο

ώστε θα υποθέταμε

ότι θα να ανησυχούσαν τόσο πολύ οι ευρωπαϊκές χώρες,

από τις πιο προηγμένες παγκοσμίως, ώστε να επενδύσουν σε έρευνες,

τεχνογνωσία, χρηματοδότηση και να αναπτύξουν τις ικανότητες αποτελεσματικής διαχείρισης

αυτής της πανδημίας, όπως και σε πολλά ανάλογα φαινόμενα.

Ωστόσο, δυστυχώς, δεν ισχύει αυτό. Απίστευτο και όμως αληθινό: ελάχιστα έχουν γίνει.

Εξαιρέσεις σε αυτό τον κανόνα είναι κάποια "ενάρετα" κράτη, όπως οι Σκανδιναβικές χώρες.

Στη Σουηδία έχουν προετοιμαστεί όχι μόνο σε επίπεδο θεραπείας των τραυματισμένων ατόμων

αλλά και σε κοινωνικό επίπεδο, αντιμετωπίζοντας με προνοητικότητα

το πρόβλημα, για αυτό σε κάθε πόλη υπάρχει

μια ομάδα κρούσης αφοσιωμένη στο τραύμα.

Ή οι θεραπευτές, όπως οι κοινωνικοί λειτουργοί,

είναι καλά εκπαιδευμένοι, στο πλαίσιο της ακαδημαϊκής διαδικασίας, για τον τρόπο διαχείρισης και πρόληψης

αυτών των ζητημάτων.

Πολλές άλλες ευρωπαϊκές χώρες, ωστόσο, δεν είναι εξίσου αποτελεσματικές.

Αρκεί να σκεφτούμε το Βέλγιο, με άψογο κατά κεφαλήν εισόδημα, άψογη ικανότητα ανάπτυξης,

βιομηχανία και υπηρεσίες, το οποίο μέχρι πριν από λίγα χρόνια δεν κατείχε τα εργαλεία

αντιμετώπισης ή υποστήριξης των θεραπευτών ώστε να αναπτύξουν σε ακαδημαϊκό επίπεδο

ικανότητες διαμόρφωσης του κοινωνικού ρόλου τους.

Η κατάσταση, λοιπόν, σήμερα δεν είναι καθόλου ικανοποιητική, με ποικίλες μεταβλητές,

όπως η Αγγλία και οι χώρες αγγλοσαξωνικού τύπου,

οι οποίες έχουν αναπτύξει με προνοητικότητα

τις δυνατότητες εκπαίδευσης και επένδυσης πόρων για τη δημιουργία θεσμών που μπορούν

να προσφέρουν βοήθεια και θεραπεία σε τραυματισμένα άτομα,

αλλά και πρόληψη του φαινομένου.

Ωστόσο, σε πολλές χώρες, όπως στην Ιταλία, υπάρχει ακόμα πολύς δρόμος να διανύσουμε

πριν γίνει αποδεκτό

να έχουμε μία αξιοπρεπή κατάσταση και μάλιστα υπό έλεγχο.

Μία θετική εργασία πραγματοποιήθηκε, προφανώς, από τους οργανισμούς τραυματολογίας

που αναπτύχθηκαν τις τελευταίες δεκαετίες. Αυτές κατά κάποιο τρόπο υποκατέστησαν

τα εκπαιδευτικά πανεπιστημιακά προγράμματα

σε ό,τι αφορά τα διάφορα επαγγέλματα υγείας δημιουργώντας και παρέχοντας

κατάρτιση, επιμορφώσεις,

ακόμα και δυνατότητες έκδοσης διπλωμάτων

με εξειδίκευση στη θεραπεία του τραύματος.

Πολλά πρέπει να γίνουν ακόμα και την ανάγκη αυτή επιτάσσει η ηθική

αλλά και η κοινωνική υγεία και τα δικαιώματα των ατόμων στην υγεία.

Στην Ιταλία, το άρθρο 33 του Συντάγματος, όπως και σε πολλά άλλα ευρωπαϊκά Συντάγματα,

λέει ότι η υγεία είναι δικαίωμα του κάθε πολίτη, άρα πρέπει να προστατεύουμε και να προάγουμε

την υγεία όλων: αυτό είναι επιτακτική ανάγκη.

Φτάσαμε στο τέλος της δεύτερης ενότητας αυτού του σεμιναρίου. Θα ήθελα να ευχαριστήσω
όλους όσοι συνέβαλαν στην πραγμάτωσή της,
μεταξύ αυτών και τον καθένα από εσάς που συμμετείχε,
και, μάλιστα, συχνά με τρόπο ενεργό. Ευχαριστώ όσους πρόσφεραν ειλικρινή σχόλια,
σημείωσαν την κατάσταση στην περιοχή τους, παρείχαν προτάσεις και άδεια χρήσης υλικού,
χαρτών και γνώσεων, που χάρη σε εσάς βελτίωσαν αυτό το σεμινάριο
σε ό,τι αφορά τις επόμενες εκδόσεις του.
Ένα μεγάλο ευχαριστώ στην ομάδα που εργάστηκε
με υπέρμετρη γενναιοδωρία και δέσμευση για την πραγμάτωση αυτού του έργου που πιστέψαμε
σε ό,τι αφορά τους σκοπούς και τους στόχους του.
Ευχαριστώ όλους τους συναδέλφους εκτός ινστιτούτου
που δέχτηκαν να εργαστούν αφιλοκερδώς

και να δώσουν τη δική τους εικόνα, τη δική τους συμβολή

αλλά και το δικό τους υλικό για να διατεθεί και να διαδοθεί δωρεάν

μέσω της πύλης αυτού του σεμιναρίου.

Ευχαριστώ όλο το προσωπικό του Ινστιτούτου Προσωποκεντρικής Προσέγγισης που τόσο γενναιόδωρα

συνέβαλε εξίσου με όλη του την καρδιά και τον νου για να μοιραστεί τις εμπειρίες του

σε αυτόν τον δύσκολο τομέα της θεραπείας των ανηλίκων που έχουν υποστεί τραύματα.

Επίσης, ευχαριστώ όλους τους οργανισμούς που συνεργάστηκαν μαζί μας

και όλους τους συνεργάτες του προγράμματος "Care Path" που μας βοήθησαν με κάθε τρόπο

αλλά και για τη συμπάθεια και τη φιλικότητα που έδειξαν.

Το τελευταίο ευχαριστώ, το κερασάκι στην τούρτα, απευθύνεται

στον υπεύθυνο του προγράμματος Λούκα Ρολέ και σε όλους τους συναδέλφους του Πανεπιστημίου του Τορίνο.

Είναι, πράγματι, από τους καλύτερους υπεύθυνους ευρωπαϊκών προγραμμάτων τα οποία γνωρίζουμε

και στα οποία συμμετείχαμε.

Ευχαριστούμε και τους συναδέλφους του στη Σχολή Ψυχολογίας του Πανεπιστημίου του Τορίνο.

Είναι εξαιρετικοί και έκαναν τα πάντα,

και ακόμα περισσότερα, για να διευκολύνουν την εργασία μας.

Ευχαριστώ, λοιπόν. Σας ευχαριστώ όλους και καλή συνέχεια με τις υπόλοιπες ενότητες.

Q1

15 points possible (graded)

1. Τι ονομάζουμε σχέση βοήθειας?

- ○ Είναι μια συναισθηματική σχέση όπου ο ένας βασίζεται στη βοήθεια του άλλου
- ○ Είναι μια σχέση που καθιερώνεται μεταξύ ενός επαγγελματία και αυτού που χρησιμοποιεί μια υπηρεσία
- ○ Μια σχέση που ανταποκρίνεται στις ανάγκες του επαγγελματία και του χρήστη υπηρεσιών
- ○ Μια σχέση μεταξύ γιατρού-ασθενή

2. Η γενική θεωρία των συστημάτων διατυπώθηκε από:

- ○ Wertheimer
- ○ Maslow
- ○ Rogers
- ○ Von Bertalanffy

3. Τι είναι το WHO;

- ○ World Science Organization (Παγκόσμιος Οργανισμός Επιστημών)
- ○ Social Medical Organization (Κοινωνικός Ιατρικός Οργανισμός)
- ○ World Health Organisation (Παγκόσμιος Οργανισμός Υγείας)

4. Η Ατομοκεντρική προσέγγιση ξεκίνησε από τον:

- ○ C. Rogers
- ○ O. Rank
- ○ J. Bowlby
- ○ A. Maslow

5. Ποιες από τις προϋποθέσεις οι οποίες είναι απαραίτητες για την καθιέρωση μιας σχέσης βοήθειας δεν θεωρήθηκε από τον C. Rogers;

- ○ Ενσυναίσθηση
- ○ Άνευ όρων αποδοχή
- ○ Ανθεκτικότητα
- ○ Αναλογικότητα

6. Συμμαχία στην εργασία

- ○ Αφορά τις ρυθμίσεις βάσει συμβολαίου μεταξύ του εργαζομένου και του εργοδότη.
- ○ Δεν αφορά το άτομο αλλά μόνο την ομάδα
- ○ Αποτελεί μια επιθυμητή μορφή συνεργασίας σε κάθε σχέση βοήθειας
- ○ Πρόκειται για το σύνολο κανόνων που ορίζει ο επαγγελματίας και το οποίο πρέπει να τηρεί ο χρήστης υπηρεσιών.

7. Η έλλειψη ενσυναίσθησης σε μια σχέση βοήθειας:

- ○ αποτελεί επαγγελματική δεξιότητα
- ○ χρησιμεύει στην καλύτερη κατανόηση της αφήγησης του χρήστη
- ○ αποτελεί μια συνιστώμενη ενέργεια για την πρόληψη της επαγγελματικής εξουθένωσης
- ○ εμποδίζει την αποτελεσματικότητα μιας σχέσης βοήθειας

8. Τι ονομάζουμε σύνθετη μετατραυματική διαταραχή στρες?

- ○ είναι ένας εναλλακτικός όρος για διαταραχή μετατραυματικού στρες
- ○ είναι μια διαταραχή που προέρχεται από χρόνιες τραυματικές εμπειρίες
- ○ είναι ένας όρος που χρησιμοποιείται όταν τα συμπτώματα της μετατραυματικής διαταραχής στρες παραμένουν για περισσότερο από 6 μήνες
- ○ είναι μια διαταραχή που προκαλείται από ένα ομαδικό τραύμα

9. Ποια από τα παρακάτω χαρακτηριστικά δεν είναι επιθυμητά σε ένα σύστημα φροντίδας που χρησιμοποιεί την προσέγγιση "Trauma Informed Care";

- ○ Η αξιολόγηση του ασθενούς σε όλες τις φάσεις φροντίδας
- ○ Η υιοθέτηση μιας ουδέτερης και υποστηρικτικής γλώσσας
- ○ Το να γίνει μια σωστή εκτίμηση του ποια εμπειρία μπορεί να οριστεί ως τραυματική.
- ○ Η εκπαίδευση του προσωπικού πάνω στο τραύμα και στα αποτελέσματα του.

10.Ποιος είναι ο πιο κοινός αιτιοπαθογόνος παράγοντας στην ανάπτυξη ψυχολογικού τραύματος;

- ○ Επαναλαμβανόμενη εμπειρία σωματικής και ψυχολογικής παραμέλησης από τους φροντιστές
- ○ Εμπειρία από πρώτο χέρι φυσικών καταστροφών
- ○ Πρώτη εμπειρία ξαφνικού θανάτου
- ○ Η εμπειρία της σεξουαλικής κακοποίησης ως παιδί

11. Informed trauma care σημαίνει:

- ○ Ένα σύνολο τεχνικών που διευκολύνουν όσους χρησιμοποιούν την τεχνική του EMDR
- ○ Ένα είδος ψυχοθεραπείας
- ○ Μια συστημική προσέγγιση σχετικά με την διαχείριση και την φροντίδα των ανθρώπων που έχουν υποστεί τραυματικές εμπειρίες
- ○ Ένας ειδικός χώρος για ασθενείς που έχουν υποστεί τραυματικές εμπειρίες unanswered

12. Η υποβοηθούμενη βία ορίζεται ως:

- ○ Τραύμα από την παρακολούθηση καταστροφικών γεγονότων
- ○ Κατάσταση στην οποία ένας ανήλικος βοηθά, άμεσα ή έμμεσα, ή αντιλαμβάνεται την επίδραση βιαιοπραγιών που διαπράττονται σε φιγούρες που είναι σημαντικές γι 'αυτόν.
- ○ Είδος βίας που προκαλείται από έναν γονέα στον άλλο γονέα με την ψυχολογική και / ή υλική υποστήριξη (που λαμβάνεται μέσω ψυχολογικής χειραγώγησης) του παιδιού
- ○ Το τραύμα το οποίο προέρχεται από την εμφάνιση φαινομένων γενικής βίας

13. Ποιες είναι οι συνιστώμενες ενέργειες παρέμβασης σε περίπτωση που κάποιος είναι μάρτυρας περιστατικού βίας?

- ○ Ανίχνευση, Προστασία, Αξιολόγηση, Θεραπεία
- ○ Παρατήρηση, αξιολόγηση, θεραπεία, οικογενειακή διαμεσολάβηση
- ○ Ανίχνευση, οικογενειακή διαμονή, θεραπεία, οικογενειακή διαμεσολάβηση, μετεγκατάσταση οικογένειας
- ○ Απομάκρυνση από τον πυρήνα της οικογένειας, Οικογενειακή μεσολάβηση, μετεγκατάσταση οικογένειας

14. Σύμφωνα με την έκθεση του ΠΟΥ (Παγκόσμιος Οργανισμός Υγείας- WHO) που δημοσιεύτηκε το 2013 σχετικά με την πρόληψη της κακοποίησης παιδιών στην Ευρώπη, πόσοι από τα παιδιά κάτω των 15 ετών πεθαίνουν από κακοποίηση παιδιών?

- ○ Μεταξύ 800 και 900
- ○ Μεταξύ 500 και 600
- ○ Μεταξύ 900 και 1000
- ○ Μεταξύ 400 και 500

15. Το σύμπλεγμα PTSD διαφέρει από το PTSD στο ότι αυτό:

- ○ το σύμπλεγμα PTSD είναι σύνηθες στην παιδική ηλικία
- ○ το σύμπλεγμα PTSD εμφανίζεται όταν υπάρχουν περιστατικά βίας σε σχέση εμπιστοσύνης
- ○ το σύμπλεγμα PTSD εμφανίζεται σε περιπτώσεις όπου μαζί με ψυχολογικά συμπτώματα συνυπάρχουν κινητικά συμπτώματα
- ○ το σύμπλεγμα PTSD εμφανίζεται αποκλειστικά σε γυναίκες και ανηλίκους

Transcript

Καλώς ορίσατε. Σε αυτές τις δύο εβδομάδες θα διερευνήσουμε εις βάθος το θέμα της επιστημονικής έρευνας.

Συγκεκριμένα, κατά την πρώτη εβδομάδα θα παρουσιάσουμε κάποιους ορισμούς της έρευνας και θα προσπαθήσουμε να απαριθμήσουμε τις τυπολογίες της

ανάλογα με τις εφαρμογές, τους στόχους και τις τεχνικές της.

Θα παρατηρήσουμε τη διαδικασία που μας οδηγεί από την έκφραση ενός θεωρητικού προβλήματος (από τη θεωρία)

στις μεθόδους που μας επιτρέπουν να το διερευνήσουμε,

παράγοντας δεδομένα που μπορούν να ερμηνευτούν και να χρησιμοποιηθούν. Στη συνέχεια, θα ενσωματώσουμε και θα εξετάσουμε εις βάθος

βάθος τις θεμελιώδεις αρχές, τα όρια και τα οφέλη της Έρευνας-δράσης, ως αφετηρία,

ενώ οι συνάδελφοί μου θα εξηγήσουν την έννοια της Έρευνας δράσης,

για να μπορέσουν έπειτα να εξηγήσουν την Έρευνα βάσει αποδείξεων.

Μετά από αυτό, θα εμβαθύνουμε στα πλεονεκτήματα και τις προκλήσεις της ενσωμάτωσης της

Έρευνας βάσει αποδείξεων

Φροντίδα με ενημέρωση για το ψυχικό τραύμα. Ειδικότερα, η διεθνής συνάφεια του θέματος μας δίνει μια εγκάρσια προοπτική

αναφορικά με τα κρίσιμα και τα δυνατά σημεία της

μετατροπής της έρευνας σε κλινική πρακτική. Εδώ θα αναλύσουμε

τα κύρια και συναφή στοιχεία ορθών πρακτικών στην επιστημονική βιβλιογραφία,

μερικά από τα οποία είναι ενημερωτικά. Θα αναρωτηθούμε

και θα προσπαθήσουμε να κατανοήσουμε το νόημα των αναγκών κατάρτισης,

καθώς και πώς αυτές μπορούν να υποστηριχθούν με κάποιο τρόπο και να ληφθούν υπόψη από τον οργανισμό.

Δεν πρέπει να ξεχνάμε ότι μια προσέγγιση σχετικά με τη Φροντίδα με ενημέρωση για το ψυχικό τραύμα έχει σίγουρα μια πτυχή,

έναν αντίκτυπο που είναι θεμελιώδης τόσο για τον οργανισμό όσο και

για τα μεμονωμένα μέλη αυτού. Από εδώ, θα επωφεληθούμε από αυτό το βήμα για να συζητήσουμε

για την επιστημονική διάδοση στην ανάπτυξη και την υλοποίηση συγκεκριμένων παρεμβάσεων

στη Φροντίδα με ενημέρωση για το ψυχικό τραύμα. Φτάνοντας προς το τέλος του ταξιδιού μας αυτήν την εβδομάδα,

θα δούμε τις αξιολογικές πτυχές των οργανισμών

που αναπτύσσουν ή προσπαθούν να αναπτύξουν διαδικασίες ή διεργασίες που αφορούν στην ενημέρωση για το ψυχικό τραύμα.

Εντούτοις, μπορούν να προσφέρουν στους υπαλλήλους,

τους συνεργάτες , τους εθελοντές τους την κατάρτιση και την πληροφόρηση σχετικά με τη Φροντίδα με ενημέρωση για το ψυχικό τραύμα,

καθώς επίσης να προσφέρουν ενδεχομένως αποτελεσματικές παρεμβάσεις που σχετίζονται με

ερευνητικές αποδείξεις στην ψυχοθεραπεία ή μάλλον στη Θεραπεία βάσει αποδείξεων.

Από αυτό το σημείο θα συνοδεύσουμε ο ένας τον άλλον και θα προχωρήσουμε στη δεύτερη εβδομάδα

που θα μας επιτρέψει να εξετάσουμε περαιτέρω ζητήματα, τα οποία σχετίζονται με την έρευνα.

Εγώ και οι συνάδελφοί μου ευχόμαστε σε όλους σας μια

ευχάριστη εβδομάδα σεμιναρίων και καλό μάθημα.

Ανακάλυψη, αποδοχή και πάθος. Μοίρασμα, μέλλον.

Πολιτισμός και γνώση.

Πρόοδος.

Ανακάλυψη για ένα καλύτερο μέλλον.

Πρόβλεψη.

Ανάπτυξη και γενναιότητα.

Ευχάριστη και ενθαρρυντική.

Δύσκολη και συναρπαστική.

Πάθος, δημιουργικότητα και αφοσίωση.

Πρόκληση.

Ανάπτυξη.

Μέλλον. Καινοτομία, επιμονή.

Θυσία αλλά μεγάλη ικανοποίηση.

Ευκαιρία.

Πρόοδος.

Κατανόηση.

Σκληρή δουλειά, ελευθερία και μελέτη.

Φιλοδοξία.

Εξέλιξη.

Προσπάθεια.

Αλλά και διασκέδαση.

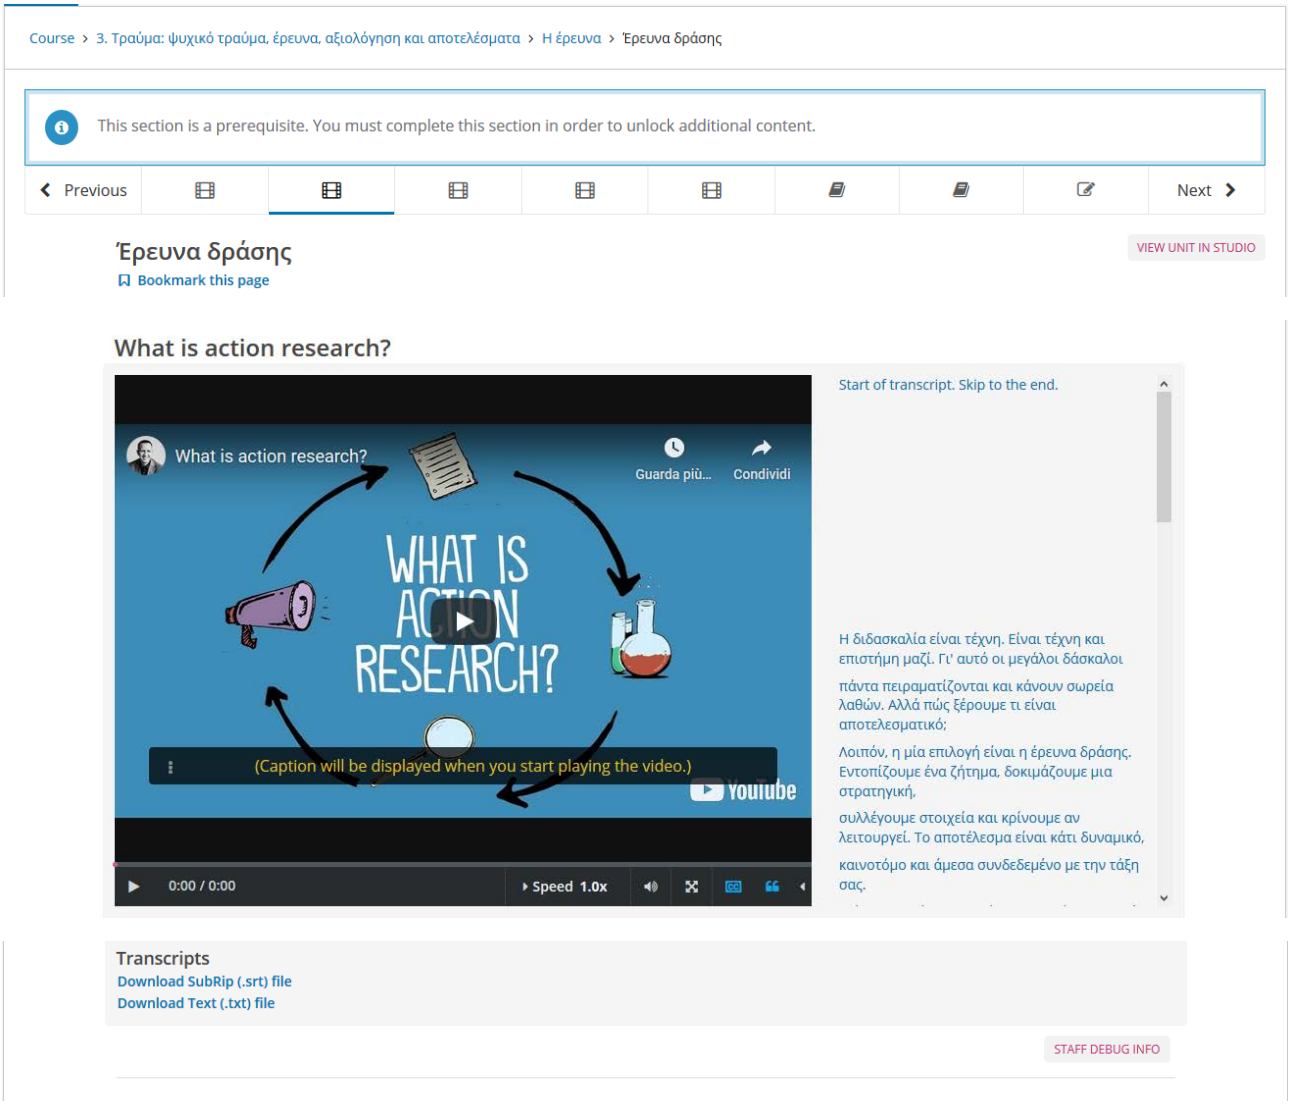
Περιέργεια, καινοτομία, ευημερία.

Η έρευνα είναι στην ανθρώπινη φύση. Ένας άνθρωπος που δεν ερευνά

είναι ένας άνθρωπος που δεν λύνει προβλήματα, που δεν υπάρχει.

Η έρευνα είναι περιέργεια, επιθυμία να μάθουμε την αλήθεια και, κυρίως,

για όσους την έχουν πραγματοποιήσει, είναι η ανεκτίμητη χαρά της ανακάλυψης.



Transcript

Η διδασκαλία είναι τέχνη. Είναι τέχνη και επιστήμη μαζί. Γι' αυτό οι μεγάλοι δάσκαλοι

πάντα πειραματίζονται και κάνουν σωρεία λαθών. Αλλά πώς ξέρουμε τι είναι αποτελεσματικό;

Λοιπόν, η μία επιλογή είναι η έρευνα δράσης. Εντοπίζουμε ένα ζήτημα, δοκιμάζουμε μια στρατηγική,

συλλέγουμε στοιχεία και κρίνουμε αν λειτουργεί. Το αποτέλεσμα είναι κάτι δυναμικό,

καινοτόμο και άμεσα συνδεδεμένο με την τάξη σας.

Η έρευνα δράσης εξαλείφει τα εμπόδια μεταξύ συμμετεχόντων και ερευνητών.

Με άλλα λόγια, ο δάσκαλος συμμετέχει ενεργά στην κατάσταση και παράλληλα διεξάγει την έρευνα.

Υπάρχουν πολλά πλαίσια έρευνας δράσης

αλλά γενικά όλα ακολουθούν παρόμοια διαδικασία. Αρχίζετε με το Στάδιο 1, τον προγραμματισμό της έρευνας.

Εδώ αρχίζετε με το ερωτηματολόγιο, όπου ορίζετε ένα συγκεκριμένο ερώτημα έρευνας.

Πρέπει να είναι κάτι το οποίο να μπορεί να τεθεί σε δοκιμασία.

Έπειτα, κάνετε μία ανασκόπηση της βιβλιογραφίας για να κατανοήσετε καλύτερα το θέμα.

Τέλος, περνάτε στη διαδικασία σχεδιασμού όπου ορίζετε τις μεθόδους δεδομένων, λαμβάνετε υπόψη ζητήματα ηθικής, εξασφαλίζετε τις απαιτούμενες άδειες, ορίζετε προθεσμίες και διαμορφώνετε τα συστήματα.

Έπειτα, περνάτε στο στάδιο της δράσης. Σε αυτό επιδίδεστε σε πολλαπλούς κύκλους πειραματισμού και συλλογής δεδομένων. Η συλλογή δεδομένων μπορεί να περιλαμβάνει ποιοτικά δεδομένα όπως παρατηρήσεις, τέχνεργα και συνεντεύξεις και ποσοτικά δεδομένα όπως αποτελέσματα ερευνών ή δεδομένα επίτευξης στόχων.

Έπειτα, περνάτε στην ανάλυση. Συχνά θα αρχίζετε οργανώνοντας τα δεδομένα με πίνακες ή γραφήματα αναζητώντας συγκεκριμένες τάσεις.

Μπορείτε επίσης να συζητήσετε με συναδέλφους, να γράψετε σε ένα περιοδικό ή να δημιουργήσετε έναν χάρτη συνεργατικών σχηματισμών πριν καταγράψετε τα αποτελέσματα. Τέλος, καταλήγετε στο συμπέρασμά σας.

Στο σημείο αυτό μοιράζεστε την έρευνά σας με τον κόσμο και στοχάζεστε σχετικά με την πρακτική σας. Αυτό, εν τέλει, θα σας οδηγήσει σε νέα ερωτήματα και ο κύκλος θα συνεχίζεται καθώς θα βελτιώνετε την τέχνη σας ως ένας καλύτερος και πιο δημιουργικός δάσκαλος.

Transcript

Ο όρος «Έρευνα δράσης» εισήχθη από τον κοινωνικό ψυχολόγο Kurt Lewin τη δεκαετία του 1940

και υποδηλώνει τη συνάντηση μεταξύ κόσμων που μέχρι τότε

είχαν θεωρηθεί ξεχωριστοί και αντίθετοι: την έρευνα, η οποία στοχεύει στη θεώρηση για τα πράγματα

και τη δράση, η οποία στοχεύει

στην αλλαγή των πραγμάτων.

Επομένως, η Έρευνα δράσης επιτρέπει να δημιουργηθεί μια συμμαχία μεταξύ της γνωστικής πτυχής,

της Έρευνας, και της εφαρμοστικής πτυχής, της Δράσης, ενώ εκφράζει μια μεταμόρφωση

στον τρόπο σύλληψης, σχεδιασμού και διεξαγωγής έρευνας στις Ανθρωπιστικές Επιστήμες, όπου η πολυπλοκότητα

των υπό μελέτη φαινομένων δεν απλοποιείται, αλλά γίνεται αποδεκτή και λαμβάνεται υπόψη.

Η Έρευνα δράσης διεξάγεται πάντα από τον Lewin σε μια ομαδική ρύθμιση,

καθώς η ομάδα είναι ο ψυχο-κοινωνικός χώρος

μέσα στον οποίο οι άνθρωποι χτίζουν τις ενέργειές τους, ενώ αποτελεί και ένα εργαλείο που μπορεί να διευκολύνει

τις διαδικασίες αλλαγής.

Η Έρευνα δράσης μπορεί να περιγραφεί ως μια οικογένεια ερευνητικών μεθοδολογιών, στόχος των οποίων,

όπως είπαμε, είναι να ενεργοποιήσουν ταυτόχρονα μια πορεία δράσης

(με άλλα λόγια, αλλαγής) και έρευνας (με άλλα λόγια, κατανόησης των φαινομένων).

Αυτή η πορεία λαμβάνει χώρα μέσω μιας ευέλικτης διαδικασίας που αποτελείται από μια αλληλουχία κύκλων,

ο καθένας από τους οποίους είναι δομημένος σε τρία διαδοχικά στάδια: σχεδιασμός, εκτέλεση

και αναγνώριση/έρευνα. Το τελευταίο στάδιο αποσκοπεί στην εκτίμηση των αποτελεσμάτων κάθε φάσης,

στην προετοιμασία μιας ορθολογικής βάσης για την επόμενη φάση και στην αλλαγή, εάν χρειάζεται,

του αρχικού σχεδίου δράσης.

Τι συμβαίνει μετά τον πρώτο κύκλο της Έρευνας-δράσης;

Μόλις αναλυθούν τα αποτελέσματα (και αναλυθεί επίσης η πιθανή αλλαγή που έχει προκύψει

σε σχέση με την αρχική κατάσταση), ξεκινά ένας νέος κύκλος της διαδικασίας,

στον οποίο εισάγονται τα νέα στοιχεία που προέκυψαν από τη δραστηριότητα

που πραγματοποιήθηκε κατά τον προηγούμενο. Αυτοί οι κύκλοι επαναλαμβάνονται μέχρις ότου εξαντληθεί η προβληματική κατάσταση.

Ο σχεδιασμός, η εκτέλεση και η έρευνα υποστηρίζονται από μια κριτική αξιολόγηση

κατά την οποία οι συμμετέχοντες αναρωτιούνται τι λειτούργησε, τι δεν λειτούργησε, τι έμαθαν

και τι μπορεί να γίνει διαφορετικά.

Η κριτική αξιολόγηση κάθε κύκλου επιτρέπει στους ερευνητές δράσης να διορθώνουν τυχόν σφάλματα

και να αναπροσαρμόζουν τις δράσεις στις πραγματικές ανάγκες που προέκυψαν κατά τη διάρκεια της ίδιας της έρευνας.

Ποιος είναι ο στόχος της Έρευνας δράσης;

Στόχος της Έρευνας δράσης είναι η δημιουργία αλλαγής:

αλλαγή στη συμπεριφορά, τις συνήθειες,

τα πλαίσια και άλλα.

Η βασική υπόθεση είναι ότι το status quo δεν επιτρέπει την ευημερία

των ατόμων και ότι μόνο μέσω της αλλαγής μπορεί να βελτιωθεί η κατάσταση.

Επομένως, η αλλαγή πρέπει να προκληθεί, στη συνέχεια να αναλυθεί και να κατανοηθεί,

ενώ πρέπει να είναι και διαρκής.

Σύμφωνα με τον Lewin, για να είναι διαρκής η αλλαγή, πρέπει να περάσει από τρεις φάσεις:

τη «φάση ξεπαγώματος» (unfreezing), η οποία επιτυγχάνεται με βάση τους παράγοντες αντίστασης στην αλλαγή

που συχνά συνδέονται με την τήρηση των κοινωνικών κανόνων,

τη «φάση κίνησης» (moving), όπως για παράδειγμα η αλλαγή και η ανάπτυξη νέων πεποιθήσεων,

αξιών και συμπεριφορών με βάση νέες πληροφορίες και η μετάβαση

από μια παλιά κατάσταση σε μια νέα.

Στο σημείο αυτό, εμφανίζεται η «φάση ξαναπαγώματος» (refreezing) ή «ανασυγκρότησης», κατά την οποία η νέα κατάσταση που έχει δημιουργηθεί

σταθεροποιείται γύρω από μια νέα ισορροπία, δηλαδή, τις νέες αξίες, στάσεις

και συμπεριφορές, οι οποίες καθιερώνονται και ενσωματώνονται στο υπόλοιπο σύστημα.

Μια σημαντική πτυχή της Έρευνας δράσης είναι η ενεργή συμμετοχή

του αποδέκτη, ο οποίος στην πραγματικότητα είναι και ο αποδέκτης και ο παράγοντας

της παρέμβασης και πρέπει να είναι σε θέση να μοιραστεί τους στόχους της ίδιας της έρευνας.

Η βασική υπόθεση της Έρευνας δράσης είναι ότι οι άνθρωποι με τους οποίους εργαζόμαστε είναι ενεργά άτομα,

με δεξιότητες και ικανότητες που πρέπει να συμμετέχουν στην ερευνητική διαδικασία.

Όταν υιοθετεί την προσέγγιση της Έρευνας δράσης, δεν μπορεί κάποιος να αγνοήσει την ενεργή συμμετοχή των ανθρώπων

στους οποίους απευθύνεται η παρέμβαση, ενώ πρέπει να δημιουργήσει μια κατάσταση συνεργασίας

και αντιπαράθεσης με τους αποδέκτες-παράγοντες της παρέμβασης.

Ένα άλλο χαρακτηριστικό στοιχείο αυτής της οικογένειας ερευνητικών μεθοδολογιών,

όπως η Έρευνα δράσης, είναι η απουσία προκαθορισμένης μεθόδου παρέμβασης που πρέπει να εφαρμοστεί.

Στην πραγματικότητα, αυτή η μέθοδος δομείται μαζί με την ομάδα ξεκινώντας από κάποιες θεμελιώδεις αρχές

και με βάση τις αποκρίσεις που παρατηρούνται κατά τη διάρκεια της εργασίας.

Συμβαίνει συχνά το αρχικό μοντέλο να τροποποιείται, καθώς η επιλογή της μεθοδολογίας

και των δράσεων που πρέπει να υλοποιηθούν δομείται κατά τη διάρκεια της διαδικασίας.

Μέχρι στιγμής, έχουμε απεικονίσει τις πτυχές που καθορίζουν την Έρευνα δράσης.

Ας εξετάσουμε τώρα τα στοιχεία που τη διαφοροποιούν από την πειραματική μέθοδο.

Έχουμε αναφέρει ξανά ότι στην Έρευνα δράσης δεν υφίσταται σταθερή παρέμβαση.

Επομένως, όσοι υιοθετούν αυτήν την προσέγγιση επιτρέπουν την εμφάνιση της υπόθεσης κατά τη διάρκεια της διαδικασίας

και την αλλαγή της πορείας της μέσω συνεχούς παρακολούθησης.

Ένα άλλο στοιχείο διαφοράς είναι ότι, στην Έρευνα δράσης, δεν προσπαθούμε να προσδιορίσουμε αιτιώδεις σχέσεις,

να επαληθεύσουμε υποθέσεις από τη βιβλιογραφία ή να καθορίσουμε τα αποτελέσματα των θεραπειών σε αντιπροσωπευτικά δείγματα

με σκοπό να επιβεβαιώσουμε ή να παραποιήσουμε

γενικές θεωρίες.

Στην Έρευνα δράσης, σε κάθε κύκλο, το φαινόμενο στο οποίο παρεμβαίνουμε βρίσκεται περισσότερο

στο επίκεντρο.

Δεν μας ενδιαφέρει η δυνατότητα μέτρησης των μεταβλητών, ενώ στόχος είναι να λυθούν τα προβλήματα

εξετάζοντας διαφορετικές πορείες που δεν μπορούν να προβλεφθούν εκ των προτέρων, αλλά που συνιστούν το αποτέλεσμα και επίσης

το εργαλείο της ομάδας.

Τέλος, ένα άλλο στοιχείο διαφοροποίησης είναι ο τρόπος με τον οποίο παρουσιάζονται τα τελικά αποτελέσματα.

Στην περίπτωση της Έρευνας δράσης, απεικονίζονται σε ολόκληρη την ομάδα

ή σε ολόκληρη την κοινότητα με συμμετοχικούς τρόπους, χρησιμοποιώντας απλοποιημένη,

προσιτή γλώσσα και όχι τεχνικο-επιστημονική γλώσσα, η οποία χαρακτηρίζει τις πειραματικές ερευνητικές εκθέσεις.

Ο στόχος που πρέπει να επιτευχθεί με την παρουσίαση των δεδομένων είναι η δημιουργία νέων αξιολογήσεων,

οι οποίες επιτρέπουν τον προσδιορισμό πιθανών ευκαιριών βελτίωσης.

Σε τελική ανάλυση, βάσει των όσων έχουν ειπωθεί μέχρι στιγμής, μπορούμε να συνοψίσουμε τις βασικές υποθέσεις στις οποίες στηρίζεται η Έρευνα δράσης:

Το γεγονός ότι είναι πρακτική και εννοιολογική.

Η Έρευνα δράσης αναλαμβάνει ως στόχο της τα προβλήματα μιας ομάδας ή μιας κοινότητας.

Ως εκ τούτου, είναι εννοιολογική ως προς τη φύση της, ή με άλλα λόγια, πρόκειται για τοπική έρευνα που λαμβάνει χώρα μέσα σε ένα πλαίσιο.

στοχεύει στην αλλαγή και επικεντρώνεται στη διάσταση της ομάδας

και όχι στο άτομο, τόσο όσον αφορά στην ανάλυση

διαδικασιών όσο και τον καθορισμό των λύσεων και αποτελεσμάτων που έχουν προκύψει.

Επιπλέον, η Έρευνα δράσης χαρακτηρίζεται από πολλαπλά στάδια

και κυκλικό χαρακτήρα που προέρχεται από τη σχεδίαση της έρευνας, η οποία διαμορφώνεται ως εναλλαγή φάσεων

γνώσης και δράσης. θέτει τη συμμετοχή στο επίκεντρο,

όσον αφορά στη συνεργασία και την αλληλεξάρτηση

μεταξύ των ερευνητών και της ομάδας ή των ερευνητών και της κοινότητας.

ΣΤΟΙΧΕΙΟ 3: ΣΥΜΜΕΤΟΧΙΚΗ ΕΡΕΥΝΑ ΔΡΑΣΗΣ

BINTEO GATTINO - RICERCA AZIONE PARTECIPATA

ΑΡΘΡΟ

Όπως επισημαίνει ο Vargiu (2008), ο τομέας της έρευνας δράσης επαναφέρει πολύ διαφορετικές εμπειρίες, ενώ συνδυάζεται με το γεγονός ότι επιδιώκονται δύο βασικοί στόχοι: η κατανόηση και η αλλαγή. Με την ανάλυση της βιβλιογραφίας είναι δυνατό να οριστεί η έρευνα δράσης ως μια «οικογένεια προσεγγίσεων» (Reason 1994, Reason - Bradbury 2006) προσανατολισμένη στην «τοποθέτηση της έρευνας στην υπηρεσία της κοινότητας, μέσω της ενεργοποίησης συμμετοχικών πρακτικών για τους σκοπούς της κοινωνικής αλλαγής. Αυτό

Transcript

Έχουμε ήδη εξετάσει τις γενικές υποθέσεις της Έρευνας δράσης, τις οποίες ορίσαμε

ως ένα σύνολο μεθοδολογιών έρευνας.

Ας εστιάσουμε και επικεντρωθούμε τώρα σε ένα συγκεκριμένο «μέλος» της οικογένειας της Έρευνας δράσης,

δηλαδή στη Συμμετοχική έρευνα δράσης.

Το κεντρικό στοιχείο της Συμμετοχικής έρευνας δράσης επικεντρώνεται ακριβώς στην ιδέα

μιας κοινής γνώσης μεταξύ του ερευνητή και των αποδεκτών της παρέμβασης,

οι οποίοι είναι συγχρόνως αποδέκτες και παράγοντες της παρέμβασης. Όπως προαναφέρθηκε, το επίκεντρο της Συμμετοχικής έρευνας δράσης

είναι να θεωρηθεί ότι υπάρχει μια κοινή γνώση με στόχο τη σχεδίαση και την αποκατάσταση

της έννοιας της συλλογικής δράσης.

Η Συμμετοχική έρευνα δράσης θεωρεί σημαντικό η Έρευνα δράσης να σχεδιάζεται και να διεξάγεται

με συλλογικό τρόπο μέσω της συμμετοχής τεχνικών εμπειρογνωμόνων αλλά και ατόμων που ανήκουν στο πλαίσιο στο οποίο παρεμβαίνει

και που μπορούν να επωφεληθούν από την τοπική γνώση και τη γνώση των εμπειρογνωμόνων, αναδεικνύοντας

τις πολλαπλές οπτικές γωνίες και προοπτικές που υπάρχουν

μέσα σε αυτό το συγκεκριμένο πλαίσιο.

Στη βάση των παρεμβάσεων της Συμμετοχικής έρευνας δράσης υπάρχει η αρχή της συμμετοχής,

η οποία προορίζεται ως εργαλείο αλλά και ως στόχος της κοινωνικής αλλαγής της παρέμβασης.

Η Συμμετοχική έρευνα δράσης αναγνωρίζει ότι ένα πρόβλημα προκύπτει από μια ομάδα που αντιμετωπίζει δυσκολίες

σε ένα συγκεκριμένο πλαίσιο και σε μια σαφώς καθορισμένη και με ακρίβεια ιστορική στιγμή.

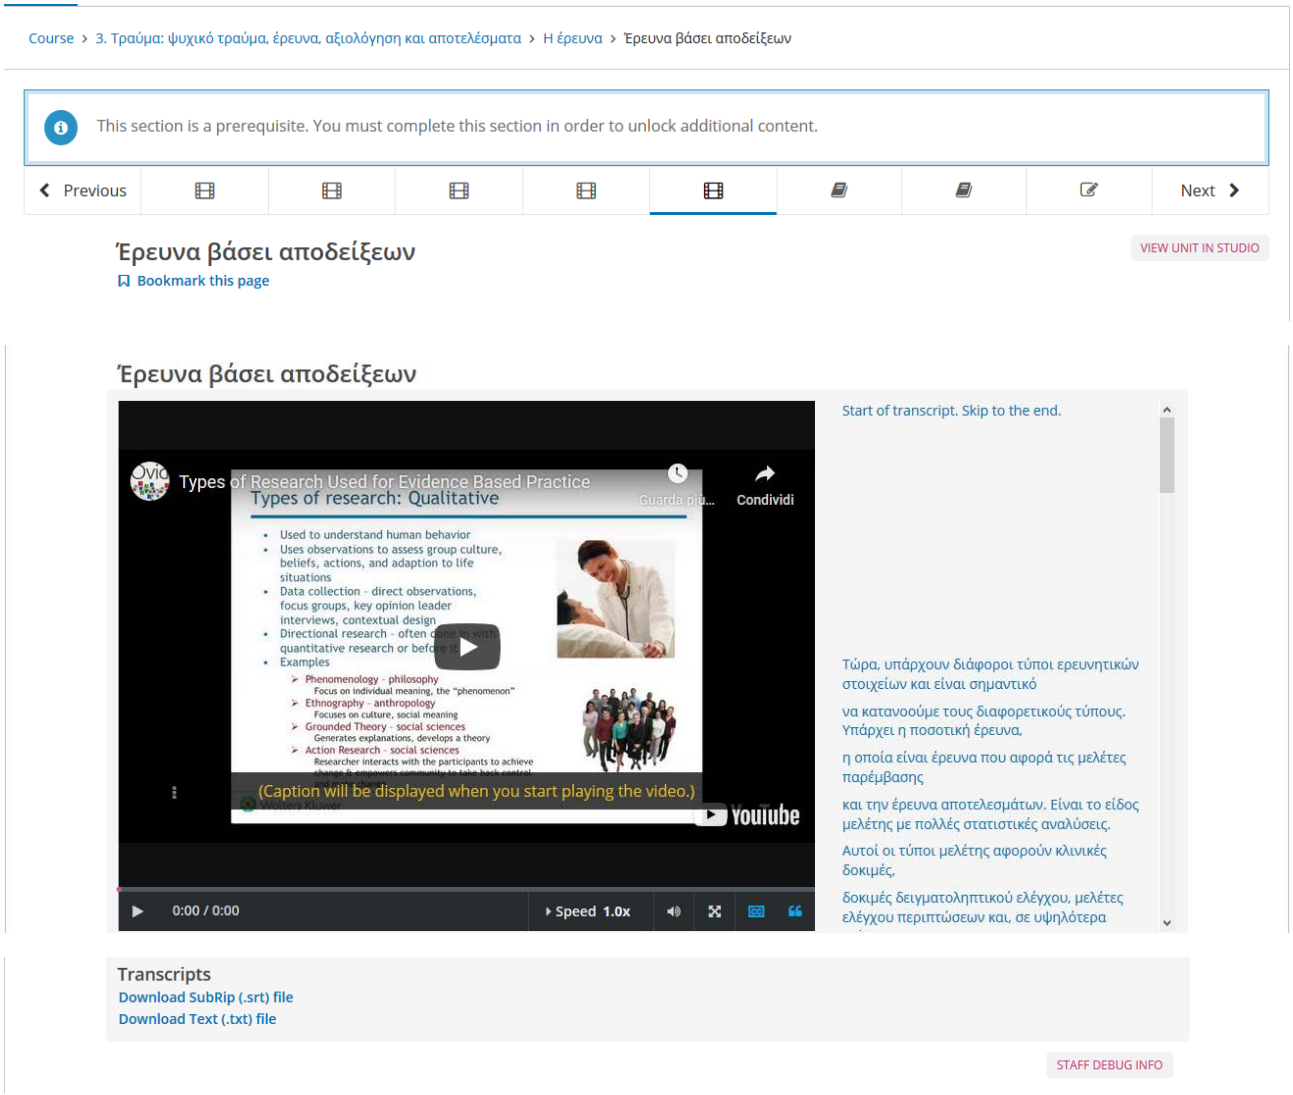
Ο ερευνητής σημειώνει συνεπώς το πρόβλημα, δεν το δημιουργεί, ενώ ο ρόλος του/της είναι να βοηθήσει την ομάδα και την κοινότητα

να προσδιορίσουν τις βασικές πτυχές προκειμένου να μπορέσουν

να συνεχίσουν με τη δράση.

Επομένως, όσοι υιοθετούν την προσέγγιση της Συμμετοχικής έρευνας δράσης πρέπει να δημιουργήσουν μια κατάσταση συνεργασίας και συζήτησης με τους πολίτες

και τους φορείς όσον αφορά στον καθορισμό των προβλημάτων που πρέπει να διερευνηθούν, τη διεξαγωγή της έρευνας και την προετοιμασία της αλλαγής.



Transcript

Τώρα, υπάρχουν διάφοροι τύποι ερευνητικών στοιχείων και είναι σημαντικό
να κατανοούμε τους διαφορετικούς τύπους. Υπάρχει η ποσοτική έρευνα,
η οποία είναι έρευνα που αφορά τις μελέτες παρέμβασης
και την έρευνα αποτελεσμάτων. Είναι το είδος μελέτης με πολλές στατιστικές αναλύσεις.
Αυτοί οι τύποι μελέτης αφορούν κλινικές δοκιμές,
δοκιμές δειγματοληπτικού ελέγχου, μελέτες ελέγχου περιπτώσεων και, σε υψηλότερα επίπεδα,
μετα-αναλύσεις και συστηματικές ανασκοπήσεις. Οι οδηγίες της κλινικής πρακτικής βασίζονται
κυρίως σε ποσοτικά ερευνητικά στοιχεία. Υπάρχει ένας άλλος τύπος έρευνας
που ονομάζεται ποιοτική έρευνα και στην πραγματικότητα διενεργείται
για να κατανοήσουμε την ανθρώπινη συμπεριφορά, το πώς οι άνθρωποι ανταποκρίνονται
στην κατάστασή τους. Έτσι, οι ποιοτικές έρευνες που γνωρίζετε,
πολύ συχνές στη νοσηλευτική και στις Κοινωνικές Επιστήμες,

είναι μελέτες όπως η φαινομενολογία, όπου εξετάζεται το φαινόμενο του νοσείν ή μιας ορισμένης κατάστασης.

Επίσης, σημαίνει εξέταση των εθνογραφικών ομάδων,

με βάση την ανθρωπολογία. Άρα εξετάζουμε ομάδες ανθρώπων σε μια ορισμένη κατάσταση.

Γνωρίζουμε ότι η ποιοτική έρευνα είναι πολύ σημαντική

για την παροχή φροντίδας σήμερα, γιατί πρέπει να είσαστε βέβαιοι

ότι οι ασθενείς σας βιώνουν μια καλή εμπειρία δεχόμενοι τη φροντίδα σας.

Στο επόμενο επίπεδο έρενας ανήκει η δευτερογενής έρευνα και είναι ό,τι αποκαλούμε

συστηματική ανασκόπηση ή μετα-ανάλυση. Η διαφορά μεταξύ της συστηματικής ανασκόπησης

και της μετα-ανάλυσης είναι ότι προσδίδει το ίδιο επίπεδο ακρίβειας

στην ανασκόπηση όλων των ερευνητικών μελετών επί ενός συγκεκριμένου θέματος.

Προσδίδει το ίδιο επίπεδο ακρίβειας στην ανάλυση όλων αυτών των μελετών.

Υπάρχει άλλος ένας περιορισμός: οι συστηματικές ανασκοπήσεις είναι πολύ διαφορετικές

από τις βιβλιογραφικές και οι μετα-αναλύσεις πρέπει να εξετάζονται μεταξύ συναδέλφων,

δηλαδή δύο ή περισσότερα άτομα πρέπει να αξιολογούν

τις μελέτες που περιλαμβάνονται σε μία συστηματική ανασκόπηση ή σε μία μετα-ανάλυση.

Όταν διενεργείτε μία συστηματική ανασκόπηση πρέπει να κοιτάξετε και άλλα πράγματα

για να βεβαιωθείτε σχετικά. Έχει σημασία το πώς παρέχουμε φροντίδα στους ασθενείς μας.

Πρέπει να προσέξετε τα εξής: είναι υλοποιήσιμα τα αποτελέσματα της συστηματικής ανασκόπησης;

Μπορώ στα αλήθεια να την εφαρμόσω σε μια συγκεκριμένη μερίδα του πληθυσμού;

Θα είναι σκόπιμη; Έχει νόημα για τους νοσούντες πληθυσμούς

και για την πρακτική μου ως παρόχου φροντίδας; Θα είναι αποτελεσματική;

Θα κάνει όντως τη διαφορά; Ωστόσο, γνωρίζουμε ότι τα ερευνητικά στοιχεία δεν είναι ισότιμα

και είναι σημαντικό οι πάροχοι φροντίδας, όταν εξετάζουν τα αποτελέσματα

στο πλαίσιο μιας έρευνας, να διαπιστώσουν

το επίπεδο της έρευνας που εξετάζουν. Στη βάση έχουμε όλες τις πρωτότυπες

ερευνητικές μελέτες και αυτές αφορούν τις μελέτες δειγματοληπτικού ελέγχου

και άλλες παρόμοιες. Το αμέσως ανώτερο επίπεδο αφορά τις συστηματικές ανασκοπήσεις

στις μετα-αναλύσεις. Και πάλι, η μετα-ανάλυση συστηματικής ανασκόπησης διεξάγεται

από έναν ερευνητή που εξετάζει όλες τις πρωτότυπες έρευνες σχετικά με ένα ορισμένο θέμα,

κάνοντας μία κριτική αξιολόγηση και σύνθεση κι έπειτα τα συνδυάζει όλα αυτά

υπό τη μορφή της συστηματικής ανασκόπησης. Αυτό θεωρείται υψηλότερο επίπεδο έρευνας

στην ιεραρχία των στοιχείων. Στην κορυφή βρίσκεται η υποστήριξη κλινικών αποφάσεων,

η οποία αφορά εργαλεία που μπορούν να χρησιμοποιούν οι πάροχοι υπηρεσιών υγείας,

να τα διαβάζουν άμεσα αλλά και να τα εφαρμόζουν άμεσα.

Και γιατί είναι τόσο σημαντικό αυτό; Γιατί οι πάροχοι υπηρεσιών υγείας

στο κρεβάτι του πόνου δεν προλαβαίνουν να διαβάσουν 100, 200, 300 σελίδες συστηματικών ανασκοπήσεων

ή μετα-αναλύσεων για να αποφασίσουν στη συνέχεια σχετικά με κάποιον ασθενή.

Πρέπει να διαβάσουν τα στοιχεία και να τα θέσουν άμεσα σε εφαρμογή.

Αυτό κάνουν τα εργαλεία υποστήριξης κλινικών αποφάσεων. Όλα αυτά τα εργαλεία

πρέπει να βασίζονται σε συστηματικές ανασκοπήσεις, σε μετα-αναλύσεις,

σε συνοπτικές εκθέσεις στοιχείων ή στα καλύτερα διαθέσιμα αποδεικτικά στοιχεία.

Ακολουθεί ένα παράδειγμα μεθόδου έρευνας από τους Bean & Creswell (1980, σελ. 321-322):

«Ο χώρος αυτής της μελέτης ήταν ένα μικρό (με 1000 εγγεγραμμένους φοιτητές), θρησκευτικό, μεικτό, προοδευτικό κολέγιο τέχνης σε μια πόλη από τις κεντροδυτικές πολιτείες με πληθυσμό 175.000 ανθρώπων. Το ποσοστό εγκατάλειψης της σχολής το προηγούμενο έτος ήταν 25%. Τα ποσοστά εγκατάλειψης τείνουν να είναι υψηλότερα μεταξύ των πρωτοετών και των δευτεροετών σπουδαστών, οπότε έγινε μια προσπάθεια να προσεγγίσουμε όσο το δυνατόν περισσότερους πρωτοετείς και δευτεροετείς διανέμοντας το ερωτηματολόγιο μέσα στην τάξη. Η έρευνα σχετικά με την αποχώρηση δείχνει ότι τα αγόρια και τα κορίτσια εγκαταλείπουν το κολέγιο για διαφορετικούς λόγους (Bean, 1978, Spady 1971). Επομένως, στην παρούσα μελέτη έγινε ανάλυση μόνο των γυναικών. Τον Απρίλιο του 1979, 169 γυναίκες απάντησαν στο ερωτηματολόγιο. Ένα ομοιογενές δείγμα 135 γυναικών που ήταν 25 ετών ή νεότερες, άγαμες, Αμερικανίδες και Καυκάσιες είχε επιλεγεί για αυτήν την ανάλυση. Από αυτές, 71 ήταν πρωτοετείς, 55 δευτεροετείς και 9 ήταν τριτοετείς. Το 95% των φοιτητών ήταν μεταξύ 18 και 21 ετών. Αυτό το δείγμα μεροληπτεί υπέρ φοιτητών με υψηλότερες ικανότητες, όπως υποδεικνύεται από τις βαθμολογίες στη δοκιμή ACT. Τα δεδομένα συγκεντρώθηκαν μέσω ερωτηματολογίου που περιείχε 116 στοιχεία. [...] Η πλειονότητα αυτών ήταν στοιχεία τύπου Likert βασισμένα σε μια κλίμακα από «σε πολύ μικρό βαθμό» έως «σε πολύ μεγάλο βαθμό». Άλλα ερωτήματα τέθηκαν για πραγματικές πληροφορίες, όπως οι βαθμολογίες Act, οι βαθμοί λυκείου και το μορφωτικό επίπεδο των γονέων. Όλες οι πληροφορίες που χρησιμοποιήθηκαν σε αυτήν την ανάλυση προέρχονταν από τα στοιχεία του ερωτηματολογίου. Το ερωτηματολόγιο αυτό δημιουργήθηκε και δοκιμάστηκε σε άλλα τρία ιδρύματα πριν από τη χρήση του σε αυτό το κολέγιο. [Οι συγγραφείς συζήτησαν για το όργανο.] [...] Χρησιμοποιήθηκε ανάλυση πολλαπλής παλινδρόμησης και διαδρομής για την ανάλυση των δεδομένων. [...]»

(Creswell, 2014, σελ. 181-182)

Ακολουθεί ένα παράδειγμα ποιοτικής έρευνας (Cardano, Ortalda, σελ. 242-243)

«Σκοπός της έρευνας ήταν να μελετηθεί η έναρξη του καπνίσματος σε προεφήβους (Frohlich, Potvin, Chabot, Corin, 2002). Μετά την αναπαράσταση της συχνότητας καπνίσματος σε προεφήβους σε 32 περιοχές του Κεμπέκ και έχοντας αποκτήσει σχετικές πληροφορίες σχετικά με τους περιορισμούς και τους «διαρθρωτικούς» πόρους που εμποδίζουν τώρα/επιτρέπουν τώρα τη συνήθεια του καπνίσματος σε αυτόν τον πληθυσμό - η παρουσία μαγαζιών που πωλούν τσιγάρα, η παρουσία δημόσιων χώρων όπου δεν επιτρέπεται το κάπνισμα, η παρουσία υποκειμένων που παρακολουθούν τη συμμόρφωση με τους κανόνες, οι οποίοι διέπουν την πώληση τσιγάρων σε εφήβους και το κάπνισμα σε δημόσιους χώρους - , οι συγγραφείς εστιάζουν την προσοχή τους σε οκτώ περιοχές στις οποίες δημιουργούν ομάδες προβληματισμού. Σε κάθε περιοχή, οι συμμετέχοντες προσεγγίζονται μέσω της διαμεσολάβησης των δασκάλων του τοπικού σχολείου, βάζοντάς τους έτσι υπεύθυνους ομάδων αγοριών και κοριτσιών που, κατά πάσα πιθανότητα, γνώριζαν ο ένας τον άλλον και έκαναν παρέα μεταξύ τους πριν από την ομάδα προβληματισμού. Στη μελέτη αυτή, η αμοιβαία γνώση των συμμετεχόντων γίνεται πόρος και όχι όριο, προσφέροντας στους ερευνητές την ευκαιρία να αποκτήσουν πρόσβαση σε ομιλίες που, ίσως λιγότερο «ήπιες», διαμορφώθηκαν στο πλαίσιο της ζωής των συμμετεχόντων. Οι τελευταίοι, εξάλλου, ενισχυμένοι με αμοιβαία υποστήριξη, μπόρεσαν να αντιμετωπίσουν ένα θέμα, τη συνήθεια του καπνίσματος, το οποίο ήταν δύσκολο να συζητηθεί μπροστά σε έναν ενήλικα συνομιλητή με μεγαλύτερη ηρεμία. Η γνώση του εθνογραφικού πλαισίου, των γλωσσικών κωδίκων των κοινωνικών πρακτικών, ευρέως διαδεδομένων στις περιοχές όπου εμφανίστηκαν οι ομάδες προβληματισμού, επέτρεψε στους συγγραφείς να αντιμετωπίσουν τις δυσκολίες που συνήθως σχετίζονται με την υλοποίηση μιας ομάδας προβληματισμού με μια φυσική ομάδα: η πρόσκληση σε κοινές εμπειρίες που δεν εξηγούνται πλήρως στην ομιλία, η χρήση αργκό, η χρήση εκφράσεων ευρετηρίου.»

(Cardano, Ortalda, σελ. 242-243)

QUIZ 1

4 points possible (graded)

1. Μια επιστημονική έρευνα...

- ○ Επιτρέπει πάντα μια πιστή καταγραφή της πραγματικότητας
- ○ Ξεκινάει με την συλλογή δεδομένων
- ○ Θα πρέπει πάντα να λαμβάνει υπόψιν την πρότερη αποκτηθείσα γνώση
- ○ Χρησιμοποιεί πάντα μια μόνο μέθοδο (τεχνική)

2. Στην έρευνα -δράσης

- ○ Ενθαρρύνεται η συμμετοχή και η συνεργασία μεταξύ των ερευνητών
- ○ Επιδιώκεται η παρεκβολή των νόμων που έχουν εγγραφεί στη φύση μέσω αντικειμενικής ανάλυσης των φαινομένων
- ○ Δεν θα πρέπει να παραχθούν κοινωνικές μεταβολές στο πλαίσιο της έρευνας
- ○ Ο ερευνητής θα πρέπει να τηρεί μια απολύτως ουδέτερη στάση απέναντι στο αντικείμενο της έρευνας

3. Ποια από αυτά τα βήματα ΔΕΝ αποτελούν μέρος κάθε ερευνητικού έργου που βασίζεται σε τεκμήρια:

- ○ Αξιολόγηση των αποτελεσμάτων
- ○ Επικύρωση του θεωρητικού πλαισίου μέσω της πρακτικής
- ○ Η συστηματική ανασκόπηση της βιβλιογραφίας
- ○ Διαμόρφωση των ερευνητικών υποθέσεων

4. Το κυρίαρχο στοιχείο ανάμεσα στο δίπτυχο Δράση – Έρευνα είναι:

- ○ Η εστίαση στην ιδέα διαμόρφωσης μιας γνώσης που δεν θα μοιράζεται μεταξύ του ερευνητή και του αποδέκτη της παρέμβασης
- ○ Η εκ των προτέρων επιλογή των υπό διερεύνηση προβλημάτων και των εργαλείων που θα χρειαστούν για την μελέτη τους
- ○ Η σαφής και απόλυτη διάκριση ανάμεσα στην Δράση και την Έρευνα
- ○ Η εστίαση στην ιδέα διαμόρφωσης μιας κοινής γνώσης ανάμεσα στον ερευνητή και τον αποδέκτη της παρέμβασης

Ανάγκες κατάρτισης σε οργανισμούς που ασχολούνται με την TIC

ΣΤΟΙΧΕΙΟ 2: ΑΝΑΓΚΕΣ ΚΑΤΑΡΤΙΣΗΣ ΣΕ ΟΡΓΑΝΙΣΜΟΥΣ ΠΟΥ ΑΣΧΟΛΟΥΝΤΑΙ ΜΕ ΤΗΝ TIC

ΑΡΘΡΟ

Οι Bryson και συνεργάτες (2017) θέτουν μια ενδιαφέρουσα προϋπόθεση που είναι χρήσιμη για τη διάκριση δύο επιπέδων αντανάκλασης, τα οποία εφαρμόζονται στην ανάλυση και αξιολόγηση των θεμάτων αυτής της ενότητας. Οι συγγραφείς διαχωρίζουν τις θεραπείες που είναι συγκεκριμένες για το ψυχικό τραύμα (δηλαδή τεχνικές παρέμβασης που στοχεύουν στη μείωση των συμπτωμάτων, τα οποία σχετίζονται με το ψυχικό τραύμα) από την TIC ως μια γενική προοπτική, η οποία στοχεύει σε μετασχηματισμό του συστήματος φροντίδας, συμπεριλαμβανομένης της κατανόησης των αντιδράσεων τραυματικού άγχους σε κάθε επίπεδο και σε όλες τις πτυχές οργάνωσης των υπηρεσιών. Παρά τη μεγάλη ζήτηση για την εφαρμογή των αρχών TIC στις υπηρεσίες και παρά τα πλεονεκτήματα που μπορεί να έχει, η

Διάδοση της έρευνας για το ψυχικό τραύμα σε χώρους οργανισμών

VIEW UNIT IN STUDIO

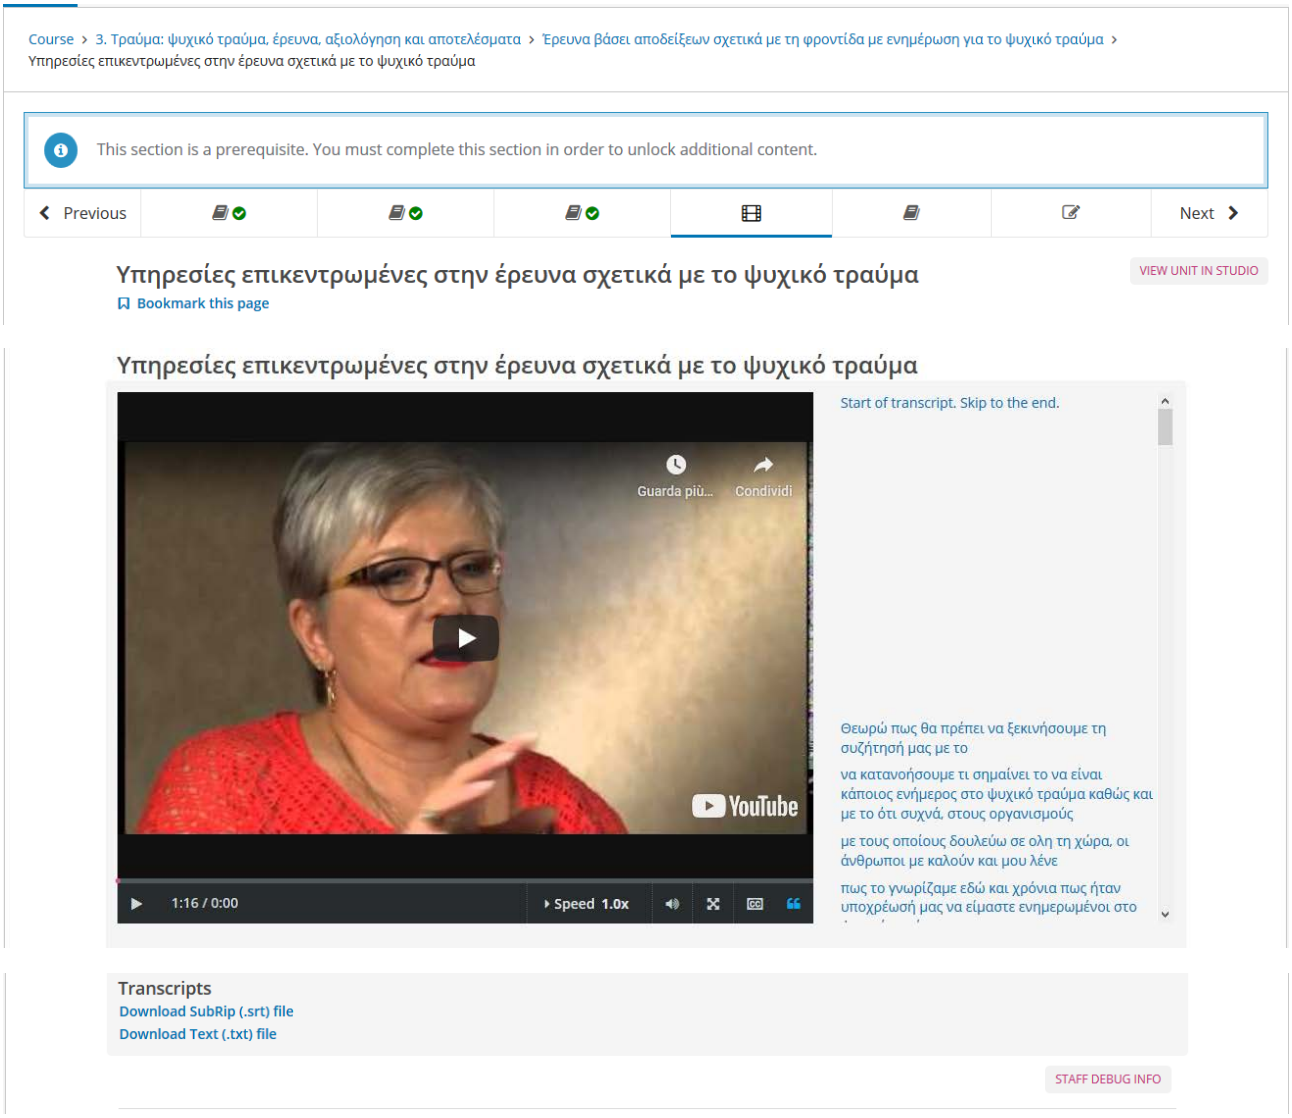
Bookmark this page

ΑΡΘΡΟ

Όταν μιλάμε για το θέμα της διάδοσης της έρευνας σε χώρους οργανισμών, οι Ruzek & Rosen (2009) τονίζουν την πολυπλοκότητά του: τα μοντέλα που ασχολούνται με τη διάδοση υπογραμμίζουν πώς αυτό εξαρτάται από πολλαπλούς παράγοντες που αλληλεπιδρούν μεταξύ τους σε διαφορετικά επίπεδα (ατομικά και οργανωτικά). Οι Briggs και συνεργάτες (2012) δείχνουν πώς αναγνωρίζεται ότι η αλλαγή στη γνώση αποτελεί το πρώτο βήμα προς την οργανωτική αλλαγή, αλλά είναι εξίσου θεμελιώδης και η επαλήθευση του πόσο αυτό εμφανίζεται ή μεταφράζεται σε μια πραγματική αλλαγή συμπεριφοράς. Δύο πτυχές φαίνονται σημαντικές: η συστηματική και πολυεπίπεδη πολυπλοκότητα της διάδοσης του επιστημονικού περιεχομένου σε οργανισμούς και η διαδικασία που συνδέει τη γνώση και την πρακτική μέσω ενός πολύπλοκου μηχανισμού ατομικής και οργανωτικής αλλαγής. Αυτή η διαδικασία φέρνει στο προσκήνιο μία από τις συχνότερες αντιδράσεις στην εφαρμογή των νέων βέλτιστων πρακτικών: το γεγονός ότι η επιλογή της εφαρμογής τους στον οργανισμό βιώνεται συχνά ως «εκ των άνω προς τα κάτω» και, ως εκ τούτου, δεν υποστηρίζεται και τόσο από τους κλινικούς ιατρούς (Rohrbach et al., 2006, Ruzek & Rosen, 2009). Πράγματι, στην περίπτωση αυτή, η δέσμευση των φορέων να αλλάξουν την οργανωτική τους πρακτική αποτελεί κομβική διάσταση. Όπως προτείνουν οι συνεισφορές των μελετητών, ένας διακανονισμός κατά τον οποίο η συμφωνία για την αλλαγή διαπραγματεύεται από την ηγεσία με τους υφισταμένους, λαμβάνοντας παράλληλα υπόψη τις τοπικές ανάγκες, συμβάλλει στην επιτυχία της εφαρμογής της (Durlak & DuPre, 2008, Ruzek & Rosen, 2009) . Ένα άλλο κεντρικό θέμα είναι το γεγονός ότι οι οργανισμοί υγειονομικής περίθαλψης συχνά δεν διαθέτουν εξειδικευμένο προσωπικό που να ασχολείται αποκλειστικά με την έρευνα EBP, τη μελέτη των βέλτιστων πρακτικών και στρατηγικών για την εφαρμογή τους και, ειδικότερα, την ανάλυση και συστηματοποίηση της συνεχούς ενσωμάτωσης των αποτελεσμάτων της επιστημονικής έρευνας (Berwick, 2003, Ruzek & Rosen, 2009).

Αναφορικά με αυτό, οι Marvin & Volino Robinson (2018) υπογραμμίζουν την ανάγκη οι οργανισμοί να έχουν ένα όραμα που να εξετάζει την ανάλυση του ιδρύματος ή της ίδιας της υπηρεσίας σχετικά με τη δεξιότητα ή την ετοιμότητα για προσαρμογή και διατήρηση των παρεμβάσεων αλλαγής (στη βιβλιογραφία σημειώνεται ως «οργανωτική ετοιμότητα» και μπορεί να μετρηθεί σε οργανωτικό, ομαδικό ή ατομικό επίπεδο). Η ενασχόληση με αυτήν τη διάσταση στη φάση του σχεδιασμού έχει καθοριστική σημασία για τη διατήρηση της εφαρμογής νέων πρακτικών, την ανάλυση πιθανών εμποδίων στη διαδικασία και τη διατήρηση των πεποιθήσεων και της θετικής στάσης απέναντι στην οργανωτική αλλαγή. Ο ευρύτερος προβληματισμός για το θέμα αυτό περιλαμβάνει το επίκεντρο που θα πρέπει να δοθεί στη σύσταση δημιουργίας στοχοθετημένων στρατηγικών αλλαγής σε συγκεκριμένο οργανισμό (Augustsson et al., 2017, Marvin & Volino Robinson, 2018). Η έρευνα καταδεικνύει τη σημασία της ηγεσίας και του διαχειριστικού οράματος για τη συνδημιουργία του τρόπου αλλαγής σε συγχρονισμό με τους επαγγελματίες και για την κοινή χρήση μιας παιδείας προσανατολισμένης στην εφαρμογή της TIC, η οποία είναι αφιερωμένη, πρωτίστως, στην ανάλυση των αναγκών του προσωπικού.

STAFF DEBUG INFO



Transcript

Θεωρώ πως θα πρέπει να ξεκινήσουμε τη συζήτησή μας με το

να κατανοήσουμε τι σημαίνει το να είναι κάποιος ενήμερος στο ψυχικό τραύμα καθώς και με το ότι συχνά, στους οργανισμούς

με τους οποίους δουλεύω σε ολη τη χώρα, οι άνθρωποι με καλούν και μου λένε

πως το γνωρίζαμε εδώ και χρόνια πως ήταν υποχρέωσή μας να είμαστε ενημερωμένοι στο ψυχικό τραύμα

κατανοούμε το γιατί αυτό είναι τόσο σημαντικό και ειλικρινά δεν καταλήγουμε πουθενά

Γνωρίζουμε πως υπάρχουν κάποια βήματα τα οποία και πρέπει να κάνουμε

δεν καταφέραμε ποτέ όμως να οργανωθούμε ώστε να μπορούμε

να κάνουμε το επόμενο βήμα. Αυτό που κάναμε στο Εθνικό Συμβούλιο είναι το να αναπτύξουμε

ένα εργαλείο που ονομάζεται "αυτό-αξιολόγηση του οργανισμού" και με αυτό το εργαλείο

συγκεντρώσαμε τις σκέψεις και τις ιδέες των υπευθύνων,

όπως για παράδειγμα αυτές των Roger Fowler, Maxine Harris, Judith Herman και Sandy Blum

και προσπαθήσαμε να συνθέσουμε τη δουλειά τους με τρόπο που να εκφράζει τις πρακτικές

και τις αρχές του τι σημαίνει να είναι κανείς ενημερωμένος στο ψυχικό τραύμα. Για παράδειγμα

η προτεραιότητα στην ασφάλεια ή η διαφάνεια, η αμοιβαιότητα, η επιλογή, η ελευθερία έκφρασης

ο έλεγχος, η συνεργασία, το να δίνει κανείς σε ένα άτομο τον έλεγχο της ζωής του

έτσι αυτό που δημιουργήσαμε είναι ένα εργαλείο με το όνομα " αυτο-αξιολόγηση οργανισμών¨

που κάνει χρήση αυτών ακριβώς των πρακτικών και των κανόνων

προκειμένου να ενεργοποιήσει καθετί σε έναν οργανισμό δείχνει να οδεύει στο να είναι

ενημερωμένο στο ψυχικό τραύμα. Το εργαλείο OSA (κλίμακα αυτο-αξιολόγησης οργανισμών) είναι μία κλίμακα Likert που κυμαίνεται άπο το 0 στο 4

και συμπεριλαμβάνει την απάντηση "μη σχετικό". Δημιουργήσαμε τα 7 πεδία

της ενημερωμένης στο ψυχικό τραύμα φροντίδας και μέσα σε αυτά τα 7 πεδία μπορεί κανείς να αντιληφθεί αυτές

τις αρχές. Στα πλαίσια κάθε πεδίου, υπάρχουν πολλαπλά πρότυπα και αυτά τα πρότυπα

δεν είναι τα μοναδικά. Η ιδέα του OSA είναι να αναγκάσει τους οργανισμούς

να σκεφτούν με διαφορετικό τρόπο αναφορικά με τη δουλειά που κάνουν. Επομένως, για παράδειγμα

στα 7 πεδία, το πρώτο πεδίο είναι "έλεγχος και αξιολόγηση". Επομένως αυτό που θέλουμε

είναι να γνωρίζουμε

το πότε γίνεται ο έλεγχος ενός ανθρώπου από τη στιγμή που εισέρχεται σε μία Δομή. Επίσης όμως θέλουμε

να δώσουμε στους ανθρώπους την ευκαιρία να μιλήσουν για ότι θέλουν,

για κάθε εμπειρία τους σε ένα πλαίσιο ευαισθησίας και βάθους χρόνου. Αν είμαι κάποιος που εισέρχεται

σε έναν οργανισμό και είμαι αρκετά φοβισμένος ή δεν εμπιστεύομαι

αυτόν που συντονίζει την εισαγωγή μου, αυτό που θέλουμε είναι

να είμαστε σε θέση να δημιουργήσουμε ένα περιβάλλον όπου το άτομο μπορεί να νιώσει άνετα

στο να απαντήσει όλες τις απαραίτητες ερωτήσεις. Οι άνθρωποι πρέπει να εκπαιδευτούν

στο πως να κάνουν τις ερωτήσεις και στο πως να δημιουργούν

μία σχέση εμπιστοσύνης από τη πρώτη κιόλας στιγμή που κάποιος εισέλθει στη Δομή.

Το δεύτερο πεδίο αφορά την "φροντίδα και τις υπηρεσίες που βασίζονται στον καταναλωτή" και

είμαι ενθουσιασμένος με το Κοινοτικό Κέντρο Φροντίδας και τον τρόπο που σκέφτονται

και τον τρόπο που εργάζονται καθώς και τον αριθμό των εργαζομένων που εκπαιδεύονται

και ενεργοποιούνται με πολλούς και υπέροχους τρόπους, και δεν είναι

μόνο αυτό. Οι εργαζόμενοι είναι σε θέση να δούνε τις υπηρεσίες μέσα από ένα εντελώς διαφορετικό

τρόπο: γνωρίζουμε πως είναι να μπαίνει κανείς σε μία διαδικασία ελέγχου και αξιολόγησης,

γνωρίζουμε πως είναι να είναι κανείς εγκλωβισμένος σε ένα πλαίσιο που ειλικρινά

δεν δουλεύει, γνωρίζουμε πως είναι να τραυματίζεται κάποιος εκ νέου από το σύστημα και το

να έχει κανείς το δικαίωμα να εισακουσθεί αποτελεί μέρος της δουλειάς, αυτό αποτελεί και ένα παράδειγμα

φροντίδας προσανατολισμένης στον καταναλωτή. Βέβαια το να προσεγγίζει κανείς τα πάντα

μέσα από μία προοπτική προσανατολισμένη στην ανάκαμψη, δείχνει μία πελατοκεντρική προσέγγιση και

ως εκ τούτου αν είμαι το άτομο που λαμβάνει αυτές τις υπηρεσίες, έχω την ευκαιρία

να δηλώσω τι δουλεύει για μένα και τι όχι. Δίνω έτσι δύναμη σε αυτή τη φωνή

και διασφαλίζω πως οι επαγγελματίες του οργανισμού και οι πελάτες

θα έχουν την ευκαιρία πραγματικά να συζητήσουν για το τι δουλεύει σωστά

στον οργανισμό και τι όχι. Επίσης μιλήσαμε για ανάπτυξη του εργατικού δυναμικού

το οποίο θα έχει εκπαιδευτεί πάνω στο ψυχικό τραύμα

συμπεριλαμβάνοντας και την κλινική άσκηση. Οι κλινικοί βέβαια έχουν επαρκή κλινική εκπαίδευση

προκειμένου να κάνουνε τη δουλειά τους. Αν όμως είμαι απλά ο υπάλληλος υποδοχής, τι σημαίνει για μένα το να

εργάζομαι σε έναν οργανισμό που είναι ενημερωμένος στο ψυχικό τραύμα; Κάθε

άνθρωπος κάνει την διαφορά, ακόμη και αν είναι οδηγός λεωφορείου, ακόμη κι αν είναι ο άνθρωπος στην συντήρηση,

μπορεί να κάνει τη διαφορά με το να δημιουργήσει αυτή την κοινωνία όπου οι άνθρωποι αισθάνονται ότι

μπορούν να αρχίσουν να θεραπεύονται. Επίσης αν λάβουμε υπόψη με συμπόνια την κόπωση του προσωπικού,

στην προηγούμενη εργασία μας σήμερα μιλήσαμε για με τις εσωτερικές υπηρεσίες ως προς τους πελάτες, και κατά συνέπεια πως ο

καθένας στον οργανισμό φροντίζει τον άλλο. Δεν μπορείς να έχεις έναν

οργανισμό ενημερωμένο στο ψυχικό τραύμα όταν το προσωπικό δουλεύει υπερβολικά παραπάνω τόσο που

να βιώνει κόπωση συμπόνιας, ώστε να σκέφτεται και τις ανάγκες του

προσωπικού αλλά επίσης και τις επιπτώσεις που υπάρχουν όταν σκέφτομαι πως όταν εγώ δεν φροντίζω τον εαυτό μου

πως μπορώ να είμαι ενεργά εκεί για κάποιον άλλο; Όλο αυτό έχει επίσης σχετίζεται με την καλή κλινική

εποπτεία. Η εποπτεία γίνεται μέσα σε ένα πλαίσιο το οποίο συμφωνεί με την ενημερωμένη με το ψυχικό τραύμα προσέγγιση

ή με μια εποπτεία τιμωρητική; Ο τομέας 4 είναι με βάση τα δεδομένα ο καλύτερος σε αναδυόμενες καλές

πρακτικές, πάντα κοιτάζει για κάτι νέο, δεν λέει "αυτό είναι το μόνο πράγμα που

κάνουμε το οποίο είναι βασισμένο σε αποδεικτικά στοιχεία και ποτέ δεν εξετάζουμε νέα και αναδυόμενα

πράγματα τα οποία μπορεί να συμβαίνουν". Πάντα έχει το βλέμμα στραμμένο στο καλό

υλικό, και πραγματικά, ξέρετε, παρέχοντας κατάρτιση στο προσωπικό, κάνοντας χρήση των

βέλτιστων πρακτικών ανάμεσα σε ομοτίμους, βασισμένων σε αποδεικτικά στοιχεία, όπως το μοντέλο "WHAM" Wellness, Whole Heath Action

Management, όπου οι ομότιμοι βοηθούν τους υπόλοιπους ομοτίμους, ξέρετα, παίρνοντας

τον έλεγχο της δικής τους φυσικής υγείας. Η το μοντέλο "WRAP", Wellness Recovery Action Planning,

το οποίο είναι ένα εξαιρετικό εργαλείο βασισμένο σε στοιχεία καισχετικό με την ενημερωμένη στο ψυχικό τραύμα προσέγγιση, το οποίο

συντελεί στη δημιουργία ασφαλούς περιβάλλοντος. Οι άνθρωποι δεν μπορούν να θεραπευτούν αν δεν αισθάνονται

ασφαλείς. Αν είστε στην ανώτατη εγρήγορση, αν αισθάνεστε ότι περπατάτε μέσα σε ένα

περιβάλλον το οποίο δεν σας καλωσορίζει και δεν αισθάνεστε ασφαλείς,

τίποτα καλό δεν πρόκειται να συμβεί. Κάποιος μου είχε πει, ήμουν σε μια συνάντηση, και

εκεί έβαφαν, απλά έβαφαν ξανά και ανακαίνιζαν την περιοχή της υποδοχής, και ένας

από τους πελάτες ήρθε μέσα και είπε "Μετακομίζουμε;" και ένας άλλος είπε "Όχι, γιατί;"

"Λοιπόν υποθέσαμε, αν το κάνετε αυτό

ωραίο θα πρέπει να φύγουμε" και αυτός είναι ένας

δείκτης ότι οι άνθρωποι δεν αισθάνονται πολύτιμοι, ήταν ένα τεράστιο μάθημα για

αυτούς. Οι άνθρωποι δικαιούνται να απολαμβάνουν φροντίδα σε ένα χώρο και με έναν τρόπο που να δηλώνει "Εγώ

σε σέβομαι, είσαι πολύτιμος", δεν μπορείς να αρχίσεις να θεραπεύεις αν δεν αρχίσεις

να γεμίζεις αυτά τα κενά. και ο τομέας έξι είναι σχετικός με την κατασκευή κοιωνικών συνεργασιών,

όποιοι και αν είμαστε στην κοινότητα μας πρέπει να εργαζόμαστε για να φτιάξουμε κοινότητες,

Η ενημερωμένη στο ψυχικό τραύμα θεραπεία δεν μπορεί να επιτευχθεί στο κενό επομένως αν δεχτώ εξαιρετικές

υπηρεσίες από το πρόγραμμα σου αλλά όταν βγω έξω, ξέρετε, σε ένα οποιοδήποτε άλλο τμήμα και αυτοί

μου συμπεριφερθούν σαν να, ξέρετε, είμαι η λάσπη στο κάτω μέρος του παπουτσιού τους, αυτό αναιρεί όλη την

καλή δουλειά που εγώ έκαν δουλεύοντας με εσένα, οπότε πραγματικά το να φτάσουμε έξω στην

κοινότητα και με το να βοηθήσουμε την κοινότητα να καταλάβει τι σημαίνει να είναι

ενημερωμερωμένη για το ψυχικό τραύμα. Και στο τέλος, ο τομέας επτά είναι σχετικός με τη "Βελτίωση της Απόδοσης"

Πως γνωρίζεις ότι αυτό που παρέχεις κάνει την διαφορά;

Αν εγώ κάνω Χ, αυτό θα δουλεέψει για εμένα; Αυτό θα δουλέψει για τους ανθρώπους τους οποίους εμείς

υπηρετούμε; Κάνω έρευνες ανατροφοδότησης από τους πελάτες; Ρωτάω τους πελάτες σχετικά με το επίπεδο της

ασφάλειας που αισθάνονται; Κάνω έρευνα στο προσωπικό μου; Και όταν κάνω την έρευνα, πράττω

ανάλογα με τα αποτελέσματα; Μόλις έκανα έρευνα οπότε, ξέρετε, ο τρόπος με τον οποίο χρησιμοποιούμε

το μοντέλο OSA είναι, ρωτάμε τους οργανισμούς, όταν ξεκινούν την αξιολόγηση, αυτό αποτελεί

την γραμμή αναφοράς, και μετά τους ρωτάμε και πάλι αφού περάσει ένα χρονικό διάστημα και το ξανακάνουμε, οπότε αυτοί

μπορούν να δουν την πρόδο που έχουν κάνει. κατόπιν χρησιμοποιούμε ένα πλήθος άλλων εργαλείων,

ένα εργαλείο παρακολούθησης της απόδοσης και ένα οδηγό εφαρμογής για να βοηθήσει

τους οργανισμούς να προχωρήσουν, αλλά όλα αυτά είναι ένα στιγμιότυπο του OSA, ένα πολύ γρήγορο

στιγμιότυπο, καθώς το OSA αποτελεί μια χρονοβόρα διεργασία, το OSA δεν είναι

σχεδιασμένο για να πουν οι οργανισμοί "εντάξει, έχουμε τελειώσει τώρα", δεν είναι μια

λίστα ελέγχου, είναι ενας τρόπος να καθοδηγήσετε συνομιλίες, για να αρχίσετε μα κάνετε

αξιοσημείωτες αλλαγές μέσα στον οργανισμό.

ΥΠΗΡΕΣΙΕΣ ΕΠΙΚΕΝΤΡΩΜΕΝΕΣ ΣΤΗΝ ΕΡΕΥΝΑ ΣΧΕΤΙΚΑ ΜΕ ΤΟ ΨΥΧΙΚΟ ΤΡΑΥΜΑ

QUIZ 2

3 points possible (graded)

1. Μια μελέτη των Ruzek and Rosen (2009) έδειξε ότι στο διεθνές πλαίσιο των παρεμβάσεων που σχετίζονται με την φροντίδα τραύματος:

- ○ Οι ανάγκες συγκεκριμένων υπο-ομάδων αντιμετωπίστηκαν επαρκώς.
- ○ Τα εκπαιδευτικά προγράμματα εφαρμόστηκαν με διαφορετικούς τρόπους, υπογραμμίζοντας την ανάγκη καθορισμού βασικών στοιχείων και εννοιών
- ○ Οι ίδιες θεραπευτικές παρεμβάσεις ήταν εξίσου αποτελεσματικές σε ενήλικες και παιδιά
- ○ Οι θεραπείες εφαρμόστηκαν ομοιόμορφα σε διάφορες χώρες, υπογραμμίζοντας την αποτελεσματικότητα των προσεγγίσεων που εφαρμόστηκαν

2. Η Ενημερωμένη Φροντίδα Τραύματος (TIC)

- ○ Στοχεύει μόνο στην μείωση των συμπτωμάτων που σχετίζονται με το τραύμα, εστιάζοντας σε τεχνικές παρέμβασης
- ○ Έχει ως στόχο να μετατρέψει το σύστημα φροντίδας, εστιάζοντας στην ικανότητα του προσωπικού να υιοθετεί ένα όραμα φροντίδας του τραυματισμένου ασθενούς
- ○ Χρησιμοποιείται αποκλειστικά σε ανηλίκους
- ○ Εφαρμόζει τεχνικές παρέμβασης όπως η συγκράτηση και η απομόνωση

3. Ένα από τα πλεονεκτήματα της επιστημονικής διάδοσης σε οργανισμούς που σχετίζονται με το τραύμα είναι:

- ○ Η δυνατότητα έκφρασης αποκλειστικού ενδιαφέροντος σε θέματα που σχετίζονται με ομάδες εργασίας
- ○ Η μετάβαση σε γενικευμένες θεραπευτικές παρεμβάσεις που θα είναι αποτελεσματικές για όλους τους ασθενείς
- ○ Η εφαρμογή των αποδεικτικών στοιχείων ως μια κάθετη απόφαση από πάνω προς τα κάτω από την ηγεσία των οργανισμών
- ○ Η δυνατότητα της έναρξης μιας διεργασίας εφαρμογής των πιο σύγχρονων και ενημερωμένων και τεκμηριωμένων πρακτικών , με στόχο τη βελτίωση της ευημερίας του προσωπικού και των ασθενών

ΟΡΙΣΜΟΙ ΚΑΙ ΧΩΡΟΙ

ΣΤΟΙΧΕΙΟ 1: ΟΡΙΣΜΟΙ ΚΑΙ ΧΩΡΟΙ

ΑΡΘΡΟ

Οι Guyadeen & Seasons (2018) τονίζουν πώς, όπως και σε πολλούς άλλους κλάδους, «ο τομέας του σχεδιασμού έχει το δικό του είδος αξιολόγησης» (σελ. 98) που μπορεί να ταξινομηθεί σε δύο μέρη: «αξιολόγηση σχεδίου και αξιολόγηση σχεδιασμού. Παραδοσιακά, η αξιολόγηση στον σχεδιασμό θεωρήθηκε ανεξάρτητη από την αξιολόγηση του προγράμματος και αφορούσε στη χρήση συγκεκριμένων προσεγγίσεων αξιολόγησης. Ο κλάδος του σχεδιασμού υποστηρίζει επί του παρόντος ότι υπάρχει ένα πλεονέκτημα για τη δημιουργία ισχυρότερων δεσμών μεταξύ της αξιολόγησης του προγράμματος και της αξιολόγησης στον σχεδιασμό» (σελ. 98). Στο σύστημα δημόσιας υγείας, η αξιολόγηση διαδραματίζει σημαντικό ρόλο στην ανάπτυξη πολιτικών και προγραμματικού σχεδιασμού. «Και οι δύο διαδικασίες ακολουθούν μια φάση αναγνώρισης και προσδιορισμού του

ΣΤΟΙΧΕΙΟ 2: ΑΞΙΟΛΟΓΗΣΗ ΑΠΟΔΟΤΙΚΟΤΗΤΑΣ ΚΑΙ ΕΜΠΕΙΡΙΑΣ (αποτελέσματα)

ΑΡΘΡΟ

Σύμφωνα με τους Guyadeen & Seasons (2018), «το ιστορικά κυρίαρχο πρότυπο αξιολόγησης είναι επιστημονικά καθοδηγούμενο και εξαιρετικά τεχνικό, με μεγάλη έμφαση στις ποσοτικές μεθόδους». Οι μέθοδοι και οι τεχνικές επιστημονικής έρευνας, όπως τα συστηματικά τυχαιοποιημένα ερευνητικά σχέδια και τα πειράματα, θεωρούνται αναπόσπαστα στοιχεία της διαδικασίας αξιολόγησης (Alkin 2013). Αυτή η προσέγγιση της αξιολόγησης επικεντρώνεται στη μέτρηση της αποτελεσματικότητας και της αποδοτικότητας (Greene 1994) (σελ.. 100).

Οι μελετητές εργάστηκαν για μεγάλο χρονικό διάστημα και με διαφωνίες σχετικά με τον τρόπο αξιολόγησής της, τους στόχους και το περιεχόμενό της, καθώς και τους δείκτες της

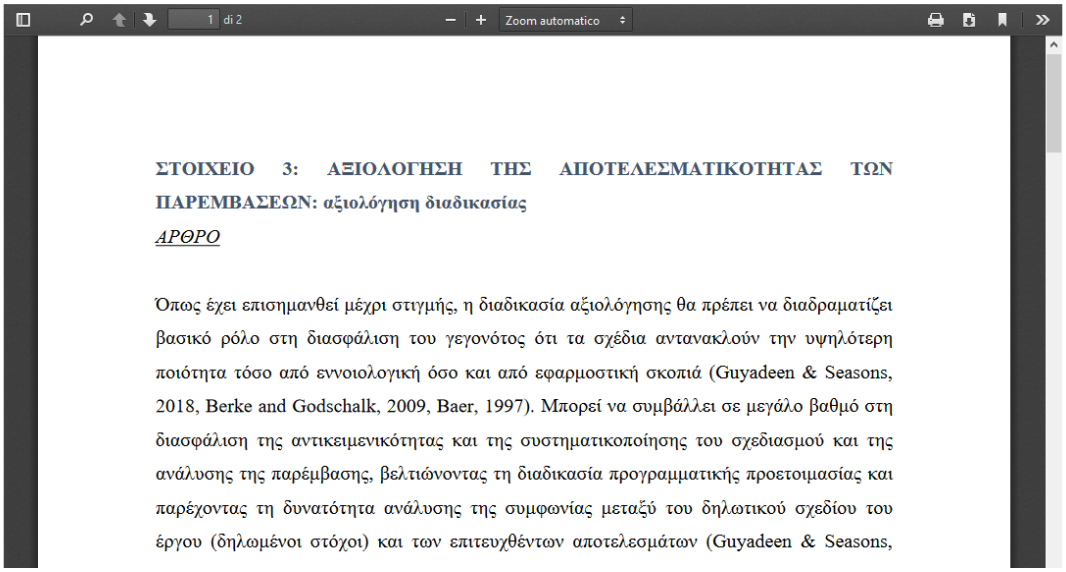
ΑΞΙΟΛΟΓΗΣΗ ΤΗΣ ΑΠΟΤΕΛΕΣΜΑΤΙΚΟΤΗΤΑΣ ΤΩΝ ΠΑΡΕΜΒΑΣΕΩΝ: αξιολόγηση διαδικασίας



ΣΤΟΙΧΕΙΟ 3: ΑΞΙΟΛΟΓΗΣΗ ΤΗΣ ΑΠΟΤΕΛΕΣΜΑΤΙΚΟΤΗΤΑΣ ΤΩΝ ΠΑΡΕΜΒΑΣΕΩΝ: αξιολόγηση διαδικασίας

ΑΡΘΡΟ

Όπως έχει επισημανθεί μέχρι στιγμής, η διαδικασία αξιολόγησης θα πρέπει να διαδραματίζει βασικό ρόλο στη διασφάλιση του γεγονότος ότι τα σχέδια αντανακλούν την υψηλότερη ποιότητα τόσο από εννοιολογική όσο και από εφαρμοστική σκοπιά (Guyadeen & Seasons, 2018, Berke and Godschalk, 2009, Baer, 1997). Μπορεί να συμβάλλει σε μεγάλο βαθμό στη διασφάλιση της αντικειμενικότητας και της συστηματικοποίησης του σχεδιασμού και της ανάλυσης της παρέμβασης, βελτιώνοντας τη διαδικασία προγραμματικής προετοιμασίας και παρέχοντας τη δυνατότητα ανάλυσης της συμφωνίας μεταξύ του δηλωτικού σχεδίου του έργου (δηλωμένοι στόχοι) και των επιτευχθέντων αποτελεσμάτων (Guyadeen & Seasons,

QUIZ 3

3 points possible (graded)

1. Σύμφωνα με τους Rychetnik, Frommer, Hawe and Shiell (2002), η αξιολόγηση ορίζεται ως:

- ○ Η διαδικασία προσδιορισμού της αξίας μιας παρέμβασης μέσα από την σύγκριση με προκαθορισμένα και ρητά πρότυπα
- ○ Ερευνητική ανάγνωση των δεδομένων που συλλέγονται μέσω μιας επίσημης έρευνας ή μέσω συγκεκριμένων ερευνητικών μοντέλων
- ○ Το κοινωνικό, πολιτικό και/η οργανωτικό πλαίσιο εντός του οποίου προγραμματίζεται η παρέμβαση
- ○ Μια σειρά από αλλαγές και αποτελέσματα τα οποία μπορούν να καθοριστούν εκ των προτέρων

2. Κατά την αξιολόγηση της αποτελεσματικότητας μιας παρέμβασης, ποιο από αυτά ΔΕΝ μοιάζει να αποτελεί σημαντικό παράγοντα? (Rychetnik et al., 2002)

- ○ Η συνάφεια των μετρούμενων επιπτώσεων στο πλαίσιο εφαρμογής
- ○ Το μέγεθος των μετρούμενων αποτελεσμάτων
- ○ Ο αριθμός των παρεμβάσεων που πραγματοποιούνται από τον οργανισμό
- ○ Η ισχύς των αποδεικτικών στοιχείων, που καθορίζεται από ένα συνδυασμό σχεδιασμού μελέτης, μεθοδολογικής ποιότητας και στατιστικής ακρίβειας

3. Η Αξιολόγηση...

- ○ Θα πρέπει να αποφεύγεται η συνεκτίμηση του ενδιαφέροντος των ανθρώπων που συμμετέχουν, στις αποφάσεις που αφορούν τις παρεμβάσεις
- ○ Δεν απαιτεί την συσχετισμό ανάμεσα στις μεθόδους αξιολόγησης και στο σχέδιο που τελεί υπό αξιολόγηση
- ○ Θα πρέπει να γίνεται μόνο στα αποτελέσματα
- ○ Επιτρέπει την εμπειρική τεκμηρίωση των αδύναμων αλλά και των δυνατών σημείων των σχεδίων παρέμβασης

Transcript

Καλώς ορίσατε. Εδώ είμαστε και πάλι σε μια νέα εβδομάδα, με νέες πτυχές, νέες ιδέες.

Αυτήν την εβδομάδα θα συζητήσουμε πτυχές που σχετίζονται με βέλτιστες πρακτικές,

πτυχές που σχετίζονται με την παρατήρηση και πτυχές που σχετίζονται με δείκτες κακοποίησης και κακομεταχείρισης παιδιών.

Ας ξεκινήσουμε με το πρώτο στοιχείο. Μαζί θα διερευνήσουμε 5 00:00:25,480 --> 00:00:32,120 τα στοιχεία που σχετίζονται με την παρέμβαση της έρευνας και της πρακτικής με ιδιαίτερη έμφαση

στην ανάπτυξη βέλτιστων πρακτικών. Μετά από αυτό θα εξετάσουμε τις μεθοδολογικές πτυχές

της έρευνας στη Φροντίδα με ενημέρωση για το ψυχικό τραύμα, την οποία πλέον μάθαμε

να κατανοούμε και να διαβάζουμε, ενώ θα έχουμε την ευκαιρία να κατανοήσουμε περαιτέρω τον τρόπο με τον οποίο αυτές εφαρμόζονται

στον ερευνητικό σχεδιασμό, τον τρόπο χρήσης της Φροντίδας αυτής

στην έρευνα και, στη συνέχεια, να κατανοήσουμε τη σύνδεση από τη θεωρία στην πράξη.

Έπειτα, θα προσπαθήσουμε να προσδιορίσουμε τα στοιχεία που αποτελούν

μια καλή ερευνητική πρόταση εξετάζοντας πτυχές που σχετίζονται με μια ορθή τεχνική, όπως η παρατήρηση.

Η παρατήρηση ως κλινικό εργαλείο, η παρατήρηση ως εργαλείο που μπορεί να επιτρέψει σε έναν φορέα

που συνεργάζεται ή προτίθεται να εργαστεί ή (για χιλιάδες άλλους λόγους)

είναι πρόθυμος να γνωρίσει και να εξετάσει εις βάθος το θέμα της Φροντίδας με ενημέρωση για το ψυχικό τραύμα να χρησιμοποιήσει την παρατήρηση ως μέθοδο,

και για την κατανόηση του ατόμου που εισήλθε σε αυτό το πλαίσιο

(να έχετε κατά νου την έννοια της Φροντίδας με ενημέρωση για το ψυχικό τραύμα).

Και εδώ θα διερευνήσουμε τις απαιτήσεις και τις πιθανές εφαρμογές της κλινικής παρατήρησης και άλλα.

Στη συνέχεια, θα συνεχίσουμε με παραδείγματα

και έννοιες που συζητήθηκαν προηγουμένως, όπως ορθές πρακτικές, παρατήρηση και πώς

μπορούν να εφαρμοστούν στην κακοποίηση και κακομεταχείριση παιδιών, προσπαθώντας ταυτόχρονα να προσδιορίσουμε τους δείκτες,

λαμβάνοντας υπόψη ότι ένας δείκτης είναι μόνο ένας δείκτης, ενώ σίγουρα δεν αποτελεί

ένα θεμελιώδες και συγκεκριμένο στοιχείο κακοποίησης και κακομεταχείρισης, αλλά ένα σύνολο δεικτών

μπορεί να μας ενδιαφέρει ως στοιχείο που πρέπει να έχουμε κατά νου, καθώς μπορεί να υπάρχει κάτι που πρέπει να διερευνηθεί.

Από εδώ θα εξετάσουμε τις διαδικασίες εξέτασης

για την αξιολόγηση του ψυχικού τραύματος και θα προσπαθήσουμε να καταλάβουμε με τους συναδέλφους πόσο σημαντική μπορεί να είναι η εξέτασή

του με σκοπό τη γνώση.

Θα κλείσουμε στην πορεία με πτυχές που σχετίζονται με τη Φροντίδα με ενημέρωση για το ψυχικό τραύμα και τη σύνδεση με την έρευνα

και με το πώς μπορεί να υπάρχει ένα οργανωμένο σύστημα διαδικασιών που να πηγαίνει από τη θεωρία στην πράξη.

Εάν στο πρώτο μέρος, τις δύο πρώτες εβδομάδες, συζητήσαμε και εξετάσαμε με τους συναδέλφους

ίσως την πιο θεωρητική πλευρά του ψυχικού τραύματος, μαζί μας σήμερα,

σε αυτές τις δύο εβδομάδες, συζητήσαμε για την Έρευνα βάσει αποδείξεων ή για την Έρευνα δράσης στη Φροντίδα με ενημέρωση για το ψυχικό τραύμα.

Όμως, από εδώ και στο εξής θα προχωρήσετε σε μια νέα πορεία που θα έχει πάντοτε

ως κεντρικό θέμα το ψυχικό τραύμα και τη Φροντίδα με ενημέρωση για το ψυχικό τραύμα, αλλά από μια ελαφρώς διαφορετική οπτική,

ιδιαίτερα τη νομοθετική πλευρά, ώστε να αντιμετωπιστούν στη συνέχεια ζητήματα που σχετίζονται με τη νομοθεσία, την έρευνα και τις πολιτικές .

Εγώ και οι συνάδελφοί μου σας ευχόμαστε να έχετε,

μια σωστή εξέλιξη στην πορεία αυτή. Έχετε φτάσει πλέον στα μισά του δρόμου,

ίσως και περισσότερο, και σε αυτό το σημείο κατευθύνεστε προς το τέλος του MOOC σας.

Και πάλι σας ευχόμαστε καλή συνέχεια και θα τα ξαναπούμε στο τέλος του MOOC.

Εκπαιδευτικό υλικό

Όπως πρότειναν οι Newman & Ridenour (1998), ο τρόπος με τον οποίο οι ερευνητές πραγματοποιούν μια μελέτη και το ποια συμπεράσματα λαμβάνουν από αυτή είναι δύο πολύ διαφορετικά πράγματα και εξαρτώνται από την προσέγγισή τους ως προς την πραγματικότητα. Επιπλέον, η επιστημολογία αφορά στη μελέτη του πώς γνωρίζουμε τα πράγματα, ενώ η μέθοδος αφορά στην επιλογή της τεχνικής μέσω της οποίας είναι δυνατόν να προχωρήσουμε στη γνώση των φαινομένων (Bernard, 2006).

Όπως επισήμανε ο Lastrucci (1963), η επιστήμη συνιστά «μια αντικειμενική, λογική και συστηματική μέθοδο ανάλυσης φαινομένων που έχει σχεδιαστεί για να επιτρέπει τη συσσώρευση αξιόπιστων γνώσεων» (σελ. 6). Αυτό γίνεται μέσα από τρεις στόχους που καθοδηγούν τις επιλογές του ερευνητή (Bernard, 2006):

- Αντικειμενικότητα: αυτό συνεπάγεται ρητή υπαγωγή στις μετρήσεις, προσοχή στη μεθοδολογία και αναφορά στην αναθεώρηση από συναδέλφους εντός της επιστημονικής κοινότητας.
- Την επιστημονική μέθοδο
- Αξιοπιστία

Η ηθική διάσταση αποτελεί μέρος της επιστημονικής μεθόδου και, όταν μιλάμε για έρευνα στις ανθρωπιστικές επιστήμες, ένα κεντρικό ερώτημα είναι πώς να λειτουργήσουν φαινόμενα που είναι πολύπλοκα από τη φύση τους. Αυτό το είδος διαδικασίας βασίζεται στον ορισμό των μεταβλητών, στην αναζήτηση συσχετίσεων ή σχέσεων μεταξύ τους και στην προσπάθεια κατανόησης του εάν και πώς η παραλλαγή ενός πράγματος προκαλεί παραλλαγή ενός άλλου (Bernard, 2006). Σε σχέση με αυτές τις πτυχές, ένα θεμελιώδες στοιχείο είναι η μέτρηση και η αναγνώριση έγκυρων και αξιόπιστων δεικτών και συνδέεται στενά με τη διάρθρωση των λειτουργικών ορισμών που «αποτελούνται από ένα σύνολο οδηγιών για τον τρόπο μέτρησης μιας μεταβλητής, η οποία έχει καθοριστεί εννοιολογικά» (σελ. 38).

Η έρευνα σχετικά με την TIC (Trauma-Informed-Care)

VIEW UNIT IN STUDIO

Bookmark this page

Εκπαιδευτικό υλικό

Στην TIC, μία από τις βασικές έννοιες είναι η χρήση επιστημονικά επικυρωμένων διαδικασιών και εννοιών. Από αυτή την άποψη, είναι απαραίτητο να προωθηθεί μια συνεργατική αλληλεπίδραση μεταξύ κλινικού έργου και έρευνας προκειμένου να διερευνηθούν τα αποτελέσματα της θεραπείας και να αξιολογηθούν τα λειτουργικά μοντέλα των υπηρεσιών αναφορικά με την αποτελεσματικότητα και την αποδοτικότητα, επίσης με την επίσημη διατύπωση αυτών των πτυχών σε συγκεκριμένες κατευθυντήριες γραμμές ή/και την προσοχή στην τήρηση του συγκεκριμένου πρωτοκόλλου στα καθιερωμένα στοιχεία της διεθνούς έρευνας στον τομέα αυτό (Schäfer et al., 2018).

Από την άποψη αυτή, η συμβολή της επιστημονικής έρευνας στην ανάλυση των ορισμών της TIC και των υποκείμενων παραγόντων είναι σημαντική.

Σχετικά με αυτό, οι Becker-Blease (2017), Hanson & Lang (2016) και Johnson (2017) υπογραμμίζουν ορισμένες κρίσιμες πτυχές που σχετίζονται με την TIC και τα προβλήματα εφαρμογής, συμπεριλαμβανομένης, για παράδειγμα, της εστίασης στην επιστημονική βιβλιογραφία σχετικά με τις θεωρητικές πτυχές και τις θεμελιώδεις αρχές εις βάρος της προσοχής στα απτά στοιχεία και την εφαρμογή τους στην πράξη: «υπάρχει ένα κενό στο πώς οι επαγγελματίες μπορούν να μετατρέψουν τη θεωρία και τις αρχές σε καθημερινή πρακτική και επομένως να αξιολογήσουν την αποτελεσματικότητά τους» (Becker-Blease, 2017, σελ. 3). Επομένως, η εστίαση στην έρευνα είναι χρήσιμη για την αξιολόγηση των πρωτοβουλιών, προγραμμάτων και υπηρεσιών αναφορικά με την εφαρμογή με ενημέρωση για το ψυχικό τραύμα, καθώς και για το εάν αυτά σχετίζονται με σημαντικά θετικά αποτελέσματα.

Στην προσπάθεια να πραγματοποιηθεί μια εποικοδομητική και λειτουργική ανταλλαγή μεταξύ εννοιολογικών και θεωρητικών πτυχών και εκείνων που σχετίζονται με την εφαρμογή, θα πρέπει να δοθεί ιδιαίτερη έμφαση στην ανάλυση της δυνατότητας εφαρμογής των τυποποιημένων διαδικασιών και δεικτών, τόσο ως προς τα στοιχεία της διαδικασίας όσο και ως προς τα αποτελέσματα που προέκυψαν. Η επιστημονική βιβλιογραφία για το θέμα αυτό καλεί τους οργανισμούς και τα ιδρύματα να θεωρήσουν ιδιαίτερα σχετική τη διάρθρωση των ερευνητικών έργων, τόσο βασικών όσο και εφαρμοστικών, με στόχο τη διαχείριση των διαδικασιών ελέγχου (έλεγχος βάσει αποδείξεων), την ανάλυση διαδικασιών αξιολόγησης που στοχεύουν στην αναγνώριση τραυματικών γεγονότων και των ιδιαιτεροτήτων τους. Επιπλέον, για τον σκοπό αυτό, είναι σημαντικό οι τυχαιοποιημένες, ελεγχόμενες μελέτες να διεξάγονται σε πειραματική βάση ώστε να ελέγχεται η αποτελεσματικότητα των παρεμβάσεων που προσανατολίζονται στο ψυχικό τραύμα.

ΑΡΘΡΟ

Υπάρχουν διαφορετικές προσεγγίσεις στη διάρθρωση ενός έργου (Leone & Prezza, 1999) στον κοινωνικό τομέα και στον τομέα της υγείας: α) συνοπτική-ορθολογική (που συνεπάγεται μέγιστη διάρθρωση του περιεχομένου εκ των προτέρων), β) συντονισμένος-συμμετοχικός ή διαλογικός σχεδιασμός (όπου η συνεχής διαπραγμάτευση των στόχων μεταξύ εμπειρογνωμόνων και αποδεκτών είναι κεντρική), γ) ευρετική (η οποία προβλέπει μια ελάχιστη εκ των προτέρων διάρθρωση των στόχων).

Από γενική άποψη, τα ακόλουθα βήματα πρέπει να τηρηθούν στην ερευνητική διαδικασία:

1. Διατυπώνεται ένα θεωρητικό πρόβλημα (που προκύπτει από την ανάλυση της

3 points possible (graded)

1. Ο λειτουργικός ορισμός:

- ○ Δεν είναι χρήσιμος για την μέτρηση μιας μεταβλητής
- ○ Είναι υπό επεξεργασία κατά την μέτρηση μιας μεταβλητής
- ○ Ακολουθεί τον εννοιολογικό ορισμό μιας μεταβλητής
- ○ Εκτελείται πριν από τον εννοιολογικό ορισμό μιας μεταβλητής

2. Στο πεδίο της Ενημερωμένης Φροντίδας Τραύματος είναι κρίσιμο να:

- ○ Προωθείται η συνεργατική αλληλεπίδραση μεταξύ της κλινικής εργασίας και της έρευνας
- ○ Αποφευχθεί η συνεκτίμηση της συμβολής της επιστημονικής έρευνας
- ○ Αποφευχθεί η συνεκτίμηση κρίσιμων οπτικών και δυσκολιών κατά την εφαρμογή
- ○ Επιβληθεί μια μεθοδολογία παρέμβασης στους φορείς διαχείρισης

3. Σε κάθε στάδιο της διαδικασίας σχεδιασμού:

- ○ Τα δεδομένα θα πρέπει πάντα α αναλύονται
- ○ Δεν υπάρχει ανάγκη χρονικού προγραμματισμού
- ○ Ο ερευνητής δεν θα πρέπει να θέτει στα ερωτήματα που λαμβάνουν υπόψη τα κρίσιμα στοιχεία από εννοιολογική και πρακτική σκοπιά
- ○ Ο ερευνητής θα πρέπει να θέτει στον εαυτό του αναρωτιέται πάνω σε σημαντικά ερωτήματα που λαμβάνουν υπόψη τα κρίσιμα στοιχεία από εννοιολογική και πρακτική σκοπιά

ΘΕΜΕΛΙΩΔΗ ΣΤΟΙΧΕΙΑ ΟΡΘΩΝ ΠΡΑΚΤΙΚΩΝ

Με την ανάλυση της βιβλιογραφίας και των πρωτοκόλλων για την αξιολόγηση των πρακτικών της TIC, είναι δυνατόν να συμπεράνουμε ότι οι ορθές πρακτικές (που μπορούν να μεταφερθούν σε διαφορετικά πλαίσια) θα πρέπει να περιλαμβάνουν:

1) μόνιμη κατάρτιση όλων των μελών του προσωπικού πάνω στο ψυχικό τραύμα και τους συσχετισμούς του. Αυτή η κατάρτιση δεν θα πρέπει να παρέχεται μόνο σε επαγγελματίες που εργάζονται απευθείας σε κλινικό επίπεδο με τους χρήστες, αλλά σε όλους όσοι εμπλέκονται σε διάφορες θέσεις και με διαφορετικές λειτουργίες στον οργανισμό,

2) συνεχή ενημέρωση του εσωτερικού προσωπικού σχετικά με πρακτικές βάσει αποδείξεων (EBP) για τη θεραπεία του ψυχικού τραύματος και εστίαση στη στάση των επαγγελματιών απέναντι σε αυτές,

3) συνεργασία με εμπειρογνώμονες στον τομέα, προκειμένου να αυξηθεί η διαθεσιμότητα των καταρτισμένων κλινικών παρόχων,

4) συμπερίληψη τυποποιημένων και τεκμηριωμένων διαδικασιών ελέγχου στην κλινική πρακτική και χρήση ειδικών και επικυρωμένων μέτρων/εργαλείων αξιολόγησης για την αναγνώριση τραυματικών συμβάντων (ACE),

5) προσοχή από κοινού στο ιστορικό των χρηστών και τη σύνδεσή του με τα συμπτώματα ή τις δυσκολίες που σχετίζονται με το ψυχικό τραύμα,

6) σύμφωνα με το προηγούμενο σημείο, αναγνώριση της ιδιαιτερότητας του κύκλου ζωής κάθε χρήστη που διασφαλίζεται μέσω ενεργητικής και συμπονετικής ακρόασης εξ ονόματος του συνόλου του προσωπικού,

7) συμπερίληψη και προσεκτική κοινή χρήση του ιστορικού ψυχικού τραύματος στα παιδιά κατά τον σχεδιασμό της παρέμβασης ή κατά τη διατύπωση των περιπτώσεων,

8) εις βάθος αξιολόγηση και συνεχή παρακολούθηση των δεξιοτήτων του προσωπικού (χρήση ειδικά σχεδιασμένων διαδικασιών),

9) εμπεριστατωμένη παρακολούθηση προκειμένου να διατηρηθούν τα πρότυπα που έχουν καθοριστεί για την καλή λειτουργία της TIC και ενδεχομένως να βελτιωθούν τα στοιχεία του ελλείμματος,

10) εφαρμογή διαδικασιών για τη μείωση του άγχους δευτερογενούς ψυχικού τραύματος και αύξηση της ευημερίας του προσωπικού,

11) δημιουργία και διατήρηση ενός καλού δικτύου συνεργασίας όχι μόνο εντός των υπηρεσιών αλλά και με άλλους οργανισμούς στον τομέα αυτό,

12) προσοχή στο επίκεντρο της επικοινωνιακής διάστασης: ο στόχος του υψηλότερου επιπέδου θα πρέπει να είναι να υπάρχουν προσεκτικοί και συνεργατικοί επαγγελματίες για την επιδίωξη στόχων και την εφαρμογή κοινών και συνεργαζόμενων διαδικασιών,

13) προσοχή στις διαδικασίες για μείωση του κινδύνου επανεμφανίσεως του ψυχικού τραύματος στους χρήστες,

14) ενθάρρυνση της συμμετοχής των ασθενών στη σχεδίαση του θεραπευτικού σχεδίου,

15) συμμετοχή των χρηστών στον σχεδιασμό της υπηρεσίας: προσοχή στα σχόλια και τις προτάσεις τους για βελτίωση του οργανισμού και των προσφερόμενων υπηρεσιών,

16) ιδιαίτερη έμφαση στην παροχή υπηρεσιών βασισμένων σε πλεονεκτήματα, με στόχο την προώθηση παραγόντων θετικής εξέλιξης (π.χ. ανθεκτικότητα, ενδυνάμωση),

17) κατάρτιση σε στρατηγικές που αποσκοπούν στην οργάνωση ενός θετικού περιβάλλοντος για τους χρήστες και το προσωπικό,

18) ιδιαίτερη προσοχή στις φυσικές και διαρθρωτικές διαστάσεις της υπηρεσίας,

19) τήρηση και προώθηση των αρχών TIC με συγκεκριμένες και σαφείς πολιτικές,

20) έναν κεντρικό ρόλο που αποδίδεται στη διάσταση της ηγεσίας και στις λειτουργίες της κατά την οργάνωση της υπηρεσίας.

ΚΑΙΡΙΑ ΣΤΟΙΧΕΙΑ ΚΑΙ ΠΡΟΚΛΗΣΕΙΣ

Παρά το γεγονός ότι το θέμα των συστάσεων για την εφαρμογή των βέλτιστων πρακτικών έχει επισημανθεί ιδιαίτερα, η χρήση πρακτικών βάσει αποδείξεων αποτελεί σήμερα ένα στοιχείο αντίδρασης εκ μέρους ορισμένων επαγγελματιών, οργανισμών και ερευνητών (Gray, Elhai, Schmidt, 2007). Αυτό θα πρέπει να αποτελέσει αντικείμενο ανάλυσης, συζήτησης και προσοχής εκ μέρους οργανισμών που ασχολούνται με την κλινική παρέμβαση στο ψυχικό τραύμα, προκειμένου να δημιουργηθεί και ένας συνεργατικός ορισμός των προτύπων.

Στην πραγματικότητα, παρόλο που η προσέγγιση TIC αναλαμβάνει σημαντικό ρόλο στην οργάνωση των υπηρεσιών και την παροχή φροντίδας για ανθρώπους που υποφέρουν από ψυχικό τραύμα αυτήν τη στιγμή, υπάρχουν ακόμα κάποια εμπόδια στην εφαρμογή της και ακόμη και πριν από αυτό στη διατύπωσή της (Baker, 2016). Συγκεκριμένα, υπάρχουν ελλείψεις ως προς αυτό:

➢ ένας σαφής λειτουργικός ορισμός

➢ η παρουσία ψυχομετρικά έγκυρων εργαλείων για την αξιολόγηση των διαστάσεων της TIC.

Για να καλυφθεί αυτό το κενό, για παράδειγμα, οι Baker και συνεργάτες (2016) δημιούργησαν και επικύρωσαν ένα εργαλείο, την Κλίμακα σχετικά με τις συμπεριφορές που σχετίζονται με τη φροντίδα με ενημέρωση για το ψυχικό τραύμα (ARTIC), για να αξιολογήσουν τις σχετικές με την TIC συμπεριφορές του προσωπικού που εργάζεται σε διαφορετικούς τομείς παρέμβασης ή σε περιβάλλοντα με άτομα με τραυματικές ιστορίες. Προηγουμένως στη δημοσίευσή τους «Καλλιέργεια παιδείας για τη φροντίδα με ενημέρωση για το ψυχικό τραύμα (CCTIC)»: ένα πρωτόκολλο αυτοαξιολόγησης και σχεδιασμού, οι Fallot και Harris (2009) δομήσαν ένα Πρωτόκολλο Αυτοαξιολόγησης και Σχεδιασμού που περιλαμβάνει έξι τομείς, οι οποίοι συνεπάγονται αλλαγές σε επίπεδο υπηρεσίας, διοίκησης ή συστήματος. Η προσοχή στην πολυπλοκότητα της κατάστασης εφαρμογής της TIC καθίσταται όλο και περισσότερο ένας προκλητικός στόχος από την άποψη της προώθησης τόσο για τους μεμονωμένους φορείς όσο και για τις κοινωνικές και υγειονομικές υπηρεσίες στην καθημερινή τους αλληλεπίδραση και τη σχέση τους με την επιστημονική κοινότητα αναφοράς.

Έρευνα σχετικά με την TIC και σύνδεσή της με πολιτικές

VIEW UNIT IN STUDIO

ΕΡΕΥΝΑ ΣΧΕΤΙΚΑ ΜΕ ΤΗΝ TIC ΚΑΙ ΣΥΝΔΕΣΗ ΤΗΣ ΜΕ ΤΙΣ ΠΟΛΙΤΙΚΕΣ

Ως μοντέλο που στοχεύει στη διάρθρωση της παροχής υπηρεσιών, η TIC υλοποιείται σε ένα μεγάλο και ποικίλο εύρος πλαισίων. Οι Bowen and Murshid (2016) υπογραμμίζουν τον τρόπο με τον οποίο το παράδειγμα αυτό μπορεί να εφαρμοστεί εξίσου, στις θεμελιώδεις αρχές του (ασφάλεια, αξιοπιστία και διαφάνεια, συνεργασία, ενδυνάμωση, επιλογή και διασταύρωση), στις κοινωνικές πολιτικές. Και αυτό, σύμφωνα με την πρόταση των συγγραφέων, δεδομένου ότι η TIC προσφέρει στους επαγγελματίες ψυχικής υγείας (ειδικά στον δημόσιο τομέα) μια πορεία που στοχεύει στην εξάλειψη των ανισοτήτων μέσω της κλινικοοργανωτικής δράσης που, λόγω της ηθικής και δεοντολογικής της διάστασης, μπορεί επίσης να αναχθεί σε μια ευρύτερη πολιτική διάσταση. Ο Reeves (2015) είχε ήδη τονίσει πώς η ευρεία εφαρμογή των μοντέλων φροντίδας με γνώμονα την TIC μπορεί να θέσει στο επίκεντρο της παρέμβασης την ανταπόκριση στις μοναδικές και ιδιόρρυθμες ανάγκες των ατόμων που είναι επιφορτισμένα με τις υπηρεσίες αποκατάστασης, μειώνοντας έτσι τις ανισότητες ευημερίας που βιώνει αυτός ο ευάλωτος πληθυσμός.

Πρόσφατα, οι Levy-Carrick και συνεργάτες (2019) υπογράμμισαν την άνιση μεταχείριση στο πλαίσιο του τραύματος ως κρίσιμο ζήτημα στον εθνικό οργανισμό υπηρεσιών υγείας, την οποία η υιοθέτηση της TIC μπορεί να διορθώσει, αν όχι εντελώς, τουλάχιστον ευρέως. Στην πραγματικότητα, ένα κεντρικό σημείο που υπογραμμίστηκε από τους συγγραφείς είναι ότι η αποτελεσματική εφαρμογή αυτού του παραδείγματος θα εξασφαλίζεται με την πλήρη συμμετοχή των παρόχων φροντίδας στον σχεδιασμό και την υλοποίηση των δραστηριοτήτων σε κάθε βήμα. Στο βιβλίο τους «Caring for the vulnerable: Perspectives in nursing theory, practice, and research», οι De Chesnay and Anderson (2019) έχουν επίσης τονίσει ότι η ψυχική υγεία έχει πολιτικό και συμμετοχικό χαρακτήρα (ιδίως από πλευράς χρηστών). Σύμφωνα με αυτό, ο Παγκόσμιος Οργανισμός Υγείας έχει συχνά προτρέψει πολιτικές για τη δημιουργία ενός χώρου συνεργασίας στον οποίο οι επαγγελματίες και οι ομάδες που υπερασπίζονται τα δικαιώματα των χρηστών των υπηρεσιών ψυχικής υγείας (ομάδες υπεράσπισης) καθώς και ένα ευρύ φάσμα ενδιαφερομένων μπορούν να συμμετάσχουν προς την κατεύθυνση μιας συνέργειας, προσεκτικής για τις αμοιβαίες ανάγκες.

Επιπλέον, όπως συμβαίνει σε ορισμένες περιπτώσεις, είναι σημαντικό να συμβάλλουμε πολιτικά στην απόφαση χρηματοδότησης μελετών για την ανάλυση και την προώθηση πρακτικών βάσει αποδείξεων, τη δημιουργία και τη διάδοση κοινών προτύπων και τον καθορισμό του οργανωτικού δείκτη και των κοινοτικών στόχων των οργανισμών και ιδρυμάτων που εμπλέκονται στην παροχή μοντέλων φροντίδας (Ko et al., 2008, Bateman & Anderson, 2013, Levy-Carrick et al., 2019).

Αυτά που έχουν ειπωθεί μέχρι στιγμής αφορούν στη γενική διάσταση της πολιτικής για την υγεία, αλλά αφορούν επίσης στην τοπική διάσταση ως απάντηση σε συγκεκριμένες ανάγκες της εκάστοτε περιοχής και, ειδικότερα, στις πολιτικές μεμονωμένων οργανισμών ή υπηρεσιών. Η βιβλιογραφία που ασχολείται με την TIC υποδηλώνει ότι «για να εφαρμοστεί ενημερωμένη βοήθεια για το ψυχικό τραύμα, υπάρχει ανάγκη προετοιμασίας, αξιολόγησης και οργανωτικής αλλαγής (Harris & Fallot, 2001, Rivard, Bloom, McCorkle, & Abramovitz, 2005) [...] Η εφαρμογή ενημερωμένων πρακτικών σχετικά με το τραύμα βασίζεται έτσι στη χρήση εξατομικευμένων οργανωτικών δεδομένων για την ενημέρωση του σχεδιασμού και της εφαρμογής» (Hummer et al., 2010, σελ. 82). Η ικανότητα υποστήριξης πολιτικών με δεδομένα από αποτελεσματικές ερευνητικές εγκαταστάσεις αποτελεί αναμφισβήτητα προτεραιότητα και επιθυμητό στρατηγικό στοιχείο (Levy-Carrick et al., 2019). Για παράδειγμα, στο επίπεδο των εργαλείων που είναι χρήσιμα για την ανάλυση του πόσο προσανατολισμένες προς τις αρχές της TIC είναι οι οργανωτικές πολιτικές, το πρωτόκολλο CCTIC που αναπτύχθηκε από τους Fallot and Harris (2009) θα μπορούσε να είναι ιδιαίτερα ενδιαφέρον στον βαθμό που περιπλέκει τομείς και υποτομείς, οι οποίοι εμπλέκονται στην αξιολόγηση οργανωτικών υπηρεσιών και πρωτοβουλιών στον τομέα της φροντίδας ψυχικών τραυμάτων.

Συνεπώς, η υιοθέτηση μιας προοπτικής προσανατολισμένης στην TIC συνεπάγεται ευαισθησία σε αυτό που τόνισαν οι Levy-Carrick και συνεργάτες (2019): «Η βοήθεια προς τους ασθενείς μας και τους εαυτούς μας θα απαιτήσει μια κρίσιμη αλλαγή προοπτικής που πρέπει να παρουσιαστεί στην αρχή της κατάρτισης, να ενισχυθεί σε όλα τα μέρη, να διαμορφωθεί από παλαιότερους επαγγελματίες και να προωθηθεί από τις επόμενες γενιές» (σελ. 107).

Transcript

[Η ενηλικίωση δεν είναι απλό πράγμα. Ποιες είναι οι καθημερινές προκλήσεις;]

Βρισκόμαστε στη Ρώμη και παίρνουμε συνέντευξη από άτομα ηλικίας μεταξύ 18 και 22 ετών

Τι είναι ο φόρος TARI; [φόρος για τα απόβλητα στην Ιταλία]

Τι είναι;...

Α ναι, για την αποταμίευση...

Μια έννοια σχετικά με την οικονομία...

Ο TARI είναι ένα πράγμα, ένα πολιτικό πράγμα...

Ναι σωστά

Τι είναι ο φόρος TARI;

Ο TARI; Είναι φόρος;

Πρέπει να ψάξεις για σπίτι: πώς θα το κάνεις;

Τι κάνεις; Ποια κίνηση θα κάνεις;

Με τα μέσα μαζικής μεταφοράς...

Η Giulia το βρήκε.

Μέσω ενός μεσιτικού γραφείου.

Μένω στο σπίτι με τη μαμά

που πάντα με περιμένει

Τι είδους συμβόλαιο θα υπογράψεις;

Εννοώ, απλά πληρώνω, δηλαδή πρέπει να πληρώσω

Συμβόλαια, οκ, αορίστου διάρκειας, μακροπρόθεσμα

συμβόλαια...

Εννοώ ότι μόλις μπήκα στη Νομική…

αλλά μόλις ξεκίνησα! Άρα…

Κάνεις το 4…; [4+4, ένα συνηθισμένο συμβόλαιο στέγασης]

4 μήνες;

Συν 5

Τα χρήματα για ενοίκιο είναι πεταμένα λεφτά.

Δηλαδή, το νερό και το ρεύμα περιλαμβάνονται στην τιμή

4;

Ο τραπεζικός λογαριασμός

Μια ανάκριση στα Λατινικά μου φαίνεται πιο εύκολη!

Εεε, δεν ξέρω

Εκεί που κάνεις κατάθεση…

Εάν θέλετε, μπορούμε να μιλήσουμε για τον Σενέκα

Όταν έχεις κάποιο πρόβλημα, ποιον καλείς;

Giulia

Τον μπαμπά

Τον Σενέκα, που έχει πεθάνει…άρα τη μαμά και

τον μπαμπά προς το παρόν.

Μερικές ερωτήσεις έχουν δύσκολες απαντήσεις, αλλά οι νέοι που έγιναν 18 χρονών

και μια μέρα θα πρέπει να τις αντιμετωπίσουν μόνοι τους πια.

Άτομα που αποχωρούν από τη φροντίδα

Δεν ξέρω τι είναι αυτό

Ανάγκες…υγείας;...

Ποιοι είναι αυτοί;

Παίκτες της Λίβερπουλ

Δεν ξέρω τι είναι αυτό, δεν τους έχω ξανακούσει

Δεν καταλαβαίνω την ερώτηση

Κληρικοί

Είναι νέοι που γίνονται 18 χρονών,

ζουν σε ανάδοχη οικογένεια και χρειάζεται να την εγκαταλείψουν και να βρουν μια λύση να είναι ανεξάρτητοι

Τέλεια!

[Το μέλλον χτίζεται μέρα με τη μέρα]

Τι μπορούμε να πούμε σε αυτούς τους νέους ανθρώπους; Ελάτε τώρα;!

Τι… Να τους ευχηθούμε να είναι καλά, τι να τους πούμε;!

Quiz 5

3 points possible (graded)

1. Η ενημερωμένη στο τραύμα θεραπευτική προσέγγιση (TIC)

- ○ Αναγνωρίζει αποκλειστικά την ψυχολογική διάσταση του ατόμου
- ○ Προωθεί την φροντίδα του ατόμου μέσα από μια ολιστική οπτική
- ○ Αναγνωρίζει μόνο τη φυσική διάσταση του ατόμου
- ○ Αναγνωρίζει μόνο την κοινωνική διάσταση του ατόμου

2. Σε μια παρέμβαση, για να ληφθούν υπόψη οι βέλτιστες πρακτικές θα πρέπει:

- ○ να αποφεύγεται να δίνεται σημασία στο ιστορικό των ωφελούμενων και στην σύνδεση τους με τα συμπτώματα ή τις δυσκολίες που σχετίζονται με το τραύμα
- ○ να διασφαλίζεται ότι το εσωτερικό προσωπικό συνεχίζει πάντα να εκτελεί τις διαδικασίες στις οποίες είχε αρχικά εκπαιδευτεί
- ○ να αποφεύγονται να λαμβάνονται υπόψη κατά την κλινική πρακτική τυποποιημένες και τεκμηριωμένες διαδικασίες
- ○ να προωθείται η σε βάθος αξιολόγηση και η συνεχής παρακολούθηση των ικανοτήτων του προσωπικού (μέσω της χρήσης ειδικά σχεδιασμένων διαδικασιών)

3. Μια καλή ερευνητική πρόταση...

- ○ διεξάγει ανάλυση σκοπιμότητας και καθορίζει χρονοδιάγραμμα
- ○ διατηρεί τους ερευνητικούς στόχους όσο πιο γενικούς γίνεται
- ○ διατυπώνει πάντα υποθέσεις έρευνας μετά από την συλλογή των δεδομένων
- ○ πάντα παρέχει ένα στρωματοποιημένο δείγμα

3. Μια καλή ερευνητική πρόταση...

- ○ διεξάγει ανάλυση σκοπιμότητας και καθορίζει χρονοδιάγραμμα
- ○ διατηρεί τους ερευνητικούς στόχους όσο πιο γενικούς γίνεται
- ○ διατυπώνει πάντα υποθέσεις έρευνας μετά από την συλλογή των δεδομένων
- ○ πάντα παρέχει ένα στρωματοποιημένο δείγμα

Το 1969 η Αμερικανίδα ψυχολόγος Μαίρη Έινσγουορθ πρόσθεσε στην αναπτυξιακή ψυχολογία

μία νέα διαδικασία μελέτης της προσκόλλησης στα νήπια.

Την ονόμασε "Ταξινόμηση Παράξενης Κατάστασης" και είναι ευρέως γνωστή ως "Παράξενη Κατάσταση".

Ως ενήλικες, γνωρίζετε πότε διαμορφώσατε μία προσκόλληση με κάποιον.

Γνωρίζετε την αίσθησή της και πώς να εκφράσετε λεκτικά τα συναισθήματά σας.

Ωστόσο, όταν πρόκειται για βρέφη ή παιδιά,

αυτά δεν έχουν ακόμα αναπτύξει τις συγκεκριμένες δεξιότητες

και άρα οι ερευνητές πρέπει να καταφύγουν σε πιο λεπτές τεχνικές,

όπως είναι η παράξενη κατάσταση, που μετράει την ασφάλεια μιας προσκόλλησης,

σε νήπια 1-2 ετών. μία εικοσάλεπτη συμμετοχική παρατήρηση

στην οποία ο ερευνητής παρατηρεί τις συμπεριφορικές αντιδράσεις του νηπίου σε μια σειρά από σενάρια.

Η Παράξενη Κατάσταση της Έινσγουορθ περιλαμβάνει 8 στάδια, με τρίλεπτη περίπου διάρκεια το καθένα.

Αρχικά η μητέρα, το νήπιο και ο ερευνητής βρίσκονται όλοι μαζί στο δωμάτιο,

έναν μικρό, ουδέτερα χρωματισμένο χώρο με λίγα παιχνίδια για να παίξει το παιδί.

Ο πειραματιστής αποσύρεται μετά από 1 λεπτό περίπου και η μητέρα με το νήπιο μένουν μόνοι

επί 3 περίπου λεπτά. Σε αυτό το στάδιο

οι ερευνητές παρακολουθούν εάν το παιδί νοιώθει την αυτοπεποίθηση να εξερευνήσει το νέο περιβάλλον

έχωντας τη μητέρα σε ασφαλή απόσταση. Ένας άγνωστος μπαίνει στο δωμάτιο με τη μητέρα και το παιδί.

Οι ερευνητές καταγράφουν την αντίδραση του νηπίου σε αυτόν τον άγνωστο που μόλις μπήκε,

ο οποίος μένει μόνος με το νήπιο όταν η μητέρα βγαίνει από το δωμάτιο.

Σε αυτό το στάδιο, οι ερευνητές ανιχνεύουν στη συμπεριφορά του νηπίου 21 00:01:51,450 --> 00:01:55,850 ενδείξεις άγχους αποχωρισμού. Τρία λεπτά αργότερα η μητέρα επιστρέφει

και οι ερευνητές παρατηρούν την αντίδραση του νηπίου στην επανασύνδεση. Ο άγνωστος βγαίνει από το δωμάτιο.

Μετά από λίγα λεπτά η μητέρα βγαίνει από το δωμάτιο αφήνοντας το νήπιο μόνο

για πρώτη φορά στο πείραμα. Ο επόμενος που μπαίνει στο δωμάτιο είναι ο άγνωστος

και, τέλος, μετά από 3 λεπτά επιστρέφει η μητέρα και φεύγει ο άγνωστος.

Γενικά πρόκειται για μία απόλυτα παράξενη κατάσταση για όλους τους εμπλεκόμενους.

Άρα τι μετρούσαν οι ερευνητές; Όταν η μητέρα βρισκόταν στο δωμάτιο με το νήπιο,

μετρούσαν τη συμπεριφορά του νηπίου με βάση τέσσερα κριτήρια.

"Εγγύτητα και αναζήτηση επαφής", "Διατήρηση επαφής",

"Αποφυγή εγγύτητας και επαφής" και "Αντίσταση στην επαφή και την εμψύχωση".

Επίσης, καταγράφονταν οι διερευνητικές συμπεριφορές του νηπίου καθώς εξερευνούσε το περιβάλλον.

Η Έινσγουορθ ανέφερε ότι τα νήπια εκδηλώνουν έναν από τους εξής τρεις τύπους προσκόλλησης.

Τα νήπια με "ασφαλή προσκόλληση" εκδήλωσαν δυσφορία όταν αποχωρίστηκαν τη μητέρα τους, ήταν αποφευκτικά

όταν έμειναν μόνα με τον άγνωστο αλλά φιλικά όταν ήταν παρούσα και η μητέρα

και χαρούμενα όταν η μητέρα έμπαινε και πάλι στο δωμάτιο.

Το 70% των παιδιών ανήκαν σε αυτή την κατηγορία. Το 15% των παιδιών εκδήλωσε "αμφίθυμη προσκόλληση".

Αυτά τα παιδιά παρουσίασαν έντονη δυσφορία

όταν η μητέρα βγήκε από το δωμάτιο και σημαντικό φόβο απέναντι στον άγνωστο.

Όταν η μητέρα επέστρεψε στο δωμάτιο, τα αμφίθυμα παιδιά προσέγγιζαν τη μητέρα

αλλά απέρριπταν την επαφή. Η Έινσγουορθ ανέφερε ότι ένα τελευταίο 15% των παιδιών

είχαν μία "αποφευκτική προσκόλληση". Τα νήπια αυτά δεν εκδηλώνουν ενδιαφέρον όταν η μητέρα

αποχωρεί από το δωμάτιο και παίζουν χαρούμενα με τον άγνωστο.

Όταν η μητέρα επιστρέφει, τα αποφευκτικά παιδιά μετά βίας αντιλαμβάνονται την άφιξή της.

Το 1990 οι Μέιν και Σόλομον πρόσθεσαν ότι ένα πολύ μικρό ποσοστό

είχε αντιφατική συμπεριφορά και όρισαν αυτή την προσκόλληση ως "αποδιοργανωμένη".

Σύμφωνα με την "Υπόθεση Ευαισθησίας Φροντιστή" της Έινσγουορθ, οι διαφορές στην προσκόλληση νηπίων

εξαρτώνται από τη συμπεριφορά της μητέρας προς το παιδί

κατά τη διάρκεια μίας κρίσιμης περιόδου ανάπτυξής του.

Η ΣΗΜΑΣΙΑ ΤΗΣ ΠΑΡΑΤΗΡΗΣΗΣ

Συζητάμε για την κακομεταχείριση και την κακοποίηση παιδιών και πριν αποκτήσουμε πρόσβαση στο ποιες

είναι οι συνέπειες ενός τραυματικού γεγονότος ή έκθεσης σε συγκεκριμένες μορφές βίας

σύμφωνα με τους δείκτες συμπεριφοράς, θα αναφέρουμε εν συντομία

τις κατηγορίες θυματοποίησης στον τομέα της κακοποίησης. Ας ξεκινήσουμε από τις διεθνείς ταξινομήσεις:

πρώτα έχουμε την ψυχολογική κακοποίηση, που ονομάζεται επίσης «Συναισθηματική κακομεταχείριση»/«Ψυχολογική κακοποίηση»,

μετά υπάρχει η σωματική κακοποίηση και τέλος η σεξουαλική κακοποίηση.

Σχετικά με την ψυχολογική κακοποίηση, είναι η έκθεση σε μορφές βίας που χαρακτηρίζονται

από σωματική βλάβη την οποία περνά το παιδί. Αποτελεί συνεπώς

ένα πολύ ισχυρό τραυματικό γεγονός, καθώς έχει συνέπειες για την ανάπτυξη,

τις οποίες θα δούμε παρακάτω. Όταν μιλάμε για ψυχολογική βία,

αναφερόμαστε σε προσβολές, υποτίμηση, κοινωνική απομόνωση

του παιδιού και παραμέληση. Αυτές είναι οι

μορφές βίας που είναι λιγότερο ορατές, αλλά που έχουν ψυχολογικό αντίκτυπο και, ως εκ τούτου, αποτελούν μακροχρόνιο τραυματικό γεγονός.

Τέλος, η σεξουαλική κακοποίηση αναφέρεται σε όλες τις πράξεις που σχετίζονται με θυματοποίηση

και οι οποίες συνδέονται με σωματική έκθεση σε σεξουαλική βία, αιμομιξία,

αγγίγματα ή ακατάλληλα αγγίγματα από όσους έχουν την επιμέλεια του παιδιού σε μια προστατευμένη κατάσταση.

Ας αναλύσουμε τις συνέπειες που σχετίζονται

με την κακοποίηση και τη βία κατά του παιδιού,

λαμβάνοντας υπόψη τόσο τους δείκτες συμπεριφοράς όσο και τους συναισθηματικούς δείκτες. Οι συνέπειες που αντιμετωπίζει το παιδί

κατά τη διάρκεια της ανάπτυξής του είναι, για παράδειγμα,

διαταραχές στην αντίληψη του σώματος και συνεπώς στην εικόνα του σώματός του.

Το παιδί δεν μπορεί να καταλάβει εάν το σώμα του ανήκει σε παιδί ή ενήλικα, επειδή έχει ερωτικοποιηθεί

από νεαρή ηλικία. Άλλες συνέπειες είναι οι χρόνιες δυσκολίες στον ύπνο. Με άλλα λόγια, το τραυματικό γεγονός

έχει αντίκτυπο στη ρύθμιση της ροής ύπνου-αφύπνισης. Έπειτα, υπάρχουν διαταραχές προσοχής και δυσκολίες κατά τη συγκέντρωση

και προσοχή στο σχολείο.

Εάν το παιδί είναι κάτω των 3-5 ετών, μπορεί να προκύψουν και διαταραχές κένωσης.

Κατά την εφηβεία,

άλλες εκδηλώσεις αναστάτωσης που μπορεί να εκφράσει το παιδί ή το νεαρό άτομο είναι οι διατροφικές διαταραχές,

συμπεριλαμβανομένης της ανορεξίας και της βουλιμίας, πράξεις καταφανούς επιθετικότητας έναντι

όλων των υποκειμένων που τείνουν να εκφράζουν συμπεριφορά επίδειξης προσοχής προς το παιδί

(το παιδί μπορεί να υπερασπιστεί τον εαυτό του με καταφανή επιθετικότητα). Τέλος, πράξεις αυτοτραυματισμού,

ακριβώς επειδή υπάρχει εγγενής πόνος, μέσα δηλαδή στο παιδί

που προκαλείται από το τραυματικό γεγονός. Το παιδί αντιδρά τότε προκαλώντας τραυματισμό στον εαυτό του καθώς και σε άλλα υποκείμενα.

Αυτές είναι μερικές από τις συνέπειες της έκθεσης σε τραυματικά γεγονότα κατά τη βρεφική ηλικία,

την παιδική ηλικία και την εφηβεία, αλλά πολλές ακόμη διερευνώνται από τη βιβλιογραφία:

μαθησιακές δυσκολίες, απομόνωση και αντικοινωνική συμπεριφορά,

όπως η χρήση και κατάχρηση οινοπνεύματος και ναρκωτικών, η ασύδοτη σεξουαλική συμπεριφορά, η έκθεση

σε συγκεκριμένες σεξουαλικά μεταδιδόμενες ασθένειες.

Επομένως, αυτό μας κάνει να καταλάβουμε πώς δεν επιτυγχάνεται μια φυσιολογική αναπτυξιακή πορεία,

διότι εκείνοι που φροντίζουν το παιδί και θα πρέπει να λειτουργούν ως τα άτομα που έχουν την επιμέλειά του

κακοποιούν το παιδί σωματικά,

μέσω του ξυλοδαρμού και της εκούσιας πρόκλησης πόνου στο παιδί, σεξουαλικά,

δηλαδή με την ερωτικοποίηση του σώματος του παιδιού ή ψυχολογικά,

δηλαδή με ταπείνωση, απομόνωση και υποτίμηση του παιδιού. Αυτές οι μορφές κακοποίησης έχουν τραυματικό αντίκτυπο στο παιδί

με τις συνέπειες που μόλις εξερευνήσαμε. Αυτές οι συνέπειες αποτελούν επομένως δείκτες

συμπεριφορικού αλλά και συναισθηματικού χαρακτήρα και εκφράζουν μια αναστάτωση που το παιδί

βιώνει σε μια συγκεκριμένη χρονική στιγμή και για την οποία είναι απαραίτητο να υπάρξει έγκαιρη παρέμβαση,

προτού οι συνέπειες γίνουν όλο και πιο τραυματικές και εγγενείς στην ανάπτυξη

της προσωπικότητας του υποκειμένου, σαφώς με συνέπειες ψυχοπαθολογικού χαρακτήρα.

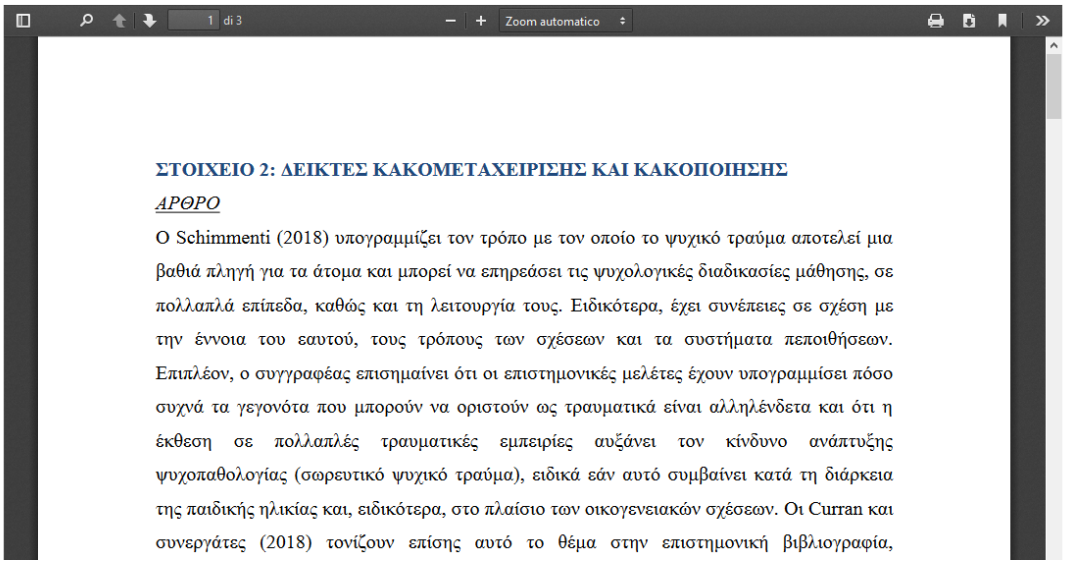
ΔΕΙΚΤΕΣ ΚΑΚΟΜΕΤΑΧΕΙΡΙΣΗΣ ΚΑΙ ΚΑΚΟΠΟΙΗΣΗΣ



ΣΤΟΙΧΕΙΟ 2: ΔΕΙΚΤΕΣ ΚΑΚΟΜΕΤΑΧΕΙΡΙΣΗΣ ΚΑΙ ΚΑΚΟΠΟΙΗΣΗΣ

ΑΡΘΡΟ

Ο Schimmenti (2018) υπογραμμίζει τον τρόπο με τον οποίο το ψυχικό τραύμα αποτελεί μια βαθιά πληγή για τα άτομα και μπορεί να επηρεάσει τις ψυχολογικές διαδικασίες μάθησης, σε πολλαπλά επίπεδα, καθώς και τη λειτουργία τους. Ειδικότερα, έχει συνέπειες σε σχέση με την έννοια του εαυτού, τους τρόπους των σχέσεων και τα συστήματα πεποιθήσεων. Επιπλέον, ο συγγραφέας επισημαίνει ότι οι επιστημονικές μελέτες έχουν υπογραμμίσει πόσο συχνά τα γεγονότα που μπορούν να οριστούν ως τραυματικά είναι αλληλένδετα και ότι η έκθεση σε πολλαπλές τραυματικές εμπειρίες αυξάνει τον κίνδυνο ανάπτυξης ψυχοπαθολογίας (σωρευτικό ψυχικό τραύμα), ειδικά εάν αυτό συμβαίνει κατά τη διάρκεια της παιδικής ηλικίας και, ειδικότερα, στο πλαίσιο των οικογενειακών σχέσεων. Οι Curran και συνεργάτες (2018) τονίζουν επίσης αυτό το θέμα στην επιστημονική βιβλιογραφία,

Transcript

Υπάρχουν πολλοί τύποι παιδικής κακοποίησης. Επιγραμμική κακοποίηση: είναι κάθε τύπος κακοποίησης που συμβαίνει στο Διαδίκτυο. Μπορεί να έχει τη μορφή μπούλινγκ, αποπλάνησης, σεξουαλικής κακοποίησης και εκμετάλλευσης στον κυβερνοχώρο από άτομα γνωστά ή άγνωστα. Η επιγραμμική κακοποίηση μπορεί να περιορίζεται μόνο στο Διαδίκτυο ή, επιπλέον, να συμβαίνει και στον πραγματικό κόσμο. Καθώς η τεχνολογία είναι πανταχού παρούσα, τα παιδιά και οι νέοι που έχουν υποστεί τέτοια κακοποίηση μπορεί να νοιώθουν παγιδευμένα μην ξέροντας πού να απευθυνθούν γιατί τους ακολουθεί όπου κι αν πάνε, όπως στο υπνοδωμάτιό τους που υποτίθεται ότι είναι ασφαλής τόπος. Αποπλάνηση: συμβαίνει όταν ένας ενήλικας χτίζει μία σχέση με ένα παιδί με στόχο να το κακοποιήσει ή να το εκμεταλλευτεί σεξουαλικά. Αυτό μπορεί να συμβεί στο Διαδίκτυο ή στον πραγματικό κόσμο από γνωστό ή άγνωστο πρόσωπο. Σεξουαλική κακοποίηση: συμβαίνει όταν ένα παιδί εξαναγκάζεται ή πείθεται να συμμετάσχει σε οποιαδήποτε σεξουαλική πράξη, όχι απαραίτητα σωματική. Ενίοτε το παιδί δεν έχει επίγνωση πως ό,τι συμβαίνει συνιστά κακοποίηση ή είναι λανθασμένο. Σωματική κακοποίηση: πρόκειται για τον σκόπιμο τραυματισμό παιδιών που προκαλεί βλάβες όπως σπασμένα πλευρά, εγκαύματα ή κοψίματα. Μπορεί να δέχονται κλωτσιές, γροθιές, ραπίσματα, να τα δηλητηριάζουν, να τα καίνε ή να τους εκσφενδονίζουν αντικείμενα. Τα νήπια μπορεί ενίοτε να τα τραντάζουν με τόση βία που να προκαλεί το θάνατό τους. Εγκατάλειψη: είναι μία διαρκής έλλειψη κάλυψης των πλέον βασικών αναγκών ενός παιδιού. Το να αφήνονται τα παιδιά να πεινούν, άπλυτα ή με ακατάλληλη ένδυση, στέγη και επίβλεψη είναι όλα παραδείγματα παιδιών σε εγκατάλειψη. Επίσης, η εγκατάλειψη μπορεί να υφίσταται όταν ένας γονέας ή φροντιστής δεν προστατεύει ένα παιδί από άλλους τύπους κακοποίησης. Μπούλινγκ: είναι η συμπεριφορά που πληγώνει κάποιον άλλο με χαρακτηρισμούς, χειροδικία, σπρώξιμο, διάδοση φήμης, απειλή ή υπονόμευση κάποιου. Αυτό μπορεί να συμβεί οπουδήποτε, ακόμα και μέσα στο σπίτι του παιδιού και συχνά σε μεγάλο βάθος χρόνου. Συναισθηματική κακοποίηση, γνωστή και ως ψυχολογική κακοποίηση, όταν ένας γονέας ή φροντιστής

διαρκώς κακομεταχειρίζεται ή εγκαταλείπει το παιδί συναισθηματικά,
η οποία μπορεί να αφορά σκόπιμη προσπάθεια να φοβίσει ή να ταπεινώσει ένα παιδί
ή να το απομονώσει ή να το αγνοεί. Επιβλαβής σεξουαλική συμπεριφορά:
τα παιδιά και οι νέοι που αναπτύσσουν επιβλαβή σεξουαλική συμπεριφορά τραυματίζουν τον εαυτό τους
και άλλους χρησιμοποιώντας σεξουαλικά ρητές λέξεις και φράσεις, ανάρμοστα αγγίγματα,
σεξουαλική βία και απειλές ή εμπλοκή σε ολοκληρωμένο σεξ, με διείσδυση,
με άλλα παιδιά ή ενήλικες. Η παιδική σεξουαλική εκμετάλλευση είναι ένα ακόμα είδος κακοποίησης.
Τα παιδιά και οι νέοι που υφίστανται σεξουαλική εκμετάλλευση είναι ευάλωτα άτομα
που έχουν εξαπατηθεί ή χειραγωγηθεί ώστε να πιστέψουν ότι βρίσκονται σε μία σχέση αγάπης.
Ενδέχεται να τους προσφέρουν χρήματα ή άλλες ανταμοιβές με στόχο τη διακίνησή τους
στη σωματεμπορία. Μπορεί να έχουν αποπλανηθεί στο Διαδίκτυο αναπτύσσοντας απόλυτη εξάρτηση
από τον κακοποιητή τους, η οποία καθιστά ακόμα δυσκολότερη τη φυγή τους.
Η εμπορία παιδιών είναι επίσης κακοποίηση. Τα παιδιά μπορεί να διακινούνται για φθηνή εργασία,
σεξουαλική κακοποίηση, οικιακή εργασία, απάτη σχετική με επιδόματα, εξαναγκασμό σε γάμο.

This section is a prerequisite. You must complete this section in order to unlock additional content.

ΑΞΙΟΛΟΓΗΣΗ ΓΝΩΣΕΩΝ

Quiz 6

4 points possible (graded)

1. Η παρατήρηση ορίζεται ως (Mantovani, 1995):

- ένας αντικειμενικός και αξιόπιστος τρόπος καταγραφής της πραγματικότητας
- Μια ενδιάμεση στιγμή μεταξύ ενός φαινομένου και της ερμηνείας του
- Η περιγραφή ενός είδους σε έναν κατάλογο
- Μια μορφή ανίχνευσης που στοχεύει στην εξερεύνηση ενός συγκεκριμένου φαινομένου

2. Κατά την διάρκεια της παρατήρησης, ένας σημαντικός παράγοντας είναι:

- Να αποφεύγεται η αλληλεπίδραση με το αντικείμενο της παρατήρησης με κάθε κόστος
- Να αποφεύγεται η επιρροή από προλήψεις και προκαταλήψεις
- Η ταχύτητα της κρίσης
- Να χρησιμοποιείτε πάντα δομημένα εργαλεία παρατήρησης

3. Στους ανηλίκους, η παρουσία δεικτών και ενδείξεων που σχετίζονται με κακομεταχείριση και κακοποίηση.....

- μπορούν να ανακύψουν από την παρατήρηση συναισθημάτων και συμπεριφορών
- οδηγούν στην άμεση απώλεια γονικής μέριμνας
- αντιστοιχούν, σε κάθε περίπτωση, σε καταστάσεις κακοποίησης και κακομεταχείρισης
- θα πρέπει να λαμβάνονται υπόψη χωρίς την επίδραση των συμπεριφορών

4. Σύμφωνα με τον Schimmenti (2018), οι τραυματικές εμπειρίες...

- ○ Είναι πάντα εύκολο να ξεπεραστούν μέσα από τη συζήτηση με φίλους και συγγενείς σχετικά με το γεγονός
- ○ Θα πρέπει να καταπιεσθούν με το να προσπαθούμε να μη τις σκεφτόμαστε
- ○ Δεν προκαλούν καμία ζημιά αν αντιμετωπιστούν ως ένα και μοναδικό γεγονός, χάρη στην πλαστικότητα των νευρώνων
- ○ Αυξάνουν την πιθανότητα εμφάνισης ψυχικών ασθενειών, ειδικά όταν το υποκείμενο υπόκειται σε πολλαπλές εκθέσεις (Σωρευτικό τραύμα)

Μαθησιακοί στόχοι

· να γνωρίζουμε συνοπτικά την κοινωνικο-πολιτισμική και νομική διαδικασία που οδήγησε στην παγκόσμια και ευρωπαϊκή αναγνώριση ότι τα παιδιά αποτελούν υποκείμενα δικαιωμάτων και ότι τα κράτη έχουν την υποχρέωση να παρεμβαίνουν άμεσα και αποτελεσματικά για την προστασία τους σε περίπτωση βίας, κακοποίησης ή παραμέλησης

· να γνωρίζουμε τα θεμελιώδη δικαιώματα και τις αρχές που καθορίζονται από το διεθνές και ευρωπαϊκό νομικό πλαίσιο για τα δικαιώματα των παιδιών εντός του οποίου μπορεί να εφαρμοστεί η Φροντίδα με ενημέρωση για το ψυχικό τραύμα (ICT). Ιδιαίτερη προσοχή θα δοθεί στο δικαίωμα των παιδιών να ενημερώνονται και να συμμετέχουν στην απόφαση που τους επηρεάζει, τη φροντίδα τους και το μέλλον τους μετά την αποχώρησή τους από το κέντρο φροντίδας

· να γνωρίζουμε και να κατανοούμε τα νομικά μέσα που εγγυώνται τη συμμετοχή των παιδιών που πάσχουν από ψυχικό τραύμα σε διαδικασίες (διοικητικές και δικαστικές) στις οποίες λαμβάνονται αποφάσεις για την προστασία τους (π.χ. το δικαίωμα του παιδιού που είναι ικανό να διαμορφώσει τη δική του άποψη για ακρόαση και, σε ορισμένες περιπτώσεις, το καθήκον να ζητηθεί η συναίνεσή του)

· να κατανοούμε τα επιχειρησιακά αποτελέσματα της προσέγγισης που βασίζεται στα δικαιώματα των παιδιών (και συγκεκριμένα των δικαιωμάτων συμμετοχής των παιδιών) στις πολιτικές για την κοινωνική μέριμνα και την υγεία

· να γνωρίζουμε και να μαθαίνουμε σε άριστο επίπεδο τη νομική ορολογία.

Ο σκοπός της νομικής διδακτικής ενότητας είναι η κατανόηση του κανονιστικού πλαισίου
και των βασικών νομικών αρχών όπου εντάσσεται η λεγόμενη θεραπεία «Trauma Informed Care».
Με την ολοκλήρωση της ενότητας θα έχετε μάθει να χρησιμοποιείτε σωστά όρους όπως κακοποίηση,
κακομεταχείριση, προκατάληψη, κατάσταση εγκατάλειψης.
Οι συγκεκριμένοι στόχοι αυτού του μαθήματος είναι η γνώση της πολιτιστικής και νομικής διαδικασίας
που οδήγησε, σε ευρωπαϊκό και παγκόσμιο επίπεδο, στην αναγνώριση ότι τα άτομα μικρής ηλικίας
έχουν δικαιώματα και ότι είναι υποχρέωση της πολιτείας να επεμβαίνει άμεσα
και αποτελεσματικά για την προστασία τους σε περιπτώσεις κακομεταχείρισης.
Στη νομική ενότητα θα μάθετε επίσης να αναγνωρίζετε τα δικαιώματα και τις θεμελιώδεις αρχές που θέτει
το ισχύον διεθνές και ευρωπαϊκό κανονιστικό πλαίσιο σχετικά με τα δικαιώματα των παιδιών

και των εφήβων,

ένα πλαίσιο εντός του οποίου εντάσσεται η θεραπεία «Trauma Informed Care».

Ιδίως σχετικά με τα δικαιώματα των παιδιών και των εφήβων στην ενημέρωση και στην ακρόαση

κατά τις διαδικασίες λήψης αποφάσεων σχετικά με τη βοήθεια, τις θεραπείες και το μέλλον τους

ακόμα και μετά την παύση αρμοδιότητας εκ μέρους της πολιτείας.

Στη νομική ενότητα θα μάθετε επίσης να αναγνωρίζετε και να κατανοείτε πώς λειτουργούν

οι κανονιστικοί μηχανισμοί που εγγυώνται τη συμμετοχή των ανηλίκων, που έχουν υποστεί κακομεταχείριση,

στις διαδικασίες λήψης αποφάσεων, διοικητικές ή νομικές, στις οποίες αποφασίζονται παρεμβάσεις

με σκοπό την προστασία τους.

Άρα, για παράδειγμα, το δικαίωμα του ανηλίκου, με ικανότητα κρίσης, στην ακρόαση

και, σε κάποιες περιπτώσεις, η υποχρέωση της απόκτησης συναίνεσης από τον έφηβο

ώστε να ενεργοποιηθεί το εργαλείο προστασίας.

Τέλος, ένα μέρος της ενότητας θα αφιερωθεί στις λειτουργικές συνέπειες της προσέγγισης

που βασίζεται στα δικαιώματα των παιδιών στις κοινωνικές και υγειονομικές πολιτικές.

Αυτό θα πραγματοποιηθεί μέσω μιας γενικής επισκόπησης αλλά και μερικών περιπτώσεων μελέτης.

Για παράδειγμα, μέσω της ανάλυσης των πολιτικών πάταξης των πρακτικών του γενετήσιου ακρωτηριασμού γυναικών

ή της χρήσης σωματικών τιμωριών στην οικογένεια

ή και μέσω της ανάλυσης των πολιτικών που έχουν υιοθετήσει πολλές χώρες

για τον ορισμό κηδεμόνα ως βοηθού ή συμβούλου των ασυνόδευτων

αλλοδαπών παιδιών.

Νομικό γλωσσάριο για το «ψυχικό τραύμα» της παιδικής ηλικίας

Ο όρος «ψυχικό τραύμα» δεν χρησιμοποιείται συνήθως στη νομική γλώσσα.

Η Διεθνής Σύμβαση για τα Δικαιώματα των Παιδιών και των Εφήβων (CRC), για παράδειγμα, σχεδιάζει να «προστατεύει το παιδί από κάθε μορφή σωματικής ή πνευματικής βίας, τραυματισμού ή κακοποίησης, εγκατάλειψης ή παραμέλησης, κακομεταχείρισης ή εκμετάλλευσης, συμπεριλαμβανομένης της σεξουαλικής κακοποίησης» (Άρθρο 19).

ΚΑΚΟΠΟΙΗΣΗ και ΚΑΚΟΜΕΤΑΧΕΙΡΙΣΗ:

Το Συμβούλιο της Ευρώπης ορίζει ως παιδική κακοποίηση: «τις πράξεις και τις ελλείψεις που διαταράσσουν σοβαρά το παιδί, απειλούν τη σωματική του ακεραιότητα, τη σωματική, πνευματική και ηθική του ανάπτυξη, οι οποίες εκδηλώνονται ως παραμέληση ή/και σωματικά ή/και ψυχικά ή/και σεξουαλικά τραύματα από μέλος της οικογένειας ή από άλλους που φροντίζουν το παιδί» (IV Εγκληματολογικό Σεμινάριο - Στρασβούργο, 1978)

Ο Παγκόσμιος Οργανισμός Υγείας δηλώνει ότι: «για την κακοποίηση και κακομεταχείριση παιδιών (κακοποίηση παιδιών, κακομεταχείριση) όλες οι μορφές σωματικής ή/και συναισθηματικής κακής υγείας, σεξουαλικής κακοποίησης, εγκατάλειψης ή παραμέλησης ή εμπορικής εκμετάλλευσης ή ο,τιδήποτε άλλο που συνεπάγεται πραγματική ή δυνητική προκατάληψη για την υγεία του παιδιού, για την επιβίωσή του, για την ανάπτυξή του ή για την αξιοπρέπειά του στο πλαίσιο μιας σχέσης που χαρακτηρίζεται από ευθύνη, εμπιστοσύνη ή εξουσία» (Παγκόσμιος Οργανισμός Υγείας, Παγκόσμια Έκθεση για τη Βία και την Υγεία, 2002).

Τόσο η κακοποίηση όσο και η κακομεταχείριση μπορούν να έχουν τη μορφή:

- ενεργούς συμπεριφοράς (για παράδειγμα, ξυλοδαρμούς, τραυματισμούς, σεξουαλικές πράξεις, εκμετάλλευση)
- συμπεριφορά παράληψης (για παράδειγμα, επιπολαιότητα, παραμέληση).

Η απουσία φυσικών αποδείξεων ψυχικού τραύματος δεν αποκλείει την υπόθεση κακομεταχείρισης ή κακοποίησης. Για παράδειγμα, η συμπεριφορά του δασκάλου/γονέα που ταπεινώνει, υποτιμά, δυσφημεί ή ασκεί ψυχολογική βία σε ένα παιδί ή το απειλεί μπορεί να αποτελεί κακοποίηση όταν συνίσταται σε ψυχολογική βία που μπορεί να βλάψει την ψυχοσωματική υγεία του παιδιού και να υπονομεύσει την αξιοπρέπειά του.

Οι όροι **ΒΙΑ** και **ΕΚΜΕΤΑΛΛΕΥΣΗ** αναφέρονται συνήθως σε ενεργές συμπεριφορές που λαμβάνουν χώρα εναντίον του παιδιού.

Η **εκμετάλλευση**, συγκεκριμένα, μπορεί να είναι οικονομικής ή σεξουαλικής φύσης

Άρθρο 32 (CRC): «Τα Συμβαλλόμενα Κράτη αναγνωρίζουν το δικαίωμα του παιδιού να προστατεύεται από την οικονομική εκμετάλλευση και από την εκτέλεση οποιασδήποτε εργασίας που ενδέχεται να είναι επικίνδυνη ή να παρεμβαίνει στην εκπαίδευση του παιδιού ή να είναι επιβλαβής για την υγεία του παιδιού ή για τη σωματική, ψυχική, πνευματική, ηθική ή κοινωνική του ανάπτυξη.»

Άρθρο 34, παρ. 1 (CRC): «Τα Συμβαλλόμενα Κράτη δεσμεύονται να προστατεύουν το παιδί από όλες τις μορφές σεξουαλικής εκμετάλλευσης και σεξουαλικής κακοποίησης.»

Η Επιτροπή των Ηνωμένων Εθνών για τα Δικαιώματα του Παιδιού προσδιορίζει ότι με τον όρο «βία» εννοούμε «όλες τις μορφές σωματικής ή ψυχικής βίας, τραυματισμού ή κακοποίησης, εγκατάλειψης ή παραμέλησης, κακοποίησης ή εκμετάλλευσης, συμπεριλαμβανομένης της σεξουαλικής κακοποίησης». Στην κοινή γλώσσα ο όρος βία συχνά χρησιμοποιείται για να ορίσει μόνο τη σωματική βλάβη ή/και την εκ προθέσεως βλάβη. Ωστόσο, η Επιτροπή δίνει ιδιαίτερη έμφαση στο γεγονός ότι η επιλογή του όρου βία σε αυτό το γενικό σχόλιο δεν θα πρέπει να ερμηνεύεται με κανέναν τρόπο ώστε να ελαχιστοποιείται ο αντίκτυπος ή η ανάγκη αντιμετώπισης των μη σωματικών ή/και εκ προθέσεως μορφών βλάβης (όπως, μεταξύ άλλων, εγκατάλειψη και ψυχολογική κακομεταχείριση) (Το δικαίωμα του παιδιού να απαλλαγεί από κάθε μορφή βίας, Γενικό σχόλιο αρ. 13 (2011) CRC / C / GC / 13, 18 Απριλίου 2011).

Τέλος, η φράση **ΚΑΤΑΣΤΑΣΗ ΕΓΚΑΤΑΛΕΙΨΗΣ** αναφέρεται σε κατάσταση σοβαρής και μόνιμης ανεπάρκειας των γονέων να φροντίζουν το παιδί λόγω παραμέλησης, σοβαρής βίας ή εκμετάλλευσης.

Καλημέρα. Σκοπός αυτού του βίντεο είναι να σας δώσει κάποιες γνώσεις σχετικά με την πολιτιστική και νομικη διαδικασία που οδήγησε, αφ' ενός, στην αναγνώριση του ότι οι ανήλικοι έχουν επίσης δικαιώματα, δηλαδή είναι δικαιούχοι κάποιων δικαιωμάτων, είναι δικαιούχοι των δικαιωμάτων που συνήθως αναγνωρίζονται για κάθε άνθρωπο καθώς και των δικαιωμάτων που αναγνωρίζονται σε ανηλίκους λόγω του γεγονότος ότι τελούν ακόμα υπό διαμόρφωση,
Και, αφ' ετέρου, στη διαδικασία που οδήγησε στην αναγνώριση της υποχρέωσης της πολιτείας να παρεμβαίνει με στόχο την προστασία και την προώθηση των δικαιωμάτων των ανηλίκων που είναι θύματα βίας και κακομεταχείρισης. Για να θέσουμε το συγκεκριμένο θέμα θα σας διαβάσω ένα απόσπασμα από ένα βιβλίο του 2006 με τίτλο «Η ζωή και οι κανόνες», των ιταλικών εκδόσεων Φελτρινέλι.

Ο συγγραφέας είναι ο Στέφανο Ροντοτά, νομικός, Ιταλός πολιτικός, μέλος της συγγραφικής ομάδας

του Ευρωπαϊκού Χάρτη Θεμελιωδών Δικαιωμάτων. Γράφει ο Ροντοτά.

«Ο νομικός κανονισμός δεν μπορεί»

«να θεωρείται ως κάτι που εξαλείφει τον πόνο από τον κόσμο, αλλά ως ένα από τα κριτήρια»

«που σηματοδοτούν το όριο του αποδεκτού πόνου, σε προσωπικό και κοινωνικό επίπεδο».

Νομίζω ότι αυτό το κείμενο μας βοηθά να περιγράψουμε το θέμα της αντίδρασης της πολιτείας

στην κακομεταχείριση των παιδιών γιατί επισημαίνει πρωτίστως ότι το δικαίωμα δεν είναι πανίσχυρο.

Κι αυτό σημαίνει ότι, παρόλο που υπάρχουν νομικοί κανόνες οι οποίοι καταστέλλουν τη βία

και την κακομεταχείριση των παιδιών και προσπαθούν να τις προλαμβάνουν,

αυτό δεν σημαίνει, δυστυχώς, ότι παύουν να υφίστανται η βία και η κακομεταχείριση.

Επιπλέον, πρέπει να παραδεχτούμε πως, συγκεκριμένα, όταν υφίσταται αυτή η βία και η κακομεταχείριση,

η πολιτεία δεν καταφέρνει πάντα να ενεργοποιήσει μία άμεση και αποτελεσματική παρέμβαση.

Επίσης, το σύντομο κείμενο του Ροντοτά μας βοηθά να στοχαστούμε σχετικά με το όριο

της κρατικής παρέμβασης, για την προστασία γενικά των προσώπων που βρίσκονται σε κατάσταση δυσχέρειας

και, ιδίως, για την υποστήριξη των ανηλίκων θυμάτων κακομεταχείρισης.

Αυτό το όριο, λοιπόν, μπορεί να ταυτιστεί με την επίθεση, την παραβίαση της ανθρώπινης αξιοπρέπειας.

Άρα η κρατική παρέμβαση πρέπει να πραγματοποιείται όταν το όριο του πόνου

είναι τόσο υψηλό ώστε να βλάπτει την αξιοπρέπεια του ανθρώπου, ενώ το πνεύμα της κρατικής παρέμβασης

σε αυτές τις περιπτώσεις πρέπει να έγκειται στη γενική υποχρέωση

της κοινωνικής αλληλεγγύης που οδηγεί, κι αυτό είναι μία από τις λειτουργίες των δικαιωμάτων,

στην προστασία των ατομικών ελευθεριών και των ατόμων που βρίσκονται σε ευάλωτη κατάσταση.

Ας δούμε τώρα τα ορόσημα αυτής της πορείας που οδήγησε στην αναγνώριση του ανηλίκου

ως προσώπου με δικαιώματα και στην υποχρέωση του κράτους να προστατεύει τους ανηλίκους

που είναι θύματα κακομεταχείρισης.

Ένα πρώτο θεμελιώδες στοιχείο μπορούμε να διακρίνουμε

στο έτος 1874, όταν η πολιτεία της Νέας Υόρκης των ΗΠΑ πραγματοποίησε δίκη

για τις βλάβες που προκάλεσε μία μητέρα στη μικρή της κόρη ονόματι Μέρι Έλεν Γουίλσον.

Η δικαστική υπόθεση της Μέρι Έλεν Γουίλσον Προκάλεσε αίσθηση γιατί αποκάλυψε την ανυπαρξία

ενός δημόσιου συστήματος προστασίας του παιδιού και η συγκεκριμένη υπόθεση οδήγησε στην ίδρυση

του πρώτου οργανισμού για αυτό τον σκοπό, την Εταιρεία Νέας Υόρκης για την πρόληψη

της βάναυσης συμπεριφοράς κατά των παιδιών. Τι είχε συμβεί;

Οι γείτονες είχαν επισημάνει σε μία μεθοδίστρια ιεραπόστολο

ονόματι Έττα Γουίλερ, ότι ένα κοριτσάκι μάλλον 5 ετών, η Μέρι Έλεν, δηλαδή,

που θα αποδεικνυόταν ότι ήταν 10 ετών, ήταν θύμα κακομεταχείρισης από τη μητέρα της.

Η Έττα Γουίλερ μπήκε στο σπίτι δήθεν ζητώντας βοήθεια για μία γειτόνισσα

με χρόνια αναπηρία. Με τη δικαιολογία αναζήτησης βοήθειας για μία γειτόνισσα

η Έττα Γουίλερ μπήκε στο σπίτι των γονέων της Μέρι Έλεν και διαπίστωσε ιδίοις όμμασι

την κατάσταση της μικρής, που όντως ήταν θύμα κακομεταχείρισης, τόσο σωματικής,

καθώς έφερε εγκαύματα, αιματώματα και κοψίματα στο σώμα, αλλά και ενδυμασία ακατάλληλη για την εποχή,

όσο και κακομεταχείρισης ψυχολογικού τύπου, γιατί το κοριτσάκι, για παράδειγμα,

επί πολλές ώρες την ημέρα εξαναγκαζόταν να μένει κλειδωμένο σε μία ντουλάπα,

και δεν μπορούσε να βγει στον δρόμο, παρά μόνο στην αυλή του σπιτιού τη νύχτα.

Η Έττα Γουίλερ επικοινώνησε με την τοπική αρχή ζητώντας από τους αρμόδιους την απομάκρυνση

του κοριτσιού από το σπίτι, αλλά οι τοπικές αρχές αρνήθηκαν γιατί δεν υπήρχε το κατάλληλο νομικό πλαίσιο

που θα επέτρεπε την απομάκρυνσή του. Η Έττα Γουίλερ δεν το έβαλε κάτω: ζήτησε και έλαβε βοήθεια

από έναν δικηγόρο ειδικευμένο στην προστασία των ζώων κατά της βάναυσης μεταχείρισης

και αξιοποιώντας αυτό το κανονιστικό πλαίσιο κατάφερε να απομακρύνει το κορίτσι από το σπίτι.

Κι έτσι, όπως είπα, το 1874 πραγματοποιήθηκε η δίκη που οδήγησε στην καταδίκη

της μητέρας σε ένα έτος φυλάκισης για την κακομεταχείριση που άσκησε στη Μέρι Έλεν.

Ανάμεσα στα κυριότερα ορόσημα, άλλη μία καθοριστική ημερομηνία για την επιβεβαίωση

των δικαιωμάτων των παιδιών είναι το 1924. Αυτή τη φορά είμαστε στην Ευρώπη, στη Γενεύη.

Η Κοινωνία των Εθνών διακηρύσσει τον Χάρτη, τη λεγόμενη «Διακήρυξη της Γενεύης»,

τη Διακήρυξη των δικαιωμάτων του παιδιού. Είναι ένας ακόμη Χάρτης που επικεντρώνεται

στις ανάγκες των ανηλίκων για υλικά αγαθά και στοργή και οι ανήλικοι αντιμετωπίζονται

ως παθητικοί παραλήπτες των δικαιωμάτων. Για παράδειγμα, η Διακήρυξη δηλώνει το εξής.

«Το παιδί που πεινάει πρέπει να τραφεί. Το παιδί που νοσεί πρέπει να θεραπευτεί».

Θα περιμένουμε μερικές ακόμα δεκαετίες για έναν νέο Χάρτη, την Παγκόσμια Διακήρυξη των Δικαιωμάτων

του παιδιού, τη Διακήρυξη της Νέας Υόρκης το 1959, αυτή τη φορά στο πλαίσιο των Ηνωμένων Εθνών,

για να φτάσουμε σε ένα έγγραφο όπου αναγνωρίζονται οι ανήλικοι ως άτομα με δικαιώματα

και άρα εισάγεται η έννοια ότι ακόμα και ο ανήλικος, όπως κάθε άνθρωπος,

μπορεί να είναι άμεσος δικαιούχος δικαιωμάτων. Στην πρώτη αρχή, για παράδειγμα, λέει.

«Το παιδί πρέπει να απολαμβάνει όλα τα δικαιώματα που δηλώνονται»

«στην παρούσα διακήρυξη». Και κατά την τρίτη αρχή, «Το παιδί έχει δικαίωμα»,

«από τη γέννησή του, σε ένα όνομα και μία εθνικότητα». Αυτή η διατύπωση των παιδικών δικαιωμάτων

επανέρχεται στο πιο γνωστό έγγραφο παγκοσμίως σχετικά με τα δικαιώματα της παιδικής ηλικίας

που είναι η Σύμβαση των Ηνωμένων Εθνών του 1989.

Έδωσα έμφαση στον όρο «Σύμβαση»

γιατί αντιπροσωπεύει μία πρώτη σημαντική καινοτομία σε σχέση με τα έγγραφα του 1924 και του 1959.

Η Σύμβαση του 1989 είναι ένα έγγραφο δεσμευτικό για τα κράτη που την έχουν επικυρώσει,

σε αντίθεση με τη Διακήρυξη που είναι μία πράξη με εφαρμογή αμιγώς προγραμματική

και άρα προτρεπτική για τα κράτη στα οποία απευθύνεται.

Η Σύμβαση του 1989 διακρίνεται επίσης για τη θεσμοθέτηση ενός μηχανισμού εποπτείας και ελέγχου

που είναι εστιασμένος στα δικαιώματα των παιδιών, με έδρα στη Γενεύη,

και εξετάζει τις περιοδικές εκθέσεις που υποβάλλονται από τα κράτη μέλη σχετικά με την εφαρμογή

της Σύμβασης στο πλαίσιο του εκάστοτε εθνικού δικαίου. Όσον αφορά τα άρθρα,

αναγνωρίζονται στον ανήλικο όλα τα ανθρώπινα δικαιώματα με βάση τους διεθνείς Χάρτες

συν μερικά ιδιαίτερα δικαιώματα που αφορούν τους ανηλίκους, οι οποίοι τελούν ακόμα υπό διαμόρφωση.

Στο θέμα της κακομεταχείρισης του ανηλίκου σημειώνω, ιδίως, το άρθρο 19

που προστατεύει «το παιδί ενάντια σε κάθε μορφή βίας» εντός του οικογενειακού περιβάλλοντος.

Επίσης, το άρθρο 34, «προστασία κατά της σεξουαλικής εκμετάλλευσης και βίας», το άρθρο 35, «προστασία του ανηλίκου»

«κατά της απαγωγής, πώλησης και εμπορίας», το 37, «προστασία κατά του βασανισμού, ποινών»

«ή απάνθρωπων και βάναυσων συμπεριφορών» και στη συνέχεια το άρθρο 39,

πολύ σημαντικό γιατί ορίζει ότι «τα κράτη μέλη»

«υιοθετούν όλα τα κατάλληλα μέτρα για να διευκολύνουν τη σωματική και ψυχολογική αποκατάσταση»

«και την κοινωνική επανένταξη κάθε παιδιού που είναι θύμα κακομεταχείρισης».

Q5.1

5 points possible (graded)

1. Στη νομική γλώσσα, ποιο από τα παρακάτω θεωρείται «ψυχικό τραύμα» της παιδικής ηλικίας;:

- ○ κάθε μορφή σωματικής και μη σωματικής βίας, ακόμη κι εάν δεν έχει διαπραχθεί με σκοπό την πρόκλησή του
- ○ μόνο σωματική βία που διαπράττεται με σκοπό την πρόκλησή του
- ○ μόνο σωματική βία, ακόμη κι εάν δεν έχει διαπραχθεί με σκοπό την πρόκλησή του
- ○ κάθε μορφή σωματικής ή μη σωματικής βίας, εφόσον διαπράττεται με σκοπό την πρόκλησή του

2. Στην περίπτωση της Mary Ellen Wilson, το θύμα παιδικής κακοποίησης έλαβε προστασία σύμφωνα με:

- ○ την απαγόρευση βάναυσης μεταχείρισης ζώων
- ○ την απαγόρευση απάνθρωπης και εξευτελιστικής μεταχείρισης
- ○ την απαγόρευση σωματικής τιμωρίας
- ○ την απαγόρευση κακοποίησης παιδιών

3. Ποιο από τα παρακάτω ισχύει;

- ○ Τα παιδιά δεν υπόκεινται σε δικαιώματα
- ○ Τα παιδιά έχουν ειδικά δικαιώματα που τους παρέχονται ως εκπαιδευόμενοι
- ○ Τα παιδιά έχουν μόνο δικαιώματα αναγνωρισμένα σε κάθε άνθρωπο εκ φύσεως
- ○ Τα παιδιά υπόκεινται σε δικαιώματα εφόσον έχουν τη δυνατότητα να διακρίνουν

4. Ποιο από τα παρακάτω αντιπροσωπεύει ένα ειδικό μέσο που αναπτύχθηκε στο πλαίσιο του Συμβουλίου της Ευρώπης για την προστασία του παιδιού;

- ○ ECHR (ΕΣΔΑ)
- ○ Ευρωπαϊκός Κοινωνικός Χάρτης
- ○ Χάρτης της Νίκαιας
- ○ Σύμβαση Λανζαρότε

5. Στην απόφαση της ΕΣΔΑ Z. ΚΑΙ ΑΛΛΟΙ εναντίον του ΗΝΩΜΕΝΟΥ ΒΑΣΙΛΕΙΟΥ, ποιο από τα ακόλουθα αναγνωρίζεται;

- ○ Άρθρο 3 ECHR (Απαγόρευση των βασανιστηρίων)
- ○ Άρθρο 5 ECHR (Δικαίωμα στην ελευθερία και την ασφάλεια)
- ○ Άρθρο 6 ECHR (Δικαίωμα σε δίκαιη δίκη)
- ○ Άρθρο 8 ECHR (Δικαίωμα σεβασμού της ιδιωτικής και οικογενειακής ζωής)

Νομικό γλωσσάριο σχετικά με τους διεθνείς οργανισμούς και τους οργανισμούς και τις συνθήκες της Ευρωπαϊκής Ένωσης

Οργανισμός Ηνωμένων Εθνών (ΟΗΕ) = διεθνής οργανισμός που ιδρύθηκε το 1945 με σκοπό τη διατήρηση της διεθνούς ειρήνης και ασφάλειας, την ανάπτυξη φιλικών σχέσεων μεταξύ των εθνών, τη συνεργασία για την επίλυση διεθνών προβλημάτων και την προώθηση του σεβασμού των ανθρωπίνων δικαιωμάτων. Αποτελεί κέντρο εναρμόνισης των διαφόρων εθνικών πρωτοβουλιών. Τα μέλη του ΟΗΕ είναι κυρίαρχα κράτη. Τα Ηνωμένα Έθνη δεν αποτελούν παγκόσμια κυβέρνηση και δεν νομοθετούν.

Ωστόσο, ο ΟΗΕ παρέχει τα μέσα για να βοηθήσει στην επίλυση των διεθνών συγκρούσεων και να διαμορφώσει κατάλληλες πολιτικές για ζητήματα κοινού ενδιαφέροντος.

Διεθνής Σύμβαση για τα Δικαιώματα του Παιδιού (CRC) = διεθνής συνθήκη που εγκρίθηκε από τη Γενική Συνέλευση των Ηνωμένων Εθνών το 1989 και εκφράζει συναίνεση για τις υποχρεώσεις των κρατών και της διεθνούς κοινότητας απέναντι στα παιδιά, ενώ αναγνωρίζει για πρώτη φορά ότι τα παιδιά απολαμβάνουν επίσης αστικά, κοινωνικά, πολιτικά, πολιτιστικά και οικονομικά δικαιώματα.

Επιτροπή του ΟΗΕ για τα Δικαιώματα του Παιδιού = θεσπίστηκε από τη Σύμβαση των Ηνωμένων Εθνών για τα Δικαιώματα του Παιδιού προκειμένου να εξεταστεί η πρόοδος που έχουν σημειώσει τα Συμβαλλόμενα Κράτη κατά την εκτέλεση των υποχρεώσεων που απορρέουν από τη Συνθήκη, ενώ απαρτίζεται από 18 εμπειρογνώμονες υψηλού κύρους, οι οποίοι κατέχουν αναγνωρισμένη εμπειρογνωμοσύνη στον καλυπτόμενο από τη Σύμβαση τομέα. Αποστολή της Επιτροπής είναι να αναλύει περιοδικές εκθέσεις σχετικά με την εφαρμογή της Σύμβασης, τις οποίες δεσμεύονται τα Συμβαλλόμενα Κράτη να παρουσιάζουν βάσει των διατάξεων του άρθρου 44 της Σύμβασης.

Ευρωπαϊκή Σύμβαση για τα Δικαιώματα του Ανθρώπου (ΕΣΔΑ) = διεθνής συνθήκη με την οποία τα κράτη μέλη του Συμβουλίου της Ευρώπης εγγυώνται θεμελιώδη αστικά και πολιτικά δικαιώματα όχι μόνο στους δικούς τους πολίτες αλλά και σε οποιονδήποτε υπάγεται στη δικαιοδοσία τους. Η Σύμβαση υπογράφηκε στη Ρώμη στις 4 Νοεμβρίου 1950 και άρχισε να ισχύει το 1953.

Ευρωπαϊκό Δικαστήριο Ανθρωπίνων Δικαιωμάτων (Δικαστήριο του Στρασβούργου) = Διεθνές δικαστήριο που ιδρύθηκε το 1959 με έδρα το Στρασβούργο. Αποφαίνεται επί των ατομικών ή κρατικών προσφυγών που αφορούν υποτιθέμενες παραβιάσεις αστικών και πολιτικών δικαιωμάτων, τα οποία θεσπίστηκαν με την Ευρωπαϊκή Σύμβαση για τα Δικαιώματα του Ανθρώπου. Από το 1998, το Δικαστήριο είναι μόνιμο όργανο, ενώ ιδιώτες μπορούν να απευθύνονται απευθείας σε αυτό.

Συμβούλιο της Ευρώπης = διεθνής οργανισμός σκοπός του οποίου είναι η προώθηση της δημοκρατίας, των ανθρωπίνων δικαιωμάτων, της ευρωπαϊκής πολιτιστικής ταυτότητας και της αναζήτησης λύσεων για κοινωνικά προβλήματα στην Ευρώπη. Ιδρύθηκε στις 5 Μαΐου 1949 με τη Συνθήκη του Λονδίνου, έχει έδρα το Στρασβούργο και αποτελείται από 47 κράτη μέλη, συμπεριλαμβανομένων των 28 μελών της Ευρωπαϊκής Ένωσης.

Προσοχή! Το Συμβούλιο της Ευρώπης είναι εκτός της Ευρωπαϊκής Ένωσης και δεν θα πρέπει να το συγχέουμε με τα όργανά της.

Σύμβαση του Συμβουλίου της Ευρώπης για την προστασία των παιδιών κατά της σεξουαλικής εκμετάλλευσης και της σεξουαλικής κακοποίησης (Σύμβαση Λανζαρότε) = συνθήκη με την οποία τα κράτη μέλη συμφωνούν να ποινικοποιήσουν ορισμένες μορφές σεξουαλικής κακοποίησης παιδιών. Είναι η πρώτη διεθνής συνθήκη που ασχολείται με τη σεξουαλική κακοποίηση παιδιών, η οποία λαμβάνει χώρα μέσα στην οικογένεια.

Σύμβαση του Συμβουλίου της Ευρώπης για την πρόληψη και την καταπολέμηση της βίας κατά των γυναικών και της ενδοοικογενειακής βίας (Σύμβαση Κωνσταντινούπολης) = διεθνής συνθήκη που αποσκοπεί στην πρόληψη της βίας, στην προώθηση της προστασίας των θυμάτων και στην αποτροπή της ατιμωρησίας των δραστών. Αποτελεί το πρώτο νομικά δεσμευτικό διεθνές μέσο για τη δημιουργία ενός ολοκληρωμένου νομικού πλαισίου για την προστασία των γυναικών από οποιαδήποτε μορφή βίας.

Ευρωπαϊκή Ένωση = οικονομικός και πολιτικός οργανισμός μεταξύ 28 χωρών της ευρωπαϊκής ηπείρου που δημιουργήθηκαν μετά τον Δεύτερο Παγκόσμιο Πόλεμο με στόχο την προώθηση μεγαλύτερης οικονομικής συνεργασίας μεταξύ των κρατών μελών. Με την πάροδο του χρόνου, έχει καταστεί οργανισμός που αποσκοπεί στη δημιουργία των βάσεων μιας Ένωσης μεταξύ των ευρωπαϊκών λαών, διασφαλίζοντας τις χώρες και επιδιώκοντας πολιτική ενότητα εξασφαλίζοντας, μέσω κοινής δράσης, οικονομική και κοινωνική πρόοδο, όπως η δημιουργία ενιαίας ευρωπαϊκής αγοράς και η ενίσχυση της κοινωνικής συνοχής.

Χάρτης Θεμελιωδών Δικαιωμάτων της Ευρωπαϊκής Ένωσης (Χάρτης της Νίκαιας)= διακηρύχθηκε κατά τη διάρκεια του Ευρωπαϊκού Συμβουλίου της Νίκαιας στις 20 Δεκεμβρίου 2000, ενώ συγκεντρώνει όλα τα αστικά, πολιτικά, οικονομικά και κοινωνικά δικαιώματα που ισχύουν στην Ευρωπαϊκή Ένωση και καθιερώνει τη θεμελιώδη φύση και το πεδίο των ανθρωπίνων δικαιωμάτων για τους πολίτες της ΕΕ. Παρόλο που κατέστη νομικώς δεσμευτική μόνο μετά την έναρξη ισχύος της Συνθήκης της Λισαβόνας, ενέπνευσε, από τότε που ξεκίνησε, τη δραστηριότητα του Ευρωπαϊκού Κοινοβουλίου. Με τη θέση σε ισχύ της Συνθήκης της Λισαβόνας, ο Χάρτης της Νίκαιας έχει το ίδιο νομικό κύρος με τις συνθήκες και ως εκ τούτου είναι πλήρως δεσμευτικός για τα ευρωπαϊκά θεσμικά όργανα και τα κράτη μέλη.

Δικαστήριο της Ευρωπαϊκής Ένωσης (Δικαστήριο ΔΕΕ - Δικαστήριο του Λουξεμβούργου)= ιδρύθηκε το 1952, εδρεύει στο Λουξεμβούργο και ερμηνεύει το δίκαιο της ΕΕ για να διασφαλίσει ότι εφαρμόζεται με τον ίδιο τρόπο σε όλα τα κράτη μέλη, ενώ επιλύει νομικές διαφορές μεταξύ των εθνικών κυβερνήσεων και των θεσμικών οργάνων της ΕΕ.

Transcript

Καλημέρα.

Ένας από τους πυλώνες της Σύμβασης του ΟΗΕ για τα δικαιώματα των παιδιών και, γενικότερα,

μία από τις αρχές που οδηγούν στην πραγμάτωση των ανθρωπίνων δικαιωμάτων των ανηλίκων

είναι η συμμετοχή των παιδιών στις διαδικασίες ως αποτέλεσμα των οποίων

πρέπει να ληφθούν αποφάσεις που είναι πιθανό να επηρεάσουν με καθοριστικό τρόπο

τη ζωή τους.

Η Διακήρυξη του ΟΗΕ σχετικά με τα παιδικά δικαιώματα αναγνωρίζει το δικαίωμα του ανηλίκου, ως ανθρώπου,

στην ελευθερία έκφρασης στο άρθρο 12, παράγραφος 1. Και στην επόμενη παράγραφο, την παράγραφο 2,

προσδιορίζει ένα από τα εργαλεία που εγγυώνται τη συμμετοχή του ανηλίκου στις διαδικασίες,

ειδικά το δικαίωμα της ακρόασης, εκ μέρους του δικαστή ή εκ μέρους

των άλλων διοικητικών αρχών που θα λάβουν αποφάσεις προς όφελος του παιδιού.

Αλλά η ακρόαση δεν είναι το μοναδικό εργαλείο που εγγυάται τη συμμετοχή του ανηλίκου

στις αποφάσεις που τον αφορούν.

Η ευρωπαϊκή Διακήρυξη άσκησης των δικαιωμάτων Ανηλίκων, που αφορά συγκεκριμένα

τις νομικές διαδικασίες, στο άρθρο 3 αναγνωρίζει το δικαίωμα του ανηλίκου «να λαμβάνει κάθε σχετική πληροφορία»

και στο άρθρο 4 αναγνωρίζει το δικαίωμα του ανηλίκου να «ζητά [...] τον διορισμό»

«ενός ειδικού αντιπροσώπου» όταν μεταξύ των ασκούντων τη γονική μέριμνα

και του ανηλίκου υπάρχει σύγκρουση συμφερόντων, ενός αντιπροσώπου, δηλαδή, που θα διαχειρίζεται

τις νομικές διαδικασίες.

Αλλά τι σημαίνει ακριβώς ακρόαση του ανηλίκου με κριτήριο την ελευθερία έκφρασής του;

Σημαίνει ότι, αν και ο λαμβάνων την απόφαση κατά την ακρόαση του ανηλίκου θα αποκτήσει

πληροφορίες που θα του είναι χρήσιμες για να καταλήξει στην απόφασή του, ο ενημερωτικός σκοπός

της ακρόασης είναι δευτερεύων απέναντι στη μείζονα σημασία της ακρόασης που είναι

να εγγυηθούμε στον ομιλούντα τη δυνατότητα να εκφραστεί σχετικά με ένα θέμα τόσο σημαντικό

για τη ζωή του.

Εξ ου και μερικές πρακτικές συνέπειες που αφορούν, για παράδειγμα, τον τρόπο ακρόασης.

Αυτό σημαίνει ότι η ακρόαση δεν μπορεί να διεξάγεται σαν ανάκριση ή σαν την ακρόαση

ενός μάρτυρα.

Σημαίνει όμως ότι, για παράδειγμα, ο ανήλικος θα μπορέσει να αρνηθεί την ακρόασή του

από τον δικαστή.

Καθώς η ακρόαση αποτελεί δικαίωμα, ο δικαιούχος μπορεί να επιλέξει να μην ασκήσει το δικαίωμά του.

Ή, επίσης, σε ό,τι αφορά τους λόγους για τους οποίους θα μπορεί να μην προβεί στην ακρόαση,

δεν θα μπορεί η μη ακρόαση ενός ανηλίκου να αιτιολογηθεί λέγοντας

ότι ήταν, στην προκείμενη περίπτωση, περιττή.

Ο μοναδικός λόγος για τον οποίο μπορεί να αποκλειστεί η ακρόαση είναι αν θεωρηθεί ότι η εν λόγω ακρόαση

θα ήταν αντίθετη στο συμφέρον του παιδιού.

Ένας άλλος πυλώνας της Σύμβασης του ΟΗΕ για τα δικαιώματα των παιδιών είναι ακριβώς

η προστασία του ανηλίκου και ο πυλώνας της προστασίας εξισορροπείται με τα δικαιώματα του παιδιού

στη συμμετοχή στις διαδικασίες που το αφορούν.

Και αυτή η ανάγκη εξισορρόπησης προκύπτει επίσης με αναφορά στον ρόλο που διαδραματίζει

η εκδηλωμένη επιθυμία του ανηλίκου κατά την ακρόαση στη λήψη της τελικής απόφασης από την αρμόδια αρχή.

Η αρχή, πράγματι, δεν μπορεί να θεωρείται δεσμευμένη από την εκδηλωμένη επιθυμία του ανηλίκου.

Μπορεί να συμβεί η αρχή να θεωρήσει ότι η εκδηλωμένη επιθυμία του ανηλίκου

στην πραγματικότητα αντιβαίνει στο συμφέρον του.

Ας πούμε, για παράδειγμα, ότι κάποιος ανήλικος, στο πλαίσιο μιας πολιτικής δικονομίας

που αφορά ενδοοικογενειακές κακομεταχειρίσεις, επιμένει να δει τον γονέα του

ή γενικότερα τον ενήλικα που τον κακομεταχειρίστηκε.

Σε αυτή την περίπτωση η αρχή μπορεί να αρνηθεί τις επισκέψεις, να συνεχίσει να τηρεί την αναστολή τους,

ακόμα κι όταν αυτό είναι αντίθετο στην εκδηλωμένη επιθυμία του ανηλίκου.

Υπάρχει διαφορά, λοιπόν, σε σύγκριση με ό,τι ισχύει για τον ενήλικα.

Ο ενήλικας, μάλιστα, έχει το δικαίωμα να αρνηθεί την υγειονομική περίθαλψη

ακόμα κι όταν αυτή η άρνηση συνεπάγεται βέβαιο θάνατο.

Δεν ισχύει το ίδιο για τον ανήλικο γιατί, όπως είπα, το δικαίωμα συμμετοχής

και γενικά το δικαίωμα αυτοδιάθεσης πρέπει να εξισορροπείται με την αρχή

του μείζονος συμφέροντος του παιδιού.

Η ανάγκη εξισορρόπησης επιβάλλει, ωστόσο, στη δικαστική αρχή και γενικά στις αρχές

λήψης αποφάσεων σχετικών με τη ζωή του παιδιού, να ενημερώνουν τον ανήλικα σχετικά με τη ληφθείσα απόφαση

και να εκθέτουν επακριβώς τους λόγους για τους οποίους δεν στάθηκε δυνατό

να σεβαστούν την εκδηλωμένη επιθυμία του παιδιού κατά τη διάρκεια της ακρόασης.

Εισαγωγή στην ταινία "Νόμος περί Τέκνων"

Οι κύριοι χαρακτήρες της ταινίας είναι ο Άνταμ, ένα δεκαεπτάχρονο αγόρι, το οποίο αρνείται μια σωτήρια μετάγγιση αίματος για θρησκευτικούς λόγους σε συμφωνία με τους γονείς του, και η Φιόνα Μέι, μια Αγγλίδα δικαστής στον τομέα της οικογένειας και των ανηλίκων, που καλείται να αποφασίσει εάν θα επιτραπεί στους γιατρούς να προχωρήσουν στη μετάγγιση αίματος πάραυτα.

Η ταινία μας επιτρέπει να συλλογιστούμε τα δύο χαρακτηριστικά γνωρίσματα της αρχής των δικαιωμάτων των ανηλίκων για ακρόαση, όπως περιγράφονται στο άρθρο 12 της Σύμβασης των Ηνωμένων Εθνών για τα Δικαιώματα του Παιδιού (CRC).

· **Η ακρόαση είναι ο τρόπος με τον οποίο ο ανήλικος ασκεί τη δική του ελευθερία έκφρασης**. Στην πραγματικότητα, η Φιόνα συναντά τον Άνταμ επειδή θέλει να τον «γνωρίσει» και δεν τον «ακούει» με τη μέθοδο της ανάκρισης ή της ακρόασης μάρτυρα. Δεν περιορίζει τη συνάντησή τους για να εξετάσει σε βάθος τους λόγους για την απόφασή του να αρνηθεί τη μετάγγιση, αλλά συνομιλεί μαζί του αγγίζοντας διάφορα θέματα, όπως η μουσική και η ποίηση.

· **Επιπλέον, η ακρόαση δεν δεσμεύει τον δικαστή με τη βούληση του ανηλίκου. Στην πραγματικότητα, η Φιόνα στην ταινία αποφασίζει να ενεργήσει κατά της βούλησης του Άνταμ**. Σε αντίθεση με τον ενήλικα, ο οποίος έχει το δικαίωμα να αποφασίσει για τη δική του ζωή, ακόμη κι εάν η απόφαση αυτή οδηγεί σε θάνατο (π.χ. τυπικό παράδειγμα της άρνησης μιας σωτήριας μετάγγισης αίματος για θρησκευτικούς λόγους), ο ανήλικος δεν έχει αυτό το δικαίωμα σε όλες τις περιπτώσεις: Το άρθρο 12 της Σύμβασης των Ηνωμένων Εθνών για τα Δικαιώματα του Παιδιού (CRC) ορίζει ότι όποιος αποφασίσει πρέπει να λάβει υπόψη τη γνώμη του ανηλίκου μαζί με την ανάπτυξη με βάση την ηλικία και το επίπεδο ωριμότητάς του, αλλά αυτό δεν είναι δεσμευτικό για τον δικαστή. Πράγματι, εάν ο δικαστής ή το πρόσωπο που καλείται να λάβει απόφαση σχετικά με έναν ανήλικο πιστεύει ότι η βούληση που εκφράζεται κατά την ακρόαση δεν είναι σύμφωνη με το συμφέρον του ανηλίκου, όχι μόνο έχει το δικαίωμα, αλλά πρέπει να αποφασίσει με τον αντίθετο τρόπο.

Q5.2

5 points possible (graded)

1. Τι περιλαμβάνει η σωματική τιμωρία εις βάρος του παιδιού;

- ○ Μόνο σωματική τιμωρία που αποσκοπεί στην πρόκληση πόνου στο παιδί
- ○ Αποκλειστικά σωματική τιμωρία που αποσκοπεί στην πρόκληση πόνου ή αναστάτωσης στο παιδί
- ○ Σωματικές ή μη σωματικές πράξεις, πέραν όσων γίνονται για τη διαπαιδαγώγηση των παιδιών
- ○ Και μη σωματικές πράξεις, όπως απειλές, που αποσκοπούν στην ταπείνωση του παιδιού

2. Ποιο από τα παρακάτω δεν ισχύει;

- ○ Απαγορεύεται η αδικαιολόγητη διαφοροποίηση ανάλογα με την ηλικία
- ○ Οι ανήλικοι έχουν δικαίωμα, εκ φύσεως, σε διαφοροποιημένη θεραπεία βάσει ηλικίας
- ○ Απαγορεύονται όλες οι θεραπείες που διαφοροποιούνται ανάλογα με την ηλικία
- ○ Η θεραπεία των παιδιών πρέπει να εμπνέεται από την αρχή του βέλτιστου συμφέροντος του παιδιού

3. Ποιο από τα ακόλουθα σχετικά με την ακρόαση ενός παιδιού ισχύει;

- ○ Πρέπει να διασφαλίζεται μόνο σε δικαστικές και διοικητικές διαδικασίες που το αφορούν
- ○ Μπορεί να διεξαχθεί όπως η ακρόαση ενός μάρτυρα, αλλά όχι ως ανάκριση
- ○ Μπορεί να αποκλειστεί όταν η γνώμη του παιδιού είναι περιττή
- ○ Πρέπει να διασφαλίζεται μόνο σε δικαστικές και όχι σε διοικητικές διαδικασίες που το αφορούν

4. Σε περίπτωση που γίνεται ακρόαση του παιδιού, είναι η γνώμη του παιδιού δεσμευτική για όσους αποφασίζουν;

- ○ Όχι, αλλά ο υπεύθυνος λήψης της απόφασης πρέπει να τη λάβει υπόψη του
- ○ Ναι
- ○ Όχι, ο υπεύθυνος λήψης της απόφασης μπορεί να την αγνοήσει
- ○ Ναι εφόσον το παιδί εμφανίζει υψηλό βαθμό ωριμότητας

5. Στην απόφαση της ΕΣΔΑ Z. ΚΑΙ ΑΛΛΟΙ εναντίον του ΗΝΩΜΕΝΟΥ ΒΑΣΙΛΕΙΟΥ, ποιο από τα ακόλουθα αναγνωρίζεται;

- ○ Άρθρο 5 ECHR (Δικαίωμα στην ελευθερία και την ασφάλεια)
- ○ Άρθρο 3 ECHR (Απαγόρευση των βασανιστηρίων)
- ○ Άρθρο 6 ECHR (Δικαίωμα σε δίκαιη δίκη)
- ○ Άρθρο 8 ECHR (Δικαίωμα σεβασμού της ιδιωτικής και οικογενειακής ζωής)

Πρωτογενής θυματοποίηση = κακοποίηση ή βία, η οποία προκαλεί σοβαρές επιπτώσεις στην σωματική ή και ψυχολογική υγεία του ατόμου.

Δευτερογενής θυματοποίηση = περαιτέρω καταπόνηση που προκαλείται από το άγχος της ίδιας της διαδικασίας, από τη μνήμη της κακοποίησης που υπέστη το άτομο και από την πιθανή επαφή με τον υπαίτιο της συμπεριφοράς, τον δικαστή και τους δικηγόρους.

Ποινική διαδικασία = η δικαστική διαδικασία μέσω της οποίας ο δράστης της συμπεριφοράς κατά του ανηλίκου τιμωρείται, εάν η συμπεριφορά του αποτελεί έγκλημα.

Αστική διαδικασία =η διαδικασία δικαιοδοσίας κατά την οποία ένας δικαστής αξιολογεί την επάρκεια του οικογενειακού περιβάλλοντος του παιδιού και λαμβάνει τα απαραίτητα μέτρα.

Ακρόαση του ανηλίκου = μέρος της αστικής / ποινικής διαδικασίας κατά την οποία ο ανήλικος κάνει δηλώσεις σχετικά με τα γεγονότα που τον αφορούν και σχετίζονται με την απόφαση του δικαστή.

Διαβούλευση με τον ανήλικο = μέρος της διαδικασίας (ειδικά της αστικής) κατά την οποία ο ανήλικος εκφράζει τις απόψεις του, προτού ο δικαστής προβεί σε απόφαση.

Συναίνεση του ανηλίκου = περαιτέρω εγγύηση που συνίσταται στην υποχρέωση του δικαστή να λάβει την ευνοϊκή γνώμη του ανηλίκου προκειμένου να λάβει συγκεκριμένη απόφαση (για παράδειγμα, επιμέλεια ή υιοθεσία).

Εκπρόσωπος = όταν οι γονείς απουσιάζουν, δεν είναι διαθέσιμοι ή βρίσκονται σε σύγκρουση συμφερόντων, ο εκπρόσωπος είναι ένα άτομο που προσδιορίζει τα συμφέροντα του παιδιού και το προστατεύει κατά τη διάρκεια της διαδικασίας.

Δικηγόρος = εξουσιοδοτημένο άτομο που διορίζεται για λάβει μια δικαστική απόφαση στο μέτρο του δυνατού, σύμφωνα με τα συμφέροντα του παιδιού.

Κοινωνικός επαγγελματίας ή επαγγελματίας υγείας = εμπειρογνώμονας ψυχολογίας, ψυχιατρικής ή κοινωνιολογίας, ο οποίος βοηθά το τραυματισμένο παιδί κατά τη διάρκεια των αστικών και ποινικών διαδικασιών και βοηθά τον δικαστή να εκτιμήσει τις ψυχο-φυσικές καταστάσεις και τις ανάγκες του ώστε να το προστατεύσει.

Προληπτικά μέτρα = προσωρινά μέτρα, που εγκρίνονται από τον δικαστή, για την προστασία της ψυχοσωματικής ευημερίας του ανηλίκου κατά τη διάρκεια των διαδικασιών.

Transcript

Η παρέμβαση του Δικαστηρίου Ανηλίκων για την προστασία των ανήλικων θυμάτων κακομεταχείρισης ουσιαστικά πραγματοποιείται ως εξής. Είναι απαραίτητη μία αίτηση της εισαγγελικής αρχής στο δικαστήριο, γιατί το Δικαστήριο δεν αναλαμβάνει αυτεπάγγελτα πρωτοβουλίες.

Μία αίτηση της Εισαγγελικής αρχής Ανηλίκων που με τη σειρά της προκύπτει από μία επισήμανση εκ μέρους άλλων προσώπων σχετικά με μία κατάσταση κακομεταχείρισης όπου ο ανήλικος είναι θύμα στο οικογενειακό του περιβάλλον.

Αυτά τα άλλα πρόσωπα, που με τη σειρά τους επισημαίνουν στον Εισαγγελέα Ανηλίκων την κατάσταση κακομεταχείρισης, είναι κυρίως οι κοινωνικές υπηρεσίες αλλά μπορούν να είναι και οι σχολικές δομές όπου βρίσκεται το παιδί ή και οι αρχές της Δικαστικής Αστυνομίας που παρεμβαίνουν σε περιπτώσεις που αφορούν αδίκημα.

Προφανώς, υπάρχει και η παρέμβαση της Ποινικής Δικαστικής Αρχής αλλά συχνότατα,
όταν υπάρχουν υποψίες αδικήματος, οι παρεμβάσεις είναι ταυτόχρονες: το Δικαστήριο Ανηλίκων
παρεμβαίνει για τα μέτρα προστασίας, η Ποινική Δικαστική Αρχή παρεμβαίνει
για την διαπίστωση ύπαρξης ή όχι αδικημάτων.
Η παρέμβαση του Δικαστηρίου εξαρτάται από τον τύπο έρευνας που έχει διεξαγάγει ο Εισαγγελέας
στο Δικαστήριο.
Υπάρχουν περιπτώσεις, σοβαρότατες περιπτώσεις, κατά τις οποίες ο Εισαγγελέας,
μπορεί να ζητήσει άμεση και επείγουσα παρέμβαση για την απομάκρυνση του παιδιού
και το Δικαστήριο μπορεί να παρέμβει αναλόγως. Ή περιπτώσεις κατά τις οποίες εξ αρχής
ο Εισαγγελέας ζητά από το Δικαστήριο να προβεί σε ελέγχους για να εξακριβώσει
τη σοβαρότητα της καταγγελθείσας κατάστασης, το κατά πόσο αληθεύει η καταγγελθείσα κατάσταση
και τη σοβαρότητά της και να ορίσει τις κατάλληλες παρεμβάσεις για την προστασία του ανηλίκου.
Κατά τη διάρκεια αυτών των ελέγχων,
ή αμέσως μετά το ενδεχόμενο μέτρο της απομάκρυνσης,
όταν υπάρχει ανάγκη, όταν το Δικαστήριο θεωρεί απολύτως αναγκαία τη λήψη του μέτρου απομάκρυνσης,
στη διάρκεια αυτών των ελέγχων, λοιπόν,
παρεμβαίνουν οι καταγγέλλουσες υπηρεσίες αλλά και άλλες, όπως οι υπηρεσίες που ειδικεύονται στην ψυχολογία,
ή ακόμα παρεμβαίνουν και οι ίδιοι οι γονείς, αν και, προφανώς, η δική τους παρέμβαση
είναι ιδιάζουσα, αλλά στο πλαίσιο της διαδικασίας ο νόμος προβλέπει
να τους ακούσουν πριν το Δικαστήριο λάβει οριστικά μέτρα προστασίας των ανηλίκων
όπως μέτρα περιορισμού της ευθύνης των γονέων,
ή και «αφαιρετικά» μέτρα, όπως αποκαλούνται, δηλαδή μέτρα αποκλεισμού των γονέων από την ευθύνη,
αν φυσικά ο Εισαγγελέας έχει ζητήσει
απόφαση αυτού του τύπου.
Επίσης, γίνεται ακρόαση και του παιδιού σε αυτές τις διαδικασίες, αν έχει συμπληρώσει τα 12 έτη,
όπως ορίζει ο νόμος, ή δεν τα έχει συμπληρώσει αλλά ο Δικαστής το θεωρεί ικανό
να εκφραστεί, να το ακούσουν, λοιπόν, και να εκφράσει μία δική του εκτίμηση
Της κατάστασης.
Προφανώς, είναι μία εκτίμηση που ο Δικαστής θα αξιολογήσει ελεύθερα για να κατανοήσει
κυρίως τις επιθυμίες αλλά και την πραγματική ψυχολογική κατάσταση του ανηλίκου.

Ωστόσο, επαναλαμβάνω: πρόκειται για μία πραγματική ψυχολογική κατάσταση του παιδιού και άρα διαπιστώνεται

και αξιολογείται μέσω της παρέμβασης των εξειδικευμένων υπηρεσιών

που ακούν το παιδί και αναφέρουν στον Δικαστή όσα ήταν σε θέση,

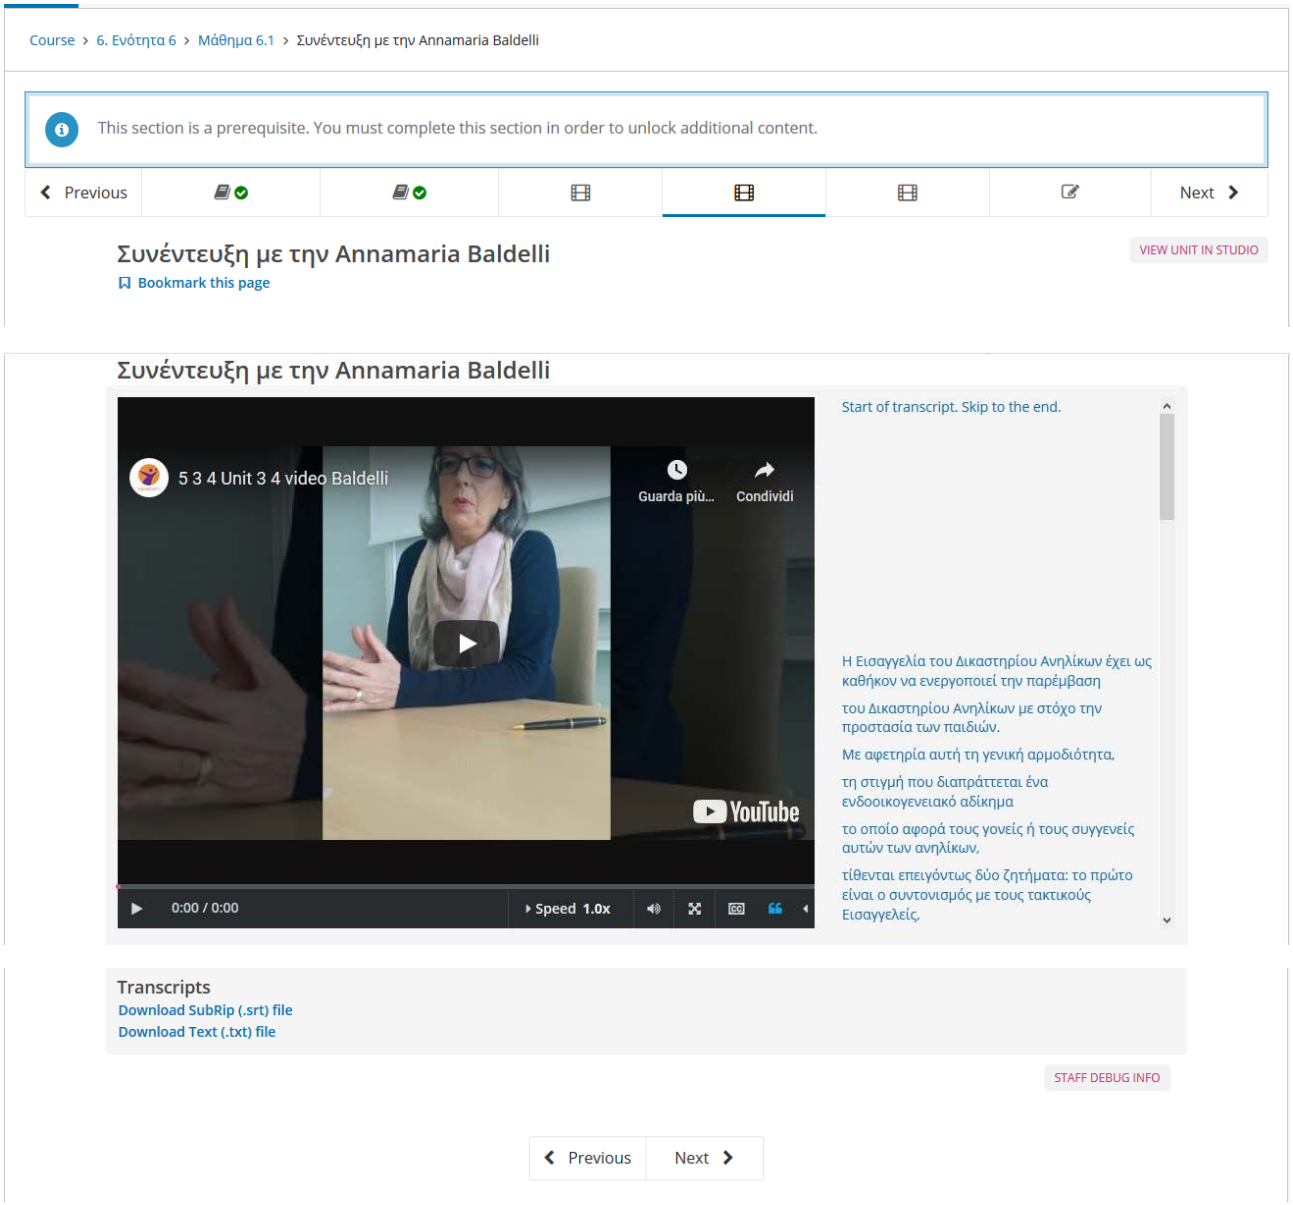
ανάλογα με την ηλικία του,

να πει ο ανήλικος.

Πρόκειται για μία μορφή ακρόασης «με διαμεσολάβηση», θα λέγαμε, που διεξάγεται από άλλα πρόσωπα,

με ειδικές επαγγελματικές δεξιότητες, την οποία χρησιμοποιεί ο Δικαστής

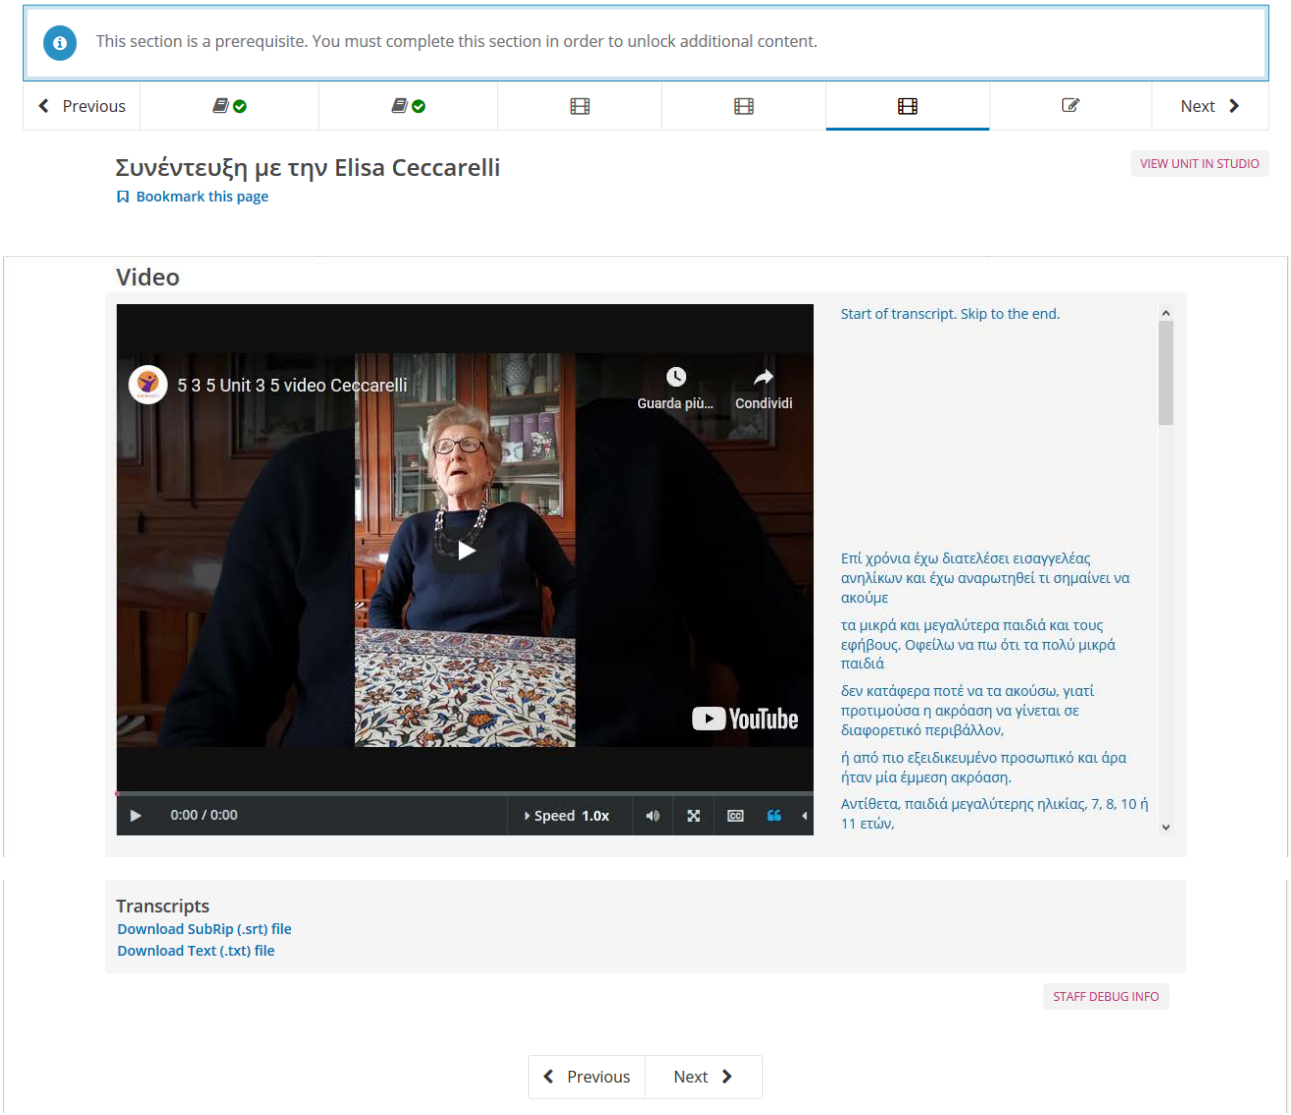
για να λάβει την απόφασή του.



Transcript

Η Εισαγγελία του Δικαστηρίου Ανηλίκων έχει ως καθήκον να ενεργοποιεί την παρέμβαση
του Δικαστηρίου Ανηλίκων με στόχο την προστασία των παιδιών.
Με αφετηρία αυτή τη γενική αρμοδιότητα,
τη στιγμή που διαπράττεται ένα ενδοοικογενειακό αδίκημα
το οποίο αφορά τους γονείς ή τους συγγενείς αυτών των ανηλίκων,
τίθενται επειγόντως δύο ζητήματα: το πρώτο είναι ο συντονισμός με τους τακτικούς Εισαγγελείς,
που έχουν την αρμοδιότητα της ποινικής διαδικασίας, για να αποφευχθούν παρεμβάσεις
που θα μπορούσαν να βλάψουν την ποινική δίωξη,
και το δεύτερο είναι η συλλογή στοιχείων, όχι μόνο για τη γνώση
της κατάστασης σημαντικής ζημίας,

αλλά και στοιχείων για τη γνώση σχετικά με μέσα προσωπικά
και οικογενειακά, ίσως και άλλων συγγενών αλλά και μέσα κοινωνικά, που βρίσκονται
γύρω από αυτό το παιδί, για να στοιχειοθετηθεί μία προσφυγή στο Δικαστήριο Ανηλίκων
με σωστές προοπτικές παρέμβασης.
Η βασική δυσκολία είναι ο περιορισμός των καθυστερήσεων,
γιατί η διαδικασία προστασίας, όπως και η ποινική, έχουν τους χρόνους τους
που δεν είναι πάντα ελεγχόμενοι. Εμείς προσπαθήσαμε να ζητήσουμε
από τις αστυνομικές αρχές να ενημερώνουν συγχρόνως, τόσο την τακτική Εισαγγελία,
αρμόδια για την ποινική διαδικασία απέναντι στον διαπράττοντα το αδίκημα,
όσο και την Εισαγγελία Ανηλίκων, αρμόδια για την προστασία του θύματος του αδικήματος,
ώστε αυτές οι υπηρεσίες να αναγκαστούν να συντονιστούν με τρόπο
έγκαιρο και άμεσο, δηλαδή ήδη από τα πρώτα στάδια της έρευνας.
Αυτός ο τρόπος, υποβοηθούμενος
από συμβάσεις με ποικίλες Εισαγγελίες, μας επέτρεψε να προσδιορίσουμε
ποιος κάνει τι, πότε και πώς, καλύπτοντας, όπως είπα και πριν, τις απαιτήσεις
της σωστής ποινικής διαδικασίας αλλά και τις απαιτήσεις της προστασίας του ανηλίκου.
Ενίοτε μπορεί να συμβεί, κυρίως όταν τα παιδιά νοσηλεύονται στο νοσοκομείο
και δεν υπάρχει διαφωνία των γονέων για τη νοσηλεία, ενίοτε είναι πιθανές
κάποιες καθυστερήσεις στην παρέμβαση της προστασίας και άρα καθυστερήσεις στην παρέμβαση
του Δικαστηρίου Ανηλίκων, γιατί ο ανήλικος χαίρει εκ των πραγμάτων προστασίας
λόγω της νοσηλείας στο νοσοκομείο, επιτρέποντας στον τακτικό Εισαγγελέα, αρμόδιο για την ποινική διαδικασία
απέναντι στον διαπράττοντα το αδίκημα, να προβεί στις απαιτούμενες διαπιστώσεις
με μυστικότητα και άρα αποτελεσματικά.
Όταν πλέον είναι σαφές
ότι δεν μπορεί να αναβληθεί μία πρόβλεψη προστασίας, ο συνάδελφος στην τακτική Εισαγγελία,
αρμόδιος για την ποινική διαδικασία, μπορεί να εκδώσει διοικητική πρόβλεψη προστασίας
μέσω της Δικαστικής Αστυνομίας, σύμφωνα με το άρθρο 403 του αστικού κώδικα,
δηλαδή να θέσει σε προστασία τον ανήλικο, ώσπου στη συνέχεια, με δική μας προσφυγή,
το Δικαστήριο Ανηλίκων να μπορεί να κυρώσει αυτό το προσωρινό μέσο προστασίας.



Transcript

Επί χρόνια έχω διατελέσει εισαγγελέας ανηλίκων και έχω αναρωτηθεί τι σημαίνει να ακούμε

τα μικρά και μεγαλύτερα παιδιά και τους εφήβους. Οφείλω να πω ότι τα πολύ μικρά παιδιά

δεν κατάφερα ποτέ να τα ακούσω, γιατί προτιμούσα η ακρόαση να γίνεται σε διαφορετικό περιβάλλον,

ή από πιο εξειδικευμένο προσωπικό και άρα ήταν μία έμμεση ακρόαση.

Αντίθετα, παιδιά μεγαλύτερης ηλικίας, 7, 8, 10 ή 11 ετών,

έχω ακούσει πολλά.

Κυρίως ήταν παιδιά μέσα σε έντονα συγκρουσιακά οικογενειακά περιβάλλοντα, με γονείς

που δεν αποφάσιζαν να χωρίσουν ή χωρισμένους, αλλά πάντοτε δεμένους μέσω σύγκρουσης και εκδίκησης,

που είχαν βαρύ αντίκτυπο στα παιδιά τους.

Αυτό που προσπαθούσα να πω στα παιδιά,

σε αυτές τις ακροάσεις, ήταν πάνω από όλα ότι υπήρχε κάποιος
που πραγματικά τα άκουγε,
κάποιος που είχε συγκεκριμένο καθήκον να αποφασίσει για το καλύτερο δυνατό για εκείνα,
και η απόφαση αυτή αναγκαστικά
μπορούσε να διαφέρει από ό,τι τα παιδιά
επιθυμούσαν ή εξέφραζαν.
Ωστόσο, αυτό ακριβώς προσπαθούσα να τους πω.
Η απόφαση εξαρτάται από το Δικαστήριο και τον δικαστή. Δουλειά του δικαστή είναι να αποφασίζει
και άρα λαμβάνω υπόψη ό,τι μου διηγείσαι,
θα προσπαθήσω να είμαι όσο γίνεται πιο προσεκτική
να κάνω το καλύτερο για σένα
αλλά η απόφαση δεν θα ταυτίζεται πάντα
με την επιθυμία σου. Αυτό είναι κάτι που συμβαίνει πάντα στη ζωή μας
Και πρέπει να συνηθίσεις να ζεις με αυτό το δεδομένο.
Σε ό,τι αφορά τους γονείς, προσπαθούσα πάντα να διαφυλάξω τη θετική πλευρά της σχέσης των παιδιών
με τους γονείς τους, δηλαδή προσπαθούσα να εξηγήσω Ότι ο μπαμπάς, γενικά οι πατέρες ήταν
πολύ αυταρχικοί στις σχέσεις με τα παιδιά
και άρα τα εξανάγκαζαν να κάνουν πράγματα
που θεωρούσαν χρήσιμα στη συγκρουσιακή τους σχέση με την πρώην σύντροφο,
προσπαθούσα, λοιπόν, να πω το εξής.
«Κοίτα, ο μπαμπάς δεν έχει κάτι εναντίον σου και είναι σωστό να αγαπάς τον μπαμπά».
«Αλλά ξέρουμε ότι έχει κάποια προβλήματα, ότι δεν δέχεται αυτή την κατάσταση».
Πρέπει, λοιπόν, να μπορούμε να διαφυλάξουμε αυτή τη μορφή του μπαμπά.
Εννοώ, δηλαδή, να μην εμμένουμε ποτέ σε συγκρουσιακές συμπεριφορές προς το παιδί.
Γιατίν παράλληλα
προσπαθούμε να διαφυλάξουμε,
τη δυνατότητα του παιδιού να μπορεί να αρνηθεί,
λέγοντας «Όχι, δεν αντέχω άλλο να είμαι με αυτόν τον μπαμπά, δεν αντέχω άλλο»
γιατί το παιδί δεν καταλαβαίνει τελικά.
Θυμάμαι την περίπτωση ενός κοριτσιού περίπου 10 ετών που είχε και τους δύο γονείς.
Ο πατέρας ήταν εξαιρετικά παθολογικός και η προσέγγισή μας ήταν η εξής.
«Εντάξει, περιμένουμε να αλλάξει ο μπαμπάς και αν δεν καταφέρει να αλλάξει,»

«όλο αυτό το βάρος φυσικά δεν θα πρέπει να το σηκώσει το κορίτσι».

Q6.1

7 points possible (graded)

1) Η δευτερογενής θυματοποίηση προκαλείται από:

- ○ το άγχος που προκαλείται στους ανηλίκους κατά τη συμμετοχή τους στη διαδικασία
- ○ την παραβίαση που αισθάνονται από την αναγκαία παρέμβαση της δικαστικής αρχής
- ○ το άγχος που προκύπτει από την τοποθέτηση των ανηλίκων σε μια νέα οικογένεια
- ○ την επανάληψη της παραβίασης που είχαν υποστεί

2) Η αρχή του βέλτιστου συμφέροντος του παιδιού:

- ○ εφαρμόζεται μόνο στις ποινικές διαδικασίες
- ○ συνεπάγεται ότι ο δικαστής πρέπει πάντα να λαμβάνει υπόψη, πάνω από όλα, την ψυχολογική και φυσική κατάσταση του παιδιού
- ○ εφαρμόζεται μόνο στις αστικές διαδικασίες
- ○ υποχρεώνει τα κράτη να αποφεύγουν τη συμμετοχή του ανηλίκου σε οποιαδήποτε διαδικασία μετά το παραβιαστικό τραυματικό γεγονός

3) Η ακρόαση του παιδιού ως μάρτυρα:

- ○ πρέπει πάντα να εκτελείται από τον δικαστή
- ○ είναι προτιμότερο να διεξάγεται στο τελευταίο μέρος της διαδικασίας
- ○ είναι καλύτερα να επαναλαμβάνεται τουλάχιστον δύο φορές, για να ελεγχθεί η αξιοπιστία του παιδιού
- ○ είναι προτιμότερο να διεξάγεται κατά την έναρξη της διαδικασίας

4) Η γνώμη που εξέφρασε ο ανήλικος κατά τη διάρκεια της διαδικασίας:

- ○ δεν είναι δεσμευτική, αλλά ο δικαστής πρέπει να την λάβει υπόψη για να αποφασίσει
- ○ είναι πάντοτε δεσμευτική για τον δικαστή
- ○ είναι δεσμευτική για τον δικαστή, αλλά μόνο αν ο ανήλικος είναι τουλάχιστον 14 χρονών
- ○ είναι δεσμευτική για τον δικαστή, αλλά μόνο αν ο ανήλικος έχει επαρκή αντιληπτική ικανότητα

5) Οι ποινικές και αστικές διαδικασίες που ακολουθούν την παραβίαση των παιδιών:

- ○ είναι ξεχωριστές, αλλά η αστική μπορεί να ξεκινήσει μόνο μετά την ποινική
- ○ είναι ξεχωριστές, αλλά η αστική μπορεί να ξεκινήσει μόνο αν, κατά τις ποινικές διαδικασίες, οι γονείς έχουν καταδικαστεί
- ○ αντιμετωπίζουν διαφορετικά θέματα και έχουν διαφορετικούς σκοπούς
- ○ έχουν τον ίδιο σκοπό και το ίδιο αντικείμενο

6) Πότε ο δικαστής διατάσσει ένα προληπτικό μέτρο;

- ○ στο τέλος των διαδικασιών
- ○ προτού ξεκινήσουν οι διαδικασίες
- ○ κατά την διάρκεια των διαδικασιών, για να προστατέψει την φυσική και ψυχική ισορροπία του παιδιού
- ○ κατά τη διάρκεια της διαδικασίας, να εξασφαλίσει την εύλογη διάρκεια της διαδικασίας

7) Εξώδικες διαδικασίες:

- ○ εφαρμόζονται όταν η σχέση μεταξύ του δράστη της παραβίασης και του ανηλίκου φαίνεται να είναι μη θεραπεύσιμη
- ○ εφαρμόζονται μόνο όταν η κακοποίηση είναι σοβαρή
- ○ πρέπει πάντα να εφαρμόζονται
- ○ εφαρμόζονται μόνο όταν η κακομεταχείριση δεν είναι πολύ σοβαρή

Κοινωνικές υπηρεσίες = φάσμα υπηρεσιών που παρέχονται από δημόσιους ή ιδιωτικούς φορείς, οι οποίοι ανταποκρίνονται στις συλλογικές και προσωπικές ανάγκες των ανθρώπων. Παρόλο που ο όρος "υπηρεσίες" συνήθως αναφέρεται σε τυποποιημένες διεργασίες, οι οποίες παρέχονται παγκοσμίως στους ανθρώπους ως μέλη μιας κατηγορίας, οι "κοινωνικές υπηρεσίες" ανταποκρίνονται στις "ειδικές ανάγκες" των δικαιούχων.

Κοινωνικές υπηρεσίες για παιδιά και οικογένειες = σειρά μέτρων και δραστηριοτήτων που ανταποκρίνονται στις γενικές ή ατομικές ανάγκες ενός παιδιού ή / και της οικογένειάς του. Αυτού του είδους οι υπηρεσίες στοχεύουν στην ικανοποίηση των διαφορετικών αναγκών των παιδιών και των οικογενειών, όπως ακριβώς κάνουν οι εξειδικευμένες και εντατικές υπηρεσίες.

Κοινωνικές υπηρεσίες φιλικές προς τα παιδιά = κοινωνικές υπηρεσίες που σέβονται, προστατεύουν και αντιλαμβάνονται τα δικαιώματα κάθε παιδιού, συμπεριλαμβανομένου του δικαιώματος πρόσβασης σε παροχές, συμμετοχής και προστασίας και της αρχής του βέλτιστου συμφέροντος του παιδιού. (Σύσταση του Συμβουλίου της Ευρώπης, 16 Νοεμβρίου 2011, αρ. 12, σχετικά με τα δικαιώματα των παιδιών και τις κοινωνικές υπηρεσίες για τα παιδιά και τις οικογένειές τους)

Δικαιοσύνη φιλική προς τα παιδιά = δικαστικά συστήματα που εγγυώνται το σεβασμό και την αποτελεσματική εφαρμογή όλων των δικαιωμάτων των παιδιών στο υψηλότερο δυνατό επίπεδο, λαμβανομένου υπόψη του βαθμού ωριμότητας και κατανόησης του παιδιού. Πρόκειται για προσβάσιμη δικαιοσύνη, προσαρμοσμένη στην ηλικία, ταχεία, επιμελής, προσαρμοσμένη στις ανάγκες του παιδιού και επικεντρωμένη σε αυτά, όσον αφορά τα δικαιώματα τους, συμπεριλαμβανομένου του δικαιώματος για δίκαιη διαδικασία, συμμετοχή και κατανόηση της διαδικασίας, σεβασμό της ιδιωτικής και οικογενειακής ζωής, ακεραιότητα και αξιοπρέπεια. (Βλέπε τις κατευθυντήριες γραμμές της Επιτροπής Υπουργών του Συμβουλίου της Ευρώπης για την φιλική προς τα παιδιά δικαιοσύνη, που εγκρίθηκε από την Επιτροπή Υπουργών του Συμβουλίου της Ευρώπης στις 17 Νοεμβρίου 2010)

Παιδεία και φροντίδα στην παιδική ηλικία (εκπαίδευση και φροντίδα στην παιδική ηλικία ή ECEC) = υπηρεσία που προσφέρεται στα παιδιά από τη γέννηση τους έως την πρωτοβάθμια εκπαίδευση και υπόκειται σε εθνικό κανονιστικό πλαίσιο και σε συμμόρφωση με ένα σύνολο ελάχιστων προτύπων ή / και διαδικασιών διαπίστευσης. Η υπηρεσία περιλαμβάνει ιδιωτικές, δημόσιες και εθελοντικές υπηρεσίες. Οι ευρωπαϊκές χώρες παρουσιάζουν διαφορετικές λύσεις για να εξασφαλίσουν την εκπαίδευση και τη φροντίδα των παιδιών κάτω από την ηλικία της υποχρεωτικής εκπαίδευσης. Εντούτοις, η ECEC καθίσταται όλο και περισσότερο αναπόσπαστο μέρος των εκπαιδευτικών συστημάτων στην Ευρώπη.

(Βλέπε https://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2011:0066:FIN:IT:PDF)

Ευρωπαϊκός χώρος τριτοβάθμιας εκπαίδευσης (European Higher Education Area - EHEA) = έργο που στοχεύει στην επίτευξη διαδικασίας σύγκλισης και ενίσχυσης της τριτοβάθμιας εκπαίδευσης ή των πανεπιστημιακών σπουδών στην Ευρώπη. Η διαδικασία αυτή ευθυγραμμίζεται με τις στρατηγικές που έχει η Ευρωπαϊκή Επιτροπή μαζί με τα κράτη μέλη της Ένωσης και ξεκίνησε τα τελευταία χρόνια για την οικοδόμηση μιας πραγματικής Ευρώπης της γνώσης και έχει ως κύριο σκοπό την προώθηση της κινητικότητας και της απασχόλησης των σπουδαστών, να καταστήσουν τα εκπαιδευτικά συστήματα πιο ανταγωνιστικά, να προσελκύσουν μαθητές (και εκπαιδευτικούς) από την Ευρώπη και άλλα μέρη του κόσμου. Τα μέσα για την επίτευξη αυτού του στόχου είναι η στήριξη για μεγαλύτερη συγκρισιμότητα και συμβατότητα μεταξύ των διαφόρων συστημάτων και των διαφόρων ιδρυμάτων της τριτοβάθμιας εκπαίδευσης στην Ευρώπη και για την αύξηση της ποιότητας τους .

(Βλέπε https://ec.europa.eu/education/education-in-the-eu/european-education-area_en)

Η υγειονομική περίθαλψη για τα παιδιά = οι πολιτικές και οι πρακτικές στον τομέα της υγειονομικής περίθαλψης εστιάζονται στα εξελισσόμενα δικαιώματα, στις ανάγκες, στα χαρακτηριστικά, τους πόρους και τις δυνατότητες των παιδιών, λαμβάνοντας υπόψη τη γνώμη τους. (Βλέπε https://rm.coe.int/168046ccef)

Προσέγγιση φιλική προς τα παιδιά για την υγειονομική περίθαλψη = ολοκληρωμένο εννοιολογικό και επιχειρησιακό πλαίσιο που σέβεται πλήρως τα δικαιώματα και τις ανάγκες των παιδιών στον τομέα της υγείας .

Διαμεσολαβητής του παιδιού

VIEW UNIT IN STUDIO

Bookmark this page

Διαμεσολαβητής παιδιών

Οι αρμοδιότητες που αποδίδουν οι διάφοροι θεσμικοί νόμοι στον διαμεσολαβητή παιδιών οφείλονται σε διάφορες δράσεις: ακρόαση και συμμετοχή, προώθηση και ευαισθητοποίηση, συνεργασία, προετοιμασία προτάσεων, γνωμών και συστάσεων.

Η δραστηριότητα του διαμεσολαβητή παιδιών διαδραματίζει σήμερα ηγετικό ρόλο στις πολιτικές που αποσκοπούν στη διασφάλιση της γνώσης και του σεβασμού των δικαιωμάτων των παιδιών, ενώ επιτρέπει να δίνεται φωνή σε άτομα (παιδιά) που συχνά κινδυνεύουν να είναι αόρατα: https://www.youtube.com/watch?v=jWiE2jHX5yE.

Ο διαμεσολαβητής παιδιών εν περιλήψει:

• παρακολουθεί την εφαρμογή της Σύμβασης για τα δικαιώματα των παιδιών και των εφήβων στη χώρα και συμβάλλει στη διάδοση της γνώσης και της νοοτροπίας των δικαιωμάτων των παιδιών και των εφήβων,

• αναφέρει στις αρμόδιες αρχές τυχόν παραβιάσεις αυτών των δικαιωμάτων,

• ελέγχει ότι τα άτομα μικρής ηλικίας έχουν πλήρη πρόσβαση στα δικαιώματά τους,

• εκφράζει απόψεις για κανονιστικές προτάσεις σχετικά με τους ανηλίκους και για την προστασία των δικαιωμάτων και την ανάπτυξη των υποκειμένων κατά την ηλικία ανάπτυξης.

Πιο συγκεκριμένα, οι λειτουργίες και αρμοδιότητες των αρχών προστασίας (διαμεσολαβητές παιδιών) μπορούν να χωριστούν σε δύο βασικούς τομείς:

• Ο πρώτος τομέας είναι γενικής φύσης και μπορεί να προσδιοριστεί ως παρεμβάσεις για την προώθηση των δικαιωμάτων των παιδιών. Ο διαμεσολαβητής παιδιών, για παράδειγμα, προωθεί τη γνώση και την επιβεβαίωση των ατομικών και των κοινωνικών και πολιτικών δικαιωμάτων των παιδιών και των εφήβων, προωθώντας κάθε πρωτοβουλία που στοχεύει στη συγκεκριμένη πραγματοποίησή τους. Παρακολουθεί την εφαρμογή εντός της χώρας της Σύμβασης για τα Δικαιώματα του Παιδιού. Εκφράζει, κατόπιν αιτήματος των αρμόδιων τοπικών φορέων, γνώμες, προτάσεις και παρατηρήσεις σχετικά με σχέδια νόμων, κανονισμούς και διοικητικές πράξεις όσον αφορά στον ενδεχόμενο αντίκτυπο σε παιδιά και νέους.

• Ο δεύτερος τομέας παρέμβασης είναι συγκεκριμένος και αφορά στις απαντήσεις σε εκθέσεις για την κατάσταση μεμονωμένων παιδιών που αντιμετωπίζουν δυσκολίες. Ο διαμεσολαβητής παιδιών, στην πραγματικότητα, δέχεται ειδοποιήσεις που προέρχονται ακόμη και από ανήλικους (για παράδειγμα, βλ. εδώ), από οικογένειες, από σχολεία, από ενώσεις και θεσμούς, σε περιπτώσεις παραβίασης δικαιωμάτων. Αναφέρει στις αρμόδιες δημόσιες διοικήσεις τυχόν περιπτώσεις παραβίασης δικαιωμάτων, συνεπεία πράξεων ή γεγονότων που καθυστέρησαν, παραλήφθηκαν ή άλλως διεξήχθησαν παράτυπα, για τις οποίες έλαβε γνώση από δημόσιους και ιδιωτικούς φορείς ή από μεμονωμένα άτομα, συμπεριλαμβανομένων των παιδιών.

Όσον αφορά στον τρόπο λειτουργίας του, ο διαμεσολαβητής παιδιών δεν διαθέτει άμεσες και αυστηρές εξουσίες έρευνας, παροχής συμβουλών και κυρώσεων. Η δράση των αρχών προστασίας εκφράζεται ουσιαστικά μέσω της λεγόμενης ηθικής πίεσης, δηλαδή, της πειθούς που ασκείται έναντι των δημοσίων φορέων (υπεύθυνοι λήψης πολιτικών αποφάσεων, τοπικές διοικήσεις, εδαφικές υπηρεσίες κοινωνικής βοήθειας, δικαστικές αρχές) και ιδιωτικών οντοτήτων (γονείς σε σύγκρουση, φορείς τρίτου τομέα) βάσει του καθεστώτος ως αρχή προστασίας. Έτσι, για παράδειγμα, ο διαμεσολαβητής παιδιών μπορεί να συστήσει στις αρμόδιες διοικήσεις την υιοθέτηση παρεμβάσεων βοήθειας και υποστήριξης, καθώς και την υιοθέτηση ειδικών μέτρων, σε περίπτωση συμπεριφοράς παραμέλησης. Προωθεί, στο πλαίσιο των αρμόδιων διοικήσεων, την τροποποίηση ή τη μεταρρύθμιση των μέτρων που θεωρούνται επιζήμια για τα παιδιά και τους νέους. Καλεί τις αρμόδιες διοικήσεις να θεωρούν ως κορυφαίο το καλύτερο συμφέρον του παιδιού.

Ο διαμεσολαβητής παιδιών μπορεί να υφίσταται τόσο σε εθνικό όσο και σε τοπικό επίπεδο.

Στην Ευρώπη συναντάμε το Ευρωπαϊκό Δίκτυο Αρχών Προστασίας Παιδιών και Εφήβων (Ευρωπαϊκό Δίκτυο Συνηγόρων του Παιδιού - ιστοσελίδα: https://enoc.eu/?page_id=174), το οποίο συνεδριάζει τουλάχιστον μία φορά τον χρόνο για να συζητήσει θέματα κοινού ενδιαφέροντος σε ευρωπαϊκό επίπεδο και να προσδιορίσει γραμμές κοινής παρέμβασης.

Οι εθνικές εποπτικές αρχές συνεργάζονται συνεχώς με το διεθνές δίκτυο των αρχών προστασίας των παιδιών, με διεθνείς οργανισμούς και θεσμούς για την προστασία και προαγωγή των δικαιωμάτων των παιδιών και με μη κερδοσκοπικούς οργανισμούς.

Η εναλλαγή διαφόρων θεμάτων επιτρέπει στις αρχές να αναπτύξουν προτάσεις ανάλογα με την εποχή και τις ανάγκες των νέων.

Ένας από τους τομείς παρέμβασης των αρχών προστασίας αφορά στα φαινόμενα βίας και κακομεταχείρισης εις βάρος των ανήλικων (ψυχολογική κακομεταχείριση, σωματική κακοποίηση, βία, σεξουαλική συμπεριφορά, αμέλεια, υποβοηθούμενη βία). Στο σημείο αυτό ανατρέξτε στη δήλωση θέσης του ENOC (Ευρωπαϊκό Δίκτυο Συνηγόρων του Παιδιού) σχετικά με τη «Βία κατά των παιδιών», http://enoc.eu/wp-content/uploads/2014/12/ENOC-position-statement-on-Violence-against-children-2015-FV.pdf

Ο εθελοντής κηδεμόνας ως «φωνή» του ασυνόδευτου ανηλίκου

Πολλοί ανήλικοι αναγκάζονται να εγκαταλείψουν τη χώρα τους και να ζήσουν την παιδική τους ηλικία και την εφηβεία μακριά από το σπίτι τους, χωρισμένοι από τις οικογένειές τους και χωρίς οικογένεια να διασφαλίζει την προστασία των συμφερόντων τους. Η μεγάλη πλειοψηφία τους υπέστη τραυματικές εμπειρίες σχετικές με το μεταναστευτικό ταξίδι, τη ζωή τους πριν από αυτό ή την απομάκρυνση από την οικογένειά τους.

Στο δίκαιο της ΕΕ, η Οδηγία του Ευρωπαϊκού Κοινοβουλίου και του Συμβουλίου, αρ. 2011/95/ΕΕ, ορίζει τον «ασυνόδευτο ανήλικο» ως: «τον ανήλικο που φτάνει στο έδαφος των κρατών μελών χωρίς να συνοδεύεται από ενήλικα που είναι υπεύθυνος γι 'αυτόν, είτε από τον νόμο είτε από την πρακτική του εκάστοτε κράτους μέλους και για όσο διάστημα δεν έχει πράγματι λάβει τη φροντίδα ενός τέτοιου προσώπου. Χαρακτηρίζει έναν ανήλικο που έμεινε ασυνόδευτος μετά την είσοδό του στο έδαφος των κρατών μελών».

Σε πολλά ευρωπαϊκά δικαστικά συστήματα η φιγούρα του εθελοντή κηδεμόνα γίνεται όλο και πιο διαδεδομένη. Πρόκειται για έναν ιδιώτη πολίτη, με υψηλά προσόντα, που καλείται να εκπροσωπεί νομίμως τους ανήλικους, οι οποίοι έφθασαν μόνοι στο έδαφος του κράτους και να διασφαλίζει ότι τα συμφέροντά τους προστατεύονται, οι ανάγκες τους ακούγονται και οι δυνατότητές τους καλλιεργούνται. Ο θεσμός του εθελοντή κηδεμόνα αντιπροσωπεύει, με άλλα λόγια, ένα παράδειγμα ιδιότητας ενεργού πολίτη και επομένως ένα μέσο κοινωνικής πολιτικής για τους ανηλίκους.

Ο Carlo Infuso, ένας δικηγόρος από το Τορίνο, περιγράφει την εμπειρία του ως εθελοντής κηδεμόνας.

«Συνάντησα τον V, τον κηδεμονευόμενό μου, σε μια απολύτως συνηθισμένη περίσταση: μου τον σύστησε η Κοινότητα που τον φιλοξενούσε. Συνάντησα αυτό το αγόρι και πρέπει να πω ότι μετά τη γνωριμία μας δεν ξέραμε για ποιο πράγμα να συζητήσουμε. Τον πήρα λοιπόν με τη μηχανή μου και πήγαμε μια βόλτα, μιλήσαμε λιγάκι και σιγά-σιγά αρχίσαμε να χτίζουμε αυτήν τη σχέση που σήμερα έχει εξελιχθεί σε κάτι ευχάριστο και όμορφο και είναι γεμάτη αμοιβαία εμπιστοσύνη.

Ο V ξεκινάει επιτέλους τη ζωή του εδώ στην Ιταλία. Επωφελείται της διεθνούς προστασίας κι έτσι θα έχει άδεια παραμονής μόλις γίνει 18, αλλά και αργότερα, καθώς θα λάβει άδεια για δύο χρόνια. Θα ζητήσουμε άδεια ώστε να συνεχίσει για να τελειώσει τις σπουδές του.

Αρχίζει επιτέλους να κατανοεί πόσο σημαντικό είναι να μάθει την ιταλική γλώσσα, κάτι που δεν είχε συνειδητοποιήσει πριν, για τον ίδιο, τις σχέσεις τους με τους άλλους και με εμένα, τους φίλους μου, όσους συναντά μέσω εμού, τους οποίους αρχίζει να γνωρίζει καλύτερα. Μαθαίνει επίσης τη σημασία του να μελετήσει ώστε να εργαστεί ως σερβιτόρος. Πίστευε πως το να είναι κανείς σερβιτόρος απλά σήμαινε να σερβίρει φαγητό στο τραπέζι, αλλά αντ' αυτού, μαθαίνει πλέον να φτιάχνει καπουτσίνο, τον καπουτσίνο με σχέδιο πάνω, να σερβίρει με διπλά μαχαιροπίρουνα, από τα αριστερά, από τα δεξιά, να φέρνει ποτήρια νερού, ποτήρια κρασιού, μαθαίνει πώς να τοποθετεί τις πετσέτες και ούτω καθεξής. Ανακαλύπτει λίγο-λίγο την ευχαρίστηση της μάθησης, της μάθησης για δικό του καλό.

Είναι πολύ αστείος. Είναι νέος, ένας έφηβος, και έχει τρέλα με τη μουσική. Φοράει σκουλαρίκι, έχει μοντέρνο κούρεμα...όπως όλα τα αγόρια.

Κάτι που με εξέπληξε στον ρόλο του κηδεμόνα ήταν το γεγονός ότι εκείνος δεν μπλέκεται με όλο αυτό. Όταν για παράδειγμα έπρεπε να αποφασίσουμε για το τι θα σπουδάσει και που, ο V μ είπε: «Δεν έχω γονείς, εσύ είσαι ο Ιταλός πατέρας μου. Αποφασίζεις για εμένα, επειδή ξέρω πως ό,τι κι αν αποφασίσεις θα είναι καλό για εμένα».

Σήμερα, μετά από λίγους μήνες, είμαι χαρούμενος που ο V μπορεί να πει: «Είμαι ευτυχισμένος που επιλέξαμε αυτές τις σπουδές μαζί, καθώς μου αρέσει πολύ αυτή η σχολή».

Το γεγονός ότι κατάφερα, ίσως μέσα από μικρά καθημερινά πράγματα, να ενεργοποιήσω μέσα του έναν μηχανισμό εμπιστοσύνης προς τους άλλους, του επέτρεψε να χτίσει σε ορισμένο βαθμό την αυτοπεποίθησή του και πλέον ο V είναι πιο ικανός να πάρει αποφάσεις που δεν θα μπορούσε πιο πριν, με μεγαλύτερη αντίληψη, λιγότερη επιπολαιότητα και περισσότερη δέσμευση από ποτέ.

Πρόκειται για μια σχέση που χτίζεται (ανάμεσα στον κηδεμόνα και τον κηδεμονευόμενο) και η οποία μπορεί να εξελιχθεί καλά ή άσχημα. Στην περίπτωσή μας, εξελίχθηκε καλά και μας επέτρεψε να δημιουργήσουμε κάτι.

Βρίσκομαι στην ευχάριστη θέση να πω ότι θα φιλοξενήσω τον V αυτό το Σαββατοκύριακο στο σπίτι μου. Απόψε μάλλον θα μαγειρέψει κάτι και είμαστε όλοι πολύ χαρούμενοι».

Q6.2

5 points possible (graded)

1. Σε περιπτώσεις ενδοοικογενειακής βίας ή σε περίπτωση σύγκρουσης με γονείς, τα παιδιά και οι έφηβοι:

- ○ πρέπει να έχουν πρόσβαση σε εμπιστευτικές ιατρικές συμβουλές και συμβουλές χωρίς τη συγκατάθεση των γονέων, ανεξάρτητα από την ηλικία τους
- ○ πρέπει να έχουν πρόσβαση σε εμπιστευτικές ιατρικές συμβουλές και συμβουλές χωρίς τη συγκατάθεση των γονέων, εφόσον είναι άνω των 14 ετών
- ○ πρέπει να έχουν πρόσβαση σε εμπιστευτικές ιατρικές συμβουλές και συμβουλές με τη συγκατάθεση των γονέων, ανεξάρτητα από την ηλικία τους
- ○ πρέπει να έχουν πρόσβαση σε εμπιστευτικές ιατρικές συμβουλές και συμβουλές με τη συγκατάθεση των γονέων, εφόσον εμφανίζουν υψηλό βαθμό ωριμότητας

2. Η Διακήρυξη του Βουκουρεστίου για τα Παιδιά της Ευρωπαϊκής Ένωσης είναι ένα μέσο κινητοποίησης των ευρωπαϊκών θεσμικών οργάνων και των κρατών μελών για την καθιέρωση επίσημων δομών και μηχανισμών που προωθούν το δικαίωμα των παιδιών και των νέων:

- ○ να συμμετέχουν στις αποφάσεις της ΕΕ
- ○ να ακούγονται σε κάθε δικαστική ή διοικητική διαδικασία που τους αφορά
- ○ να λαμβάνουν ή να επικοινωνούν πληροφορίες ή ιδέες χωρίς παρεμβάσεις από δημόσιες αρχές και χωρίς συνοριακούς περιορισμούς
- ○ να επωφελούνται της ιδιαίτερης προστασίας και, ως εκ τούτου, το δικαίωμα στη διαφοροποιημένη θεραπεία βάσει της ηλικίας

3. Όταν, σύμφωνα με τον νόμο, ένα παιδί δεν έχει την ικανότητα να δώσει τη συγκατάθεσή του για μια παρέμβαση στην υγεία, αυτή η διαδικασία:

- ○ δεν μπορεί να διεξαχθεί
- ○ μπορεί να διεξαχθεί ακόμη και χωρίς την εξουσιοδότηση του εκπροσώπου, της αρχής, του προσώπου ή του φορέα που ορίζει ο νόμος
- ○ δεν μπορεί να διεξαχθεί χωρίς την εξουσιοδότηση του εκπροσώπου, της αρχής, του προσώπου ή του φορέα που ορίζει ο νόμος
- ○ μπορεί να διεξαχθεί ακόμη και χωρίς την εξουσιοδότηση του εκπροσώπου, της αρχής, του προσώπου ή του φορέα που ορίζει ο νόμος, εφόσον είναι δυνατόν να ανασυσταθεί η βούληση του παιδιού

4. Το βίντεο του Συμβουλίου της Ευρώπης «Πες το σε κάποιον που εμπιστεύεσαι» ασχολείται, με μεθόδους φιλικές προς τα παιδιά, με το θέμα:

- ○ της σεξουαλικής κακοποίησης
- ○ του εκφοβισμού (bullying)
- ○ της μαρτυρίας βίας
- ○ της σωματικής τιμωρίας

5. Ο Διαμεσολαβητής Παιδιών ασκεί:

- ○ αυστηρές εξουσίες έρευνας
- ○ εξουσίες περιορισμού και κυρώσεων
- ○ ρυθμιστικές εξουσίες
- ○ εξουσίες ηθικής πίεσης

Φτάσατε πλέον στο τέλος αυτών των δύο εβδομάδων επιμόρφωσης,

στις οποίες προσπαθήσαμε να εντοπίσουμε

και να περιγράψουμε τα νομικά και κοινωνικά μέσα που θέτει η πολιτεία

στη βάση της προστασίας των ανηλίκων οι οποίοι έχουν υποστεί τραύμα.

Έτσι, σε αυτό το σύντομο καταληκτικό βίντεο, θα προσπαθήσω να κινήσω τα νήματα της πορείας μας,

προσδιορίζοντας τα βασικά ερμηνευτικά κλειδιά των διαφόρων ζητημάτων που πραγματευτήκαμε.

Κατ' αρχάς, είναι σημαντικό να θυμάστε ότι η καθιέρωση των δικαιωμάτων του παιδιού

ήταν μια κατάκτηση επίπονη και καθόλου δεδομένη.

Σαφή μαρτυρία των παραπάνω είναι ασφαλώς η περίπτωση της Μέρι Έλεν Γουίλσον,

που είχε αίσιο τέλος μόνο χάρη στην τόλμη μίας μεθοδίστριας ιεραποστόλου

και στη διαίσθηση ενός δικηγόρου.

Στη συγκεκριμένη περίπτωση, για να απομακρυνθεί μία ανήλικη από ένα οικογενειακό περιβάλλον

τουλάχιστον ακατάλληλο, ήταν αναγκαία η προσφυγή

στους νόμους σχετικά με την κακομεταχείριση των ζώων.

Κι αυτό είναι κάτι που προκαλεί έκπληξη.

Αλλά περισσότερο έκπληκτοι ίσως να μείνατε

με το γεγονός που αφορά την απόφαση "Z. c." στη Μεγάλη Βρετανία, του Ευρωπαϊκού Δικαστηρίου

για τα ανθρώπινα δικαιώματα,

αν μη τι άλλο γιατί πραγματοποιήθηκε εκατό και πλέον χρόνια αργότερα.

Μπορούμε να πούμε, λοιπόν,

ότι, στις αρχές της δεκαετίας του 1990, η ιδέα της υποχρέωσης ενός κράτους

να αποκαθιστά οικογενειακές καταστάσεις προβληματικές για την ευημερία ενός ανηλίκου

καθιερώθηκε με αρκετή δυσκολία.

Οι δικαστές του Ευρωπαϊκού Δικαστηρίου, σε εκείνη την περίπτωση, αναγκάστηκαν να "αποσπάσουν"

αυτή την υποχρέωση από την Ευρωπαϊκή Σύμβαση ανθρωπίνων δικαιωμάτων, αναγνωρίζοντάς την ουσιαστικά

ως απόρροια των απάνθρωπων και ταπεινωτικών συμπεριφορών του άρθρου 3 της Ευρωπαϊκής Σύμβασης.

Υπάρχει κι ένα δεύτερο στοιχείο που πρέπει να θυμόμαστε.

Ότι αποφασιστική ώθηση προς την υπέρβαση

των νομοθετικών κενών, που υπάρχουν

σε κάθε κράτος, αναμφίβολα προέρχεται από το διεθνές δίκαιο

και από το υπερεθνικό δίκαιο.

Ασφαλώς, θα επισημάνουμε τη Σύμβαση της Νέας Υόρκης

και στη συνέχεια, σε ό,τι αφορά την περιοχή μας, πολλές πρωτοβουλίες του Συμβουλίου της Ευρώπης,

καθώς και πρόσφατα, πρωτοβουλίες της Ευρωπαϊκής Ένωσης.

Μόνο μέσα από αυτά τα εργαλεία, θα λέγαμε, η συνείδηση ότι ο ανήλικος είναι

ένα αυτόνομο πρόσωπο με δικαιώματα, που δικαιούται τις δικές του νομικές και ανεξάρτητες θέσεις

έναντι των θέσεων των γονέων, ήταν κάτι που μπόρεσε να καθιερωθεί σταδιακά.

Έτσι, σήμερα

μπορεί όντως να οριστεί ως κοινή κληρονομιά σε κάθε νομοθεσία.

Κατά τον ίδιο τρόπο, είναι προφανές

ότι υπάρχει μία ουσιαστική υποχρέωση των κρατικών αρχών να προλαμβάνουν

και να τιμωρούν σήμερα πιθανές κακομεταχειρίσεις κατά των ανηλίκων, όπως είναι εξίσου προφανές
ότι υπάρχει υποχρέωση αποτελεσματικής συνοδείας όποιου έχει υποστεί κακομεταχείριση
και πλήρους αποκατάστασης της ψυχοσωματικής του ευημερίας.
Υπάρχει κι ένα τρίτο, πολύ σημαντικό ερμηνευτικό κλειδί.
Ο ανήλικος είναι ένα άτομο
με έντονες ιδιαιτερότητες.
Η προσωπικότητά του τελεί ακόμα υπό διαμόρφωση
και, ανάλογα με την ηλικία, χρειάζεται φροντίδες που συνήθως δεν είναι απαραίτητες στον ενήλικα.
Ακόμα περισσότερο, αυτές οι ειδικές φροντίδες
είναι απαραίτητες όταν ο ανήλικος είναι θύμα κακοποιήσεων και βίας,
ίσως, ακόμα περισσότερο, σε οικογενειακό περιβάλλον.
Με άλλα λόγια, θα λέγαμε
πως, σε ό,τι αφορά τους ανηλίκους, για τα δικαιώματα που γενικώς αναγνωρίζονται σε κάθε άτομο
απαιτήθηκε μία αυτόνομη επεξεργασία, που λαμβάνει υπόψη την ιδιαίτερη
και ευαίσθητη συνθήκη των παιδιών.
Για παράδειγμα, όντως ο ανήλικος δικαιούται
να τον ακούν και να εκφράζει την άποψή του σε κάθε θέμα που τον αφορά.
Αλλά, από την άλλη, αν αυτό είναι αναγκαίο προς το βέλτιστο συμφέρον του,
τότε η απόφαση που λαμβάνει τελικά η πολιτεία σε μία δίκη που το αφορά, θα μπορούσε
να είναι διαφορετική από εκείνη που το ίδιο δήλωσε ότι προτιμά. Μπορεί, μάλιστα, να είναι
τελείως διαφορετική από την επιθυμία που εξέφρασε ο ανήλικος.
Έπειτα, πρέπει να θυμόμαστε ένα τέταρτο σημαντικό στοιχείο.
Η πορεία
προς την αποκατάσταση της ευημερίας του ανηλίκου που έχει υποστεί τραύμα
μπορεί να είναι μια πορεία εξίσου επώδυνη
με τη βία και τις κακοποιήσεις που έχει υποστεί.
Υπό αυτή την έννοια, η εγκαθίδρυση μιας ποινικής διαδικασίας,
μιας αστικής διαδικασίας, μετά την κακομεταχείριση, είναι ασφαλώς θεμελιώδης
για την επίτευξη πολλών και σημαντικών στόχων: την τιμωρία εκείνου που διέπραξε
το γεγονός, αν συνιστά αδίκημα,
την αποφυγή επανάληψης των συμπεριφορών κακοποίησης,
την αποκατάσταση της υφιστάμενης βλάβης,

όταν κρίνεται αναγκαίο, την αποκατάσταση ενός κατάλληλου οικογενειακού περιβάλλοντος.
Ας μην ξεχνάμε όμως ότι υπάρχει και η άλλη όψη του νομίσματος,
η οποία αφορά τις θυσίες,
συχνά είναι εξίσου πολλές, που απαιτούνται από τον ανήλικο για να αντιμετωπίσει
όλα τα στάδια μιας δίκης.
Συχνά είναι κρίσιμης σημασίας, για παράδειγμα, η συμμετοχή του
στη δίκη που τον αφορά.
Και αυτή η συμμετοχή, εκτός από δικαίωμα του ανηλίκου,
είναι και σημαντική, ή μάλλον θεμελιώδης, για την διαπίστωση των γεγονότων.
Εκφράζοντας την άποψή του και αφηγούμενο την εμπειρία του, το θύμα μπορεί πάντα να παρέχει
στον δικαστή σημαντικά στοιχεία για την τελική του απόφαση.
Ωστόσο, όπως είδαμε,
υπάρχουν σοβαροί κίνδυνοι δευτερογενούς θυματοποίησης,
γιατί,
κατά την πορεία μιας δίκης,
ο ανήλικος πρέπει πιθανώς να θυμηθεί τα γεγονότα και άρα τα τραύματα που υπέστη.
Πρέπει πιθανότατα
να υποστεί τη δημόσια έκθεση που συνδέεται με το συμβάν του το οποίο εκδικάζεται.
Πρέπει πιθανότατα,
στη διάρκεια της δίκης, να έρθει σε άμεση επαφή με αυτόν που άσκησε την κακοποίηση.
Και όλοι αυτοί είναι πολύ σημαντικοί και σοβαρότατοι κίνδυνοι.
Έπειτα, όταν προκύπτει η αναγκαιότητα υιοθεσίας του ανηλίκου
ή έστω ανάθεσης επιμέλειας, δεν πρέπει να ξεχνάμε πόσο δύσκολη μπορεί να είναι
η ένταξη σε έναν νέο οικογενειακό πυρήνα.
Όλως παραδόξως, θα έλεγα, η υπέρβαση ενός πρώτου τραύματος,
που έχει προκληθεί από την κακοποίηση,
απαιτεί την ανάληψη μιας νέας πορείας, κατάσπαρτης, με τη σειρά της, από τον κίνδυνο
πολλών άλλων μικρών τραυμάτων.
Κι έπειτα ίσως να υπάρχει κι άλλο ένα στοιχείο, πιθανώς το πιο σημαντικό.
Συχνά συμβαίνει τα νέα δικαιώματα και οι νέες προστασίες
να απαιτούν πολύ χρόνο και πολλή ενέργεια για να καθιερωθούν.
Το ίδιο, όπως είδαμε, συνέβη και στην περίπτωση των ανηλίκων.

Σήμερα, λοιπόν,
που υπάρχουν αυτές οι εγγυήσεις, πιθανότατα πρέπει να κάνουμε
ένα ακόμα βήμα.
Είναι ανάγκη να αποκτήσουμε τη συνείδηση ότι το δικαίωμα, από μόνο του, δεν αρκεί.
Ότι οι διεθνείς, υπερεθνικές Συμβάσεις, οι ευρωπαϊκές κατευθυντήριες οδηγίες,
οι νόμοι των μεμονωμένων κρατών, από μόνοι τους, δεν αρκούν.
Είναι το σημείο αφετηρίας,
είναι η βάση πάνω στην οποία
πρέπει να οικοδομήσουμε όλα τα υπόλοιπα.
Εκείνο που έχει πιο πολλή σημασία, σε αυτόν τον τομέα ίσως περισσότερο
από ό,τι σε άλλους, είναι το πώς οι εγγυήσεις που προβλέπονται στα χαρτιά θα εφαρμοστούν,
θα γίνουν πραγματικότητα, μέσα από αποτελεσματικές κοινωνικές πολιτικές.
Γι' αυτό οι κεντρικές και τοπικές διοικήσεις
πρέπει ασφαλώς να αναλάβουν να προωθήσουν, με συγκεκριμένες πρωτοβουλίες, μία κουλτούρα
σεβασμού των δικαιωμάτων των ανηλίκων.
Ταυτόχρονα, πρέπει να δημιουργούν, να ελέγχουν, να επενδύουν
σε υπηρεσίες ειδικά για τα παιδιά και τους εφήβους.
Υπηρεσίες όπως σημεία παροχής βοήθειας, ομάδες υποστήριξης,
εποπτικές και ελεγκτικές αρχές.
Και ας μην ξεχνάμε ότι σημαντικό ρόλο
διαδραματίζουν πάντα ο εθελοντισμός και οι οργανώσεις που προάγουν και προστατεύουν
τα δικαιώματα των ανηλίκων,
γιατί αυτές οι οργανώσεις είναι οπωσδήποτε ένα θεμελιώδες λιθαράκι
στην εφαρμογή αποτελεσματικών και αποδοτικών κοινωνικών υπηρεσιών.
Για την ελαχιστοποίηση του κινδύνου της δευτερογενούς θυματοποίησης, όπως είδαμε,
οι δημόσιες διοικήσεις πρέπει να έχουν την απαραίτητη ευαισθησία και να ενεργούν
με κατάλληλες επενδύσεις.
Για να αναφέρουμε ένα παράδειγμα, πρέπει οπωσδήποτε να διαμορφώσουν
κάποιες αίθουσες του δικαστηρίου ειδικά για την προστατευμένη ακρόαση.
Πρέπει να ευαισθητοποιήσουν κατάλληλα τους δικαστές και τους δικηγόρους.
Πρέπει να εξασφαλίσουν κατάλληλες συνθήκες για τη διεξαγωγή των ακροάσεων του ανηλίκου.
Πρέπει οπωσδήποτε να εγγυηθούν τη συνεχή ψυχολογική υποστήριξη

σε όλη τη διάρκεια της δίκης.

Και, φυσικά, δεν ξεχνάμε τους πρώτους αποδέκτες αυτού του προγράμματος,

δηλαδή τους λειτουργούς, κοινωνικούς και ιατρικούς, που αλληλεπιδρούν με τον ανήλικο,

των οποίων η συμβολή είναι θεμελιώδης.

Γιατί αυτοί οι λειτουργοί είναι,

είσαστε,

οι φύλακες των ανηλίκων έξω από τις δίκες,

για την υπέρβαση του τραύματος από την πρωτογενή θυματοποίηση.

Αλλά είσαστε και οι φύλακες του ανηλίκου μέσα στις δίκες,

γιατί μπορείτε να καταστήσετε

πιο ανεκτό κάτι που δεν θα μπορεί

ποτέ να βιωθεί ως σύνηθες.

Κι έπειτα, είσαστε οι φύλακες των ανηλίκων ακόμα και μετά τις δίκες,

γιατί πρέπει να βρείτε τον τρόπο ώστε η κοπιώδης πορεία

προς την αποκατάσταση της γαλήνης να μην διακοπεί τη στιγμή ακριβώς που θα έπρεπε

να επιταχυνθεί και στη συνέχεια να καρποφορήσει.

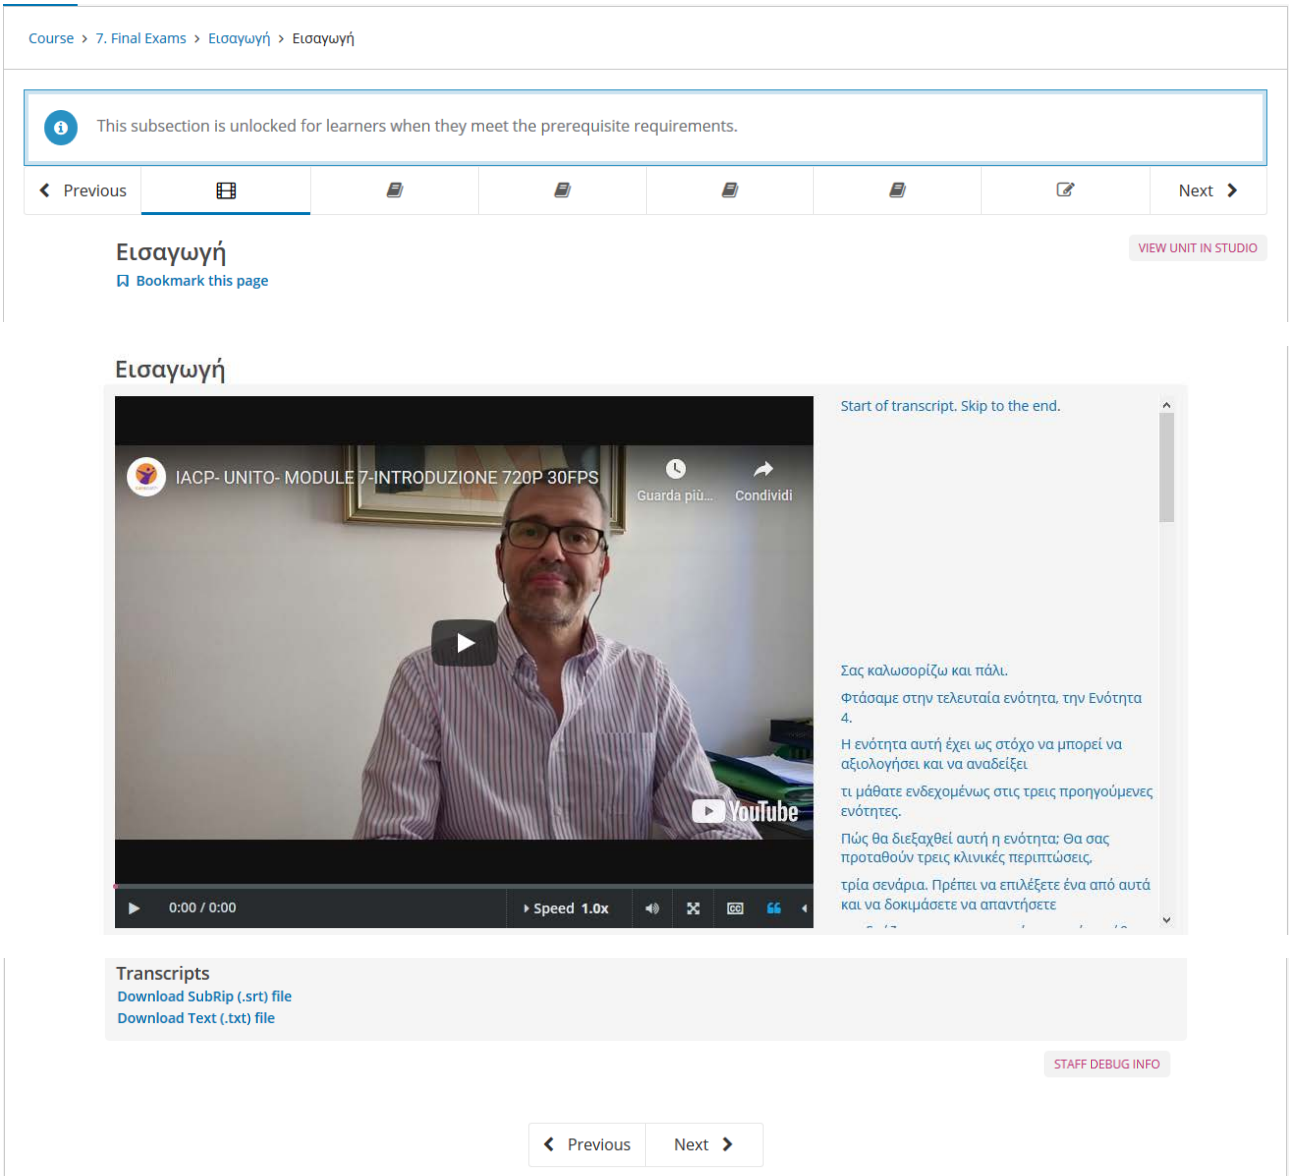
Εν τέλει, είναι πάρα πολλές οι δυσκολίες που περιμένουν το παιδί ή τον έφηβο

που είναι θύμα κακομεταχείρισης.

Αλλά, όπως προσπαθήσαμε να τονίσουμε ως αυτή τη στιγμή, υπάρχουν

και πολλά εργαλεία για να το βοηθήσουμε να αντιμετωπίσει και να νικήσει τις προκλήσεις.

Καλή δουλειά, λοιπόν, σε όλες και όλους.



Transcript

Σας καλωσορίζω και πάλι.

Φτάσαμε στην τελευταία ενότητα, την Ενότητα 4.

Η ενότητα αυτή έχει ως στόχο να μπορεί να αξιολογήσει και να αναδείξει

τι μάθατε ενδεχομένως στις τρεις προηγούμενες ενότητες.

Πώς θα διεξαχθεί αυτή η ενότητα; Θα σας προταθούν τρεις κλινικές περιπτώσεις,

τρία σενάρια. Πρέπει να επιλέξετε ένα από αυτά και να δοκιμάσετε να απαντήσετε

συνδυάζοντας και ενσωματώνοντας ό,τι μάθατε στην Ενότητα 1 "Η Θεωρία",

στην Ενότητα 2 "Η Έρευνα" και στην Ενότητα 3 "Το Νομοθετικό Πλαίσιο", ποια είναι τα κύρια στοιχεία

της Θεραπείας "Trauma Informed" και πώς αυτή μπορεί να εφαρμοστεί

στα τρία σενάρια.

Πώς θα συντάξετε αυτή τη σύντομη αναφορά,

αυτή τη συνοπτική έκθεση; Έχετε διάφορες επιλογές. Μπορείτε να δημιουργήσετε ένα αρχείο σε PowerPoint,

δηλαδή μία παρουσίαση. Μπορείτε να δημιουργήσετε ένα σύντομο βίντεο, δηλαδή να χρησιμοποιήσετε

αυτό τον τύπο αρχείου ή να συντάξετε ένα έγγραφο Word ή ένα αρχείο PDF ή και να χρησιμοποιήσετε

άλλους τρόπους που μπορεί να έχετε κατά νου.

Η ιδιαιτερότητα, η ιδιομορφία αυτής της τελευταίας ενότητας

είναι ότι θα είναι μία ανασκόπηση μεταξύ συναδέλφων. Θα αξιολογήσετε την εργασία ενός άλλου συμμετέχοντα

στο πρόγραμμα και ταυτόχρονα η εργασία σας θα αξιολογηθεί από έναν άλλο συμμετέχοντα.

Θα είναι μία αξιολόγηση μεταξύ ομοτίμων. Την τελευταία αξιολόγηση όμως θα αναλάβει

ένας εκπαιδευτής μεγαλύτερης ηλικίας, ένας από τους υπεύθυνους του προγράμματος.

Αυτό θα λέγαμε ότι είναι στα αλήθεια το τελευταίο απαιτούμενο βήμα για να αποκτήσετε

το πιστοποιητικό συμμετοχής σε αυτό το διαδικτυακό πρόγραμμα κατάρτισης.

Όταν ολοκληρώσετε την τεκμηρίωση και ετοιμάσετε την αναφορά, το βίντεο

ή την παρουσίασή σας σε Power Point, μπορείτε να τα υποβάλλετε. Θα επιλεγεί τυχαία και ανώνυμα

ένας συμμαθητής σας και έπειτα θα κληθείτε κι εσείς να αξιολογήσετε ένα έγγραφο, μία αναφορά ή ένα βίντεο.

Στη συνέχεια θα υποβάλλετε για τελευταία φορά την εργασία σας και τότε ένας καθηγητής

θα δώσει μία τελική αξιολόγηση και θα εγκρίνει, ή όχι, το πέρας του προγράμματος επιμόρφωσής σας.

Ελπίζουμε ότι ήταν ένα ευχάριστο πρόγραμμα,

ότι μπορέσατε να κατανοήσετε κάτι ή έστω ότι επιβεβαιώσατε ή επικυρώσατε επιπλέον γνώσεις

σχετικά με τη Θεραπεία "Trauma Informed". Αν έχετε την ευχαρίστηση, μπορείτε να στείλετε

μερικά σύντομα βίντεο στο τέλος του προγράμματος, με το ονοματεπώνυμό σας, σύντομα έγγραφα

όπου θα επιβεβαιώσουμε ότι συμμετείχατε σε αυτό το πρόγραμμα επιμόρφωσης.

Εγώ προσωπικά, ο Λούκα Ρολέ, και όλη η ομάδα εργασίας του προγράμματος "Care Path",

σας ευχαριστούμε θερμά και πάλι που ήσασταν μαζί μας και ελπίζουμε να σας ξαναδούμε

σε άλλα προγράμματα στο μέλλον.

1. Κατά τη διάρκεια αυτής της δραστηριότητας σας ζητείται να αναλύσετε την υπόθεση (επιλέγοντας ένα σενάριο) από νομική άποψη, ψυχολογική άποψη και / ή σύμφωνα με την επιστημονική έρευνα. Η απάντησή σας θα πρέπει να περιλαμβάνει τις σκέψεις σας υπό το πρίσμα των θεμελιωδών αρχών της περίθαλψης για τα τραύματα. (μοντέλο TIC). Μπορείτε να υποβάλετε την εργασία σας σε

ο κείμενο (απλά εισάγετε την απάντηση σας στην αντίστοιχη περιοχή) ή

ο Μπορείτε να ανεβάσετε ένα αρχείο που περιέχει την εργασία σας. **Σημαντική σημείωση** - το αρχείο πρέπει να είναι σε μορφή pdf μέχρι 5mb.

Σε περίπτωση που έχετε ετοιμάσει ένα βίντεο, μπορείτε να εισάγετε απλώς τη σύνδεση του δημοσιευμένου σας βίντεο, ώστε να μπορούμε να έχουμε πρόσβαση σε αυτό.

2. Κάθε μαθητής, μετά την υποβολή της δικής του εργασίας, θα πρέπει να αξιολογήσει τουλάχιστον μία εργασία άλλου εκπαιδευόμενου. Αυτό είναι ένα απαραίτητο βήμα για να ολοκληρωθεί η δραστηριότητα και να δοθεί η πιστοποίηση.

Σημαντική σημείωση - Σε περίπτωση που χρειαστεί να αξιολογήσετε μια απάντηση που περιέχεται σε ένα αρχείο, πρέπει να κάνετε λήψη του αρχείου και να το ανοίξετε στην επιφάνεια εργασίας / κινητή συσκευή σας. Βεβαιωθείτε ότι το αρχείο έχει την επέκταση .pdf. Αν όχι, μετονομάστε το αρχείο σας προσθέτοντας το κατάληξη .pdf στο τέλος.

2. Το τελευταίο βήμα περιλαμβάνει την αξιολόγηση του προσωπικού. Μετά την ολοκλήρωση, ο τελικός βαθμός θα είναι διαθέσιμος αμέσως

Η C.F. είναι 15 χρονών και έχει παραπεμφθεί από τα τοπικά νοσοκομεία στην τοπική κοινωνική υπηρεσία.

Παρακολουθεί ακανόνιστα το γυμνάσιο έχοντας μη ικανοποιητική επίδοση και μεταφέρθηκε στον χώρο επειγόντων του νοσοκομείου λόγω κατάποσης υπερβολικής ποσότητας ψυχοτρόπων φαρμάκων.

Μετά την παρέμβαση πρώτων βοηθειών, την έστειλαν πίσω στο σπίτι της, με την υποχρέωση ολόκληρης της οικογένειας να ακολουθήσουν ένα πρόγραμμα υποστήριξης και βοήθειας.

Η ανήλικη επιδεικνύει μια θυμωμένη στάση, δεν θέλει να είναι στη συνέντευξη ή να μιλήσει για την κατάστασή της, και δεν δείχνει να καταλαβαίνει το λόγο αυτής της παραπομπής. Ισχυρίζεται ότι όλο αυτό ήταν ένα ηλίθιο πράγμα που έκανε με τον φίλο της, αλλά που σίγουρα δεν θα το επαναλάβει.

Αφού έλαβε φροντίδα με ενσυναίσθηση σχετικά με τους φόβους που είχε, αναφέρθηκε στο περιστατικό της υπερβολικής δόσης (αναφέρεται στο επεισόδιο ως ότι έκανε "μαλακίες") και δέχθηκε να λάβει πληροφορίες για τους όρους των προσφερόμενων υπηρεσιών. Το κορίτσι φάνηκε να ανοίγει και να μοιράζεται την ιστορία της και την ευαισθησία της. Αναφέρθηκε ότι οι γονείς της έχουν χωρίσει –όχι ακόμη επισήμως- αλλά πριν λίγους μήνες ότι η μητέρα είχε εγκαταλείψει το σπίτι τους.

Η C. αναφέρει ότι η αποχώρηση της μητέρας σηματοδοτεί μια θετική νέα εξέλιξη γι 'αυτήν, δεδομένου ότι έχει μια πολύ δύσκολη σχέση με τη μητέρα της και το γεγονός ότι η μητέρα είναι μακριά από το σπίτι την κάνει να αισθάνεται πιο ήρεμη. Από τη μία πλευρά, αυτό συνεπάγεται ότι δεν υπάρχει πλέον γύρω της το άτομο εκείνο που την βοηθούσε να κάνει πράγματα. Για πολύ καιρό, όταν η C. Πήγαινε στο δημοτικό και στο γυμνάσιο, η μητέρα της ήταν θυμωμένη και την χτυπούσε ή την προσέβαλλε όταν έκανε κάτι λανθασμένο. Η μητέρα της χρησιμοποιούσε ψυχολογική και σωματική βία για να την τιμωρήσει. Οι πιο συνήθεις προσβολές ήταν «Ηλίθια», «είσαι σκύλα». Τελικά, το τελευταίο έτος, η C. άρχισε τελικά να μην υποφέρει παθητικά αυτές τις κακομεταχειρίσεις, άρχισε να ανταποκρίνεται στις επιθέσεις της μητέρας της και μερικές φορές μπήκε σε διαμάχες ακόμη και σε φυσικές μάχες με τη μητέρα της. Βίωσε τη νέα ενεργή συμπεριφορά της με τη μητέρα της ως μια πιο ικανοποιητική για την ίδια συμπεριφορά από την προηγούμενη. Ο πατέρας της είναι μακριά όλη την ημέρα για δουλειά. Η C. λέει ότι είναι καλός άνθρωπος, που παρόλα αυτά επιστρέφει στο σπίτι μόνο το βράδυ και δεν φαίνεται να ενδιαφέρεται για τη δυναμική της οικογένειάς του, πιθανότατα επειδή έρχεται σπίτι πολύ κουρασμένος από την εργασία. Τα πράγματα φαίνονταν ψυχρά ανάμεσα στους γονείς της. Στην οικογένειά της, οι άνθρωποι δεν συγκεντρώνονται για να πραγματοποιήσουν κάποιες κοινές δραστηριότητες. Τις Κυριακές επίσης είναι πάντα εντός σπιτιού ή με τη θεία της (την αδελφή του πατέρα της) .Για την C., η θεία είναι ένας σημαντικός ενήλικας και ένα σημαντικό σημείο αναφοράς.

Όταν η C. ήταν 13 ετών, μαζί με τον φίλο της άρχισαν να καπνίζουν τσιγάρο και μαριχουάνα στο σχολείο. Της άρεσε το αίσθημα της χαλάρωσης και της διασκέδασης που γνώρισε με το κάπνισμα μαριχουάνας και σύντομα άρχισε να βγαίνει μαζί με μια ομάδα ανθρώπων που μοιράζονταν το ίδιο "ενδιαφέρον" καπνίσματος χόρτου.

Μετά από μερικούς μήνες συνεχών δυσκολιών στο σπίτι, η μητέρα της άρχισε να είναι λιγότερο παρούσα, κάθε μέρα το απόγευμα η μητέρα έβγαινε και αυτό επέτρεψε στην C.. να είναι ελεύθερη να προσκαλέσει τους φίλους της στο σπίτι. Αρχικά, ήταν ευχαριστημένη με αυτή τη νέα κατάσταση, θεώρησε ότι ήταν μια βελτίωση της κατάστασης της ζωής της. Μια μέρα όμως ανακαλύπτει, ενώ ταξιδεύει με έναν φίλο, ότι η μητέρα της βλέπει έναν άλλο άνθρωπο. Τους πετυχαίνει να κάθονται σε ένα μπαρ έξω από τη γειτονιά τους σε στάσεις που δηλώνουν με σαφήνεια ότι είναι εραστές.

Σε αυτό το σημείο, η C. αναφέρει ότι τελικά βρέθηκε σε μια θέση να ζητάει και να απαιτεί από τη μητέρα της ό, τι θέλει, γιατί η μητέρα της δεν μπορούσε λόγω του μυστικού να ξεφύγει από τα αιτήματα της κόρης της: Η C. ήθελε να πάρει στο σπίτι το αγόρι της και να είναι εκεί μόνοι τους και ζητάει από την μητέρα της να την αφήσει ήσυχη. Αρχικά, η μητέρα δεν θέλει, αλλά όταν η C. της λέει ότι πρέπει, διαφορετικά θα ενημερώσει τον πατέρα της για την εξωσυζυγική της σχέση, η μητέρα υποκύπτει στο αίτημα της. Τα αιτήματα της C. και οι παραχωρήσεις της μητέρας αυξάνονται. Η C. καλεί όποιον θέλει σπίτι, καπνίζει στο σπίτι, της επιτρέπεται να αγοράσει μπύρα και παίρνει όλα τα χρήματα που ζητάει. Η μητέρα υποχωρεί στα αιτήματά της, αλλά η C. Παράλληλα δέχεται από τη μητέρα τον θυμό τις προσβολές του και όλη την περιφρόνησή της.

Ο πατέρας δεν τα γνωρίζει όλα αυτά. Ενώ μιλάει γι 'αυτό η C δείχνει μια στάση θλιβερού θριάμβου και μεγάλο θυμό.

Αυτή η κατάσταση των πραγμάτων συνεχίζεται για περίπου ένα χρόνο, μέχρι το Σεπτέμβριο, όπου ο πατέρας της, ανακαλύπτει την προδοσία της συζύγου, και της ζητά να φύγει από το σπίτι τους.

Σε αυτό το σημείο η C. είναι ακόμη πιο ελεύθερη μιας και είναι μόνη στο σπίτι μέχρι την επιστροφή του πατέρα του από την εργασία. Αρχίζει να καθυστερεί στο σχολείο ή να μην πηγαίνει καθόλου, μέχρι που μένει στο σπίτι μιας φίλης της και βρίσκει ένα φάρμακο της μητέρας της φίλης της. Αποφασίζουν να προσπαθήσουν να τα πάρουν μαζί. Μετά από αυτό το επεισόδιο, ο πατέρας καλείται από τη μητέρα της φίλης που βρήκε την C και την κόρη της να κοιμούνται βαθιά στο κρεβάτι και σε μια κατάσταση σύγχυσης: «Δυστυχώς» και τα δύο κορίτσια έσπευσαν στα επείγοντα του νοσοκομείου.

Η Β. είναι ένα κορίτσι 15 χρονών και η πρώτη από δύο αδέλφια. Η μητέρα είναι επιχειρηματίας και ο πατέρας είναι άνεργος. Οι τέσσερις τους ζουν σε ένα πολυτελές προάστιο της πόλης.

Η Β. έρχεται στη συμβουλευτική εξαιτίας του σοβαρού φυσικού πόνου που περιλαμβάνει το χαμηλότερο μέρος του σώματος (πόδια και κοιλιά) που δεν εξηγείται από καμία ιατρική κατάσταση (οι γονείς της την είχαν ήδη πάει προς εξέταση σε πολλούς επαγγελματίες).

Αυτός ο πόνος την εμποδίζει να έχει έναν ικανοποιητικό τρόπο ζωής, αντίστοιχο της ηλικίας της: το να συμμετέχει με συνέπεια στο σχολείο είναι κάτι αδύνατον για την ίδια, επομένως κινδυνεύει μείνει στην ίδια τάξη μένοντας από απουσίες. Επιπλέον είναι πολύ δύσκολο να κανονίσει εξόδους με φίλους ή να κάνει κάποιο άθλημα, επειδή κάτι τέτοιο ανά πάσα στιγμή θα μπορούσε να ακυρωθεί εξαιτίας του ξαφνικού αυτού διάτρητου πόνου.

Στην πρώτη μας συνάντηση μοιάζει ατημέλητη, μάλλον εσωστρεφής (χαμηλώνει το βλέμμα της, ψιθυρίζει λίγα λόγια) και γέρνει το σώμα (ξοδεύει όλον τον χρόνο που έχουμε κουλουριασμένη στην καρέκλα της). Αναφέρει ότι αποφάσισε να ζητήσει βοήθεια επειδή αναγνωρίζει την ανάγκη να φροντίσει αυτό το πρόβλημα που όπως αναφέρει: «με κλείνει στο σπίτι μου».

Έχει αρκετά εκτεταμένη γνώση, μεγάλη περιέργεια και έντονη ευφυία, που όλα αυτά φαίνεται να αντιπαραβάλλονται της συμπαγούς και κουλουριασμένης της στάσης.

Λέει ότι δεν έχει ιδέα για το τι μπορεί να έχει ξεκινήσει τα συμπτώματά της, τα οποία εμφανίστηκαν περίπου την εποχή της αρχής της εμμήνου ρύσης.

Αφηγείται ότι έχει υπέροχες σχέσεις με τα μέλη της οικογένειάς της, πολύ λίγους φίλους και να αγωνίζεται πολύ για να είναι σε ομάδες, ανεξάρτητα από το αν αυτές αποτελούνται από συνομήλικους ή από ενήλικες. Απολαμβάνει να διαβάζει και να ακούει μουσική και να μελετά διάφορες γλώσσες ως αυτοδίδαχτη.

Κατά τη διάρκεια του πρώτου έτους της ψυχοθεραπείας, εργάζεται για την εξαφάνιση των συμπτωμάτων της και εστιάζουμε στην ενδυνάμωσή της. Ο πόνος μπορεί να περιγραφεί και αρχίζει να καταπραύνεται. Εμφανίζεται λίγο πριν από την έμμηνο ρύση και την κάνει να χάσει το πολύ μόνο 2 ή 3 μέρες του σχολείου. Ωστόσο, δεν υπάρχει ακόμα συνειδητότητα και αναγνώριση της πηγής προέλευσης των συμπτωμάτων της και, επιπλέον, έχει συχνές κρίσεις πανικού.

Εκτός από τις ατομικές συνεδρίες της Β., συναντώ περιοδικά όλη την οικογένεια η οποία, ακόμα και αν εκφράζει την ανησυχία της για τα βάσανα της Β., αναγνωρίζει τις μεγάλες αλλαγές της και τους πόρους που μπορεί να αξιοποιήσει για να ζήσει και πάλι μια ικανοποιητική ζωή .

Μετά από δύο χρόνια ψυχοθεραπείας, η Β. Μπορεί να διαχειριστεί τις κρίσεις πανικού της, οι οποίες γίνονται ολοένα και πιο σποραδικές και χρησιμοποιεί διάφορες τεχνικές διαχείρισης και αντιμετώπισης του πόνου (αυτοθεραπεέα, γιόγκα, καθοδηγούμενες φαντασιώσεις, τεχνικές αναπνοής).

Ωστόσο, κατά την παρακολούθηση μιας ταινίας στην οποία υπάρχει σκηνή σεξουαλικής επίθεσης, βιώνει μια ξαφνική και έντονη αίσθηση αγωνίας, την οποία θα μου αναφέρει στην επόμενη σύνοδο ως «ένα εσωτερικό black out».

Αρχίζουμε να εξερευνούμε αυτό το συναίσθημα, προσπαθώντας να πλησιάσουμε αυτά τα "θραύσματα του ονείρου" όπως αρχικά αναφέρεται τα οποία αργότερα μετατρέπονται σε θολές εικόνες. Δύσκολο να οριστούν ως αναμνήσεις ή φαντασιώσεις δανεισμένες από βιβλία ή ταινίες.

Η δουλειά με σεβασμό στο χρόνο της και τις συμπεριφορές, έχουν σκοπό να μην αναγκάσουν, τις αμυντικές στρατηγικές της ή τους κατανοητούς φόβους της, αλλά έχοντας ως σκοπό να συνεχίσει να ανακαλύπτει τα εσωτερικά της αποθέματα βοηθούν την Β. να ανακαλέσει σιγά σιγά στην μνήμη της ένα άτομο στο οποίο την είχαν εμπιστευτεί να την προσέχει, οι γονείς όταν ήταν μακριά (στις ηλικίες 3 εως 7) και το οποίο την κακοποίηση σεξουαλικά.

Η ανάκληση της μνήμης αυτής επιτρέπει να ξεκινήσει η διαδικασία όχι μόνο με στόχο να αναφέρει τον κακοποιό και να δημιουργήσει ένα ασφαλές περιβάλλον για τον εαυτό της (ο κακοποιός εξακολουθούσε να βλέπει σποραδικά την οικογένειά αυτή) αλλά και για να νοηματοδοτόσει εκ νέου την ψυχολογική καταπόνηση που μέχρι εκείνη τη στιγμή βίωνε και που δεν μπορούσε να εξηγηθεί ή να νοηματοδοτηθεί.

1. Ο Ρ είναι ενήλικος 13 ετών και έχει παραπεμφθεί από το δικαστήριο σε τοπικό οργανισμό φροντίδας υγείας.

Παρακολούθησε το δημοτικό σχολείο και βρισκόταν σε αναδοχή από την ηλικία των 9 ετών.

Σε αυτή την πρώτη συνάντηση συνοδεύεται από τον παιδαγωγό του οικογενειακού σπιτιού, είναι ανοιχτός και ενδιαφέρεται να γνωρίσει τους ανθρώπους με τους οποίους έχει συνέντευξη για να μπορέσει να λάβει την υπηρεσία μας ως πελάτης. Στην αρχή είναι κοινωνικός, απαντά στις ερωτήσεις, αλληλεπιδρά με τους ανθρώπους, κάνει αστεία και είναι αρκετά συμπαθής. Όταν αρχίζουμε να μιλάμε για τους λόγους αυτής της συνάντησης, αρχίζει να έχει σύγχυση, δεν καταλαβαίνει γιατί είναι εκεί, τι πρέπει να κάνει, τι θέλουμε από αυτόν και αναζητά απαντήσεις σε αυτά τα ερωτήματα, δίνοντας φωνή στην τάση του για αποπροσανατολισμό και στου φόβους του (όπου υποχρεώνεται να είναι ακόμη πιο μακριά από τους γονείς του, τον φόβο ότι τους πληγώνει, τον φόβο ότι κάποιος θα αποφασίσει ότι δεν θα μπορεί πλέον να τους ξαναδει, κλπ.).

Οι γονείς του, μετά από μια περίοδο χωρισμού ζουν τώρα μαζί, ακριβώς όπως την περίοδο όπου ο Ρ. απομακρύνθηκε από την οικογένειά του. Το αγόρι θυμάται πολλές διαμάχες μεταξύ των γονέων του, δεν τα πήγαιναν πολύ καλά και αρκετές φορές η μητέρα, η οποία καταγόταν από διαφορετική χώρα από τη χώρα διαμονής, έκανε απόπειρες να επιστρέψει στην οικογένειά της προέλευσης. Όταν η μητέρα του έφυγε ο Ρ. λυπήθηκε πολύ, αλλά την ίδια στιγμή αισθανόταν και ευτυχής γιατί από τότε οι καυγάδες των γονιών τους σταμάτησαν για λίγο. Αγαπά τους γονείς του και ακόμη και τώρα είναι ευτυχής όταν περνούν χρόνο μαζί.

Μιλάει μαζί τους καθημερινά μέσω τηλεφώνου και τους βλέπει μία φορά την εβδομάδα όταν τον επισκέπτονται στο οικογενειακό σπίτι αναδοχής.

Σε αυτό το σπίτι διαμένει για δύο περίπου χρόνια και είναι εντάξει, αν και θα ήθελε να επιστρέψει στο δικό του σπίτι, αν και δεν ξέρει αν αυτό είναι δυνατόν.

Δεν θυμάται καλά την ημέρα που εισήλθε στην οικογένεια αναδοχής, αλλά ξέρει ότι ο πατέρας του ήταν αυτός που τον είχε συνοδεύσει. Η μητέρα είχε μείνει στο σπίτι να κλαίει και ένιωθε πολύ λύπη γι 'αυτήν. Ο μπαμπάς ήταν πιο δυνατός, επειδή τον είχε συνοδεύσει συνόδευε, και όπως πάντα τον γεμίζε με λόγια, αλλά δεν έκλαιγε.

Ο R. φοβήθηκε πολύ όταν εισήλθε στο σπίτι αναδοχής, αλλά εκεί βρήκε μερικούς συμπαθητικούς και αστείους ανθρώπους που τον έκαναν να αισθάνεται λιγότερο φοβισμένος και ήταν εύκολο να γίνει φίλος και με τους υπόλοιπους.

Ο Ρ. μπήκε στο σπίτι αναδοχής μετά από κάποια περιστατικά σεξουαλικής παρενόχλησης από έναν φίλο των γονέων, ο οποίος κακοποίησε τον μικρό. Ο Ρ. δεν το αναφέρει αυτό σε κανέναν, αλλά σε κάποιο σημείο αυτό αποκαλύπτεται (ο R. ακόμα δεν ξέρει γιατί) και καταλήγουν στο δικαστήριο. Αυτός ήταν ένας φίλος των γονιών του ο οποίος επισκεπτόταν πολύ συχνά το σπίτι των γονιών και ήταν πολύ συμπαθής στον Ρ.. Ένιωθε ότι ήταν και αυτός σημαντικός για αυτόν: Το βράδυ αυτός ο ενήλικας κάποιες φορές του διάβαζε ιστορίες και μερικές φορές ο πατέρας του Ρ θα τον ρωτούσε αν ήθελε να τον πάει στο κρεβάτι.

Όταν αυτά τα άσχημα πράγματα συνέβησαν και ήρθαν στο φως, ο πατέρας του συνόδευσε τον Ρ. στο σπίτι αναδοχής, θέλοντας να τον προστατεύσει από αυτόν τον άνθρωπο.

Ο Ρ. δεν ξέρει πραγματικά πώς αισθάνεται για όλα αυτά, ίσως - λέει - πολύ σύγχυση.

Στο σπίτι της οικογένειας αναδοχής είναι ωραία, αλλά μερικές φορές αισθάνεται λίγο αναγκασμένος να υπακούσει σε κάποιους σκληρούς κανόνες, τότε οργίζεται πολύ και καταλήγει να καταστρέφει αντικείμενα, αλλά ποτέ δεν συμπεριφέρεται άσχημα σε ανθρώπους. Ειδικότερα, ο Ρ. δεν μπορεί να αντέξει το γεγονός ότι για να μιλήσει με τους γονείς του ή για να τους δει πρέπει να ακολουθήσει κανόνες που δεν καταλαβαίνει. Από την άλλη πλευρά, σε αυτό το σπίτι, κάνει ενδιαφέροντα πράγματα (ασχολείται ακόμη και με αθλήματα), αισθάνεται όμορφα στο να σχετίζεται με άλλους ανθρώπους. Του αρέσει να έχει φίλους γύρω του, αν και, μερικές φορές θέλει να μένει μόνος του και να έχει χώρο για τον εαυτό του.

Ο Ρ. έχει δημιουργήσει μια ειδική σχέση με τον παιδαγωγό που τον φροντίζει πολύ και αυτό είναι κάτι που του αρέσει πολύ.

Ο Ρ. έχει πολλούς φόβους για το τι θα συμβεί όταν χρειαστεί να εγκαταλείψει το σπίτι της ανάδοχης οικογένειας, όχι επειδή πρέπει να φύγει τώρα, αλλά ξέρει ότι τελικά σε κάποιο σημείο αυτό θα συμβεί και δεν θέλει οι γονείς του να γνωρίζουν ότι βιώνει αυτούς τους φόβους , επειδή φοβάται ότι θα αισθανθεί λυπημένος και πιστεύει ότι δεν τον αγαπούν.

ΣΤΟΙΧΕΙΟ 1: ΟΡΙΣΜΟΣ ΤΗΣ ΕΡΕΥΝΑΣ

ΒΙΝΤΕΟ

Τι εστί επιστημονική έρευνα;

ΑΡΘΡΟ

Δεν είναι εύκολο να προσδιοριστούν τα όρια του τι είναι η έρευνα και τι όχι. Έχουν δοθεί πολλοί ορισμοί με το πέρασμα του χρόνου. Ας δούμε κάποιους από τους πιο πρόσφατους:

«Η έρευνα απλά αναζητά την απάντηση σε ορισμένες ερωτήσεις, οι οποίες έχουν παραμείνει αναπάντητες, ενώ οι απαντήσεις εξαρτώνται από ανθρώπινες προσπάθειες. […] Στην πραγματικότητα, η έρευνα αποτελεί απλά τη διαδικασία να φτάσει κανείς σε αξιόπιστες λύσεις για ένα πρόβλημα μέσω σχεδιασμένης και συστηματικής συλλογής, ανάλυσης και ερμηνείας δεδομένων.» (Singh, 2006, σελ.1).

«Η έρευνα αποτελεί δημιουργική διαδικασία της ανακάλυψης που αναπτύσσεται σύμφωνα με προκαθορισμένη πορεία και σύμφωνα με προκαθορισμένες διαδικασίες, οι οποίες έχουν παγιωθεί εντός της επιστημονικής κοινότητας» (Corbetta, 2015, σελ.15).

Σε γενικές γραμμές, η έρευνα διεξάγεται «οπουδήποτε η περιέργεια και η διαίσθηση εφαρμόζονται με συστηματική προσέγγιση ώστε να απαντηθούν ερωτήσεις σχετικά με καθημερινά φαινόμενα, εκμεταλλευόμενη τις εμπειρίες και τη γνώση που έχουν ήδη αποκτηθεί (Research Italy, 2013).

Υπάρχουν διαφορετικά είδη έρευνας που διαφέρουν σύμφωνα με την εφαρμογή, τους στόχους και τις μεθόδους έρευνας. Η έρευνα μπορεί στην πραγματικότητα να είναι «εφαρμοσμένη» ή «θεωρητική». Η εφαρμοσμένη έρευνα έχει ως στόχο να βρει μια λύση σε ένα πρόβλημα εφαρμογής που πρέπει να αντιμετωπιστεί, ενώ η θεωρητική έρευνα αφορά κυρίως σε γενικεύσεις και στη διατύπωση μιας θεωρίας (Kothary, 2004, Singh & Masuku, 2013). Ανάλογα με τους στόχους, η έρευνα μπορεί να είναι περιγραφική, εξερευνητική, σχεσιακή ή επεξηγηματική. Η περιγραφική έρευνα αποσκοπεί στο να περιγράψει ένα φαινόμενο, ένα πρόβλημα, μια κατάσταση.

Η σχεσιακή έρευνα αποσκοπεί στο να εξερευνήσει μια σχέση ανάμεσα σε δύο ή περισσότερες μεταβλητές.

Η επεξηγηματική έρευνα αποσκοπεί να επεξηγήσει γιατί συμβαίνουν κάποια πράγματα.

Η εξερευνητική έρευνα αποσκοπεί στο να εξετάσει την εφαρμοσιμότητα μιας μελέτης ή να εξερευνήσει ένα λιγότερο γνωστό θεματικό πεδίο.

Για να ξεκινήσει η έρευνα χρειάζεται ένα σχέδιο δράσης που προσδιορίζεται από διαδικαστικά βήματα, τα οποία πρέπει να διεξαχθούν σε σχέση με την ίδια την έρευνα. Οι φάσεις αυτές είναι γνωστές ως «σχεδίαση έρευνας».

Ανάλογα με τις τεχνικές που χρησιμοποιούνται, η έρευνα μπορεί να χωριστεί σε:

- Ποσοτική έρευνα: χρησιμοποιεί διαρθρωμένη προσέγγιση, αποσκοπεί στην ποσοτικοποίηση της παραλλαγής ή της ποικιλομορφίας ενός φαινομένου, κατάστασης ή συμπεριφοράς μέσω μιας σωστά δομημένης σχεδίασης της έρευνας, η οποία παρέχει ποσοτικά δεδομένα που μπορούν να αναλυθούν για να επαληθεύσουν τις υποθέσεις και να ελέγξουν τις σχέσεις μεταξύ των μεταβλητών.
- Ποιοτική έρευνα: χρησιμοποιεί μια μη διαρθρωμένη προσέγγιση, είναι επεξηγηματική, περιγραφική και επαγωγική, με ιδιαίτερη έμφαση στο πλαίσιο, ενώ έχει ως στόχο να εντοπίσει και να περιγράψει όσο το δυνατόν περισσότερες παραλλαγές σε ένα φαινόμενο, κατάσταση ή συμπεριφορά, κατανοώντας τους λόγους που δικαιολογούν τις παραλλαγές αυτές. Το τελευταίο αυτό συνεπάγεται μια «ερμηνευτική και νατουραλιστική προσέγγιση του κόσμου, πράγμα που σημαίνει ότι οι ποιοτικοί ερευνητές μελετούν τα φαινόμενα στο φυσικό τους πλαίσιο, προσπαθώντας να τους δώσουν νόημα ή να τα ερμηνεύσουν ως προς το νόημα που τους αποδίδουν οι άνθρωποι» (Denzin & Lincoln, 2011, σελ. 3). Ο στόχος της ποιοτικής έρευνας είναι να περιγράψει και να κατανοήσει τα φαινόμενα παρά να τα προβλέψει ή/και να τα ελέγξει (Streubert & Carpenter, 2005).

Η μικτή προσέγγιση, από την άλλη πλευρά, συνδυάζει τόσο ποσοτικές όσο και ποιοτικές ερευνητικές μεθόδους. «Η κοινωνική έρευνα βασίζεται στον ορισμό των μεταβλητών, στην αναζήτηση συσχετισμών μεταξύ τους και στην προσπάθεια να καταλάβουμε εάν και πώς η παραλλαγή ενός πράγματος προκαλεί παραλλαγή σε ένα άλλο. Μερικές συνηθισμένες μεταβλητές που θα συναντήσετε στην κοινωνική έρευνα είναι η ηλικία, το φύλο, η εθνότητα, η φυλή, η εκπαίδευση, το εισόδημα, η οικογενειακή κατάσταση και η απασχόληση» (Bernard, 2006, σελ. 28-29). Επομένως, πρώτη συναντάμε την έννοια της μεταβλητής: κάτι που μπορεί να πάρει περισσότερες από μία τιμές. Σε δεύτερη φάση, έχουμε την έννοια της «μέτρησης»: στην πραγματικότητα, οι μεταβλητές μετρούνται με τους δείκτες τους, οι οποίοι καθορίζονται από τις τιμές της ίδιας της μεταβλητής. Η μέτρηση υποδηλώνει ποια τιμή

πρέπει να καταγραφεί. Κάθε αναζήτηση πρέπει επίσης να σέβεται τις αρχές της εγκυρότητας και της αξιοπιστίας. Η εγκυρότητα σημαίνει ότι η αναζήτηση πρέπει να διαθέτει ακριβή όργανα μέτρησης, δεδομένα και αποτελέσματα, ενώ η αξιοπιστία σημαίνει ότι τα ίδια αποτελέσματα επιτυγχάνονται μετρώντας τα πολλές φορές με το ίδιο όργανο.

Ο Bernard (2006) εξηγεί τα τέσσερα βασικά σημεία που ακολουθεί η ερευνητική διαδικασία:

1. Πρώτα διατυπώνεται ένα θεωρητικό πρόβλημα (επιστημονική θεωρία και βιβλιογραφία).
2. Στη συνέχεια, επιλέγονται κατάλληλες μονάδες ανάλυσης και μέθοδοι.
3. Έπειτα, γίνεται συλλογή και ανάλυση των δεδομένων.
4. Τέλος, η θεωρητική πρόταση με την οποία ξεκίνησε η έρευνα είτε αμφισβητείται είτε υποστηρίζεται.

(Bernard, 2006, σελ.69)

ΣΤΟΙΧΕΙΟ 2: ΕΡΕΥΝΑ ΔΡΑΣΗΣ

ΒΙΝΤΕΟ

Τι εστί έρευνα δράσης;

ΑΡΘΡΟ

Παραδοσιακά, το ερευνητικό έργο έχει να κάνει με την προέκταση των νόμων που εγγράφονται στη φύση του κόσμου με την αντικειμενική ανάλυση των φαινομένων. Ο ερευνητής πρέπει να διαχειριστεί τα φαινόμενα που μελετά από μια απολύτως ουδέτερη σκοπιά. Η έρευνα εξ ορισμού απευθύνεται στη θεωρία. Τείνει στη γενικότητα και στην οικοδόμηση μοντέλων όσο το δυνατόν πιο καθολικών. Η δράση, από την άλλη πλευρά, στην κοινή εμπειρία είναι γεμάτη με κίνητρα, επιθυμίες, συναισθήματα και γνώσεις που συχνά δεν είναι λογικές, είναι αντιφατικές και αποσκοπούν στην πραγματοποίηση, την απόκτηση και τη μετατροπή. Η δράση κατευθύνεται προς την πράξη, συνδέεται με το ιδιαίτερο και το μοναδικό, με το τοπικιστικό και το καταστασιακό, το ιστοριοποιημένο, δεν είναι πάντα προβλέψιμη στην προέλευση και τα αποτελέσματά της (Amerio, 2000). Η Έρευνα δράσης έχει γεννηθεί με την πρόθεση να συνδυάσει αυτές τις δύο διαστάσεις που παραδοσιακά έχουν θεωρηθεί ως ξεχωριστές και ασυμβίβαστες. Οι δύο ακρογωνιαίοι λίθοι της έρευνας δράσης, που την διαφοροποιούν από την παραδοσιακή έρευνα, είναι η συμμετοχή και η συνεργασία. Ο Elliot θα την όριζε ως εξής:

«Η έρευνα δράσης θα μπορούσε να οριστεί ως η μελέτη μιας κοινωνικής κατάστασης με στόχο τη βελτίωση της ποιότητας της δράσης μέσα σε αυτή. Με άλλα λόγια, αποσκοπεί στην εισαγωγή πρακτικής αξιολόγησης σε συγκεκριμένες καταστάσεις. Η εγκυρότητα των «θεωριών» ή των υποθέσεων που δημιουργεί εξαρτάται όχι τόσο από τις «επιστημονικές» επαληθεύσεις της αλήθειας αλλά από τη χρησιμότητά τους να βοηθήσουν τους ανθρώπους να δρουν με πιο έξυπνο και επιδέξιο τρόπο. Στην έρευνα δράσης, οι «θεωρίες» δεν επικυρώνονται ανεξάρτητα και στη συνέχεια εφαρμόζονται στην πράξη. Επικυρώνονται μέσω της πράξης.» (Elliott, 1994, σελ. 97)

Και συνεχίζει:

«Πρέπει να διαγνωσθεί το πρόβλημα - η κατάσταση και να σχεδιαστούν και εφαρμοστούν διορθωτικές ενέργειες, τα αποτελέσματα των οποίων πρέπει να ελέγχονται προκειμένου να γίνουν βελτιώσεις. Αυτή η συνολική διαδικασία ανάλυσης-διάγνωσης-σχεδιασμού-ενεργοποίησης-ελέγχου επιπτώσεων ονομάζεται έρευνα δράσης [...]». (Elliott, 1994, σελ. 96)

Το αρχικό μοντέλο της έρευνας δράσης αναπτύχθηκε από τον Lewin (1946) με στόχο την κατανόηση των προβλημάτων που υπάρχουν σε συγκεκριμένα πλαίσια μέσω της ανταλλαγής γνώσεων μεταξύ ανθρώπων, οι οποίοι είναι και ερευνητές και υποκείμενα πειραμάτων. Η δράση παίρνει ολοένα και περισσότερη αξία επειδή γίνεται μια στιγμή κατά την οποία δημιουργείται η γνώση για το πρόβλημα. Η διαδικασία της αλλαγής πραγματοποιείται σε τρία στάδια:

1. Ξεπάγωμα: παραβιάζεται η αρχική ισορροπία δρώντας με παράγοντες αντίστασης που συνδέονται με την τήρηση κοινωνικών κανόνων.
2. Κίνηση: νέα και υπάρχοντα στοιχεία στον τομέα κινούνται σύμφωνα με τις δυνάμεις που δρουν εντός αυτού.
3. Ξαναπάγωμα: η νέα κατάσταση σταθεροποιείται γύρω από μια νέα ισορροπία.

Επομένως, η έρευνα δράσης αποτελεί μια «συστηματική συλλογή και ανάλυση δεδομένων με σκοπό τη λήψη μέτρων και την πρόκληση αλλαγής», δημιουργώντας κοινές πρακτικές γνώσεις (Gillis & Jackson, 2002, σελ. 264).

Στόχος κάθε έρευνας δράσης είναι η παραγωγή κοινωνικής αλλαγής μέσω της δράσης (ή των δράσεων), που με τη σειρά τους είναι ο τελικός στόχος της έρευνας (Greenwood & Levin, 1998, McNiff & Whitehead, 2006, MacDonald, 2012).

Οι ερευνητές που ξεκινούν μια έρευνα δράσης έχουν κατά νου την υπόθεση ότι η πραγματικότητα δημιουργείται και αναδημιουργείται μέσω μιας συνεχούς κοινωνικής διαδικασίας. Αναγνωρίζουν ότι, σύμφωνα με τους Argyris et al (1982), τα κρίσιμα στοιχεία μιας ερευνητικής προσέγγισης που λειτουργεί μέσα σε μια συγκεκριμένη κοινωνική κατάσταση είναι: συνεργασία μεταξύ ερευνητών και κοινοτήτων αναφοράς, διαδικασία κρίσιμης έρευνας, εστίαση στην κοινωνική πρακτική και μια αντανακλαστική διαδικασία μάθησης. Αυτό συνεπάγεται αναγκαστικά ένα διαφορετικό είδος έρευνας από την επαλήθευση των υποθέσεων, η οποία δίνει περισσότερη προσοχή στα θέματα της έρευνας, που δηλώνονται και συζητούνται απαραίτητα, επιτρέποντας σε όσους ενδιαφέρονται να υποβάλουν την έρευνα προς σοβαρή εξέταση (Checkland & Holwell, 1998).

BINTEO: GATTINO - Ricerca Azione

ΣΤΟΙΧΕΙΟ 3: ΣΥΜΜΕΤΟΧΙΚΗ ΕΡΕΥΝΑ ΔΡΑΣΗΣ

BINTEO GATTINO - RICERCA AZIONE PARTECIPATA

ΑΡΘΡΟ

Όπως επισημαίνει ο Vargiu (2008), ο τομέας της έρευνας δράσης επαναφέρει πολύ διαφορετικές εμπειρίες, ενώ συνδυάζεται με το γεγονός ότι επιδιώκονται δύο βασικοί στόχοι: η κατανόηση και η αλλαγή. Με την ανάλυση της βιβλιογραφίας είναι δυνατό να οριστεί η έρευνα δράσης ως μια «οικογένεια προσεγγίσεων» (Reason 1994, Reason - Bradbury 2006) προσανατολισμένη στην «τοποθέτηση της έρευνας στην υπηρεσία της κοινότητας, μέσω της ενεργοποίησης συμμετοχικών πρακτικών για τους σκοπούς της κοινωνικής αλλαγής. Αυτό συνεπάγεται ουσιαστικές διαφορές σε σχέση με άλλες μορφές έρευνας, όσον αφορά στους στόχους που ο ίδιος ο ερευνητής θέτει, τις επιστημολογικές υποθέσεις και τις πρακτικές του. (σελ. 206). Σύμφωνα με τον συγγραφέα, αυτή η «οικογένεια» συνδέεται με πολλές προσεγγίσεις και πρακτικές, όπως: 1) έρευνα δράσης, 2) συμμετοχική έρευνα, 3) συμμετοχική έρευνα δράσης, 4) συμμετοχική έρευνα δράσης, 5) επιστήμη δράσης, 6) έρευνα δράσης 7) κοινωνιολογία δράσης ή *sociologie de l'action* (Bartoletto, 2006). Ο Vargiu (2008) προσθέτει επίσης τις εμπειρίες που μπορούν να αναχθούν στην Έρευνα βάσει της κοινότητας και στην Έρευνα δράσης (Συμμετοχική) βάσει της κοινότητας, ενώ παρατηρεί ότι «η συμμετοχική έρευνα και η συμμετοχική έρευνα δράσης μπορούν να ενταχθούν στην κατηγορία έρευνας που ο Capecchi (2006) ορίζει ως «con-ricerca»». (σελ. 209). Σύμφωνα με τον συγγραφέα, αυτό που επιτρέπει τη χρήσιμη διαφοροποίηση είναι το επίπεδο συμμετοχής που προβλέπεται στην ερευνητική διαδικασία και πόσος, κατά τον προσδιορισμό των στόχων, των διαδικαστικών στοιχείων και των μέσων, χώρος δίνεται στην υποκειμενική και συλλογική διάσταση.

Η συμμετοχική έρευνα και η έρευνα δράσης αποτελούν όλο και περισσότερο κεντρικά παραδείγματα στις κοινωνικές επιστήμες (Brydon-Miller et al., 2004, Greenwood and Levin, 1998, Kindon, Pain and Kesby, 2007, Jason et al., 2004, Park et al., 1993, Reason and Bradbury, 2006, Selener, 1997, Taggart, 1997). Όπως υποδεικνύεται από τους Kindon, Pain και Kesby (2007) και από τους Mackenzie και συνεργάτες (2012), η Συμμετοχική έρευνα δράσης (PAR) περιλαμβάνει ερευνητές και συμμετέχοντες σε ένα γενικό έργο, με στόχο την εξέταση μιας προβληματικής κατάστασης ή δράσης, αποσκοπώντας έτσι στην τροποποίησή

της προς μια καλύτερη κατεύθυνση (Wadsworth, 1998). Πρόκειται για μια συνεργατική διαδικασία έρευνας, εκπαίδευσης και δράσης (Hall, 1981) προσανατολισμένη προς τον κοινωνικό μετασχηματισμό (McTaggart, 1997), ξεκινώντας από την αναγνώριση της ύπαρξης μιας πληθώρας γνώσεων σε διάφορους θεσμούς και πλαίσια (Kindon, Pain and Kesby, 2007). Η διαδικασία είναι κυκλική (βάσει κύκλων ανάκλασης-δράσης): οι ερευνητές και οι συμμετέχοντες αναγνωρίζουν ένα πρόβλημα ή μια κατάσταση που χρειάζεται να αλλάξει και ξεκινούν έρευνα, η οποία βασίζεται σε δεξιότητες και πόρους για να επιταχυνθεί η σχετική δράση. Τόσο οι ερευνητές όσο και οι συμμετέχοντες αναλογίζονται αυτήν τη δράση, μαθαίνουν από αυτή και προχωρούν σε έναν νέο κύκλο έρευνας/δράσης/προβληματισμού. Όπως διευκρινίζουν οι Kindon, Pain και Kesby (2007), συνεργάζονται επίσης για την ανάπτυξη μεθόδων που αφορούν συγκεκριμένα πλαίσια με σκοπό τη διευκόλυνση αυτών των κύκλων. Συνοπτικά, η PAR επικεντρώνεται στη διαλογική δέσμευση μεταξύ των συνεργατών ερευνητών (Kindon, Pain and Kesby, 2007) κι έτσι, η PAR είναι ένας προσανατολισμός στη διεξαγωγή έρευνας (Reason 2004, Kesby et al, 2005), που απαιτεί μεθοδολογική καινοτομία και λαμβάνει υπόψη την ερευνητική διαδικασία καθώς και τα προϊόντα της: η αποτελεσματικότητά της δεν είναι μόνο εγγενής στην ποιότητα της παραγόμενης πληροφορίας, αλλά καθορίζεται και από τον βαθμό στον οποίο οι δεξιότητες, οι γνώσεις και οι ικανότητες των συμμετεχόντων αναπτύσσονται μέσω της ερευνητικής εμπειρίας (Cornwall and Jewkes 1995, Kesby et al., 2005, 2007, Maguire 1987).

Οι Reason και Bradbury (2006) υποστηρίζουν την ανάγκη υιοθέτησης μιας συμμετοχικής προοπτικής ή μιας παγκόσμιας άποψης, η οποία «μας ζητά να είμαστε σε θέση και να στοχαζόμαστε, να είμαστε σαφείς σχετικά με την προοπτική από την οποία δημιουργείται η γνώση, να βλέπουμε την έρευνα ως διαδικασία γνώσης, να υπηρετούμε τη δημοκρατική και πρακτική δεοντολογία της έρευνας δράσης» (σελ. 7). Σύμφωνα με τον Kindon και τους συνεργάτες (2007), το κλειδί είναι μια οντολογική άποψη που υποδηλώνει ότι οι άνθρωποι είναι δυναμικοί παράγοντες, προικισμένοι με αντανακλαστικές δεξιότητες και προσωπική αλλαγή, καθώς και μια επιστημολογία που αγκαλιάζει αυτές τις δεξιότητες μέσα στην ερευνητική διαδικασία.

Ακολουθώντας μια θεμελιωδώς συμμετοχική προοπτική, στην PAR, οι επιλογές σχετικά με τους τρόπους και τα επίπεδα συμμετοχής δεν γίνονται μόνο *εκ των προτέρων* από τον ερευνητή, αλλά τίθενται υπό διαπραγμάτευση με συναδέλφους και συμμετέχοντες. Οι πιο συνηθισμένες μέθοδοι που χρησιμοποιούνται στην PAR εστιάζουν στον διάλογο, την

αφήγηση και τη συλλογική δράση, ενώ αυτές που χρησιμοποιούνται συχνότερα είναι (Kindon, Pain and Kesby, 2007):

- Έρευνες

- Παρατήρηση συμμετέχοντα

- Δευτερεύουσα ανάλυση δεδομένων

- Μάθηση μέσω της πράξης

- Διάλογος

- Πολιτική δράση

- Ομαδική εργασία και συζητήσεις

- Συνεντεύξεις

- Αφήγηση

- Χαρτογράφηση

- Τέχνη και μέσα της κοινότητας

- Δημιουργία διαγραμμάτων

- Εκπαιδευτικά κέντρα

- Προγράμματα ανταλλαγής

- Κατάταξη και βαθμολόγηση

- Κοινή ανάλυση, καταγραφή και παρουσιάσεις

Όπως έχει ήδη τονιστεί, η ενεργή έρευνα γίνεται συμμετοχική έρευνα δράσης ανάλογα με το ποιος συμμετέχει σε κάθε φάση και σε ποιον βαθμό. Οι συμμετέχοντες ως συνεργάτες μπορούν να ενημερώσουν τη σχεδίαση, να προτείνουν μεθόδους, να διευκολύνουν ορισμένες δραστηριότητες και, πάνω από όλα, να επανεξετάσουν και να αξιολογήσουν τη διαδικασία στο σύνολό της (Mackenzie et al., 2012). Από τη φάση σχεδιασμού, η PAR τείνει να περιλαμβάνει τη χρήση καθιερωμένων ερευνητικών τεχνικών προσαρμοσμένων στην κατάσταση, ενώ θεωρεί απαραίτητο να αναπτυχθεί μια στρατηγική (πριν από τη δράση) για την παρακολούθηση και την αξιολόγηση των αποτελεσμάτων της δράσης. Αυτό θα επιτρέψει την αναγνώριση της έκτασης των αλλαγών αλλά και τη «διατύπωση μιας ισχυρής

επιστημολογίας πάνω στην οποία θα εκτιμηθεί η εγκυρότητα και η σημασία της νέας ή αναδυόμενης γνώσης, όπως σε ένα συστημικό σύστημα σκέψης» (Ison, 2008). Οι αποτελεσματικές διαδικασίες παρακολούθησης και αξιολόγησης παρέχουν την αυστηρότητα της διαδικασίας αξιολόγησης της αποτελεσματικότητας, της καταλληλότητας και της συνάφειας της παρέμβασης στην έρευνα δράσης. Παρέχει επίσης ένα πλαίσιο για τον προσδιορισμό της αιτιότητας κατά τον προσδιορισμό του σε ποιο βαθμό η ερευνητική δραστηριότητα «προκάλεσε» ή «συνέβαλε» στις επιθυμητές αλλαγές στην κατάσταση (McAllister and Vernooy, 1999). (σελ. 12-13). Η αξιολόγηση της διαδικασίας και των αποτελεσμάτων από τους συμμετέχοντες παρέχει μια περαιτέρω οδό για την εδραίωση της δέσμευσης των ενδιαφερομένων μερών, ενώ προσφέρει τη συλλογική ευκαιρία να συνυπάρξουν μια ενεργή και ουσιαστική δέσμευση, στις οποίες οι εναλλακτικές φωνές είναι απαραίτητες και μεταδοτικές. Επομένως, η PAR απαιτεί από τον ερευνητή να εγκαταλείψει τον έλεγχο και να αναλάβει τον ρόλο του διευκολυντή της διαδικασίας (Kindon, Pain and Kesby, 2007, Janssen et al., 2013).

Όπως επισημαίνεται από τον Kangovi και τους συνεργάτες (2014), η PAR στον τομέα της ψυχικής υγείας μπορεί να θεωρηθεί μια καλή στρατηγική για να καταστεί λειτουργική η συμμετοχή του ασθενούς στη σχεδίαση. Ο συνεργατικός και επαναλαμβανόμενος χαρακτήρας της επιτρέπει στους ερευνητές, το προσωπικό στην υγειονομική περίθαλψη και τους ασθενείς να συνεργαστούν κατά τη σχεδίαση των παρεμβάσεων που επικυρώνονται από τους τελικούς χρήστες. Μπορεί επίσης να χρησιμοποιηθεί για να προσαρμόσει μια υπάρχουσα παρέμβαση σε συγκεκριμένες ανάγκες και, όταν διαδοθεί, σε νέους χώρους ή/και ομάδες ασθενών. Σχετικά με το πεδίο εφαρμογής στους νέους πληθυσμούς, όπως υποδεικνύεται από τους Shamrova και Cummings (2017), το παράδειγμα των δικαιωμάτων των παιδιών έχει δώσει μεγαλύτερη ώθηση στους ερευνητές να αναγνωρίσουν τα παιδιά ως ενεργούς συμμετέχοντες στην οικοδόμηση του νοήματος. Σε αυτό, η PAR είναι ένας μηχανισμός μέσω του οποίου η δυνατότητα δράσης διανέμεται στους συμμετέχοντες, υποστηρίζοντας την εφαρμογή των δικαιωμάτων των παιδιών (Checkoway, 2011, Quijada Cerecer, Cahill and Bradley, 2013, Shamrova and Cummings, 2017). Επιπλέον, σε ολόκληρη τη βιβλιογραφία, τα αποτελέσματα σχετικά με την εφαρμογή της αναφέρονται επίσης σε οργανωτικό επίπεδο. Τα πιο συχνά ήταν οι αλλαγές στην οργανωτική παιδεία με στόχο: να αυξηθούν οι δυνατότητες συμμετοχής, να αυξηθεί το επίπεδο συμμετοχής στο παιδί και να διαδοθεί μεγαλύτερη πληροφόρηση ώστε τα προγράμματα να προσαρμοστούν καλύτερα στις ανάγκες των παιδιών και των νέων (Shamrova and Cummings, 2017). Επιπλέον, οι

συγγραφείς (Shamrova and Cummings, 2017) έχουν αναγνωρίσει ορισμένες μεθοδολογικές επιλογές που θα μπορούσαν να βοηθήσουν στη στήριξη της συμμετοχής των παιδιών ως σημαντικής:

- κατάρτιση

- επιλογή και χρήση εργαλείων συλλογής δεδομένων φιλικών προς τα παιδιά

- ενεργή συμμετοχή των παιδιών στην ανάλυση δεδομένων και την ανάγνωση των αποτελεσμάτων

- επιλογή σημαντικών τοποθεσιών για τη διάδοση των ερευνητικών αποτελεσμάτων.

Όσον αφορά στην έρευνα με ευάλωτες ομάδες, όπως επισημαίνουν οι Lushey και Munro (2015), η PAR μπορεί να προωθήσει τα δικαιώματα συμμετοχής των παιδιών και όσων χάνουν τη φροντίδα τους και ταυτόχρονα να ενημερώσει την εμπειρική βάση που προκύπτει από μελέτες σε αυτούς τους πληθυσμούς.

Σε εννοιολογικό επίπεδο, είναι ιδιαίτερα ενδιαφέρουσα η Συμμετοχική έρευνα δράσης των νέων (YPAR) (Anyon et al., 2018, Rodriguez and Brown, 2009), η οποία περιλαμβάνει τις ακόλουθες βασικές αρχές:

1. βασίζεται στην έρευνα
2. οι τομείς που εξερευνώνται είναι οι εμπειρίες ακριβώς όπως τις ζουν οι νέοι
3. είναι συμμετοχική
4. έχει μετασχηματιστικό χαρακτήρα

Οι βασικές της διαδικασίες είναι:

α) η κατανομή εξουσίας μεταξύ των νέων και των ενηλίκων κατά τη διάρκεια ολόκληρης της διαδικασίας

β) η κατάρτιση και εφαρμογή μεθόδων έρευνας και προώθησης

γ) η κρίσιμη χρήση της στρατηγικής σκέψης για τον τρόπο με τον οποίο μπορεί να δημιουργηθεί η κοινωνική αλλαγή

δ) η δημιουργία συμμαχιών με όλα τα ενδιαφερόμενα μέρη.

Τέλος, ένα παράδειγμα έρευνας σύμφωνα με το πρότυπο της PAR είναι αυτό που πραγματοποίησαν οι Törrönen και Vornanen (2014) με άτομα που αποχωρούν από τη φροντίδα. Σύμφωνα με τις παραπάνω αρχές, όπως ανέφεραν οι συγγραφείς, οι εμπλεκόμενοι

επαγγελματίες και ερευνητές ανέλαβαν υποστηρικτικό ρόλο, ενώ οι νέοι διεξήγαγαν συνεντεύξεις, συγκέντρωσαν δεδομένα από τους συνομηλίκους τους και ενθάρρυναν την έκφραση απόψεων σχετικά με τις εμπειρίες (Törrönen & Vauhkonen, 2012). Η κεντρική πτυχή ήταν, στην πραγματικότητα, η προσοχή στο όραμα των ανήλικων που συμμετείχαν ως συν-ερευνητές. Ως εκ τούτου, συμμετείχαν πλήρως στην ερευνητική διαδικασία.

BINTEO: GATTINO - Ricerca Azione Partecipata

ΣΤΟΙΧΕΙΟ 4: ΕΡΕΥΝΑ ΒΑΣΕΙ ΑΠΟΔΕΙΞΕΩΝ

ΒΙΝΤΕΟ

Είδη έρευνας που χρησιμοποιούνται για πρακτική βάσει αποδείξεων

ΑΡΘΡΟ

Ο όρος «έρευνα βάσει αποδείξεων» (EBR) επινοήθηκε το 2009 για να υποδείξει την προσέγγιση που δρα ενάντια στη σημαντική πηγή άχρηστου υλικού στη βιοϊατρική έρευνα (Robinson, 2009) η οποία οφείλεται κυρίως σε αρχικές μελέτες που πραγματοποιήθηκαν χωρίς συστηματική αναθεώρηση των διαθέσιμων στοιχείων. Αυτό δεν θεωρήθηκε ούτε ηθικό ούτε επιστημονικό (Lund, H. et al., 2017). Η έρευνα βάσει αποδείξεων στηρίζεται πάντοτε σε μια συστηματική αναθεώρηση (SR), η οποία περιλαμβάνει προκαθορισμένες ερευνητικές ερωτήσεις, κριτήρια συμπερίληψης, μεθόδους έρευνας, διαδικασίες επιλογής, αξιολόγηση ποιότητας, εξαγωγή δεδομένων και στατιστική ανάλυση (Lund, H. et al., 2017). Οι συστηματικές αναθεωρήσεις χρησιμοποιούνται για να κατανοήσουμε και να δώσουμε προτεραιότητα στην έρευνα, καθώς και εάν αυτή είναι απαραίτητη και χρήσιμη για την κοινότητα ή όχι ή μια πιθανή πηγή άχρηστων πόρων επειδή δεν παράγει νέες επιστημονικές γνώσεις. Οι κατευθυντήριες γραμμές που πρότεινε το Evidence, ένα περιοδικό ανοικτής πρόσβασης του Ιδρύματος GIMBE (ιταλική ομάδα για την τεκμηριωμένη ιατρική), για τη δημιουργία ενός ερευνητικού έργου βάσει αποδείξεων, έχουν ως εξής:

1. Να διατυπωθεί το προκαταρκτικό ερευνητικό ερώτημα και να προσδιοριστούν οι σχετικές συστηματικές αναθεωρήσεις,
2. Να αξιολογηθεί η επάρκεια του σκοπού, της ποιότητας και της ενημέρωσης της έρευνας,
3. Να αξιολογηθούν οι λεπτομέρειες σχετικά με: τον πληθυσμό, την παρέμβαση, τη σύγκριση, τα αποτελέσματα και το εύρος χρόνου (PICOT),
4. Να αξιολογηθεί η μέθοδος που χρησιμοποιήθηκε και τα αποτελέσματα.

Τέλος, οι ερευνητές θα πρέπει να χρησιμοποιούν συστηματικές αναθεωρήσεις για να διατυπώνουν το τελικό ερώτημα της μελέτης που επιθυμούν να προωθήσουν, να δικαιολογούν την ανάγκη για αυτή κατά τη διάρκεια της αίτησης χρηματοδότησης και έγκρισης από την επιτροπή δεοντολογίας, να ερμηνεύουν τα αποτελέσματα της νέας μελέτης στο πλαίσιο των διαθέσιμων στοιχείων και να κάνουν συστάσεις για μελλοντική έρευνα. Με την πάροδο του χρόνου, σημειώθηκε ραγδαία ανάπτυξη στην έρευνα βάσει αποδείξεων, η οποία οδήγησε στη δημοσίευση περίπου δύο εκατομμυρίων άρθρων σε πάνω από είκοσι χιλιάδες περιοδικά. Υπάρχουν πολλοί λόγοι για την ανάπτυξη αυτή, αφενός, ο εκπαιδευτικός

της προσανατολισμός (JAMA, 1992) και η μετατόπιση των παραδειγμάτων (Pagliaro & Colli, 2014) που οδήγησαν στην πρακτική αυτή και, αφετέρου, τα πλεονεκτήματα που η έρευνα βάσει αποδείξεων παρουσιάζει:

- επιτρέπει την παραγωγή γνώσεων και την καθοδήγηση επαγγελματικής πρακτικής σε τομείς όπου υπάρχει μεγαλύτερη αβεβαιότητα σχετικά με τις παρεμβάσεις που πραγματοποιούνται στην κλινική πρακτική,

- μειώνει το άχρηστο υλικό διότι καθορίζει τις προτεραιότητες των ερευνητικών ερωτήσεων λαμβάνοντας υπόψη προηγούμενες συστηματικές αναθεωρήσεις,

- επιτρέπει μια σαφή περιγραφή των ερευνητικών σχεδίων (πληθυσμός στόχος, παρεμβάσεις, συγκρίσεις, αποτελέσματα),

- παρέχει ενημερώσεις και διαδίδει συστηματικές αναθεωρήσεις,

- ενσωματώνει τις αποδείξεις στην κλινική πρακτική,

- επιτρέπει μια συνεχή επανεκτίμηση της γνώσης κάποιου (GIMBE).

ΣΤΟΙΧΕΙΟ 1: ΕΡΕΥΝΑ ΒΑΣΕΙ ΑΠΟΔΕΙΞΕΩΝ ΟΣΟΝ ΑΦΟΡΑ ΣΤΑ TIC/TIP (ΠΡΩΤΟΚΟΛΛΟ ΒΕΛΤΙΩΣΗΣ ΤΗΣ ΘΕΡΑΠΕΙΑΣ): ΔΙΕΘΝΗΣ ΠΡΟΟΠΤΙΚΗ

ΑΡΘΡΟ

Ένα από τα κύρια θέματα της οργάνωσης των υπηρεσιών που ασχολούνται με ανηλίκους με ψυχικό τραύμα και ένα από τα σημαντικότερα αιτήματα που προέρχονται από αυτές είναι ο τρόπος εξασφάλισης επαρκούς και αποτελεσματικής κατάρτισης για επαγγελματίες όσον αφορά στις παρεμβάσεις βάσει αποδείξεων (Ruzek & Rosen, 2009). Κατά την παρακολούθηση της κατάστασης της εφαρμογής θεραπειών και κατευθυντήριων γραμμών βάσει αποδείξεων από μια γενικότερη προοπτική, παρά τη σπουδαιότητα του θέματος αυτού στον τομέα της δημόσιας υγείας, μπορεί να συναχθεί μια άνιση εφαρμογή και περιορισμένη προσοχή στη συστηματική αξιολόγηση και τις μακροπρόθεσμες επιπτώσεις των προγραμμάτων κατάρτισης (Ruzek & Rosen, 2009). Επιπλέον, από συγκριτική άποψη, ο Delaney (2006) υπογράμμισε μια άλλη συναφή πτυχή: σε διεθνές επίπεδο, οι κατευθυντήριες γραμμές και η εφαρμογή τους σε προαιρετικές θεραπείες σε όλη την κλινική πρακτική ποικίλλουν σημαντικά σε εθνικό επίπεδο και σε διαφορετικά κράτη (συμπεριλαμβανομένων των κανονισμών δημόσιας υγείας). Οι Weiner, Schneider & Lyons (2009) μελέτησαν την ανάλυση των μεθόδων βάσει αποδείξεων για τη θεραπεία ψυχικών τραυμάτων σε ανηλίκους. Όπως καθορίζεται από τους συγγραφείς, μερικές από αυτές έχουν δοκιμαστεί μέσω πειραματικών ή σχεδόν πειραματικών μεθόδων, αλλά οι περισσότερες μέθοδοι έχουν δομηθεί για τους ενήλικους πληθυσμούς παρά την εφαρμογή τους και σε ανηλίκους, ενώ έχουν αξιολογηθεί με μικρή ή καθόλου προσοχή στις πολιτισμικές μεταβλητές και τη διαφοροποίηση των υποομάδων βάσει παραγόντων που επηρεάζουν τα αποτελέσματα. Από αυτές τις παρατηρήσεις μπορεί να προκύψει μια ενδιαφέρουσα πρόσκληση για διαπολιτισμική επικύρωση των θεραπειών, η οποία θα επέτρεπε όχι μόνο την επέκταση της αποτελεσματικότητας αλλά και τη διερεύνηση των φραγμών που εμποδίζουν την εφαρμογή τους καθώς και των ευέλικτων απαιτήσεων προσαρμογής σε σχέση με συγκεκριμένες υποομάδες ή συνθήκες εφαρμογής. Οι Courtois & Gold (2009) και Layne & συνεργάτες (2014) υπογράμμισαν την ανάγκη να συμπεριληφθεί μια ειδική εστίαση στο ψυχικό τραύμα και τις συνέπειές του στην κατάρτιση των φορέων, ξεκινώντας από την ενημέρωση του γεγονότος ότι το ψυχικό τραύμα και οι επιπτώσεις του επηρεάζουν όλες τις φάσεις της θεραπείας, συγκεκριμένα, τη δέσμευση του ασθενούς, την αξιολόγηση και την ανταπόκριση στη θεραπεία. Επιπλέον, υπογραμμίζουν, από αυτήν την άποψη, τον σχετικό ρόλο που διαδραματίζει η δημιουργία διεθνών προτύπων και κοινών μεθόδων κατάρτισης για τους

φορείς στην Πρακτική βάσει αποδείξεων (EBP, Lyon et al., 2011). Η EBP επιτρέπει στον φορέα να επιλέξει τις καλύτερες δυνατές επιλογές, επικυρωμένες και κατάλληλες για τη συγκεκριμένη κατάσταση, με βάση τις συγκεκριμένες ανάγκες του πελάτη, τα πλεονεκτήματα και τις περιστάσεις τους (Layne et al., 2014). Προκειμένου να διασφαλιστεί επαρκής κατάρτιση στον τομέα αυτό, είναι επιτακτική η ανάγκη η επιστημονική κοινότητα να δημιουργήσει έναν ορισμό των βασικών ικανοτήτων, δηλαδή μια βάση γνώσης που πρέπει να διαθέτουν όσοι ασχολούνται με ένα ιστορικό ψυχικού τραύματος. Ειδικότερα, αυτή η προσοχή θα πρέπει να επιτρέπει την καλή ποιότητα των παρεχόμενων υπηρεσιών, να αυξάνει την ευθύνη των φορέων και να διαδίδει τις γνώσεις που μοιράζονται και, συχνά, αποτελούν αντικείμενο εγχειριδίων μέσω πρωτοκόλλων μεταξύ διαφόρων κλάδων (ψυχολογία, ψυχοθεραπεία, κοινωνικές επιστήμες, ψυχιατρική κλπ.). Το δίκτυο National Child Traumatic Stress Network (NCTSN) είναι ένα δίκτυο επαγγελματιών, μελών της οικογένειας, ερευνητών και διεθνών συνεργατών που ασχολούνται με τη βελτίωση των προτύπων φροντίδας και την ευκαιρία πρόσβασης σε υπηρεσίες για παιδιά και οικογένειες. Το NCTSN δημιούργησε ένα πρωτόκολλο κατάρτισης με τίτλο CCCT (Core Curriculum on Childhood Trauma) (Layne et al., 2011) που αποσαφηνίζει τα βασικά στοιχεία της παρέμβασης (με την ενσωμάτωσή τους σε έναν ολοκληρωμένο πίνακα βάσει αποδείξεων), τις βασικές έννοιες του ψυχικού τραύματος και των ουσιαστικών θεραπευτικών δεξιοτήτων για τον σχεδιασμό και την εφαρμογή μιας αποτελεσματικής παρέμβασης για παιδιά που υποφέρουν από ψυχικό τραύμα και τις οικογένειές τους. Δύο στοιχεία φαίνονται θεμελιώδη: οι στόχοι της παρέμβασης (στόχοι που αναμένεται να επιτευχθούν μέσω της παρέμβασης) και τα πρακτικά στοιχεία (οι πραγματικές διαδικασίες που πρέπει να εφαρμοστούν για την επίτευξη αποτελεσμάτων). Αυτή η προσοχή στην κατάρτιση των φορέων σχετικά με τις βασικές ικανότητες περνά μέσα από τον προσδιορισμό συγκεκριμένων «χρυσών κανόνων» σε σχέση με την κατάρτιση EBP και τις θεραπείες βάσει αποδείξεων (EBTT, Θεραπείες ψυχικού τραύματος βάσει αποδείξεων). Το CCCT περιλαμβάνει 5 επίπεδα: α) Βάση εμπειρικών αποδείξεων, β) 12 βασικές έννοιες για την κατανόηση των αντιδράσεων τραυματικού άγχους σε παιδιά και οικογένειες, γ) τους στόχους παρέμβασης, δ) πρακτικά στοιχεία (παρατηρήσιμες ενέργειες που τίθενται σε εφαρμογή για την επίτευξη των στόχων), ε) θεραπευτικές δεξιότητες/ικανότητες (δύο υπο-επίπεδα: 1) διαδικαστικές και προσανατολισμένες στη διαδικασία, 2) αξιολογητικές). Το προαναφερθέν μοντέλο υποστηρίζει πρακτικές και ικανότητες βάσει αποδείξεων, όπως συνηθισμένη αξιολόγηση και συλλογή πληροφοριών, θεωρία της πρακτικής, εφαρμογή των αποτελεσμάτων που προέρχονται από την επιστημονική βιβλιογραφία σε μεμονωμένες καταστάσεις ασθενών,

διατύπωση των περιπτώσεων και σχεδιασμός της παρέμβασης. Κατά τη διαδικασία εξέτασης και εφαρμογής του μοντέλου CCCT, μια ομάδα εργασίας έχει σχεδιάσει μια ειδική συνεδρία βελτίωσης των ικανοτήτων στατιστικής ανάλυσης και διάρθρωσης των πρωτοκόλλων μελέτης που είναι χρήσιμα για την επικύρωση της κλινικής πρακτικής. Αυτό που υπογραμμίζεται περισσότερο είναι η πρόσκληση για ανάπτυξη τόσο των θεωρητικών πτυχών όσο και των μεθόδων αξιολόγησης (πολυδιάστατες), καθώς και η εμπειρική βάση που είναι προσβάσιμη στην αξιολόγηση και επικύρωση των παρεμβάσεων (ιδίως για τα αποτελέσματα, τους παρεμβατικούς παράγοντες και την αποτελεσματικότητα των παρεμβάσεων με επίκεντρο την ειδική κατάσταση ενός ατόμου). Οι Briggs & συνεργάτες (2012) προσδιορίζουν περαιτέρω ως προτεραιότητα τη βελτίωση των προτύπων μέσω «[…] της ανάπτυξης, της εφαρμογής και της διάδοσης βάσει αποδείξεων» (σελ. 1). Η διάρθρωση των κατευθυντήριων γραμμών παρέμβασης με στόχο την αναγνώριση των βέλτιστων στόχων και των μεθόδων προσδιορισμού (ποιες συγκεκριμένες περιστάσεις μπορούν να δοθούν στην καλύτερη παρέμβαση) και την αξιολόγηση των αποτελεσμάτων είναι θεμελιώδης και χρήσιμη για τους φορείς και για όσους ασχολούνται με τη διάρθρωση των υπηρεσιών. Τα ερευνητικά σχέδια που μπορεί να είναι χρήσιμα είναι εκείνα που εξετάζουν τη διασύνδεση μεταξύ παραγόντων κινδύνου και διαφορετικών αποτελεσμάτων, προκειμένου να αποσαφηνιστεί σε ποια στοιχεία μπορεί να εστιάσει η παρέμβαση, καθώς και, αναδρομικά, να συμπεριλάβει νέες πτυχές στη θεωρητική κατανόηση του ψυχικού τραύματος και να περιπλέξει το επιστημονικό πλαίσιο. Ιδιαίτερο ενδιαφέρον έχει στην πραγματικότητα η παρατήρηση ότι οι θεραπείες που στοχεύουν στη μείωση των συμπτωμάτων που σχετίζονται με PTSD (διαταραχή μετατραυματικής καταπόνησης) είναι επίσης αποτελεσματικές για τη μείωση των λειτουργικών δυσκολιών που δεν σχετίζονται άμεσα με το αντικείμενο της θεραπείας. Αυτό υπογραμμίζει τον τρόπο με τον οποίο μια θεραπεία εστιασμένη στο ψυχικό τραύμα μπορεί να παράγει θετικές, ευρείας κλίμακας επιδράσεις (Layne et al., 2010).

ΣΤΟΙΧΕΙΟ 2: ΑΝΑΓΚΕΣ ΚΑΤΑΡΤΙΣΗΣ ΣΕ ΟΡΓΑΝΙΣΜΟΥΣ ΠΟΥ ΑΣΧΟΛΟΥΝΤΑΙ ΜΕ ΤΗΝ TIC

ΑΡΘΡΟ

Οι Bryson και συνεργάτες (2017) θέτουν μια ενδιαφέρουσα προϋπόθεση που είναι χρήσιμη για τη διάκριση δύο επιπέδων αντανάκλασης, τα οποία εφαρμόζονται στην ανάλυση και αξιολόγηση των θεμάτων αυτής της ενότητας. Οι συγγραφείς διαχωρίζουν τις θεραπείες που είναι συγκεκριμένες για το ψυχικό τραύμα (δηλαδή τεχνικές παρέμβασης που στοχεύουν στη μείωση των συμπτωμάτων, τα οποία σχετίζονται με το ψυχικό τραύμα) από την TIC ως μια γενική προοπτική, η οποία στοχεύει σε μετασχηματισμό του συστήματος φροντίδας, συμπεριλαμβανομένης της κατανόησης των αντιδράσεων τραυματικού άγχους σε κάθε επίπεδο και σε όλες τις πτυχές οργάνωσης των υπηρεσιών. Παρά τη μεγάλη ζήτηση για την εφαρμογή των αρχών TIC στις υπηρεσίες και παρά τα πλεονεκτήματα που μπορεί να έχει, η επιστημονική συμβολή στην εφαρμογή της TIC για τους ανήλικους πελάτες είναι, δυστυχώς, περιορισμένη (Bryson et al., 2017). Οι Ruzek & Rosen, το 2009, έχουν ήδη παρατηρήσει ότι η διάδοση θεραπειών βάσει αποδείξεων που εστιάζουν σε συμπτώματα, τα οποία σχετίζονται με PTSD, ήταν ένα από τα βασικά στοιχεία για τα οποία δεσμεύτηκαν οργανισμοί που υποστηρίζουν τους ανθρώπους που υποφέρουν από ψυχικό τραύμα και, ως εκ τούτου, γίναμε μάρτυρες μιας αύξησης της επιστημονικής βιβλιογραφίας σχετικά με τους οργανωτικούς παράγοντες, οι οποίοι συνδέονται με την εφαρμογή και τη διάδοση βέλτιστων πρακτικών. Παρά ταύτα, σε μια προηγούμενη ανάλυση που εισήγαγε ο Delaney (2006), επιβεβαιωμένη από τους Ruzek & Rosen (2009) και από τους ίδιους τους Bryson και συνεργάτες (2017), προέκυψε μεγάλη αστάθεια των ποσοστών χρήσης πρακτικών, όπως ο περιορισμός και η απομόνωση. Επιπλέον, όπως τόνισαν οι Valenkamp και συνεργάτες (2014) καθώς και οι Bryson και συνεργάτες (2017), λίγες μελέτες εξέτασαν την αποτελεσματικότητα αυτών των παρεμβάσεων κατά τη σύγκριση με εναλλακτικές μεθόδους εισαγωγής. Η αστάθεια των μεθόδων παρέμβασης, σύμφωνα με τους Ruzek & Rosen (2009), θα φανερώσει την ανάγκη να προχωρήσουμε σε μια συγκριτική ανάλυση των κατευθυντήριων γραμμών και των βέλτιστων διεθνών πρακτικών, προκειμένου να τις καταστήσουμε περισσότερο βασισμένες στον τομέα των προτάσεων οργανωτικής αλλαγής και περισσότερο προσανατολισμένες βάσει αποδείξεων σε επίπεδο πολιτικών. Οι Bryson & συνεργάτες (2017) προσπαθούν, μέσω μιας συστηματικής αναθεώρησης της επιστημονικής βιβλιογραφίας, να υπογραμμίσουν ποιοι παράγοντες κάνουν την εφαρμογή της TIC να λειτουργεί, για ποιον τύπο χρήστη, υπό ποιες συνθήκες, προς ποια κατεύθυνση και για ποιο λόγο. Οι στρατηγικές που θεωρούνται πιο

κοινές σε επιστημονικές συνεισφορές είναι οι εξής: 1) μια ηγεσία προσανατολισμένη στην αλλαγή, 2) η χρήση ερευνητικών δεδομένων για την ενημέρωση της πρακτικής, 3) ανάπτυξη του προσωπικού, 4) η χρήση εργαλείων που αποτρέπουν τον περιορισμό και την απομόνωση, 5) ο ρόλος των χρηστών στο πλαίσιο της παραμονής τους, 6) τεχνικές ενημέρωσης. Ενόψει της ανάγκης να αναλυθεί η λειτουργική πολυπλοκότητα αυτών των στοιχείων, ενώ παράλληλα συνδέονται με τις εδαφικές και οργανωτικές ιδιαιτερότητες, η πρόσκληση των συγγραφέων για υπηρεσίες που ασχολούνται με την εφαρμογή της TIC είναι να προχωρήσουν στην προσπάθεια να αποδείξουν, μέσα από τη διαδικασία της επιστημονικής έρευνας και σε μια διαχρονική προοπτική, την αποτελεσματικότητα τόσο των προσπαθειών όσο και των αλλαγών που εφαρμόζονται για τη βελτίωση της ασφάλειας των ασθενών, καθώς και τα μακροπρόθεσμα αποτελέσματα των θεραπειών. Από κοινού με αυτήν την προοπτική, οι Lang και συνεργάτες (2016) υπογραμμίζουν πόσο σημαντικό είναι να επιτευχθεί συναίνεση σχετικά με το τι συνιστά μια υπηρεσία με ενημέρωση για το ψυχικό τραύμα και πώς να μετρώνται αποτελεσματικά οι παράγοντες που εμπλέκονται. Πρώτα από όλα, τα κεντρικά ζητήματα είναι: πώς να φτάσετε στη βέλτιστη διαδικασία προβολής. πώς να λειτουργήσουν καλύτερα οι θεμελιώδεις αρχές της TIC στην καθημερινή εργασία με υποκείμενα που εκτίθενται σε δυνητικά ή βέβαια τραυματικά γεγονότα και ποιες είναι οι καλύτερες μέθοδοι για την ενίσχυση των υπηρεσιών που ασχολούνται με αυτόν τον πληθυσμό. Επί του παρόντος, υπάρχουν λίγες έρευνες που ασχολούνται με την αποτελεσματικότητα των αλλαγών στην εισαγωγή των ασθενών σε οργανωτικό επίπεδο βάσει TIC και πώς/πόσο αυτές οι αλλαγές είναι χρήσιμες για τα αποτελέσματα της υγείας για τους συμμετέχοντες χρήστες. Μια πρόκληση που αναφέρθηκε από τους ερευνητές θα μπορούσε στην πραγματικότητα να είναι η ενσωμάτωση της έρευνας και των βέλτιστων πρακτικών των EBP, προκειμένου να ενισχυθεί η ποιότητα της υλοποίησης αυτών των υπηρεσιών (λαμβάνοντας παράλληλα υπόψη την ανάλυση του πεδίου των οικονομικών επιπτώσεων αυτών των πρωτοβουλιών), μέσω της ανάπτυξης των ικανοτήτων του προσωπικού, των διαδικασιών επιλογής, των δυνατοτήτων αλλαγής πολιτικής. Κρίσιμο ρόλο προς αυτήν την κατεύθυνση μπορεί να διαδραματίσει η ηγεσία, η οποία πρέπει να στηρίξει μια διαδικασία αλλαγής, μερικές φορές ριζικής, ακόμη και σε επίπεδο οργανωτικής παιδείας (με έμφαση, για παράδειγμα, στη σημασία της TIC). Η κατάρτιση σχετικά με το ψυχικό τραύμα αποτελεί ουσιαστικό στοιχείο, αλλά δεν επαρκεί για έναν οργανισμό ώστε να έχει ενημέρωση για το ψυχικό τραύμα. Μια άλλη σημαντική πτυχή, όπως ορίζεται από τους Kramer και συναδέλφους (2013), είναι η συνεργασία μεταξύ διαφόρων φορέων που ασχολούνται με την παροχή βοήθειας στους ανηλίκους και τις οικογένειές τους, οι οποίοι

ενδεχομένως θα μοιράζονται τις αρχές της TIC. Όσον αφορά σε αυτήν την τελευταία πτυχή, οι συγγραφείς ανέλυσαν την αποτελεσματικότητα της κατάρτισης προσανατολισμένης προς την απόκτηση ειδικών γνώσεων με τη διαχρονική διαχείριση κατάλληλων εργαλείων έρευνας (πριν και μετά την κατάρτιση), καθώς και μιας έρευνας παρακολούθησης για να αναλυθεί το πόσο αυτές οι αποκτηθείσες ικανότητες οδηγούν σε αλλαγές της σχετικής υπηρεσίας. Από την άποψη αυτή, ένα ενδιαφέρον θέμα είναι η ανάλυση των εμποδίων που αντιμετωπίζει ολόκληρο το προσωπικό και η συγκρότηση συγκριτικής έρευνας (με τυχαιοποιημένες ομάδες) που αποσκοπούν στην εξέταση της χρησιμότητας των διαφόρων στρατηγικών, οι οποίες εφαρμόζονται και οι ανάγκες περαιτέρω κατάρτισης, επίσης διαχρονικά.

ΣΤΟΙΧΕΙΟ 4: ΥΠΗΡΕΣΙΕΣ ΕΠΙΚΕΝΤΡΩΜΕΝΕΣ ΣΤΗΝ ΕΡΕΥΝΑ ΣΧΕΤΙΚΑ ΜΕ ΤΟ ΨΥΧΙΚΟ ΤΡΑΥΜΑ

ΑΡΘΡΟ

Η TIC θα μπορούσε να οριστεί ως μια προσέγγιση βάσει αποδείξεων για την αντίδραση στο ψυχικό τραύμα, η οποία επικεντρώνεται στην ικανότητα (ή αδυναμία) των μελών του προσωπικού να συμμετάσχουν σε ένα όραμα περί φροντίδας ενός ασθενούς που υποφέρει από ψυχικό τραύμα, ως ένας σημαντικός πρόδρομος για την επιτυχία ή την αποτυχία υιοθέτησης στρατηγικών που αποσκοπούν στη μείωση του κινδύνου εκ νέου πρόκλησης ψυχικού τραύματος στον χρήστη (Marvin & Volino Robinson, 2018). Σε αυτό το σημείο κρίνεται ουσιαστικής σημασίας να λαμβάνουμε υπόψη την πολυπλοκότητα των ιστοριών στις οποίες το ψυχικό τραύμα προκαλείται από διαφορετικές και ατομικές εμπειρίες. Οι πολιτικές, οι διαδικασίες και η καθημερινή λειτουργία θα μπορούσαν ενδεχομένως να είναι επιπλέον τραυματικές εμπειρίες ή να προκαλέσουν αποκρίσεις που συνδέονται με την ατομική λειτουργία του ψυχικά τραυματισμένου ατόμου, εμποδίζοντάς το να λάβει τη φροντίδα που χρειάζεται. Προκειμένου να αποφευχθούν οι καταστάσεις αυτές και να μην δημιουργηθεί δυσαρέσκεια στα μέλη του προσωπικού, η στροφή προς ειδικά δομημένες και διεθνώς αναγνωρισμένες βέλτιστες πρακτικές μπορεί να είναι χρήσιμη (βλ., για παράδειγμα, τις στρατηγικές που προώθησε η SAMHSA το 2014). Σε συνδυασμό με αυτό, η προοπτική της TIC καλεί τους οργανισμούς να εξετάσουν τον αντίκτυπο της εργασίας με υποκείμενα που φέρουν τραυματικές ιστορίες στα μέλη που εισέρχονται σε κλινικές υπηρεσίες (SAMHSA, 2014, Knight, 2015) και πώς θα μπορούσαν να βοηθηθούν οι φορείς μέσω της κατάρτισης και μιας ηγεσίας ενημερωμένης για το ψυχικό τραύμα, διατηρώντας ένα καλό επίπεδο ευημερίας και αποτελεσματικότητας/αποδοτικότητας στις παρεμβάσεις κατά την εργασία (Manderscheid, 2009). Οι Ruzek & Rosen (2009) εξέτασαν εις βάθος τους παράγοντες που επηρεάζουν τον τρόπο με τον οποίο οι υπηρεσίες λαμβάνουν τα ερευνητικά αποτελέσματα για πρακτικές βάσει αποδείξεων, οι οποίες συνδέονται με τη θεραπεία του ψυχικού τραύματος. Η προσεκτική αξιολόγηση τόσο της διάδοσης της πρακτικής όσο και της έρευνας συνεπάγεται την ενσωμάτωση ενός πεδίου ανάλυσης που αποτελείται από πολλαπλούς παράγοντες, οι οποίοι μπορούν να επηρεάσουν την εξέλιξη της διαδικασίας φροντίδας, τη σχέση των ασθενών ή των δυνητικών χρηστών με τις υπηρεσίες, τη μέθοδο που χρησιμοποιούν οι κλινικοί ιατροί για να μάθουν νέα τις τεχνικές θεραπείας, τις αλλαγές στους οργανισμούς που συνδέονται με τον μετασχηματισμό συμπεριφοράς. Βέβαια, σύμφωνα με το όραμα των συγγραφέων, μια όλο και πιο επείγουσα προτεραιότητα στην

εφαρμογή της εμπειρικής έρευνας στον τομέα αυτό αποτελεί η επικύρωση ή η υποστήριξη μεθόδων θεραπείας που εφαρμόζονται με πιο εύκολο οικονομικά τρόπο. Ειδικότερα, οι ερευνητές ανέλυσαν τον ρόλο των παραγόντων που αφορούν στους φορείς, τους οποίους ανέδειξε η έρευνα όταν έγινε σύνδεση με τα αποτελέσματα. Παρατηρούν ότι οι αξιολογήσεις που πραγματοποιήθηκαν από φορείς εξειδικευμένους στο άγχος που σχετίζεται με ψυχικά τραύματα (συγκεκριμένα αυτοί που ασχολούνται με την PTSD) σχετικά με μια συγκεκριμένη πρακτική, τις ικανότητες και τα χαρακτηριστικά τους (π.χ. το επίπεδο αυτοαποτελεσματικότητας), την προθυμία τους να αλλάξουν σε λειτουργικές πρακτικές (π.χ. υιοθέτηση συγκεκριμένης βέλτιστης πρακτικής, ενσωματώνοντάς την στην καθημερινή τους λειτουργία) είναι επιδρώντες παράγοντες, αλλά σπάνια μελετώνται σε εμπειρικό επίπεδο. Η προσβασιμότητα σε προγράμματα κατάρτισης σχετικά με την EBP και οι ανησυχίες σχετικά με τη δυνατότητα εφαρμογής καινοτομιών στον τομέα της έρευνας που σχετίζονται με τον συγκεκριμένο αντίστοιχο πληθυσμό τους (πρόβλημα γενίκευσης των αποτελεσμάτων) φαίνεται να αποτελούν τις σημαντικότερες μεταβλητές όσον αφορά τη στάση τους απέναντι σε πρακτικές βάσει αποδείξεων, ανεξάρτητα από το θεωρητικό τους πλαίσιο. Η μέθοδος κατάρτισης που φαίνεται ιδιαίτερα αποτελεσματική όσον αφορά στην προώθηση της αλλαγής στη συμπεριφορά φροντίδας φαίνεται να είναι τα εντατικά μαθήματα κατάρτισης, ειδικά όταν απαιτούν την απόδειξη των απαραίτητων ικανοτήτων και όταν απαιτούν αυτές να τεθούν υπό δοκιμή σε όλη τη διαδραστική συμμετοχή στα μαθήματα (με διαθεσιμότητα εποπτείας σε τακτική βάση και, ως εκ τούτου, πέραν της ίδιας της στιγμής της κατάρτισης και των περιπτώσεων κατάρτισης των εκπαιδευτών). Όσον αφορά στους παράγοντες καινοτομίας, οι συγγραφείς υπογραμμίζουν ότι οι αντιλήψεις των ασθενών και των φορέων σχετικά με τις θεραπείες αποτελούν βασικό στοιχείο για την υιοθέτησή τους, ιδιαίτερα αναφορικά με την αποδεδειγμένη αποτελεσματικότητά τους (ακόμη και σε συγκριτικό επίπεδο με άλλες μεθόδους). Όσον αφορά στους συστημικούς παράγοντες, παρατηρούν πόσο ιδιαίτερα σχετική είναι η διαθεσιμότητα χώρων για εποπτεία και διοικητική και οργανωτική υποστήριξη για την επιτυχή εφαρμογή μιας βέλτιστης πρακτικής (Fixsen et al., 2005). Ακόμη πιο σημαντική είναι η ανάγκη να υποστηριχθεί εμπειρικά η δημιουργία συστημάτων φροντίδας με ενημέρωση για το ψυχικό τραύμα (Ko et al., 2008, Ruzek & Rosen, 2009). Επιπλέον, η παρακολούθηση της εφαρμογής της θεραπείας είναι μια άλλη βασική πτυχή της διάδοσης, των επιδράσεων και της πιστότητας στη διαδικασία για την εκπλήρωση των EBP (Rosenheck, 2001b, DuFrene, Noell, Gilbertson & Duhon, 2005, Durlak & DuPre, 2008, Ruzek & Rosen, 2009). Μια ιδιαίτερα ενδιαφέρουσα πτυχή είναι αυτή που αναλύεται από τον Rosenheck (2001a), ο οποίος υπογραμμίζει την αμοιβαία αναδρομική διαδικασία

αλληλεπίδρασης μεταξύ των EBP (στη γενική και τη ρυθμιστική τους διάσταση) και των τοπικών εμπειριών/αναγκών για υλοποίηση. Ο σκοπός της παρακολούθησης, ακόμη και ενόψει του κόστους που συνεπάγεται με οικονομικούς και χρονικούς επενδυτικούς πόρους για υπηρεσίες, θα πρέπει να επιτρέπει στις [υπηρεσίες] να επικεντρωθούν σε κρίσιμα στοιχεία για τα αποτελέσματα της θεραπείας και την αποτελεσματικότητα της θεραπείας (Ruzek & Rosen, 2009). Ένα από τα βασικά ερωτήματα μπορεί να είναι πώς οι τροποποιήσεις του κλινικού ιατρού αναφορικά με συγκεκριμένες ανάγκες ενδέχεται να υπονομεύσουν, να αυξήσουν ή να αφήσουν αμετάβλητες τις επιδράσεις της παρέμβασης (Ruzek & Rosen, 2009).

ΒΙΝΤΕΟ: Φροντίδα με ενημέρωση για το ψυχικό τραύμα

ΣΤΟΙΧΕΙΟ 2: ΑΞΙΟΛΟΓΗΣΗ ΑΠΟΔΟΤΙΚΟΤΗΤΑΣ ΚΑΙ ΕΜΠΕΙΡΙΑΣ (αποτελέσματα)

ΑΡΘΡΟ

Σύμφωνα με τους Guyadeen & Seasons (2018), «το ιστορικά κυρίαρχο πρότυπο αξιολόγησης είναι επιστημονικά καθοδηγούμενο και εξαιρετικά τεχνικό, με μεγάλη έμφαση στις ποσοτικές μεθόδους». Οι μέθοδοι και οι τεχνικές επιστημονικής έρευνας, όπως τα συστηματικά τυχαιοποιημένα ερευνητικά σχέδια και τα πειράματα, θεωρούνται αναπόσπαστα στοιχεία της διαδικασίας αξιολόγησης (Alkin 2013). Αυτή η προσέγγιση της αξιολόγησης επικεντρώνεται στη μέτρηση της αποτελεσματικότητας και της αποδοτικότητας (Greene 1994) (σελ. 100).

Οι μελετητές εργάστηκαν για μεγάλο χρονικό διάστημα και με διαφωνίες σχετικά με τον τρόπο αξιολόγησής της, τους στόχους και το περιεχόμενό της, καθώς και τους δείκτες της (Jacobson et al., 1999). Για παράδειγμα, μια ευρέως διαδεδομένη πρακτική στον τομέα της αξιολόγησης αφορά στην ανάλυση του τρόπου με τον οποίο (κυρίως ποσοτικά) τα προγράμματα προάγουν ή παρεμποδίζουν την επίτευξη των στόχων. Αυτή η προσέγγιση απαιτεί σαφώς καθορισμένους στόχους και αντίστοιχους δείκτες. Η αξιολόγηση της αποτελεσματικότητας είναι μια περίπλοκη διαδικασία και δεν είναι απαλλαγμένη από την ευθύνη λήψης σχετικών αποφάσεων: όπως υπογραμμίζουν οι Craig και συνεργάτες (2008), για την εκτίμηση της αποτελεσματικότητας μιας παρέμβασης, πρέπει να λαμβάνεται πάντοτε υπόψη ως μέθοδος επιλογής η τυχαιοποίηση (π.χ. για την αποφυγή σφαλμάτων επιλογής). Εάν μια συμβατική τυχαιοποιημένη δοκιμή μεταξύ παράλληλων ομάδων δεν είναι κατάλληλη, θα πρέπει να εξεταστούν άλλα τυχαιοποιημένα σχέδια μεθοδολογικής μελέτης ή, εάν δεν είναι εφικτή μια πειραματική προσέγγιση, θα μπορούσαν να ληφθούν υπόψη οιονεί πειραματικά ή παρατηρητικά έργα.

Αναφορικά με την ανάλυση των αποτελεσμάτων της παρέμβασης, εάν το σχέδιο έρευνας διεξάγεται σύμφωνα με την επιστημονική μέθοδο, έχει ως στόχο να επιβεβαιώσει ή να διαψεύσει την ύπαρξη αιτιώδους συνάφειας μεταξύ της παρέμβασης και των αποτελεσμάτων της και να κατανοήσει τους λόγους πίσω από την αποτελεσματικότητα ή έλλειψη αυτής. Η σχεδίαση μελέτης ορίζει επίσης το επίπεδο των αποδείξεων που προκύπτουν από αυτή. Η συστηματική αναθεώρηση των τυχαιοποιημένων ελεγχόμενων δοκιμών (RCT) είναι μία από τις πιο ευρέως χρησιμοποιούμενες και αναγνωρισμένες μεθόδους για την παροχή του καλύτερου επιπέδου αποδεικτικών στοιχείων σχετικά με τις επιδράσεις των παρεμβάσεων πρόληψης ή/και θεραπείας (Rychetnik, Frommer, Hawe & Shiell, 2002). Η μακροπρόθεσμη παρακολούθηση μπορεί να είναι απαραίτητη για να προσδιοριστεί κατά πόσο προκύπτουν τα

αναμενόμενα αποτελέσματα ή εάν οι βραχυπρόθεσμες αλλαγές παραμένουν: «αν και όχι συχνές, τέτοιες μελέτες μπορεί να είναι εξαιρετικά ενημερωτικές» (Craig et al., 2008, σελ. 3). Σχετικά με τα επίπεδα αποδείξεων στην αξιολόγηση των παρεμβάσεων δημόσιας υγείας, αυτά αποτελούν αντικείμενο περαιτέρω μελέτης στην επιστημονική βιβλιογραφία λόγω της εξάρτησής τους από τα κριτήρια που έχουν τεθεί για την εκτίμηση της αξιοπιστίας τους. Από την άποψη αυτή, εξακολουθεί να υπάρχει διαφωνία στον τομέα των RTC που εφαρμόζεται στην ανάλυση των παρεμβάσεων στον τομέα της δημόσιας υγείας. Αφορά κυρίως στη δυσκολία διεξαγωγής αυτών των μελετών εξαιτίας της προγραμματικής πολυπλοκότητας των παρεμβάσεων, της ανάλυσης των αποτελεσμάτων και της υποεκτίμησης της συμβολής των μελετών παρατήρησης. Λόγω της φύσης τους, πολλές δημόσιες παρεμβάσεις απαιτούν πολλαπλές και ευέλικτες στρατηγικές ανάλυσης στις οποίες είναι δύσκολο να προσαρμοστούν μελέτες που βασίζονται σε «κλασικά» μοντέλα RCT, σύμφωνα με τους συγγραφείς (ειδικά επειδή απαιτούν μια πολύ άκαμπτη τυποποίηση της παρέμβασης και την προϋπόθεση τυχαιοποίησης βάσει μεμονωμένων μονάδων). Σημαντικό σημείο της ανάλυσης των ερευνητών είναι ότι τονίζεται πως η εφαρμογή μη τυχαιοποιημένων μεθοδολογιών όπου αυτό είναι δυνατό μπορεί να οδηγήσει σε σημαντική και μη βιώσιμη απώλεια της συνάφειας. Ωστόσο, σύμφωνα με τα όσα είπαν οι Rychetnik και συνεργάτες (2002):

«*η σχεδίαση της μελέτης από μόνη της δεν μπορεί να είναι επαρκής ως το κύριο κριτήριο για την αξιοπιστία των αποδείξεων σχετικά με παρεμβάσεις δημόσιας υγείας*» (σελ. 121).

Ερμηνεία των αποτελεσμάτων

Η διαδικασία αξιολόγησης αποτελεί κεντρική πτυχή της σχεδίασης και της υλοποίησης μιας παρέμβασης, ανεξάρτητα από το εάν τα αποτελέσματα σχετικά με την αποτελεσματικότητα είναι αρνητικά ή θετικά. Στην πραγματικότητα, η απόδειξη της κατάλληλης εφαρμογής των διαδικασιών που προβλέπονται από το πρόγραμμα παρέμβασης και η χρήση αποτελεσματικών δεικτών για την παρακολούθηση της διαδικασίας αναγνωρίζονται ως κεντρικές στην επιστημονική βιβλιογραφία (Rychetnik et al., 2002).

Οι θεωρίες σχετικά με τις παρεμβάσεις, οι προδιαγραφές τους (επεξήγηση και αξιοπιστία) σε σχέση με τις υποκείμενες προϋποθέσεις (υποθέσεις), οι οποίες σχετίζονται με την αποτελεσματικότητα και τη λειτουργικότητα των μέτρων αποτελέσματος και αντίκτυπου, αποτελούν βασικά κριτήρια αξιολόγησης και ερμηνείας της ποιότητάς τους όσον αφορά στη δημόσια υγεία (Rychetnik et al., 2002).

Σύμφωνα με την ανάλυση των Rychetnik και συναδέλφων (2002), διατίθενται πολυδιάστατες προσεγγίσεις στη βιβλιογραφία για την αξιολόγηση της έρευνας σχετικά με τα

αποτελέσματα. Κατά την αξιολόγηση των αποδεικτικών στοιχείων σχετικά με την αποτελεσματικότητα της παρέμβασης είναι σημαντικές τρεις διαστάσεις:

1) «η *ισχύς* των αποδεικτικών στοιχείων που καθορίζεται από έναν συνδυασμό σχεδίασης της μελέτης (επίπεδο), μεθοδολογικής ποιότητας και στατιστικής ακρίβειας» (σελ. 122),
2) «το *μέγεθος* των μετρούμενων αποτελεσμάτων» (σελ. 122),
3) «η *συνάφεια* των μετρούμενων αποτελεσμάτων (όπως παρατηρήθηκε στην αξιολόγηση) με το πλαίσιο υλοποίησης» (σελ. 122).

Οι εμπειρικές αξιολογήσεις ποιότητας είναι σημαντικές, καθώς μπορούν να επηρεάσουν τις αποφάσεις σε πολιτικό ή πρακτικό επίπεδο στον τομέα της δημόσιας υγειονομικής περίθαλψης. Θα πρέπει να διασφαλιστεί προσεκτικά ότι η χρήση ανεπαρκών πρωτοκόλλων αξιολόγησης δεν οδηγεί σε μη ρεαλιστικές ή υπερβολικά δαπανηρές απαιτήσεις. Τα κριτήρια αξιολόγησης θα πρέπει να υποστηρίζουν τη διαδικασία λήψης αποφάσεων, καθώς θα πρέπει να βοηθήσουν να προσδιοριστεί κατά πόσον τα αποτελέσματα που μετρούνται περιλαμβάνουν α) τα συμφέροντα εκείνων που ενδέχεται να συμμετέχουν στην απόφαση ή στην πρόταση της παρέμβασης και το κοινό στόχο, β) εάν τα απρόβλεπτα και αναμενόμενα αποτελέσματα της παρέμβασης έχουν ως αποτέλεσμα οφέλη ή όχι και γ) την αποδοτικότητα της παρέμβασης και την αποτελεσματικότητά της. Σχετικά με την πρώτη διάσταση, η συμβολή όλων των ενδιαφερομένων είναι καθοριστική, δεδομένης της κοινωνικής και πολιτικής φύσης της δημόσιας υγείας. Για τους λόγους αυτούς, σημαντικοί παράγοντες στη διαδικασία αξιολόγησης είναι οι υπεύθυνοι λήψης αποφάσεων και οι ομάδες στόχοι.

Όπως επεσήμαναν οι Guyadeen & Seasons (2018), υπάρχουν μοντέλα αξιολόγησης που δίνουν μεγάλη έμφαση στον πλουραλισμό και στην ανάλυση των διαφόρων ενδιαφερομένων μερών που συμμετέχουν σε μια αξιολόγηση. Επιπλέον, οι ποιοτικές μέθοδοι χρησιμοποιούνται συχνά για να βελτιώσουν το όραμα των προγραμμάτων από τις οπτικές γωνίες των άμεσα ενδιαφερομένων (Greene, 1994). Στην πραγματικότητα, θα μπορούσαν να θεωρηθούν ουσιαστικής σημασίας καθώς έχουν άμεση συμμετοχή (π.χ. χρήματα και προσωπικά συμφέροντα) στην αξιολόγηση.

Η συμμετοχική αξιολόγηση (Cousins, 2004), η αξιολόγηση της ενδυνάμωσης (Fetterman, 2004), η συνεργατική αξιολόγηση (Rodriguez-Campos, 2012) και πιο πρόσφατα η αξιολόγηση της ανάπτυξης (Patton, 2011) θα μπορούσαν να θεωρηθούν ορθά παραδείγματα αποτελεσματικών μεθοδολογιών στον τομέα αυτό (Guyadeen & Seasons, 2018).

ΣΤΟΙΧΕΙΟ 3: ΑΞΙΟΛΟΓΗΣΗ ΤΗΣ ΑΠΟΤΕΛΕΣΜΑΤΙΚΟΤΗΤΑΣ ΤΩΝ ΠΑΡΕΜΒΑΣΕΩΝ: αξιολόγηση διαδικασίας

ΑΡΘΡΟ

Όπως έχει επισημανθεί μέχρι στιγμής, η διαδικασία αξιολόγησης θα πρέπει να διαδραματίζει βασικό ρόλο στη διασφάλιση του γεγονότος ότι τα σχέδια αντανακλούν την υψηλότερη ποιότητα τόσο από εννοιολογική όσο και από εφαρμοστική σκοπιά (Guyadeen & Seasons, 2018, Berke and Godschalk, 2009, Baer, 1997). Μπορεί να συμβάλλει σε μεγάλο βαθμό στη διασφάλιση της αντικειμενικότητας και της συστηματικοποίησης του σχεδιασμού και της ανάλυσης της παρέμβασης, βελτιώνοντας τη διαδικασία προγραμματικής προετοιμασίας και παρέχοντας τη δυνατότητα ανάλυσης της συμφωνίας μεταξύ του δηλωτικού σχεδίου του έργου (δηλωμένοι στόχοι) και των επιτευχθέντων αποτελεσμάτων (Guyadeen & Seasons, 2018). Μέσω της αξιολόγησης είναι επίσης δυνατή η τεκμηρίωση και η εμπειρική αναγνώριση των κενών ή/και των πλεονεκτημάτων (Berke, Smith & Lyles 2012, Guyadeen & Seasons, 2018). Βασική προϋπόθεση είναι ότι για να είναι αποτελεσματικά και να αξιολογούνται τα σχέδια πρέπει να υπάρχει σαφής σχέση μεταξύ των κύριων συνιστωσών ενός σχεδίου (δηλαδή των στόχων και των πολιτικών του) και των μηχανισμών εφαρμογής (Oliveira & Pinho 2010b, Guyadeen & Seasons, 2018). Συνολικά, υπάρχουν δύο γενικές μορφές αξιολόγησης στον σχεδιασμό: α) αξιολόγηση του σχεδίου (π.χ. αξιολόγηση της ποιότητας του σχεδίου, αξιολόγηση της εφαρμογής του σχεδίου και αξιολόγηση των αποτελεσμάτων του σχεδίου) και β) αξιολόγηση του σχεδιασμού (π.χ. αξιολόγηση των διαδικασιών σχεδιασμού και της πρακτικής σχεδιασμού) (Guyadeen & Seasons, 2018). Ενώ η αξιολόγηση του σχεδιασμού περιλαμβάνει τον προσδιορισμό της αποτελεσματικότητας της διαδικασίας σχεδιασμού, η αξιολόγηση του σχεδίου παρέμβασης και τα αποτελέσματά του περιλαμβάνουν την αξιολόγηση της ποιότητας του σχεδίου, την επιτυχία της εφαρμογής του και την επίτευξη των στόχων του (Morckel, 2010, Guyadeen & Seasons , 2018). Αυτές οι μορφές αξιολόγησης είναι παρόμοιες με την αξιολόγηση του προγράμματος επειδή επιδιώκουν τη βελτίωση της διαδικασίας λήψης αποφάσεων, αλλά διαφέρουν λόγω της έμφασης που δίνουν στο σχέδιο, στον τρόπο με τον οποίο δημιουργήθηκε και στα αποτελέσματα που δημιουργούνται από τη δραστηριότητα του σχεδιασμού (Guyadeen & Seasons, 2018). Επιπλέον, υπάρχουν γενικά τρεις τύποι αξιολόγησης του σχεδιασμού: εκ των προτέρων (ή *a priori*), εν εξελίξει και εκ των υστέρων (Guyadeen & Seasons, 2018). Σύμφωνα με τους Oliveira & Pinho (2010), αυτοί οι τύποι αξιολόγησης αντιστοιχούν στα

διάφορα στάδια του σχεδιασμού, τα οποία περιλαμβάνουν την προετοιμασία, την εφαρμογή και την αναθεώρηση του σχεδίου (δηλ., μόλις υλοποιηθεί).

Η υγειονομική περίθαλψη βάσει αποδείξεων έχει ως στόχο να ληφθεί υπόψη η αποδοτικότητα και η αποτελεσματικότητα, αν και μέχρι σήμερα δεν έχει δοθεί έμφαση σε θέματα αποδοτικότητας όσον αφορά στην ιατρική βάσει αποδείξεων. Η αξιολόγηση των αποδεικτικών στοιχείων σχετικά με τις παρεμβάσεις στον τομέα της δημόσιας υγείας πρέπει αναπόφευκτα να προσδιορίζουν κατά πόσο έχει αξιολογηθεί η αποδοτικότητα και, εάν ναι, το επίπεδο αποδοτικότητας που επιτεύχθηκε (Rychetnik, Frommer, Hawe & Shiell, 2002). Επιπλέον, «οι αποφάσεις βάσει αποδείξεων σχετικά με την αξία και τη δυνατότητα εφαρμογής μιας παρέμβασης που συνδέεται με γνώση της αποτελεσματικότητας ταυτόσημων, παρόμοιων ή ανάλογων παρεμβάσεων λαμβάνουν συνήθως χώρα και αξιολογούνται σε διαφορετικό περιβάλλον σε διαφορετική χρονική στιγμή. Για να αξιολογηθεί η δυνατότητα μεταφοράς των αποδείξεων μιας παρέμβασης, απαιτούνται πληροφορίες σχετικά με α) την ίδια την παρέμβαση, β) το πλαίσιο αξιολόγησης και γ) τις αλληλεπιδράσεις μεταξύ παρέμβασης και πλαισίου» (Rychetnik, Frommer, Hawe & Shiell, 2002, σελ. 123). Σε περίπτωση πολύπλοκων παρεμβάσεων, η πίστη δεν είναι εύκολο ζήτημα. Ένα στοιχείο που προσθέτει πολυπλοκότητα είναι το γεγονός ότι η αυστηρή τυποποίηση των διαδικασιών υπονομεύει μερικές φορές την ιδιαιτερότητα της παρέμβασης, όταν αυτή ενεργοποιείται από τοπικές ανάγκες (Craig et al., 2008). Ένα βασικό σημείο που πρέπει να αποσαφηνιστεί είναι το μέγεθος των αλλαγών ή προσαρμογών που επιτρέπονται και η ανάγκη καταγραφής των αλλαγών στην εφαρμογή, έτσι ώστε η πιστότητα να μπορεί να εκτιμηθεί σε σχέση με τον βαθμό τυποποίησης που απαιτείται από το πρωτόκολλο της μελέτης. Η μεταβλητότητα κατά την εφαρμογή, είτε σχεδιασμένη είτε όχι, καθιστά ακόμη πιο σημαντικό το γεγονός ότι οι διαδικασίες αξιολόγησης διαδικασιών και αποτελεσμάτων έχουν αναφερθεί πλήρως και ότι μια σαφής περιγραφή της παρέμβασης παρέχεται ώστε να επιτραπεί η αναπαραγωγή της (Craig et al., 2008).

ΣΤΟΙΧΕΙΟ 3: ΒΑΣΙΚΑ ΣΤΟΙΧΕΙΑ ΓΙΑ ΤΗΝ ΠΑΡΟΥΣΙΑΣΗ ΜΙΑΣ ΚΑΛΗΣ ΕΡΕΥΝΗΤΙΚΗΣ ΠΡΟΤΑΣΗΣ

ΑΡΘΡΟ

Υπάρχουν διαφορετικές προσεγγίσεις στη διάρθρωση ενός έργου (Leone & Prezza, 1999) στον κοινωνικό τομέα και στον τομέα της υγείας: α) συνοπτική-ορθολογική (που συνεπάγεται μέγιστη διάρθρωση του περιεχομένου εκ των προτέρων), β) συντονισμένος-συμμετοχικός ή διαλογικός σχεδιασμός (όπου η συνεχής διαπραγμάτευση των στόχων μεταξύ εμπειρογνωμόνων και αποδεκτών είναι κεντρική), γ) ευρετική (η οποία προβλέπει μια ελάχιστη εκ των προτέρων διάρθρωση των στόχων).

Από γενική άποψη, τα ακόλουθα βήματα πρέπει να τηρηθούν στην ερευνητική διαδικασία:

1. Διατυπώνεται ένα θεωρητικό πρόβλημα (που προκύπτει από την ανάλυση της επιστημονικής θεωρίας και της βιβλιογραφίας).
2. Επιλέγονται κατάλληλες μονάδες ανάλυσης και μέθοδοι.
3. Συλλέγονται και αναλύονται τα δεδομένα.
4. Η θεωρητική πρόταση με την οποία ξεκίνησε η έρευνα είτε αμφισβητείται είτε υποστηρίζεται.

Όπως τονίζει ο Lanzara (1985): «Κάθε παράγοντας που του παρουσιάζεται το πρόβλημα της καινοτομίας ή απλώς της παρέμβασης σε μια κατάσταση για να την τροποποιήσει έχει ένα πρόβλημα σχεδίασης μπροστά του» (σελ. 336). Ο σχεδιασμός είναι μια διαδικασία συστηματοποίησης. Στην πραγματικότητα, η παρουσίαση ενός ερευνητικού έργου είναι μια κρίσιμη και θεμελιώδης φάση που περιλαμβάνει σημαντικές επιλογές, οι οποίες επηρεάζουν τα αποτελέσματά της. Επιπλέον, οι Leone & Prezza (1999) υπογραμμίζουν ότι: «Το να διατυπώσουμε ένα έργο μεταξύ διαφορετικών υποκειμένων, να σκεφτούμε τη συνοχή μεταξύ των διαφόρων μερών (στόχοι, χρόνοι, διαθέσιμοι φορείς...) σημαίνει να προβληματιστούμε για την πρακτική και να ασχοληθούμε με το όριο, με τη μεροληψία και αυτό είναι ακριβώς ό,τι σε μερικά πλαίσια τείνει να καταργηθεί» (σελ. 23) ή θεωρείται υπερβολικά περίπλοκο από άποψη εφαρμογής.

Σύμφωνα με μια εγκάρσια προοπτική, οι συγγραφείς επισημαίνουν τα θεμελιώδη στάδια στη διάρθρωση ενός έργου στον κοινωνικό τομέα:

1. Ιδεασμός: το στάδιο κατά το οποίο υποτίθεται ότι πρόκειται να γίνει ή να προταθεί ένα έργο

2. Ενεργοποίηση: επαλήθευση πόρων, ρόλων, προβλημάτων και στρατηγικών, πιθανή ανάλυση της ζήτησης (πελάτες)
3. Σχεδιασμός: ανάπτυξη του έργου και διάρθρωση των φάσεων που το συνθέτουν, καθιέρωση των περιόδων και καθορισμός των μεθοδολογικών επιλογών
4. Υλοποίηση: έναρξη των δραστηριοτήτων, πρώτος έλεγχος των υποθέσεων, συνεχιζόμενες αλλαγές
5. Επαλήθευση: τελική ανάλυση των αποτελεσμάτων

Επίσης, στον τομέα της επιστημονικής έρευνας, σημαντικά στοιχεία από την άποψη της εφαρμογής είναι:

- Ορισμός και ανάλυση του ερευνητικού αντικειμένου από την άποψη της επιστημονικής βιβλιογραφίας, επεξήγηση του θεωρητικού πλαισίου
- Προσδιορισμός και επεξήγηση των γενικών και των ειδικών στόχων της μελέτης (ερευνητικό ερώτημα: διερευνητικό, αξιολογικό, επεξηγηματικό)
- Διάρθρωση των υποθέσεων
- Προσδιορισμός του πληθυσμού στόχου, εύρεση συμμετεχόντων και διαδικασίες δειγματοληψίας
- Διαδικασίες αξιολόγησης, ορισμός δεικτών, εργαλείων και τεχνικών για την ανάλυση των συλλεγόμενων δεδομένων
- Προγραμματισμός χρόνου (χρονοδιάγραμμα) και ανάλυση εφαρμοσιμότητας (συμπεριλαμβανομένης της κρισιμότητας και των περιορισμών)

Με αυτόν τον τρόπο, μπορούν να χρησιμοποιηθούν μεθοδολογικές τοποθετήσεις ενός ποσοτικού, ποιοτικού ή μικτού πίνακα σύμφωνα με το ερευνητικό ερώτημα.

Κάθε φάση της διαδικασίας σχεδίασης συνεπάγεται ότι ο ερευνητής θέτει σημαντικά ερωτήματα που λαμβάνουν επίσης υπόψη τα κρίσιμα στοιχεία από εννοιολογική και πρακτική άποψη. Το πλαίσιο μέσα στο οποίο διεξάγεται η έρευνα είναι ένα από αυτά, όπως και οι πόροι.

Δεδομένης αυτής της πολυπλοκότητας, είναι θεμελιώδους σημασίας να δοθεί προσοχή στην κατάρτιση του προσωπικού σε αυτήν τη διάσταση, καθώς και στη συνεχή αλληλεπίδραση μεταξύ των επαγγελματιών που ασχολούνται με το κλινικό έργο και των ερευνητών που συμμετέχουν στην έρευνα στην κλινική και για την κλινική.

Επιπλέον, ένας σημαντικός τομέας που δείχνει το επίκεντρό του είναι η διάρθρωση και η επικύρωση εργαλείων που μπορούν να χρησιμοποιηθούν ξεκινώντας από τους στόχους παρέμβασης και έρευνας. Αυτά μπορεί να έχουν διαφορετικές μορφές και να εφαρμόζονται σε συγκεκριμένους στόχους, γι 'αυτό είναι απαραίτητο όλοι οι παράγοντες που συμμετέχουν στη σχεδίαση και την υλοποίηση ενός έργου να συνεργάζονται σε κάθε στάδιο του σχεδίου του έργου, συμπεριλαμβανομένων των μεθοδολογικών επιλογών.

ΣΤΟΙΧΕΙΟ 1: ΟΡΘΗ ΠΡΑΚΤΙΚΗ ΑΝΑΦΟΡΙΚΑ ΜΕ ΤΗΝ TIC

ΑΡΘΡΟ

Δεδομένων των μεγάλων κινδύνων για τη σωματική και ψυχολογική υγεία λόγω της επίδρασης των τραυματικών συμβάντων (Δυσάρεστες εμπειρίες για την παιδική ηλικία, ACE), με την πάροδο του χρόνου έχουν αναπτυχθεί πολλές παρεμβάσεις για να συνδράμουν τα ιδρύματα και τους επαγγελματίες ώστε να βοηθήσουν τους ανθρώπους με τραυματικές ιστορίες προκειμένου να δοθεί έμφαση στο πλεονέκτημα της υιοθέτησης μιας προσέγγισης που βασίζεται στην TIC (Baker et al., 2016). Συγκεκριμένα, «μια προσέγγιση TIC βλέπει ένα άτομο ολιστικά, όχι μόνο ως τη λίστα με τα προβλήματα που αντιμετωπίζει» (Hepburn, 2017, σελ. 7). Όπως υποδεικνύουν πολλοί συγγραφείς (Bryson et al., 2017, Bridgett, Valentino & Hayden, 2012, Ellis & Boyce, 2011, Perry, 2002, Rothbart, Ziaie, O'Boyle, 1992) ένα προστατευτικό αποτέλεσμα (ρυθμιστικός ρόλος) προκύπτει από καλές σχέσεις φροντίδας και υποστηρικτικές σχέσεις, οι οποίες ασκούνται από προσεκτικούς και δραστήριους παρόχους φροντίδας: η ασφάλεια των σχέσεων μειώνει τις βλαβερές συνέπειες του ψυχικού τραύματος στα παιδιά. Το τραυματικό άγχος είναι μια συνήθης κατάσταση στην περίπτωση μιας ACE και συχνά προκαλεί σημαντικές κλινικές εκδηλώσεις (συμπτώματα εσωτερίκευσης ή/και εξωτερίκευσης) που εντοπίζονται συνήθως σε νοσοκομεία ή ξενώνες ειδικούς για ενήλικες και παιδιά (Bryson et al., 2017, Greenwald et al., 2012, Hummer, Dollard & Robst, 2010, Ko et al., 2008). Παραθέτουμε εδώ τους Elliott και συνεργάτες (2005), οι οποίοι δήλωσαν ότι «Οι υπηρεσίες με ενημέρωση για το ψυχικό τραύμα είναι εκείνες στις οποίες η παροχή υπηρεσιών επηρεάζεται από την κατανόηση των επιπτώσεων της διαπροσωπικής βίας και της θυματοποίησης στη ζωή και την ανάπτυξη ενός ατόμου» (σελ. 462) και ότι «Πολλές κοινές διαδικασίες και πρακτικές στους χώρους των υπηρεσιών ενεργοποιούν τις τραυματικές αντιδράσεις και αντιμετωπίζονται ως μη ασφαλή συναισθήματα και πηγή αδυναμίας για τους επιζήσαντες του ψυχικού τραύματος» (σελ. 446). Είναι δυνατό να τονιστεί περαιτέρω ότι οι ορθές πρακτικές θα πρέπει να αξιολογούνται βάσει συγκεκριμένων κριτηρίων, τα οποία προσδιορίζονται και αναλύονται λεπτομερώς στην επιστημονική βιβλιογραφία και περιλαμβάνουν μια προσεκτική αξιολόγηση των σύνθετων παραγόντων που εμπλέκονται στις τραυματικές ιστορίες. Στην πραγματικότητα, σε περιπτώσεις όπου η υπηρεσία ή ο οργανισμός ασχολείται με άτομα που έχουν υποστεί ψυχικό τραύμα, συνιστάται μια προοπτική στην οποία η δημόσια υγεία και η κοινωνική φροντίδα προσανατολίζονται στην πρόληψη και τη μείωση κινδύνων (Bryson et al., 2017). Στον τομέα αυτό, αποτελεί κεντρικό ζήτημα η προώθηση προσεγγίσεων με ενημέρωση για το ψυχικό τραύμα: η φροντίδα με

ενημέρωση για το ψυχικό τραύμα (TIC) και η πρακτική με ενημέρωση για το ψυχικό τραύμα (TIP) είναι τα επιλεγμένα θεραπευτικά παραδείγματα, διότι στοχεύουν στη μεταμόρφωση ολόκληρων συστημάτων φροντίδας, συμπεριλαμβάνοντας μια κατανόηση του άγχους ως απάντηση στο ψυχικό τραύμα σε όλες τις πτυχές της υπηρεσίας και εστιάζοντας στην προτεραιότητα της ασφάλειας και της επιλογής. Επιπρόσθετα, η φιλοσοφία αυτή στοχεύει στη δημιουργία ενός τρόπου θεραπείας επικεντρωμένου στη μη βία, τη μάθηση και τη συνεργασία, όπου δίνεται έμφαση σε όλες τις περιβαλλοντικές και διαπροσωπικές αλληλεπιδράσεις (Bryson et al., 2017). Στη συστηματική αναθεώρηση της βιβλιογραφίας, οι Bryson και συνεργάτες (2017) περιέλαβαν ορισμένα σημαντικά ευρήματα:

- Η «μείωση του φυσικού εξαναγκασμού στην παραδοσιακή και κατ'οίκον ψυχιατρική φροντίδα» (σελ. 11) τονίζεται ως η μείωση/εξάλειψη των στρατηγικών απομόνωσης ή ελέγχου και εξαναγκασμού,

- Βασική πτυχή της TIC είναι «η θεμελιώδης σημασία των ανώτερων υπευθύνων στο να δίνουν προτεραιότητα στην TIC [...] ειδικά όταν το προσωπικό πρέπει να προσαρμοστεί σε νέους τρόπους εργασίας» (σελ. 11),

- οι ερευνητές υπογραμμίζουν την ανάγκη να υποστηριχθεί το προσωπικό μέσω της προηγμένης κατάρτισης, ιδίως όσον αφορά στις διαδικασίες ψυχικών τραυμάτων, της συνεχούς εποπτείας, της καθοδήγησης και της ενημέρωσης,

- σε αυτό το σημείο, είναι σημαντικό να ακούμε τους ασθενείς και τις οικογένειες, δίνοντας ιδιαίτερη προσοχή στις εμπειρίες, τις ανάγκες, τις προτεραιότητές τους σχετικά με τη διαδικασία θεραπείας,

- η σημασία που αποδίδεται στον τομέα της συνεχούς ενημέρωσης των δεδομένων έρευνας και στην ανάλυση των δεικτών αποτελεσμάτων είναι εγκάρσιες διαστάσεις που στοχεύουν στην παροχή κινήτρων και την ενημέρωση σχετικά με τις επιδόσεις των υπηρεσιών και τη βελτίωση της αποτελεσματικότητας,

- η βιβλιογραφία ασχολείται εκτενώς με την «ανάγκη να ευθυγραμμιστεί η τυπική και άτυπη πολιτική και πρακτική με τις γενικές αρχές της πρακτικής με ενημέρωση για το ψυχικό τραύμα» (σελ. 11).

Παρά τη συχνότερη εφαρμογή της, η επιστημονική έρευνα σχετικά με την αποτελεσματικότητα αυτού του τύπου προσέγγισης εξακολουθεί να έχει ελλείψεις (Bryson et al., 2017). Όπως επισημαίνεται από τους Valenkamp, Delaney & Verheij (2014) και

Chandler (2008), υπάρχει έλλειψη τυχαιοποιημένων ελεγχόμενων μελετών που δοκιμάζουν παρεμβάσεις και διερευνούν τους κρίσιμους παράγοντες, οι οποίοι εμπλέκονται στην εφαρμογή θεραπειών προσανατολισμένων στην TIC. Αναφορικά με το τι αποδεικνύεται σήμερα σε διεθνές επίπεδο, οι εμπειρικές μελέτες έχουν δείξει πόσο σημαντική είναι η κατάρτιση για την παροχή στο προσωπικό μιας κοινής γλώσσας που πρέπει να χρησιμοποιείται σχετικά με την εμπειρία του ασθενούς και συγκεκριμένες παρεμβάσεις που πρέπει να χρησιμοποιηθούν σε ασθενείς με ψυχικό τραύμα (Bryson et al., 2017). Το επίκεντρο αυτού του θέματος έχει επίσης επισημανθεί νωρίτερα από τους Le Bel, Huckshorn & Caldwell (2008) και από τους Brown, Baker & Wilcox (2012). Επιπλέον, έχει αποδειχθεί χρήσιμη η ειδική κατάρτιση σχετικά με τις βέλτιστες πρακτικές και τη συμμετοχή των ασθενών στις δραστηριότητες κατάρτισης του προσωπικού (π.χ. με την αναφορά των εμπειριών τους) (Holstead, Lamond, Dalton, Horne & Crick, 2010), καθώς και η συμμετοχή των παιδιών στην ενημέρωση αναφορικά με τις κρίσιμες πτυχές ή στάδια κατά την παροχή φροντίδας (Lebel et al., 2008), την ανταλλαγή δεδομένων και τη συνεχή παρακολούθηση των επιδόσεων/διαδικασιών (σε ατομικό, συλλογικό και επίπεδο μονάδας) (Bryson et al., 2017). Ένας άλλος αναδυόμενος στόχος της επιστημονικής βιβλιογραφίας σχετικά με τις αποτελεσματικές στρατηγικές TIC είναι η ικανότητα των οργανισμών να ευθυγραμμίζουν τις πολιτικές και τις πρακτικές με τις αρχές της φροντίδας με ενημέρωση για το ψυχικό τραύμα (Bryson et al., 2017). Σύμφωνα με αυτό το όραμα, το περιβάλλον και η παιδεία των οργανισμών αποτελούν τα ίδια τα θεραπευτικά εργαλεία και συμβάλλουν στην οικοδόμηση μιας «θεραπευτικής κοινότητας». Ιδιαίτερη σημασία έχουν και τα εξής στοιχεία: 1) εστίαση στη δημιουργία ενός ασφαλούς χώρου θεραπείας τόσο για τους ασθενείς όσο και για το προσωπικό και 2) ενσωμάτωση των αρχών TIC σε δηλώσεις αποστολής και οράματος. Συνοπτικά, οι βασικές στρατηγικές TIC που επισημάνθηκαν από τους Bryson και συνεργάτες (2017) ευθυγραμμίζονται με εκείνες που διέπουν τη NASMHPD (National Association of State Mental Health Program Directors), ενώ και οι δύο παρουσιάζονται στον Πίνακα 1.

Πίνακας 1 Βασικές στρατηγικές της TIC

Bryson και συνεργάτες (2017)
Ένταξη στην κοινότητα
Δέσμευση της ηγεσίας
Επιλογή μοντέλου
Μετασχηματισμός του εργατικού δυναμικού

Προσανατολισμός αποτελεσμάτων
Κοινή διατήρηση
NASMHPD
Ηγεσία προσανατολισμένη στην οργανωτική αλλαγή
Χρήση δεδομένων για ενημέρωση της πρακτικής
Χρήση εργαλείων μείωσης της συγκράτησης και της απομόνωσης
Ανάπτυξη του εργατικού δυναμικού
Βελτίωση του ρόλου του καταναλωτή σε χώρο για εσωτερικούς ασθενείς
Τεχνικές ενδελεχούς ενημέρωσης

Ακόμη, σε μια μελέτη των Azeem και συνεργατών (2011), αυτά τα στρατηγικά στοιχεία ελέγχθηκαν διαχρονικά ώστε να αναλυθεί η μείωση της χρήσης συγκράτησης και απομόνωσης. Πιο συγκεκριμένα, οι συγγραφείς τόνισαν ότι:

- ✓ Η ηγεσία διαδραματίζει κυρίαρχο ρόλο στην πραγματοποίηση αλλαγής της παιδείας, ιδιαίτερα όταν ένα όραμα προσανατολισμένο στην TIC είναι κοινό για όλο το προσωπικό.
- ✓ Η συλλογή και κοινή χρήση των δεδομένων διαδραματίζουν «καθοριστικό ρόλο στα έργα βελτίωσης των επιδόσεων» (σελ. 12) και στις διαδικασίες παρακολούθησης.
- ✓ Η κατάρτιση και συνεχής εκπαίδευση του προσωπικού όσον αφορά στις αρχές της περίθαλψης με προσανατολισμό την ανάρρωση, της προσωποκεντρικής περίθαλψης και της TIC με τις σχετικές αξιολογήσεις επιδόσεων έχει αποδειχθεί ότι έχουν σημαντικές θετικές επιπτώσεις.
- ✓ Θα πρέπει να δοθεί ιδιαίτερη προσοχή στις αρχές της πρωτοβάθμιας πρόληψης, χρησιμοποιώντας ατομικά θεραπευτικά σχέδια που περιλαμβάνουν το ιστορικό του ψυχικού τραύματος και την επικοινωνία με τις στρατηγικές του ασθενούς, της οικογένειας και του προσωπικού.
- ✓ Μια σωστή αρχή για την πρακτική της TIC είναι η συμμετοχή του ασθενούς και της οικογένειας.
- ✓ Εφαρμόστηκαν αποτελεσματικά δραστηριότητες στήριξης της ενημέρωσης, ιδιαίτερα όσον αφορά στις συναισθηματικές πτυχές και τις απαραίτητες αλλαγές στα θεραπευτικά σχέδια, όπως οι παρεμβάσεις για τον μετριασμό της πρόκλησης ψυχικών τραυμάτων και του αντίκτυπου αυτών.

Μελετώντας διαφορετικές προσεγγίσεις της TIC, οι Hanson and Lang (2016) και Johnson (2017) εντόπισαν ορισμένα ζητήματα που θα μπορούσαν να θεωρηθούν σημαντικά για τη διερεύνηση των προσεγγίσεων των υπηρεσιών για τα παιδιά, ενώ κατέληξαν στο συμπέρασμα ότι είναι δυνατός ο προσδιορισμός 15 βασικών συνιστωσών της TIC.

Οι προσδιορισμένες συνιστώσες οργανώθηκαν σε τρία επίπεδα (Hanson & Lang, 2016, σελ. 98):

1. Ανάπτυξη του εργατικού δυναμικού (WD):

- Απαιτείται κατάρτιση για όλο το προσωπικό σχετικά με την ενημέρωση και γνώση της επίδρασης της κακοποίησης ή του ψυχικού τραύματος,

- Μέτρηση της ικανότητας του προσωπικού με καθορισμένα κριτήρια να επιδεικνύουν γνώση/πρακτική σχετικά με το ψυχικό τραύμα,

- Στρατηγικές/διαδικασίες για την αντιμετώπιση/μείωση του άγχους που συνδέεται με δευτερεύον ψυχικό τραύμα μεταξύ του προσωπικού,

- Γνώσεις/δεξιότητες σχετικά με τον τρόπο πρόσβασης και αναφοράς σε βέλτιστες πρακτικές βάσει αποδείξεων επικεντρωμένες στο ψυχικό τραύμα.

2. Υπηρεσίες επικεντρωμένες στο ψυχικό τραύμα (TFS):

- Χρήση τυποποιημένων μέτρων ελέγχου/αξιολόγησης βάσει στοιχείων για τον καθορισμό του ιστορικού και των συμπτωμάτων ή προβλημάτων που σχετίζονται με το ψυχικό τραύμα,

- Συμπερίληψη του ιστορικού του ψυχικού τραύματος του παιδιού στην τεκμηρίωση/στα αρχεία/στην περίπτωση σχεδίου υπηρεσίας,

- Διαθεσιμότητα ειδικευμένων κλινικών ιατρών καταρτισμένων σε πρακτικές βάσει αποδείξεων επικεντρωμένων στο ψυχικό τραύμα,

3. Παράδοση εντός οργανισμού (ORG):

- Συνεργασία, συντονισμός των υπηρεσιών και ανταλλαγή πληροφοριών μεταξύ επαγγελματιών στο πλαίσιο του οργανισμού που σχετίζονται με υπηρεσίες με ενημέρωση για το ψυχικό τραύμα,

- Συνεργασία, συντονισμός των υπηρεσιών και ανταλλαγή πληροφοριών μεταξύ επαγγελματιών στο πλαίσιο άλλων οργανισμών που σχετίζονται με υπηρεσίες με ενημέρωση για το ψυχικό τραύμα,

- Διαδικασίες για μείωση του κινδύνου επανεμφανίσεως του ψυχικού τραύματος του χρήστη,

- Διαδικασίες για τη συμμετοχή του χρήστη και την εισαγωγή στον σχεδιασμό υπηρεσίας και την ανάπτυξη ενός συστήματος με ενημέρωση για το ψυχικό τραύμα,

- Παροχή υπηρεσιών βασισμένων σε πλεονεκτήματα και προώθηση της θετικής ανάπτυξης,

- Παροχή θετικού και ασφαλούς φυσικού περιβάλλοντος,

- Γραπτές πολιτικές που περιλαμβάνουν ρητά και υποστηρίζουν αρχές με ενημέρωση για το ψυχικό τραύμα,

- Ύπαρξη μιας καθορισμένης θέσης ηγεσίας ή μιας θέσης εργασίας που σχετίζεται ειδικά με την TIC.

ΣΤΟΙΧΕΙΟ 1: Η ΣΗΜΑΣΙΑ ΤΗΣ ΠΑΡΑΤΗΡΗΣΗΣ

ΑΡΘΡΟ

Οι κλινικοί ιατροί και οι ερευνητές αναζητούν συνεχώς τη γνώση για ένα συγκεκριμένο φαινόμενο, με έναν λίγο πολύ συστηματικό τρόπο. Αυτή η επιθυμία για γνώση προέρχεται από ενδιαφέρον ή περιέργεια, από προσεκτική ματιά, με γυμνό μάτι ή με τη βοήθεια εργαλείων, με μία λέξη, μέσω της «παρατήρησης».

Ο Mantovani (1995) ορίζει την παρατήρηση ως: «[...] μια μορφή ανίχνευσης που στοχεύει στην εξερεύνηση ενός δεδομένου φαινομένου» (σελ. 84).

Η παρατήρηση συνιστά μια σύνθετη και απαιτητική δραστηριότητα που απαιτεί:

- χρόνο,
- πνευματική ελευθερία,
- απουσία προκαταλήψεων και προκαθορισμένων αντιλήψεων,
- αυτεπίγνωση,
- ικανότητα μη εμπλοκής,
- ικανότητα αναστολής της κρίσης.

Σε κλινικά και ερευνητικά πλαίσια, η παρατήρηση αποκτά μεγάλη σημασία, μεταμορφωμένη από μια απλή και μη επιστημονική μέθοδο σε μια ευέλικτη, δομημένη και αξιόπιστη μέθοδο (Venuti, 2001). Με την πρόοδο των μελετών για παιδιά, για παράδειγμα, έχει εγκαταλειφθεί η χρήση «παιδικών βιογραφιών», για να δοθεί χώρος στη συστηματική παρατήρηση και τον πειραματισμό (Bornstein, 2001). Πράγματι, με την πάροδο του χρόνου οι νατουραλιστικές παρατηρήσεις έχουν αφήσει περιθώρια για τυποποιημένες παρατηρήσεις (Bornstein, 2001). Θα μπορούσε κανείς να ισχυριστεί, σύμφωνα με τα λεγόμενα του Venuti (2001), ότι η παρατήρηση «[...] ενεργεί ως γέφυρα μεταξύ ενός επεξηγηματικού μοντέλου αναφοράς και μιας επακόλουθης διαδικασίας ανάλυσης και ερμηνείας των δεδομένων» (σελ. 58). Επομένως, όταν λέμε παρατηρούμε, δεν αρκεί πλέον μόνο να βλέπουμε μια ομάδα παιδιών να αλληλεπιδρούν ή να καταγράφουμε βίντεο σχετικά με τη συμπεριφορά μεταξύ μητέρας και παιδιού, καθώς η παρατήρηση πρέπει πάντα να αναφέρεται σε ένα θεωρητικό και επεξηγηματικό μοντέλο, το οποίο θα καθοδηγήσει τον ερευνητή να διατυπώσει υποθέσεις και να αναλύσει δεδομένα (Venuti, 2001). Τι να παρατηρήσετε, πώς, πού και πότε θα το κάνετε, θα εξαρτηθεί από τον σκοπό της έρευνας και τη θεωρητική προσέγγιση αναφοράς.

Υπάρχουν διαφορετικά είδη παρατηρήσεων:

- Ψυχαναλυτική παρατήρηση, η οποία έχει την ψυχανάλυση ως θεωρητικό μοντέλο,
- Παρατήρηση κατά Piaget, η οποία έχει την ψυχολογία της ανάπτυξης ως θεωρητικό μοντέλο,
- Ηθολογική παρατήρηση, η οποία έχει την ηθολογία ως θεωρητικό μοντέλο.

Η παρατήρηση κατά Piaget είναι ένα σχεδόν πειραματικό είδος παρατήρησης. Θέτει τα θεμέλιά της στις θεωρητικές προσεγγίσεις του αλληλεπιδρασμού, του δομισμού, του γνωστικισμού και εμβαθύνει τη μελέτη της πορείας της ψυχικής υγείας κατά τη διάρκεια της ανάπτυξής (Vigna, 2002). Δεν περιορίζεται στην καταγραφή όλων όσων κάνει το παιδί, αλλά καθοδηγείται από ορισμένες υποθέσεις που αποτελούν τη βάση της θεωρίας του Piaget. Ο παρατηρητής προσπαθεί να καθιερώσει μια αλληλεπίδραση με τον παρατηρούμενο σε ένα φυσικό πλαίσιο (Petter, 1984, Vigna, 2002). Οι βασικές αρχές αυτής της παρατήρησης είναι δύο:

1. Ο παρατηρητής προσαρμόζεται στο στάδιο ανάπτυξης του παιδιού και, αλληλεπιδρώντας, τροποποιεί τις ίδιες τις συνθήκες της παρατήρησης.
2. Ο παρατηρητής αναπαράγει επανειλημμένα την ίδια κατάσταση παιχνιδιού κατά τη διάρκεια μιας παρατήρησης για να αξιολογήσει εάν η αντίδραση του παιδιού επαναλαμβάνεται με την παρουσία του ίδιου ερεθίσματος και δεν οφείλεται σε τυχαίο γεγονός.

Τα κύρια πλαίσια εφαρμογής αυτού του είδους παρατήρησης είναι ο παιδικός σταθμός και το νηπιαγωγείο.

Η ηθολογική προσέγγιση, από την άλλη πλευρά, εμπνέεται από τη θεωρία της εξέλιξης του Δαρβίνου και το έργο του ηθολόγου Lorenz. Η παρατήρηση ορίζεται ως ηθολογική όταν οι παρατηρητές δεν επηρεάζουν με οποιονδήποτε τρόπο τη συμπεριφορά που ενδιαφέρονται να μελετήσουν και ακυρώνουν όσο το δυνατόν περισσότερο την υποκειμενικότητά τους. Συνήθως αυτή η τεχνική εφαρμόζεται στο φυσικό περιβάλλον στο οποίο μια δεδομένη συμπεριφορά εκδηλώνεται αυθόρμητα. Ωστόσο, είναι δυνατό να χρησιμοποιηθεί το εργαστήριο ως περιβάλλον, υπό την προϋπόθεση ότι είναι εξοπλισμένο με τέτοιο τρόπο ώστε να αναπαραγάγει ένα οικείο περιβάλλον για το παιδί (π.χ. δωμάτιο για παιχνίδι).

Είναι χρήσιμο για τη διερεύνηση των πρώτων χρόνων ζωής, όπου η λεκτική γλώσσα εξακολουθεί να είναι απούσα ή ελλιπής, για δύο λόγους:

1. είναι πιο εύκολο να καθοριστεί το φυσικό περιβάλλον διαβίωσης των μικρών παιδιών,

2. τα μικρά παιδιά δεν συνειδητοποιούν πάντα ότι παρακολουθούνται και, σε κάθε περίπτωση, δεν αντιδρούν μεταβάλλοντας τη συμπεριφορά τους.

Αυτό το είδος παρατήρησης στοχεύει στον αποκλεισμό της υποκειμενικότητας και στην επίτευξη της αντικειμενικότητας που από μόνη της μας επιτρέπει να εξαγάγουμε συμπεράσματα που δεν είναι παραπλανητικά (Lis & Venuti, 1986). Σε αυτόν τον τύπο παρατήρησης, χρησιμοποιούνται διαδικασίες που επιτρέπουν την καταγραφή και την αντικειμενική και συστηματική καταλογογράφηση των συμπεριφορών, ώστε να υπάρχει δυνατότητα να ερμηνευτούν αργότερα υπό το πρίσμα των αρχικών υποθέσεων. Μεταξύ των πλεονεκτημάτων της ηθολογικής παρατήρησης προκύπτουν:

- αύξηση των περιγραφικών μελετών της παιδικής συμπεριφοράς,
- απόδοση σπουδαιότητας στη διαχρονική έρευνα, θεωρούμενη ως η πλέον κατάλληλη για την κατανόηση της διαδικασίας της αλλαγής και της εξελικτικής της σημασίας.

Ωστόσο, η έμφαση στην αντικειμενική περιγραφή μπορεί να μας κάνει να ξεχνάμε ότι όταν παρατηρούμε, είναι αναπόφευκτο να κάνουμε επιλογές. Επιπλέον, η σημασία της ανίχνευσης μικρο-συμπεριφορών, οι οποίες μπορούν να περιγραφούν αντικειμενικά, δεν μπορεί να μας κάνει να ξεχάσουμε την έννοια που μια συγκεκριμένη συμπεριφορά παίρνει σε μια συγκεκριμένη στιγμή και πλαίσιο.

Η ψυχαναλυτική παρατήρηση, από την άλλη πλευρά, είναι ένας τύπος άμεσης παρατήρησης, μια μέθοδος που δεν κάνει χρήση οποιουδήποτε οργάνου εκτός του ίδιου του παρατηρητή. Σύμφωνα με το ψυχαναλυτικό μοντέλο, όταν δεν υπάρχουν φαινόμενα που προβλέπονται βάσει μιας θεωρίας, το «απροσδόκητο» (Bion, 1962) γίνεται σχετικό. Η παρατήρηση σε αυτήν την περίπτωση έχει τη βασική λειτουργία της δημιουργίας ενός χώρου όπου το απροσδόκητη μπορεί να εκφραστεί. Αυτή η εικόνα δεν συνεπάγεται καμία πρόθεση εκ μέρους του παρατηρητή να μας επιτρέψει να κατανοήσουμε τη συνειδητή και ασυνείδητη σκοπιμότητα του παρατηρηθέντος ατόμου. Τα πεδία εφαρμογής είναι:

- ψυχολογική έρευνα,
- κλινικό έργο,
- κατάρτιση ψυχοθεραπευτών και αναλυτών για παιδιά.

Ο παρατηρητής αποτελεί αναπόσπαστο μέρος της κατάστασης και παρατηρεί τόσο τις συμπεριφορές και τις διατυπώσεις όσο και τις διαθέσεις και τα συναισθήματα. Πρέπει επίσης να αξιολογήσει προσεκτικά τη δική του ψυχολογική κατάσταση ως πηγή πληροφοριών για το παρατηρούμενο υποκείμενο, χρησιμοποιώντας τη δική του ομοιότητα για να διαφοροποιηθεί από το τελευταίο και να αποδεχθεί τη δική του παρουσία.

Τέλος, μπορεί κανείς να παρατηρήσει ολόκληρο τον πυρήνα της οικογένειας μέσω δομημένων εργασιών στο κλινικό πλαίσιο ή στο φυσικό περιβάλλον του άλλου. Αυτός ο τύπος παρατήρησης μπορεί να συνδεθεί με μια συνέντευξη με την οικογένεια και έχει την πρόθεση να γίνει κατανοητό το πώς τα μέλη του πυρήνα αλληλεπιδρούν μεταξύ τους και να γίνουν κατανοητές οι επικοινωνίες σε λεκτικό και προφορικό επίπεδο (μορφές έμμεσης διυποκειμενικότητας).

Συμπερασματικά, η παρατήρηση είναι ένας από τους ακρογωνιαίους λίθους του επαγγελματισμού εκείνων που εργάζονται στον τομέα της εκπαίδευσης και της κατάρτισης, συμβάλλοντας στην οικοδόμηση μιας «βασικής συμπεριφοράς» που γίνεται αναπόσπαστο μέρος του τρόπου επαγγελματικής δράσης, ως βασικό στοιχείο της εκπαιδευτικής ικανότητας. Δεν είναι ένα απλό εργαλείο, αλλά ένα σύνολο από συμπεριφορές, μεθοδολογίες και εργαλεία. Αυτά μπορούν να είναι δομημένα (εγγραφή βίντεο, δίκτυα, κατάλογοι ελέγχου κλπ.) ή και όχι (π.χ. ημερολόγιο). Ο παρατηρητής θα πρέπει στη συνέχεια να καταρτιστεί μέσω μιας φάσης κατάρτισης, να αποκτήσει συγκεκριμένες δεξιότητες και γνώσεις για να μπορέσει να χρησιμοποιήσει αυτά τα εργαλεία και να εντοπίσει το φαινόμενο που προτίθεται να μελετήσει (Venuti, 2001). Τα δεδομένα που λαμβάνονται από την παρατήρηση μπορούν να είναι τόσο ποιοτικά όσο και ποσοτικά. Τα ποιοτικά δεδομένα έχουν αφηγηματική δομή (Hilliard, 1993), ενώ τα ποσοτικά δεδομένα μπορούν να χρησιμοποιηθούν για διάφορες μετρήσεις και αναλύσεις (π.χ. μετρήσεις συχνότητας και διάρκειας, διαδοχικές αναλύσεις κλπ.).

ΣΤΟΙΧΕΙΟ 2: ΔΕΙΚΤΕΣ ΚΑΚΟΜΕΤΑΧΕΙΡΙΣΗΣ ΚΑΙ ΚΑΚΟΠΟΙΗΣΗΣ

ΑΡΘΡΟ

Ο Schimmenti (2018) υπογραμμίζει τον τρόπο με τον οποίο το ψυχικό τραύμα αποτελεί μια βαθιά πληγή για τα άτομα και μπορεί να επηρεάσει τις ψυχολογικές διαδικασίες μάθησης, σε πολλαπλά επίπεδα, καθώς και τη λειτουργία τους. Ειδικότερα, έχει συνέπειες σε σχέση με την έννοια του εαυτού, τους τρόπους των σχέσεων και τα συστήματα πεποιθήσεων. Επιπλέον, ο συγγραφέας επισημαίνει ότι οι επιστημονικές μελέτες έχουν υπογραμμίσει πόσο συχνά τα γεγονότα που μπορούν να οριστούν ως τραυματικά είναι αλληλένδετα και ότι η έκθεση σε πολλαπλές τραυματικές εμπειρίες αυξάνει τον κίνδυνο ανάπτυξης ψυχοπαθολογίας (σωρευτικό ψυχικό τραύμα), ειδικά εάν αυτό συμβαίνει κατά τη διάρκεια της παιδικής ηλικίας και, ειδικότερα, στο πλαίσιο των οικογενειακών σχέσεων. Οι Curran και συνεργάτες (2018) τονίζουν επίσης αυτό το θέμα στην επιστημονική βιβλιογραφία, επισημαίνοντας πώς αυτό συνεπάγεται:

1. για παιδιά που έχουν υποστεί πολλαπλές τραυματικές εμπειρίες, αύξηση του κινδύνου κατάθλιψης και αδυναμίας (Arata et al., 2007),
2. σε διαχρονικό επίπεδο κατά την ενηλικίωση για άτομα με ιστορίες σωματικής και ψυχολογικής κακοποίησης, μείωση της αυτοεκτίμησης και των δεξιοτήτων αντιμετώπισης σε σύγκριση με τα συναισθήματα (ιδιαίτερα θυμός και επιθετικότητα), αύξηση της αποκλίνουσας σεξουαλικής συμπεριφοράς και δυσκολία στην ψυχοκοινωνική προσαρμογή (Sesar et al., 2010),
3. για θύματα σεξουαλικής ή σωματικής κακοποίησης, υψηλότερο κίνδυνο ψυχοκοινωνικών δυσκολιών και εμφάνισης κοινωνικής ή αντικοινωνικής συμπεριφοράς, χρόνιων σωματικών συμπτωμάτων, διαταραχών άγχους ή κατάθλιψης, συμπτωμάτων που σχετίζονται με το ψυχικό τραύμα και την απομάκρυνση (Higgins & McCabe, 2000).
4. Επιπλέον, κατά την εφηβεία, η επιστημονική έρευνα παρουσιάζει επίσης αυξημένο κίνδυνο εμφάνισης παραβατικής συμπεριφοράς, κατάχρησης ουσιών και αυτοτραυματισμών, ιδιαίτερα σε άτομα με ιστορικό PTSD ή πολυ-θυματοποίησης.

Σε γενικές γραμμές, η έρευνα προτείνει, από επιδημιολογική άποψη, τη σύνδεση μεταξύ του ψυχικού τραύματος και της σοβαρότητας του προβλήματος. Ακόμη, εάν το ψυχικό τραύμα προκλήθηκε κατά τη διάρκεια της παιδικής ηλικίας, μπορεί να έχει σοβαρές και εξασθενητικές συνέπειες στην ανάπτυξη γνωστικών, συναισθηματικών και κοινωνικών δεξιοτήτων (Curran et al., 2018). Μια πτυχή που φαίνεται να έχει ιδιαίτερα σημαντικό

αντίκτυπο στην ανάπτυξη και τα αποτελέσματα των τραυματικών εμπειριών στην παιδική ηλικία είναι η συναισθηματική παραμέληση των μορφών προσκόλλησης, ιδιαίτερα εκείνων με γονικό ρόλο, για το παιδί (Schimmenti, 2018). Η επαρκής κατανόηση των μηχανισμών που διέπουν την ατομική μεταβλητότητα της ψυχολογικής αντίδρασης στο ψυχικό τραύμα είναι σημαντική τόσο για την αναγνώριση των παιδιών που διατρέχουν κίνδυνο μακροχρόνιας δυσφορίας όσο και για τη δόμηση κατάλληλων και αποτελεσματικών παρεμβάσεων (Ozer et al., 2003, Alisic et al., 2011). Πιο συγκεκριμένα, είναι σημαντικό να δοθεί έμφαση στο γεγονός ότι τα παιδιά αντιδρούν στο ψυχικό τραύμα με διαφορετικό τρόπο από τους ενήλικες, εν μέρει λόγω του επιπέδου ανάπτυξής τους και των δεξιοτήτων τους, συμπεριλαμβανομένης της διαχείρισης του περιεχομένου της μνήμης και των συναισθηματικών αποκρίσεων στα γεγονότα. Οι Lonigan και συνεργάτες (1998) είχαν ήδη τονίσει την ανάγκη να επικεντρωθεί η επιστημονική έρευνα στην ανάλυση των παιδικών αντιδράσεων στο ψυχικό τραύμα και στους παράγοντες που συνδέονται με αυτό. Μία από τις ερωτήσεις που έθεσαν ήταν η ανάγκη διερεύνησης δεικτών, ιδιαίτερα έγκυρων και αξιόπιστων για τον παιδικό πληθυσμό και όχι απλώς δανεισμένων από τις συνθήκες που επικρατούν σε ενήλικα άτομα, σε φυσιολογικές έναντι ψυχοπαθολογικών αντιδράσεων των παιδιών σε ανεπιθύμητα συμβάντα. Ένα ενδιαφέρον πεδίο έρευνας είναι στην πραγματικότητα η διάκριση μεταξύ τυπικών αντιδράσεων στο τραύμα και εκείνων των συνθηκών κατά τις οποίες είναι δυνατό να βρεθεί μια ψυχοπαθολογική απόκριση με ιδιαίτερη έμφαση στο ποια είναι τα συμπτώματα που επιτρέπουν μια διαφορική οπτική μεταξύ των δύο συνθηκών και μια βελτίωση των δυνατοτήτων αποτελεσματικής αξιολόγησης από τους κλινικούς ιατρούς (Lonigan et al., 1998). Η βιβλιογραφία παρέχει πολλές πληροφορίες σχετικά με τους δείκτες κακομεταχείρισης και κακοποίησης, επισημαίνοντας ότι αυτές είναι συχνά μη ειδικά μηνύματα που θα πρέπει να διαβάζονται με φροντίδα και προσοχή, καθώς δεν δείχνουν πάντοτε αποκλειστικά την κακομεταχείριση. Στην πραγματικότητα, είναι απαραίτητο οι φορείς να βελτιώσουν την ικανότητά τους να κατανοούν ότι το παιδί υποφέρει στα πλαίσια μέσα στα οποία βρίσκεται, προσφέροντάς του τις κατάλληλες συνθήκες ώστε να αισθάνεται ευπρόσδεκτο και ότι έχει τη στήριξη να εκφράσει τα συναισθήματα και τις δυσκολίες του. Σε συνδυασμό με τις τεχνικές παρατήρησης, οι φορείς μπορούν να χρησιμοποιήσουν δίκτυα από δείκτες για να διερευνήσουν το πρόβλημα όσο το δυνατόν περισσότερο. Ως παράδειγμα, ανατρέξτε στον σύνδεσμο του εγγράφου που καταρτίστηκε από το CE.S.P.IM (Centro Servizi per il volontariato Provincia di Imperia) με τίτλο «*Il Silenzio dei Passerotti. Project for combating*

and recovering abuse and mistreatment of children», όπου μπορείτε να προβάλετε ορισμένα παραδείγματα δεικτών κακοποίησης και κακομεταχείρισης.

COUR EUROPÉENNE DES DROITS DE L'HOMME
EUROPEAN COURT OF HUMAN RIGHTS

CASE OF Z AND OTHERS v. THE UNITED KINGDOM

(Application no. 29392/95)

JUDGMENT

STRASBOURG

10 May 2001

In the case of Z and Others v. the United Kingdom,

The European Court of Human Rights, sitting as a Grand Chamber composed of the following judges:

Mr L. WILDHABER, *President*,
Mrs E. PALM,
Mr C.L. ROZAKIS,
Mr J.-P. COSTA,
Mr L. FERRARI BRAVO,
Mr L. CAFLISCH,
Mr P. KŪRIS,
Mr J. CASADEVALL,
Mr B. ZUPANČIČ,
Mrs N. VAJIĆ,
Mr J. HEDIGAN,
Mrs W. THOMASSEN,
Mrs M. TSATSA-NIKOLOVSKA,
Mr E. LEVITS,
Mr K. TRAJA,
Mr A. KOVLER,
Lady Justice ARDEN, ad hoc *judge*,

and also of Mr P.J. MAHONEY, *Deputy Registrar*,

Having deliberated in private on 28 June and 11 October 2000 and on 4 April 2001,

Delivers the following judgment, which was adopted on the last-mentioned date:

PROCEDURE

1. The case was referred to the Court, in accordance with the provisions applicable prior to the entry into force of Protocol No. 11 to the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention"), by the European Commission of Human Rights ("the Commission") on 25 October 1999 (Article 5 § 4 of Protocol No. 11 and former Articles 47 and 48 of the Convention).

2. The case originated in an application (no. 29392/95) against the United Kingdom of Great Britain and Northern Ireland lodged with the Commission under former Article 25 of the Convention by the applicants, Z, A, B, C and D, five British nationals, on 9 October 1995.

3. The applicants alleged that the local authority had failed to take adequate protective measures in respect of the severe neglect and abuse which they were known to be suffering due to their ill-treatment by their

parents and that they had no access to a court or effective remedy in respect of this. They relied on Articles 3, 6, 8 and 13 of the Convention.

4. The Commission declared the application admissible on 26 May 1998. On 6 September 1999, pursuant to the express wishes of D's adoptive parents, the Commission decided that D should no longer be an applicant. In its report of 10 September 1999 (former Article 31 of the Convention) [*Note by the Registry*. The report is obtainable from the Registry], it expressed the unanimous opinion that there had been a violation of Article 3 of the Convention, that no separate issue arose under Article 8, that there had been a violation of Article 6 and that no separate issue arose under Article 13.

5. Before the Court the applicants had been granted legal aid. The President of the Court acceded to their request not to have their names disclosed (Rule 47 § 3 of the Rules of Court).

6. On 6 December 1999 a panel of the Grand Chamber determined that the case should be decided by the Grand Chamber (Rule 100 § 1). The composition of the Grand Chamber was determined according to the provisions of Article 27 §§ 2 and 3 of the Convention and Rule 24. The President of the Court decided that in the interests of the proper administration of justice, the case should be assigned to the Grand Chamber that had been constituted to hear the case of *T.P. and K.M. v. the United Kingdom* ([GC], no. 28945/95, ECHR 2001-V) (Rules 24, 43 § 2, and 71). Sir Nicolas Bratza, the judge elected in respect of the United Kingdom, who had taken part in the Commission's examination of the case, withdrew from sitting in the Grand Chamber (Rule 28). The United Kingdom Government ("the Government") accordingly appointed Lady Justice Arden to sit as an *ad hoc* judge (Article 27 § 2 of the Convention and Rule 29 § 1).

7. The applicants and the Government each filed a memorial. Third-party comments were also received from Professor G. Van Bueren, Director of the Programme on International Rights of the Child, University of London, who had been given leave by the President to intervene in the written procedure (Article 36 § 2 of the Convention and Rule 61 § 3).

8. A hearing took place in public in the Human Rights Building, Strasbourg, on 28 June 2000 (Rule 59 § 2).

There appeared before the Court:

(a) *for the Government*

Ms S. McGRORY, Foreign and Commonwealth Office, *Agent*,
Mr D. ANDERSON QC, Foreign and Commonwealth Office,
Ms J. STRATFORD, Foreign and Commonwealth Office, *Counsel*,
Ms S. RYAN, Foreign and Commonwealth Office,
Ms J. GRAY, Foreign and Commonwealth Office,
Mr M. MURMANE, Foreign and Commonwealth Office, *Advisers*;

(b) *for the applicants*
Mr B. EMMERSON QC, *Counsel*,
Ms P. WOOD, Solicitor,
Mrs M. MAUGHAN, Solicitor,
Ms E. GUMBEL QC,
Ms N. MOLE, of the AIRE Centre, *Advisers*.

The Court heard addresses by Mr Emmerson and Mr Anderson.

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

9. The applicants are four full siblings:
– Z, a girl born in 1982;
– A, a boy born in 1984;
– B, a boy born in 1986;
– C, a girl born in 1988.

10. The applicants' parents were married in November 1981.

11. The family was first referred to social services in October 1987 by their health visitor due to concerns about the children and marital problems. Z was reported to be stealing food at night. Following the referral, a professionals' meeting, involving the relevant agencies, was held on 24 November 1987, at which it was decided that a social worker and health visitor should visit. The family were reviewed at a further meeting in March 1988 and as it appeared that concerns had diminished, the file was closed.

12. In September 1988 a neighbour reported that the children were locked outside the house for most of the day.

13. In April 1989 the police reported that the children's bedrooms were filthy. The family's general practitioner also reported that the children's bedrooms were filthy and that their doors were locked. The children's head-teacher, Mrs Armstrong, expressed concern in May 1989 and requested a case conference. In June 1989 the NSPCC (National Society for the Prevention of Cruelty to Children) and the emergency team made a referral after complaints by neighbours that the house was filthy and that the children spent most of the day in their bedrooms, rarely being allowed out to play, and crying frequently. In August 1989 the maternal grandmother complained to the social services about the mother's care and discipline of the children.

14. At a professionals' meeting on 4 October 1989, at which the social services, the applicants' head-teacher, the applicants' general practitioner

and health visitor attended, it was decided that no social worker would be allocated to the family. The school was to monitor the older children's weight and the health visitor was to continue to visit the family regularly. It was agreed that the problem was one of limited and neglectful parenting rather than a risk of physical abuse, and that the parents should be assisted to manage their responsibilities better.

15. In October 1989, whilst the applicants were on holiday, their house was burgled. On entering, the police found it in a filthy state. Used sanitary towels and dirty nappies were discarded in a cupboard and the children's mattresses were sodden with urine. At a professionals' meeting on 13 December 1989, the health visitor requested that the four older children be placed on the Child Protection Register as she felt that their mother could not offer consistent care. This suggestion was rejected. However, a social-work assistant, Ms M., was assigned to the family. It was not considered appropriate to convene a case conference at this stage. Prior to the meeting, Z and A had mentioned to the head-teacher that A had been hit with a poker. It was decided that this statement would be investigated.

16. At a professionals' meeting on 23 March 1990, an improvement was noted in respect of the cleanliness of the house, the children's bedding being clean save on two occasions. However, it was reported that Z and A were taking food from bins at the school. There was still considered to be cause for concern, especially since the birth of another child was expected.

17. At a professionals' meeting on 11 July 1990, the applicants' headmistress reported a deterioration in the children's well-being; Z and A were still taking food from bins and A was soiling himself. Ms M. was visiting weekly at this stage and said that she was checking the children's bedrooms. She had noted that the children ate at 4 or 4.30 p.m. and then did not eat again until the morning. The children were also sent to bed at 6 p.m. It was planned to give the applicant's mother further assistance through a voluntary agency.

18. In or about September 1990, A and B were both reported to have bruising on their faces. The police investigated after neighbours had reported screaming at the applicants' home but apparently found no signs of bruising. They reported to the social services that "the conditions of the house were appalling and not fit for [the] children to live in".

19. At a further professionals' meeting on 3 October 1990, the assistant social worker, Ms M., stated that she was concerned about the applicants' soiling and their mother's lack of interest. Apparently, the children were defecating in their bedroom and smearing excrement on their windows. The head-teacher expressed concern, particularly concerning the boys A and B, and stated that the children had described blocks of wood being placed against their bedroom doors. It was decided to continue monitoring the children.

20. At a professionals' meeting on 5 December 1990, a decision was made to arrange a case conference for January 1991 as a result of concern regarding the applicants' care and the state of their bedroom. Ms M. considered that standards in the boys' bedroom had dramatically dropped. She found the room to be damp and smelly. A's bed was broken and had a metal bar protruding from it. The bedding was damp and grubby with soil marks.

21. In a report dated 24 January 1991, the headmistress stated that A was shabby, ill-kempt and often dirty and that he had been raiding the playground bins for apple cores. Z was pathetic, lacking in vitality and frequently and inexplicably tearful, becoming increasingly isolated from the other girls in her peer group with unfortunate incidents in which detrimental remarks were made about her appearance. B presented as withdrawn, pathetic and bedraggled. He regularly arrived cold, was frequently tearful and craved physical contact from adult helpers. He also appeared to crave for food. She concluded that they were still concerned that the children's needs were not being adequately met and that home conditions and family dynamics were giving reasons for concern.

22. At the case conference held on 28 January 1991, Ms M. stated that the boys' bedroom had no light, carpet or toys and that their bedding was wet, smelly and soil-stained. Their mother did not change the beds. Their head-teacher stated that Z was tearful and withdrawn, A had been raiding school bins and was often dirty, and B was very withdrawn, craved attention and was ravenously hungry. The chairman of the conference concluded that, despite the many concerns about the parenting of the applicants and the conditions in the home, there was little evidence to support going to court. It was felt that the parents were not wilfully neglecting their children and, bearing in mind their own poor upbringing, it was considered that the applicants' parents were doing what they could and that continued support was required to try and improve the situation. It was decided not to place the children on the Child Protection Register.

23. On 5 March 1991 B was found to have “unusual” bruises on his back.

24. At a later social services meeting in April 1991, no change to the children's living conditions was noted. The head-teacher stated that Z and A were still taking food from bins and that A was becoming more withdrawn. Ms M. reported that the mother had stated that the children were taking food from the park bins on the way to school.

25. In July 1991 the applicants' mother informed social services that the children would be better off living in care. On 12 August 1991 the social services received a phone call from a neighbour who stated that the children were frequently locked outside in a filthy back garden, that they constantly screamed and that they were kept for long periods in their bedrooms where they smeared faeces on their windows. The maternal grandparents later told

the guardian *ad litem* that Z, who was treated by her mother as a little servant, was expected to clean the excrement from the windows.

26. From 19 to 28 August 1991, the three older children spent some time with foster carers in respite care. The foster carers reported that A did not know how to wash, bathe or clean his teeth on arrival. He wet his bed every night and stole food from his brother. B was described as being "very frightened. He could not understand how he could play in the garden and the door was left open for him to come back in, he expected to be locked out". He also had to be taught to use the toilet properly and to clean himself.

27. At a professionals' meeting on 18 September 1991, Ms M. stated that the conditions in which the boys were sleeping were deteriorating. The mattresses in the boys' bedroom were ripped and the springs were coming through. The boys were stealing food, and C had also been seen to do this. Their mother stated that she could not control them. It was decided not to arrange a child-protection meeting but to carry out a monthly weight check on the three older children at school, and for the health visitor to check the weight of the two younger children. It was also decided to arrange respite care for Z, A and B in the holidays as well as on one weekend in four.

28. In November-December 1991 C was found to have developed a squint. His mother failed to keep appointments at the eye-clinic over the following months.

29. At a professionals' meeting on 21 November 1991, it was reported that the applicants' mother had said that she could not control the applicants' behaviour which consisted of refusing to go to bed when asked and stealing food. It was considered that the home was in an acceptable condition, though the boys' room still needed attention. The children's weights were recorded. It was noted that Z had put on 2 lb in the previous two months whereas she had only put on 2.5 lb in the preceding two years. A had only put on 3 lb in a year. B had put on 0.5 lb in a year and was on the 50th centile for height. C was on the 25th centile for weight. There was a discussion about the three elder children being accommodated by the local authority to allow the mother "to get back on her feet". The social services considered a six-week period whilst the general practitioner envisaged a period of eighteen to twenty-four months.

30. In December 1991 a social worker was introduced to the applicants' mother with a view to assisting her with shopping, budgeting and cooking.

31. Z, A and B were accommodated by volunteers between January and March 1992, and showed to have gained weight. In March and again in April, their mother asked if the boys, A and B, could be placed for adoption.

32. On 14 January 1992 C started to attend a nursery group at a family centre. She was noted to be unsocialised, lacking in confidence, unable to share, and with poor speech.

33. At a further professionals' meeting on 9 March 1992, it was decided that further respite care would be considered. The children's weights were noted, increases being seen for Z, A and B.

34. The children's parents divorced in April 1992.

35. At another professionals' meeting on 30 April 1992 it was decided that the applicants' mother's request that A and B be placed for adoption be followed up. The headmistress voiced concern over the fundamental pattern of the mother's care of the children, in particular in relation to Z's role in the home and the mothering role which she played. Ms M. reported that conditions were deteriorating for A and B.

36. On 10 June 1992 the applicants' mother demanded that the children be placed in care as she could not cope. She stated that if they were not removed from her care she would batter them. The applicants were placed in emergency foster care. The applicants were entered onto the Child Protection Register under the categories of neglect and emotional abuse after a child-protection meeting on 22 June 1992.

37. The applicants were all fostered separately. Initially, Z was noted to have dirty, ill-fitting clothes. She stated that she did not like living with her siblings as she did not like having to look after them all the time. A wet the bed every night, shunned physical contact and suffered from nightmares. B did not know how to use the toilet or toilet paper. C bonded very quickly with her foster parents.

38. On 8 October 1992 the local authority decided to seek care orders in respect of the children. Interim care orders were made on 7 December 1992.

39. A guardian *ad litem*, who was appointed on 18 January 1993, recommended that all the applicants should be the subject of care orders in order to protect them from further harm. She stated that there was "an abundance of evidence that the children have been subjected to physical and mental ill-treatment". She noted that their health had also been neglected by their parents who frequently missed appointments with opticians and doctors.

40. All the applicants were seen by Dr Dora Black, a consultant child psychiatrist, in January 1993. Dr Black stated that the three older children were all showing signs of psychological disturbance. Z was exhibiting signs of serious depressive illness and had assumed responsibility for her family and for its breakdown. Her mother's behaviour towards her was described as cruel and emotionally abusive. A and B, who suffered from nightmares, were both identified as showing signs of post-traumatic stress disorder and A was also chronically under-attached. Dr Black noted that all children had been deprived of affection and physical care. She described their experiences as "to put it bluntly, horrific", and added that the case was the worst case of neglect and emotional abuse that she had seen in her professional career. In her opinion, social services had "leaned over backwards to avoid putting these children on the Child Protection Register

and had delayed too long, leaving at least three of the children with serious psychological disturbance as a result".

41. Full care orders were made in respect of the applicants on 14 April 1993 by Judge Tyrer sitting at Milton Keynes County Court.

42. In June 1993 the Official Solicitor, acting as the applicants' next friend, commenced proceedings against the local authority claiming damages for negligence and/or breach of statutory duty arguing that the authority had failed to have regard to their welfare as was required by statute and should have acted more quickly and more effectively when apprised of their condition. It was argued that the local authority's failure to act had resulted in psychological damage. The application was struck out as revealing no cause of action, by Mr Justice Turner on 12 November 1993.

43. The applicants appealed to the Court of Appeal, which, on 28 February 1994, upheld the decision of Mr Justice Turner to strike out the application.

44. The applicants appealed to the House of Lords. On 29 June 1995 the House of Lords rejected their appeal, finding that no action lay against the local authority in negligence or breach of statutory duty concerning the discharge of their duties relating to the welfare of children under the Children Act 1989 in respect of child care. The case is reported as *X and Others v. Bedfordshire County Council* [1995] 3 All England Law Reports 353.

45. Lord Browne-Wilkinson gave the leading judgment. In respect of claims for breach of statutory duty, he stated, *inter alia*:

> "... My starting point is that the Acts in question are all concerned to establish an administrative system designed to promote the social welfare of the community. The welfare sector involved is one of peculiar sensitivity, involving very difficult decisions how to strike the balance between protecting the child from immediate feared harm and disrupting the relationship between the child and its parents. In my judgment in such a context it would require exceptionally clear statutory language to show a parliamentary intention that those responsible for carrying out these difficult functions should be liable in damages if, on subsequent investigation with the benefit of hindsight, it was shown that they had reached an erroneous conclusion and therefore failed to discharge their statutory duties. ...
>
> When one turns to the actual words used in the primary legislation to create the duties relied upon in my judgment they are inconsistent with any intention to create a private law cause of action."

46. As regards the claims that the local authority owed a duty of care to the applicants pursuant to the tort of negligence, Lord Browne-Wilkinson stated, *inter alia*:

> "I turn then to consider whether, in accordance with the ordinary principles laid down in *Caparo* [1990] 2 AC 605, the local authority ... owed a direct duty of care to the plaintiffs. The local authority accepts that they could foresee damage to the plaintiffs if they carried out their statutory duties negligently and that the relationship between the authority and the plaintiffs is sufficiently proximate. The third

requirement laid down in *Caparo* is that it must be just and reasonable to impose a common law duty of care in all the circumstances ...

The Master of the Rolls took the view, with which I agree, that the public policy consideration that has first claim on the loyalty of the law is that wrongs should be remedied and that very potent counter considerations are required to override that policy (see [1994] 4 AER 602 at 619). However, in my judgment there are such considerations in this case.

First, in my judgment a common law duty of care would cut across the whole statutory system set up for the protection of children at risk. As a result of the ministerial directions contained in 'Working Together' the protection of such children is not the exclusive territory of the local authority's social services. The system is inter-disciplinary, involving the participation of the police, educational bodies, doctors and others. At all stages the system involves joint discussions, joint recommendations and joint decisions. The key organisation is the Child Protection Conference, a multi-disciplinary body which decides whether to place the child on the Child Protection Register. This procedure by way of joint action takes place, not merely because it is good practice, but because it is required by guidance having statutory force binding on the local authority. The guidance is extremely detailed and extensive: the current edition of 'Working Together' runs to 126 pages. To introduce into such a system a common law duty of care enforceable against only one of the participant bodies would be manifestly unfair. To impose such liability on all the participant bodies would lead to almost impossible problems of disentangling as between the respective bodies the liability, both primary and by way of contribution, of each for reaching a decision found to be negligent.

Second, the task of the local authority and its servants in dealing with children at risk is extraordinarily delicate. Legislation requires the local authority to have regard not only to the physical well-being of the child but also to the advantages of not disrupting the child's family environment. ... In one of the child abuse cases, the local authority is blamed for removing the child precipitately; in the other for failing to remove the children from their mother. As the Report of the Inquiry into Child Abuse in Cleveland 1987 (Cmnd. 412) ('Cleveland Report 1987') said, at p. 244:

> '... It is a delicate and difficult line to tread between taking action too soon and not taking it soon enough. Social services whilst putting the needs of the child first must respect the rights of the parents; they also must work if possible with the parents for the benefit of the children. These parents themselves are often in need of help. Inevitably a degree of conflict develops between those objectives.'

Next, if liability in damages were to be imposed, it might well be that local authorities would adopt a more cautious and defensive approach to their duties. For example, as the Cleveland Report makes clear, on occasions the speedy decision to remove the child is sometimes vital. If the authority is to be made liable in damages for a negligent decision to remove a child (such negligence lying in the failure properly first to investigate the allegations) there would be a substantial temptation to postpone making such a decision until further inquiries have been made in the hope of getting more concrete facts. Not only would the child in fact being abused be prejudiced by such delay, the increased workload inherent in making such investigations would reduce the time available to deal with other cases and other children.

> The relationship between the social worker and the child's parents is frequently one of conflict, the parent wishing to retain care of the child, the social worker having to consider whether to remove it. This is fertile ground in which to breed ill-feeling and litigation, often hopeless, the cost of which both in terms of money and human resources will be diverted from the performance of the social service for which they were provided. The spectre of vexatious and costly litigation is often urged as a reason for not imposing a legal duty. But the circumstances surrounding cases of child abuse make the risk a very high one which cannot be ignored.
>
> If there were no other remedy for maladministration of the statutory system for the protection of children, it would provide substantial argument for imposing a duty of care. But the statutory complaints procedures contained in section 76 of the 1980 Act and the much fuller procedures now available under the 1989 Act provide a means to have grievances investigated though not to recover compensation. Further, it was submitted (and not controverted) that the local authorities Ombudsman would have power to investigate cases such as these.
>
> Finally, your Lordships' decision in *Caparo* [1990] 2 AC 605 lays down that in deciding whether to develop novel categories of negligence the court should proceed incrementally and by analogy with decided categories. We were not referred to any category of case in which a duty of care has been held to exist which is in any way analogous to the present cases. Here, for the first time, the plaintiffs are seeking to erect a common law duty of care in relation to the administration of a statutory social welfare scheme. Such a scheme is designed to protect weaker members of society (children) from harm done to them by others. The scheme involves the administrators in exercising discretion and powers which could not exist in the private sector and which in many cases bring them into conflict with those who, under the general law, are responsible for the child's welfare. To my mind, the nearest analogies are the cases where a common law duty of care has been sought to be imposed upon the police (in seeking to protect vulnerable members of society from wrongs done to them by others) or statutory regulators of financial dealing who are seeking to protect investors from dishonesty. In neither of these cases has it been thought appropriate to superimpose on a statutory regime a common law duty of care giving rise to a claim in damages for failure to protect the weak against the wrongdoer. ... In my judgment, the courts should proceed with great care before holding liable in negligence those who have been charged by Parliament with the task of protecting society from the wrong doings of others."

47. Z and C, the two girls, were meanwhile adopted. The boys, A and B, were initially in foster care. Following the breakdown of B's adoptive placement, he was placed in a therapeutic residential placement in July 1995. After two years, he was again placed with foster parents where he remained, attending school in a special-needs group. In January 1996, A was placed in a therapeutic community, where he stayed for two years. He apparently had a number of foster placements which broke down. Records indicated that he had been in twelve different placements in eight years. He is currently in a children's home.

48. In March 1996, applications were made to the Criminal Injuries Compensation Board (CICB) on behalf of all the children by the adoption society to whom the local authority had delegated certain responsibilities. It was claimed on behalf of Z that she had suffered severe neglect and chronic

deprivation which rendered it likely that specialist care would be necessary during her adolescence, a time where emotional repercussions of the abuse might become apparent; on behalf of A that he had suffered physical deprivation, emotional abuse, physical abuse and possible sexual abuse – he had suffered permanent physical scarring and was still receiving treatment from a child psychiatrist; on behalf of B that he had suffered extreme physical and emotional deprivation and shown signs of sexual abuse – he also had suffered permanent physical scarring and was receiving therapy; and on behalf of C that she had suffered extreme physical and emotional deprivation, and in addition that her need for eye treatment was not being met by her parents.

49. In February 1997, the CICB awarded 1,000 pounds sterling (GBP) to Z, GBP 3,000 to A and GBP 3,000 to B for injuries suffered between 1987 and 1992; it awarded GBP 2,000 to C for injuries suffered between 1988 and 1992. In a letter dated 20 May 1998 from the CICB to the Official Solicitor, it was stated:

> "The Board Member who assessed these cases recognised that the children were exposed to appalling neglect over an extended period but explained to their advisers that the Board could not make an award unless it was satisfied on the whole available evidence that an applicant had suffered an injury – physical or psychological – directly attributable to a crime of violence ... He was nevertheless satisfied, that setting aside 'neglect' the children had some physical and psychological injury inflicted upon them as enabled him to make an award to each child ..."

II. RELEVANT DOMESTIC LAW

A. Local authority's duties in respect of child care

50. Prior to the coming into force of the current legislation, the Children Act 1989, on 14 October 1991, the local authority's duty in respect of child care was governed by the Child Care Act 1980.

Sections 1 and 2 of the Child Care Act 1980 provided that:

> "1. It shall be the duty of every local authority to make available such advice, guidance and assistance as may promote the welfare of children by diminishing the need to receive or keep them in care.
>
> 2. (1) Where it appears to a local authority with respect to a child in their area appearing to them to be under the age of seventeen -
>
> (a) that he has neither parent nor guardian or has been and remains abandoned by his parents or guardian or is lost;
>
> (b) that his parents or guardian are, for the time being or permanently, prevented by reason of mental or bodily disease or infirmity or other incapacity or any other

circumstances from providing for his proper accommodation, maintenance and upbringing; and

(c) in either case, that the intervention of the local authority under this section is necessary in the interests of the welfare of the child, it shall be the duty of the local authority to receive the child into their care under this section."

51. Section 17 of the Children Act 1989 has since provided, *inter alia*:

"17. Provision of services for children in need, their families and others

(1) It shall be the general duty of every local authority (in addition to the other duties imposed on them by this Part) -

(a) to safeguard and promote the welfare of children within their area who are in need; and

(b) so far as is consistent with that duty, to promote the upbringing of such children by their families,

by providing a range and level of services appropriate to those children's needs.

(2) For the purpose principally of facilitating the discharge of their general duty under this section, every local authority shall have the specific duties and powers set out in Part I of Schedule 2.

...

(10) For the purposes of this Part a child shall be taken to be in need if -

(a) he is unlikely to achieve or maintain, or to have the opportunity of achieving or maintaining a reasonable standard of health or development without the provision for him of services by a local authority under this Part;

(b) his health or development is likely to be significantly impaired or further impaired, without the provision for him of such services; or

(c) he is disabled ...

(11) ...; and in this Part

'development' means physical, intellectual, emotional, social or behavioural development; and

'health' means physical or mental health."

52. Part III of the Children Act 1989 deals with local authority support for children and families. The policy of the Act is made clear by paragraph 7 of Part I of Schedule 2, which requires local authorities to take reasonable steps designed to reduce the need to bring proceedings relating to children.

53. Section 20 provides that

"20(1) Every local authority shall provide accommodation for any child in need within their area who appears to them to require accommodation as a result of -

(a) there being no person who has parental responsibility for him;

(b) his being lost or having been abandoned; or

(c) the person who has been caring for him being prevented (whether or not permanently, and for whatever reason) from providing him with suitable accommodation or care.

...

(4) A local authority may provide accommodation for any child within their area (even though a person who has parental responsibility for him is able to provide him with accommodation) if they consider that to do so would safeguard or promote the child's welfare."

54. Part V of the Children Act 1989 deals with the protection of children. Section 47 provides as follows:

"47(1) Where a local authority -

...

(b) have reasonable cause to suspect that a child who lives or is found, in their area is suffering, or is likely to suffer, significant harm,

the authority shall make, or cause to be made, such enquiries as they consider necessary to enable them to decide whether they should take any action to safeguard or promote the child's welfare.

...

(8) Where, as a result of complying with this section, a local authority conclude that they should take action to safeguard or promote the child's welfare they shall take action (so far as it is within their power and reasonably practicable for them to do so)."

B. Complaints procedure

55. The complaints procedure is provided by section 26 of the Children Act 1989:

"Review of cases and inquiries into representations

...

(3) Every local authority shall establish a procedure for considering any representations (including any complaint) made to them by -

(a) any child ... who is not being looked after by them but is in need;

(b) a parent of his;

...

(e) such other person as the authority consider has a sufficient interest in the child's welfare to warrant his representations being considered by them,

about the discharge by the authority of any of their functions under this Part in relation to the child.

(4) The procedure shall ensure that at least one person who is not a member or officer of the authority takes part in -

(a) the consideration; and

(b) any discussions which are held by the local authority about the action (if any) to be taken in relation to the child in the light of this consideration.

...

(7) Where any representation has been considered under the procedure established by the local authority under this section, the authority shall -

(a) have due regard to the findings of those considering the representation; and

(b) take such steps as are reasonably practicable to notify (in writing) -

(i) the person making the representation;

(ii) the child (if the authority consider that he has sufficient understanding); and

(iii) such other persons (if any) as appear to the authority to be likely to be affected,

of the authority's decision in the matter and their reasons for taking that decision and of any action which they have taken, or propose to take.

(8) Every local authority shall give such publicity to their procedure for considering representations under this section as they consider appropriate."

56. The powers of the Secretary of State to investigate the actions of the local authority are set out in sections 81 and 84 of the Children Act 1989.

"81. (1) The Secretary of State may cause an inquiry to be held into any matter connected with -

(a) the function of the social services committee of a local authority, in so far as those functions relate to children;

...

84. Local authority failure to comply with statutory duty: default power of Secretary of State

(1) If the Secretary of State is satisfied that any local authority has failed, without reasonable excuse, to comply with any of the duties imposed on them by or under this Act he may make an order declaring that authority to be in default with respect to that duty.

...

(3) Any order under subsection (1) may contain such directions for the purpose of ensuring that the duty is complied with, within such period as may be specified in the order, as appears to the Secretary of State to be necessary.

(4) Any such directions shall, on the application of the Secretary of State, be enforceable by mandamus."

C. Actions for damages against the local authority

57. In England and Wales there is no single tort which imposes liability to pay compensation for civil wrongs. Instead there is a series of separate torts, for example, trespass, conversion, conspiracy, negligence and defamation.

58. Negligence arises in specific categories of situations. These categories are capable of being extended. There are three elements to the tort of negligence: a duty of care, breach of the duty of care, and damage. The duty of care may be described as the concept which defines the categories of relationships in which the law may impose liability on a defendant in damages if he or she is shown to have acted carelessly. To show a duty of care, the claimant must show that the situation comes within an existing established category of cases where a duty of care has been held to exist. In novel situations, in order to show a duty of care, the claimant must satisfy a threefold test, establishing:

– that damage to the claimant was foreseeable;

– that the claimant was in an appropriate relationship of proximity to the defendant; and,

– that it is fair, just and reasonable to impose liability on the defendant.

These criteria apply to claims against private persons as well as claims against public bodies. The leading case is *Caparo Industries plc v. Dickman* ([1990] 2 Appeal Cases 605).

59. If the courts decide that as a matter of law there is no duty of care owed in a particular situation, that decision will (subject to the doctrine of precedent) apply in future cases where the parties are in the same relationship.

60. The decision in *X and Others v. Bedfordshire County Council* ([1995] 3 All England Law Reports 353) is the leading authority in the United Kingdom in this area. It held that local authorities could not be sued for negligence or for breach of statutory duty in respect of the discharge of

their functions concerning the welfare of children. The leading judgment is reported at length in the facts above (see paragraphs 45-46 above).

61. Since *X and Others v. Bedfordshire County Council*, there have been two further significant judgments regarding the extent of liability of local authorities in child care matters.

62. The Court of Appeal gave judgment in *W. and Others v. Essex County Council* ([1998] 3 All England Law Reports 111). This case concerned the claims by a mother and father (first and second plaintiffs), who had agreed to act as foster parents, that the defendant local authority placed G., a 15-year-old boy, in their home although they knew that he was a suspect or known sexual abuser. During G.'s stay in their home, the plaintiffs' three children (fourth to sixth plaintiffs) were all sexually abused and suffered psychiatric illness. The plaintiffs brought an action against the local authority and the social worker involved, claiming damages for negligence and for negligent misstatement. On the defendants' application to strike out the statement of claim as disclosing no reasonable cause of action, the judges struck out the parents' claims but refused to strike out the claims of the children. The Court of Appeal upheld his decision. The headnote for the judgment summarised the Court of Appeal's findings as follows:

> "(1) Although no claim in damages lay in respect of decisions by a local authority in the exercise of a statutory discretion, if the decision complained of was so unreasonable that it fell outside the ambit of the discretion conferred, there was no *a priori* reason for excluding common law liability. In the instant case, the giving of information to the parents was part and parcel of the defendants' performance of their statutory powers and duties, and it had been conceded that it was arguable that those decisions fell outside the ambit of their discretion. Accordingly, since it had also been conceded that the damage to the children was reasonably foreseeable and that there was sufficient proximity, the question for the court was whether it was just and reasonable to impose a duty of care on the council or the social worker. Having regard to the fact that common law duty of care would cut across the whole statutory set up for the protection of children at risk, that the task of the local authority and its servants in dealing with such children was extraordinarily difficult and delicate, that local authorities might adopt a more defensive approach to their duties if liability in damages were imposed, that the relationship between parents and social workers was frequently one of conflict and that the plaintiff children's injuries were compensatable under the Criminal Injuries Compensation Scheme, it was not just and reasonable to do so. It followed that no duty of care was owed to the plaintiff parents who in any event were secondary victims in respect of their claim for psychiatric illness ...
>
> (2) (Stuart-Smith LJ dissenting) It was arguable that the policy considerations against imposing a common law duty of care on a local authority in relation to the performance of its statutory duties to protect children did not apply when the children whose safety was under consideration were those in respect of whom it was not performing any statutory duty. Accordingly, since in the instant case, the plaintiff children were not children for whom the council had carried out any immediate caring responsibilities under the child welfare system but were living at home with their parents, and express assurances had been given that a sexual abuser would not be placed in their home, their claim should proceed ..."

63. On further appeal by the parents, the House of Lords on 16 March 2000 held that it was impossible to say that the psychiatric injury allegedly suffered by the parents, flowing from a feeling that they had brought the abuser and their children together or from a feeling of responsibility for not having detected the abuse earlier, was outside the range of psychiatric injury recognised by the law, nor was it unarguable that the local authority had owed a duty of care to the parents. The parents' claim could not be said to be so certainly or clearly bad that they should be barred from pursuing it to trial and their appeal was allowed.

64. The House of Lords gave judgment on 17 June 1999 in *Barrett v. London Borough of Enfield* ([1999] 3 Weekly Law Reports 79). That case concerned the claims of the plaintiff, who had been in care from the age of ten months to 17 years, that the local authority had negligently failed to safeguard his welfare causing him deep-seated psychiatric problems. The local authority had applied to strike out the case as disclosing no cause of action. The House of Lords, upholding the plaintiff's appeal, unanimously held that the judgment in *X and Others v. Bedfordshire County Council* did not in the circumstances of this case prevent a claim of negligence being brought against a local authority by a child formerly in its care.

65. Lord Browne-Wilkinson, in his judgment in that case, commented as follows on the operation of the duty of care:

> "(1) Although the word 'immunity' is sometimes incorrectly used, a holding that it is not fair, just and reasonable to hold liable a particular class of defendants whether generally or in relation to a particular type of activity is not to give immunity from a liability to which the rest of the world is subject. It is a prerequisite to there being any liability in negligence at all that as a matter of policy it is fair, just and reasonable in those circumstances to impose liability in negligence. (2) In a wide range of cases public policy has led to the decision that the imposition of liability would not be fair and reasonable in the circumstances, e.g. some activities of financial regulators, building inspectors, ship surveyors, social workers dealing with sex abuse cases. In all these cases and many others the view has been taken that the proper performance of the defendant's primary functions for the benefit of society as a whole will be inhibited if they are required to look over their shoulder to avoid liability in negligence. In English law the decision as to whether it is fair, just and reasonable to impose a liability in negligence on a particular class of would-be defendants depends on weighing in the balance the total detriment to the public interest in all cases from holding such class liable in negligence as against the total loss to all would-be plaintiffs if they are not to have a cause of action in respect of the loss they have individually suffered. (3) In English law, questions of public policy and the question whether it is fair and reasonable to impose liability in negligence are decided as questions of law. Once the decision is taken that, say, company auditors though liable to shareholders for negligent auditing are not liable to those proposing to invest in the company (see *Caparo Industries plc v. Dickman* [1990] 1 All ER 568, [1990] 2 AC 605), that decision will apply to all future cases of the same kind. The decision does not depend on weighing the balance between the extent of the damage to the plaintiff and the damage to the public in each particular case."

D. Striking-out procedure

66. At the relevant time, Order 18, Rule 19 of the Rules of the Supreme Court provided that a claim could be struck out if it disclosed no reasonable cause of action. This jurisdiction has been described as being reserved for "plain and obvious cases", in which a claim was "obviously unsustainable".

67. In applications to strike out, the courts proceeded on the basis that all the allegations set out in the claimant's pleadings were true. The question for the courts was whether, assuming that the claimant could substantiate all factual allegations at trial, the claim disclosed a reasonable cause of action.

68. The striking out procedure, now contained in Part 3.4(2) of the Civil Procedure Rules in force since 1999, is regarded as an important feature of English civil procedure, performing the function of securing speedy and effective justice, *inter alia*, by allowing a court to decide promptly which issues need full investigation and trial, and disposing summarily of the others. By means of this procedure, it can be determined at an early stage, with minimal cost to the parties, whether the facts as pleaded reveal a claim existing in law.

THE LAW

I. ALLEGED VIOLATION OF ARTICLE 3 OF THE CONVENTION

69. The applicants alleged that the local authority had failed to protect them from inhuman and degrading treatment contrary to Article 3 of the Convention, which provides:

> "No one shall be subjected to torture or to inhuman or degrading treatment or punishment."

70. In its report the Commission expressed the unanimous opinion that there had been a violation of Article 3 of the Convention. It considered that there was a positive obligation on the Government to protect children from treatment contrary to this provision. The authorities had been aware of the serious ill-treatment and neglect suffered by the four children over a period of years at the hands of their parents and failed, despite the means reasonably available to them, to take any effective steps to bring it to an end.

71. The applicants requested the Court to confirm this finding of a violation.

72. The Government did not contest the Commission's finding that the treatment suffered by the four applicants reached the level of severity prohibited by Article 3 and that the State failed in its positive obligation,

under Article 3 of the Convention, to provide the applicants with adequate protection against inhuman and degrading treatment.

73. The Court reiterates that Article 3 enshrines one of the most fundamental values of democratic society. It prohibits in absolute terms torture or inhuman or degrading treatment or punishment. The obligation on High Contracting Parties under Article 1 of the Convention to secure to everyone within their jurisdiction the rights and freedoms defined in the Convention, taken in conjunction with Article 3, requires States to take measures designed to ensure that individuals within their jurisdiction are not subjected to torture or inhuman or degrading treatment, including such ill-treatment administered by private individuals (see *A. v. the United Kingdom*, judgment of 23 September 1998, *Reports of Judgments and Decisions* 1998-VI, p. 2699, § 22). These measures should provide effective protection, in particular, of children and other vulnerable persons and include reasonable steps to prevent ill-treatment of which the authorities had or ought to have had knowledge (see, *mutatis mutandis*, *Osman v. the United Kingdom*, judgment of 28 October 1998, *Reports* 1998-VIII, pp. 3159-60, § 116).

74. There is no dispute in the present case that the neglect and abuse suffered by the four applicant children reached the threshold of inhuman and degrading treatment (as recounted in paragraphs 11-36 above). This treatment was brought to the local authority's attention, at the earliest in October 1987. It was under a statutory duty to protect the children and had a range of powers available to them, including the removal of the children from their home. These were, however, only taken into emergency care, at the insistence of the mother, on 30 April 1992. Over the intervening period of four and a half years, they had been subjected in their home to what the consultant child psychiatrist who examined them referred as horrific experiences (see paragraph 40 above). The Criminal Injuries Compensation Board had also found that the children had been subject to appalling neglect over an extended period and suffered physical and psychological injury directly attributable to a crime of violence (see paragraph 49 above). The Court acknowledges the difficult and sensitive decisions facing social services and the important countervailing principle of respecting and preserving family life. The present case, however, leaves no doubt as to the failure of the system to protect these applicant children from serious, long-term neglect and abuse.

75. Accordingly, there has been a violation of Article 3 of the Convention.

II. ALLEGED VIOLATION OF ARTICLE 8 OF THE CONVENTION

76. The applicants alleged, in the alternative to their complaints under Article 3 of the Convention, that the circumstances in which they suffered

ill-treatment, causing them physical and psychological injury, disclosed a breach of Article 8 of the Convention, which under the principle of respect for private life, protected physical and moral integrity.

77. Having regard to its finding of a violation of Article 3, the Court considers that no separate issue arises under Article 8 of the Convention.

III. ALLEGED VIOLATION OF ARTICLE 6 OF THE CONVENTION

78. The applicants complained that they had been denied access to a court to determine their claims against the local authority in negligence. They relied on Article 6 of the Convention.

79. Article 6 § 1 provides in its first sentence:

> "In the determination of his civil rights and obligations or of any criminal charge against him, everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law."

80. The Government denied that there was any civil right in issue in the case or any restriction on access, while the Commission found unanimously that there had been a breach of Article 6, in that the House of Lords had applied an exclusionary rule concerning the liability of local authorities in child care matters which constituted in the circumstances a disproportionate restriction on the applicants' access to a court.

A. Submissions of the parties

1. The applicants

81. The applicants submitted that their negligence claim was plainly arguable as a matter of domestic law, relying, *inter alia*, on *Osman*, cited above. The right to sue in negligence, a cause of action framed in general terms, was an established civil right in domestic law. The local authority had conceded that they could have foreseen damage to the applicants if they carried out their duties negligently and that there was a proximate relationship, thereby satisfying the first two limbs of the test for the duty of care. There was a strong argument that public policy considerations required a duty of care to be imposed and there was no prior decision excluding liability. The applicants also pointed to the fact that the judge who made the care orders specifically released the case papers to the Official Solicitor so that he could investigate and, if appropriate, pursue negligence claims; that the Official Solicitor considered that there were arguable claims in negligence; that the Legal Aid Board granted legal aid to pursue the claims to the House of Lords; and that the Court of Appeal which rejected the claims by a majority granted leave to appeal to the House of Lords, the precondition for such leave being that the claim was arguable in domestic

law; that the Master of the Rolls, in the Court of Appeal, found that there was duty of care, stating the contrary to be "an affront to common sense"; and that in previous cases, local authorities had paid settlements in negligence cases, on the basis that they were potentially liable. There was a serious dispute in domestic law, therefore, as to the existence of any exclusionary principle, which has continued since, and Article 6 was applicable.

82. The exclusionary rule applied by the House of Lords permitted the applicants' claims to be struck out without determining the facts and without a trial. This applied regardless of the merits or the seriousness of the harm suffered. Designed to protect local authorities from wasting resources on having to defend an action at all, this amounted in practical effect to an immunity and acted as a restriction on access to a court.

83. The application of a blanket rule which excluded the determination of the applicants' claims irrespective of the seriousness of the harm suffered, the nature and extent of negligence involved, or the fundamental rights which were at stake, constituted a disproportionate restriction on their right of access to a court. They emphasised the severity of the damage suffered by them due to prolonged exposure to abuse and neglect against which the public policy arguments against imposition of liability had little weight, namely, the alleged risk of frivolous litigation, the increased caution of social services in fulfilling their functions or the difficulty or sensitivity of the issues. Indeed, the requirement to investigate effectively cases of treatment contrary to Article 3 pointed strongly to the recognition of a right of access to a court where the State's responsibility had been engaged for inhuman or degrading treatment of vulnerable children. They referred to the Court's finding in *Osman* (cited above, p. 3170, § 151) that the domestic courts should be able to distinguish between degrees of negligence or harm and give consideration to the justice of a particular case. An exclusionary rule on that basis should be capable of yielding to competing human rights considerations on the facts of a particular case.

2. The Government

84. The Government submitted that Article 6 guaranteed a fair trial in the determination only of such civil rights and obligations as are (at least arguably) recognised in national law. It does not bear on the substantive question of whether a right to compensation exists in any given situation. The proceedings brought by the applicants established that no right existed. The decision to strike out their claim touched on the scope of the domestic law. By ruling that a right of action did not exist in a particular set of circumstances, the courts were applying substantive limits to tort liability, as the legislature might do in statute (see, for example, *Powell and Rayner v. the United Kingdom*, judgment of 21 February 1990, Series A no. 172,

pp. 16-17, § 36). There was no established cause of action which was restricted. Accordingly, they claimed that Article 6 § 1 was not applicable.

85. The Government argued in the alternative that there was no immunity applied which could be regarded as a restriction on access to a court. Even assuming that there was an arguable issue, there could in their view be no doubt that the dispute was subject to a fair and public hearing in compliance with the guarantees of Article 6. The striking-out procedure was an important way of securing the speedy and cost-effective determination of cases that were hopeless in law. It achieved those aims without inhibiting claimants' rights to present any arguments in their favour to a court. Thus, as factual matters were assumed to be those pleaded, the claimants were not prejudiced by the lack of hearing of evidence, while they could put forward any arguments in their favour to persuade the court that their claim was sustainable as a matter of law.

86. Assuming that their arguments on the above failed, the Government argued that any restriction on access to a court nonetheless pursued a legitimate aim and was proportionate. It aimed to preserve the efficiency of a vital sector of public service. The exclusion of liability was strictly limited in scope to the category of cases to which it applied, actions for misfeasance, vicarious liability for employees remaining unaffected. The domestic courts had themselves weighed up the public policy issues for and against liability in light of the principles of English tort law and the social and political philosophy underlying those principles. A very substantial margin of appreciation would therefore be appropriate in any international adjudication.

B. The Court's assessment

1. Applicability of Article 6 of the Convention

87. The Court recalls its constant case-law to the effect that "Article 6 § 1 extends only to '*contestations*' (disputes) over (civil) 'rights and obligations' which can be said, at least on arguable grounds, to be recognised under domestic law; it does not itself guarantee any particular content for (civil) 'rights and obligations' in the substantive law of the Contracting States" (see *James and Others v. the United Kingdom*, judgment of 21 February 1986, Series A no. 98, pp. 46-47, § 81; *Lithgow and Others v. the United Kingdom*, judgment of 8 July 1986, Series A no. 102, p. 70, § 192; and *The Holy Monasteries v. Greece*, judgment of 9 December 1994, Series A no. 301-A, pp. 36-37, § 80). It will however apply to disputes of a "genuine and serious nature" concerning the actual existence of the right as well as to the scope or manner in which it is exercised (see *Benthem v. the Netherlands*, judgment of 23 October 1985, Series A no. 97, pp. 14-15, § 32).

88. In the present case, the applicants were claiming damages on the basis of alleged negligence, a tort in English law which is largely developed through the case-law of the domestic courts. It is agreed by the parties that there was no previous court decision which indicated that liability existed in respect of damage caused negligently by a local authority in carrying out its child protection duties. It was in the applicants' case that the domestic courts were called on to rule whether this situation fell within one of the existing categories of negligence liability, or whether any of the categories should be extended to this situation (see paragraphs 57-65 above).

89. The Court is satisfied that at the outset of the proceedings there was a serious and genuine dispute about the existence of the right asserted by the applicants under the domestic law of negligence as shown, *inter alia*, by the grant of legal aid to the applicants and the decision of the Court of Appeal that their claims merited leave to appeal to the House of Lords. The Government's submission that there was no arguable (civil) "right" for the purposes of Article 6 once the House of Lords had ruled that no duty of care arose has relevance rather to any claims which were lodged or pursued subsequently by other plaintiffs. The House of Lords' decision did not remove, retrospectively, the arguability of the applicants' claims (see *Le Calvez v. France*, judgment of 29 July 1998, *Reports* 1998-V, pp. 1899-900, § 56). In such circumstances, the Court finds that the applicants had, on at least arguable grounds, a claim under domestic law.

90. Article 6 was, therefore, applicable to the proceedings brought by these applicants alleging negligence by the local authority. The Court must, therefore, examine whether the requirements of Article 6 were complied with in those proceedings.

2. Compliance with Article 6 of the Convention

91. The Court, in *Golder v. the United Kingdom* (judgment of 21 February 1975, Series A no. 18, pp. 13-18, §§ 28-36), held that the procedural guarantees laid down in Article 6 concerning fairness, publicity and expeditiousness would be meaningless if there were no protection of the pre-condition for the enjoyment of those guarantees, namely, access to a court. It established this as an inherent aspect of the safeguards enshrined in Article 6, referring to the principles of the rule of law and the avoidance of arbitrary power which underlie much of the Convention.

92. Article 6 § 1 "may ... be relied on by anyone who considers that an interference with the exercise of one of his (civil) rights is unlawful and complains that he has not had the possibility of submitting that claim to a tribunal meeting the requirements of Article 6 § 1" (see *Le Compte, Van Leuven and De Meyere v. Belgium*, judgment of 23 June 1981, Series A no. 43, p. 20, § 44). Where there is a serious and genuine dispute as to the lawfulness of such an interference, going either to the very existence or the scope of the asserted civil right, Article 6 § 1 entitles the individual "to have

this question of domestic law determined by a tribunal" (see *Sporrong and Lönnroth v. Sweden*, judgment of 23 September 1982, Series A no. 52, p. 30, § 81; see also *Tre Traktörer AB v. Sweden*, judgment of 7 July 1989, Series A no. 159, p. 18, § 40).

93. The right is not absolute, however. It may be subject to legitimate restrictions such as statutory limitation periods, security for costs orders, regulations concerning minors and persons of unsound mind (see *Stubbings and Others v. the United Kingdom*, judgment of 22 October 1996, *Reports* 1996-IV, pp. 1502-03, §§ 51-52; *Tolstoy Miloslavsky v. the United Kingdom*, judgment of 13 July 1995, Series A no. 316-B, pp. 80-81, §§ 62-67; and *Golder*, cited above, p. 19, § 39). Where the individual's access is limited either by operation of law or in fact, the Court will examine whether the limitation imposed impaired the essence of the right and, in particular, whether it pursued a legitimate aim and there was a reasonable relationship of proportionality between the means employed and the aim sought to be achieved (see *Ashingdane v. the United Kingdom*, judgment of 28 May 1985, Series A no. 93, pp. 24-25, § 57). If the restriction is compatible with these principles, no violation of Article 6 will arise.

94. It is contended by the applicants in this case that the decision of the House of Lords, finding that the local authority owed no duty of care, deprived them of access to a court as it was effectively an exclusionary rule, or an immunity from liability, which prevented their claims from being decided on the facts.

95. The Court observes, firstly, that the applicants were not prevented in any practical manner from bringing their claims before the domestic courts. Indeed, the case was litigated with vigour up to the House of Lords, the applicants being provided with legal aid for that purpose. Nor is it that any procedural rules or limitation periods had been relied on. The domestic courts were concerned with the application brought by the defendants to have the case struck out as disclosing no reasonable cause of action. This involved the pre-trial determination of whether, assuming the facts of the applicants' case as pleaded were true, there was a sustainable claim in law. The arguments before the courts were, therefore, concentrated on the legal issues, primarily whether a duty of care in negligence was owed to the applicants by the local authority.

96. Moreover, the Court is not persuaded that the House of Lords' decision that, as a matter of law, there was no duty of care in the applicants' case may be characterised as either an exclusionary rule or an immunity which deprived them of access to a court. As Lord Browne-Wilkinson explained in his leading speech, the House of Lords was concerned with the issue whether a novel category of negligence, that is a category of cases in which a duty of care had not previously been held to exist, should be developed by the courts in their law-making role under the common law

(see paragraph 46 above). The House of Lords, after weighing in the balance the competing considerations of public policy, decided not to extend liability in negligence into a new area. In so doing, it circumscribed the range of liability under tort law.

97. That decision did end the case, without the factual matters being determined on the evidence. However, if as a matter of law, there was no basis for the claim, the hearing of evidence would have been an expensive and time-consuming process which would not have provided the applicants with any remedy at its conclusion. There is no reason to consider the striking-out procedure which rules on the existence of sustainable causes of action as *per se* offending the principle of access to a court. In such a procedure, the plaintiff is generally able to submit to the court the arguments supporting his or her claims on the law and the court will rule on those issues at the conclusion of an adversarial procedure (see paragraphs 66-68 above).

98. Nor is the Court persuaded by the suggestion that, irrespective of the position in domestic law, the decision disclosed an immunity in fact or practical effect due to its allegedly sweeping or blanket nature. That decision concerned only one aspect of the exercise of local authorities' powers and duties and cannot be regarded as an arbitrary removal of the courts' jurisdiction to determine a whole range of civil claims (see *Fayed v. the United Kingdom*, judgment of 21 September 1994, Series A no. 294-B, pp. 49-50, § 65). As it has recalled above in paragraph 87, it is a principle of Convention case-law that Article 6 does not in itself guarantee any particular content for civil rights and obligations in national law, although other Articles such as those protecting the right to respect for family life (Article 8) and the right to property (Article 1 of Protocol No. 1) may do so. It is not enough to bring Article 6 § 1 into play that the non-existence of a cause of action under domestic law may be described as having the same effect as an immunity, in the sense of not enabling the applicant to sue for a given category of harm.

99. Furthermore, it cannot be said that the House of Lords came to its conclusion without carefully balancing the policy reasons for and against the imposition of liability on the local authority in the circumstances of the applicants' case. Lord Browne-Wilkinson, in his leading judgment in the House of Lords, acknowledged that the public policy principle that wrongs should be remedied required very potent counter-considerations to be overridden (see paragraph 46 above). He weighed that principle against the other public policy concerns in reaching the conclusion that it was not fair, just or reasonable to impose a duty of care on the local authority in the applicants' case. It may be noted that in subsequent cases the domestic courts have further defined this area of law concerning the liability of local authorities in child-care matters, holding that a duty of care may arise in other factual situations, where, for example, a child has suffered harm once

in local authority care, or a foster family has suffered harm as a result of the placement in their home by the local authority of an adolescent with a history of abusing younger children (see *W. and Others v. Essex County Council* and *Barrett*, both cited above, paragraphs 62-65 above).

100. The applicants, and the Commission in its report, relied on *Osman* (cited above) as indicating that the exclusion of liability in negligence, in that case concerning the acts or omissions of the police in the investigation and prevention of crime, acted as a restriction on access to a court. The Court considers that its reasoning in *Osman* was based on an understanding of the law of negligence (see, in particular, *Osman*, cited above, pp. 3166-67, §§ 138-39) which has to be reviewed in the light of the clarifications subsequently made by the domestic courts and notably by the House of Lords. The Court is satisfied that the law of negligence as developed in the domestic courts since the case of *Caparo Industries plc* (cited above) and as recently analysed in the case of *Barrett* (cited above, loc. cit.) includes the fair, just and reasonable criterion as an intrinsic element of the duty of care and that the ruling of law concerning that element in this case does not disclose the operation of an immunity. In the present case, the Court is led to the conclusion that the inability of the applicants to sue the local authority flowed not from an immunity but from the applicable principles governing the substantive right of action in domestic law. There was no restriction on access to a court of the kind contemplated in *Ashingdane* (cited above, loc. cit.).

101. The applicants may not, therefore, claim that they were deprived of any right to a determination on the merits of their negligence claims. Their claims were properly and fairly examined in light of the applicable domestic legal principles concerning the tort of negligence. Once the House of Lords had ruled on the arguable legal issues that brought into play the applicability of Article 6 § 1 of the Convention (see paragraphs 87-89 above), the applicants could no longer claim any entitlement under Article 6 § 1 to obtain any hearing concerning the facts. As pointed out above, such a hearing would have served no purpose, unless a duty of care in negligence had been held to exist in their case. It is not for this Court to find that this should have been the outcome of the striking-out proceedings since this would effectively involve substituting its own views as to the proper interpretation and content of domestic law.

102. It is nonetheless the case that the interpretation of domestic law by the House of Lords resulted in the applicants' case being struck out. The tort of negligence was held not to impose a duty of care on the local authority in the exercise of its statutory powers. Their experiences were described as "horrific" by a psychiatrist (see paragraph 40 above) and the Court has found that they were victims of a violation of Article 3 (see paragraph 74 above). Yet the outcome of the domestic proceedings they brought is that they, and any children with complaints such as theirs, cannot sue the local

authority in negligence for compensation, however foreseeable – and severe – the harm suffered and however unreasonable the conduct of the local authority in failing to take steps to prevent that harm. The applicants are correct in their assertions that the gap they have identified in domestic law is one that gives rise to an issue under the Convention, but in the Court's view it is an issue under Article 13, not Article 6 § 1.

103. The Court emphasises that the object and purpose underlying the Convention, as set out in Article 1, is that the rights and freedoms should be secured by the Contracting State within its jurisdiction. It is fundamental to the machinery of protection established by the Convention that the national systems themselves provide redress for breaches of its provisions, the Court exerting its supervisory role subject to the principle of subsidiarity. In that context, Article 13, which requires an effective remedy in respect of violations of the Convention, takes on a crucial function. The applicants' complaints are essentially that that they have not been afforded a remedy in the courts for the failure to ensure them the level of protection against abuse to which they were entitled under Article 3 of the Convention. The domestic courts referred to "the public-policy consideration that has first claim on the loyalty of the law" as being that "wrongs should be remedied" (see paragraph 46 above). As far as Convention wrongs are concerned, that principle is embodied in Article 13 (see, *inter alia*, *Kudła v. Poland* [GC], no. 30210/96, § 152, ECHR 2000-XI). It is under Article 13 that the applicants' right to a remedy should be examined and, if appropriate, vindicated.

104. Accordingly, the Court finds that there has been no violation of Article 6 of the Convention.

IV. ALLEGED VIOLATION OF ARTICLE 13 OF THE CONVENTION

105. The applicants submitted that they had not been afforded any remedy for the damage which they had suffered as a result of the failure of the local authority to protect them, relying on Article 13 of the Convention, which provides:

> "Everyone whose rights and freedoms as set forth in [the] Convention are violated shall have an effective remedy before a national authority notwithstanding that the violation has been committed by persons acting in an official capacity."

106. The applicants argued that the exclusionary rule established by the House of Lords in their case deprived them of any effective remedy within the national legal system for the violation of Article 3 which they suffered. While the remedy required by Article 13 need not always be judicial in character, in their case a judicial determination was required. This was because the tort of negligence was the only remedy in national law capable of determining the substance of their complaint and which (but for the

alleged immunity) would closely match the requirements of the Convention. Also the accountability of public officials, central to both Articles 3 and 13, required a right of access to a court whereby the individual could hold the responsible officials to account in adversarial proceedings and obtain an enforceable order for compensation if the claim was substantiated. The wording of Article 13 also prohibited the creation of immunities for public officials and any such immunity must be regarded as contrary to the object and purpose of the Convention.

107. The Government pointed out that there were a number of remedies available to the applicants which went some way towards providing effective redress. This included the payment of compensation from the Criminal Injuries Compensation Board (CICB), the possibility of complaining to the Local Government Ombudsman, and the complaints procedure under the Children Act 1989. However, the Government accepted that in the particular circumstances of this case, the remedies were insufficient, alone or cumulatively, to satisfy the requirements of Article 13. They conceded that there had been a serious violation of one of the most important Convention rights, that the CICB could only award compensation for criminal acts, not for the consequences of neglect, and that any recommendation by the Ombudsman would not have been legally enforceable. They had been under the obligation, in this case, to ensure that some form of compensation was made available for damage caused by the breach of Article 3, whether by a broader statutory compensation scheme, an enforceable Ombudsman's award, or through the courts. They pointed out that from October 2000, when the Human Rights Act 1998 came into force, a victim would be able to bring proceedings in the courts against a public authority for a breach of a substantive right, and the courts would be empowered to award damages.

108. As the Court has stated on many occasions, Article 13 of the Convention guarantees the availability at the national level of a remedy to enforce the substance of the Convention rights and freedoms in whatever form they might happen to be secured in the domestic legal order. Article 13 thus requires the provision of a domestic remedy to deal with the substance of an "arguable complaint" under the Convention and to grant appropriate relief, although the Contracting States are afforded some discretion as to the manner in which they conform to their Convention obligations under this provision. The scope of the obligation under Article 13 also varies depending on the nature of the applicant's complaint under the Convention. Nevertheless, the remedy required by Article 13 must be "effective" in practice as well as in law (see, among other authorities, *Aydın v. Turkey*, judgment of 25 September 1997, *Reports* 1997-VI, pp. 1895-96, § 103).

109. The Court has previously held that where a right with as fundamental an importance as the right to life or the prohibition against torture, inhuman and degrading treatment is at stake, Article 13 requires, in

addition to the payment of compensation where appropriate, a thorough and effective investigation capable of leading to the identification and punishment of those responsible, including effective access for the complainant to the investigation procedure (see *Kaya v. Turkey*, judgment of 19 February 1998, *Reports* 1998-I, pp. 330-31, § 107). These cases, however, concerned alleged killings or infliction of treatment contrary to Article 3 involving potential criminal responsibility on the part of security force officials. Where alleged failure by the authorities to protect persons from the acts of others is concerned, Article 13 may not always require that the authorities undertake the responsibility for investigating the allegations. There should, however, be available to the victim or the victim's family a mechanism for establishing any liability of State officials or bodies for acts or omissions involving the breach of their rights under the Convention. Furthermore, in the case of a breach of Articles 2 and 3 of the Convention, which rank as the most fundamental provisions of the Convention, compensation for the non-pecuniary damage flowing from the breach should in principle be part of the range of available remedies.

110. The applicants have argued that in their case an effective remedy could only be provided by adversarial court proceedings against the public body responsible for the breach. The Court notes that the Government have conceded that the range of remedies at the disposal of the applicants was insufficiently effective. They have pointed out that in the future, under the Human Rights Act 1998, victims of human rights breaches will be able to bring proceedings in courts empowered to award damages. The Court does not consider it appropriate in this case to make any findings as to whether only court proceedings could have furnished effective redress, though judicial remedies indeed furnish strong guarantees of independence, access for the victim and family, and enforceability of awards in compliance with the requirements of Article 13 (see, *mutatis mutandis*, *Klass and Others v. Germany*, judgment of 6 September 1978, Series A no. 28, p. 30, § 67).

111. The Court finds that in this case the applicants did not have available to them an appropriate means of obtaining a determination of their allegations that the local authority failed to protect them from inhuman and degrading treatment and the possibility of obtaining an enforceable award of compensation for the damage suffered thereby. Consequently, they were not afforded an effective remedy in respect of the breach of Article 3 and there has, accordingly, been a violation of Article 13 of the Convention.

V. APPLICATION OF ARTICLE 41 OF THE CONVENTION

112. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

A. Pecuniary damage

1. The applicants

113. The applicants submitted that they should be compensated for loss of future earnings and the costs of future medical expenses. Their experiences have, in different ways and to differing extents, blighted their lives. A substantial award should be made to enable them to enter life with a modicum of financial security, the potential to build an independent existence and the means to pay for therapeutic treatment and support.

114. The applicants provided updated medical reports dated 16 May 2000 by Dr Jean Harris-Hendriks concerning their progress and prognosis for the future.

(i) Z was described as having made a recovery from the serious depressive illness suffered at the time of her removal into care. While she was no longer suffering from any psychiatric illness, she had emotional, social and practical difficulties far beyond those normally affecting a girl of her age and was statistically vulnerable to anxiety and perhaps depressive illness in adult life. Her problems were classified as being of moderate severity. It was estimated that she would need psychotherapeutic treatment, outside the National Health Service, estimated at 60 to 100 sessions costing 70 to 90 pounds sterling (GBP) per session, to cope with her vulnerability, particularly at periods of transition. She was likely to remain vulnerable on the labour market, though it was anticipated that she would be able to take on further education, sustain her own mental health and enter the workforce. On her behalf, her representatives claimed GBP 9,000 for the cost of future psychiatric treatment, and GBP 40,000 to offset her handicap on the labour market, a total of GBP 49,000.

(ii) A had failed to appear for an interview with Dr Harris-Hendriks, who also commented on the lack of detailed information concerning periods spent by A in care. She had, however, interviewed him on behalf of the local authority in May 1993 and had some records concerning his past treatment and problems. On that basis, she concluded that he was suffering from long-term psychiatric illness and had a poor prognosis for recovery. His chances of fitting into the normal school system remained very poor. He

was prone to aggressiveness and had difficulty with everyday tasks. He was currently suffering from a reactive attachment disorder, resulting directly from severe parental neglect and abuse. The prognosis for the future was extremely bleak and he was likely to require intermittent hospitalisation. He was seriously handicapped on the labour market and was unlikely ever to be able to hold down a job. Assuming that he might otherwise have been able to obtain low-paid manual employment earning GBP 15,000 per year, and a normal working life to age 65, and taking into account uncertainties and early settlement, he claimed GBP 150,000 in loss of future earnings. As he had a substantial and continuing need for psychiatric treatment outside the National Health Service (NHS), he claimed GBP 50,000 as a minimum estimate for future treatment. This made a total of GBP 200,000.

(iii) B was still suffering from untreated post-traumatic stress disorder and a chronic, generalised anxiety disorder. He had horrific nightmares and, if left untreated, was likely to continue in the same disturbed emotional state. He required open-ended psychiatric treatment into adult life, outside the limited provision of the NHS. This was estimated at a cost of GBP 50,000 minimum. He is vulnerable in terms of both schooling and employment opportunities because of a chronic psychiatric disorder and limited social skills. His prospects of future employment were not as bleak as those of A, but he was likely to have substantial interruptions in his employment. On the assumption of six gaps of one year, on an average labourer's wage of GBP 15,000 per year, he claimed GBP 90,000. This made a total of GBP 140,000.

(iv) C was described as happy in her adoptive home, though carrying a substantial burden about her origins and reminders of them. She was recurrently angry and anxious about her natural mother. She had some remaining behavioural problems which were likely to be containable with good substitute parenting. She was, however, more liable than other children to anxiety and there was a statistical risk of depression in adult life. She did not currently require psychiatric treatment although provision should be made for treatment in adolescence and adulthood. At a recommended 30 to 50 sessions at GBP 70 to 90, a claim was made for GBP 4,500 for future psychiatric treatment. GBP 10,000 was claimed for loss of future earnings, making a total of GBP 14,500.

The reports commented that all the children would have benefited from compensation for their claims in 1994 as this would have allowed additional psychotherapeutic help, improving their prognosis. In A's case, his difficulties had been exacerbated by this lack of help while appropriate psychiatric, educational and environmental help might have substantially improved his prognosis. In B's case, more psychotherapeutic help could have reduced his current vulnerability and given a less gloomy prognosis. The reports also deplored that the psychotherapeutic referrals recommended for A and B in 1993 (for both) and 1998 (for B) had not been pursued by the

local authority on their behalf, and noted that one of the social workers had been told that there was no time or money for this work to be done.

2. The Government

115. The Government submitted that it was wrong to rely on domestic case-law and scales of assessment in just-satisfaction claims under Article 41 as the Court made its own assessment in accordance with principles in its own case-law. They emphasised that it must also be taken into account that the ill-treatment and neglect suffered by the applicants was not inflicted by the local authority but by their parents. It was also relevant that the breach of Article 3 arose only after there had been a failure to take effective steps when the situation in the home failed to show significant improvement – there was no ground for assuming that the children should have been removed from their home immediately. Nor should any award be made in respect of any alleged violation of Article 13 as that damage would be compensated by the award made under Article 3. In assessing what compensation would be equitable, it should also be taken into account that a number of compensatory remedies were available to the applicant, in particular, they received awards from the CICB.

116. As regards the recent medical reports, the Government considered that these were framed in largely identical terms with no attempt to distinguish the children's condition by reference to their age at the time of the violation, their sex and the duration of the treatment. No consideration was given either to what part was played by the temperament of the applicants, and by environmental factors including the care which they had received since 1992. Nor was any regard given to any harm which they might have suffered since being taken into care.

117. Turning to the specific claims made, the Government noted that Z had recovered from her depressive illness and had been doing remarkably well during her schooling, with no significant problems. There was nothing to substantiate the asserted claim for 60 to 100 sessions of psychotherapeutic treatment. Given her positive progress, the claim of statistical vulnerability to future anxiety and depressive illness was not substantiated either.

The report on A was in their view particularly unsatisfactory as it was issued without A having appeared for interview and without full information about his history. While he was not referred to a special clinic as suggested, he did receive therapeutic work in the community where he lived between 1996 and 1998. There was no or little basis for the assumption that his difficulties were exacerbated by the failure of his earlier compensation claim.

The report on B was similarly highly speculative and unsubstantiated, with regard to the alleged adverse impact of the lack of compensation. Its comments on his educational difficulties were inconsistent.

The report on C indicated that she was not psychiatrically ill and was coping well, rendering the conclusion that she had emotional and practical difficulties beyond the average girl of her age difficult to understand. The statements concerning likely future need and alleged impact of the failure of the compensation claim were unsupported by the evidence.

118. The Government submitted that in light of these considerations a reasonable sum of GBP 20,000 for Z, GBP 40,000 for A, GBP 30,000 for B, and GBP 10,000 for C would afford the applicants just satisfaction for both pecuniary and non-pecuniary damage.

3. The Court's assessment

119. As regards the applicants' claims for pecuniary loss, the Court's case-law establishes that there must be a clear causal connection between the damage claimed by the applicant and the violation of the Convention and that this may, in the appropriate case, include compensation in respect of loss of earnings (see, among other authorities, *Barberà, Messegué and Jabardo v. Spain* (Article 50), judgment of 13 June 1994, Series A no. 285-C, pp. 57-58, §§ 16-20, and *Çakıcı v. Turkey* [GC], no. 23657/94, § 127, ECHR 1999-IV).

120. A precise calculation of the sums necessary to make complete reparation (*restitutio in integrum*) in respect of the pecuniary losses suffered by the applicants may be prevented by the inherently uncertain character of the damage flowing from the violation (see *Young, James and Webster v. the United Kingdom* (Article 50), judgment of 18 October 1982, Series A no. 55, pp. 6-7, § 11). An award may still be made notwithstanding the large number of imponderables involved in the assessment of future losses, though the greater the lapse of time involved, the more uncertain the link becomes between the breach and the damage. The question to be decided in such cases is the level of just satisfaction, in respect of both past and future pecuniary losses, which it is necessary to award each applicant, the matter to be determined by the Court at its discretion, having regard to what is equitable (see The Sunday Times *v. the United Kingdom (no. 1)* (Article 50), judgment of 6 November 1980, Series A no. 38, p. 9, § 15, and *Smith and Grady v. the United Kingdom* (just satisfaction), nos. 33985/96 and 33986/96, §§ 18-19, ECHR 2000-IX). In that determination, the awards made in comparable domestic cases is a relevant but not decisive consideration.

121. Turning to the present case, the Court recalls that all four children suffered psychological and physical damage resulting from the abuse and neglect of their parents over a period of more than four years (see paragraphs 11-40 above). The breach of Article 3 concerned the failure of the local authority to take reasonable steps available to them to protect them from that damage. There is a direct causal link, therefore, between the breach and the damage suffered by the children. While it is correct, as

asserted by the Government, that there is no finding that the children should have immediately been taken into care and that they might have suffered damage even if effective steps had been taken at an earlier stage, the Court notes that the severity of the damage suffered by the children is inextricably linked to the long period of time over which the abuse persisted, which factor is also at the heart of the violation of Article 3 in this case.

122. The Court has taken into consideration the points made by the Government concerning the medical reports provided by the applicants, in particular, the lack of any attempt to compare the children's prospects in education and employment prior to their being taken into care. It cannot be excluded, for example, that A and B, who were identified as having educational difficulties, would have experienced some problems in any event. However, such assessments would inevitably be imprecise and based on some degree of speculation, as were the views expressed by Dr Harris-Hendriks concerning the future prognosis and effect on the educational and employment prospects. It may also be noted that the medical reports have not been tested in adversarial proceedings.

123. It is nonetheless possible, on the basis of the information available to the Court, to conclude that the four children will, in all probability, suffer from the effects of their experiences for the rest of their lives. Their capacity to cope with this past trauma will depend on their own personal abilities and the support to which they may have access.

124. It is clear that Z has made an excellent recovery from her depressive illness and, receiving support from her new family, is expected to do well at school and in the future in general. C, who, due to her young age, was less damaged by events, has also successfully integrated into a new family and is attending school without problem. In their case, the Court finds that it is not possible with any degree of certainty to draw conclusions as to future difficulties in the employment sphere. Notwithstanding their current positive prognosis, it may be considered as reasonably possible that in the future they will have some need of professional help in coping with problems which may arise as they grow older and in coming to terms with their childhood experience. An award to cover future psychotherapeutic care will assist in providing them with the support necessary to that process.

125. A was the most severely damaged of the children and suffers an ongoing psychiatric illness. Therapeutic care would help him now and will be necessary in the future. The Court is satisfied that the medical report may be relied on in this respect, Dr Harris-Hendriks having previously examined A and having access to sufficient information to support her opinion. Having integrated neither into a family nor into the education system, the prognosis for A may reasonably be described as bleak. In his case, it may be claimed that the damage suffered from the abuse will in all probability affect his prospects of gaining employment in the future. An award is appropriate to reflect this loss.

126. B is suffering from post-traumatic stress and anxiety disorders, which are likely to continue to affect him for some time to come. He requires both current and future psychiatric treatment. He is attending school, in a special-needs group. It is also probable, though to a lesser extent than A, that he will have problems in obtaining and sustaining employment in later life. An award is appropriate to reflect this.

127. Bearing in mind the uncertainties of the applicants' situations, and making an assessment on an equitable basis, the Court awards Z the sum of GBP 8,000 for future medical costs; A the sum of GBP 50,000 for future medical costs and GBP 50,000 for loss of employment opportunities; B the sum of GBP 50,000 for future medical costs and GBP 30,000 for loss of employment opportunities; and C the sum of GBP 4,000 for future medical costs.

B. Non-pecuniary damage

1. The applicants

128. The applicants claimed non-pecuniary damage in respect of the physical and psychiatric damage sustained. Z had suffered a serious depressive illness and severe malnutrition, and it was predicted that she would need long-term psychiatric care, probably into adulthood. A had suffered from post-traumatic stress disorder and was chronically under-attached. There was evidence to suggest that his father had hit him with a poker and that he had been sexually abused. He had suffered permanent scarring and was expected to require long-term psychiatric care. B had also suffered post-traumatic stress disorder, with some evidence of being beaten by a poker and being sexually abused. He suffered very bad nightmares and would wake up screaming. He was expected to require long-term psychiatric care. C had been less seriously damaged but was also expected to require some psychiatric treatment. Her health had been neglected by her mother and she had a squint as a result.

According to the assessment of Dr Black, Z, A and B had suffered psychiatric damage falling at the upper end of the severe bracket. They exhibited "marked problems" in their ability to cope with life and in their relationships with family, friends and those with whom they came into contact. A and B in particular had a poor prognosis and there was a likelihood of future vulnerability. C had suffered damage in the "moderately severe" bracket. Although she presented significant problems in the areas above, she had a more favourable prognosis.

Having regard to the levels of awards in such cases in the domestic courts, the applicants considered that a reasonable sum would be GBP 35,000 for Z, GBP 45,000 for A, GBP 40,000 for B, and GBP 25,000 for C.

2. The Government

129. As stated above, the Government considered that sums of GBP 20,000 for Z, GBP 40,000 for A, GBP 30,000 for B, and GBP 10,000 for C would afford the applicants just satisfaction for both pecuniary and non-pecuniary damage.

3. The Court's assessment

130. The children in this case suffered very serious abuse and neglect over a period of more than four years. Z, A and B suffered, and in the case of the two boys, still suffer psychiatric illness as a result. A and B also suffered physical injury and C suffered neglect in respect of an eye condition. The description of the conditions which they endured and the traumatic effects which this had on the children leave the Court with no doubt that a substantial award to reflect their pain and suffering is appropriate.

131. In making this assessment, the Court recalls that the rates applied in domestic cases, though relevant, are not decisive. It does not consider it appropriate or desirable to attempt to distinguish between the children in this context. Making an assessment on an equitable basis, the Court awards each child the sum of GBP 32,000.

C. Costs and expenses

132. The applicants claimed GBP 52,781.28 inclusive of value-added tax (VAT) by way of legal costs and expenses, which included fees for attendance at hearings before the Commission and the Court, fees for Dr Harris-Hendriks and submissions on Article 41 of the Convention.

133. The Government did not dispute the hourly rate or number of hours claimed by the applicants' principal legal advisers. They did query the involvement of a leading counsel as an expert on negligence law in addition to the leading counsel with human rights expertise. They also queried the involvement of the AIRE Centre in addition to an experienced counsel and solicitor, and noted that the AIRE Centre's fees for attending the hearing had also been billed in full in the second case, *T.P. and K.M. v. the United Kingdom* [GC], no. 28945/95, ECHR 2001-V, heard before the Court on the same day. They proposed that GBP 43,000 was a reasonable sum, taking these deductions into account. However, if no violation of Articles 6 and 8 of the Convention was found, they disputed the necessity for any of the fees incurred after April 2000 when the Government conceded a breach of Articles 3 and 13 of the Convention. In those circumstances, a reasonable sum would be GBP 36,000.

134. The Court recalls that only legal costs and expenses found to have been actually and necessarily incurred and which are reasonable as to

quantum are recoverable under Article 41 of the Convention (see, among other authorities, *Nikolova v. Bulgaria* [GC], no. 31195/96, § 79, ECHR 1999-II). It observes that the case involved important and complex issues, both concerning the facts which were established by the Commission, and the legal aspects. It does not consider that the costs incurred after April 2000 should be disallowed as such, as there were outstanding issues to be determined, including the claims of pecuniary and non-pecuniary damage arising out of the breaches conceded by the Government. As, however, the complaint made under Article 6, which was a significant part of the application, was unsuccessful, the costs and expenses allowed should be reduced. The Court has had regard to the fact that the Article 6 complaint was to some extent interconnected with the complaint about the inadequacy of remedies under Article 13.

135. In light of these matters, the Court awards the global sum of GBP 39,000 for legal costs and expenses, inclusive of VAT.

D. Default interest

136. According to the information available to the Court, the statutory rate of interest applicable in the United Kingdom at the date of adoption of the present judgment is 7.5% per annum.

FOR THESE REASONS, THE COURT

1. *Holds* unanimously that there has been a violation of Article 3 of the Convention.

2. *Holds* unanimously that no separate issue arises under Article 8 of the Convention.

3. *Holds* by twelve votes to five that there has been no violation of Article 6 of the Convention.

4. *Holds* by fifteen votes to two that there has been a violation of Article 13 of the Convention.

5. *Holds* unanimously
   (a) that the respondent State is to pay the applicants, within three months, the following amounts:
      (i) GBP 8,000 (eight thousand pounds sterling) to Z, GBP 100,000 (one hundred thousand pounds sterling) to A, GBP 80,000 (eighty

thousand pounds sterling) to B, and GBP 4,000 (four thousand pounds sterling) to C in respect of pecuniary damage;

(ii) GBP 32,000 (thirty-two thousand pounds sterling) to each applicant for non-pecuniary damage;

(iii) GBP 39,000 (thirty-nine thousand pounds sterling) in respect of costs and expenses, inclusive of VAT;

(b) that simple interest at an annual rate of 7.5% shall be payable from the expiry of the above-mentioned three months until settlement;

6. *Dismisses* unanimously the remainder of the applicants' claims for just satisfaction.

Done in English and in French, and delivered at a public hearing in the Human Rights Building, Strasbourg, on 10 May 2001.

Luzius WILDHABER
President

Paul MAHONEY
Deputy Registrar

In accordance with Article 45 § 2 of the Convention and Rule 74 § 2 of the Rules of Court, the following separate opinions are annexed to this judgment:

(a) concurring opinion of Lady Justice Arden as to Article 6;

(b) concurring opinion of Lady Justice Arden as to Article 41, joined by Mr Kovler;

(c) partly dissenting opinion of Mr Rozakis joined by Mrs Palm;

(d) partly dissenting opinion of Mrs Thomassen joined by Mr Casadevall and Mr Kovler.

L.W.
P.J.M.

CONCURRING OPINION OF LADY JUSTICE ARDEN AS TO ARTICLE 6

I agree that Article 6 of the Convention is applicable in this case and that it is not violated for the reasons given by the majority. I attach particular importance to the majority's affirmation of the well-established principle of Convention case-law that Article 6 does not guarantee any particular content for civil rights and obligations (see paragraphs 87, 98, 100 and 101 of the judgment). In the present case the applicants failed to obtain any remedy under the domestic law because the domestic courts held that they had no cause of action in English law (*X v. Bedfordshire County Council* [1995] 2 Appeal Cases 633).

Founding themselves upon the erroneous proposition as a matter of domestic law that they had some general right to sue in negligence where the defendant's act had caused damage and there was sufficient proximity, the applicants sought to argue that the decision of the English courts amounted to a sweeping or blanket immunity. I agree with the conclusion, in paragraph 98 of the judgment, that the facts of this case do not support that argument. In my view, when the courts in England, proceeding incrementally under the common law system of judicial law-making, hold that a hitherto unconsidered category of harm does not, as a matter of law, fall within the scope of the tort of negligence, they cannot properly be described as creating an "immunity", whether blanket or limited (see the speech of Lord Browne-Wilkinson in *Barrett v. the London Borough of Enfield* [1999] 3 Weekly Law Reports 79, paragraph 65 of the judgment in the present case). What the decision of the House of Lords in the present case did was to determine a legal issue fixing the limits on the substantive content of a domestic "civil right". In any event the decision was fully and carefully reasoned. It could not be regarded as the product of arbitrariness and it applied only to closely defined circumstances (see paragraphs 98-99 of the judgment).

Paragraph 98 of the judgment refers to *Fayed v. the United Kingdom* (judgment of 21 September 1994, Series A no. 294-B). In that case the Court contemplated the possibility that there might be a violation of the right of access to a court if, for example, a State could remove from the jurisdiction of the courts a whole range of civil claims, or confer immunities from civil liability on large groups or categories of persons (ibid., pp. 49-50, § 65). At the same time, however, the Court also stated that the Convention enforcement bodies could not create, by way of interpretation of Article 6, a substantive civil right which had no legal basis in the State concerned. Yet that is what the applicants are inviting the Court to do in the present case. Once the conclusion is reached that the right on which the applicants seek to rely has no legal basis in national law, the question of whether there was an

"immunity" such as to rely on the principle referred to in *Fayed* strictly does not arise.

In *Fayed* the Court did not settle the question whether the operation of a defence to a claim in defamation conferred by English law on a public officer was such as to attract the application of the right of access to a court under Article 6 § 1 or, rather, the substantive right to respect for one's private life under Article 8. Instead, it chose to "proceed on the basis that Article 6 § 1 [was] applicable to the facts of the case" (ibid., pp. 50-51, § 67). It explained that it did so as a matter of procedural convenience because the same central issues of legitimate aim and proportionality would have been raised under Article 8, and because the parties' arguments had been directed solely to Article 6 § 1. The result in that case does not, therefore, set any precedent for the applicability of Article 6 § 1 or detract from the principle to which, as stated, I attach particular importance, namely that Article 6 does not guarantee any particular content for civil rights and obligations (see paragraphs 87, 98, 100 and 101 of the present judgment).

CONCURRING OPINION OF LADY JUSTICE ARDEN AS TO ARTICLE 41, JOINED BY JUDGE KOVLER

Article 41 of the Convention enables the Court in appropriate cases to "afford just satisfaction to the injured party". The judgment of the Court awards two sums to each applicant by way of just satisfaction: one sum in respect of pecuniary damage and the other sum in respect of non-pecuniary damage. In the case of pecuniary damage, each applicant is awarded a different sum. However, in respect of non-pecuniary damage, each applicant is awarded an identical amount. Thus, with regard to non-pecuniary damage, the applicants' cases are not assessed individually. The applicants are treated as having suffered equal distress. In addition, no distinction is drawn between the suffering of any one applicant as against that of any other applicant, despite the differences between the cases of the applicants.

I agree that the just satisfaction which the Court awards to the applicants for the violation of Article 13 should include a sum on account of non-pecuniary damage in addition to the sums awarded in respect of pecuniary damage. I have no doubt that such an award is justified. However, in my opinion, the Court should not award the same sum to each applicant but rather should make a separate award to each applicant, reflecting the suffering of that applicant.

As paragraph 128 of the judgment shows, the applicants themselves have sought different amounts: GBP 35,000 for Z, GBP 45,000 for A, GBP 40,000 for B, and GBP 25,000 for C.

All the applicants endured suffering before they were taken into care. After they were taken into care they were assessed by consultant child psychiatrists: in 1993 by Dr Black, and in 2000 by Dr Harris-Hendriks. The diagnosis of A indicates that his case is the most serious. In 1993 he was diagnosed as suffering from post-traumatic stress disorder, and in 2000 he was diagnosed as suffering from a personality disorder for which the prognosis was unfavourable. B was considered to have a post-traumatic stress disorder in both 1993 and 2000, as well as social difficulties, and in addition in 2000 a generalised anxiety disorder, but the prognosis for him was uncertain rather than unfavourable. On the other hand, the initial diagnosis in 1993 of Z as suffering from a severe depressive illness has not been borne out, though it is considered that she may suffer anxiety and perhaps depressive illness in later life. In 2000 C's difficulties were described as moderate; she was regarded as vulnerable to anxiety and likely to need psychotherapeutic help in the future, but she had not suffered any psychiatric disorder.

In the circumstances my preferred course would have been to have performed a separate assessment of the amount to be awarded for non-pecuniary damage to each applicant. Having considered the evidence on the Article 41 issue, I consider that an appropriate amount would have been

GBP 25,000 for Z, GBP 40,000 for A, GBP 35,000 for B, and GBP 15,000 for C.

PARTLY DISSENTING OPINION OF JUDGE ROZAKIS JOINED BY JUDGE PALM

With great regret I am unable to follow the assessment and the conclusions of the majority of the Court that, in the instant case, there has been no violation of Article 6 § 1 of the Convention in so far as access of the applicants to a court of law is concerned. The reasons which have led me to depart from the majority's findings are as follows:

1. The majority is satisfied that the proceedings before the national courts, which culminated in a decision of the House of Lords, met the requirements of Article 6 § 1 as regards the applicants' right to have access to a court for the determination of their civil rights. As the Court observes in paragraph 101 of the judgment, the applicants may not "claim that they were deprived of any right to a determination on their merits of their negligence claims. Their claims were properly and fairly examined in the light of the applicable domestic principle concerning the tort of negligence". And, as it is also stated in paragraph 95, "[t]he arguments before the courts were, therefore, concentrated on the legal issues, primarily whether a duty of care in negligence was owed to the applicants by the local authority". It is difficult for one to accept this approach. The applicants' claims before the national courts did not, of course, refer to this preliminary issue. Their complaint was that the local authorities acted with gross negligence in a case involving a statutory duty of care and that, because of the damage inflicted on them by the failure of the authorities to properly discharge their responsibilities, compensation was due. They submitted this civil right to the courts and nurtured the legitimate expectation that it would be dealt with by the courts through an examination on the merits following an adversarial procedure that would enable them to prove the veracity of their claims. If it may be asserted that, as a general rule the question of access to a court is determined by the subject matter of the claims before the national courts, then the applicants never enjoyed access: at all stages of the domestic examination of their case, the national courts solely examined the jurisdictional problem of whether they could entertain the merits of the case before them, thus confining themselves to the preliminary question of whether an exclusionary rule exists, preventing them from examining the merits. An exclusionary rule which was eventually established by them, not on the basis of statutory requirements or specific precedents that were binding on them, but on the basis of a particular interpretation by them of the requirements of English law in the light of the circumstances of the case before them.

2. It is one matter, of course, to accept that there was no access to a court – which, unfortunately, the majority did not clearly accept – and another to say that, in the circumstances of a particular case, the absence of access is justified because it serves a particular purpose which is proportionate to the

damage done to an individual not enjoying the protection otherwise afforded to him by Article 6 of the Convention.

I am prepared to subscribe to this alternative approach, on which the majority has also embarked – without, however, making a clear distinction between the absence of access and the circumstances justifying a proportional denial of it. However, I am not prepared to accept that the facts of the case may lead us to the conclusion that the applicants were correctly and proportionately deprived of their right because the public-interest considerations prevailed over their legitimate expectation to have their claims examined on the merits.

First of all, it transpires clearly from the facts of the case that the right to sue in negligence was an established civil right in domestic law, that the public-care authorities accepted that they had been negligent in their behaviour, and that there was a proximate relationship in accordance with the criteria determined by national law. Further, the way that the judicial authorities dealt with the matter shows that the case presented serious issues that warranted serious examination: as the applicants pointed out, the judge who made the care orders specifically released the case papers to the Official Solicitor so that he could investigate and, if appropriate, pursue negligence claims; the Official Solicitor considered that there were arguable claims in negligence; the Legal Aid Board granted legal aid to pursue the claims to the House of Lords; and the Court of Appeal, which rejected the claims by a majority, granted leave to appeal to the House of Lords, the precondition for such leave being that the claim was arguable in domestic law; the Master of the Rolls in the Court of Appeal found that there was a duty of care, stating the contrary to be "an affront to common sense"; and, in previous cases, local authorities had settled negligence claims on the basis that they were potentially liable.

So, the only reason which eventually led to this case being struck out was an interpretation by the national courts, and particularly the House of Lords, based on an argument of expediency and as a matter of policy. Indeed, by applying the third test of the English law of torts on negligence – namely, whether it was fair, just and reasonable to impose liability on the public-care authorities in the circumstances of the case, the House of Lords found that it would be detrimental to the exercise of the duties of the public body in question to impose upon them the excessive burden of tortious liability for acts or omissions in the discharge of their duties. The position taken by the House of Lords in this matter was novel and tantamount to a refusal to extend tortious liability for civil wrongs arising out of a duty of care by local authorities for child care.

It is not the Court's task to enter into an examination of the social-policy considerations which led the national courts to interpret the third test in the way they did. Yet, it is its task to look at the circumstances surrounding the particular decisions taken and to assess their significance when applying its

own test of proportionality; and it seems difficult for me to accept that in view of the importance attached to the facts of the case by the various judicial and other bodies, and the novel character of the House of Lords' ruling, the creation of new case-law barring the examination of the case on its merits was proportionate to the need for adequate protection of individuals (and society generally) against negligence by public authorities.

Secondly, and more importantly, this Court has found a violation of Article 3 of the Convention on the basis of a finding that "the neglect and abuse suffered by the four applicant children reached the threshold of inhuman and degrading treatment" (see paragraph 74 of the judgment). Again it is difficult for me to accept that serious matters of public concern – as are all matters involving a violation of Article 3 – may be left outside the protection of independent and impartial tribunals established by law, and providing all the guarantees required by Article 6 of the Convention. The majority, however, holds a different view since it accepts that, even in circumstances where there has been a violation of the substance of Article 3, the Contracting States "are afforded some discretion as to the manner in which they conform to their Convention obligations ..." provided that some effective remedy exists to deal with individual complaints concerning inhuman and degrading treatment. Hence, they conclude that, in the present situation, Article 13, but not Article 6, has been violated.

It seems to me that the present case may be considered as the *locus classicus* of the limits afforded to States by the Convention to determine the modalities of access to domestic courts. Our case-law has repeatedly underlined the fact that the right to a tribunal is not unlimited – and rightly so. Yet, the Court is free to determine in which instances a Contracting State oversteps its freedom of choice and becomes liable under Article 6; and one criterion which can readily assist the Court in drawing the line between instances where a State retains its discretion, and instances where a State is bound to offer judicial guarantees to those falling under its jurisdiction, is the severity of the complaint before the national authorities. If the complaint may involve a violation of core Convention rights – such as Articles 2 and 3 – the Court is bound, to my mind, to find that the States are obliged not simply to offer an effective remedy (as required by Article 13), but a judicial remedy covering all the requirements of Article 6.

3. Most of the ideas put forward in the previous lines have as their source of inspiration *Osman v. the United Kingdom* (judgment of 28 October 1998, *Reports of Judgments and Decisions* 1998-VIII) which the majority has not followed in the present judgment. The main reason which has led the majority to depart from the established case-law is explained in paragraph 100 of the present judgment:

> "... The Court considers that its reasoning in *Osman* was based on an understanding of the law of negligence ... which has to be reviewed in the light of the clarifications subsequently made by the domestic courts and by notably the House of Lords. The

> Court is satisfied that the law of negligence as developed in the domestic courts since the case of *Caparo Industries plc* ... and as recently analysed in the case of *Barrett* ... includes the fair, just and reasonable criterion as an intrinsic element of the duty of care and that the ruling of law concerning that element in this case does not disclose the operation of an immunity. In the present case, the Court is led to the conclusion that the inability of the applicants to sue the local authority flowed not from an immunity but from the applicable principles governing the substantive right of action in domestic law. ..."

I do not think that in *Osman* the Court was very much concerned with this subtle issue raised by this judgment in the above-mentioned paragraph. The Court in *Osman* never said that the jurisdictional bar was an immunity to be distinguished from the applicable principles governing the substantive right of action in domestic law. It simply considered that "the application of the [exclusionary] rule in this manner without further enquiry into the existence of competing public interest considerations only serves *to confer a blanket immunity* on the police for their acts and omissions during the investigation and suppression of crime and amounts to an unjustifiable restriction on an applicant's right to have a determination on the merits of his or her claim against the police in deserving cases" (see *Osman*, cited above, p. 3170, § 151 – emphasis added). It went on to express the opinion that, in cases where the harm sustained by a complainant was of the most serious nature, examination of the merits could not be automatically excluded by the application of a rule which "*amounts to the grant of an immunity to the police*". In conclusion, the Court in *Osman* was mainly concerned with the fact that the applicants in a very serious case of possible substantive human-rights violations did not have the opportunity to air their grievances before a court of law; it was not concerned with whether the reason behind it being impossible to examine the case on the merits was or was not the result of an immunity provided for by national law acting as a procedural bar having such an effect. It simply found that the impossibility amounted to a grant of an immunity. Under these circumstances how can we distinguish between *Osman* and the present case?

For all the above reasons I believe that Article 6 (access to a court) has been violated and, hence, I consider that Article 13 does not raise a separate ground for violation, Article 6 being the *lex specialis* in this case.

PARTLY DISSENTING OPINION OF JUDGE THOMASSEN JOINED BY JUDGES CASADEVALL AND KOVLER

I am unable to agree with the majority that there has been no violation of Article 6 of the Convention in this case.

The Court is unanimous that the authorities failed to protect the applicants, young children, from inhuman and degrading treatment and its majority observes that the applicants were denied "a determination of their allegations that the local authority failed to protect them from inhuman and degrading treatment and the possibility of obtaining an enforceable award of compensation for the damage suffered thereby" (see paragraph 111 of the judgment).

Despite the severe negligence by the authorities, which allowed the ill-treatment of the applicants to continue for so many years and caused the applicants physical and psychiatric injuries amounting to a violation of Article 3, the applicants could not hold the authorities accountable in domestic court proceedings. By reference to policy factors (for example, difficulties of attributing responsibility between different agencies, sensitivity of decisions, risk of inculcating in local authorities a cautious and defensive approach to exercise of their duties, risk of costly and vexatious litigation) the domestic courts decided that the local authority could not be held liable in negligence in the exercise of their statutory powers to protect children. *De facto*, the local authority was thus declared to be immune for claims because they had acted in the exercise of their statutory powers to protect children.

In my view the applicants' rights under Article 6 were thereby violated as they had no access to a court in order to have a decision on their claims, which were arguable under national law. The facts of this case and the way in which domestic law operated are very similar to those in *Osman v. the United Kingdom* (judgment of 28 October 1998, *Reports of Judgments and Decisions* 1998-VIII) where the applicants' claims for negligence against the police were struck out for policy reasons relating to the perceived interests in preventing the efficiency of the police service being undermined by litigation. In *Osman* the Court found that the application of an exclusionary rule barring liability of the police for negligence in the exercise of their functions of investigating and preventing crime constituted a disproportionate restriction on access to a court for the applicants. The majority's reasons for not following the decisions in *Osman* (see paragraph 100 of the judgment) are not, to my mind, convincing. There seem to have been no striking or significant changes in the law of negligence since that case and all relevant matters concerning the content of domestic law had been brought to the attention of the Court by the parties in *Osman*. I am of the opinion that the conclusion under Article 6 in this case must be the same.

It is true that, as the majority observes in paragraph 95 of the judgment, the applicants were not prevented in any practical manner from bringing their claims before the domestic courts. The case was litigated up to the House of Lords, the applicants being provided with legal aid for that purpose. Nor is it the case that any procedural rules of limitation had been relied on. However, the notion of "access to a court" under Article 6 guarantees not only that the applicants have their claims brought before the courts, but implies also the right to have those claims examined on the basis of the facts before the courts and to have them decided on.

I agree with the majority saying in paragraph 98 that Article 6 does not in itself guarantee any particular content for civil rights and obligations in national law. But where there is an arguable claim under domestic tort law as in this case (see paragraph 89 of the judgment), requiring that the applicants obtain a decision by a court on the liability of those responsible for allowing their ill-treatment to continue for many years, cannot, in my opinion, be said to determine the content of domestic law.

I would observe that the Court's supervision of the activities of national courts in defining "access" or "liability" seems to take place on a wider basis. In *Fayed v. the United Kingdom* (judgment of 21 September 1994, Series A no. 294-B, pp. 49-50, § 65), the Court said:

> "Certainly the Convention enforcement bodies may not create by way of interpretation of Article 6 § 1 a substantive civil right which has no legal basis in the State concerned. However, it would not be consistent with the rule of law in a democratic society or with the basic principle underlying Article 6 § 1 – namely that civil claims must be capable of being submitted to a judge for adjudication – if, for example, a State could, without restraint or control by the Convention enforcement bodies, remove from the jurisdiction of the courts a whole range of civil claims or confer immunities from civil liability on large groups or categories of persons ..."

To reach its conclusion that the decision by the House of Lords did not amount to the granting of an immunity, the Court's majority observes, in paragraph 99, that in cases concerning the liability of local authorities in child-care matters brought after the applicants' case, the domestic courts have held that a duty of care may arise. But this does not change the fact that an immunity was conferred on the authorities in the applicants' case. Apparently the immunity applied in the applicants' case was found no longer appropriate in subsequent cases, the national courts taking into account, amongst other factors, the Court's approach in *Osman*, cited above.

While it has been alleged by the Government that a finding of a violation in this case would undermine the striking-out procedure used to avoid pointless litigation of baseless claims, I consider that this argument has not been substantiated by the material placed before the Court. The domestic courts have continued to strike cases out after the Court's judgment in *Osman*. A finding of a violation in this case would mean only that these applicants' claims, which involved serious ill-treatment contrary to a

fundamental human right, should not have been struck out on the basis of general policy arguments. This Court has found no denial of access to a court where judges have struck out cases where there has been no proximity or foreseeability (see, for example, *Powell v. the United Kingdom* (dec.), no. 45305/99, ECHR 2000-V, and *Bromiley v. the United Kingdom* (dec.), no. 33747/96, 23 November 1999, unreported).

The majority of the Court finds that the applicants were not afforded an effective remedy in respect of the breach of Article 3 and they conclude that Article 13, not Article 6, was violated.

My conclusion would be that the "remedy" to which the applicants were entitled should have been access to a court in order to have their damages settled. Restrictions to access to a court in order to protect the interests of the local authority exercising their powers to protect children may be necessary and justified under Article 6. However, I would say that in this case, where it is agreed that the child applicants were victims of the failure of the system to protect them from serious, long-term neglect and abuse, the immunity conferred on the local authority because of policy reasons cannot be seen as proportionate.

Therefore, I believe that Article 6 was violated.

I voted for a violation of Article 13 because I agree with the majority that the applicants, whose rights under Article 3 of the Convention were violated, had no effective remedy before the national authorities.

UN Convention on the Rights of the Child

In Child Friendly Language

"Rights" are things every child should have or be able to do. All children have the same rights. These rights are listed in the UN Convention on the Rights of the Child. Almost every country has agreed to these rights. All the rights are connected to each other, and all are equally important. Sometimes, we have to think about rights in terms of what is the best for children in a situation, and what is critical to life and protection from harm. As you grow, you have more responsibility to make choices and exercise your rights.

Article 1
Everyone under 18 has these rights.

Article 2
All children have these rights, no matter who they are, where they live, what their parents do, what language they speak, what their religion is, whether they are a boy or girl, what their culture is, whether they have a disability, whether they are rich or poor. No child should be treated unfairly on any basis.

Article 3
All adults should do what is best for you. When adults make decisions, they should think about how their decisions will affect children.

Article 4
The government has a responsibility to make sure your rights are protected. They must help your family to protect your rights and create an environment where you can grow and reach your potential.

Article 5
Your family has the responsibility to help you learn to exercise your rights, and to ensure that your rights are protected.

Article 6
You have the right to be alive.

Article 7
You have the right to a name, and this should be officially recognized by the government. You have the right to a nationality (to belong to a country).

Article 8
You have the right to an identity – an official record of who you are. No one should take this away from you.

Article 9
You have the right to live with your parent(s), unless it is bad for you. You have the right to live with a family who cares for you.

Article 10
If you live in a different country than your parents do, you have the right to be together in the same place.

Article 11
You have the right to be protected from kidnapping.

Article 12
You have the right to give your opinion, and for adults to listen and take it seriously.

Article 13
You have the right to find out things and share what you think with others, by talking, drawing, writing or in any other way unless it harms or offends other people.

Article 14
You have the right to choose your own religion and beliefs. Your parents should help you decide what is right and wrong, and what is best for you.

Article 15
You have the right to choose your own friends and join or set up groups, as long as it isn't harmful to others.

Article 16
You have the right to privacy.

Article 17
You have the right to get information that is important to your well-being, from radio, newspaper, books, computers and other sources. Adults should make sure that the information you are getting is not harmful, and help you find and understand the information you need.

Article 18
You have the right to be raised by your parent(s) if possible.

Article 19
You have the right to be protected from being hurt and mistreated, in body or mind.

Article 20
You have the right to special care and help if you cannot live with your parents.

Article 21
You have the right to care and protection if you are adopted or in foster care.

Article 22
You have the right to special protection and help if you are a refugee (if you have been forced to leave your home and live in another country), as well as all the rights in this Convention.

Article 23
You have the right to special education and care if you have a disability, as well as all the rights in this Convention, so that you can live a full life.

Article 24
You have the right to the best health care possible, safe water to drink, nutritious food, a clean and safe environment, and information to help you stay well.

Article 25
If you live in care or in other situations away from home, you have the right to have these living arrangements looked at regularly to see if they are the most appropriate.

Article 26
You have the right to help from the government if you are poor or in need.

Article 27
You have the right to food, clothing, a safe place to live and to have your basic needs met. You should not be disadvantaged so that you can't do many of the things other kids can do.

Article 28
You have the right to a good quality education. You should be encouraged to go to school to the highest level you can.

Article 29
Your education should help you use and develop your talents and abilities. It should also help you learn to live peacefully, protect the environment and respect other people.

Article 30
You have the right to practice your own culture, language and religion - or any you choose. Minority and indigenous groups need special protection of this right.

Article 31
You have the right to play and rest.

Article 32
You have the right to protection from work that harms you, and is bad for your health and education. If you work, you have the right to be safe and paid fairly.

Article 33
You have the right to protection from harmful drugs and from the drug trade.

Article 34
You have the right to be free from sexual abuse.Article 35No one is allowed to kidnap or sell you.

Article 36
You have the right to protection from any kind of exploitation (being taken advantage of).

Article 37
No one is allowed to punish you in a cruel or harmful way.

Article 38
You have the right to protection and freedom from war. Children under 15 cannot be forced to go into the army or take part in war.

Article 39
You have the right to help if you've been hurt, neglected or badly treated.

Article 40
You have the right to legal help and fair treatment in the justice system that respects your rights.

Article 41
If the laws of your country provide better protection of your rights than the articles in this Convention, those laws should apply.

Article 42
You have the right to know your rights! Adults should know about these rights and help you learn about them, too.

Articles 43 to 54
These articles explain how governments and international organizations like UNICEF will work to ensure children are protected with their rights.

unicef

QUEEN ALEXANDRA FOUNDATION FOR CHILDREN

Canadian Heritage Patrimoine canadien

Convention on the Rights of the Child

Adopted and opened for signature, ratification and accession by General Assembly resolution 44/25 of 20 November 1989

entry into force 2 September 1990, in accordance with article 49

Preamble

The States Parties to the present Convention,

Considering that, in accordance with the principles proclaimed in the Charter of the United Nations, recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Bearing in mind that the peoples of the United Nations have, in the Charter, reaffirmed their faith in fundamental human rights and in the dignity and worth of the human person, and have determined to promote social progress and better standards of life in larger freedom,

Recognizing that the United Nations has, in the Universal Declaration of Human Rights and in the International Covenants on Human Rights, proclaimed and agreed that everyone is entitled to all the rights and freedoms set forth therein, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status,

Recalling that, in the Universal Declaration of Human Rights, the United Nations has proclaimed that childhood is entitled to special care and assistance,

Convinced that the family, as the fundamental group of society and the natural environment for the growth and well-being of all its members and particularly children, should be afforded the necessary protection and assistance so that it can fully assume its responsibilities within the community,

Recognizing that the child, for the full and harmonious development of his or her personality, should grow up in a family environment, in an atmosphere of happiness, love and understanding,

Considering that the child should be fully prepared to live an individual life in society, and brought up in the spirit of the ideals proclaimed in the Charter of the United Nations, and in particular in the spirit of peace, dignity, tolerance, freedom, equality and solidarity,

Bearing in mind that the need to extend particular care to the child has been stated in the Geneva Declaration of the Rights of the Child of 1924 and in the Declaration of the Rights of the Child adopted by the General Assembly on 20 November 1959 and recognized in the Universal Declaration of Human Rights, in the International Covenant on Civil and Political Rights (in particular in articles 23 and 24), in the International Covenant on Economic, Social and Cultural Rights (in particular in article 10) and in the statutes and relevant instruments of specialized agencies and international organizations concerned with the welfare of children,

Bearing in mind that, as indicated in the Declaration of the Rights of the Child, "the child, by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth",

Recalling the provisions of the Declaration on Social and Legal Principles relating to the Protection and Welfare of Children, with Special Reference to Foster Placement and Adoption Nationally and Internationally; the United Nations Standard Minimum Rules for the Administration of Juvenile Justice (The Beijing Rules) ; and the Declaration on the Protection of Women and Children in Emergency and Armed Conflict, Recognizing that, in all countries in the world, there are children living in exceptionally difficult conditions, and that such children need special consideration,

Taking due account of the importance of the traditions and cultural values of each people for the protection and harmonious development of the child, Recognizing the importance of international co-operation for improving the living conditions of children in every country, in particular in the developing countries,

Have agreed as follows:

PART I

Article 1

For the purposes of the present Convention, a child means every human being below the age of eighteen years unless under the law applicable to the child, majority is attained earlier.

Article 2

1. States Parties shall respect and ensure the rights set forth in the present Convention to each child within their jurisdiction without discrimination of any kind, irrespective of the child's or his or her parent's or legal guardian's race, colour, sex, language, religion, political or other opinion, national, ethnic or social origin, property, disability, birth or other status.

2. States Parties shall take all appropriate measures to ensure that the child is protected against all forms of discrimination or punishment on the basis of the status, activities, expressed opinions, or beliefs of the child's parents, legal guardians, or family members.

Article 3

1. In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration.

2. States Parties undertake to ensure the child such protection and care as is necessary for his or her well-being, taking into account the rights and duties of his or her parents, legal guardians, or other individuals legally responsible for him or her, and, to this end, shall take all appropriate legislative and administrative measures.

3. States Parties shall ensure that the institutions, services and facilities responsible for the care or protection of children shall conform with the standards established by competent authorities, particularly in the areas of safety, health, in the number and suitability of their staff, as well as competent supervision.

Article 4

States Parties shall undertake all appropriate legislative, administrative, and other measures for the implementation of the rights recognized in the present Convention. With regard to economic, social and cultural rights, States Parties shall undertake such measures to the maximum extent of their available resources and, where needed, within the framework of international co-operation.

Article 5

States Parties shall respect the responsibilities, rights and duties of parents or, where applicable, the members of the extended family or community as provided for by local custom, legal guardians or other persons legally responsible for the child, to provide, in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of the rights recognized in the present Convention.

Article 6

1. States Parties recognize that every child has the inherent right to life. 2. States Parties shall ensure to the maximum extent possible the survival and development of the child.

Article 7

1. The child shall be registered immediately after birth and shall have the right from birth to a name, the right to acquire a nationality and. as far as possible, the right to know and be cared for by his or her parents.

2. States Parties shall ensure the implementation of these rights in accordance with their national law and their obligations under the relevant international instruments in this field, in particular where the child would otherwise be stateless.

Article 8

1. States Parties undertake to respect the right of the child to preserve his or her identity, including nationality, name and family relations as recognized by law without unlawful interference.

2. Where a child is illegally deprived of some or all of the elements of his or her identity, States Parties shall provide appropriate assistance and protection, with a view to re-establishing speedily his or her identity.

Article 9

1. States Parties shall ensure that a child shall not be separated from his or her parents against their will, except when competent authorities subject to judicial review determine, in accordance with applicable law and procedures, that such separation is necessary for the best interests of the child. Such determination may be necessary in a particular case such as one involving abuse or neglect of the child by the parents, or one where the parents are living separately and a decision must be made as to the child's place of residence.

2. In any proceedings pursuant to paragraph 1 of the present article, all interested parties shall be given an opportunity to participate in the proceedings and make their views known.

3. States Parties shall respect the right of the child who is separated from one or both parents to maintain personal relations and direct contact with both parents on a regular basis, except if it is contrary to the child's best interests.

4. Where such separation results from any action initiated by a State Party, such as the detention, imprisonment, exile, deportation or death (including death arising from any cause while the person is in the custody of the State) of one or both parents or of the child, that State Party shall, upon request, provide the parents, the child or, if appropriate, another member of the family with the essential information concerning the whereabouts of the absent member(s) of the family unless the provision of the information would be detrimental to the well-being of the child. States Parties shall further ensure that the submission of such a request shall of itself entail no adverse consequences for the person(s) concerned.

Article 10

1. In accordance with the obligation of States Parties under article 9, paragraph 1, applications by a child or his or her parents to enter or leave a State Party for the purpose of family reunification shall be dealt with by States Parties in a positive, humane and expeditious manner. States Parties shall further ensure that the submission of such a request shall entail no adverse consequences for the applicants and for the members of their family.

2. A child whose parents reside in different States shall have the right to maintain on a regular basis, save in exceptional circumstances personal relations and direct contacts with both parents. Towards that end and in accordance with the obligation of States Parties under article 9, paragraph 1, States Parties shall respect the right of the child and his or her parents to leave any country, including their

own, and to enter their own country. The right to leave any country shall be subject only to such restrictions as are prescribed by law and which are necessary to protect the national security, public order (ordre public), public health or morals or the rights and freedoms of others and are consistent with the other rights recognized in the present Convention.

Article 11

1. States Parties shall take measures to combat the illicit transfer and non-return of children abroad.

2. To this end, States Parties shall promote the conclusion of bilateral or multilateral agreements or accession to existing agreements.

Article 12

1. States Parties shall assure to the child who is capable of forming his or her own views the right to express those views freely in all matters affecting the child, the views of the child being given due weight in accordance with the age and maturity of the child.

2. For this purpose, the child shall in particular be provided the opportunity to be heard in any judicial and administrative proceedings affecting the child, either directly, or through a representative or an appropriate body, in a manner consistent with the procedural rules of national law.

Article 13

1. The child shall have the right to freedom of expression; this right shall include freedom to seek, receive and impart information and ideas of all kinds, regardless of frontiers, either orally, in writing or in print, in the form of art, or through any other media of the child's choice.

2. The exercise of this right may be subject to certain restrictions, but these shall only be such as are provided by law and are necessary:

(a) For respect of the rights or reputations of others; or

(b) For the protection of national security or of public order (ordre public), or of public health or morals.

Article 14

1. States Parties shall respect the right of the child to freedom of thought, conscience and religion.

2. States Parties shall respect the rights and duties of the parents and, when applicable, legal guardians, to provide direction to the child in the exercise of his or her right in a manner consistent with the evolving capacities of the child.

3. Freedom to manifest one's religion or beliefs may be subject only to such limitations as are prescribed by law and are necessary to protect public safety, order, health or morals, or the fundamental rights and freedoms of others.

Article 15

1. States Parties recognize the rights of the child to freedom of association and to freedom of peaceful assembly.

2. No restrictions may be placed on the exercise of these rights other than those imposed in conformity with the law and which are necessary in a democratic society in the interests of national security or public safety, public order (ordre public), the protection of public health or morals or the protection of the rights and freedoms of others.

Article 16

1. No child shall be subjected to arbitrary or unlawful interference with his or her privacy, family, home or correspondence, nor to unlawful attacks on his or her honour and reputation.

2. The child has the right to the protection of the law against such interference or attacks.

Article 17

States Parties recognize the important function performed by the mass media and shall ensure that the child has access to information and material from a diversity of national and international sources, especially those aimed at the promotion of his or her social, spiritual and moral well-being and physical and mental health.

To this end, States Parties shall:

(a) Encourage the mass media to disseminate information and material of social and cultural benefit to the child and in accordance with the spirit of article 29;

(b) Encourage international co-operation in the production, exchange and dissemination of such information and material from a diversity of cultural, national and international sources;

(c) Encourage the production and dissemination of children's books;

(d) Encourage the mass media to have particular regard to the linguistic needs of the child who belongs to a minority group or who is indigenous;

(e) Encourage the development of appropriate guidelines for the protection of the child from information and material injurious to his or her well-being, bearing in mind the provisions of articles 13 and 18.

Article 18

1. States Parties shall use their best efforts to ensure recognition of the principle that both parents have common responsibilities for the upbringing and development of the child. Parents or, as the case may be, legal guardians, have the primary responsibility for the upbringing and development of the child. The best interests of the child will be their basic concern.

2. For the purpose of guaranteeing and promoting the rights set forth in the present Convention, States Parties shall render appropriate assistance to parents and legal guardians in the performance of their child-rearing responsibilities and shall ensure the development of institutions, facilities and services for the care of children.

3. States Parties shall take all appropriate measures to ensure that children of working parents have the right to benefit from child-care services and facilities for which they are eligible.

Article 19

1. States Parties shall take all appropriate legislative, administrative, social and educational measures to protect the child from all forms of physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation, including sexual abuse, while in the care of parent(s), legal guardian(s) or any other person who has the care of the child.

2. Such protective measures should, as appropriate, include effective procedures for the establishment of social programmes to provide necessary support for the child and for those who have the care of the child, as well as for other forms of prevention and for identification, reporting, referral, investigation, treatment and follow-up of instances of child maltreatment described heretofore, and, as appropriate, for judicial involvement.

Article 20

1. A child temporarily or permanently deprived of his or her family environment, or in whose own best interests cannot be allowed to remain in that environment, shall be entitled to special protection and assistance provided by the State.

2. States Parties shall in accordance with their national laws ensure alternative care for such a child.

3. Such care could include, inter alia, foster placement, kafalah of Islamic law, adoption or if necessary placement in suitable institutions for the care of children. When considering solutions, due regard shall be paid to the desirability of continuity in a child's upbringing and to the child's ethnic, religious, cultural and linguistic background.

Article 21

States Parties that recognize and/or permit the system of adoption shall ensure that the best interests of the child shall be the paramount consideration and they shall:

(a) Ensure that the adoption of a child is authorized only by competent authorities who determine, in accordance with applicable law and procedures and on the basis of all pertinent and reliable information, that the adoption is permissible in view of the child's status concerning parents, relatives and legal guardians and that, if required, the persons concerned have given their informed consent to the adoption on the basis of such counselling as may be necessary;

(b) Recognize that inter-country adoption may be considered as an alternative means of child's care, if the child cannot be placed in a foster or an adoptive family or cannot in any suitable manner be cared for in the child's country of origin;

(c) Ensure that the child concerned by inter-country adoption enjoys safeguards and standards equivalent to those existing in the case of national adoption;

(d) Take all appropriate measures to ensure that, in inter-country adoption, the placement does not result in improper financial gain for those involved in it;

(e) Promote, where appropriate, the objectives of the present article by concluding bilateral or multilateral arrangements or agreements, and endeavour, within this framework, to ensure that the placement of the child in another country is carried out by competent authorities or organs.

Article 22

1. States Parties shall take appropriate measures to ensure that a child who is seeking refugee status or who is considered a refugee in accordance with applicable international or domestic law and procedures shall, whether unaccompanied or accompanied by his or her parents or by any other person, receive appropriate protection and humanitarian assistance in the enjoyment of applicable rights set forth in the present Convention and in other international human rights or humanitarian instruments to which the said States are Parties.

2. For this purpose, States Parties shall provide, as they consider appropriate, co-operation in any efforts by the United Nations and other competent intergovernmental organizations or non-governmental organizations co-operating with the United Nations to protect and assist such a child and to trace the parents or other members of the family of any refugee child in order to obtain information necessary for reunification with his or her family. In cases where no parents or other members of the family can be found, the child shall be accorded the same protection as any other child permanently or temporarily deprived of his or her family environment for any reason , as set forth in the present Convention.

Article 23

1. States Parties recognize that a mentally or physically disabled child should enjoy a full and decent life, in conditions which ensure dignity, promote self-reliance and facilitate the child's active participation in the community.

2. States Parties recognize the right of the disabled child to special care and shall encourage and ensure the extension, subject to available resources, to the eligible child and those responsible for his or her care, of assistance for which application is made and which is appropriate to the child's condition and to the circumstances of the parents or others caring for the child.

3. Recognizing the special needs of a disabled child, assistance extended in accordance with paragraph 2 of the present article shall be provided free of charge, whenever possible, taking into account the financial resources of the parents or others caring for the child, and shall be designed to ensure that the disabled child has effective access to and receives education, training, health care services, rehabilitation services, preparation for employment and recreation opportunities in a manner conducive to the child's achieving the fullest possible social integration and individual development, including his or her cultural and spiritual development

4. States Parties shall promote, in the spirit of international cooperation, the exchange of appropriate information in the field of preventive health care and of medical, psychological and functional treatment of disabled children, including dissemination of and access to information concerning methods of rehabilitation, education and vocational services, with the aim of enabling States Parties to improve their capabilities and skills and to widen their experience in these areas. In this regard, particular account shall be taken of the needs of developing countries.

Article 24

1. States Parties recognize the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health. States Parties shall strive to ensure that no child is deprived of his or her right of access to such health care services.

2. States Parties shall pursue full implementation of this right and, in particular, shall take appropriate measures:

(a) To diminish infant and child mortality;

(b) To ensure the provision of necessary medical assistance and health care to all children with emphasis on the development of primary health care;

(c) To combat disease and malnutrition, including within the framework of primary health care, through, inter alia, the application of readily available technology and through the provision of adequate nutritious foods and clean drinking-water, taking into consideration the dangers and risks of environmental pollution;

(d) To ensure appropriate pre-natal and post-natal health care for mothers;

(e) To ensure that all segments of society, in particular parents and children, are informed, have access to education and are supported in the use of basic knowledge of child health and nutrition, the advantages of breastfeeding, hygiene and environmental sanitation and the prevention of accidents;

(f) To develop preventive health care, guidance for parents and family planning education and services.

3. States Parties shall take all effective and appropriate measures with a view to abolishing traditional practices prejudicial to the health of children.

4. States Parties undertake to promote and encourage international co-operation with a view to achieving progressively the full realization of the right recognized in the present article. In this regard, particular account shall be taken of the needs of developing countries.

Article 25

States Parties recognize the right of a child who has been placed by the competent authorities for the purposes of care, protection or treatment of his or her physical or mental health, to a periodic review of the treatment provided to the child and all other circumstances relevant to his or her placement.

Article 26

1. States Parties shall recognize for every child the right to benefit from social security, including social insurance, and shall take the necessary measures to achieve the full realization of this right in accordance with their national law.

2. The benefits should, where appropriate, be granted, taking into account the resources and the circumstances of the child and persons having responsibility for the maintenance of the child, as well as any other consideration relevant to an application for benefits made by or on behalf of the child.

Article 27

1. States Parties recognize the right of every child to a standard of living adequate for the child's physical, mental, spiritual, moral and social development.

2. The parent(s) or others responsible for the child have the primary responsibility to secure, within their abilities and financial capacities, the conditions of living necessary for the child's development.

3. States Parties, in accordance with national conditions and within their means, shall take appropriate measures to assist parents and others responsible for the child to implement this right and shall in case of need provide material assistance and support programmes, particularly with regard to nutrition, clothing and housing.

4. States Parties shall take all appropriate measures to secure the recovery of maintenance for the child from the parents or other persons having financial responsibility for the child, both within the State Party and from abroad. In particular, where the person having financial responsibility for the child lives in a State different from that of the child, States Parties shall promote the accession to international agreements or the conclusion of such agreements, as well as the making of other appropriate arrangements.

Article 28

1. States Parties recognize the right of the child to education, and with a view to achieving this right progressively and on the basis of equal opportunity, they shall, in particular:

(a) Make primary education compulsory and available free to all;

(b) Encourage the development of different forms of secondary education, including general and vocational education, make them available and accessible to every child, and take appropriate measures such as the introduction of free education and offering financial assistance in case of need;

(c) Make higher education accessible to all on the basis of capacity by every appropriate means;

(d) Make educational and vocational information and guidance available and accessible to all children;

(e) Take measures to encourage regular attendance at schools and the reduction of drop-out rates.

2. States Parties shall take all appropriate measures to ensure that school discipline is administered in a manner consistent with the child's human dignity and in conformity with the present Convention.

3. States Parties shall promote and encourage international cooperation in matters relating to education, in particular with a view to contributing to the elimination of ignorance and illiteracy

throughout the world and facilitating access to scientific and technical knowledge and modern teaching methods. In this regard, particular account shall be taken of the needs of developing countries.

Article 29

1. States Parties agree that the education of the child shall be directed to:

(a) The development of the child's personality, talents and mental and physical abilities to their fullest potential;

(b) The development of respect for human rights and fundamental freedoms, and for the principles enshrined in the Charter of the United Nations;

(c) The development of respect for the child's parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may originate, and for civilizations different from his or her own;

(d) The preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin;

(e) The development of respect for the natural environment.

2. No part of the present article or article 28 shall be construed so as to interfere with the liberty of individuals and bodies to establish and direct educational institutions, subject always to the observance of the principle set forth in paragraph 1 of the present article and to the requirements that the education given in such institutions shall conform to such minimum standards as may be laid down by the State.

Article 30

In those States in which ethnic, religious or linguistic minorities or persons of indigenous origin exist, a child belonging to such a minority or who is indigenous shall not be denied the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practise his or her own religion, or to use his or her own language.

Article 31

1. States Parties recognize the right of the child to rest and leisure, to engage in play and recreational activities appropriate to the age of the child and to participate freely in cultural life and the arts.

2. States Parties shall respect and promote the right of the child to participate fully in cultural and artistic life and shall encourage the provision of appropriate and equal opportunities for cultural, artistic, recreational and leisure activity.

Article 32

1. States Parties recognize the right of the child to be protected from economic exploitation and from performing any work that is likely to be hazardous or to interfere with the child's education, or to be harmful to the child's health or physical, mental, spiritual, moral or social development.

2. States Parties shall take legislative, administrative, social and educational measures to ensure the implementation of the present article. To this end, and having regard to the relevant provisions of other international instruments, States Parties shall in particular:

(a) Provide for a minimum age or minimum ages for admission to employment;

(b) Provide for appropriate regulation of the hours and conditions of employment;

(c) Provide for appropriate penalties or other sanctions to ensure the effective enforcement of the present article.

Article 33

States Parties shall take all appropriate measures, including legislative, administrative, social and educational measures, to protect children from the illicit use of narcotic drugs and psychotropic substances as defined in the relevant international treaties, and to prevent the use of children in the illicit production and trafficking of such substances.

Article 34

States Parties undertake to protect the child from all forms of sexual exploitation and sexual abuse. For these purposes, States Parties shall in particular take all appropriate national, bilateral and multilateral measures to prevent:

(a) The inducement or coercion of a child to engage in any unlawful sexual activity;

(b) The exploitative use of children in prostitution or other unlawful sexual practices;

(c) The exploitative use of children in pornographic performances and materials.

Article 35

States Parties shall take all appropriate national, bilateral and multilateral measures to prevent the abduction of, the sale of or traffic in children for any purpose or in any form.

Article 36

States Parties shall protect the child against all other forms of exploitation prejudicial to any aspects of the child's welfare.

Article 37

States Parties shall ensure that:

(a) No child shall be subjected to torture or other cruel, inhuman or degrading treatment or punishment. Neither capital punishment nor life imprisonment without possibility of release shall be imposed for offences committed by persons below eighteen years of age;

(b) No child shall be deprived of his or her liberty unlawfully or arbitrarily. The arrest, detention or imprisonment of a child shall be in conformity with the law and shall be used only as a measure of last resort and for the shortest appropriate period of time;

(c) Every child deprived of liberty shall be treated with humanity and respect for the inherent dignity of the human person, and in a manner which takes into account the needs of persons of his or her age. In particular, every child deprived of liberty shall be separated from adults unless it is considered in the child's best interest not to do so and shall have the right to maintain contact with his or her family through correspondence and visits, save in exceptional circumstances;

(d) Every child deprived of his or her liberty shall have the right to prompt access to legal and other appropriate assistance, as well as the right to challenge the legality of the deprivation of his or her liberty before a court or other competent, independent and impartial authority, and to a prompt decision on any such action.

Article 38

1. States Parties undertake to respect and to ensure respect for rules of international humanitarian law applicable to them in armed conflicts which are relevant to the child.

2. States Parties shall take all feasible measures to ensure that persons who have not attained the age of fifteen years do not take a direct part in hostilities.

3. States Parties shall refrain from recruiting any person who has not attained the age of fifteen years into their armed forces. In recruiting among those persons who have attained the age of fifteen years but who have not attained the age of eighteen years, States Parties shall endeavour to give priority to those who are oldest.

4. In accordance with their obligations under international humanitarian law to protect the civilian population in armed conflicts, States Parties shall take all feasible measures to ensure protection and care of children who are affected by an armed conflict.

Article 39

States Parties shall take all appropriate measures to promote physical and psychological recovery and social reintegration of a child victim of: any form of neglect, exploitation, or abuse; torture or any other form of cruel, inhuman or degrading treatment or punishment; or armed conflicts. Such recovery and reintegration shall take place in an environment which fosters the health, self-respect and dignity of the child.

Article 40

1. States Parties recognize the right of every child alleged as, accused of, or recognized as having infringed the penal law to be treated in a manner consistent with the promotion of the child's sense of dignity and worth, which reinforces the child's respect for the human rights and fundamental freedoms of others and which takes into account the child's age and the desirability of promoting the child's reintegration and the child's assuming a constructive role in society.

2. To this end, and having regard to the relevant provisions of international instruments, States Parties shall, in particular, ensure that:

(a) No child shall be alleged as, be accused of, or recognized as having infringed the penal law by reason of acts or omissions that were not prohibited by national or international law at the time they were committed;

(b) Every child alleged as or accused of having infringed the penal law has at least the following guarantees:

(i) To be presumed innocent until proven guilty according to law;

(ii) To be informed promptly and directly of the charges against him or her, and, if appropriate, through his or her parents or legal guardians, and to have legal or other appropriate assistance in the preparation and presentation of his or her defence;

(iii) To have the matter determined without delay by a competent, independent and impartial authority or judicial body in a fair hearing according to law, in the presence of legal or other appropriate assistance and, unless it is considered not to be in the best interest of the child, in particular, taking into account his or her age or situation, his or her parents or legal guardians;

(iv) Not to be compelled to give testimony or to confess guilt; to examine or have examined adverse witnesses and to obtain the participation and examination of witnesses on his or her behalf under conditions of equality;

(v) If considered to have infringed the penal law, to have this decision and any measures imposed in consequence thereof reviewed by a higher competent, independent and impartial authority or judicial body according to law;

(vi) To have the free assistance of an interpreter if the child cannot understand or speak the language used;

(vii) To have his or her privacy fully respected at all stages of the proceedings.

3. States Parties shall seek to promote the establishment of laws, procedures, authorities and institutions specifically applicable to children alleged as, accused of, or recognized as having infringed the penal law, and, in particular:

(a) The establishment of a minimum age below which children shall be presumed not to have the capacity to infringe the penal law;

(b) Whenever appropriate and desirable, measures for dealing with such children without resorting to judicial proceedings, providing that human rights and legal safeguards are fully respected. 4. A variety of dispositions, such as care, guidance and supervision orders; counselling; probation; foster care; education and vocational training programmes and other alternatives to institutional care shall be available to ensure that children are dealt with in a manner appropriate to their well-being and proportionate both to their circumstances and the offence.

Article 41

Nothing in the present Convention shall affect any provisions which are more conducive to the realization of the rights of the child and which may be contained in:

(a) The law of a State party; or

(b) International law in force for that State.

PART II

Article 42

States Parties undertake to make the principles and provisions of the Convention widely known, by appropriate and active means, to adults and children alike.

Article 43

1. For the purpose of examining the progress made by States Parties in achieving the realization of the obligations undertaken in the present Convention, there shall be established a Committee on the Rights of the Child, which shall carry out the functions hereinafter provided.

2. The Committee shall consist of ten experts of high moral standing and recognized competence in the field covered by this Convention. The members of the Committee shall be elected by States Parties from among their nationals and shall serve in their personal capacity, consideration being given to equitable geographical distribution, as well as to the principal legal systems.

3. The members of the Committee shall be elected by secret ballot from a list of persons nominated by States Parties. Each State Party may nominate one person from among its own nationals.

4. The initial election to the Committee shall be held no later than six months after the date of the entry into force of the present Convention and thereafter every second year. At least four months before the date of each election, the Secretary-General of the United Nations shall address a letter to States Parties inviting them to submit their nominations within two months. The Secretary-General shall subsequently prepare a list in alphabetical order of all persons thus nominated, indicating States Parties which have nominated them, and shall submit it to the States Parties to the present Convention.

5. The elections shall be held at meetings of States Parties convened by the Secretary-General at United Nations Headquarters. At those meetings, for which two thirds of States Parties shall constitute

a quorum, the persons elected to the Committee shall be those who obtain the largest number of votes and an absolute majority of the votes of the representatives of States Parties present and voting.

6. The members of the Committee shall be elected for a term of four years. They shall be eligible for re-election if renominated. The term of five of the members elected at the first election shall expire at the end of two years; immediately after the first election, the names of these five members shall be chosen by lot by the Chairman of the meeting.

7. If a member of the Committee dies or resigns or declares that for any other cause he or she can no longer perform the duties of the Committee, the State Party which nominated the member shall appoint another expert from among its nationals to serve for the remainder of the term, subject to the approval of the Committee.

8. The Committee shall establish its own rules of procedure.

9. The Committee shall elect its officers for a period of two years.

10. The meetings of the Committee shall normally be held at United Nations Headquarters or at any other convenient place as determined by the Committee. The Committee shall normally meet annually. The duration of the meetings of the Committee shall be determined, and reviewed, if necessary, by a meeting of the States Parties to the present Convention, subject to the approval of the General Assembly.

11. The Secretary-General of the United Nations shall provide the necessary staff and facilities for the effective performance of the functions of the Committee under the present Convention.

12. With the approval of the General Assembly, the members of the Committee established under the present Convention shall receive emoluments from United Nations resources on such terms and conditions as the Assembly may decide.

Article 44

1. States Parties undertake to submit to the Committee, through the Secretary-General of the United Nations, reports on the measures they have adopted which give effect to the rights recognized herein and on the progress made on the enjoyment of those rights

(a) Within two years of the entry into force of the Convention for the State Party concerned;

(b) Thereafter every five years.

2. Reports made under the present article shall indicate factors and difficulties, if any, affecting the degree of fulfilment of the obligations under the present Convention. Reports shall also contain sufficient information to provide the Committee with a comprehensive understanding of the implementation of the Convention in the country concerned.

3. A State Party which has submitted a comprehensive initial report to the Committee need not, in its subsequent reports submitted in accordance with paragraph 1 (b) of the present article, repeat basic information previously provided.

4. The Committee may request from States Parties further information relevant to the implementation of the Convention.

5. The Committee shall submit to the General Assembly, through the Economic and Social Council, every two years, reports on its activities.

6. States Parties shall make their reports widely available to the public in their own countries.

Article 45

In order to foster the effective implementation of the Convention and to encourage international co-operation in the field covered by the Convention:

(a) The specialized agencies, the United Nations Children's Fund, and other United Nations organs shall be entitled to be represented at the consideration of the implementation of such provisions of the present Convention as fall within the scope of their mandate. The Committee may invite the specialized agencies, the United Nations Children's Fund and other competent bodies as it may consider appropriate to provide expert advice on the implementation of the Convention in areas falling within the scope of their respective mandates. The Committee may invite the specialized agencies, the United Nations Children's Fund, and other United Nations organs to submit reports on the implementation of the Convention in areas falling within the scope of their activities;

(b) The Committee shall transmit, as it may consider appropriate, to the specialized agencies, the United Nations Children's Fund and other competent bodies, any reports from States Parties that contain a request, or indicate a need, for technical advice or assistance, along with the Committee's observations and suggestions, if any, on these requests or indications;

(c) The Committee may recommend to the General Assembly to request the Secretary-General to undertake on its behalf studies on specific issues relating to the rights of the child;

(d) The Committee may make suggestions and general recommendations based on information received pursuant to articles 44 and 45 of the present Convention. Such suggestions and general recommendations shall be transmitted to any State Party concerned and reported to the General Assembly, together with comments, if any, from States Parties.

PART III

Article 46

The present Convention shall be open for signature by all States.

Article 47

The present Convention is subject to ratification. Instruments of ratification shall be deposited with the Secretary-General of the United Nations.

Article 48

The present Convention shall remain open for accession by any State. The instruments of accession shall be deposited with the Secretary-General of the United Nations.

Article 49

1. The present Convention shall enter into force on the thirtieth day following the date of deposit with the Secretary-General of the United Nations of the twentieth instrument of ratification or accession.

2. For each State ratifying or acceding to the Convention after the deposit of the twentieth instrument of ratification or accession, the Convention shall enter into force on the thirtieth day after the deposit by such State of its instrument of ratification or accession.

Article 50

1. Any State Party may propose an amendment and file it with the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to States Parties, with a request that they indicate whether they favour a conference of States Parties for the purpose of considering and voting upon the proposals. In the event that, within four months from the date of such communication, at least one third of the States Parties favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations. Any

amendment adopted by a majority of States Parties present and voting at the conference shall be submitted to the General Assembly for approval.

2. An amendment adopted in accordance with paragraph 1 of the present article shall enter into force when it has been approved by the General Assembly of the United Nations and accepted by a two-thirds majority of States Parties.

3. When an amendment enters into force, it shall be binding on those States Parties which have accepted it, other States Parties still being bound by the provisions of the present Convention and any earlier amendments which they have accepted.

Article 51

1. The Secretary-General of the United Nations shall receive and circulate to all States the text of reservations made by States at the time of ratification or accession.

2. A reservation incompatible with the object and purpose of the present Convention shall not be permitted.

3. Reservations may be withdrawn at any time by notification to that effect addressed to the Secretary-General of the United Nations, who shall then inform all States. Such notification shall take effect on the date on which it is received by the Secretary-General

Article 52

A State Party may denounce the present Convention by written notification to the Secretary-General of the United Nations. Denunciation becomes effective one year after the date of receipt of the notification by the Secretary-General.

Article 53

The Secretary-General of the United Nations is designated as the depositary of the present Convention.

Article 54

The original of the present Convention, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited with the Secretary-General of the United Nations. IN WITNESS THEREOF the undersigned plenipotentiaries, being duly authorized thereto by their respective governments, have signed the present Convention.

ΤΑ ΔΙΚΑΙΩΜΑΤΑ ΤΩΝ ΠΑΙΔΙΩΝ ΣΥΜΦΩΝΑ ΜΕ ΤΟ ΔΙΚΑΙΟ ΤΗΣ ΔΙΕΘΝΟΥΣ ΚΑΙ ΕΥΡΩΠΑΪΚΗΣ ΕΝΩΣΗΣ

Co-funded by the European Union's Rights, Equality and Citizenship Programme (2014-2020)

02 κεφάλαιο

Στόχοι:

- ✓ Η απόκτηση γνώσης σχετικά με τα θεμελιώδη δικαιώματα και τις που θεσπίζονται από το διεθνές και ευρωπαϊκό νομικό πλαίσιο και αφορούν τα δικαιώματα των παιδιών, στα πλαίσια των οποίων μπορεί να εφαρμοστεί το η τεχνική TIC (Trauma informed Therapy)
- ✓ Η πλήρης κατανόηση των δικαιωμάτων συμμετοχής των παιδιών.

Τι ορίζουμε ως παιδί;

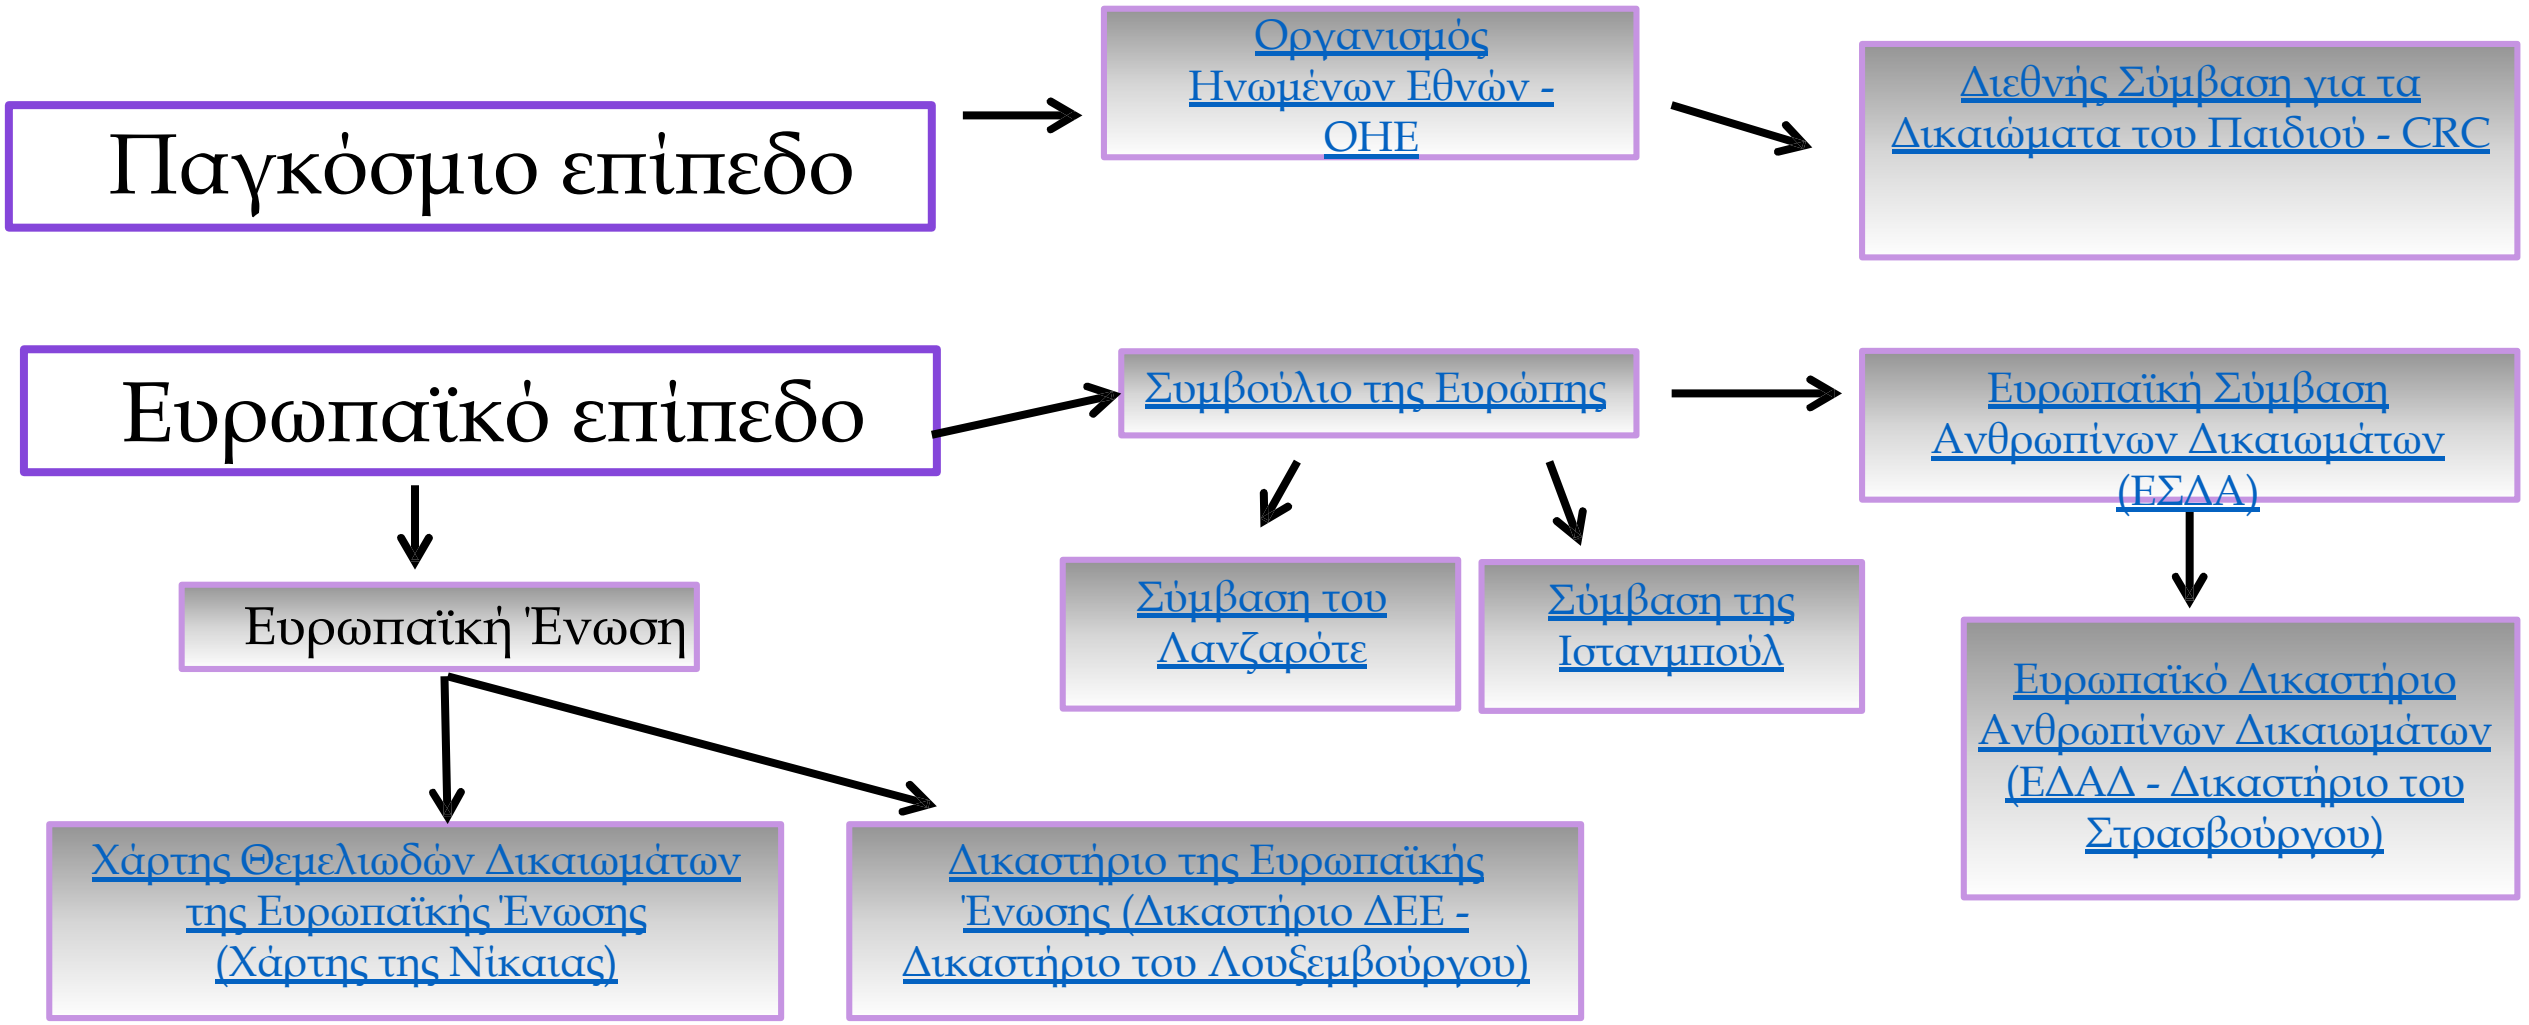
carepath

Η Διεθνής Σύμβαση για τα Δικαιώματα του Παιδιού (CRC) ορίζει ότι "παιδί ορίζεται κάθε άνθρωπος ηλικίας κάτω των δεκαοκτώ ετών" (άρθρο 1).

Ομοίως, τα περισσότερα όργανα του Συμβουλίου της Ευρώπης σχετικά με το τι είναι παιδί, υιοθετούν τον ορισμό που έχει ορίσει η CRC.

Εντός της Ευρωπαϊκής Ένωσης δεν υπάρχει περιγραφή της έννοιας του "παιδιού" και ως εκ τούτου ο ορισμός της CRC χρησιμοποιείται ευρέως.

Νομικό Πλαίσιο



ΤΑ ΔΙΚΑΙΩΜΑΤΑ ΚΑΙ ΟΙ ΕΛΕΥΘΕΡΙΕΣ ΤΩΝ ΠΑΙΔΙΩΝ

Όλα τα άτομα, συμπεριλαμβανομένων των παιδιών, απολαμβάνουν ελευθεριών και δικαιωμάτων αναγνωρισμένων από νομικές πράξεις (συμβάσεις, συνθήκες, δηλώσεις) σχετικά με τα ανθρώπινα δικαιώματα, σύμφωνα με τον Χάρτη των Θεμελιωδών Δικαιωμάτων της Ευρωπαϊκής Ένωσης (Χάρτης της Νίκαιας) και την Ευρωπαϊκή Σύμβαση Ανθρωπίνων Δικαιωμάτων (ΕΣΔΑ)

ΘΕΜΕΛΙΩΔΗ ΔΙΚΑΙΩΜΑΤΑ ΚΑΙ ΕΛΕΥΘΕΡΙΕΣ

ΠΟΛΙΤΙΚΑ ΔΙΚΑΙΩΜΑΤΑ

ΟΙΚΟΝΟΜΙΚΑ, ΚΟΙΝΩΝΙΚΑ ΚΑΙ ΠΟΛΙΤΙΣΤΙΚΑ ΔΙΚΑΙΩΜΑΤΑ

ΕΛΕΥΘΕΡΙΕΣ ΚΑΙ ΘΕΜΕΛΙΩΔΗ ΠΟΛΙΤΙΚΑ ΔΙΚΑΙΩΜΑΤΑ

- Ονομάζονται δικαιώματα "πρώτης γενιάς" και θεωρούνται θεμελιώδη καθώς η παραβίαση τους βλάπτει εις βάθος την ζωή του ανθρώπου.
- Απαιτούν από τα κράτη να μην παρεμβαίνουν στην ιδιωτική σφαίρα του ατόμου και να συμμετέχουν ενεργά σε μια δραστηριότητα ώστε να εξασφαλίζεται η πραγματική απόλαυση ενός θεμελιώδους δικαιώματος

Για παράδειγμα, το δικαίωμα σεβασμού της οικογενειακής ζωής (άρθρο 8 ΕΣΔΑ) ζητά από τα κράτη να μην χωρίζουν τα παιδιά από τους γονείς τους, εκτός εάν αυτό είναι απολύτως απαραίτητο για την προστασία των ίδιων των παιδιών, αλλά και να λαμβάνουν μέτρα για την προώθηση της ανάπτυξης σχέσεων μεταξύ των γονέων και των παιδιών στηρίζοντας έτσι τον γονέα που δεν έχει την επιμέλεια ώστε να έχει πρόσβαση στο παιδί του και να ξεπερνά την αδικαιολόγητη αντίθεση του άλλου γονέα

Δικαίωμα σεβασμού για οικογενειακή ζωή

Ο καθένας έχει το δικαίωμα να απολαμβάνει την

"οικογενειακή ζωή" όπως βιώνεται στην πράξη

(για παράδειγμα, το παιδί έχει το δικαίωμα να μεγαλώσει στην οικογένεια και να διατηρήσει επαφή και με τους δύο γονείς σε περίπτωση χωρισμού).

- • Οδηγία για την καταπολέμηση της σεξουαλικής κακοποίησης και της σεξουαλικής εκμετάλλευσης παιδιών και της παιδικής πορνογραφίας (2011/93/ΕΕ)

Παράδειγμα 2: Μάρτυρας βίαιου γενονότος

Η βία δεν προκαλεί μόνο ζημιά όταν εκτελείται, αλλά και όταν τα παιδιά γίνονται μάρτυρες βίαιων επεισοδίων.

Με το να βλέπουν, να ακούν, να βιώνουν αγωνία, να γίνονται μάρτυρες συναισθηματικού βάρους, να επηρεάζονται και να συγκλονίζονται χωρίς να μπορούν να κάνουν τίποτα. Σημαίνει την έκθεση ενός παιδιού σε οποιαδήποτε μορφή κακομεταχείρισης που πραγματοποιείται μέσω πράξεων σωματικής, λεκτικής, ψυχολογικής, σεξουαλικής και οικονομικής βίας, σε πρόσωπα αναφοράς ή σε άλλα σημαντικά πρόσωπα από συναισθηματικής πλευράς στο οικιακό και το οικογενειακό περιβάλλον. Όλα αυτά μαρτυρούν βία.
Είναι ένα φαινόμενο που δεν έχει βγει ακόμη στην επιφάνεια, είναι σχεδόν «αόρατο», το οποίο χαρακτηρίζεται από πολλαπλά σημάδια, τα αποτελέσματα των οποίων μπορεί να είναι καταστροφικά για τη σωματική, γνωστική και συμπεριφορική ανάπτυξη των παιδιών
(Save the Children https://www.savethechildren.it/campagne/abbattiamo-il-muro-del-silenzio)

Τα παιδιά που γίνονται μάρτυρες μιας βίαιης πράξης υποφέρουν από αυτή

ΠΑΡΑΔΕΙΓΜΑ 3: Σωματική τιμωρία

Ως σωματικές τιμωρίες θεωρούνται:

- • κάθε τιμωρία για την οποία χρησιμοποιείται σωματική δύναμη ώστε να προκαλέσει έναν ορισμένο βαθμό πόνου ή συμφοράς, ανεξάρτητα από το πόσο μικρή είναι
- • εξίσου σκληρές και υποτιμητικές μορφές μη σωματικής τιμωρίας, για παράδειγμα, τιμωρίες που αποσκοπούν να δυσφημήσουν το παιδί, να το ταπεινώσουν, να το μειώσουν, να το καταστήσουν μισητό, να το καταστήσουν αποδιοπομπαίο τράγο, να το απειλήσουν, να το τρομοκρατήσουν ή να το κοροϊδέψουν (UN Committee on the Rights of the Child, General Comment n. 8 of 2006)

Άρθρα 19, 28, παρ. 2 και 37 CRC

Παράδειγμα 4 : Σεξουαλική κακοποίηση

Θεωρείται «σεξουαλική κακοποίηση» η συμμετοχή σε σεξουαλικές δραστηριότητες με ένα παιδί όπου:

- • γίνεται χρήση εξαναγκασμού, βίας ή απειλών, ή γίνεται κατάχρηση μιας αναγνωρισμένης θέσης εμπιστοσύνης, εξουσίας ή επιρροής πάνω στο παιδί, ακόμη
- και εντός της οικογένειας,
  • γίνεται κατάχρηση μιας ιδιαίτερα ευάλωτης κατάστασης του παιδιού, κυρίως λόγω ψυχικής ή σωματικής αναπηρίας ή κατάστασης εξάρτησης.

(Άρθρο 18, παράγραφος 1, Σύμβαση του Συμβουλίου της Ευρώπης για την προστασία των παιδιών από τη σεξουαλική εκμετάλλευση και τη σεξουαλική κακοποίηση - Σύμβαση Λανζαρότε)

ΟΙΚΟΝΟΜΙΚΑ, ΚΟΙΝΩΝΙΚΑ ΚΑΙ ΠΟΛΙΤΙΣΤΙΚΑ ΔΙΚΑΙΩΜΑΤΑ

Αντιπροσωπεύουν τα λεγόμενα δικαιώματα "δεύτερης γενιάς" που κάθε κράτος καλείται να διασφαλίσει προκειμένου να ξεπεράσει τις κοινωνικές ανισότητες, τις οικονομικές ανισορροπίες, τα μειονεκτήματα που προκαλούνται από τη φύση, την ηλικία κλπ

Η συγκεκριμένη ανάπτυξη και διασφάλιση τους γίνεται (δυστυχώς!) σταδιακά και ακολουθώντας τα οικονομικο-διαρθρωτικά προβλήματα που αντιμετωπίζει κάθε κράτος.

Δικαίωμα στην υγεία

"Η υγεία είναι μια κατάσταση πλήρους σωματικής, πνευματικής και κοινωνικής ευημερίας και όχι απλώς η απουσία ασθένειας ή αναπηρίας"

(Παγκόσμια Οργάνωση Υγείας (WHO), 1948)

Άρθρα αναφοράς:

- Άρθρο 25 Οικουμενική Διακύρηξη των Ανθρωπίνων Δικαιωμάτων
- Άρθρο 24, 25 and 26 CRC
- Άρθρο 2 (δικαίωμα στη ζωή) and άρθρο 3 (διακίωμα στη σωματική ακεραιότητα) ECHR
- Άρθρο 11 (Δικαίωμα στην προστασία της υγείας) and 13 (δικαίωμα κοινωνικής και ιατρικής βοήθειας) Ευρωπαϊκός Κοινωνικός Χάρτης (CSE)
- Άρθρο 6 Ευρωπαϊκή Σύμβαση για την Προστασία των Ανθρωπίνων Δικαιωμάτων και την Αξιοπρέπεια του Ανθρώπου όσον αφορά τις Εφαρμογές της Βιολογίας και της Ιατρικής, αποκαλούμενη ως "Σύμβαση του Οβιέδο"

Δικαίωμα στην εκπαίδευση

"Όλοι έχουν δικαίωμα στην εκπαίδευση. Η εκπαίδευση θα πρέπει να είναι ελεύθερη τουλάχιστον στη στοιχειώδη και θεμελιώδη της βαθμίδα. Η στοιχειώδης εκπαίδευση θα πρέπει να είναι υποχρεωτική. Η τεχνική και επαγγελματική εκπαίδευση καθίσταται διαθέσιμη στην ανώτερη εκπαίδευση και θα πρέπει να είναι εξίσου προσβάσιμη σε όλους, υπό ίσους όρους, ανάλογα με τις ικανότητες τους."

(Άρθρο 26 , Οικουμενική Διακύρηξη για τα Ανθρώπινα Δικαιώματα)

Το δικαίωμα στην εκπαίδευση δεν αναφέρεται στην εκμάθηση βασικών σχολικών θεμάτων αλλά θα πρέπει να εκλαμβάνεται με μια ευρύτερη έννοια. Η εκπαίδευση πρέπει να επιδιώκει την ανάπτυξη της προσωπικότητας του παιδιού, καθώς και των ψυχικών και σωματικών του ιδιοτήτων και στάσεων. (Άρθρο 29 CRC)

Handbook on European law relating to the rights of the child

Foreword

This handbook on European law relating to the rights of the child is jointly prepared by the European Union Agency for Fundamental Rights (FRA) and the Council of Europe together with the Registry of the European Court of Human Rights. It is the fourth in a series of handbooks on European law jointly prepared by our organisations. Previous handbooks were dedicated to European law relating to non-discrimination law, asylum, borders and immigration, and data protection.

We embarked on this new joint project in the context of the celebrations of the 25th anniversary of the United Nations Convention on the Rights of the Child – which all European states have ratified – to shed light on the role of European legal standards in securing the enjoyment by children of their universal rights.

Children are full-fledged holders of rights. This handbook thus aims to raise awareness and improve the knowledge of the legal standards that protect and promote these rights in Europe. The Treaty on European Union (TEU) sets forth the Union's obligation to promote the protection of the rights of the child. The Charter of Fundamental Rights of the European Union (EU), EU regulations and directives, as well as the jurisprudence of the Court of Justice of the EU (CJEU), have contributed to further determining the protection of the rights of children. In the Council of Europe, a large number of conventions focus on specific aspects of the protection of the rights of the child, ranging from their rights and safety in cyberspace to the adoption of children. These conventions contribute to enriching the protection granted to children under the European Convention on Human Rights and the European Social Charter, including the jurisprudence of the European Court of Human Rights (ECtHR) and the decisions of the European Committee of Social Rights (ECSR).

This handbook is designed for non-specialist legal professionals, judges, public prosecutors, child protection authorities, and other practitioners and organisations responsible for ensuring the legal protection of the rights of the child.

We would like to thank Prof. Ton Liefaard, LL.M. Simona Florescu, JD. Margaret Fine, Prof. Karl Hanson, Prof. Ursula Kilkelly, Dr. Roberta Ruggiero, Prof. Helen Stalford and Prof. Wouter Vandenhole for their contribution in drafting this handbook. We would also like to thank all those who provided input and support throughout its preparation.

FOREWORD 3

ACRONYMS 11

HOW TO USE THIS HANDBOOK 13

1 INTRODUCTION TO EUROPEAN CHILDREN'S RIGHTS LAW: CONTEXT AND KEY PRINCIPLES 15

1.1. Core concepts 17

Key point 17

1.1.1. Scope of European children's rights law 17

1.1.2. 'Child' as a holder of rights 17

1.2. Background to European children's rights law 19

1.2.1. European Union: development of children's rights law and the areas of protection covered 20

1.2.2. Council of Europe: development of children's rights law and the areas of protection covered 23

1.3. European children's rights law and the UN Convention on the Rights of the Child 26

Key point 26

1.4. Role of the European courts in interpreting and enforcing European children's rights 28

1.4.1. The Court of Justice of the European Union 28

1.4.2. The European Court of Human Rights 30

1.5. European Committee of Social Rights 31

2 BASIC CIVIL RIGHTS AND FREEDOMS 33

2.1. Freedom of thought, conscience and religion 35

Key points 35

2.1.1. The child's right to freedom of religion 35

2.2. Parents' rights and the freedom of religion of their children 37

2.3. Freedom of expression and information 39

Key points 39

2.4. Right to be heard 41

Key points 41

2.5. Right to freedom of assembly and association 44

Key points 44

3 EQUALITY AND NON-DISCRIMINATION 47
3.1. European non-discrimination law 48
Key points 48
3.2. Non-discrimination based on race or ethnic origin 51
Key points 51
3.3. Non-discrimination based on nationality and immigration status 54
Key points 54
3.4. Non-discrimination based on age 56
Key point 56
3.5. Non-discrimination based on other protected grounds 57
Key point 57
4 PERSONAL IDENTITY ISSUES 61
4.1. Birth registration and the right to a name 63
Key point 63
4.2. Right to personal identity 65
Key points 65
4.2.1. Establishing paternity 66
4.2.2. Establishing maternity: anonymous birth 68
4.3. Establishing one's origin: adoption 68
4.4. Identity theft 69
Key point 69
4.5. Right to citizenship 70
Key points 70
4.6. Identity of children belonging to national minorities 72
Key point 72
5 FAMILY LIFE 73
5.1. Right to respect for family life 75
Key points 75
5.2. Right of the child to be cared for by his/her parents 76
Key points 76
5.3. Right to maintain contact with both parents 78
Key points 78
5.4. Improper removal of children across borders – child abduction 86
Key points 86

6 ALTERNATIVE CARE TO FAMILY CARE AND ADOPTION 93
6.1. Alternative care: general principles 95
Key points 95
6.2. Placing children in alternative care 99
Key points 99
6.3. Adoption 104
Key points 104
7 CHILD PROTECTION AGAINST VIOLENCE AND EXPLOITATION 111
7.1. Violence at home, in schools or other settings 114
Key points 114
7.1.1. Scope of state responsibility 114
7.1.2. Corporal punishment 118
7.1.3. Sexual abuse 120
7.1.4. Domestic violence and child neglect 122
7.2. Child exploitation, pornography and grooming 124
Key points 124
7.2.1. Forced labour 124
7.2.2. Child trafficking 127
7.2.3. Child pornography and grooming 130
7.3. High risk groups 132
Key point 132
7.3.1. Children belonging to a minority 132
7.3.2. Children with disabilities 133
7.4. Missing children 134
8 ECONOMIC, SOCIAL AND CULTURAL RIGHTS AND ADEQUATE STANDARD OF LIVING 137
8.1. Approaches to economic, social and cultural rights 139
Key points 139
8.2. Right to education 141
Key points 141
8.2.1. Right to education of migrant children 144
8.3. Right to health 149
Key points 149
8.4. Right to housing 154
Key points 154

8.5. Right to an adequate standard of living and right to social security 157
Key points 157

9 MIGRATION AND ASYLUM 161
9.1. Entry and residence 164
Key points 164
9.2. Age assessment 166
Key points 166
9.3. Family reunification for separated children 168
Key points 168
9.4. Detention 171
Key points 171
9.5. Expulsion 174
Key points 174
9.6. Access to justice 178
Key point 178

10 CONSUMER AND PERSONAL DATA PROTECTION 181
10.1. Protection of children as consumers 183
Key points 183
10.1.1. Consumer rights 183
10.1.2. Unfair commercial practices on children 185
10.1.3. Products' safety 185
10.1.4. Clinical trials on children 186
10.1.5. Food intended for infants and young children 187
10.1.6. Toy safety 187
10.1.7. Children and advertising 188
10.2. Children and personal data protection 189
Key points 189
10.2.1. European data protection law 189

11 CHILDREN'S RIGHTS WITHIN CRIMINAL JUSTICE AND ALTERNATIVE (NON-JUDICIAL) PROCEEDINGS 195
11.1. Fair trial guarantees 197
Key points 197
11.1.1. Effective participation 202
11.1.2. Access to a lawyer 203

11.2. Rights of young offenders in relation to detention 205
Key points 205
11.2.1. Forms of detention (substantive and procedural guarantees) 206
11.2.2. Conditions of detention 209
11.2.3. Protection against abuse and ill-treatment 211
11.3. Protection of child victims and witnesses 212
Key point 212
FURTHER READING 219

How to use this handbook

This handbook provides an overview of the fundamental rights of children in the European Union (EU) and the Council of Europe (CoE) member states. It is broad in scope. It acknowledges children as beneficiaries of all human/fundamental rights, as well as subjects of special regulation given their specific characteristics. Children's rights is a cross-sectorial field of law. In this handbook the emphasis is on the areas of law which are of specific importance to children.

This handbook is designed to assist legal practitioners who are not specialised in the field of children's rights. It is intended for lawyers, judges, prosecutors, social workers and others working with national authorities, as well as non-governmental organisations (NGOs) and other bodies that may be confronted with legal questions relating to these subjects. It is a point of reference on both EU and CoE law related to these subject areas, explaining how each issue is regulated under EU law as well as under the European Convention on Human Rights (ECHR), the European Social Charter (ESC) and other instruments of the CoE. Each chapter first includes a single table of applicable law under the two separate European legal systems. Then the law under each system is presented consecutively in relation to each topic covered. This allows the reader to see where the two legal systems converge and where they differ. Where relevant, there are also references to the United Nations (UN) Convention on the Rights of the Child (CRC) and other international instruments.

Practitioners in non-EU states that are member states of the CoE and thereby parties to the ECHR can access the information relevant to their own country by going straight to the CoE sections. Practitioners in EU Member States will need to use both sections as those states are bound by both legal orders. For readers who need more information on a particular issue, a list of references to more specialised material can be found in the 'Further reading' section of the handbook.

ECHR law is presented through short references to selected European Court of Human Rights (ECtHR) cases related to the handbook topic covered. These have been chosen from existing ECtHR judgments and decisions on children's rights issues.

EU law is found in legislative measures that have been adopted, in relevant provisions of the Treaties and in particular in the Charter of Fundamental Rights

of the European Union, as interpreted in the case law of the Court of Justice of the European Union (CJEU – known before December 2009 as the European Court of Justice (ECJ)).

The case law described or cited in this handbook provides examples of an important body of both ECtHR and CJEU case law. The handbook includes, as far as possible given its limited scope and introductory nature, legal developments until 1 January 2015, although later developments have also been included when possible.

The handbook includes an introductory chapter, which briefly explains the role of the two legal systems as established by CoE and EU law, and contains 10 substantive chapters covering the following issues:

- civil rights and freedoms;
- equality;
- personal identity issues;
- family life;
- alternative care and adoption;
- child protection against violence and exploitation;
- economic, social and cultural rights;
- migration and asylum;
- consumer and data protection;
- children's rights within criminal justice and alternative proceedings.

Each chapter covers a distinct subject while cross-references to other topics and chapters provide a fuller understanding of the applicable legal framework. Key points are presented at the beginning of each section.

1 Introduction to European children's rights law: context and key principles

EU	Issues covered	CoE
Free Movement Directive (2004/38/EC), Article 2 (2) (c)	'Child' as a holder of rights	Convention on Action against Trafficking in Human Beings, Article 4 (d) Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention), Article 3 (a) ECtHR, *Marckx v. Belgium*, No. 6833/74, 1979 (the applicant child was six years old when the Court delivered judgment)
Young Workers Directive (94/33/EC), Article 3	Protection of young people at work	ESC (revised), Article 7 (right of children and young persons to protection)
Charter of Fundamental Rights, Article 14 (2) (right to education)	Right to receive free compulsory education	
Charter of Fundamental Rights, Article 21 (non-discrimination)	Prohibition of discrimination on grounds of age	
Charter of Fundamental Rights, Article 32 (prohibition of child labour and protection of young people at work) Directive on combating the sexual abuse and sexual exploitation of children and child pornography (2011/93/EU) Anti-Trafficking Directive (2011/36/EU)	Prohibition of exploitative child labour	ESC (revised), Article 7 (right of children and young persons to protection)

EU	Issues covered	CoE

London Borough of Lambeth and Secretary of State for the Home Department*, 2010	Freedom of movement	

This introductory chapter explains how children's rights law has developed at the European level, which key principles guide its application, and which key aspects of children's rights European law addresses. It sets the background for the subject-specific analysis of the following chapters.

1.1. Core concepts

Key point

- European children's rights law builds on existing measures at the national and international level.

1.1.1. Scope of European children's rights law

In referring to 'European children's rights law', the focus is on primary sources of law (treaties, conventions, secondary legislation and case law) introduced by the Council of Europe (CoE) and the European Union (EU). Where relevant, reference is made to other European sources that influence the development of European children's rights law, including key policy documents, guidelines or other non-binding/soft-law instruments.

Children are holders of rights, rather than just objects of protection. They are beneficiaries of all human/fundamental rights and subjects of special regulations, given their specific characteristics. Much European case law derives from litigation initiated by parents or other legal representatives of children, given the limited legal capacity of children. While this handbook aims to illustrate how the law accommodates the specific interests and needs of children, it also illustrates the importance of parents/guardians or other legal representatives and makes reference, where appropriate, to where rights and responsibilities are most prominently vested in children's carers. In such instances, the United Nations (UN) Convention on the Rights of the Child (CRC)[1] approach is adopted, namely that parental responsibilities need to be exercised with the best interests of the child as their primary concern and in a manner consistent with the evolving capacities of the child.

1.1.2. 'Child' as a holder of rights

Under international law, the CRC establishes in its Article 1 that "a child means every human being below the age of eighteen years". This is the legal parameter currently used, also in Europe, to define what a child is.

1 UN, General Assembly (1989), Convention on the Rights of the Child, 20 November 1989.

Under EU law, there is no single, formal definition of 'child' set out in any of the treaties, their subordinate legislation or case law. The definition of a child can vary considerably under EU law, depending on the regulatory context. For example, EU law governing the free movement rights of EU citizens and their family members defines 'children' as "direct descendants who are under the age of 21 or are dependent",[2] essentially endorsing a biological and economic notion as opposed to one based on minority.

Some EU laws ascribe different rights to children according to their age. Directive 94/33/EC on the protection of young people at work (Young Workers Directive),[3] for example, which regulates children's access to and conditions of formal employment across the EU Member States, distinguishes between 'young people' (a blanket term for all persons under the age of 18 years), 'adolescents' (any young person of at least 15 years of age, but less than 18 years of age – who is no longer subject to compulsory full-time schooling) and 'children' (defined as those under the age of 15 – who are largely prohibited from undertaking formal employment).

Other areas of EU law, particularly those areas in which EU action complements that of Member States (such as social security, immigration and education), defer to national law to determine who is a child. In these contexts the CRC definition is generally adopted.

Under CoE law, most instruments relating to children adopt the CRC definition of a child. Examples include Article 4 (d) of the Council of Europe Convention on Action against Trafficking in Human Beings[4] or Article 3 (a) of the Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention).[5]

2 Directive 2004/38/EC of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States amending Regulation (EEC) No. 1612/68 and repealing Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC, OJ L 158, 30 April 2004 and OJ L 158, 29 April 2004, Art. 2 (2) (c).

3 Directive 94/33/EC of 20 August 1994 on the protection of young people at work, OJ 1994 L 216, Art. 3.

4 Council of Europe, Convention on Action against Trafficking in Human Beings, CETS No. 197, 15 May 2005.

5 Council of Europe, Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse, CETS No. 201, 25 October 2007.

The European Convention on Human Rights (ECHR) does not contain a definition of a child, but its Article 1 obliges states to secure Convention rights to "everyone" within their jurisdiction. Article 14 of the ECHR guarantees the enjoyment of the rights set out in the Convention "without discrimination on any ground", including grounds of age.[6] The European Court of Human Rights (ECtHR) has accepted applications by and on behalf of children irrespective of their age.[7] In its jurisprudence, it has accepted the CRC definition of a child,[8] endorsing the "below the age of 18 years" notion.

The same applies to the European Social Charter (ESC) and its interpretation by the European Committee of Social Rights (ECSR).[9]

1.2. Background to European children's rights law

The majority of European children's rights law to date has been developed by the EU and the CoE. In addition to the UN, other international institutions, such as the Hague Conference on Private International Law, have also adopted important instruments that continue to inform the development of European law. Although these international frameworks have operated separately from one another, links are increasingly being drawn between them.[10] Inter-institutional cooperation is particularly strong between the CoE and the EU.

6 ECtHR, *Schwizgebel v. Switzerland*, No. 25762/07, 10 June 2010. See also FRA and ECtHR (2010), p. 102.

7 See, for example, ECtHR, *Marckx v. Belgium*, No. 6833/74, 13 June 1979, where the applicant child was six years old when the Court delivered the judgment.

8 ECtHR, *Güveç v. Turkey*, No. 70337/01, 20 January 2009; ECtHR, *Çoşelav v. Turkey*, No. 1413/07, 9 October 2012.

9 ECSR, *Defence for Children International (DCI) v. the Netherlands*, No. 47/2008, 20 October 2009, para. 25.

10 See, for instance, Chapter 5, which illustrates how EU family law regulating cross-border child abduction works with the Convention of 25 October 1980 on the Civil Aspects of International Child Abduction (Hague Child Abduction Convention).

1.2.1. European Union: development of children's rights law and the areas of protection covered

In the past, children's rights developed in the EU in a piecemeal fashion. Historically, European child law was largely aimed at addressing specific child-related aspects of broader economic and politically driven initiatives, for example in the field of consumer protection[11] and the free movement of persons.[12] More recently, however, children's rights have been addressed as part of a more coordinated EU agenda, based on three key milestones:

- the introduction of the Charter of Fundamental Rights of the European Union;
- the entry into force of the Treaty of Lisbon in December 2009;
- the adoption of the European Commission Communication on a special place for children in EU external action, and of the Council EU Guidelines for the promotion and protection of the rights of the child.

The first milestone was the introduction of the EU Charter of Fundamental Rights in 2000.[13] With the entry into force of the Treaty of Lisbon, on 1 December 2009, the Charter enjoys the same legal status as the EU treaties (Article 6 of the Treaty on European Union (TEU)). It obliges the EU and its Member States to protect the rights enshrined in it when implementing EU law. The EU Charter of Fundamental Rights contains the first detailed references to children's rights at the EU constitutional level, including through the recognition of children's right to receive free compulsory education (Article 14 (2)), a prohibition of discrimination on grounds of age (Article 21), and a prohibition of exploitative child labour (Article 32). Significantly, the Charter contains a dedicated provision on children's rights (Article 24). This articulates three key children's rights principles: the right to express their views freely in accordance with their age and maturity (Article 24 (1)); the right to have their best interests taken as

11 For example, Directive 2009/48/EC of the European Parliament and of the Council of 18 June 2009 on the safety of toys, OJ 2009 L 170, which enforces safety measures for children's toys.

12 For example, Directive 2004/38/EC.

13 EU (2012), Charter of Fundamental Rights of the European Union, OJ 2012 C 326.

a primary consideration in all actions relating to them (Article 24 (2)); and the right to maintain on a regular basis a personal relationship and direct contact with both parents (Article 24 (3)).

The second key milestone was the Lisbon Treaty, which, as noted above, entered into force on 1 December 2009.[14] This instrument made important institutional, procedural and constitutional changes to the EU by amending the TEU and the former European Community Treaty (now the Treaty on the Functioning of the European Union (TFEU)).[15] These changes enhanced the EU's potential to advance children's rights, not least by identifying the "protection of the rights of the child" as a general stated objective of the EU (Article 3 (3) of the TEU) and as an important aspect of the EU's external relations policy (Article 3 (5) of the TEU). More specific references to children are included within the TFEU as well, enabling the EU to enact legislative measures aimed at combating sexual exploitation and human trafficking (Article 79 (2) (d) and Article 83 (1)).

This has led to the adoption of the directives on combating child sexual abuse, child sexual exploitation and child pornography,[16] and on preventing and combating trafficking in human beings and protecting its victims,[17] which also contain provisions addressing specific needs of child victims. The more recent directive establishing minimum standards on the rights, support and protection of victims of crime similarly devotes many of its provisions to children.[18]

The third important milestone occurred at a more strategic, policy level, initially in the context of the EU's external cooperation agenda and latterly in relation to internal issue**s**. Specifically, the Council of the EU adopted 'EU Guidelines for the promotion and protection of the rights of the child'[19] and the European Commission adopted its Communication on *A special place*

14 EU (2007), Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community, signed at Lisbon, OJ 2007 C 306, pp. 1–271.

15 See consolidated versions of European Communities (2012), Treaty on European Union (TEU) and Treaty on the Functioning of the European Union (TFEU), OJ 2012 C 326.

16 Directive 2011/93/EU, OJ 2011 L 335, p. 1.

17 Directive 2011/36/EU, OJ 2011 L 101, p. 1.

18 Directive 2012/29/EU, OJ 2012 L 315, p. 57.

19 Council of the European Union (2007), *EU Guidelines for the promotion and protection of the rights of the child*, Brussels, 10 December 2007.

for children in EU external action[20] to mainstream children's rights into all EU activities with non-EU Member States. Similarly, in 2011, the European Commission adopted the EU Agenda for the rights of the child, setting out key priorities for the development of children's rights law and policy across the EU Member States.[21] The agenda also included the targeting of the legislative processes relevant to child protection, such as the aforementioned adoption of the directive on victim's rights.

Most recently, this has been complemented with the Commission's adoption of a comprehensive strategy to support Member States in addressing poverty and social exclusion through a range of early-years interventions (for children of pre-school and primary school age).[22] While this particular initiative, like the agenda, is not legally binding, both are significant insofar as they establish the blueprint for the EU's normative and methodological approach to children's rights law – a blueprint that is firmly associated with the CRC and located within an ethic of child protection, participation and non-discrimination.

The EU may legislate only where it has been given competence under the treaties (Articles 2 to 4 of the TFEU). As children's rights is a cross-sectorial field, EU competence needs to be determined on a case-by-case basis. To date, areas relevant for children's rights where the EU has extensively legislated are:

- data and consumer protection;
- asylum and migration;
- cooperation in civil and criminal matters.

Articles 6 (1) of the TEU and 51 (2) of the EU Charter of Fundamental Rights provide that the Charter does not extend the competences of the EU, nor does it modify or establish a new power or task for the EU. The Charter provisions

20 European Commission (2008), *A special place for children in EU external action: Communication from the Commission to the Council, the European Parliament, the European Economic And Social Committee and the Committee of the Regions*, COM (2008) 55 final, Brussels, 5 February 2008.

21 European Commission (2011), *An EU agenda for the rights of the child: Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions*, COM (2011) 0060 final, Brussels, 15 February 2011.

22 European Commission (2013), *Investing in children: breaking the cycle of disadvantage*, Recommendation 2013/112/EU, Brussels.

are addressed to the EU institutions and to Member States only when they are implementing EU law. While always binding on the EU, the Charter provisions become legally binding for the Member States only where they act within the scope of EU law.

Each of the following chapters includes a brief overview of the EU's competence in areas dealt with under the respective chapter.

1.2.2. Council of Europe: development of children's rights law and the areas of protection covered

In contrast to the EU, ever since its establishment, the CoE has a clear mandate to protect and promote human rights. Its primary human rights treaty, ratified by all CoE member states, is the Convention for the Protection of Human Rights and Fundamental Freedoms, or European Convention on Human Rights (ECHR), which contains specific references to children. The main ones are as follows: Article 5 (1) (d) provides for the lawful detention of a child for the purposes of educational supervision; Article 6 (1) restricts the right to a fair and public hearing where this is in the interest of juveniles; Article 2 of Protocol No. 1 provides for the right to education and requires states to respect parents' religious and philosophical convictions in the education of their children. Moreover, all the other general provisions of the ECHR are applicable to everyone, including children. Some have been shown to have particular relevance to children, namely Article 8, which guarantees the right to respect for private and family life, and Article 3, which prohibits torture, inhuman and degrading treatment and punishment. By using interpretative approaches that focus on the positive obligations inherent in the ECHR provisions, the ECtHR has developed a large body of case law dealing with children's rights, including frequent references to the CRC. That said, the ECtHR analyses applications on a case-by-case basis and therefore does not offer a comprehensive overview of children's rights under the ECHR.

The CoE's other main human rights treaty, the European Social Charter (ESC[23] – revised in 1996[24]), provides for the protection of social rights, with specific

23 Council of Europe, European Social Charter, CETS No. 35, 18 October 1961.

24 Council of Europe, European Social Charter (revised), CETS No. 163, 3 May 1996.

provision for children's rights. It contains two provisions of particular importance for children's rights. Article 7 sets out the obligation to protect children from economic exploitation. Article 17 requires states to take all appropriate and necessary measures designed to ensure that children receive the care, assistance, education and training they need (including free primary and secondary education), to protect children and young persons from negligence, violence or exploitation and to provide protection for children deprived of their family's support. Implementation of the ESC is overseen by the European Committee of Social Rights (ECSR), which is composed of independent experts who rule on the conformity of national law and practice with the ESC either by way of a collective complaints procedure or a national reporting procedure.

In addition, the CoE has adopted a number of treaties that address a range of specific children's rights issues. These include the:

- Convention on the Legal Status of Children born out of Wedlock;[25]
- Convention on the Adoption of Children, revised in 2008;[26]
- Convention on Contact Concerning Children;[27]
- Convention on the Exercise of Children's Rights;[28]
- Council of Europe Convention on Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention).[29]

Finally, at the policy level it is important to note that in 2006, the CoE launched its programme 'Building a Europe for and with Children' – a transversal plan of action for addressing children's rights issues, including the adoption of

25 Council of Europe, European Convention on the Legal Status of Children born out of Wedlock, CETS No. 85, 15 October 1975.

26 Council of Europe, Convention on the Adoption of Children (Revised), CETS No. 202, 27 November 2008.

27 Council of Europe, Convention on Contact concerning Children, CETS No. 192, 15 May 2003.

28 Council of Europe, European Convention on the Exercise of Children's Rights, CETS No. 160, 25 January 1996.

29 Council of Europe, Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse, CETS No. 201, 25 October 2007.

standard setting instruments across a range of areas.[30] Current priorities are focused on four key areas:[31]

- promoting child-friendly services and systems;
- eliminating all forms of violence against children;
- guaranteeing the rights of children in vulnerable situations;
- promoting child participation.

The principal aim of the CoE's children's rights programme is to support the implementation of international standards in the field of children's rights by all CoE member states, and in particular to promote the implementation of the CRC, highlighting its main principles: non-discrimination, the right to life and development, the best interests of the child as a primary consideration for decision-makers, and the right of children to be heard.[32]

The programme has overseen the adoption of several children's rights instruments offering practical guidance to complement binding European legal measures, including:

- Guidelines on child-friendly justice;[33]
- Guidelines on child-friendly healthcare;[34]
- Recommendation on integrated national strategies for the protection of children from violence;[35]

30 For more information, see http://www.coe.int/t/dg3/children/.

31 Council of Europe, Committee of Ministers (2011), Council of Europe Strategy for the Rights of the Child (2012–2015), CM (2011)171 final, 15 February 2012.

32 *Ibid.*

33 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*, 17 November 2010.

34 Council of Europe, Committee of Ministers (2011), *Guidelines on child-friendly health care*, 21 September 2011.

35 Council of Europe, Committee of Ministers (2009), Recommendation CM/Rec(2009)10 of the Committee of Ministers to member states on integrated national strategies for the protection of children from violence, 18 November 2009.

- Recommendation on children's rights and social services friendly to children and families;[36]

- Recommendation on participation of children and young people under the age of 18.[37]

In doing so, the programme has ensured that Europe is at the heart of standard-setting in children's rights and has also led the way, through various means, to ensure that children's voices are central to that process. The programme also aims to support the implementation of the ECHR and of the ESC and to promote other existing CoE legal instruments in relation to childhood (participation, protection and rights), youth and family.[38]

1.3. European children's rights law and the UN Convention on the Rights of the Child

Key point

- European children's rights law is largely based on the UN Convention on the Rights of the Child (CRC).

The fact that all EU and CoE member states are parties to the CRC gives the CRC important standing at the European level. It effectively imposes common legal obligations on European states with a knock-on effect on the way European institutions develop and apply children's rights.

In this way, the CRC has become the touchstone for the development of European children's rights law, with the result that the CoE and the EU increasingly draw on its influence. In particular, the integration of CRC principles and provisions into

36 Council of Europe, Committee of Ministers (2011), Recommendation Rec (2011)12 on children's rights and social services friendly to children and families, 16 November 2011.

37 Council of Europe, Committee of Ministers (2012), Recommendation Rec(2012)2 on the participation of children and young people under the age of 18, 28 March 2012.

38 Council of Europe, Committee of Ministers (2011), *Council of Europe Strategy for the Rights of the Child (2012–2015)*, CM (2011)171 final, 15 February 2012.

binding instruments and case law at the European level gives the CRC greater force, and opens up more effective channels of enforcement for those seeking to invoke children's rights in Europe. Specific examples of this are provided throughout this handbook.

The EU is not and cannot become a party to the CRC, since there is no legal mechanism within the CRC to allow entities other than states to accede to it. However, the EU relies on "general principles of EU law" (written and unwritten principles drawn from the common, constitutional traditions of the Member States) to supplement and guide interpretations of the EU Treaties (Article 6 (3) of the TEU). Court of Justice of the European Union (CJEU) rulings have confirmed that any obligation arising from EU membership should not conflict with Member States' obligations derived from their domestic constitutions and international human rights commitments.[39] As all EU Member States have ratified the CRC, the EU is bound to adhere to the principles and provisions enshrined therein, at least in relation to matters that fall within the scope of the EU's competence (as defined by the EU treaties).

This obligation is reinforced by other EU treaties and in particular by the EU Charter of Fundamental Rights. Article 24 of the Charter is directly inspired by CRC provisions, including some that have acquired the rank of 'CRC principles', notably the best interests of the child principle (Article 3 of the CRC), the child participation principle (Article 12 of the CRC) and the child's right to live with and/or enjoy a relationship with his or her parents (Article 9 of the CRC).

The importance of the CRC in guiding the development of EU children's rights is expressed in the Commission's Agenda for the Rights of the Child, which asserts that "the standards and principles of the UNCRC must continue to guide EU policies and actions that have an impact on the rights of the child".[40] In this spirit, child-related legislative instruments, almost without exception, are accompanied by either explicit reference to the CRC or more implicit reference to children's rights principles, such as 'best interests', the child's right to participate in decisions that affect him or her, or the right to be protected from discrimination.

39 For example CJEU, C-4/73, *J. Nold, Kohlen- und Baustoffgroßhandlung v. Commission of the European Communities*, 14 May 1974.

40 European Commission (2011), *An EU Agenda for the Rights of the Child*, COM (2011) 0060 final, Brussels.

The CoE, similarly to the EU, is not as an organisation legally bound to the CRC, although all CoE member states are individual parties to this convention. Nevertheless, the ECHR cannot be interpreted in a vacuum, but must instead be interpreted in harmony with the general principles of international law. Any relevant rules of international law applicable in the relations between the States Parties to the ECHR should be taken into account, in particular the rules concerning the universal protection of human rights. The obligations that the ECHR lays on its States Parties in the field of children's rights more specifically must be interpreted in light of the CRC.[41] The ECSR has also explicitly referred to the CRC in its decisions.[42] Moreover, the standard-setting and treaty-making activities of the CoE are influenced by CRC principles and provisions. For example, the *Guidelines on child friendly justice*[43] are directly informed by a range of CRC provisions, not to mention the accompanying General Comments of the UN Committee on the Rights of the Child.[44]

1.4. Role of the European courts in interpreting and enforcing European children's rights

1.4.1. The Court of Justice of the European Union

The CJEU issues decisions regarding many types of legal actions. In children's rights cases, the CJEU has so far mainly reviewed preliminary references (Article 267 of the TFEU).[45] These are procedures where a national court or tribunal asks the CJEU for an interpretation of primary EU law (i.e. treaties) or secondary

41 ECtHR, *Harroudj v. France*, No. 43631/09, 4 October 2012, para. 42.

42 ECSR, *World Organisation against Torture (OMCT) v. Ireland*, Complaint No. 18/2003, 7 December 2004, paras. 61–63; ECSR, *Defence for Children International (DCI) v. the Netherlands*, Complaint No. 47/2008, 20 October 2009.

43 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*, 17 November 2010.

44 See UN, Committee on the Rights of the Child (2007), *General Comment No. 10 (2007): Children's rights in juvenile justice*, CRC/C/GC/10, 25 April 2007; UN, Committee on the Rights of the Child (2009), *General Comment No. 12 (2009): The right of the child to be heard*, CRC/C/GC/12, 1 July 2009; and UN, Committee on the Rights of the Child (2013), *General Comment No. 14 (2013) on the right of the child to have his or her best interest taken as a primary consideration (art.3, para.1)*, CRC/C/GC/14, 29 May 2013.

45 The only exception is an action for annulment: CJEU, C-540/03, *European Parliament v. Council of the European Union* [GC], 27 June 2006.

EU law (i.e. decisions and legislation) that is of relevance to a national case pending before that national court or tribunal.

Until recent years, the CJEU had only adjudicated a few children's rights cases. With the adoption of more explicit children's rights legislative measures and a more prominent children's rights agenda, however, it is likely that children's rights will feature more regularly on the CJEU's listings in the future.

The CJEU has delivered most of its judgments concerning children's rights in the context of free movement and EU citizenship – areas in which the EU has enjoyed long-standing competence. Here the CJEU has expressly acknowledged that children enjoy the benefits associated with EU citizenship in their own right, thereby extending independent residence as well as both social and educational entitlement to children, on grounds of EU nationality.[46]

There is only one instance in which the CJEU directly used the CRC to determine how EU law should be interpreted in relation to children, namely in the *Dynamic Medien GmbH v. Avides Media AG* case. This case concerns the lawfulness of German labelling restrictions on imported DVDs and videos, which were already subject to similar controls in the United Kingdom. The CJEU concluded that the German labelling checks constituted a lawful restriction of the EU's free movement of goods provisions (which otherwise preclude double regulatory processes of this nature), given that they aimed to protect the welfare of children. The CJEU supported its decision by reference to Article 17 of the CRC, which encourages signatory states to develop appropriate guidelines for the protection of children from media-generated information and material injurious to their well-being.[47] Requirements of proportionality apply, however, with regard to the examination procedures established to protect children, which should be readily accessible, and possible to complete within a reasonable period.[48]

46 See CJEU, C-413/99, *Baumbast and R v. Secretary of State for the Home Department*, 17 September 2002; CJEU, C-200/02, *Kunqian Catherine Zhu and Man Lavette Chen v. Secretary of State for the Home Department*, 19 October 2004; CJEU, C-148/02, *Carlos Garcia Avello v. Belgian State*, 2 October 2003; CJEU, C-310/08, *London Borough of Harrow v. Nimco Hassan Ibrahim and Secretary of State for the Home Department* [GC], 23 February 2010; CJEU, C-480/08, *Maria Teixeira v. London Borough of Lambeth and Secretary of State for the Home Department*, 23 February 2010. These cases are revisited in Chapters 8 and 9.

47 CJEU, C-244/06, *Dynamic Medien Vertriebs GmbH v. Avides Media AG*, 14 February 2008, paras. 42 and 52.

48 *Ibid.*, paras. 49 and 50.

In other cases, the CJEU has alluded to general children's rights principles also encapsulated in CRC provisions (such as the child's best interests and the right to be heard) to inform its judgments, particularly in the context of cross-border child abduction cases.[49]

That aside, the EU has traditionally been circumspect in attaching decisive force to the CRC, particularly in more politically sensitive areas such as immigration control,[50] although this is changing in recent jurisprudence, as discussed in the chapters that follow. Since the adoption of the EU Charter of Fundamental Rights, CJEU references to its articles on children's rights often resonate with references to the CRC, given the similarity between provisions.

1.4.2. The European Court of Human Rights

The ECtHR mainly decides on individual applications lodged in accordance with Articles 34 and 35 of the ECHR. ECtHR jurisdiction extends to all matters concerning the interpretation and application of the ECHR and its Protocols (Article 32 of the ECHR).

In contrast to the CJEU, the ECtHR has a vast jurisprudence on children's rights. Although many cases under Article 8 of the ECHR on the right to respect for private and family life are considered from a parents' rather than children's rights perspective, cases under other substantive provisions do not necessarily involve parents and have a clearer focus on the rights of the children concerned, such as the right to protection from inhuman and degrading treatment (Article 3 of the ECHR) or the right to a fair trial (Article 6 of the ECHR).

Although the ECtHR often refers to the CRC when addressing claims pursued either by or on behalf of children, it does not systematically attach decisive weight to it. In some cases, the children's rights principles, as articulated by the CRC, have had a profound influence on the ECtHR's reasoning, notably as concerns the Court's interpretation of Article 6 of the ECHR (right to a fair trial) in relation to the treatment of children in conflict with the law (see Chapter 11). In other areas, the approach of the ECtHR may vary slightly from that of the CRC,

49 CJEU, C-491/10 PPU, *Joseba Andoni Aguirre Zarraga v. Simone Pelz*, 22 December 2010. See further Chapter 5.

50 CJEU, C-540/03, *European Parliament v. Council of the European Union* [GC], 27 June 2006.

for example as regards hearing children in court (see Chapter 2). And in some cases, the ECtHR has explicitly relied on the CRC.

> Example: *Maslov v. Austria*[51] concerns the deportation of the applicant, who had been convicted of a number of criminal offences as a minor. The ECtHR held that where expulsion measures against a juvenile offender were concerned, the obligation to take the best interests of the child into account included an obligation to facilitate the child's reintegration, in line with Article 40 of the CRC. In the ECtHR's view, reintegration would not be achieved by severing the child's family or social ties through expulsion.[52] The CRC is thus one of the grounds used to find that the expulsion was a disproportionate interference with the applicant's rights under Article 8 of the ECHR (respect for family life).

1.5. European Committee of Social Rights

The ECSR comprises 15 independent and impartial experts who rule on the conformity of national law and practice with the ESC, either through the collective complaints procedure or the national reporting procedure.[53] Designated national and international organisations can engage in collective complaints against states that are party to the ESC and have accepted the complaints procedure. To date, complaints have involved whether states have violated children's rights under the ESC on issues including the economic exploitation of children,[54] the physical integrity of children,[55] the health rights of migrant children[56] and access to education by children with disabilities.[57]

51 ECtHR, *Maslov v. Austria* [GC], No. 1638/03, 23 June 2008.

52 *Ibid.*, para. 83.

53 For more information, see the ECSR website: www.coe.int/t/dghl/monitoring/socialcharter/ECSR/ECSRdefault_en.asp.

54 ESCR, *International Commission of Jurists (ICJ) v. Portugal*, Complaint No. 1/1998, 9 September 1999.

55 ESCR, *World Organisation Against Torture (OMCT) v. Greece*, Complaint No. 17/2003, 7 December 2004.

56 ESCR, *Defence for Children International (DCI) v. Belgium*, Complaint No. 69/2011, 23 October 2012.

57 ECSR, *Mental Disability Advocacy Center (MDAC) v. Bulgaria*, Complaint No. 41/2007, 3 June 2008, para. 35.

Example: In *International Commission of Jurists (ICJ) v. Portugal*,[58] it was alleged that although Portuguese legislation respected the minimum age of 15 years for admission to employment established by Article 7 (1) of the ESC, it was not adequately enforced. The ECSR held that the aim and purpose of the ESC was to protect rights not only in theory but also in fact, and thus that legislation must be applied effectively. Noting that a large number of children were employed illegally in Portugal, it found this situation to be in violation of Article 7 (1) of the ESC.

All persons enjoy the civil rights and freedoms laid down in various instruments, most notably the EU Charter of Fundamental Rights and the European Convention on Human Rights (ECHR) as interpreted by the European Court of Human Rights (ECtHR). Other than the Charter, no EU legal instrument deals specifically with the civil rights discussed in this chapter as they apply to children. At CoE level, however, the scope and interpretation of these civil rights have been developed extensively over the years, in particular through ECtHR case law.

This chapter presents an overview of the freedoms listed in Title II of the EU Charter of Fundamental Rights insofar as they have an impact on children's rights. It analyses the right of the child to freedom of thought, conscience and religion (Section 2.1), to freedom of expression and information (Section 2.3), the child's right to be heard (Section 2.4), and the right to freedom of assembly and of association (Section 2.5).

2.1. Freedom of thought, conscience and religion

Key points

- Freedom of thought, conscience and religion, as guaranteed under the EU Charter of Fundamental Rights and the ECHR, includes the right to change religion or belief and the freedom to manifest religion or belief in worship, teaching, practice and observance.
- Parents have the right to ensure the education and teaching of their children in conformity with their religious, philosophical and pedagogical convictions.
- Parents have the right and duty to provide direction to the child in the exercise of the child's right to freedom of thought, conscience and religion in a manner consistent with the evolving capacities of the child.

2.1.1. The child's right to freedom of religion

Under EU law, Article 10 of the EU Charter of Fundamental Rights guarantees to everyone the freedom of thought, conscience and religion. This right includes the freedom to change one's religion or belief and the freedom, either alone or in community with others and in public or in private, to manifest one's religion or belief in worship, teaching, practice and observance. The right to conscientious objection is recognised in accordance with the national laws (Article 10 (2) of the Charter).

Under CoE law, Article 9 of the ECHR provides the right to freedom of thought, conscience and religion. Three dimensions of the right to freedom of religion have been distilled from the ECtHR's case law: the internal dimension; the freedom to change one's religion or belief; and the freedom to manifest one's religion or belief. The first two dimensions are absolute, and states may not limit them under any circumstance.[59] The freedom to manifest one's religion or belief may be limited if such limitations are prescribed by law, pursue a legitimate aim and are necessary in a democratic society (Article 9 (2) of the ECHR).

In its case law, the ECtHR has dealt with children's freedom of thought, conscience and religion, mainly in relation to the right to education and the state school system. A topic of much public debate in European countries is religion in schools.

59 ECtHR, *Darby v. Sweden*, No. 11581/85, 23 October 1990.

Example: The cases of *Dogru v. France* and *Kervanci v. France*[60] concern the exclusion from the first year of a French state secondary school of two girls, aged 11 and 12 years, as a result of their refusal to remove their headscarves during physical education classes. The ECtHR observed that the purpose of the restriction on the applicants' right to manifest their religious convictions was to adhere to the requirements of secularism in state schools. According to the national authorities, wearing a veil, such as the Islamic headscarf, was incompatible with sports classes for health and safety reasons. The ECtHR deemed this reasonable, as the school balanced the applicants' religious convictions against the requirements of protecting the rights and freedoms of others and the public order. Accordingly, it concluded that the interference with the freedom of the pupils to manifest their religion was justified and proportionate to the aim pursued. It therefore found no violation of Article 9 of the ECHR.

Example: The case *Grzelak v. Poland*[61] concerns the failure to provide a pupil excused from religious instruction with ethics classes and associated marks. During his entire schooling at primary and secondary level (between the ages of seven and 18 years), the applicant did not receive religious instruction, in conformity with the wishes of his parents, who were declared agnostics. As too few pupils were interested, no class in ethics was ever organised, and he received school reports and certificates that contained a straight line instead of a mark for 'religion/ethics'. According to the ECtHR, the absence of a mark for 'religion/ethics' on the boy's school reports fell within the ambit of the negative aspect of freedom of thought, conscience and religion, as the reports could point to his lack of religious affiliation. It therefore amounted to a form of unwarranted stigmatisation. The difference in treatment between non-believers who wished to follow ethics classes and pupils who followed religious classes was thus not objectively and reasonably justified, nor was there a reasonable relationship of proportionality between the means used and the aim pursued. The state's margin of appreciation was exceeded in this matter, as the very essence of the applicant's right not to manifest his religion or convictions was infringed, in violation of Article 14 of the ECHR taken in conjunction with Article 9 of the ECHR.

60 ECtHR, *Dogru v. France*, No. 27058/05, 4 December 2008; ECtHR, *Kervanci v. France*, No. 31645/04, 4 December 2008 (available in French).

61 ECtHR, *Grzelak v. Poland*, No. 7710/02, 15 June 2010.

2.2. Parents' rights and the freedom of religion of their children

The rights of parents in the context of the freedom of religion of their children are addressed differently in European law compared to the CRC.

Under EU law, due respect must be given to the right of parents to ensure the education and teaching of their children in conformity with their religious, philosophical and pedagogical convictions, in particular in the context of the freedom to found educational establishments (Article 14 (3) of the Charter).

Under CoE law, in particular Article 2 of Protocol No. 1 to the ECHR, states must take into account the parent's (religious) convictions in the exercise of every function they undertake in the sphere of education and teaching. According to the ECtHR, this duty is broad, as it applies not only to the content and implementation of school curricula, but also to the performance of all functions a state assumes.[62] It includes the organisation and financing of public education, the setting and planning of the curriculum, the conveying of information or knowledge included in the curriculum in an objective, critical and pluralistic manner (hence forbidding the state to pursue an aim of indoctrination that might be considered as not respecting parents' religious and philosophical convictions), as well as the organisation of the school environment, including the presence of crucifixes in state-school classrooms.

Example: The case *Lautsi and Others v. Italy*[63] concerns the display of crucifixes in state-school classrooms. A parent complained that the presence of crucifixes in the classrooms of the state school attended by her children infringed the principle of secularism according to which she sought to educate her children. The ECtHR Grand Chamber found that it was up to the state, as part of its functions in relation to education and teaching, to decide whether or not crucifixes should be present in state-school classrooms, and that this fell within the scope of the second

62 See the relevant ECtHR case law: ECtHR, *Kjeldsen, Busk Madsen and Pedersen v. Denmark*, Nos. 5095/71, 5920/72 and 5926/72, 7 December 1976; ECtHR, *Valsamis v. Greece*, No. 21787/93, 18 December 1996; ECtHR, *Folgerø and Others v. Norway* [GC], No. 15472/02, 29 June 2007; ECtHR, *Hasan and Eylem Zengin v. Turkey*, No. 1448/04, 9 October 2007; ECtHR, *Lautsi and Others v. Italy* [GC], No. 30814/06, 18 March 2011.

63 ECtHR, *Lautsi and Others v. Italy* [GC], No. 30814/06, 18 March 2011.

sentence of Article 2 of Protocol No. 1 to the ECHR. The Court argued that in principle this decision falls within the margin of appreciation of the respondent state, and that there is no European consensus on the presence of religious symbols in state schools. It is true that the presence of crucifixes in state-school classrooms – a sign which undoubtedly refers to Christianity – gives visible prominence in the school environment to a country's majority religion. However, this is not in itself sufficient to denote a process of indoctrination on the respondent state's part. In the ECtHR's view, a crucifix on a wall is an essentially passive symbol that cannot be deemed to have an influence on pupils comparable to that of speech or participation in religious activities. Accordingly, the Grand Chamber concluded that, in deciding to keep crucifixes in the state-school classrooms the applicant's children attended, the authorities had acted within the limits of their margin of appreciation and thus respected the right of parents to ensure education and teaching in conformity with their own religious and philosophical convictions.

Under international law, Article 14 (2) of the CRC requires States Parties to respect the rights and duties of parents to provide direction to their child in the exercise of his/her right to freedom of thought, conscience and religion in a manner consistent with the evolving capacities of the child. Thus, as opposed to Article 14 (3) of the EU Charter of Fundamental Rights, the CRC focuses on the exercise of the freedom of the child him/herself. Under the CRC, parents have the right to provide guidance and direction not in accordance with their own convictions, but in accordance with the convictions held by the children. The wording of Article 14 (2) of the CRC is in line with the CRC's general conception of parental responsibilities: that parental responsibilities must be exercised consistently with the evolving capacities of the child (Article 5 of the CRC), and based on the best interests of the child (Article 18 (1) of the CRC).

2.3. Freedom of expression and information

Key points

- Both the EU Charter of Fundamental Rights and the ECHR guarantee the right to freedom of expression, which includes the freedom to hold opinions and to receive and impart information and ideas without interference by public authorities.
- The right to freedom of information does not include the right of access to childcare records.
- Making access to childcare records dependent on the consent of the contributor of the information may be compatible with Article 8 (the right to respect for private and family life) of the ECHR, provided that an independent authority has the final say in deciding whether access should be granted.

Under EU law, the right to freedom of expression includes the freedom to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers (Article 11 of the EU Charter of Fundamental Rights).

Under CoE law, freedom of expression is guaranteed by Article 10 of the ECHR and may be limited only if the limitation is prescribed by law, pursues one of the legitimate aims listed in Article 10 (2) and is necessary in a democratic society.

In its case law, the ECtHR stressed that "[f]reedom of expression constitutes one of the essential foundations of [a democratic] society, one of the basic conditions for its progress and for the development of every man [...] it is applicable not only to 'information' or 'ideas' that are favourably received or regarded as inoffensive or as a matter of indifference, but also to those that offend, shock or disturb the State or any sector of the population".[64]

64 See, for example, ECtHR, *Handyside v. the United Kingdom*, No. 5493/72, 7 December 1976, para. 49.

Example: In *Handyside v. the United Kingdom*,[65] the ECtHR found that a ban imposed by the authorities on a book called *Little Red School Book* was in accordance with the exception laid down in Article 10 (2) of the ECHR on the protection of morals. The case deals with the right to receive information appropriate for a child's age and maturity – an aspect of the right to freedom of expression that is particularly relevant for children. The book, which was translated from Danish, was written for school-age children and questioned a series of social norms, including sexuality and drugs. Young people could interpret certain passages of the book at a critical stage of their development as an encouragement to indulge in precocious activities harmful for them or even to commit certain criminal offences. Therefore, according to the ECtHR, the competent English judges "were entitled, in the exercise of their discretion, to think at the relevant time that the book would have pernicious effects on the morals of many of the children and adolescents who would read it".[66]

Other child cases referencing Article 10 of the ECHR concern the right of access to information of children placed in care.

Example: The case *Gaskin v. the United Kingdom*[67] concerns a person who was placed in care for most of his childhood, during which period the local authority kept confidential records. These included various reports by medical practitioners, school teachers, police and probation officers, social workers, health visitors, foster parents and residential school staff. When the applicant sought access to those records for the purpose of proceeding for personal injuries against the local authority, he was refused. The confidentiality of such records had been warranted in the public interest for the proper operation of the childcare service, which would be jeopardised if contributors to the records were reluctant to be frank in their reports in the future. The ECtHR accepted that persons who were in state care as children had a vital interest "in receiving the information necessary to know and to understand their childhood and early development".[68] While the confidentiality of public records needs to be guaranteed, a system like the British one, which made access to records dependent on the consent of

65 *Ibid.*

66 *Ibid.*, para. 52.

67 ECtHR, *Gaskin v. the United Kingdom*, No. 10454/83, 7 July 1989.

68 *Ibid.*, para. 49.

the contributor, could in principle be compatible with Article 8 of the ECHR if the interests of the individual seeking access to records were secured when a contributor to the records was unavailable or improperly refused consent. In such a case, an independent authority should ultimately decide whether access should be granted. No such procedure was available to the applicant in the present case and the Court found a violation of the applicant's rights under Article 8 of the ECHR. The ECtHR, however, found no violation of Article 10 of the ECHR, reiterating that the right to freedom to receive information prohibits a government from restricting a person from receiving information that others wish or may be willing to impart, but does not oblige a state to impart the information in question to the individual.

2.4. Right to be heard

Key points

- Under EU law, children have the right to express their views freely. Their views shall be taken into consideration on matters which concern them in accordance with their age and maturity.
- Under the ECHR, there is no absolute requirement to hear a child in court. Whether or not to do so has to be assessed in light of the specific circumstances of each case and is dependent on the child's age and maturity.
- Under UN law, children's right to express their own views freely in all matters affecting them has been recognised as one of the general principles of the Convention on the Rights of the Child.

Under EU law, Article 24 (1) of the EU Charter of Fundamental Rights provides that children may express their views freely, and that such views shall be taken into consideration on matters which concern them in accordance with their age and maturity. This provision is of general applicability, and is not restricted to particular proceedings. The CJEU interpreted the meaning of this provision in conjunction with the Brussels II bis Regulation.

Example: *Joseba Andoni Aguirre Zarraga v. Simone Pelz*[69] concerns the removal of a minor child from Spain to Germany in breach of custody rulings. The CJEU was asked whether the German court (i.e. the court of the country the child was removed to) could oppose the enforcement order by the Spanish court (the country of origin) on the basis that the child had not been heard, thereby infringing Article 42 (2) (a) of Regulation No. 2201/2003 (Brussels II bis) and Article 24 of the EU Charter of Fundamental Rights. The child had opposed the return when she expressed her views within proceedings before the German court. The CJEU reasoned that hearing a child is not an absolute right, but that if a court decides it is necessary, it must offer the child a genuine and effective opportunity to express his or her views. It also held that the right of the child to be heard, as provided in the Charter and Brussels II bis Regulation, requires legal procedures and conditions which enable children to express their views freely to be available to them, and the court to obtain those views. The court also needs to take all appropriate measures to arrange such hearings, with regard to the children's best interests and the circumstances of each individual case. According to the CJEU's ruling, however, the authorities of the country the child had been removed to (Germany) could not oppose a return of the child on the basis of a breach of the right to be heard in the country of origin (Spain).

Under CoE law, the ECtHR does not interpret the right to respect for private and family life (Article 8 of the ECHR) as always requiring the child to be heard in court. As a general rule, it is for the national courts to assess the evidence before them, including the means used to ascertain the relevant facts. Domestic courts are not always required to hear a child in court on the issue of access to a parent who does not have custody rights. This issue has to be assessed in light of the specific circumstances of each case, having due regard to the age and maturity of the child concerned. Moreover, the ECtHR will often ensure, under the procedural limb of Article 8, that the authorities have taken appropriate steps to accompany their decisions with the necessary safeguards.

69 CJEU, C-491/10 PPU, *Joseba Andoni Aguirre Zarraga v. Simone Pelz*, 22 December 2010; see also Section 5.4, which discusses further details of this ruling and the operation of the Brussels II bis regulation.

Example: In the case of *Sahin v. Germany*,[70] the mother prohibited all contact between the applicant and his four-year old daughter. The German regional court decided that granting the father access to his daughter would be harmful to the child because of the serious tensions between the parents. It did so without hearing the child whether she wanted to continue seeing her father. On the question of hearing the child in court, the ECtHR referred to the expert's explanation before the regional court in Germany. After several meetings with the child, her mother and the applicant, the expert considered that the process of questioning the child could have entailed a risk for her, which could not have been avoided by special arrangements in court. The ECtHR found that, in these circumstances, the procedural requirements implicit in Article 8 of the ECHR – to hear a child in court – did not amount to obliging the direct questioning of the child on her relationship with her father.

Example: In *Sommerfeld v. Germany*,[71] the applicant's 13-year-old daughter had expressed a clear wish not to see the applicant and had done so for several years. The domestic courts were of the view that forcing her to see the applicant would seriously disturb her emotional and psychological balance. The ECtHR accepted that the decision-making process provided the applicant with the required protection of his interests.[72]

The European Convention on the Exercise of Children's Rights deals with the right of children to express their views freely.[73] This convention aims to promote children's rights by granting them specific procedural rights in family proceedings before a judicial authority, in particular for proceedings involving the exercise of parental responsibilities, such as residence and access to children. Article 3 of the convention grants children the right to be informed and to express their views in proceedings as a procedural right. In Article 4, the child is granted the right to apply for the appointment of a special representative in proceedings before a judicial authority affecting her or him. In line with Article 6, authorities must ensure that the child has received all relevant in-

70 ECtHR, *Sahin v. Germany* [GC], No. 30943/96, 8 July 2003, para. 73. On the specific aspect of national courts having to assess the evidence they have obtained, as well as the relevance of the evidence that defendants seek to adduce, see also ECtHR, *Vidal v. Belgium*, No. 12351/86, 22 April 1992, para. 33.

71 ECtHR, *Sommerfeld v. Germany* [GC], No. 31871/96, 8 July 2003.

72 *Ibid.*, paras. 72 and 88.

73 Council of Europe, European Convention on the Exercise of Children's Rights, CETS No. 160, 1996.

formation, consult her or him in person, if appropriate, and allow the child to express her or his views.

Under international law, Article 12 (1) of the CRC affirms that a child who is capable of forming her or his own views has the right to express these views freely in all matters affecting her or him. The child's views should be given due weight in accordance with her or his age and maturity. Article 12 (2) of the CRC furthermore prescribes that the child must be provided the opportunity to be heard in any judicial and administrative proceedings affecting her or him, either directly, or through a representative or an appropriate body, in a manner consistent with the procedural rules of national law.

The UN Committee on the Rights of the Child stressed that States Parties should either directly guarantee this right, or adopt or revise laws so that this right can be fully enjoyed by the child.[74] Furthermore, they must ensure that the child receives all necessary information and advice to make a decision in favour of her or his best interests. The committee also notes that a child has the right not to exercise this right; expressing views is a choice, not an obligation.

2.5. Right to freedom of assembly and association

Key points

- Both the EU Charter of Fundamental Rights and the ECHR guarantee the freedom of peaceful assembly and association.
- This right enables and protects individuals to further their causes together with others.

Under EU law, Article 12 of the EU Charter of Fundamental Rights provides that everyone has the right to freedom of peaceful assembly and association at all levels, in particular in political, trade union and civic matters. This implies the

74 UN, Committee on the Rights of the Child, *General Comment No. 14 (2013) on the right of the child to have his or her best interest taken as a primary consideration (art.3, para.1)*, CRC/C/GC/14, 29 May 2013.

right of everyone to form and to join trade unions for the protection of his or her interests.

Under CoE law, Article 11 (1) of the ECHR guarantees the right to freedom of assembly and association subject to the restrictions of Article 11 (2).

The ECtHR has explicitly asserted the right of children to attend gatherings in a public space. As the Court noted in *Christian Democratic People's Party v. Moldova*, it would be contrary to the parent's and children's freedom of assembly to prevent them from attending events, in particular to protest against government policy on schooling.

Under international law, individual children as well as children's organisations can rely on the protection offered by Article 15 of the CRC, which contains the right to freedom of association and of peaceful assembly. A large variety of associational forms in which children are engaged have been granted international protection based on this provision.

3 Equality and non-discrimination

EU	Issues covered	CoE
Charter of Fundamental Rights, Title III (Equality), including Articles 20 (equality before the law), 21 (non-discrimination) and 23 (equality between men and women)	Equality and non-discrimination	ECHR, Article 14; Protocol No. 12 to the ECHR, Article 1 (non-discrimination) ESC (revised), Article E (non-discrimination)
Racial Equality Directive (2000/43/EC)	Non-discrimination based on race and ethnic origin	ECtHR, *D.H. and Others v. the Czech Republic* [GC], No. 57325/00, 2007 (placement of Roma children in special schools) ECtHR, *Oršuš and Others v. Croatia*, No. 15766/03, 2010 (Roma-only classes in primary schools) Framework Convention for the Protection of National Minorities (FCNM), Articles 4 and 12
Charter of Fundamental Rights, Article 45 (freedom of movement and of residence) CJEU, C-200/02, *Kunqian Catherine Zhu and Man Lavette Chen v. Secretary of State for the Home Department*, 2004 (residence rights of third-country national parents)	Non-discrimination based on nationality and immigration status	ECtHR, *Ponomaryovi v. Bulgaria*, No. 5335/05, 2011 (school fees for temporary residents) FCNM, Articles 4 and 12, para. 3
Employment Equality Directive (2000/78/EC)	Non-discrimination based on age	ECHR, Article 14; Protocol No. 12 to the ECHR, Article 1 (non-discrimination)
CJEU, C-303/06, *S. Coleman v. Attridge Law and Steve Law* [GC], 2008	Non-discrimination based on other protected grounds	ECtHR, *Fabris v. France* [GC], No. 16574/08, 2013 (inheritance rights for children born out of wedlock)

Freedom from discrimination is one of the basic principles of a democratic society. Both the EU and the CoE have been instrumental in interpreting this principle. EU institutions have adopted a series of directives which are highly relevant for children's issues. The European Court of Human Rights (ECtHR) has developed a substantial body of case law on the freedom from discrimination under Article 14 of the ECHR on the prohibition of discrimination, in conjunction with other Convention articles.

The European Committee of Social Rights (ECSR) considers the function of Article E of the European Social Charter (ESC) on non-discrimination to be similar to that of Article 14 of the European Convention on Human Rights (ECHR): it has no independent existence and must be combined with one of the ESC's substantive provisions.[75]

This chapter addresses the principles of equality and non-discrimination, with a focus on those grounds where child-specific case law has been developed. It first provides general information on European non-discrimination law (Section 3.1), and then presents the issue of equality and discrimination of children based on ethnic origin (Section 3.2), nationality and immigration status (Section 3.3), age (Section 3.4), and other protected grounds, including gender, language and personal identity (Section 3.5).

3.1. European non-discrimination law

Key points

- EU and CoE law prohibit discrimination on the grounds of sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age and sexual orientation.[76]
- When the ECtHR establishes that persons have been treated differently in a relevantly similar situation, it will investigate whether there is an objective and reasonable justification. If not, it will conclude that the treatment was discriminatory, in breach of Article 14 of the ECHR on the prohibition of discrimination.

75 ECSR, *Syndicat des Agrégés de l'Enseignement Supérieur (SAGES) v. France*, Complaint No. 26/2004, 15 June 2005, para. 34.

76 For an overview of European non-discrimination law, as constituted by the EU non-discrimination directives and Art. 14 of and Protocol 12 to the ECHR, see: FRA and ECtHR (2011), and its case law update July 2010–December 2011.

Under EU law, the prohibition of discrimination in Article 21 of the EU Charter of Fundamental Rights is a free-standing principle that also applies to situations not covered by any other Charter provision. The grounds on which discrimination is explicitly prohibited in this provision include sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age and sexual orientation. By contrast, Article 19 of the TFEU only covers the grounds of sex, racial or ethnic origin, religion or belief, disability, age and sexual orientation.

Several EU directives prohibit discrimination in the areas of employment, the welfare system and goods and services, all of which are potentially relevant to children. Council Directive 2000/78/EC, which establishes a general framework for equal treatment in employment and occupation (Employment Equality Directive),[77] prohibits discrimination on the grounds of religion or belief, disability, age and sexual orientation. Council Directive 2000/43/EC, implementing the principle of equal treatment between persons irrespective of racial or ethnic origin (Racial Equality Directive), prohibits discrimination on the basis of race or ethnicity not only in the context of employment and access to goods and services, but also in relation to the welfare system (including social protection, social security and healthcare) and to education.[78] Further directives implement the principle of equal treatment between men and women in matters of employment and occupation (Gender Equality Directive)[79] and in the access to and supply of goods and services (Gender Goods and Services Directive).[80]

Under CoE law, the prohibition of discrimination applies to the exercise of any of the substantive rights and freedoms set forth in the ECHR (Article 14), as well as to the exercise of any right guaranteed under domestic law or in any act by a public authority (Article 1 of Protocol No. 12 to the ECHR). Protocol 12, however, is of limited applicability, since it has only been ratified by a small number of countries and no child-related cases have yet been decided on its basis. The provisions set forth in both instruments include a non-exhaustive list of grounds on which discrimination is prohibited: sex, race, colour, language,

77 Council Directive 2000/78/EC, OJ 2000 L 303. All EU legal instruments are available on the EU's online portal providing access to EU law eur-lex: http://eur-lex.europa.eu/homepage.html.

78 Council Directive 2000/43/EC of 29 June 2000 implementing the principal of equal treatment between persons irrespective of racial or ethnic origin, OJ 2000 L 180, 29 June 2000.

80 Council Directive 2004/113/EC, OJ 2004 L 373, p. 37.

religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status. Where the ECtHR finds that persons in relevantly similar positions have been treated differently, it will investigate whether this can be objectively and reasonably justified.[81]

Article E of the ESC also includes a non-exhaustive list of grounds on which discrimination is prohibited: race, colour, sex, language, religion, political or other opinion, national extraction or social origin, health, association with a national minority, or birth. The appendix to this article clarifies that differential treatment based on an objective and reasonable justification includes requiring a certain age or capacity for access to some forms of education[82] – and that this is therefore not discriminatory.

Under Article 4 of the Framework Convention for the Protection of National Minorities[83] (FCNM), States Parties guarantee to persons belonging to national minorities the right of equality before the law and equal protection by the law, and prohibit discrimination based on belonging to a national minority. They also undertake to adopt, where necessary, adequate measures to promote, in all areas of economic, social, political and cultural life, full and effective equality between persons belonging to a national minority and those belonging to the majority.

The following sections analyse specific grounds of discrimination which have proven of particular relevance for children.

83 Council of Europe, Framework Convention for the Protection of National Minorities (FCNM), CETS No. 157, 1995.

3.2. Non-discrimination based on race or ethnic origin

Key points

- Race and ethnic origin are prohibited grounds of discrimination.
- Both the EU and the CoE tackle discrimination of the Roma in the areas of education, employment, healthcare and housing.
- The over-representation or segregation of children belonging to a specific ethnic group in special schools or classes can only be objectively justified if appropriate safeguards for referring children to these schools or classes are put in place.

Under EU law, the Racial Equality Directive prohibits discrimination on the basis of race or ethnicity not only in the context of employment and goods and services, but also in accessing the welfare system, education and social security. The Roma, as a particularly sizeable and vulnerable ethnic group, fall squarely within the scope of the directive. A key element of the drive to tackle discrimination of the Roma at EU level was the adoption of an EU Framework for National Roma Integration Strategies up to 2020.[84] This has been followed by the European Commission's annual monitoring of the national strategies developed by EU Member States. The Racial Equality Directive covers at least four key areas that are important for Roma children: education, employment, healthcare and housing. Achieving full equality in practice may in certain circumstances warrant Roma-specific positive action, in particular in these four key areas.[85]

Under CoE law, the ECtHR has ruled in several landmark cases on the differential treatment of Roma children in the educational system. These cases were analysed under Article 14 taken together with Article 2 of Protocol No. 1 to the

84 European Commission (EC) (2011), *An EU framework for national Roma integration strategies up to 2020: Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions*, COM(2011) 173 final, Brussels, 5 April 2011.

85 European Commission (2014), *Joint Report on the application of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin and of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation*, Report from the Commission to the European Parliament and the Council, COM(2014) 2 final, Brussels, 17 January 2014.

ECHR. The ECtHR held that the over-representation or segregation of Roma children in special schools or classes could only be objectively justified by putting in place appropriate safeguards for referring children to these schools or classes, such as tests specifically designed for and sensitive to the needs of Roma children; appropriate evaluation and monitoring of progress so that integration in ordinary classes takes place as soon as learning difficulties have been remedied; and positive measures to address learning difficulties. In the absence of effective anti-segregationist measures, prolonging the educational segregation of Roma children in a mainstream school with a regular program could thus not be justified.[86]

Example: In *D.H. and Others v. the Czech Republic,*[87] the ECtHR found that a disproportionate number of Roma children were placed in special schools for children with learning difficulties without justification. The Court was concerned about the more basic curriculum offered in these schools and the segregation that the system caused. Roma children thus received an education that compounded their difficulties and compromised their subsequent personal development instead of helping them to integrate into the mainstream education system and develop the skills that would facilitate life among the majority population. Consequently, the ECtHR found a violation of Article 14 of the ECHR in conjunction with Article 2 of Protocol No. 1 to the ECHR.

Example: In *Oršuš and Others v. Croatia*,[88] the ECtHR examined the existence of Roma-only classes within ordinary primary schools. As a matter of principle, temporarily placing children in a separate class due to their inadequate command of the language of instruction is not discriminatory as such. Such a placement can be seen as adapting the educational system to the special needs of children with language difficulties. However, as soon as this placement disproportionally or exclusively affects members of a specific ethnic group, safeguards have to be put in place. For the initial placement in separate classes, the ECtHR noted that the placement was not part of a general practice to address the problems of children with an

87 ECtHR, *D.H. and Others v. the Czech Republic* [GC], No. 57325/00, 13 November 2007, paras. 206–210.

88 ECtHR, *Oršuš and Others v. Croatia* [GC], No. 15766/03, 16 March 2010, para. 157.

inadequate command of the language, and that no specific testing of the children's command of the language had taken place. As to the curriculum offered to them, some children were not offered any specific programme (i.e., special language classes) to acquire the necessary language skills in the shortest time possible. There was neither a transferral nor a monitoring procedure in place to ensure the immediate and automatic transfer to the mixed classes as soon as the Roma children attained adequate language proficiency. Consequently, the Court found that this was in violation of Article 14 of the ECHR in conjunction with Article 2 of Protocol No. 1.

The ECSR holds that, even though educational policies of Roma children may be accompanied by flexible structures to meet the diversity of the group and may take into account the fact that some groups lead an itinerant or semi-itinerant lifestyle, there should be no separate schools for Roma children.[89]

Under Article 4 (2) and (3) FCNM, special measures adopted to promote the effective equality of persons belonging to national minorities shall not be regarded as discriminatory. In accordance with Article 12 (3) FCNM, States Parties moreover expressly undertake to promote equal opportunities for access to education at all levels for persons belonging to national minorities. The Advisory Committee on the FCNM has regularly examined the equal access to education of Roma children in line with this provision.[90]

89 ECSR, European Social Charter (revised) – Conclusions 2003 (Bulgaria), Art. 17, para. 2, p. 53.

90 See Council of Europe, Advisory Committee on the FCNM, *Commentary on Education under the Framework Convention for the Protection of National Minorities* (2006), ACFC/25DOC(2006)002.

3.3. Non-discrimination based on nationality and immigration status

Key points

- Protection against discrimination based on nationality is more limited in scope under EU law than under CoE law.
- Under EU law, protection against discrimination based on nationality is only granted to citizens of EU Member States, as enshrined in Article 45 (freedom of movement and of residence) of the EU Charter of Fundamental Rights.
- The ECHR guarantees the enjoyment of rights to all persons within the jurisdiction of a member state.

Under EU law, protection against discrimination based on nationality is particularly prominent in the context of the free movement of persons. Third-country nationals (i.e. persons who are citizens of a state that is not a member of the EU) enjoy a right to equal treatment in broadly the same areas as those covered by the non-discrimination directives when they qualify as 'long-term residents'. For qualifying as such, the Third-Country Nationals Directive requires, among other conditions, a period of five years of lawful residence.[91] In addition, Directive 2003/86/EC on the right to family reunification (Family Reunification Directive) [92] allows for third-country nationals lawfully residing in a Member State to be joined by family members, under certain conditions (see also Section 9.5).

Example: The *Chen* case[93] concerns the question of whether a child of a third-country national had the right to reside in one EU Member State when she was born in a different Member State and held the citizenship of the latter. Her mother, on whom she depended, was a third-country national. The CJEU determinedthat, when a Member State imposes require-

91 Directive 2003/109/EC of 23 January 2004 concerning the status of third-country nationals who are long-term residents, OJ 2004 L 16, p. 44.

92 Directive 2003/86/EC of 3 October 2003 on the right to family reunification, OJ 2003 L 251, p. 12.

93 CJEU, C-200/02, *Kunqian Catherine Zhu and Man Lavette Chen v. Secretary of State for the Home Department*, 19 October 2004.

ments on individuals seeking citizenship, and these are met, it is not open to a different Member State to then challenge that entitlement when the mother and the child apply for residence. The CJEU confirmed that a Member State cannot refuse a right of residence to a parent who is the carer of a child who is an EU citizen, as this would deprive the child's right of residence of any useful effect.

Under CoE law, the ECHR guarantees the enjoyment of rights to all those living within the jurisdiction of a member state, whether they are citizens or not, including those living beyond the national territory, in areas under the effective control of a member state. Regarding education, the ECtHR therefore holds that differential treatment on grounds of nationality and immigration status could amount to discrimination.

Example: *Ponomaryovi v. Bulgaria*[94] concerns the issue of foreign nationals lacking permanent residence permits having to pay school fees for their secondary education. As a matter of principle, the normally wide margin of appreciation in cases of general measures of economic or social strategy needed to be qualified in the field of education, for two reasons:

- the right to education enjoys direct protection under the ECHR;
- education is a very particular type of public service, which serves broad societal functions.

According to the ECtHR, the margin of appreciation increases with the level of education, in inverse proportion to the importance of that education for those concerned and for society at large. So, while for primary schooling (higher) fees for foreigners are hard to justify, they may be fully justified at the university level. Given the importance of secondary education for personal development, and social and professional integration, a stricter scrutiny of the proportionality of the differential treatment applies for that level of education. The Court clarified that it did not take any position on whether or not a state is entitled to deprive all irregular migrants from the educational benefits it provides to nationals and certain limited categories of foreigners. In assessing the particular circumstances of the case, it found that no "considerations relating to the need to stem or reverse the flow of illegal immigration" applied. The applicants had not tried to abuse

94 ECtHR, *Ponomaryovi v. Bulgaria*, No. 5335/05, 21 June 2011, para. 60.

the Bulgarian educational system, as they had come to live in Bulgaria at a very young age following their mother's marriage with a Bulgarian, so they had no choice but to go to school in Bulgaria. There had accordingly been a violation of Article 14 of the ECHR in conjunction with Article 2 of Protocol No. 1 to the ECHR.

3.4. Non-discrimination based on age

Key point

- Under both EU law and the ECHR, discrimination on the grounds of age is prohibited.

Under EU law, the EU Charter of Fundamental Rights in Article 21 explicitly mentions 'age' as a ground on which discrimination is prohibited. Article 24 includes the rights of the child among the protected fundamental rights. Under current EU legislation on non-discrimination, protection from discrimination on the basis of age is more limited than protection on the basis of race and ethnicity or on the basis of sex. Age is currently only protected in the context of access to employment, similarly to sexual orientation, disability and religion or belief.

The Employment Equality Directive is applicable to children who are legally entitled to work. While the International Labour Organization Convention concerning Minimum Age for Admission to Employment,[95] ratified by all EU Member States, establishes a minimum age of 15 years, differences regarding this minimum age persist among the EU Member States.[96] According to Article 6 of the Employment Equality Directive, Member States may provide justifications for differences of treatment on grounds of age. These differences do not constitute discrimination if they are objectively and reasonably justified by a legitimate aim, and if the means of achieving that aim are appropriate and necessary. Concerning children and young people, such differences of treat-

ment may, for instance, include the setting of special conditions on access to employment and vocational training, employment and occupation, to promote their vocational integration or ensure their protection.

Under CoE law, Article 14 of the ECHR and Article 1 of Protocol 12 to the ECHR do not explicitly mention 'age' in the list of grounds on which discrimination is prohibited. The ECtHR, however, has examined issues of age discrimination in relation to various rights protected by the ECHR, and thereby implicitly analysed age as being included among 'other status'. In *D.G. v. Ireland*[97] and *Bouamar v. Belgium*,[98] for instance, the ECtHR found that there was a difference in treatment between adults and children in the countries' respective justice systems regarding detention, relevant to the application of the Convention. This difference in treatment stemmed from the punitive purpose of detention as regards adults and its preventive purpose in respect of children. Hence, the Court accepted 'age' as a possible ground for discrimination.

3.5. Non-discrimination based on other protected grounds

Key point

- Further grounds of discrimination, such as disability or birth, have been addressed in European jurisprudence pertaining to children.

Under EU law, Article 21 of the EU Charter of Fundamental Rights also prohibits discrimination based on other grounds particularly relevant to children, such as sex, genetic features, language, disability or sexual orientation. At least for disability, the CJEU has accepted that EU law also protects against so-called 'discrimination by association', i.e. discrimination against a person who is associated with another who has the protected characteristic (such as the mother of a child with disabilities).

97 ECtHR, *D.G. v. Ireland*, No. 39474/98, 16 May 2002 (see also Section 11.2.2).

98 ECtHR, *Bouamar v. Belgium*, No. 9106/80, 29 February 1988 (see also Section 11.2.2).

Example: In *S. Coleman v. Attridge Law and Steve Law*,[99] the CJEU noted that the Employment Equality Directive includes certain provisions designed to specifically accommodate the needs of persons with disabilities. This, however, does not lead to the conclusion that the principle of equal treatment enshrined in the directive must be interpreted strictly, as prohibiting only direct discrimination on the grounds of disability and relating exclusively to persons with disabilities. According to the CJEU, the directive applies not to a particular category of persons but to the very nature of the discrimination. An interpretation limiting its application to persons with disabilities wouldd**e**prive the directive of an important element of its effectiveness and reduce the protection that it is intended to guarantee. The CJEU concluded that the directive must be interpreted as meaning that the prohibition of direct discrimination laid down therein is not limited to persons with disabilities. Consequently, where an employer treated an employee who did not have a disability less favourably than another employee in a comparable situation, based on the disability of the former employee's child, whose care was provided primarily by that employee, such treatment was contrary to the prohibition of direct discrimination laid down by the directive.

Under CoE law, the ECtHR has dealt with discrimination against children in a variety of situations other than those already mentioned, such as discrimination based on language[100] or affiliation.[101]

Example: In *Fabris v. France*, [102] the applicant complained that he had been unable to benefit from a law introduced in 2001 granting children 'born of adultery' identical inheritance rights to those of legitimate children, a law passed following the ECtHR's judgment in *Mazurek v. France*[103] in 2000. The Court held that the legitimate aim of protecting the inheritance rights of the applicant's half-brother and half-sister did not outweigh his claim to a share of his mother's estate. In this case, the difference in treatment had

102 *Ibid.*

103 ECtHR, *Mazurek v. France*, No. 34406/97, 1 February 2000.

been discriminatory, since it had no objective and reasonable justification. The Court found that it was in breach of Article 14 of the ECHR taken in conjunction with Article 1 of Protocol No. 1 to the ECHR.[104]

For children with disabilities, the ECSR holds that in the application of Article 17 (2) of the ESC it is acceptable to make a distinction between children with and without disabilities. It should, nevertheless, be the norm to integrate children with disabilities into mainstream schools, in which arrangements are made to cater for their special needs, and specialised schools should be the exception.[105] In addition, children attending special education schools that conform with Article 17 (2) of the ESC must be given sufficient instruction and training, so that proportionally an equivalent number of children in specialised schools and in mainstream schools complete their schooling.[106] The rights of children in relation to education are further addressed in Section 8.2.

Under UN law, Article 2 of the CRC prohibits discrimination against children on a non-exhaustive list of grounds, specifically listing 'birth' as one of them. Article 2 provides that:

> *1. States Parties shall respect and ensure the rights set forth in the present Convention to each child within their jurisdiction without discrimination of any kind, irrespective of the child's or his or her parent's or legal guardian's race, colour, sex, language, religion, political or other opinion, national, ethnic or social origin, property, disability, birth or other status.*
>
> *2. States Parties shall take all appropriate measures to ensure that the child is protected against all forms of discrimination or punishment on the basis of the status, activities, expressed opinions, or beliefs of the child's parents, legal guardians, or family members.*

EU	Issues covered	CoE
CJEU, C-200/02, *Kunqian Catherine Zhu and Man Lavette Chen v. Secretary of State for the Home Department*, 2004 (residence right of the primary care giver of a child, citizen of the EU) CJEU, C-34/09, *Gerardo Ruiz Zambrano v. Office National de l'Emploi (ONEm)*, 2011 (residence rights of TCN with minor EU citizen children)	**Citizenship**	ECtHR, *Genovese v. Malta*, No. 53124/09, 2011 (arbitrary denial of citizenship to child born out of wedlock) European Convention on Nationality CoE Convention on the Avoidance of Statelessness in Relation to State Succession
	Identity as member of national minority	FCNM, Article 5 (1) (preservation of the essential elements of the identity)

Issues of personal identity have generally not been addressed at EU level, in view of the EU's limited competence in that area. However, the CJEU has incidentally ruled on the right to a name (particularly the right to have the name which has been recognised in one EU Member State also recognised in others) from the perspective of the freedom of movement principle. Citizenship and residency aspects have also been adjudicated in light of Article 20 of the TFEU. The CoE, on the other hand, in particular through the case law of the ECtHR, has interpreted and developed the application of several fundamental rights in the area of personal identity. Therefore, with the exception of several areas in which issues of personal identity have been addressed at EU level, the following sections deal only with CoE law.

This chapter does not refer to a specific fundamental right. Rather, it provides a cross-section of fundamental rights issues that are related to identity, such as birth registration and the right to a name (Section 4.1); the right to personal identity (Section 4.2); identity theft (Section 4.4); the right to citizenship (Section 4.5); and the identity of children belonging to national minorities (Section 4.6). Several related issues are dealt with in other chapters, in particular concerning sexual abuse (Section 7.1.3) or data protection (Chapter 10). Some of these rights, such as the right to a name, have mainly been claimed as parental rights, but the approach could easily be transposed to children themselves, given the implications for their own rights.

4.1. Birth registration and the right to a name

Key point

- Refusal to register a first name not unsuitable for a child which has already gained acceptance may be in breach of Article 8 of the ECHR (right to respect for private and family life).

Unlike UN treaties (e.g. Article 24 (2) of the International Covenant on Civil and Political Rights (ICCPR), Article 7 (1) of the CRC and Article 18 of the Convention on the Rights of Persons with Disabilities (CRPD)), the European instruments on fundamental rights do not explicitly provide for the right to birth registration immediately after birth or the right to a name from birth.

Under EU law, the right to a name has been addressed from the perspective of the freedom of movement. The CJEU holds that freedom of movement precludes an EU Member State from refusing to recognise a child's surname as registered in another Member State of which the child is a national or where the child was born and had resided.[107]

Under CoE law, refusal of birth registration of children may raise an issue under Article 8 of the ECHR.

First, the ECtHR found that the name as "a means of identifying persons within their families and the community" falls within the scope of the right to respect for private and family life as enshrined in Article 8 of the ECHR.[108] The parents' choice of their child's first name[109] and family name[110] is part of their private life. The Court has held that the refusal of state authorities to register a chosen forename based on the likely harm or prejudice that the name might cause the

107 See CJEU, C-148/02, *Carlos Garcia Avello v. Belgian State*, 2 October 2003; CJEU, C-353/06, *Stefan Grunkin and Dorothee Regina Paul* [GC], 14 October 2008.

108 ECtHR, *Guillot v. France*, No. 22500/93, 24 October 1993, para. 21.

109 ECtHR, *Johansson v. Finland*, No. 10163/02, 6 September 2007, para. 28; ECtHR, *Guillot v. France*, No. 22500/93, 24 October 1993, para. 22.

110 ECtHR, *Cusan and Fazzo v. Italy*, No. 77/07, 7 January 2014, para. 56.

child did not violate Article 8 of the ECHR.[111] Refusal to register a first name, however, that is not unsuitable for a child and that has already gained acceptance may be in breach of Article 8 of the ECHR.

> Example: In *Johansson v. Finland*,[112] the authorities refused to register the forename "Axl Mick", because the spelling did not comply with the Finnish naming practice. The ECtHR accepted that due regard had to be given to the child's best interests, and that the preservation of the national naming practice was in the public interest. It found, however, that the name had been accepted for official registration in other cases and could therefore not be considered unsuitable for a child. Since the name had already gained acceptance in Finland and it had not been contended that this name had negatively affected the cultural and linguistic identity of the state, the ECtHR concluded that the public-interest considerations did not outweigh the interest of having the child registered under the name chosen. The Court thus found that there had been a violation of Article 8 of the ECHR.

The ECtHR has also found that a rule stating that the husband's family name should be given to legitimate children at the moment of birth registration does not in itself violate the ECHR. However, the impossibility to derogate from this general rule was found to be excessively rigid and discriminatory for women, and therefore in violation of Article 14, taken in conjunction with Article 8 of the ECHR.[113]

Article 11 of the FCNM provides that every person belonging to a national minority has the right to use his or her surname (patronym) and first names in his or her minority language, as well as the right to have it officially recognised, albeit subject to modalities provided for in the legal system.

Article 11 (3) of the Revised European Convention on the Adoption of Children provides for the possibility for States Parties to keep the original surname of an adopted child (Adoption Convention).[114] This is an exception to the general principle that the legal relationship between the adopted child and his or her original family is severed.

111 ECtHR, *Guillot v. France*, No. 22500/93, 24 October 1993, para. 27.

112 ECtHR, *Johansson v. Finland*, No. 10163/02, 6 September 2007.

113 ECtHR, *Cusan and Fazzo v. Italy*, No. 77/07, 7 January 2014, para. 67.

114 Council of Europe, European Convention on the Adoption of Children (Revised), CETS No. 202, 2008.

4.2. Right to personal identity

Key points

- The right to know one's origins falls within the scope of a child's private life.
- The establishment of paternity requires carefully balancing the child's interest in knowing his or her identity with the interest of the presumed or alleged father, and with the general interest.
- Anonymous births may be permissible under Article 8 of the ECHR (right to respect for private and family life) provided that the child can at least obtain non-identifying information about the mother and that there is a possibility of seeking a confidentiality waiver by the mother.
- An adopted child has the right to access information concerning his or her origins. Biological parents may be granted a legal right not to disclose their identity, but this does not amount to an absolute veto.

Under CoE law, according to the ECtHR, Article 8 of the ECHR includes the right to identity and personal development. Details of a person's identity and the interest "in obtaining information necessary to discover the truth concerning important aspects of one's personal identity, such as the identity of one's parents"[115] have been considered relevant to personal development. Birth and the circumstances of birth form part of a child's private life. "[I]nformation concerning highly personal aspects of [one's] childhood, development and history" can constitute a "principal source of information about [one's] past and formative years",[116] so that lack of access to that information by the child raises an issue under Article 8 of the ECHR.

Under international law, Article 8 of the CRC provides for a high and rather detailed level of protection of the right to preserve a child's identity. It protects against unlawful interference with the preservation of identity, including nationality, name and family relations, as recognised by law. It also guarantees "appropriate assistance and protection" where a child is illegally deprived of some or all elements of his or her identity, with a view to speedily re-establish that identity.

115 ECtHR, *Odièvre v. France* [GC], No. 42326/98, 13 February 2003, para. 29.

116 ECtHR, *Gaskin v. the United Kingdom*, No. 10454/83, 7 July 1989, para. 36.

4.2.1. Establishing paternity

Under CoE law, children have complained to the ECtHR about the impossibility of determining the identity of their natural fathers. The ECtHR held that the determination of the legal relationship between a child and the alleged natural father was part of the scope of private life (Article 8 of the ECHR). Affiliation is a fundamental aspect of one's identity.[117] A child's interest in establishing paternity, however, must be balanced against the interests of the presumed father as well as the general interest. Indeed, a child's interest in having legal certainty about his or her paternal affiliation does not trump a father's interest in rebutting the legal presumption of paternity.

Example: In *Mikulić v. Croatia*,[118] the applicant was born out of wedlock and instituted proceedings for establishment of paternity against her presumed father. The respondent refused to appear on several occasions for court-ordered DNA testing, which led to unnecessary protraction of the paternity proceedings for about five years. The ECtHR held that if under domestic law alleged fathers could not be compelled to undergo medical testing, states had to provide for alternative means allowing for the swift identification of natural fathers by an independent authority. It found a violation of Article 8 of the ECHR in the applicant's case.

Example: In *Mizzi v. Malta*,[119] the presumed father was unable to deny paternity of a child born by his wife since the legally prescribed six-month time limit had elapsed. The ECtHR examined the case under both Articles 6 (right to a fair trial) and 8 (respect of private and family life) of the ECHR. It noted that introducing a time-limit within which a presumed father must take action to disavow a child aims to ensure legal certainty and protect the interest of the child to know his or her identity. These aims, however, do not outweigh the right of the father to have the opportunity to deny paternity. The practical impossibility of denying paternity since birth had in this case put an excessive burden on the presumed father, in violation of his right of access to a court and a fair trial as enshrined in Article 6 of

117 ECtHR, *Mennesson v. France*, No. 65192/11, 26 June 2014, para. 96.

118 ECtHR, *Mikulić v. Croatia*, No. 53176/99, 7 February 2002, paras. 64–65.

119 ECtHR, *Mizzi v. Malta*, No. 26111/02, 12 January 2006.

the ECHR. It had also disproportionately interfered with his rights under Article 8 of the ECHR.[120]

The interests of a child seeking to ascertain paternity and the interests of the biological father may sometimes coincide. This occurred in a situation where a father, due to his lack of legal capacity, was unable to institute proceedings at the domestic level to establish affiliation with his child. The ECtHR found that it was not in the best interests of a child born out of wedlock that his biological father was unable to institute proceedings to have his paternity established, and that the child was therefore entirely dependent on the discretion of state authorities to have its affiliation established.[121]

Authorities may have a positive obligation to intervene in proceedings to establish paternity in the best interests of the child when the legal representative (in this case the mother) of the child is unable to properly represent the child, for instance because of a serious disability.[122]

With regard to the specific case of recognition of affiliation between intended parents and children born out of surrogacy, the Court accepted in principle that states have a wide margin of appreciation, since there is no European consensus on allowing or recognising affiliation in surrogacy arrangements. The fact, however, that affiliation is a fundamental aspect of a child's identity reduces that margin of appreciation.

Example: *Mennesson v. France*[123] concerns the refusal of French authorities to register children born out of surrogacy in the United States in the French birth register on public policy grounds. The ECtHR found no violation of the applicants' right to respect for family life, concluding that they were in no way prevented from enjoying family life in France and that administrative obstacles they might have faced had not been insurmountable. With regard to the right to respect for the private life of the children, the Court attached great importance to their best interests. It particularly emphasised that the man who was intended to be registered as the children's father on the certificate was also their biological father. To deny a child

120 *Ibid.*, paras. 112–114.

121 ECtHR, *Kruškovic v. Croatia*, No. 46185/08, 21 June 2011, paras. 38–41.

122 ECtHR, *A.M.M. v. Romania*, No. 2151/10, 14 February 2012, paras. 58–65 (available in French).

123 ECtHR, *Mennesson v. France*, No. 65192/11, 26 June 2014.

legal affiliation when a biological affiliation is established and when the parent concerned claims full recognition cannot be held to be in conformity with the best interests of the children. The Court therefore found a violation of Article 8 of the ECHR in respect of the "private life" complaint of the children.[124]

4.2.2. Establishing maternity: anonymous birth

Under CoE law, a child's interest in knowing his or her origins, and in particular his or her mother, must be balanced with other private and public interests, such as the interests of the family or families involved, the public interest of preventing illegal abortions, child abandonment or the protection of health. Cases where the birth mother decides to remain anonymous, but the child can at least obtain non-identifying information about the birth mother and the child has the possibility to seek a confidentiality waiver from the mother, might be in conformity with Article 8 of the ECHR.[125]

Example: In *Godelli v. Italy*,[126] the applicant was abandoned at birth by her mother, who did not consent to being named on the birth certificate. The applicant could not access non-identifying information concerning her origins nor could she obtain disclosure of her mother's identity. The ECtHR found a violation of Article 8 of the ECHR, because the state did not strike a proper balance between the competing interests of birth mother and child.

4.3. Establishing one's origin: adoption

A child's right to know his or her origins has gained particular prominence in the context of adoption. The substantive guarantees related to adoption, outside the right to know one's origins, are dealt with in Section 6.3.

Under CoE law, Article 22 (3) of the European Convention on the Adoption of Children (revised) is a fairly robust provision on the adopted child's right to access information held by the authorities concerning his or her origins. It allows

124 *Ibid*., para. 100; see also ECtHR, *Labassee v. France*, No. 65941/11, 26 June 2014, para. 79.

125 ECtHR, *Odièvre v. France* [GC], No. 42326/98, 13 February 2003, paras. 48–49.

126 ECtHR, *Godelli v. Italy*, No. 33783/09, 25 September 2012, para. 58.

for States Parties to grant the parents of origin a legal right not to disclose their identity, as long as it does not amount to an absolute veto. The competent authority must be able to determine whether it overrides the parents of origin's right and can disclose identifying information in light of the circumstances and the respective rights at stake. In the case of full adoption, the adopted child must at least be able to obtain a document attesting the date and place of birth.[127]

Under international law, the Hague Convention on Inter-Country Adoption provides for the possibility for an adopted child to access information about the identity of his or her parents "under appropriate guidance", but leaves it to each State Party to allow for it, or not.[128]

4.4. Identity theft

Key point

- Practical and effective protection must be ensured against identity theft of children.

Identity theft concerns situations where a child's name is used without his or her knowledge.

Under CoE law, the ECtHR has dealt with identity theft under Article 8 of the ECHR on the right to respect for private and family life. It held that states are obliged to ensure the practical and effective protection of children against identity theft, and that states must take effective steps to identify and prosecute the perpetrator.[129]

127 Council of Europe, European Convention on the Adoption of Children (Revised), CETS No. 202, 2008, Art. 22.

128 Hague Conference on Private International Law, Convention on Protection of Children and Cooperation in Respect of Intercountry Adoption, 29 May 1993, Art. 30 (2).

129 ECtHR, *K.U. v. Finland*, No. 2872/02, 2 December 2008, para. 49.

Example: In *K.U. v. Finland*,[130] an advertisement was placed on an internet dating website in the name of a 12-year-old boy, without his knowledge. It mentioned his age, telephone number, physical description and contained a link to a webpage containing his picture. The advertisement was of a sexual nature, suggesting that the boy was looking for an intimate relationship with a boy of his age or older, thus making him a target for paedophiles. The identity of the person who placed the advertisement could not be obtained from the internet provider due to the legislation in place. The ECtHR held that the positive obligation under Article 8 of the ECHR not only to criminalise offences but also to effectively investigate and prosecute them, assumes even greater importance when the physical and moral welfare of a child is threatened. In this case, the Court found that by being exposed as a target for paedophiliac approaches on the internet the child's physical and moral welfare was threatened. There was consequently a breach of Article 8 of the ECHR.

Aspects related to identity theft are closely related to child pornography and grooming. These are dealt with in Section 7.2.

4.5. Right to citizenship

Key points

- The right of residence within the EU of children who are EU citizens should not be deprived of any useful effect by refusing residence rights to their parent(s).
- The ECHR does not guarantee the right to citizenship, but an arbitrary refusal of citizenship may fall under Article 8 of the ECHR (right to respect for private and family life) due to its impact on an individual's private life.

Under EU law, Article 20 (1) of the TFEU grants the status of EU citizen to every Member State national of the EU. The CJEU ruled on the effectiveness of the right of residence of children who have EU citizenship but not the nationality of the EU Member State where they reside. At stake was the refusal of residence rights within the EU to a parent who was the carer of a child with EU citizenship. The CJEU held that the refusal of residence rights to a parent who is the

130 ECtHR, *K.U. v. Finland*, No. 2872/02, 2 December 2008.

primary caregiver of a child deprives the child's right of residence of any useful effect. Hence, the parent who is the primary caregiver has the right to reside with the child in the host state.[131] These aspects are addressed in more detail in Section 9.5.

Under CoE law, the ECHR does not guarantee the right to citizenship.[132] An arbitrary refusal of citizenship, however, may come within the scope of Article 8 of the ECHR because of its impact on an individual's private life, which embraces aspects of a child's social identity[133] – which here refers to the identity a child has in society.

> Example: In *Genovese v. Malta*, Maltese citizenship was denied to a child born out of wedlock outside of Malta to a non-Maltese mother and a judicially-recognised Maltese father. The refusal of citizenship as such did not violate Article 8 of the ECHR. The arbitrary denial of citizenship on the ground of birth out of wedlock, however, raised questions of discrimination. Arbitrary differential treatment on this ground requires weighty reasons by way of justification. In the absence of such reasons, a violation of Article 8 together with Article 14 of the ECHR was found.[134]

A key concern in treaty provisions on the right to acquire citizenship is the avoidance of statelessness. The European Convention on Nationality contains detailed provisions on children's legal acquisition of nationality, and restricts the possibilities for children to lose citizenship.[135] The CoE Convention on the Avoidance of Statelessness in Relation to State Succession contains an obligation to avoid statelessness at birth (Article 10) and provides for the right to the nationality of the successor state in case of statelessness (Article 2).[136] Article 12 of the Revised European Convention on Adoption also echoes the concern to avoid statelessness; states have to facilitate the acquisition of their nationality by a child adopted by one of their nationals, and loss of nationality

as a consequence of adoption is conditional upon possession or acquisition of another nationality.

Under international law, Article 7 of the CRC guarantees the right to acquire a nationality, as does Article 24 (3) of the ICCPR.

4.6. Identity of children belonging to national minorities

Key point

- A child belonging to a national minority has the right to enjoy his or her own culture, profess and practice his or her own religion, and use his or her own language.[136]

Under EU law, no particular attention has been paid to the identity of children belonging to national minorities from a fundamental rights' perspective. Furthermore, there is no leading jurisprudence in the EU that adds to the CoE standards.

Under CoE law, Article 5 (1) of the FCNM explicitly mentions that States Parties undertake to preserve the essential elements of the identity of persons belonging to national minorities, i.e. their religion, language, traditions and cultural heritage. There is no child-specific provision in the FCNM. The question of language in education is dealt with in Section 8.2.

Under international law, Article 30 of the CRC guarantees to a child belonging to a national minority or an indigenous child the right "to enjoy his or her own culture, to profess and practise his or her own religion, or to use his or her own language" in community with other members of his or her group.

European law – both EU and CoE – provides for the right to respect for family life (Article 7 of the EU Charter of Fundamental Rights; Article 8 of the ECHR). The EU's competence in matters of family life relates to cross-border disputes, including recognition and enforcement of judgments across Member States. The CJEU deals with matters such as the child's best interests and the right to family life as laid down in the EU Charter of Fundamental Rights, relative to the Brussels II bis Regulation. ECtHR case law relating to family life recognises interdependent rights, such as the right to family life and the right of the child to have their best interests, as a primary consideration. It acknowledges that children's rights are sometimes conflicting. The right of the child to respect for family life, for instance, may be limited to secure their best interests. Further, the CoE has adopted various other instruments which deal with matters related to contact, custody and exercise of children's rights.

This chapter examines the child's right to respect for family life and associated rights, especially the content and scope of these rights as well as the associated legal obligations and their interaction with other rights. Specific aspects addressed include the right to respect for family life and its limitations (Section 5.1), the right of the child to be cared for by his/her parents (Section 5.2), the right to maintain contact with both parents (Section 5.3) and child abduction (Section 5.4).

5.1. Right to respect for family life

Key points

- States have positive obligations to ensure children's effective enjoyment of their right to respect for family life.
- Under both EU and CoE law, judicial and administrative authorities should take into account the child's best interests in any decision related to the child's right to respect for his/her family life.

The child's right to respect for family life includes a number of composite rights, such as: the child's right to be cared for by his/her parents (Section 5.2); the right to maintain contact with both parents (Section 5.3); the right not to be separated from parents except where it is in the child's best interests (Section 5.4 and Chapter 6); and the right to family reunification (Chapter 9).

Under both EU law and CoE law, the right to respect for family life is not absolute, and subject to a number of limitations. These limitations, as the explanatory note to the EU Charter of Fundamental Rights[138] clarifies, are the same as for the corresponding provision of the ECHR, specifically Article 8 (2), that is: in accordance with the law and necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others.[139]

The EU Charter of Fundamental Rights expressly incorporates within this right an obligation to consider the best interests of the child (Article 24 (2)).[140] Even though the obligation to observe the child's best interests is not expressly laid down under the ECHR, the ECtHR incorporates that obligation in its case law.[141]

141 See, for example, ECtHR, *Ignaccolo-Zenide v. Romania*, No. 31679/96, 25 January 2000, para. 94.

5.2. Right of the child to be cared for by his/her parents

Key points

- EU law regulates procedural aspects of the child's right to be cared for by his/her parents.
- Under the ECHR, states have negative and positive duties to respect children's and parents' rights to family life.

The right of children to know the identity of their parents and the right to be cared for by them are two core components of children's right to respect for family life. They are to an extent interdependent: children's right to know their parents is ensured through parental care. Sometimes, however, these rights are distinct - for example, for children who are adopted or born as a result of medically-assisted procreation. Here the right is more closely associated with the child's right to identity, as expressed by knowing his/her biological parentage, and is therefore considered in Chapter 4. The focus of this section is on the second right: the right of the child to be cared for by his/her parents.

Under EU law, there are no provisions dealing with the substantive scope of the right to be cared for by parents. EU instruments may deal with cross-border aspects, such as recognition and enforcement of judgements across Member States. Regulation 4/2009 on jurisdiction, applicable law, recognition and enforcement of decisions and cooperation in matters relating to maintenance (Maintenance Regulation), for instance, covers cross-border maintenance applications arising from family relationships.[142] It establishes common rules for the entire EU, aiming to ensure the recovery of maintenance claims even where the debtor or creditor is in another country.

Under CoE law, the ECtHR has underscored that Article 8 of the ECHR primarily establishes the duty of the state not to intervene in family life.[143] However, states

142 Council of the European Union (2008), Council Regulation (EC) No. 4/2009 of 18 December 2008 on jurisdiction, applicable law, recognition and enforcement of decisions and cooperation in matters relating to maintenance, OJ 2008 L 7 (Maintenance Regulation).

143 ECtHR, *R.M.S. v. Spain*, No. 28775/12, 18 June 2013, para. 69.

also have a positive obligation to take the necessary measures to both support parents and families and to protect children against potential abuse.[144] Children should only be separated from their parents in exceptional circumstances. In these cases, everything must be done to preserve personal relations and, when appropriate, to 'rebuild' the family. States enjoy a wide margin of appreciation when taking the initial decision to separate children from their parents.[145] However, stricter scrutiny is called for regarding any further limitations, such as restrictions placed on parental rights of access, and any legal safeguards designed to secure the effective protection of the right of parents and children to respect for their family life. Such further limitations entail the danger that the family relations between a young child and one or both parents would be effectively curtailed. Equally, when it comes to separating mothers from new-born babies, the reasons put forth by the state must be extraordinarily compelling.[146]

The margin of appreciation decreases with the amount of time children are separated from their parents, and state authorities should put forward strong reasons to support their decision to maintain the separation.[147] The ECtHR analyses whether the decision-making process was fair and whether all parties involved were given the opportunity to present their case.

Example: In *R.M.S. v. Spain*[148], the applicant argued that she had been deprived of all contact with her daughter from the age of three years and 10 months onwards on the basis of her socio-economic status. In finding a violation of Article 8 of the ECHR, the Court stressed that "the Spanish administrative authorities should have considered other less drastic measures than taking the child into care". It also stated that: "The role of the social welfare authorities is precisely to help persons in difficulty [...], to provide them with guidance and to advise them on matters such as the different types of benefits available, the possibility of obtaining social housing and other means of overcoming their difficulties, such as those originally sought by the applicant." Accordingly, the ECtHR held "that the Spanish authorities failed to undertake appropriate and sufficient efforts to secure the applicant's right to live with her child".[149]

144 *Ibid.*, para. 69 and following.

145 ECtHR, *Y.C. v. the United Kingdom*, No. 4547/10, 13 March 2012, para. 137.

146 ECtHR, *K. and T. v. Finland* [GC], No. 25702/94, 12 July 2001, para. 168.

147 ECtHR, *Y.C. v. the United Kingdom*, No. 4547/10, 13 March 2012, para. 137.

148 ECtHR, *R.M.S. v. Spain*, No. 28775/12, 18 June 2013.

149 *Ibid.*, paras. 86 and 93.

Under international law, Article 5 of the CRC provides that "States Parties shall respect the responsibilities, rights and duties of parents, [...] to provide, in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of the rights recognised in the present Convention". Furthermore, Article 9 of the CRC states that a child shall not be separated from his/her parents against his/her will, and that all parties must be given the opportunity to participate in any proceedings relating to this situation. The UN Guidelines on Alternative Care further substantiate the rights of children in these circumstances and the corresponding duties of states.[150]

5.3. Right to maintain contact with both parents

Key points

- The right of the child to maintain contact with both parents subsists in all forms of parental separation: family-related and state-sanctioned.
- The process of ensuring the right of the child to maintain contact with his/her parents and family reunification requires regard for the best interests of the child as a primary consideration, giving due weight to the views of the child in accordance with his/her age and maturity.

The scope of the right to maintain contact with parents differs depending on the context. In the event of a decision of the parents to separate from each other, the scope is broader and normally limited only by the best interests of the child. In the context of a state-sanctioned separation resulting from, for instance, expulsion or imprisonment of a parent, state authorities act in furtherance of a protected interest, and must strike a fair balance between the interests of the parties and the obligation to ensure the best interests of the child. The right of children to maintain contact with both parents is applicable in both instances.

Under EU law, Article 24 (3) of the EU Charter of Fundamental Rights expressly recognises every child's right to maintain contact with both parents. The

150 UN, Human Rights Council (2009), *UN Guidelines for the Alternative Care of Children*, UN Doc. A/HRC/11/L.13, 15 June 2009.

provision's wording clarifies the content of the right, particularly the meaning of contact, which must: occur on a *regular basis*; allow the development of a *personal relationship*; and be in the form of *direct contact*. There is, however, a caveat: the right of each child to maintain contact with her or his parents is expressly limited by their best interests. This provision, as the explanatory note to the Charter clarifies, is expressly informed by Article 9 of the CRC.

In line with EU competences (see Chapter 1), there has been a specific focus on judicial cooperation (with the objective of creating an area of freedom, security and justice in which the free movement of persons is ensured). Two EU instruments are of particular relevance: Council Regulation (EC) No. 2201/2003[151] (Brussels II bis), and European Parliament and Council Directive 2008/52/EC (Mediation Directive).[152] From a rights perspective, the Brussels II bis Regulation is significant. First, it applies to *all* decisions on parental responsibility, irrespective of marital status. Second, the rules relating to jurisdiction (determined for the most part by the child's habitual residence) are expressly informed by the best interests of the child; and third, there is particular regard for ensuring the respect of children's views.[153]

CJEU jurisprudence in cases of wrongful removal of a child following a decision taken unilaterally by one of the parents has primarily aimed to uphold the fundamental right of the child to maintain on a regular basis a personal relationship and direct contact with both parents (Article 24 (3) of the Charter), as the Court asserts that this right undeniably merges into the best interests of any child. In the CJEU's view, a measure that prevents the child to maintain on a regular basis a personal relationship and direct contact with both parents can be justified only by another interest of the child of such importance that it takes priority over the interest underlying that fundamental right.[154] This includes provisional, including protective, measures under Article 20 of the Brussels II bis Regulation. The Court ruled that a balanced and reasonable

151 Council of the European Union (2003), Council Regulation (EC) No. 2201/2003 of 27 November 2003 concerning jurisdiction and the recognition and enforcement of judgments in matrimonial matters and the matters of parental responsibility, repealing Regulation (EC) No 1347/2000, OJ 2003 L 338 (Brussels II bis).

152 European Parliament, Council of the European Union (2008), Directive 2008/52/EC of the European Parliament and the Council of 21 May 2008 on certain aspects of mediation in civil and commercial matters, OJ 2008 L 136/3 (*Mediation Directive*).

153 See, for example, Council Regulation (EC) No. 2201/2003, Preamble (paras. 5, 12, 13 and 19) and Articles 8, 41 (2) (c) and 42 (2) (a).

154 CJEU, C-403/09 PPU, *Jasna Detiček v. Maurizio Sgueglia*, 23 December 2009, para. 59.

assessment of all the interests involved, which must be based on objective considerations relating to the actual person of the child and his or her social environment, must in principle be performed in proceedings in accordance with the provisions of Brussels II bis Regulation.[155]

> Example: The case of *E. v. B.*[156] concerns proceedings between Mr. E. (the father) and Ms. B. (the mother), in relation to the jurisdiction of the courts of the United Kingdom to hear and determine the usual place of residence of their child, S., and the rights of access of the father. The parents had signed an agreement before a Spanish court whereby the mother had custody, and access was granted to the father. Subsequently, the mother sought to reduce the rights of access which had been granted to the father by that agreement. The father submitted an application before the High Court seeking the enforcement of the Spanish agreement. The mother submitted that she had prorogued the jurisdiction of the Spanish court and sought to transfer the prorogued jurisdiction to the courts of England and Wales. On the father's appeal, the Court of Appeal referred several questions to the CJEU concerning the interpretation of Article 12 (3) of the Brussels II bis Regulation. The CJEU held that where a court is seized of proceedings in accordance with Article 12 (3) of the Brussels II bis Regulation, the best interests of the child can only be safeguarded by a review, in each specific case, of the question of whether the prorogation of jurisdiction which is sought is consistent with the child's best interests. A prorogation of jurisdiction is valid only in relation to the specific proceedings for which the court whose jurisdiction is prorogued is seized. After the final conclusion of the proceedings from which the prorogation of jurisdiction derives, that jurisdiction comes to an end, in favour of the court benefiting from a general jurisdiction under Article 8 (1) of the Brussels II bis Regulation.

With regard to parental responsibility, Brussels II bis co-exists with the Hague Convention on jurisdiction, applicable law, recognition, enforcement and cooperation in respect of parental responsibility and measures for the protection of children.[157] Pursuant to Article 61, Brussels II bis shall take precedence over

155 *Ibid.*, para. 60.

156 CJEU, C-436/13, *E. v. B.*, 1 October 2014 (summary adjusted from http://cases.iclr.co.uk).

157 The World Organisation for Cross-border Cooperation in Civil and Commercial Matters (1996), Hague Conference on private international law, Convention on Jurisdiction, Applicable Law, Recognition, Enforcement and Co-Operation in respect of Parental Responsibility and Measures for the Protection of Children, 19 October 1996.

the Hague Convention: (a) if the child concerned has her or his habitual residence on the territory of a Member State or (b) as concerns the recognition and enforcement of a judgment rendered in a court of a Member State on the territory of another Member State, even if the child concerned has her or his habitual residence on the territory of a third state which is a contracting Party to the Hague Convention. Therefore, a key issue under the Brussels II bis Regulation is the determination of the habitual residence of the child.

Example: In *Mercredi v. Chaffe,*[158] the Court of Appeal of England and Wales referred a case to the CJEU concerning the removal of a two-month-old child from the United Kingdom to the French island of Réunion. The CJEU ruled that the concept of habitual residence, for the purposes of Articles 8 and 10 of the Brussels II bis Regulation corresponds to the place which reflects some degree of integration by the child in a social and family environment. Where the situation concerns an infant who has been staying with his/her mother only a few days in a Member State – other than that of his/her habitual residence – to which he/she was removed, the factors that must be taken into consideration include: first, the duration, regularity, conditions and reasons for the stay in the territory of that EU Member State and for the mother's move to that state; and second, with particular reference to the child's age, the mother's geographic and family origins, and the family and social connections which the mother and child have with that Member State.

Also of particular relevance for the enjoyment of the right to maintain contact with both parents in cross-border disputes are the instruments related to regulating access to justice that clarify how to handle complex disputes, such as Council Directive 2002/8/EC (Access to Justice Directive), which requires "improv[ing] access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes".[159] The purpose of this directive is to: improve access to justice in cross-border civil cases by establishing common minimum rules relating to legal aid; ensure that appropriate legal aid is granted, under certain conditions, to persons who cannot meet the cost of proceedings on account of their financial situation; and facilitate compatibil-

159 Council of the European Union (2003), Council Directive 2002/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, OJ 2003 L 026 (Access to justice directive).

ity of national laws in this matter and to provide for cooperation mechanisms between the authorities of the Member States.

Under CoE law, the right of each child to maintain contact with both parents is implicit in Article 8 of the ECHR. The ECtHR affirms that "the mutual enjoyment by parent and child of each other's company constitutes a fundamental element of family life".[160] It also emphasises, however, that this right may be limited by the best interests of the child (see Section 5.4 and Chapter 6). This right is at the centre of judicial decision-making about custody of and contact with children.

In a series of cases, the ECtHR has either expressly or implicitly referred to the best interests of the child within the context of custody and contact.

> Example: In *Schneider v. Germany*,[161] the applicant had a relationship with a married woman and claimed to be the biological father of her son, whose legally recognised father was the mother's husband. The applicant argued that the decision of the domestic courts to dismiss his application for contact with the child and information about the child's development on the basis that he was neither the child's legal father nor had a relationship with the child violated his rights under Article 8 of the ECHR. In finding a violation, the ECtHR focused on the failure of the domestic courts to give any consideration to the question of whether, in the particular circumstances of the case, contact between the child and the applicant would have been in the child's best interest.[162] As regards the applicant's request for information about the child's personal development, the Court held that the domestic courts failed to give sufficient reasons to justify their interference for the purposes of Article 8 (2)[163] and that, therefore, the interference had not been "necessary in a democratic society".

160 ECtHR, *K. and T. v. Finland* [GC], No. 25702/94, 12 July 2001, para. 151.

161 ECtHR, *Schneider v. Germany*, No. 17080/07, 15 September 2011.

162 See also ECtHR, *Anayo v. Germany*, No. 20578/07, 21 December 2010, paras. 67 and 71.

163 ECtHR, *Schneider v. Germany*, No. 17080/07, 15 September 2011, para. 104.

Example: In *Levin v. Sweden*[164] the applicant, a mother of three children in alternative non-family based care, argued that the restrictions on her right to maintain contact with her children violated her right to respect for family life. The ECtHR focused on the objective of the contact restrictions, i.e. protecting the best interests of the children. In that particular case, the children had been neglected while in the care of the applicant, and contact with her revealed strong negative reactions on the part of the children. In holding that there had been no violation of Article 8 of the ECHR, the Court found that the interference with the applicant's rights had been "proportionate to the legitimate aim pursued [the best interests of the children] and within the margin of the domestic authorities".

Example: In *Sommerfeld v. Germany*[165] the applicant complained about the restrictions on his right to maintain contact with his daughter, who had consistently expressed that she did not wish to remain in contact with him. In particular, the applicant argued that the failure of the domestic courts to obtain a psychological expert opinion constituted a flaw in the domestic proceedings. In finding no violation of Article 8 of the ECHR, the ECtHR concluded that the domestic court had been well placed to evaluate the daughter's statements and to establish whether or not she had been able to make up her own mind.

Example: In *Mustafa and Armağan Akin v. Turkey*,[166] the applicants – a father and a son – argued that the terms of a custody order by the domestic court had violated their rights under Article 8 of the ECHR. These terms prevented the son from having contact with his sister, who was in the custody of their mother. Moreover, the father could not have contact with both of his children together because his son's contact with his mother coincided with his own contact with his daughter. The ECtHR held that the decision of the domestic court separating the two siblings constituted a violation of the applicants' right to respect for their family life, as it not only prevented the two siblings from seeing each other, but also made it impossible for their father to enjoy the company of both his children at the same time.

164 ECtHR, *Levin v. Sweden*, No. 35141/06, 15 March 2012, paras. 57 and 69; ECtHR, *K. and T. v. Finland* [GC], No. 25702/94, 12 July 2001, para. 151.

165 ECtHR, *Sommerfeld v. Germany* [GC], No. 31871/96, 8 July 2003, para. 72.

166 ECtHR, *Mustafa and Armağan Akin v. Turkey*, No. 4694/03, 6 April 2010.

In the context of custody and contact decision-making, the ECtHR also prohibits discrimination incompatible with Article 14 of the ECHR.

Example: In the case of *Vojnity v. Hungary*,[167] the applicant argued that he had been denied access to his son due to his religious convictions.[168] In finding a violation of Article 14 in conjunction with Article 8 of the ECHR, the ECtHR observed that there was no evidence that the applicant's religious convictions involved dangerous practices or exposed his son to physical or psychological harm.[169] The domestic courts' decisions on the removal of the applicant's access rights rendered any form of contact and the establishment of any kind of further family life impossible, despite the fact that total severance of contact could be justified only in exceptional circumstances.[170] The ECtHR, therefore, held that there had been no reasonable relationship of proportionality between a total ban on the applicant's access rights and the aim pursued, namely the protection of the best interest of the child.[171]

Example: The case of *Salgueiro da Silva Mouta v. Portugal*[172] was brought by a father who claimed parental responsibility over his child. He alleged that, in the national proceedings, the Portuguese authorities had dismissed his claim and awarded parental responsibility to the mother on the basis of his sexual orientation. The ECtHR found that the domestic authorities indeed refused custody on the ground that he was homosexual – a decision that does not have an objective and reasonable justification. The Court concluded that Article 8 taken together with Article 14 of the ECHR were violated.

Furthermore, the right of the child to maintain contact with both parents is expressly cited within the CoE Convention on Contact Concerning Children.[173] Article 4 (1) of this convention states that "a child and his or her parents shall have the right to obtain and maintain regular contact with each other". The general principles to be applied in jurisprudence about contact emphasise the right of a child to be informed, consulted and to express his or her views, and for these views to be given due weight. Article 6 of the CoE Convention on the Exercise of Children's Rights[174] further identifies requisites of judicial decision-making, including the legal obligations to: consider whether the judicial authority has sufficient information to determine the best interests of the child; ensure the right of the child to information about the process and outcomes; and open a safe space for affected children to freely express their views in an age/maturity appropriate manner.

Situations may arise in which children are otherwise separated from a parent, for example as a result of the parent's imprisonment. The ECtHR was faced with such a situation in *Horych v. Poland*,[175] where it addressed the issue of the conditions in which the applicant, categorised as a dangerous prisoner, had received visits from his minor daughters. It noted that "visits from children [...] in prison require special arrangements and may be subjected to specific conditions depending on their age, possible effects on their emotional state or well-being and on the personal circumstances of the person visited".[176] The Court went on to say that "positive obligations of the State under Article 8, [...] include a duty to secure the appropriate, as stress-free for visitors as possible, conditions for receiving visits from his children, regard being had to the practical consequences of imprisonment". [177]

Finally, the right of children deprived of the liberty to maintain contact with their parents is reinforced by selected provisions of the CoE Guidelines on

173 Council of Europe, Convention on Contact Concerning Children, CETS No. 192, 2003. See also The World Organisation for Cross-border Cooperation in Civil and Commercial Matters (1996), Hague Conference on private international law, Convention on Jurisdiction, Applicable Law, Recognition, Enforcement and Co-Operation in respect of Parental Responsibility and Measures for the Protection of Children.

174 Council of Europe, European Convention on the Exercise of Children's Rights, CETS No. 160, 1996.

175 ECtHR, *Horych v. Poland*, No. 13621/08, 17 April 2012.

177 *Ibid.*, para. 131.

child-friendly justice.[178] The guidelines expressly affirm the right of children deprived of their liberty "to maintain regular meaningful contact with parents [and] family" (Article 21 (a)) (see also Chapter 11).

Under international law, the right to maintain contact with both parents is affirmed in Article 9 (3) of the CRC: "State Parties shall respect the right of the child who is separated from one or both parents to maintain personal relations and direct contact with both parents on a regular basis, except if it is contrary to the child's best interests."

5.4. Improper removal of children across borders — child abduction

Key points

- The ECtHR requires a child rights-based approach to improper removals in breach of custody arrangements: Article 8 of the ECHR (right to respect for private and family life) must be interpreted in connection with the Hague Convention and the CRC.
- EU law requires more specifically that the child be heard during the proceedings relating to his/her return following wrongful removal or retention.

Child abduction refers to a situation in which a child is removed or retained across national borders in breach of existing custody arrangements (Article 3 of the Hague Convention on the Civil Aspects of International Child Abduction[179] (Hague Convention)). Under the Hague Convention, wrongfully removed or retained children are to be returned speedily to their country of habitual residence (Article 11 (1)). The courts of the country of habitual residence determine the merits of the custody dispute. The courts of the country from which the child has been removed should order the return within six weeks from the date that the return application is made (Article 11). The Hague Convention is underpinned by the principle of the child's best interests. In the context of this convention, the presumption is that the unlawful removal of a child is in itself

178 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*.

179 The World Organisation for Cross-border Cooperation in Civil and Commercial Matters (1980), Hague conference on private international law, Hague Convention of 25 October 1980 on the civil aspects of international child abduction, 25 October 1980.

harmful and that the *status quo ante* should be restored as soon as possible to avoid the legal consolidation of wrongful situations. Issues of custody and access should be determined by the courts that have jurisdiction in the place of the child's habitual residence rather than those of the country to which the child has been wrongfully removed. There are several limited exceptions to the return mechanism, established in Articles 12, 13, and 20 of the Hague Convention. Article 13 includes the provisions that have generated most of the litigation, both at a domestic and at an international level. It establishes that the country the child has been removed to may refuse to return a child, where the return would expose him/her to a grave risk of harm or otherwise place him/her in an intolerable situation (Article 13 (b)). A return may equally be refused if the child objects to the return if he or she has attained the level of maturity to express his/her views (Article 13 (2)).

Under EU law, the most important instrument regulating child abduction between EU Member States is the Brussels II bis Regulation,[180] largely based on the provisions of the Hague Convention. This regulation complements and takes precedence over the Hague Convention in intra-EU abduction cases (Recital 17 of the Preamble and Article 60 (e)). Although the Hague Convention remains the main child-abduction instrument, in certain respects Brussels II bis has 'tightened' the jurisdictional rules in favour of the courts of origin/habitual residence. Similar to the Hague Convention, the courts of the state where the child was habitually resident immediately prior to improper removal/retention retain the jurisdiction in cases of child abduction. The regulation maintains the same exceptions to the return as those included in the Child Abduction Convention.

However, under Brussels II bis, as opposed to the Hague Convention, the state of habitual residence retains jurisdiction to adjudicate the merits of the custody dispute, even after a non-return order is issued in application of Article 13 (b) of the Hague Convention (Article 11 (6)–(8) of the Brussels II bis Regulation). The change of jurisdiction to the state the child has been removed to may only occur in two situations, provided for under Article 10 of the Brussels II bis Regulation. The first situation stipulates that the courts of the state of refuge shall have jurisdiction if the child has acquired habitual residence in that state

180 Council of the European Union (2003), Council Regulation (EC) No. 2201/2003 of 27 November 2003 concerning jurisdiction and the recognition and enforcement of judgments in matrimonial matters and the matters of parental responsibility, repealing Regulation (EC) No 1347/2000, OJ 2003) L 338.

and each person having right of custody has acquiesced in the removal or retention.[181] The second situation arises where the child: has acquired habitual residence in the state he/she has been removed to; a period of one year has elapsed since the parent left behind had or should have had knowledge of the whereabouts of the child; the child is settled into his new environment; and at least one of the four further conditions listed in Article 10 (b) of the Brussels II bis Regulation are met.[182]

As with all other EU legal instruments, Brussels II bis must be interpreted in accordance with the provisions of the EU Charter of Fundamental Rights, in particular Article 24. The CJEU has had the opportunity to clarify the interpretation of Article 24 in the context of child abductions. As discussed in Section 2.4, in the *Aguirre Zarraga Case*, the CJEU ruled that the right of the child to be heard, enshrined in Article 24 of the Charter, requires that the legal procedures and conditions which enable children to express their views freely be made available to them, and that those views be obtained by the court.[183] According to the CJEU however, it is only for the courts of the child's habitual residence to examine the lawfulness of their own judgments in the light of the EU Charter of Fundamental Rights and the Brussels II bis Regulation. According to the mutual trust principle, Member States' legal systems should provide effective and equivalent protection of fundamental rights. Therefore, the interested parties have to bring any human rights-based challenge before the courts which have jurisdiction over the merits of the custody dispute pursuant to the regulation. The CJEU ruled that the court of the Member State to which the child had been wrongfully removed could not oppose the enforcement of a certified judgement, ordering the return of the child, since the assessment of whether there was an infringement of these provisions fell exclusively within the jurisdiction of the state from which the child had been removed.

181 Art. 10 (a) of the Brussels II bis Regulation.

182 Art. 10 (b) of the Brussels II bis Regulation provides for four alternative conditions as follows: (i) within one year after the holder of rights of custody has had or should have had knowledge of the whereabouts of the child, no request for return has been lodged before the competent authorities of the Member State where the child has been removed to or is being retained; (ii) a request for return lodged by the holder of rights of custody has been withdrawn and no new request has been lodged within the time limit set in paragraph (i); (iii) a case before the court in the Member State where the child was habitually resident immediately before the wrongful removal or retention has been closed pursuant to Art. 11 (7); (iv) a judgment on custody that does not entail the return of the child has been issued by the courts of the Member State where the child was habitually resident immediately before the wrongful removal or retention.

183 CJEU, C-491/10 PPU, *Joseba Adoni Aguirre Zarraga v. Simone Pelz*, 22 December 2010. On aspects concerning child participation in this case, see further the analysis in Section 2.4.

Example: The case of *Povse v. Alpago*[184] concerns the unlawful removal of a girl to Austria by her mother. The Austrian courts dismissed the father's application for return of his daughter to Italy on the ground that there was a grave risk of harm to the child. Meanwhile, upon the request of the father, the Italian court ruled that it retained jurisdiction to adjudicate the merits of the custody dispute and issued an order for the return of the child to Italy and an enforcement certificate on the basis of Article 42 of Brussels II bis. The case was referred to the CJEU by an Austrian court following the mother's appeal against the application for enforcement of the certificate and the ensuing return order of the child to Italy. The CJEU ruled that once a certificate of enforcement has been issued there are no possibilities of opposing the return in the country the child has been removed to (in this case Austria), as the certificate is automatically enforceable. Further, the CJEU decided that, in this case, only the Italian courts were competent to adjudicate on the serious risk to the child's best interests entailed by the return. Assuming that these courts were to consider such a risk justified, they retained sole competence to suspend their own enforcement order[185].

Under CoE law, the CoE European Convention on Recognition and Enforcement of Decisions Concerning Custody of Children and on Restoration of Custody[186]and the Convention on Contact concerning Children[187] include safeguards to prevent the improper removal of children and ensure the return of children.[188]

The ECtHR often deals with child abduction cases, and is in such instances generally guided by provisions of the Hague Convention when interpreting Article 8 of the ECHR. However, the ECtHR inevitably conducts an analysis of the child's best interests in these cases. Two leading Grand Chamber judgments reflect the court's position on this matter.

184 CJEU, C-211/10, *Doris Povse v. Mauro Alpago*, 1 July 2010.

185 An application based on the same facts was later lodged with the ECtHR and declared inadmissible. See ECtHR, *Povse v. Austria*, Decision of inadmissibility, No. 3890/11, 18 June 2013.

186 Council of Europe, European Convention on Recognition and Enforcement of Decisions concerning Custody of Children and on Restoration of Custody of Children, CETS No. 105, 1980.

187 Council of Europe, Convention on Contact Concerning Children, CETS No. 192, 2003.

188 *Ibid.*, Arts. 10 (b) and 16, respectively; Council of Europe, European Convention on Recognition and Enforcement of Decisions concerning Custody of Children and on Restoration of Custody of Children, CETS No. 105, 1980, Art. 8.

Example: The case *Neulinger and Shuruk v. Switzerland*[189] was brought by a mother, who had removed her son from Israel to Switzerland in breach of existing guardianship arrangements. Upon the father's application under the Hague Convention, the Swiss authorities ordered the child's return to Israel. In the opinion of the national courts and experts, the child's return to Israel could be envisaged only if he was accompanied by his mother. The measure in question remained within the margin of appreciation afforded to national authorities in such matters. Nevertheless, to assess compliance with Article 8 of the ECHR, it was also necessary to take into account any developments since the Federal Court's judgment ordering the child's return. In the present case, the child was a Swiss national and had settled well in the country, where he had been living continuously for about four years. Although he was at an age where he still had a significant capacity for adaptation, being uprooted again would probably have serious consequences for him and had to be weighed against any benefit he was likely to gain from it. It was also noteworthy that restrictions had been imposed on the father's right of access before the child's removal. Moreover, the father had remarried twice since then and was now a father again, but failed to pay maintenance for his daughter. The ECtHR doubted that such circumstances would be conducive to the child's well-being and development. As to the mother, her return to Israel could expose her to a risk of criminal sanctions, such as a prison sentence. It was clear that such a situation would not be in the child's best interests, given that his mother was probably the only person to whom he related. The mother's refusal to return to Israel was not, therefore, totally unjustified. Moreover, the father had never lived alone with the child and had not seen him since the child's departure at the age of two. The ECtHR was thus not convinced that it would be in the child's best interests to return to Israel. As to the mother, a return to Israel would mean a disproportionate interference with her right to respect for her family life. Consequently, there would be a violation of Article 8 of the ECHR in respect of both applicants if the decision ordering the second applicant's return to Israel were to be enforced.

189 ECtHR, *Neulinger and Shuruk v. Switzerland* [GC], No. 41615/07, 6 July 2010.

Example: In *X v. Latvia*,[190] the mother argued that the return of her daughter to Australia, from where she had been wrongfully removed, would expose her to serious harm. In determining whether the decisions of the national courts had struck a fair balance between the competing interests at stake – within the margin of appreciation afforded to states in such matters – the best interests of the child had to be a primary consideration. To achieve a harmonious interpretation of the ECHR and the Hague Convention, the factors capable of constituting an exception to the child's immediate return under Articles 12, 13 and 20 of the Hague Convention had to be genuinely taken into account by the requested state, which had to issue a decision that was sufficiently reasoned on this point, and then evaluated in light of Article 8 of the ECHR. This Article imposed a procedural obligation on the domestic authorities, requiring that when assessing an application for a child's return, the courts had to consider arguable allegations of a "grave risk" for the child in the event of return and make a ruling giving specific reasons. As to the exact nature of the "grave risk", the exception provided for in Article 13 (b) of the Hague Convention concerned only situations which go beyond what a child could reasonably bear. In the present case, the applicant had submitted to the Latvian Appeal Court a psychologist's certificate concluding that there existed a risk of trauma for the child in the event of immediate separation from her mother. Although it was for the national courts to verify the existence of a "grave risk" for the child, and the psychological report was directly linked to the best interests of the child, the regional court refused to examine the conclusions of that report in light of the provisions of Article 13 (b) of the Hague Convention. At the same time, the national courts also failed to deal with the issue of whether it was possible for the mother to follow her daughter to Australia and to maintain contact with her. As the national courts had failed to carry out an effective examination of the applicant's allegations, the decision-making process under domestic law did not satisfy the procedural requirements inherent in Article 8 of the ECHR, and the applicant had therefore suffered a disproportionate interference with her right to respect for her family life.

190 ECtHR, *X v. Latvia* [GC], No. 27853/09, 26 November 2013, paras. 101, 106, 107 and 115–119.

6 Alternative care to family care and adoption

Every child has the right to respect for family life, a right recognised under Article 7 of the EU Charter of Fundamental Rights and Article 8 of the European Convention on Human Rights (ECHR) (see Chapter 5). Both EU and Council of Europe law reflect the importance to the child of family relationships, and this includes the child's right not to be deprived of contact with his/her parents, except when this is contrary to the child's best interests.[191] Finding a balance between ensuring the child remains with his/her family – in line with the respect for family life – and ensuring the child is protected from harm is difficult. Where a child is removed from his/her family, he/she may be placed in either foster care or residential care. Family life does not end with this separation and requires that contact continues to support family reunification if it is in the child's best interests. In certain circumstances, permanent removal, through adoption, will take place. The finality of adoption means that stringent requirements must be followed.

The purpose of this chapter is to consider European law on alternative care. EU law, mainly through the Brussels II bis Regulation, deals with cross-border procedural aspects related to placing children in alternative care. This regulation should be interpreted according to the EU Charter of Fundamental Rights, in particular Article 24. The ECtHR has also developed an extensive body of case law dealing with both substantive and procedural matters of placing children into alternative care.

191 EU (2012), Charter of Fundamental Rights of the European Union, OJ 2012 C 326, Art. 24 (3).

Section 6.1 begins by introducing some of the general principles governing the situation of children deprived of family care, Section 6.2 outlines the law concerning the child's removal into alternative care and Section 6.3 considers the European standards on adoption.

6.1. Alternative care: general principles

Key points

- Alternative care is a temporary protective measure.
- International law confirms that family-based care should be preferred over residential care.
- Children have the right to information and to express their view with respect to placement into alternative care.

Under EU, CoE and international law, viewed together, six broad principles relating to alternative care emerge.

First, alternative care is a protective measure that ensures children's interim safety and facilitates children's return to their families where possible.[192] Ideally, it is thus a temporary solution. Sometimes, it is a protective measure pending family reunification, for example of unaccompanied or separated child migrants with their families.[193] Other times it is a protective measure pending developments in family life, for example, improvements in the health of a parent or provision of support to parents.

Second, international law confirms that family-based care (such as foster care) is the optimal form of alternative care for securing children's protection and development. This is affirmed by the UN Guidelines for the Alternative

192 UN, General Assembly (2010), *Guidelines for the alternative care of children*, A/RES/64/142, 24 February 2010, paras. 48–51; Committee on the Rights of the Child (2013), *General Comment No. 14 (2013) on the right of the child to have his or her best interests taken as a primary consideration (art. 3 para. 1)*, UN Doc. CRC/C/GC/14, 29 May 2013, paras. 58–70.

193 UN, General Assembly, Convention on the Rights of the Child, 20 November 1989, Art. 22; Committee on the Rights of the Child (2005), *General Comment No. 6 (2005): Treatment of unaccompanied and separated children outside their country of origin*, UN Doc. CRC/GC/2005/6, 1 September 2005, paras. 81–83.

Care of Children and the UN Convention on the Rights of Persons with Disabilities (CRPD), to which the EU is a party.[194] The CRPD expressly states that "States Parties shall, where the immediate family is unable to care for a child with disabilities, undertake every effort to provide alternative care within the wider family, and failing that, within the community in a family setting".[195] Non-family based care (e.g. residential care) "should be limited to cases where such a setting is specifically appropriate, necessary and constructive for the individual child concerned and in his/her best interests".[196]

Third, the child's right to a guardian or representative is key to securing his or her broader rights.[197] Although there is no explicit general obligation in EU law to appoint a guardian for children without parental care, at least seven EU directives require Member States to appoint a guardian for children within different contexts, some directly related to children without parental care.[198] Further, this body of law is substantiated by the UN Guidelines for the Alternative Care of Children (generally regarding children without parental care), the CRC (specifically regarding unaccompanied children) and the CoE Convention on Action against Trafficking in Human Beings.[199] Most often the mandate of a legal guardian is to safeguard the child's best interests, ensure his or her overall well-being and complement his/her limited legal capacity (and also sometimes to exercise legal representation).[200]

Fourth, implicit within Article 24 of the EU Charter of Fundamental Rights is the legal obligation to take positive measures to ensure that decision-making

194 UN, General Assembly (2010), *Guidelines for the alternative care of children*, A/RES/64/142, 24 February 2010, paras. 20–22; UN, Committee on the Rights of the Child (2006), *General Comment No. 7 (2005): Implementing child rights in early childhood*, UN Doc. CRC/C/GC/7/Rev.136 (b), 20 September 2006, para. 18. UN, Convention on the rights of persons with disabilities (CRPD), 13 December 2006, Art. 23 (5) (see also Art. 7).

195 UN, Convention on the Rights of Persons with Disabilities (CRPD), 13 December 2006, Art. 23 (5).

197 FRA (2014a), p. 31.

198 *Ibid.*, p. 14.

199 UN, General Assembly (2010), *Guidelines for the alternative care of children*, 24 February 2010, A/RES/64/142, paras. 100–103; UN, Committee on the Rights of the Child, *General Comment No. 6, (2005): Treatment of unaccompanied and separated children outside their country of origin*, UN Doc. CRC/GC/2005/6, 1 September 2005, paras. 33–38; Council of Europe, Convention on Action against Trafficking in Human Beings, CETS No. 197, 2005, Art. 10 (4).

200 FRA (2014a), p. 15.

about a child's placement is guided by his/her best interests[201] and views.[202] General Comments No. 5 and 14 of the Committee on the Rights of the Child[203] as well as the UN Guidelines for the Alternative Care of Children emphasise the need to ensure the child's right to information, including on his/her rights and options, as well as the child's right "to be consulted and to have his/her views duly taken into account in accordance with his/her evolving capacities".[204]

Fifth, children's broader rights within the EU Charter of Fundamental Rights, the ECHR and the CRC remain applicable to cases of alternative care (foster or residential care). This includes their civil and political rights (e.g. their rights to privacy, freedom of expression and freedom of religion and protection from all forms of violence) and their socio-economic rights (including their rights to education, healthcare and participation in cultural life).[205]

Finally, Article 4 of the CRC requires states to take "all appropriate legislative, administrative, and other measures" to implement the convention. This applies equally to the context of alternative care. Article 17 (1) (c) of the revised European Social Charter (ESC) similarly requires states to take all appropriate and necessary measures designed to provide protection and special aid for children and young persons temporarily or definitively deprived of their family's support.

Under EU law, the CJEU ruled that the Brussels II bis Regulation applies to decisions to place a child in alternative care. As noted in Chapter 5, Brussels II bis incorporates children's rights principles in its approach, emphasising that the equality of all children, the best interests of the child and the right to be heard, amongst others, should be taken into account.[206] Here the

201 UN, Committee on the Rights of the Child (2013), *General Comment No. 14 (2013) on the right to have his/her best interest taken as a primary consideration (art.3 para.1),* UN Doc. CRC/C/GC/14, 29 May 2013.

204 UN, General Assembly (2010), *Guidelines for the alternative care of children*, 24 February 2010, A/RES/64/142, para. 6.

205 EU Charter of Fundamental Rights, Arts. 3–4, 7, 10–11, 14 and 24; ECHR, especially Art. 8; and CRC, Arts. 13–14, 16, 19, 28, 29, 24, 31 and 37; UN, General Assembly (2010), *Guidelines for the alternative care of children*, 24 February 2010, A/RES/64/142, Sec. 2.

206 Brussels II bis, Preamble. See also Chapter 5.

"grounds of non-recognition for judgments relating to parental responsibility", as expressed in Article 23 of the Brussels II bis Regulation, are instructive. Article 23 states that judgments shall not be recognised:

> *"(a) if such recognition is manifestly contrary to the public policy of the Member State in which recognition is sought taking into account the best interests of the child;*
> *(b) if it was given, except in case of urgency, without the child having been given an opportunity to be heard, in violation of fundamental principles of procedure of the Member State in which recognition is sought […]."*

Under the regulation, jurisdiction is determined on the basis of the child's habitual residence, with several limited exceptions, including the child's best interests (Articles 8, 12 and 15 of Brussels II bis).

Under CoE law, the ECtHR affirms that the family is the natural environment for the growth and well-being of children. However, where the family cannot provide the child with the requisite care and protection, removal to an alternative care setting may be required. Such removal interferes with the respect for family life. The ECtHR has explained that in most cases the placement of a child in alternative care should be intended as a temporary measure and that the child must ultimately be reunited with his/her family in fulfilment of the right to respect for private and family life under Article 8 of the ECHR.[207]

Although the ECHR does not impose any specific duty on states to provide children with care and protection, Article 17 of the ESC requires that states "take all appropriate and necessary measures designed to provide protection and special aid from the state for children and young persons temporarily or definitively deprived of their family's support".[208]

207 ECtHR, *K.A. v. Finland*, No. 27751/95, 14 January 2003. The Committee of Ministers of the Council of Europe has endorsed this approach in its Recommendation on the rights of children living in residential institutions, adopted on 16 March 2005.

208 Council of Europe, European Social Charter (revised), CETS No. 163, 1996, Art. 17 (1) c.

6.2. Placing children in alternative care

Key points

- Under the CoE law, placing a child in alternative care should be provided for by law, pursue a legitimate aim and be necessary in a democratic society. Relevant and sufficient reasons must be put forward by the competent authority.
- Under CoE law, the decision-making process must follow certain procedural safeguards.

Under CoE law,[209] the child's placement in alternative care is only compatible with Article 8 of the ECHR when it is in accordance with the law, pursues a legitimate aim (such as the protection of the child's best interests) and is considered necessary in a democratic society. This last aspect requires that the courts give reasons that are both relevant and sufficient to support the means used to pursue the desired aim.

Example: In *Olsson v. Sweden (No. 1)*,[210] the applicants complained about the decision to place their three children into care. Finding that the care decision fell within the state's margin of appreciation, the ECtHR focused on the manner in which the care order was implemented. According to the Court, the care decision should have been regarded as a temporary measure, to be discontinued as soon as circumstances permitted, given that adoption was not being considered. Measures taken should thus have been consistent with the ultimate aim of reuniting the natural family. In this light, the ECtHR noted that the national authorities had placed the children in separate foster homes, at a significant distance from each other and their parents. Although the authorities had acted in good faith in implementing the care order, the Court noted that it was unacceptable for administrative difficulties, such as the lack of appropriate foster families or placements, to determine where the children would be placed. In such a fundamental area as respect for family life, such considerations could not be allowed to play more than a secondary role. Thus, in finding a violation

209 The placement of children in alternative care has also been a topic of political debate in the CoE for many years. See for instance the Committee of Ministers Resolution (77) 33 on the placement of children, adopted on 3 November 1977.

210 ECtHR, *Olsson v. Sweden (No. 1)*, No. 10465/83, 24 March 1988.

of Article 8 of the ECHR, the ECtHR stated that the measures taken by the authorities in the implementation of the care order were not supported by sufficient reasons to render them proportionate to the legitimate aim pursued under Article 8.

More recently, the ECtHR considered the merits of decisions to place children in alternative care under Article 8 of the ECHR.

Example: In *Wallová and Walla v. the Czech Republic*[211] the applicants complained about the placement of their five children in two separate children's homes due to their poor housing situation. Custody of the children was given to the children's homes in 2002 on the basis of the parents' economic instability and the care orders were later lifted when their economic and housing situation improved. The ECtHR found that the underlying reason for the decision to place the children in care had been a lack of suitable housing and as such a less drastic measure could have been used to address their situation. Under Czech law, there was a possibility to monitor the family's living and hygiene conditions, and to advise them on how to improve their situation, but this option was not used. While the reasons given for placing the children in care were relevant, they were not sufficient, and the authorities did not make enough efforts to help the applicants overcome their difficulties through alternative measures. In concluding that there had been a violation of Article 8 of the ECHR, the Court also took note of the conclusions of the UN Committee on the Rights of the Child, which observed that the principle of primary consideration of the best interests of the child was still not adequately defined and reflected in all Czech legislation, court decisions and policies affecting children.

Example: In *Saviny v. Ukraine*,[212] the applicants' children were placed in care due to the parents' lack of financial means and the domestic court's conclusion that their personal qualities endangered their children's lives, health and moral upbringing. In assessing the case, the ECtHR questioned the adequacy of the evidence on which the domestic authorities had based their findings and considered that there was insufficient information available on the extent of social assistance made available. This would

211 ECtHR, *Wallová and Walla v. the Czech Republic*, No. 23848/04, 26 October 2006 (available in French).

212 ECtHR, *Saviny v. Ukraine*, No. 39948/06, 18 December 2008.

have been pertinent in evaluating whether the authorities had discharged the duty to keep the family together and whether they had sufficiently explored the effectiveness of less drastic alternatives before seeking to separate the children from their parents. Furthermore, at no stage of the proceedings had the children been heard by the judges. In sum, although the reasons given by the national authorities for removal of the applicants' children were relevant, they were not sufficient to justify such a serious interference with the applicants' family life. Therefore, the Court found that there had been a violation of Article 8 of the ECHR.

The ECtHR requires under Article 8 of the ECHR that decision-making concerning respect for family life must adhere to certain procedural safeguards. It states that the decision-making process (administrative and judicial proceedings) leading to measures of interference with family life must be fair and afford due respect to the interests protected by Article 8. What is considered under Article 8 is whether "the parents have been involved in the decision-making process [...] to a degree sufficient to provide them with [a] requisite protection of their interests".[213] This includes keeping them informed about developments, ensuring that they can participate in decisions made about them[214] and, in certain circumstances, hearing from the children concerned.[215]

Example: In *B. v. Romania (No. 2)*,[216] the applicant had been diagnosed with paranoid schizophrenia and taken by the police on a number of occasions to psychiatric institutions for treatment. Her children no longer lived with her and were placed in a care home because of their mother's illness. The ECtHR had to examine whether, having regard to the serious nature of the decisions to be taken as regards placing children into care, the decision-making process, seen as a whole, provided the parents to a sufficient degree with the requisite protection of their interests. In that connection, the Court observed that the applicant, who was suffering from a severe mental disorder, had not been assigned either a lawyer or a guardian *ad litem* to represent her during the proceedings, so that it had been impossible for her to take part in the decision-making process concerning her

215 ECtHR, *B. v. Romania (No. 2)*, No. 1285/03, 19 February 2013; ECtHR, *B.B. and F.B. v. Germany*, Nos. 18734/09 and 9424/11, 14 March 2013.

216 ECtHR, *B. v. Romania (No. 2)*, No. 1285/03, 19 February 2013.

minor children. In addition, the applicant's situation and the situation of her children had been examined by a court on only two occasions over a period of 12 years before both children had reached majority, and there was no evidence of regular contact between social workers and the applicant, which may otherwise have provided suitable means of representing her views to the authorities. In light of these facts, the Court concluded that the decision-making process around her children's placement in care had not adequately protected her interests, and that there had thus been a violation of her rights under Article 8 of the ECHR.

Example: In *B.B. and F.B. v. Germany*,[217] following allegations from the applicants' 12-year-old daughter that she and her eight-year-old brother had been repeatedly beaten by their father, the parental rights in respect of the two children were transferred to the Youth Court and the children were placed in a children's home. The District Court made a full order transferring parental authority from the applicants to the Youth Office, reaching its decision on the basis of direct evidence from the children. About a year later, at the first subsequent meeting with their parents, the daughter admitted that she had lied about having been beaten, and the children were eventually returned to their parents. In considering the applicants' complaint that the authorities had failed to adequately examine the relevant facts, the ECtHR emphasised that mistaken assessments by professionals did not necessarily mean that measures taken would be incompatible with Article 8 of the ECHR. The placement decision could only be assessed in light of the situation as presented to the domestic authorities at the time. In the ECtHR's assessment, the fact that the District Court had relied only on the statements of the children, while the applicants had submitted statements from medical professionals who had not noticed any signs of ill-treatment, combined with the fact that the Court of Appeal had not re-examined the children, were significant. As the children were in a safe placement at the time of the full hearing, there had been no need for haste, and the courts could have established an investigation into the facts of their own motion, which they failed to do. In sum, the German courts failed to give sufficient reasons for their decision to withdraw the applicants' parental authority, in breach of Article 8 of the ECHR.

217 ECtHR, *B.B. and F.B. v. Germany*, Nos. 18734/09 and 9424/11, 14 March 2013.

Even when placed in alternative care, children retain the right to maintain contact with their parents. This right has been recognised under the ECHR,[218] as the ECtHR holds that mutual contact between parents and children is a fundamental part of family life under Article 8. Given that placement in alternative care should normally be a temporary measure, maintaining family relationships is essential to ensure the successful return of the child to his/her family.[219] Under the ECHR, positive duties flow from these principles, as illustrated by the following cases.

Example: In *T. v. the Czech Republic*,[220] the ECtHR considered whether the rights of a father and daughter (applicants) had been violated by the placement of the child in care and the failure of the authorities to support contact between them. The child had been placed in a specialist institution after the death of her mother and after the father's applications for custody of his daughter had been denied due to concerns about his personality. Further requests to spend holidays with his daughter were denied and a therapeutic centre concluded that the visits were not beneficial to the child as she was afraid of him, at which time all contact was terminated. Later on, the courts decided that contact between the two applicants should only take place in writing, in accordance with the wishes of the child. The ECtHR emphasised *inter alia* a child's interests in maintaining ties with his/her family, except in particularly extreme cases where this would not be in the child's best interest. In examining the decision to place the child into care, the ECtHR noted with approval that the domestic authorities had given careful consideration to their decision, which was made after hearing expert psychological and psychiatric opinions as well as taking into account the wishes of the child. There had thus been no violation of Article 8 of the ECHR in relation to the decision to place the child in care. However, the Court went on to find that Article 8 had been violated as a result of the restrictions imposed on the contact between the applicants, in particular due to the lack of oversight of decisions by the child's residential institution to deny contact, given that these decisions ultimately reduced the chances of family reunification.

218 ECtHR, *Olsson v. Sweden (No. 1)*, No. 10465/83, 24 March 1988.

219 ECtHR *Eriksson v. Sweden*, No. 11373/85, 22 June 1989.

220 ECtHR, *T. v. the Czech Republic*, No. 19315/11, 17 July 2014 (available in French).

Example: In *K.A. v. Finland*,[221] the applicant's children were placed in alternative care due to allegations that they were being sexually abused. During the children's placement in care, little contact took place between them and their parents and little effort was made to plan for their reunification. Examining the case, the ECtHR noted that the state has a positive duty to facilitate family reunification as soon as reasonably feasible, taking into account the duty to protect the best interests of the child. According to the ECtHR, the severe restrictions on the applicant's right to visit his children reflected the social welfare authority's intention to strengthen the ties between the children and the foster family, rather than to reunite the original family. This was made notwithstanding a noted improvement in the father's circumstances. Accordingly, there was a violation of Article 8 of the ECHR.

6.3. Adoption

Key points

- Adoption ensures alternative care for children who cannot remain with their biological families.
- The best interests of the child must be the paramount consideration in adoption.
- There is no right to adopt under EU or CoE law, but the adoption process must adhere to certain criteria to ensure that it is in the best interests of the child.[220]

Under international law, the best interests of the child must be the paramount consideration in cases of adoption. Aside from the best interests principle, other general principles of the CRC also guide and inform its implementation in the context of adoption: non-discrimination, the right to life, survival and development and respect for children's views.[223] Of particular relevance is

221 ECtHR, *K.A. v. Finland*, No. 27751/95, 14 January 2003.

222 On the interest of the child to know his/her origins in the context of adoption, see Chapter 4.

223 CRC, Arts. 2, 3, 6 and 12. See also, UN, Committee on the Rights of the Child (2010), Treaty-specific guidelines regarding the form and content of periodic reports to be submitted by States Parties under Article 44, paragraph 1 (b), of the Convention on the Rights of the Child, UN Doc. CRC/C/58/Rev.2, 23 November 2010, paras. 23–27.

the UN Committee on the Rights of the Child's General Comment No. 14 on the "right of the child to have his or her best interests taken as a primary consideration".[224]

Similarly, one of the objectives of the Hague Convention on Protection of Children and Co-operation in respect of Intercountry Adoption is to "to establish safeguards to ensure that intercountry adoptions take place in the best interests of the child and with respect for his or her fundamental rights as recognised in international law".[225]

Under EU law, the rights and associated legal obligations in Article 24 of the EU Charter of Fundamental Rights are applicable to adoption in so far as it is addressed by the EU.

Under CoE law, the right to respect for family life as expressed in Article 8 of the ECHR is applicable and relied on in adoption cases. There are also two specific CoE conventions on this subject: the European Convention on the Adoption of Children[226] and the European Convention on the Adoption of Children (revised).[227] These instruments require a child rights-based approach to adoption. The European Convention on the Adoption of Children (revised), for instance, states that "[t]he competent authority shall not grant an adoption unless it is satisfied that the adoption will be in the best interests of the child".[228] Likewise, the ECtHR emphasises that the best interests of the child may override those of the parent in certain circumstances, including in adoption.[229] The European Convention on the Adoption of Children (revised) also requires that adoption should not be granted by the competent authority without "the consent of the child considered by law as having sufficient understanding".[230] Moreover, the child not deemed to understand this shall "as far as possible, be consulted

and his or her views and wishes shall be taken into account having regard to his or her degree of maturity".[231]

Example: In *Pini and Others v. Romania*,[232] two Italian couples complained about the failure of the Romanian authorities to execute the decision of a Romanian court concerning their adoption of two Romanian children. In breach of court orders, the private institution in which the children resided in Romania had refused to hand them over to the applicants. The ECtHR held that the relationship between the applicants and their adopted children fell within the scope of family life under Article 8 of the ECHR, even though they had never lived together or established emotional ties. Considering the case, the ECtHR interpreted Article 8 in light of the CRC and the Hague Convention in finding that the positive obligation on the authorities to enable the applicants to establish family ties with their adopted children was circumscribed by the best interests of the child.[233] In this regard, it held that the child's interests may, depending on their nature and seriousness, override those of the parent. Furthermore, in finding that there was no violation of Article 8, the Court emphasised that in a relationship based on adoption it is important that the child's interests should prevail over those of the parents, since adoption meant providing a child with a family, not a family with a child.[234]

Example: In *Kearns v. France*,[235] the ECtHR found it compatible with the ECHR that an Irish woman, who had placed her child for adoption in France, could not revoke her formal consent to adoption after the expiry of a two-month period. The ECtHR first underlined that the national authorities' refusal of the request for the child's return pursued the legitimate aim of protecting the rights and freedoms of others, in this case the child.[236] In relation to the imposition of a time-limit for the withdrawal of consent, the French law sought to strike a fair balance and ensure proportionality between the conflicting interests of the biological mother, the child and the adoptive family. In this process, the child's best interests

231 *Ibid.*, Art. 6.

232 ECtHR, *Pini and Others v. Romania*, Nos. 78028/01 and 78030/01, 22 June 2004.

233 *Ibid.*, para. 155.

234 *Ibid.*, para. 156.

235 ECtHR, *Kearns v. France*, No. 35991/04, 10 January 2008.

236 *Ibid.*, para. 73.

had to be paramount.[237] From the evidence presented to the Court, it was in the child's best interests to enjoy stable relations within a new family as quickly as possible and all of the necessary steps had been taken to ensure that the applicant understood the precise implications of her action. In light of these considerations, the Court held that France had not failed in its positive obligations towards the applicant under Article 8 of the ECHR.

The ECtHR also affirms that decision-making about adoption must take place in a manner consistent with the prohibition of discrimination established in Article 14 of the ECHR. In particular, the ECtHR considered whether the applicants' exclusion from eligibility to adopt on the grounds of either sexual orientation or age was compatible with Article 14, in conjunction with Article 8. In doing so, it reaffirms that the duty to take proportionate action with a view to protecting the best interests of the child is of central importance.

Example: In *Schwizgebel v. Switzerland*,[238] the applicant, a single 47-year-old woman, was unable to adopt a second child given the age gap between her and the child she wished to adopt. The applicant claimed to be a victim of discrimination on the grounds of age. The ECtHR considered that the denial of authorisation to receive a child with a view to adoption in the applicant's case pursued the legitimate aim of protecting the well-being and rights of the child.[239] Given the lack of European consensus concerning the right to adopt as a single parent, the lower and upper age-limits for adopters and the age-difference between the adopter and the child, and the state's consequent broad margin of appreciation in this area as well as the need to protect children's best interests, the refusal to authorise the placement of a second child did not contravene the proportionality principle.[240] The Court therefore found that the justification given by the government appeared objective and reasonable and that the difference in treatment complained of had not been discriminatory within the meaning of Article 14 of the ECHR.

237 *Ibid.*, para. 79.

238 ECtHR, *Schwizgebel v. Switzerland*, No. 25762/07, 10 June 2010.

239 *Ibid.*, para. 86.

240 *Ibid.*, para. 97.

Example: The case of *E.B. v. France*[241] concerns the refusal of the national authorities to grant approval for the purposes of adoption to the applicant, a lesbian living with her partner who sought to adopt as a single person.[242] The Court reiterated that Article 8 of the ECHR did not in itself confer a right to found a family or adopt. However, a discrimination complaint could fall within the broader scope of a particular right, even if the issue in question did not relate to a specific entitlement granted by the ECHR.[243] Given that French law allowed single persons to adopt, such a right could not be denied to an individual on discriminatory grounds. As established by domestic courts, the applicant presented undoubted personal qualities and an aptitude for bringing up children, which were assuredly in the child's best interests, a key notion in the relevant international instruments.[244] The Court formed the view that the applicant's sexual orientation played a determinative role in the refusal of the authorities to allow her to adopt, amounting to discriminatory treatment by comparison to other single individuals who were entitled to adopt under national law.[245]

Example: The case of *Gas and Dubois v. France*[246] concerns the question of whether same-sex couples should have an equal right to second-parent adoption as heterosexual couples. The applicants were a same-sex couple who had entered into a civil partnership. Together they had brought up a daughter, who was conceived by artificial insemination and borne by one of them in 2000. The other partner's application for a simple adoption was rejected on the grounds that the adoption would deprive the child's biological mother of her parental rights, which would run counter to both the applicant's intentions and the child's best interests. Under French law, the only situation in which a simple adoption does not result in the removal of the biological parents' rights in favour of the adoptive parent is when an individual adopts his/her spouse's child. The applicants alleged that they had been discriminated against compared with both married and unmarried heterosexual couples. Examining whether they had been discriminated against compared with a married couple, the

241 ECtHR, *E.B. v. France* [GC], No. 43546/02, 22 January 2008.

242 *Ibid.*, para. 49.

243 *Ibid.*, paras. 41–48.

244 *Ibid.*, para. 95.

245 *Ibid.*, para. 96.

246 ECtHR, *Gas and Dubois v. France*, No. 25951/07, 15 March 2012.

ECtHR concluded that marriage conferred a special status, giving rise to social, personal and legal consequences; for that reason, the applicants could not be said to be in a relevantly similar situation to married couples. Concerning the comparison with unmarried couples of opposite sex, the Court concluded that a comparable heterosexual couple in a civil partnership would also have their application for a simple adoption refused under the provisions of French law. The ECtHR consequently concluded that there had been no difference in treatment based on sexual orientation and thus no violation of the applicants' Convention rights.

Example: The case of *X and Others v. Austria*[247] concerns a complaint from a same-sex couple that it had been discriminated against in comparison with different-sex couples as regards second-parent adoption. The first and third applicants were in a stable relationship and the first applicant sought to adopt the second applicant, who was the son of the third applicant. As in *Gas and Dubois*, the ECtHR rejected the notion that the applicants were in an analogous position to a married couple in which one spouse wants to adopt the child of the other spouse. However, the ECtHR accepted that the applicants were in a comparable situation to an unmarried heterosexual couple. While second-parent adoption for unmarried heterosexual couples is permissible under Austrian law, the Austrian Civil Code provides that anyone who adopts a child would replace the biological parent of the same sex, meaning that second-parent adoption for same-sex couples is a legal impossibility. The Court concluded that in such circumstances there had been a difference in treatment of the applicants on the grounds of their sexual orientation and that no sufficiently weighty and convincing reasons had been advanced by the Government, in breach of Article 14 in conjunction with Article 8 of the ECHR.

Finally, the ECtHR also focuses its attention on the merits of abiding by the spirit and purpose of international law with respect to decision-making about adoption.

247 ECtHR, *X and Others v. Austria* [GC], No. 19010/07, 19 February 2013.

Example: In *Harroudj v. France*,[248] the French authorities refused the applicant's request for the full adoption of an Algerian girl who had been abandoned at birth and placed in the applicant's care under *kafala* – guardianship under Islamic law. The reasons for such a refusal were the fact that the French Civil Code does not allow for the adoption of a child whose adoption would be prohibited under the law of his/her country of origin (which is the case for Algerian law), and the fact that *kafala* already gave the applicant parental authority allowing her to take decisions in the child's best interests. A subsequent appeal was rejected on the basis that the domestic law was consistent with the Hague Convention on the Protection of Children and Co-operation in Respect of Intercountry Adoption and that Article 20 of the CRC recognised *kafala* as being on a par with adoption in preserving the child's best interests. In examining the applicant's complaint, the ECtHR recalled the principle that, once a family tie is established, the state has to act in a manner calculated to enable that tie to be developed and establish legal safeguards that render possible the child's integration in the family, as well as the need to interpret the ECHR harmoniously with the general principles of international law. In its assessment, the ECtHR underlined the French courts' concern to abide by the spirit and purpose of international conventions, including the UN Convention on the Rights of the Child. *Kafala* was recognised under French law and the applicant was allowed to exercise parental authority and take decisions in the child's interest. It was open to her, for example, to draw up a will in the child's favour, overcoming difficulties stemming from the restriction on adoption. In conclusion, by gradually obviating the prohibition of adoption in this manner, the respondent state, which sought to encourage the integration of children of foreign origin without cutting them off immediately from the rules of their country of origin, showed respect for cultural pluralism and struck a fair balance between the public interest and that of the applicant. The ECtHR thus found no violation of the applicant's rights.

248 ECtHR, *Harroudj v. France*, No. 43631/09, 4 October 2012.

Child protection in the broad sense relates to all measures designed to ensure the exercise of children's rights. In the narrow sense, it relates to the rights of children to be free from all forms of violence. Under international law, states must take measures to ensure children benefit from adequate protection and their rights to physical integrity and dignity are effectively observed. The duty of the state to protect may take various forms, depending on the specific risk of violence a child is exposed to and the perpetrator thereof. Thus, states' duties are more evident where children are under the authority and control of the state, for example where they are placed in public institutions. This happens when the risk of violence is high. The state's duty to protect may prove more difficult in cases where children are exposed to violence by private actors, such as their family members.

The European Union's main competence in the area relates to cross-border crimes (Article 83 of the Treaty on the Functioning of the European Union (TFEU)). Particular legislative measures have therefore been enacted with respect to child pornography and human trafficking. The EU has also passed legislation requiring Member States to criminalise several forms of sexual abuse. At the Council of Europe (CoE) level, the European Convention on Human Rights (ECHR) – mainly under Articles 2, 3 and 8 – has elaborated on states' duties in relation to a wide range of acts constituting violence against children. The ECSR has also been active in the field, both through its reporting procedure and its collective complaint mechanism. Further, specific CoE conventions, most notably the Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention),[249] are now in place and monitoring bodies in charge of supervising their implementation.

This chapter analyses specific aspects of violence against children and the response of the international community. Section 7.1 looks at violence at home, school and other settings and focuses on issues such as corporal punishment, child abuse and neglect, and sexual violence. Section 7.2 looks at cases of child exploitation which have a marked cross-border dimension, including human trafficking (for the purposes of forced labour or sexual exploitation), child pornography and grooming. Finally, Section 7.3 deals with instances of abuse where children are in particularly vulnerable situations.

249 Council of Europe, Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse, CETS No. 201, 2007.

7.1. Violence at home, in schools or other settings

Key points

- States have the duty to ensure that children are effectively protected against violence and harm in all settings.
- States have the duty to provide an adequate legal framework for child protection.
- States must conduct effective investigations into arguable allegations of child abuse, violence against children and harm to children.

Under EU law,[250] the main legal instrument in this field, enacted on the basis of Articles 82 and 83 of the TFEU, is Directive 2011/93/EU on combating sexual abuse and sexual exploitation of children and child pornography.[251]

Under CoE law, the ECtHR and the ECSR have developed a substantial body of case law regarding the protection of children against violence in all settings. In addition, specific CoE conventions (e.g. the Lanzarote Convention) provide detailed guarantees to protect children against specific forms of violence.

7.1.1. Scope of state responsibility

Under CoE law, the ECtHR has analysed the most severe forms of violence against children under various articles of the ECHR, most notably Articles 2 and 3. The Court has identified clear duties incumbent on states whenever children are placed in institutions under their authority.[252] Likewise, if a certain conduct or situation reaches the level of severity after which it qualifies as inhuman or degrading treatment under Article 3, the state has positive obligations to protect children against ill-treatment, including treatment administered by private individuals. Situations such as long-term neglect by parents,[253] repeated sexual

abuse by school teachers,[254] rape,[255] or corporal punishments[256] have all been found to fall within the scope of Article 3 of the ECHR.

In the case of a death, a state may be held responsible under Article 2 of the ECHR, even if the death was inflicted by a private person, and not by an agent of the state. States' positive obligations vary from case to case, the core duty being to secure the *effective* protection of children against violence. In cases of serious forms of ill-treatment, positive obligations include the duty to enact effective criminal law provisions which are backed by the law-enforcement machinery.[257] States must also adopt special measures and safeguards for protecting children.[258]

The ECHR was faced on several occasions with cases concerning violence against children administered by private individuals in schools, private homes or other establishments which were ran by non-state actors, where it was questionable whether state responsibility could arise. More importantly, the ECtHR ruled that a state may not absolve itself of the duty to protect children by delegating the administration of important public services – such as education – to private individuals.[259] In cases concerning the determination of state responsibility, the ECtHR generally distinguished between the states' general obligation to protect, when the risk was not clearly identifiable, and a specific obligation to protect, in cases where the victim was clearly identifiable. In the former case, the ECtHR analysed whether the absence of state intervention resulted in a real risk of violence for the child victim.

Example: The case of *Kayak v. Turkey*[260] concerns the stabbing to death of a 15-year-old boy by another teenager, in the vicinity of a school. The ECtHR found that schools have an obligation to protect those enrolled from all forms of violence. In this specific case the ECtHR ruled that Turkey was responsible under Article 2 of the ECHR for failing to protect the right to life

260 ECtHR, *Kayak v. Turkey*, No. 60444/08, 10 July 2012 (available in French).

of the applicants' son and brother, as there was no effective surveillance system in place at the time. In the absence of such a system, it was possible for a teenager to take a knife from the kitchen school, which he used to stab the victim.

Example: The case of *O'Keeffe v. Ireland*[261] concerns acts of abuse committed in the 1970s in an Irish National School. At the time, national schools in Ireland were recognised and paid for by the state, whereas the management and administration was entrusted to the Church. The applicant, a pupil at the time, was subjected to approximately 20 acts of sexual abuse by one of the school teachers. She only complained to the state authorities about these acts in 1998, after finding out about other acts of sexual abuse committed by the same teacher. The ECtHR had to determine whether the state could be held liable for acts of abuse which were not reported at the time to the authorities. The Court first found that the acts of abuse to which the applicant had been subjected fell within the scope of Article 3 of the ECHR. Then, based on various reports, the ECtHR found that the state should have been aware of the potential risks of sexual abuse in schools. At the time, there was no adequate procedure in place which would have allowed a child or a parent to complain directly to the state about acts of abuse. There was also no supervision mechanisms of the teachers' treatment of children. The ECtHR therefore concluded that Ireland had failed to fulfil its positive obligations under Article 3 of the ECHR, since it did not provide an effective protection mechanism for acts of abuse against minors in schools.

Pursuant to the ECtHR, states must also conduct effective investigations into allegations of ill-treatment or loss of life, irrespective of whether the acts were perpetrated by state agents[262] or by private persons. An investigation is effective if, upon the receipt of complaints from victims or their successors, states put in place a procedure capable of leading to the identification and punishment of those responsible for acts of violence contrary to either Articles 2 or 3 of the ECHR.

Under the ESC, children's rights to protection from abuse and ill-treatment fall mainly under Articles 7 and 17.

261 ECtHR, *O'Keeffe v. Ireland* [GC], No. 35810/09, 28 January 2014.

262 ECtHR, *Assenov and Others v. Bulgaria*, No. 24760/94, 28 October 1998.

Further, under the Lanzarote Convention, states are required to criminalise various forms of sexual abuse and sexual exploitation against children.[263] This convention also requires states to take legislative or other measures to prevent sexual abuse of children, by organising awareness-raising campaigns, training specialist staff, informing children on the risks of abuse, and providing specialist help to individuals who risk committing child abuse crimes. Furthermore, under Articles 4 and 5 of the Council of Europe Convention on preventing and combating violence against women and domestic violence (Istanbul Convention),[264] states undertake to enact special legislative measures and to investigate acts of violence against women. Under Article 22 of the Istanbul Convention, states are obliged to ensure specialist support services to women and children who are victims of domestic violence.

Under international law, the CRC is the key legal instrument for ensuring child protection at state level. Pursuant to Article 19, States Parties have the duty to take legislative, administrative, social and educational measures to protect children against all forms of violence. The UN Committee on the Rights of the Child has issued an important number of General Comments and recommendations interpreting states' obligations under the CRC. For instance, General Comment No. 13 describes measures to protect children against all forms of violence.[265] General Comment No. 5 refers to measures to implement and monitor the CRC in national laws and policies.[266]

7.1.2. Corporal punishment

Corporal punishment is generally defined as any form of physical punishment intended to cause someone pain or discomfort. It mostly relates to hitting children with the hand or with an object, but it may also involve non-physical acts, such as threats, which have the same end result – the humiliation of the child.[267]

Under CoE law, the ECtHR has analysed complaints about corporal punishment as a form of disciplinary measure mainly under Article 3 of the ECHR. Where the measure reached the level of severity required under Article 3, the ECtHR found that the treatment violated that provision.[268] Where measures of corporal punishment do not reach the threshold of severity required under Article 3, they may nevertheless fall under Article 8 as part of the right to physical and moral integrity. However, the ECtHR has to date not found a violation on the merits of Article 8 in corporal punishment cases. The use of corporal punishment in state schools may also breach the rights of the parents to raise their children according to their philosophical convictions, as provided for under Article 2 of Protocol No. 1 to the ECHR.[269]

Example: The cases of *Campbell and Cosans v. the United Kingdom*[270] concern the suspension from school of two boys for refusing to accept corporal punishment. The ECtHR found no violation of Article 3 of the ECHR as the children had not actually been subjected to corporal punishment. It found, however, a violation of Article 2 of Protocol No. 1 to the ECHR on the grounds that, by allowing for corporal punishment, the respondent state had failed to respect the parents' philosophical convictions. The ECtHR also found a violation of one of the boys' right to education provided for under Article 2 of Protocol No. 1 to the ECHR, on account of his suspension from school.

267 UN, Committee on the Rights of the Child (2007), *General Comment No. 8 (2006): The right of the child to protection from corporal punishment and other cruel or degrading forms of punishment' (Arts. 19; 28, para. 2; and 37 inter alia)*, CRC/C/GC/8, 2 March 2007.

268 ECtHR, *Tyrer v. the United Kingdom*, No. 5856/72, 25 April 1978.

269 ECtHR, *Campbell and Cosans v. the United Kingdom*, Nos. 7511/76 and 7743/76, 25 February 1982, para. 38.

270 ECtHR, *Campbell and Cosans v. the United Kingdom*, Nos. 7511/76 and 7743/76, 25 February 1982.

The ESC does not include any direct prohibition against corporal punishment. Nevertheless, the ECSR has read such an obligation into Article 17 of the ESC.[271] By virtue of its supervision, both through the reporting procedure and the collective complaints procedure of states' compliance with Article 17, the ECSR has found that several contracting states breach this provision by not prohibiting all forms of corporal punishment. In three similar cases filed by the Association for the Protection of All Children (APPROACH) Ltd. against Belgium,[272] the Czech Republic,[273] and Slovenia[274] respectively, the ECSR found a violation of Article 17 of the ESC, as these states lacked legislation setting out "an express and comprehensive prohibition on all forms of corporal punishment of children that is likely to affect their physical integrity, dignity, development or psychological well-being".[275] The ECSR also established that laws prohibiting the corporal punishment of children must be applicable to such forms of alternative care as institutional care, foster care and kindergartens. It should also be recalled in this regard that the Council of Europe's Parliamentary Assembly issued in 2004 a recommendation requesting all contracting states to ban corporal punishment.[276]

Under international law, corporal punishment is indirectly considered a form of violence against children falling under Articles 19, 28 (2) and 37 of the CRC. Moreover, the Committee on the Rights of the Child has issued General Comment No. 8/2006, calling on states to take appropriate measures against all forms of corporal punishment.[277]

271 See, for example, ECSR, *World Organisation against Torture (OMCT) v. Belgium*, Complaint No. 21/2003, 7 December 2004; ECSR, Conclusions XVI-2, Poland, Art. 17, p. 65.

276 Council of Europe, Parliamentary Assembly (2004), Recommendation 1666 (2004) on a Europe-wide ban on corporal punishment of children, 23 June 2004.

277 UN, Committee on the Rights of the Child (2007), *General Comment No. 8 (2006): The right of the child to protection from corporal punishment and other cruel or degrading forms of punishment (arts. 19; 28, para. 2; and 37, inter alia)*, CRC/C/GC/8, 2 March 2007.

7.1.3. Sexual abuse

Human trafficking and child pornography is dealt with in Sections 7.2.2 and 7.2.3 respectively.

Child sexual abuse may take many forms, including harassment, touching, incest or rape. Child sexual abuse can take place in various settings, including homes, schools, care-institutions, churches, etc. Children are particularly vulnerable to sexual abuse, as they often find themselves under the authority and control of adults and have less access to complaint mechanisms.

Under EU law, Directive 2011/93/EU – largely reflecting the approach of the Lanzarote Convention – seeks to harmonise minimum criminal sanctions for various child sexual abuse offences between Member States.[278] Under Article 3 of this directive, Member States must take criminal law measures to ensure the sanctioning of various forms of sexual abuse, including causing children to witness sexual activities or sexual abuse, and engaging in sexual activities with children. The directive provides for increased penalties if the acts are committed by persons in a position of trust against particularly vulnerable children and/or through the use of coercion. Further, Member States must ensure that the prosecution of suspects of child abuse takes place automatically and that persons convicted of sexual abuse crimes are prevented from exercising any professional activities involving direct or regular contact with children. The directive also includes provisions on child-friendly proceedings and ensures the protection of child victims in courts.

Directive 2011/93/EU is linked to the Framework Decision 2009/315/JHA[279] on the organisation and content of the exchange of information extracted from the criminal record between Member States. Despite not being child-specific, this Framework Decision fills an important gap in the protection system, ensuring that Member States' authorities have access to the criminal records of convicted persons. This facilitates the identification of individuals convicted of sexual abuse looking for a job in institutions working with children in other Member States.

278 Directive 2011/93/EU of the European Parliament and of the Council of 13 December 2011 on combating the sexual abuse and sexual exploitation of children and child pornography, OJ 2011 L 335/1.

279 Council Framework Decision 2009/315/JHA of 26 February 2009 on the organisation and content of the exchange of information extracted from the criminal record between Member States, OJ 2009 L 93, pp. 23–32.

Under CoE law, the ECtHR has examined cases of sexual abuse under Articles 3 and 8 of the ECHR. Complaints generally concern the failure of states to take appropriate measures to protect children from abuse. In the context of Article 3, the ECtHR has also examined whether states conducted effective investigations into allegations of sexual abuse. Child-abuse claims made under Article 8 concern the impact of such acts on the physical integrity of the victim and on the right to respect for family life. At times, the distinction between states' obligations under Articles 3 and 8 is rather blurred, the ECtHR using similar reasoning for finding violations of both Articles. It should be noted, however, that Article 8 cases have been more common in situations concerning undue removal/taking into care and the impact of allegations of child abuse on the family. These situations are analysed in Chapter 5.

Example: In *M.C. v. Bulgaria*[280] the applicant was a 14-year-old girl, who claimed to have been raped by two individuals after she had gone out one evening. Her complaint before the domestic authorities had been dismissed mainly as no form of physical violence had been found. The ECtHR noted that allegations of rape fell under Article 3 of the ECHR and that the respondent state had to conduct an effective investigation into such allegations. In finding that the Bulgarian authorities failed to conduct such an investigation, the ECtHR relied on evidence that the authorities generally dismissed cases where the victim could not show physical opposition to the act of rape. The Court found that such a standard of proof was not in accordance with factual realities concerning victims of rape and was therefore capable of rendering the authorities' investigation ineffective in breach of Article 3 of the ECHR.

Further, the Lanzarote Convention regulates in detail the right of children to be protected from sexual abuse. This convention adopted in the framework of the CoE, is open to ratification by states outside Europe. This binding instrument is backed by a plethora of non-legally binding instruments aimed at further ensuring that states enact effective measures against child sexual abuse.[281]

280 ECtHR, *M.C. v. Bulgaria*, No. 39272/98, 4 December 2003.

281 Examples include: Council of Europe, Committee of Ministers (2001), Recommendation Rec (2001) 16 on the protection of children against sexual exploitation, 31 October 2001; Council of Europe, Parliamentary Assembly (1996), Resolution 1099 (1996) on the sexual exploitation of children, 25 September 1996; Council of Europe, Parliamentary Assembly (2000), Resolution 1212 (2000) on rape in armed conflicts, 3 April 2000; Council of Europe, Parliamentary Assembly (2002), Resolution 1307 (2002) on sexual exploitation of children: zero tolerance, 27 September 2002.

7.1.4. Domestic violence and child neglect

Many cases of domestic violence include allegations of sexual abuse. In this sense, states' obligations under international law are similar to those listed in Section 7.1.3 above.

Under CoE law, it has usually been mothers who have complained to the ECtHR that the state has failed to adequately discharge its obligation – established by the ECHR – to protect against harm. Domestic violence cases raised issues under Articles 2, 3 and 8 of this Convention. States must comply with their positive obligation to take effective measures against domestic violence and conduct an effective investigation into arguable allegations of domestic violence or child neglect.

Example: In the case of *Kontrová v. Slovakia*,[282] the applicant had on several occasions been physically assaulted by her husband. She complained to the police, but later withdrew her complaint. Her husband subsequently threatened to murder their children. A relative reported this incident to the police. Nevertheless, several days after the incident, the applicant's husband shot himself and their two children dead. The ECtHR held that a state's positive obligations arise in the sphere of Article 2 of the ECHR whenever the authorities know or ought to know of the existence of a real and immediate risk to the life of an identified individual. In this case, the Slovak authorities should have known of such a risk by virtue of the pre-existing communications between the applicant and the police. The positive obligations of the police should have entailed registering the applicant's criminal complaint, launching a criminal investigation and initiating criminal proceedings, keeping a proper record of the emergency calls and taking action in respect of the allegations that the applicant's husband had a shotgun. The police, however, failed to meet its obligations and the direct consequence of those failures was the death of the applicant's children, in breach of Article 2 of the ECHR.

282 ECtHR, *Kontrová v. Slovakia*, No. 7510/04, 31 May 2007.

Example: The case of *Eremia v. the Republic of Moldova*[283] concerns the complaint of a mother and her two daughters about the authorities' failure to protect them from the violent and abusive behaviour of their husband and father. The ECtHR held that, despite their knowledge of the abuse, the authorities failed to take effective measures to protect the mother from further domestic violence. It also considered that, despite the detrimental psychological effects on the daughters witnessing their father's violence against their mother in the family home, little or no action had been taken to prevent the recurrence of such behaviour. The Court found that the Moldovan authorities had not properly complied with their obligations under Article 8 of the ECHR.

Cases of child neglect, either in state institutions or at home, have also been raised under the ECHR. The obligations of the authorities in situations of parental child neglect are similar to those in the cases presented previously. On the one hand, the state needs to put in place effective mechanisms for child protection, while on the other, state authorities must take action for protecting children in cases of reported child neglect, or where there is enough evidence of child neglect at their disposal, be it in homes or in privately-run institutions.[284] Cases of neglect in state institutions impose direct obligations on the authorities to protect children by ensuring that they receive adequate (medical) care, that the facilities where they are placed are adequate and/or the staff is trained to deal with the needs of children.[285]

The Istanbul Convention is also relevant.[286] Though not child-specific, it includes several references to children. First, under Article 3 (f), girls below the age of 18 are to be considered 'women', therefore, all the provisions of the convention apply to them. Secondly, under Article 2 (2), States Parties are encouraged to apply the convention to all victims of domestic violence, which can include children. In fact, in most cases children are witnesses to and are severely affected by domestic violence within the home.[287] Finally, child-specific provisions of the convention include obligations for states to take measures to address the needs of child victims, raise awareness among children, and protect child witnesses.

In the same vein, under Article 17 of the ESC, states are obliged to prohibit all forms of violence against children and to adopt adequate criminal and civil law provisions.

The issues of domestic violence and child neglect have been addressed in various non-legally binding instruments of the CoE.[288]

7.2. Child exploitation, pornography and grooming

Key points

- State authorities have a duty to cooperate and effectively work together to protect children against violence, including in the conduct of investigations.

7.2.1. Forced labour

Under EU law, slavery, servitude, forced or compulsory labour are prohibited (Article 5 (2) of the EU Charter of Fundamental Rights). The employment of children is also prohibited (Article 32 of the Charter). Directive 94/33/EC is the main legal instrument prohibiting child labour.[289] Only in exceptional circumstances are states allowed to set the minimum age for employment below the minimum school leaving age (Article 4 (2)). States have to ensure that young people admitted to work benefit from appropriate working conditions (Articles 6 and 7). Furthermore, children can only be employed for certain activities, such as light domestic work or social and cultural activities (Articles 2 (2) and 5). The directive also sets out specific protection measures to be taken in cases of child labour (Section III).

288 Examples include: Council of Europe, Committee of Ministers (1985), Recommendation No. R (85) 4 on violence in the family, 26 March 1985; Council of Europe, Committee of Ministers (1990), Recommendation No. R (90) 2 on social measures concerning violence in the family, 15 January 1990; Council of Europe, Parliamentary Assembly (1998), Recommendation 1371 (1998) on abuse and neglect of children, 23 April 1998.

289 Council Directive 94/33/EC of 22 June 1994 on the Protection of Young People at Work, OJ 1994 L 216.

In many instances, forced child labour cases involve trafficked children.[290] Directive 2011/36/EU on preventing and combating trafficking in human beings recognises forced labour as a form of child exploitation (Article 2 (3)).[291] Children trafficked for the purposes of forced labour are protected under the directive in the same way as victims of trafficking for other purposes (such as sexual exploitation, see Section 7.1.3).[292]

Under CoE law, Article 4 of the ECHR prohibits in absolute terms all forms of slavery, servitude, forced and compulsory labour. The ECtHR defines "forced or compulsory labour" as "work or service which is exacted from any person under the menace of any penalty against the will of the person concerned and for which the said person has not offered himself voluntarily".[293] Servitude includes, in addition, "the obligation for the 'serf' to live on another person's property and the impossibility of altering his condition".[294] Servitude is therefore an aggravated form of compulsory labour.

In cases concerning allegations of forced labour, the ECtHR first determines whether the allegations fall within the scope of Article 4 of the ECHR.[295] It then analyses whether states have complied with their positive obligations to put in place a legislative and administrative framework that prohibits, punishes and effectively prosecutes cases of forced or compulsory labour, servitude and slavery.[296] As regards the procedural aspect of Article 4, the ECtHR examines whether the domestic authorities conducted an effective investigation into arguable allegations of forced labour or servitude.[297]

290 Recital 11, Directive 2011/36/EU of the European Parliament and of the Council of 15 April 2011 on preventing and combating trafficking in human beings and protecting its victims, OJ 2011 L 101/1.

291 Directive 2011/36/EU of the European Parliament and of the Council of 15 April 2011 on preventing and combating trafficking in human beings and protecting its victims, OJ 2011 L 101/1.

292 See further FRA (2015c), pp. 40–41.

293 ECtHR, *Siliadin v. France*, No. 73316/01, 26 July 2005, para. 116.

294 *Ibid.*, para. 123.

295 ECtHR, *C.N. and V. v. France*, No. 67724/09, 11 October 2012, para. 70.

296 *Ibid.*, para. 104 and following.

297 ECtHR, *C.N. v. the United Kingdom*, No. 4239/08, 13 November 2012, paras. 70–82.

Example: The case of *C.N. and V. v. France*[298] concerns the forced-labour claims of two sisters of Burundian origin. After the death of their parents, they were taken to live with their aunt and her family in France. They were accommodated for four years in the basement of the house in allegedly very bad conditions. The older sister did not attend school and spent all her time doing household chores and taking care of her aunt's disabled son. The younger sister attended school and worked for the aunt and her family after school and after having been given time to do her homework. Both sisters lodged a complaint with the ECtHR that they had been held in servitude and subjected to forced labour. The ECtHR found that the first applicant had indeed been subject to forced labour as she had to work seven days a week with no remuneration and no holiday. Moreover, she had been held in servitude because she had the feeling that her situation was permanent, with no likelihood of change. The ECtHR further found that the state did not meet its positive obligations, since the legal framework in place did not offer effective protection to victims of compulsory labour. Concerning the procedural obligation to investigate, the ECtHR held that the requirements of Article 4 of the ECHR had been met, as the authorities had conducted a prompt independent investigation capable of leading to the identification and punishment of those responsible. The ECtHR dismissed the second applicant's allegations of forced labour, reasoning that she had been able to go to school and was given time to do her homework.

The ESC guarantees the right of children to be protected against physical and moral dangers within and outside the working environment (Article 7 (10)). The ECSR observed that domestic/labour exploitation of children, including trafficking for the purposes of labour exploitation, must be prohibited at state level.[299] States Parties to the ESC must ensure not only that they have the necessary legislation to prevent exploitation and protect children and young persons, but also that this legislation is effective in practice.[300]

The Lanzarote Convention also stipulates that states should criminalise all forms of child sexual exploitation.

7.2.2. Child trafficking

Under EU law, Article 83 of the TFEU identifies trafficking in human beings as a field where the EU Parliament and Council have legislative powers. Article 5 (3) of the EU Charter of Fundamental Rights contains an express prohibition of trafficking in human beings. The contribution of the EU is valued here, as this is an area with cross-border dimensions.

Directive 2011/36/EU on preventing and combating trafficking in human beings and protecting its victims is the first instrument passed by the European Parliament and the Council based on Article 83 of the TFEU.[301] Under Article 2 (1) of this directive, trafficking is defined as "the recruitment, transportation, transfer, harbouring or reception of persons, including the exchange or transfer of control over those persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation". The purpose of the directive is to set out minimum rules for the definition and sanctioning of human trafficking-related offences (Article 1). The directive as a whole is relevant for children, and it also includes several child-specific provisions relating to assistance and support of child victims of trafficking and protection in criminal investigations (Articles 13–16).[302] Specific support measures are to be taken pursuant to a specialist assessment of each individual victim (Article 14 (1)). States should appoint a guardian to represent the child's best interests (Article 14 (2)) and provide support to the family of the child (Article 14 (3)). During criminal proceedings, children have the right to a representative, free legal counselling, and the right to be heard in adequate premises and by trained professionals (Article 15 (1)–(3)). Further protection measures include the possibility to conduct hearings without the presence of the public and the possibility to hear the child indirectly via communication technologies (Article 15 (5)).[303]

301 Directive 2011/36/EU of the European Parliament and of the Council of 15 April 2011 on preventing and combating trafficking in human beings and protecting its victims, OJ 2011 L 101/1.

302 Provisions detailed in FRA and ECtHR (2014), p. 222.

303 See FRA (2015b), p. 79.

Directive 2004/81/EC is also relevant for trafficked children.[304] Under this instrument, victims of trafficking may be issued residence permits by the host Member States, provided they cooperate in the criminal investigation. Nevertheless, the directive only applies to children to the extent decided by Member States.[305]

When it comes to enforcement, the EU's law enforcement agency (Europol) and the EU's Judicial Cooperation Unit (Eurojust) play important roles in ensuring cooperation between Member States to identify and prosecute organised trafficking networks. The relevant provisions for the protection of child victims at EU level are addressed in Section 11.3 of this handbook.

Under CoE law, the ECHR does not include any express provision on trafficking. Nevertheless, the ECtHR interprets Article 4 of the ECHR as including a prohibition of trafficking.[306] The Court has adopted the same definition of trafficking as laid down in Article 3 (a) of the Protocol to prevent, suppress and punish trafficking in persons, especially women and children, supplementing the UN Convention against Transnational Organized Crime (Palermo Protocol) and Article 4 (a) of the CoE Convention on Action against Trafficking in Human Beings.[307] The ECtHR first identifies whether a particular situation involves a credible allegation of trafficking and thus falls under the scope of Article 4. If it does, the ECtHR's analysis will follow the patterns described in Section 7.2.1: the Court looks into whether the legal framework of the respondent state offers effective protection against trafficking, whether the state has discharged its positive obligations in the particular circumstances of the case and whether the authorities have conducted an effective investigation into arguable allegations of trafficking.

304 Council Directive 2004/81/EC of 29 April 2004 on the residence permit issued to third-country nationals who are victims of trafficking in human beings or who have been the subject of an action to facilitate irregular immigration, who cooperate with the competent authorities, OJ 2004 L 261, pp. 19–23.

305 *Ibid.*, Art. 3.

306 ECtHR, *Rantsev v. Cyprus and Russia*, No. 25965/04, 7 January 2010, para. 282.

307 UN, Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children, supplementing the United Nations Convention against Transnational Organized Crime (UNCTOC), New York, 15 November 2000; Council of Europe, Council of Europe Convention on Action against Trafficking in Human Beings, CETS No. 197, 2005.

Example: The case of *Rantsev v. Russia and Cyprus*[308] was lodged by the father of a young Russian girl who died under suspicious circumstances in Cyprus. She had entered Cyprus on a cabaret artist visa. After what appeared to be an escape attempt, she died by falling off the balcony of an apartment belonging to acquaintances of her employer. Her father lodged a complaint against both Russia and Cyprus, essentially claiming that the authorities had not appropriately investigated the death of his daughter. The ECtHR held for the first time that trafficking in human beings falls under the scope of Article 4 of the ECHR. Although Cyprus had an adequate legal framework to combat trafficking, Article 4 was violated, as the administrative practice of requiring employers to issue financial guarantees for cabaret dancers did not offer effective protection against trafficking and exploitation. Further, in the particular circumstances of the case, the Cypriot authorities should have known that the applicant's daughter was at risk of being trafficked. The Court ruled that the police failed to take measures to protect Ms Rantseva against exploitation. Finally, it found a violation of Article 4 by Russia, since the Russian authorities did not appropriately investigate the allegations of trafficking.

The ECSR considers trafficking in human beings to constitute a grave violation of human rights and human dignity, and to amount to a new form of slavery.[309] Under Article 7 (10), states must enact legislation to criminalise it.[310] This legislation must be backed by an adequate supervisory mechanism, sanctions, and an action plan to combat child trafficking and sexual exploitation. [311]

At treaty level, the CoE Convention on Action against Trafficking in Human Beings is the key instrument addressing human trafficking.[312] In view of the broader membership of the CoE and the fact that the Anti-Trafficking Convention is open to accession by non-CoE member states,[313] it complements the

308 ECtHR, *Rantsev v. Cyprus and Russia*, No. 25965/04, 7 January 2010. The case does not concern the death of a child; however, this case is worth mentioning in absence of ECtHR child-specific trafficking cases and in view of the particular threat of trafficking to children.

313 For example, Belarus acceded to the convention on 26 November 2013.

EU Directive 2011/36/EU and is instrumental in combating trafficking in states party to the convention, whether EU members or not, on the basis of common standards and obligations. The implementation of the convention is monitored by a group of independent experts (the Group of Experts on Action against Trafficking in Human Beings GRETA), who periodically assess the situation in each country and publish reports. On the basis of these reports, the Committee of the Parties to the Convention, the political pillar of the monitoring mechanism under the convention, adopts recommendations to States Parties concerning measures to be taken to implement GRETA's conclusions and follows up on progress.

7.2.3. Child pornography and grooming

Under EU law, Directive 2011/93/EU is the main legal instrument addressing child pornography.[314] Pornography is defined as: "(i) any material that visually depicts a child engaged in real or simulated sexually explicit conduct; (ii) any depiction of the sexual organs of a child for primarily sexual purposes; (iii) any material that visually depicts any person appearing to be a child engaged in real or simulated sexually explicit conduct or any depiction of the sexual organs of any person appearing to be a child, for primarily sexual purposes; or (iv) realistic images of a child engaged in sexually explicit conduct or realistic images of the sexual organs of a child, for primarily sexual purposes."[315] Article 5 of this directive introduces an obligation for EU Member States to take all necessary measures to ensure that the intentional production, acquisition, possession, distribution, dissemination, transmission, offering, supplying or making available of child pornography as well as knowingly obtaining access to this type of content is punishable.

Under CoE law, the ECtHR has on several occasions analysed cases concerning child pornography under Article 8 of the ECHR.

Example: The case of *Söderman v. Sweden* was brought by a girl whose stepfather attempted to film her while she was taking a shower.[316] She alleged that the Swedish legislative framework did not adequately protect

314 Directive 2011/93/EU of the European Parliament and of the Council of 13 December 2011 on combating the sexual abuse and sexual exploitation of children and child pornography, OJ 2011 L 335/1, pp. 1–14.

315 *Ibid.*, Art. 2 (c).

316 ECtHR, *Söderman v. Sweden* [GC], No. 5786/08, 12 November 2013.

her private life. The ECtHR held that the state has positive obligations to set up a legislative framework offering adequate protection to victims such as the applicant. As this case concerns only an attempt to film the applicant, the ECtHR held that such legislative framework does not necessarily have to include criminal sanctions. The remedies offered to a victim – either civil or criminal – have to be effective. On the facts of the case, the ECtHR held that the applicant did not benefit from effective criminal or civil remedies against her stepfather's attempt to film her, in breach of Article 8 of the ECHR.

Article 9 of the CoE Convention on Cybercrime[317] requires States Parties to criminalise the conduct of offering, making available, distributing, transmitting, procuring or possessing child pornography or producing such material through a computer system. An important requirement is that this conduct must be intentional. The Explanatory Report of the Convention states that the term 'pornographic material' is dependent on national standards concerning materials classified as "obscene, inconsistent with public morals or similarly corrupt".[318] Nevertheless, this obligation to criminalise should not only apply to material if it visually depicts a child, but also if it depicts a person appearing to be one or realistic images representing a child who is engaged in sexually explicit conduct.[319]

Further, pursuant to Articles 21 to 23 of the Lanzarote Convention, states are required to take legislative measures to criminalise various forms of child pornography. Under Article 21, recruiting, coercing and participating in child pornography activities should be criminalised. Under Article 22, causing children to witness sexual (abuse) acts must equally be criminalised. Finally, Article 23 requires that criminal legislation be enacted in relation to acts of solicitation of children for sexual purposes through information and communication technologies. The Lanzarote Committee has adopted an opinion on this provision, which invites the States Parties to the convention to consider extending the criminalisation of solicitation to cases when the sexual abuse is not the result of a meeting in person but committed online.[320]

320 Lanzarote Committee Opinion on Art. 23 of the Lanzarote Convention and its explanatory note, 17 June 2015.

7.3. High risk groups

Key point

- Children victims of forced disappearance (known as 'enforced disappearance' in international law) have the right to preserve or to re-establish their identity.

7.3.1. Children belonging to a minority

Under CoE law, ECtHR cases dealing specifically with violence against minority children – outside the context of human trafficking and forced labour – are rather sparse. They mainly concern segregation in schools and discrimination, which is analysed in Section 3.2.

Example: In the case of *Centre of Legal Resources on behalf of Valentin Câmpeanu v. Romania*, an NGO lodged an application in the name of a young Roma boy who died in a state institution.[321] He was HIV-positive and had a severe intellectual disability. The conditions in the institution where he lived were appalling: there was no heating, no bedding or clothes, no support from staff, etc. In the absence of any close relative of the victim, an NGO alleged on his behalf the infringement of the rights established by Articles 2, 3, 5, 8, 13 and 14 of the ECHR. The Grand Chamber decided that, in the exceptional circumstances of the case (the extreme vulnerability and lack of any known next-of-kin of the young Roma), the NGO had standing to represent the deceased applicant. On the merits, the ECtHR found a violation of the substantive limb of Article 2. The domestic authorities were found liable for the death of Mr. Câmpeanu as they had placed him in an institution where he died due to the lacked adequate food, accommodation and medical care. The ECtHR also found a violation of Article 2 due to the fact that the Romanian authorities did not conduct an effective investigation into the death of Mr. Câmpeanu.

321 ECtHR, *Centre for Legal Resources on behalf of Valentin Câmpeanu v. Romania* [GC], No. 47848/08, 17 July 2014.

With respect to children living in institutions, the CoE Recommendation Rec(2005)5 supports the decision that the placement of a child should not be based on discriminatory grounds.[322]

7.3.2. Children with disabilities

Under EU law, the EU has become a party to the CRPD, the first international treaty in the field of human rights to which the EU has acceded.[323] The CRPD includes specific provisions related to children. EU Member States and the EU have undertaken to ensure the enjoyment of human rights by children with disabilities on an equal basis with other children. Under Article 16 of the CRPD, they must take specific measures to protect children with disabilities from abuse and exploitation.[324]

Under CoE law, ECtHR cases concerning children with disabilities have raised several issues, including consent, states' positive obligations to protect from death and ill-treatment, and living conditions in state-run facilities.

Example: The case of *Nencheva and Others v. Bulgaria*[325] concerns the death of 15 children and young adults in a home for people with mental and psychical disabilities. The ECtHR held that the children had been placed in a specialised public institution under the sole control of the state. The living conditions of the children in the institution were appalling: they lacked food, medicine, clothing and heating. The competent authorities had been alerted to this situation on several occasions, and were consequently aware or should have been aware of the risks of death. The ECtHR found a violation of the substantive limb of Article 2 of the ECHR, as the authorities did not take measures to protect the lives of children placed under their control. Further, the Bulgarian authorities did not conduct an effective investigation into the deaths of the applicants' children. In the particular circumstances of the case, the Bulgarian authorities should have launched an *ex officio* criminal investigation. The investigation was

322 Council of Europe, Committee of Ministers (2005), Recommendation Rec (2005)5 on the rights of children living in residential institutions, 16 March 2005.

323 Council of the European Union (2009), Council Decision 2010/48/EC of 26 November 2009 concerning the conclusion, by the European Community, of the United Nations Convention on the Rights of Persons with Disabilities, OJ 2010 L 23/35.

324 See also Section 3.5.

325 ECtHR, *Nencheva and Others v. Bulgaria*, No. 48609/06, 18 June 2013 (available in French).

deemed ineffective for several reasons: it had started two years after the death of the children, it had lasted unreasonably long, it did not cover the death of all the children and it did not clarify all the relevant factors in the matter.

7.4. Missing children

Under EU law, the EU Commission has launched a hotline number (116000) for missing children.[326] This service takes calls reporting missing children and passes them on to the police authorities, offers guidance to and supports the persons responsible for the missing child, and supports the investigation.

Under CoE law, the enforced disappearance of children has been addressed under Article 8 of the ECHR.

Example: In *Zorica Jovanović v. Serbia*,[327] a new-born baby allegedly died in hospital shortly after birth, but his body was never transferred to the parents. The mother complained that the state had failed to provide her with any information about the fate of her son, including the cause of his alleged death or time and place of his burial. The ECtHR held that a state's "continuing failure to provide [the mother] with credible information as to the fate of her son" amounted to a violation of her right to respect for family life.[328]

Under UN law, Article 25 (1) (b) of the International Convention for the Protection of All Persons from Enforced Disappearance[329] stipulates that states must prevent and punish the "falsification, concealment or destruction of documents attesting to the true identity" of children that are themselves or whose parents are subjected to enforced disappearance. States must also take the necessary measures to search for and identify these children, and to return them to their families of origin. In light of these children's right to preserve,

326 Commission Decision (2007), Commission Decision 2007/698/EC of 29 October 2007 amending Decision 2007/116/EC as regards the introduction of additional reserved numbers, OJ 2007, L 284/31.

328 *Ibid.*, para. 74.

329 UN, International Convention for the Protection of All Persons from Enforced Disappearance, 20 December 2006.

or to have re-established, their identity, including their nationality, name and family relations as recognised by law, states need to have legal procedures in place to review and annul any adoption or placement of children involved in enforced disappearances (Article 25 (4)). The convention reiterates two of the general principles underpinning children's rights: the best interests of the child as a primary consideration and the right of the child to express his/her views (Article 25 (5)). Whereas a relatively low number of European states have ratified this convention, its relevance to the European normative framework should not be dismissed.[330]

330 As at 19 February 2015, nine out of the 28 EU Member States had ratified this convention (Austria, Belgium, Spain, France, Germany, Lithuania, Netherlands, Portugal and Slovakia). In addition, the following CoE member states have ratified the convention: Serbia, Montenegro, Bosnia and Herzegovina, Armenia and Albania.

Charter of Fundamental Rights, Article 34 (3) (right to social and housing assistance)	**Right to housing**	ESC (revised), Articles 16 (right of the family to social, legal and economic protection), 17 (right of children and young persons to social, legal and economic protection) and 31 (right to housing) ECtHR, *Bah v. the United Kingdom*, No. 56328/07, 2011 ECtHR, *Connors v. the United Kingdom*, No. 66746/01, 2004.
Charter of Fundamental Rights, Article 34 (social security and social assistance)	**Right to an adequate standard of living and right to social security**	ESC (revised), Articles 12–14 (rights to social security, social and medical assistance, and to benefit from social welfare services), 16 (right of the family to social, legal and economic protection) and 30 (right to protection against poverty and exclusion) ECSR, *European Committee for Home-Based Priority Action for the Child and the Family (EUROCEF) v. France*, Complaint No. 82/2012, 2013 (suspension of family allowances for truancy) ECtHR, *Konstantin Markin v. Russia* [GC], No. 30078/06, 2012 (parental leave)

Economic, social and cultural rights (ESC rights), more often referred to as socio-economic rights or social rights in a European context, include work-related rights as well as the right to education, health, housing, social security and, more generally, an adequate standard of living. Cultural rights have remained largely underdeveloped and unaddressed in scholarship and litigation. Aspects of them are addressed in Section 4.6 on the identity of children belonging to a minority and in Section 8.2 under the right to education.

Explicit standards on ESC rights in the European context can mainly be found in the European Social Charter and the EU Charter of Fundamental Rights, although the ECHR and its protocols also include several relevant provisions, for instance the prohibition of forced labour and the right to education. Moreover, the ECtHR has argued that there is "no water-tight division separating [the] sphere [of social and economic rights] from the field covered by the Convention"[331] and has read ESC rights into the civil rights guaranteed by the ECHR. In that way, for example, access to health care has been dealt with under the prohibition of torture, inhuman and degrading treatment and punishment (Article 3 of the ECHR).[332]

This chapter analyses ESC rights that are of specific relevance to children: the right to education (Section 8.2); the right to health (Section 8.3); the right to housing (Section 8.4); and the right to an adequate standard of living and social security (Section 8.5).

8.1. Approaches to economic, social and cultural rights

Key points

- Securing the availability of adequate resources is key to ensure the protection of social rights.
- Essential elements of social rights are availability, accessibility, adaptability and acceptability.

Under EU law, ESC rights have been included in the EU Charter of Fundamental Rights on par with civil and political rights. However, Article 52 of the Charter distinguishes between rights and principles, with the latter being limited in the way they are "judicially cognisable".

331 ECtHR, *Airey v. Ireland*, No. 6289/73, 9 October 1979, para. 26.

332 See, for example, ECtHR, Factsheet on Prisoners' health-related rights, February 2015, and Factsheet on Health, April 2015.

Under CoE law, the ECSR notes that when the realisation of a right is "exceptionally complex and particularly expensive to resolve", it assesses progressive realisation against three criteria: measures must be taken "to achieve the objectives of the Charter within a reasonable time, with measurable progress and to an extent consistent with the maximum use of available resources".[333] It also introduces a prioritisation, in that it reminds states of "the impact that their choices will have for groups with heightened vulnerabilities as well as for others persons affected".[334]

The ECSR, albeit in the specific context of the right to social security, argues that retrogressive steps "in order to ensure the maintenance and sustainability of the existing social security system" are permissible provided they do not "undermine the core framework of a national social security system or deny individuals the opportunity to enjoy the protection it offers against serious social and economic risk".[335] The ECtHR also accepts the possibility of retrogressive steps, but examines whether the method chosen is reasonable and suitable to the achievement of the legitimate aim pursued.[336]

In the context of the right to education, the ECSR, in line with the approach of the UN Committee on Economic, Social and Cultural Rights, has adopted the analytical framework of availability, accessibility, acceptability and adaptability.[337] The distinction between availability and accessibility also features in the case law of the ECtHR. The criteria or essential elements of availability, accessibility, acceptability and adaptability guide the analysis that follows, to the extent that relevant case law is available.

333 ECSR, *International Association Autism Europe (IAAE) v. France*, Complaint No. 13/2002, 4 November 2003, para. 53; applied in ECSR, *European Action of the Disabled (AEH) v. France*, Complaint No. 81/2012, 11 September 2013, paras. 94–99.

334 ECSR, *International Association Autism Europe (IAAE) v. France*, Complaint No. 13/2002, 4 November 2003, para. 53.

336 ECtHR, *Markovics and Others v. Hungary*, Decision of inadmissibility, Nos. 77575/11, 19828/13 and 19829/13, 24 June 2014, paras. 37 and 39.

337 ECSR, *Mental Disability Advocacy Center (MDAC) v. Bulgaria*, Complaint No. 41/2007, 3 June 2008, para. 37.

8.2. Right to education

Key points

- Limitations to the accessibility of education must be foreseeable, pursue a legitimate aim and must be justified and non-discriminatory.
- Acceptability of education, which requires respect for the religious and philosophical convictions of parents, does not exclude the possibility of religious or sexual education in schools.
- Adaptability requires special measures for children with disabilities and the possibility for children belonging to a minority to learn and be taught in their own language.
- Children have the right to education regardless of their nationality or migration status.

Under EU law, Article 14 (2) of the EU Charter of Fundamental Rights guarantees the right to education, including "the possibility to receive free compulsory education". In its third paragraph, Article 14 ensures the freedom to found educational establishments and the right of parents to ensure the education and teaching of their children in conformity with their religious, philosophical and pedagogical convictions.

Under CoE law, Article 2 of Protocol No. 1 to the ECHR guarantees the right to education. The ECtHR clarifies that this article does not oblige states to make education available; it provides "a right of access to educational institutions existing at a given time".[338] In addition, the right to education also includes "the possibility of drawing profit from the education received, that is to say, the right to obtain, in conformity with the rules in force in each state, and in one form or another, official recognition of the studies [...] completed".[339] However, this is not an absolute right; limitations must be foreseeable for those concerned and must pursue a legitimate aim. Disciplinary measures, including suspension or expulsion from an educational institution, are allowed, provided they meet the conditions for permissible limitations. To assess whether these forms of exclusion from education result in a denial of the right to ed-

338 ECtHR, *Case "Relating to certain aspects of the laws on the use of languages in education in Belgium" v. Belgium*, Nos. 1474/62, 1677/62, 1691/62, 1769/63, 1994/63 and 2126/64, 23 July 1968, para. 4.

339 *Ibid.*

ucation, factors such as the procedural safeguards, duration of the exclusion, reintegration efforts and adequacy of alternative education provided will be considered.[340]

> Example: In *Catan and Others v. Moldova and Russia*,[341] the ECtHR looked into the language policy introduced in schools by the separatist authorities in Transdniestria. The objective of this language policy was Russification. Following the forced closure of Moldovan-language schools (using the Latin alphabet), parents had to choose between sending their children to schools where they were taught in an artificial combination of language and Cyrillic alphabet and with teaching materials produced in Soviet times, or to sending their children to schools that were less well equipped and less conveniently situated, on their way to which they were subjected to harassment and intimidation. The forced closure of schools and subsequent harassment was held to be an unjustified interference with the children's right to education that amounted to a violation of Article 2 of Protocol No. 1 to the ECHR.[342]

As part of the right to education, parents have the right to respect for their religious and philosophical convictions. However, "the setting and planning of the curriculum fall in principle within the competence" of the state.[343] They can also integrate information or knowledge of a religious or philosophical kind in the school curriculum, on condition that it is "conveyed in an objective, critical and pluralistic manner".[344] To safeguard pluralism, quantitative and qualitative differences in teaching a particular religion or philosophy must be balanced by offering parents the possibility of either partially or fully exempting their children from such teaching, namely the possibility not to attend certain classes or the religious course as a whole.[345] For the ECtHR's way of dealing with the issue from a non-discrimination angle, see Section 2.1.[346]

340 ECtHR, *Ali v. the United Kingdom*, No. 40385/06, 11 January 2011, para. 58.

341 ECtHR, *Catan and Others v. Moldova and Russia* [GC], Nos. 43370/04, 8252/05 and 18454/06, 19 October 2012.

342 *Ibid.*, paras. 141–144.

343 ECtHR, *Folgerø and Others v. Norway* [GC], No. 15472/02, 29 June 2007, para. 84.

344 *Ibid.*, para. 84.

345 *Ibid.*, paras. 85–102 and Dissenting opinion.

346 ECtHR, *Grzelak v. Poland*, No. 7710/02, 15 June 2010.

Pursuant to Article 17 (2) of the revised ESC, states undertake "to take all appropriate and necessary measures designed [...] to provide to children and young persons a free primary and secondary education as well as to encourage regular attendance at schools".[347] Additionally, the ECSR ruled that under this provision, contracting states should ensure that children unlawfully present in their territory also have access to education.[348]

Furthermore, educational institutions have to be accessible to everyone without discrimination.[349] The ESCR held that the "integration of children with disabilities into mainstream schools [...] should be the norm and teaching in specialised schools must be the exception".[350] States do not enjoy a wide margin of appreciation regarding the choice of the type of school for persons with disabilities; it must be a mainstream school.[351]

Situations concerning differential treatment in education on grounds such as nationality, immigration status or ethnic origin are dealt with in Chapter 3.

Under the ECSR case law, sexual and reproductive health education must be part of the ordinary curriculum.[352] Whereas states enjoy a wide margin of appreciation in determining the cultural appropriateness of the educational material used, they must ensure non-discriminatory sexual and reproductive health education "which does not perpetuate or reinforce social exclusion and the denial of human dignity". Educational materials must not "reinforce demeaning stereotypes", for instance concerning persons of non-heterosexual orientation.[353]

347 The ESC of 1961 does not contain a provision on the right to education.

348 ECSR, *Médecins du Monde – International v. France*, Complaint No. 67/2011, 11 September 2012.

349 On the issue of children with disabilities, see further Chapters 3 and 7.

352 ECSR, *International Centre for the Legal Protection of Human Rights (INTERIGHTS) v. Croatia*, Complaint No. 45/2007, 30 March 2009, para. 47.

353 *Ibid.*, paras. 59 and 61.

Finally, adaptability of education requires, for example, that for children with disabilities who are integrated into mainstream schools, "arrangements are made to cater for their special needs"[354] (see also Section 3.5).

In addition, under Article 12 (3) of the FCNM, States Parties undertake to promote equal opportunities for access to education at all levels for persons belonging to national minorities (see also Chapter 3).[355] For children belonging to national minorities, Article 14 of the FCNM contains the right to learn and be taught one's own language.[356] The ECtHR has confirmed that the right to education implies the right to be educated in (one of) the national language(s).[357]

8.2.1. Right to education of migrant children

Under EU law, children's fundamental right to education, regardless of their migration status, is recognised in virtually all aspects of EU migration law.[358] That said, the EU does not have the competence to determine the content or scope of national educational provisions. Rather, the EU protects migrant children's right to access education on the same or, depending on their status, similar basis as nationals. The Students Directive (2004/114/EC) regulates the conditions of admission of third-country nationals for the purposes of studies, pupil exchange, unremunerated training or voluntary service.[359] This admission

354 ECSR, *Mental Disability Advocacy Center (MDAC) v. Bulgaria*, Complaint No. 41/2007, 3 June 2008, para. 35.

355 See further Council of Europe, Advisory Committee on the Framework Convention for the Protection of National Minorities (FCNM), Commentary on Education under the Framework Convention for the Protection of National Minorities, 2006, ACFC/25DOC(2006)002, Part 2.1.

358 E.g. Art. 27 Directive 2011/95/EU of the European Parliament and of the Council of 13 December 2011 on standards for the qualification of third-country nationals or stateless persons as beneficiaries of international protection, for a uniform status for refugees or for persons eligible for subsidiary protection, and for the content of the protection granted (Recast) (Qualification Directive), OJ 2011 L 337/9, pp. 9–268.

359 Council Directive 2004/114/EC on the conditions of admission of third-country nationals for the purposes of studies, pupil exchange, unremunerated training or voluntary service (Students Directive).

covers the entry and residence of the third-country national for a period exceeding three months. The general conditions of admission for children include the presentation of a valid travel document, parental authorisation for the planned stay, sickness insurance and, if the Member State so requests, the payment of a fee for processing the application for admission.[360] School pupils for instance are required to provide evidence of participation in a pupil exchange scheme operated by an organisation recognised by the Member State.[361] Unremunerated trainees are subject to providing the evidence the Member State requires to ensure that during their stay they will have sufficient resources to cover their subsistence, training and return travel costs.[362] Access to economic activities, including employment, by higher education students are subject to restrictions.[363]

The children of EU migrants who move to another EU Member State under free movement law benefit from the most favourable entitlement in this context. They have a right to be admitted to that state's general educational, apprenticeship and vocational training courses under the same conditions as nationals.[364] This includes public and private, and compulsory and non-compulsory education. The CJEU has always interpreted this entitlement broadly to ensure equal access to education, but also to broader, education-related social benefits, as well as to any benefits intended to facilitate educational attendance. For example, in the *Casagrande* case, the child of a migrant worker was able to access a means-tested educational grant under EU free movement law.[365]

360 *Ibid.*, Art, 6.

361 *Ibid.*, Art. 7.

362 *Ibid.*, Art. 10.

363 *Ibid.*, Art. 17.

364 Regulation (EU) 492/2011 of the European Parliament and of the Council of 5 April 2011 on freedom of movement for workers within the Union, OJ 2011 L 141/1, pp. 1–12, Art. 10; and Directive 2004/38 of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States amending Regulation (EEC) No. 1612/68 and repealing Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC (Free Movement Directive), OJ 2004 L 158, pp. 77–123, Art. 24 (1).

365 CJEU, C-9/74, *Donato Casagrande v. Landeshauptstadt München*, 3 July 1974. Subsequently confirmed in cases such as CJEU, C-3/90, *M.J.E. Bernini v. Minister van Onderwijs en Wetenschappen*, 26 February 1992.

Moreover, legislation introduced in the 1970s requires Member States to provide supplementary language tuition for children of EU migrant workers, in both the host state language and in their mother tongue, with a view to facilitate their integration in the host state and in their country of origin should they subsequently return.[366] While this seems to offer quite generous and valuable supplementary support to children following their admission to a school in the host state, its implementation across different countries has been notoriously patchy and increasingly impractical given the range of different languages to accommodate.[367]

Example: The issue in *Baumbast and R v. Secretary of State for the Home Department*[368] was whether the two daughters of a German migrant worker who moved to the United Kingdom with his Colombian wife and daughters, could continue to attend school there after he left the United Kingdom for a non-EU Member State, leaving his wife and daughters behind. The CJEU was faced with the question of whether his wife and daughters could remain in the host state independently, notwithstanding the fact that Mr Baumbast (from whom the family derived their residence rights) had effectively relinquished his status as an EU migrant worker. The decisive factor for the CJEU was that the children were integrated into the education system of the host state and it would have been both harmful and disproportionate to uproot them at such a crucial point in their education. The Court confirmed that such is the importance of achieving continuity in children's education that it can effectively 'anchor' the (otherwise non-qualifying) family's residence in the host state for the duration of a migrant child's studies.

366 Council Directive 77/486/EEC on the education of the children of migrant workers, OJ 1977 L 199, pp. 32–33. Note that third-country national migrant children are excluded from its scope.

367 Commission reports on the implementation of Directive 77/486/EEC, COM(84) 54 final and COM(88) 787 final.

368 CJEU, C-413/99, *Baumbast and R v. Secretary of State for the Home Department*, 17 September 2002.

The *Baumbast* decision was followed in successive cases[369] and has been codified in Article 12 (3) of Directive 2004/38/EC (Free Movement Directive).[370]

Third-country national children can generally only access *publicly-funded* education under the same conditions as nationals, and are excluded from associated benefits such as maintenance grants.[371] Some EU immigration instruments, however, go further than granting mere equality of access, requiring Member States to implement mechanisms to ensure due recognition and transferability of foreign qualifications, even in the absence of documentary evidence (Article 28 of the Qualification Directive).[372]

The educational rights of asylum-seeking children are weaker still; they must be granted access to the host state's education system on *similar,* but not necessarily the *same* terms as those that apply to nationals.[373] As such, education may be provided in accommodation centres rather than schools, and the authorities can postpone asylum-seeking children's full access to a school for up to three months from the date of application for asylum. Where access to the education system is impossible due to the specific situation of the child, Member States are obliged to offer alternative education arrangements (Article 14 (3) of the Reception Conditions Directive).[374]

369 CJEU, C-480/08, *Maria Teixeira v. London Borough of Lambeth and Secretary of State for the Home Department*, 23 February 2010; CJEU, C-310/08, *London Borough of Harrow v. Nimco Hassan Ibrahim and Secretary of State for the Home Department* [GC], 23 February 2010.

370 Directive 2004/38/EC of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States amending Regulation (EEC) No. 1612/68 and repealing Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC, OJ 2004 L 158, Art. 2 (2) (c) and Art. 12 (3).

371 Refugee Qualification Directive 2011/95/EU, Art. 11; Long-Term Residents Directive (Directive 2003/109/EC), Art. 14; Directive 2003/86/EC on the right to family reunification, Art. 14; Temporary Protection Directive (2001/55/EC); Reception Directive (2013/33/EU), Art 14(c); and Return Directive (2008/115/EC).

372 Directive 2011/95/EU of the European Parliament and of the Council of 13 December 2011 on standards for the qualification of third-country nationals or stateless persons as beneficiaries of international protection, for a uniform status for refugees or for persons eligible for subsidiary protection, and for the content of the protection granted (Recast) (Qualification Directive), OJ 2011 L 337/9.

373 Reception Conditions Directive (2013/33/EU). Note that, under the Refugee Qualification Directive (2011/95/EU, Art. 27), child refugees (who have acquired longer term residence rights) can access education under the same conditions as nationals.

374 Directive 2013/33/EU of the European Parliament and of the Council of 26 June 2013 laying down standards for the reception of applicants for international protection (Recast) (Reception Directive), OJ 2013 L 180/96, pp. 96–116.

Under CoE law, Article 2, Protocol No. 1 has been used in conjunction with Article 14 to secure migrant children's access to education (see also Section 3.3).

> Example: In *Ponomaryovi v. Bulgaria*,[375] the ECtHR considered the requirement for two Russian school children without permanent residence to pay secondary school fees. The Court concluded that imposing fees for secondary school in their case had been discriminatory and thus contrary to Article 14 of the ECHR taken together with Article 2 of Protocol No. 1 to the ECHR.[376].

The ESC protects migrant children's educational rights both directly (Article 17, paragraph 2) and indirectly, imposing restrictions on children's employment rights with a view to enabling them to obtain the full benefits of compulsory education (Article 7).

Furthermore, the European Convention on the Legal Status of Migrant Workers[377] endorses migrant children's right to access "on the same basis and under the same conditions as nationals", general education and vocational training in the host state (Article 14 (1)).

Under international law, migrant children's equality of access to education is supported by the International Convention on the Protection of the Rights of all Migrant Workers and Members of Their Families (Article 30).[378]

Article 28 of the CRC provides that all children have the right to free compulsory education. According to Article 29 (1) (c), this right extends far beyond equality of access to education and includes provisions concerning the development of the child's cultural identity, language and values of the child's country of origin.

375 ECtHR, *Ponomaryovi v. Bulgaria*, No. 5335/05, 21 June 2011.

376 See also Section 3.3.

377 Council of Europe, European Convention on the Legal Status of Migrant Workers, CETS No. 93, 1977.

378 UN, Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families, 18 December 1990.

8.3. Right to health

Key points

- States have positive obligations to take measures against life-endangering health risks that the authorities are or ought to be aware of.
- State authorities must undertake an effective investigation in case of a person's death.
- Under the ESC, children who are unlawfully in the country are entitled to healthcare beyond urgent medical assistance.
- Acceptability of healthcare requires informed consent or authorisation.
- Under EU law and the ESC, subject to several limitations, migrant children are entitled to access social assistance and healthcare.

Under EU law, Article 35 of the EU Charter of Fundamental Rights guarantees a right of access to healthcare.

Children of EU migrant nationals can access social welfare and health support on the same basis as nationals, following three months of residence in the host state.[379] Similar rights are extended to the children of third-country nationals who have acquired permanent residence in a Member State, although these may be restricted to so-called 'core benefits'.[380] As far as refugee and asylum-seeking children are concerned, Member States have to provide access to appropriate social assistance on an equal basis as nationals of the host state, but, again, this can be limited to 'core benefits' (Article 29 of the Qualification Directive). The legislation requires Member States to provide vulnerable migrant children with access to sufficient healthcare support. For instance, children who have suffered violence or torture must be provided with sufficient support to address their physical and mental needs (Chapter IV Recast Reception Directive, Articles 21, 23 (4) and 25). The Qualification Directive contains similar provisions for vulnerable child migrants.

379 Free Movement Directive, Art. 24.

380 Council Directive 2003/109/EC of 25 November 2003 concerning the status of third-country nationals who are long-term residents, OJ L 16, 23.1.2004, Art. 11 (4)).

Under CoE law, the ECHR does not expressly guarantee a right to healthcare or a right to health. However, the ECtHR has dealt with a number of health-related cases in a variety of circumstances. First, the Court examines life-endangering health issues for children. It identifies positive obligations incumbent on the state to take preventive measures against life-endangering health risks that it knows or should know about.

Example: In *Oyal v. Turkey*, the state failed to take preventive measures against the spread of HIV through blood transfusions. As a consequence, a new-born baby was infected with the HIV virus during blood transfusions at a state hospital. While some redress was offered, the ECtHR found that, in the absence of full medical cover for treatment and medication during the lifetime of the child concerned, the state had failed to offer satisfactory redress and thereby violated the right to life (Article 2 of the ECHR).[381] In addition, it ordered the Turkish State to provide free and full medical cover during the lifetime of the victim.

Example: In *Iliya Petrov v. Bulgaria*,[382] a 12-year old boy got seriously injured in an electricity substation. The substation was located in an outdoor park where children and young people often met, and the door was not locked. The ECtHR held that the exploitation of an electricity grid is an activity that poses a heightened risk to persons who are close to the installations. The state has an obligation to put adequate regulation in place, including a system to control the proper application of security rules. The Court ruled that the failure of the state to ensure that the electricity substation was secured, although it knew about the safety problems, amounted to a violation of the right to life (Article 2 of the ECHR).[383]

Moreover, states have positive obligations to account for the treatment of children in a vulnerable situation who are in the care of state authorities (see also Chapter 6 and Section 7.3).

381 ECtHR, *Oyal v. Turkey*, No. 4864/05, 23 March 2010, paras. 71–72.

382 ECtHR, *Iliya Petrov v. Bulgaria*, No. 19202/03, 24 April 2012 (available in French).

383 *Ibid.*

Example: The case of *Centre for Legal Resources on behalf of Valentin Câmpeanu v. Romania*[384] concerned an HIV-positive Roma teenager who had a severe intellectual disability and also suffered from tuberculosis, pneumonia and hepatitis, and died at the age of 18. He had been in state care throughout his life. The ECtHR found serious shortcomings in the decision-making concerning the provision of medication and care, and a continuous failure of the medical staff to provide him with appropriate care and treatment. Article 2 of the ECHR had therefore been violated.[385]

Furthermore, in the absence of an emergency, the ECtHR found that medical treatment without parental consent is in breach of Article 8 of the ECHR.

Example: In *Glass v. the United Kingdom*,[386] diamorphine had been administered to a child with severe disability, notwithstanding firm objections by his mother. The ECtHR found that the decision of the hospital authorities to override the mother's objection to the proposed treatment in the absence of authorisation by a Court resulted in a breach of Article 8 of the ECHR.[387]

Example: In *M.A.K. and R.K. v. the United Kingdom*,[388] a nine year old girl underwent a blood test and photographs without parental consent, notwithstanding her father's express instructions not to carry out any further tests while the girl was alone in the hospital. In the absence of any medical urgency, these medical interventions without parental consent were held to be in violation of her right to physical integrity under Article 8 of the ECHR.[389]

In accordance with Articles 6 and 8 of the Convention on Human Rights and Biomedicine,[390] when a child does not have the legal capacity to consent to

387 *Ibid.*, para. 83.

388 ECtHR, *M.A.K. and R.K. v. the United Kingdom*, Nos. 45901/05 and 40146/06, 23 March 2010.

389 *Ibid.*, para. 79.

390 Council of Europe, Convention for the Protection of Human Rights and Dignity of the Human Being with regard to the Application of Biology and Medicine: Convention on Human Rights and Biomedicine, CETS No. 164, 1997.

a medical intervention, that intervention may only be carried out with the authorisation of his or her representative, save in an emergency situation. Whereas this convention does not require the consent of the child if he or she is legally incapable of consenting, it does hold that the opinion of the child must be taken into consideration "as an increasingly determining factor in proportion to his or her age and degree of maturity" (Article 6 (2)).

Furthermore, under Article 11 of the ESC, States Parties agree to take appropriate measures to provide for advisory and educational facilities for the promotion of health and the encouragement of individual responsibility in matters of health.[391] Medical assistance and care is guaranteed under Article 13 of the ESC to those who are without adequate resources and unable to secure those resources by their own efforts or from other sources. Finally, in 2011 the Committee of Ministers adopted child-specific guidelines on child-friendly healthcare.[392]

As indicated in the following examples, the ECSR holds that migrant children staying irregularly in a country are entitled to healthcare beyond urgent medical assistance. The ESC includes many references to children's rights to social welfare and health services (Articles 11, 12, 13, 14, 16 and 17), which apply regardless of their migration status.

Example: The ECSR decision in *International Federation of Human Rights Leagues (FIDH) v. France*[393] concerns France passing a law which ended the exemption of immigrants in an irregular situation with very low incomes from paying for medical treatment, and imposed health care charges. The ECSR ruled that individuals who have not reached the age of majority, including unaccompanied children, must be provided with free medical care.

391 On sexual and reproductive health education, see also under education (Section 8.2).

392 Council of Europe, Committee of Ministers (2011), Guidelines on child-friendly health care, 21 September 2011.

393 ECSR, *International Federation of Human Rights Leagues (FIDH) v. France*, Complaint No. 14/2003, 8 September 2004, paras. 35–37.

Example: In *Defence for Children International (DCI) v. Belgium*,[394] the ECSR found a violation of Article 17 of the ESC because of restrictions on medical assistance to undocumented migrant children. The Committee confirmed "the right of migrant minors unlawfully in a country to receive health care extending beyond urgent medical assistance and including primary and secondary care, as well as psychological assistance".[395] It also stated that the lack of reception facilities for foreign minors unlawfully in the country made access to health care difficult. Moreover, it found that causes of ill-health can only be removed to the extent that children are provided with housing and foster homes. Accordingly, it held that there was a violation of Article 11 (1) and (3) of the ESC due to the lack of housing and foster homes.[396]

The European Convention on the Legal Status of Migrant Workers[397] similarly provides that migrant workers who are lawfully employed in the territory of another state, as well as their families, should receive equal access to social and medical assistance (Article 19).

Under international law, more comprehensive provisions on the right to health can be found in Article 12 of the International Covenant on Economic, Social and Cultural Rights (ICESCR)[398] and in Article 24 of the CRC. These instruments emphasise prevention and treatment. The UN Committee on the Rights of the Child emphasises the importance of access to the highest attainable standard of healthcare and nutrition during early childhood,[399] and access for adolescents to sexual and reproductive information.[400] It has also clarified that children's right to health entails "the right to control one's health and body,

including sexual and reproductive freedom to make responsible choices".[401] It encourages states to "consider allowing children to consent to certain medical treatments and interventions without the permission of a parent, caregiver, or guardian, such as HIV testing and sexual and reproductive health services, including education and guidance on sexual health, contraception and safe abortion".[402]

8.4. Right to housing

Key points

- The right to adequate housing is guaranteed in Article 31 of the ESC.
- The ECSR holds that adequate shelter is to be provided to children residing irregularly in a country and that the living conditions in shelters must be in keeping with human dignity.
- According to the ECtHR, inadequate housing does not justify placement into public care.

Under EU law, Article 34 (3) of the EU Charter of Fundamental Rights contains a reference to the right to housing assistance as part of the struggle against social exclusion and poverty. The Racial Equality Directive highlights housing among the goods and services available to the public to which non-discriminatory access and supply should be granted.[403] Non-differential treatment regarding housing benefits applies to long-term residents. However, EU law tries to ensure, regarding family reunification for instance, that family members will not constitute a burden for the Member States' social assistance systems.[404] The Family Reunification Directive requires applications for family reunification to provide evidence that a valid sponsor of family reunification (i.e. a third-country national allowed to reside for a period of one year or more and with a reasonable prospect of obtaining the right of permanent residence)

401 UN, Committee on the Rights of the Child (2013), *General Comment No. 15 on the right of the child to the enjoyment of the highest attainable standard of health (art. 24)*, UN Doc. CRC/C/GC/15, para. 24.

402 *Ibid.*, para. 31.

404 See further FRA and ECtHR (2014), p. 201.

has accommodation regarded as normal for a comparable family in the same region. The accommodation should meet the general health and safety standards in force in the Member State concerned.[405]

Under CoE law, there is no right to be provided with housing under the ECHR, but if a state decides to provide housing, it must do so in a non-discriminatory way.

> Example: In *Bah v. the United Kingdom*[406] the applicant, who was lawfully residing in the UK, was allowed to be joined by her son on the condition that he did not have recourse to public funds. Shortly after her son's arrival, the applicant sought assistance in finding accommodation. However, because her son was subject to immigration control, she was refused the priority to which her status as an unintentionally homeless person with a minor child would ordinarily have entitled her. The authorities ultimately helped her find new accommodation and later provided her with social housing. The applicant complained that the refusal to grant her priority had been discriminatory. The ECtHR held that it was legitimate to put in place criteria for the allocation of limited resources such as social housing, provided that such criteria were not arbitrary or discriminatory. There had been nothing arbitrary in the denial of priority to the applicant, who had brought her son into the country in full awareness of the condition attached to his leave to enter. Moreover, the applicant had never in fact been homeless and there were other statutory duties which would have required the local authority to assist her and her son had the threat of homelessness actually manifested itself. Consequently, there had been no violation of Article 14 taken in conjunction with Article 8 of the ECHR.

The ECtHR also examines cases of eviction of Roma families from caravan sites.[407] The ECtHR has indirectly dealt with the issue of the quality of housing, stating that inadequate housing does not justify placing children into public care[408] (see also Sections 5.2. and 6.2.).

405 Council Directive 2003/86/EC on the right to family reunification of 22 September 2003 (Family Reunification Directive) Art. 7 (1) (a).

406 ECtHR, *Bah v. the United Kingdom*, No. 56328/07, 27 September 2011.

407 ECtHR, *Connors v. the United Kingdom*, No. 66746/01, 27 May 2004.

408 ECtHR, *Wallová and Walla v. the Czech Republic*, No. 23848/04, 26 October 2006, paras. 73–74 (available in French); ECtHR, *Havelka and Others v. the Czech Republic*, No. 23499/06, 21 June 2007, paras. 57–59 (available in French).

The right to adequate housing is guaranteed in Article 31 of the ESC. The ECSR holds that "[a]dequate housing under Article 31 (1) means a dwelling which is safe from a sanitary and health point of view, i.e. it must possess all basic amenities, such as water, heating, waste disposal, sanitation facilities and electricity and must also be structurally secure, not overcrowded and with secure tenure supported by the law".[409] Evictions are permissible if justified, carried out in conditions that respect dignity, and if alternative accommodation is made available.[410] Living conditions in a shelter "should be such as to enable living in keeping with human dignity [...] [and] must fulfil the demands for safety, health and hygiene, including basic amenities, i.e. clean water, sufficient lighting and heating. The basic requirements of temporary housing include also security of the immediate surroundings."[411]

With regard to housing for foreign children in an irregular situation, the ECSR holds that both the failure to provide any form of accommodation and the provision of inappropriate accommodation in hotels amount to a violation of Article 17 (1) of the ESC.[412] Moreover, under Article 31 (2) of the ESC on the prevention of homelessness, states are required to provide adequate shelter to children in an irregular situation without resorting to detention.[413]

8.5. Right to an adequate standard of living and right to social security

Key points

- Access to child allowances and parental leave must be non-discriminatory.
- Under EU law, the social security coverage of young workers in apprenticeship contracts should not be so low that it excludes them from the general range of protection.
- Under the ESC, the suspension of family allowances in case of truancy is a disproportionate limitation to the right of the family to economic, social and legal protection.

Under EU law, Article 34 (1) of the EU Charter of Fundamental Rights stipulates that the "Union recognises and respects the entitlement to social security benefits and social services" in cases that correspond to the traditional branches of social security (maternity, illness, industrial accidents, dependency or old age, and loss of employment). Entitlement extends to everyone residing and moving legally within the EU. The right to social assistance is recognised to ensure a decent existence for those who lack sufficient resources and to combat social exclusion and poverty. All these aspects are qualified by the "rules laid down by Union Law and national laws and practices" (Article 34 (1) of the Charter).

The CJEU holds that, where a Member State's own nationals are only required to reside in the Member State to access a child-raising allowance, nationals of other EU Member States cannot be made to produce a formal residence permit to access the same benefits.[414] The refusal of parental leave to certain categories of persons, such as commissioning mothers who have a baby through a surrogacy arrangement, is discriminatory.[415] The same applies to male civil servants who are refused parental leave if their wives do not work or exercise any profession, unless the wives are unable to meet the needs related to the upbringing of the child due to serious illness or injury.[416] Similarly, Member States have to establish a parental leave regime in the event of the birth of

twins that ensures these parents receive treatment particular to their needs. This can be ensured through basing the length of parental leave on the number of children born, and providing for other measures, such as material assistance or financial aid.[417]

Under CoE law, the ECtHR examined alleged discrimination in the granting of parental leave and parental allowances in Russia.

> Example: In *Konstantin Markin v. Russia*,[418] parental leave was refused to a serviceman in the Russian army, while servicewomen were entitled to such leave. In the Court's view, the exclusion of servicemen from the entitlement to parental leave could not be reasonably justified. Neither the special armed forces context and assertions about the risk to operational effectiveness, nor the arguments about the special role of women in raising children or the prevailing traditions in the country were found to justify the differential treatment. The Court found that Article 14 in conjunction with Article 8 of the ECHR had been violated.

More extensive provisions on the right to social security, the right to social and medical assistance, and the right to benefit from social welfare services can be found in Articles 12–14 of the ESC. Article 16 of the ESC explicitly mentions social and family benefits as a way the economic, legal and social protection of the family life can be promoted. Article 30 of the ESC provides for a right to protection against poverty and social exclusion. Certain social security claims may fall within the scope of Article 1, Protocol No. 1 to the ECHR, provided that national legislation generates a proprietary interest by providing for the payment as of right of a welfare benefit, whether conditional or not on the prior payment of contributions.[419]

Article 12 of the ESC requires states to establish or maintain a social security system, and to endeavour to raise it progressively to a higher level.

Article 16 of the ESC requires states to ensure the economic, legal and social protection of the family by appropriate means. The primary means should be family or child benefits, provided as part of social security and available either

417 CJEU, C-149/10, *Zoi Chatzi v. Ypourgos Oikonomikon*, 16 September 2010, paras. 72–75.

418 ECtHR, *Konstantin Markin v. Russia* [GC], No. 30078/06, 22 March 2012.

419 ECtHR, *Stummer v. Austria* [GC], No. 37452/02, 7 July 2011, para. 82.

universally or subject to a means-test. These benefits must constitute an adequate income supplement for a significant number of families. The ECSR assesses the adequacy of family (parental) benefits with respect to the median equivalised income (Eurostat).[420] The ECSR finds that the absence of any general system of family benefits is not in conformity with the ESC.[421]

The ECSR accepts, however, that the payment of child benefits may be made conditional based on the child's residence.[422] It holds that the introduction of only very limited protection against social and economic risks given to children (15–18 years old) in special apprenticeship contracts (they were only entitled to sickness benefits in kind and to occupational accident coverage at a rate of 1 %) effectively excludes a distinct category of (minor) workers from the "general range of protection offered by the social security system at large". It is hence in violation of the state's obligation to progressively raise the system of social security.[423]

The suspension of family allowances in cases of truancy is also a disproportionate limitation on the right of the family to economic, social and legal protection.

Example: In a complaint against France, the European Committee for Home-Based Priority Action for the Child and the Family (EUROCEF) argued that suspending family allowances as a measure to address truancy was a violation of the right of families to social, legal and economic protection under Article 16 of the ESC. In finding the measure disproportionate to the aim pursued, the Committee noted that "the contested measure of suspending and possibly suppressing family allowances makes parents exclusively responsible for pursuing the aim of reducing truancy and increases the economic and social vulnerability of the families concerned".[424]

424 ECSR, *European Committee for Home-Based Priority Action for the Child and the Family (EUROCEF) v. France*, Complaint No. 82/2012, 19 March 2013, para. 42.

The European Convention on the Legal Status of Migrant Workers[425] provides that migrant workers lawfully employed in another state as well as their families should receive equal access to social security (Article 18), and other "social services" that facilitate their reception in the host state (Article 10). Similarly, the European Convention on Social Security protects refugees and stateless persons' rights to access social security provision in the host state (including family benefits for children).[426]

Under international law, the right to an adequate standard of living is guaranteed in Article 11 of the ICESCR and Article 27 of the CRC.

Greece*, No. 8687/08, 2011 (effective remedies to challenge conditions of detention)

The EU has clear competence to legislate in the area of migration and asylum. Provisions covering migrant children govern a range of migration situations, including long-term work-related migration, asylum, and subsidiary protection, and also addresses the situation of migrants in an irregular situation. In addition to the protection migrant children are entitled to under Article 24 of the EU Charter of Fundamental Rights, Articles 18 and 19 of the Charter deal with the right to asylum and protection in the event of removal, expulsion or

extradition. The EU has also paid attention to the specific needs of unaccompanied children, including regarding legal aspects such as legal guardianship and legal representation, age assessment, family tracing and reunification, asylum procedures, detention, and expulsion, as well as aspects relating to the living conditions of the children, including accommodation, healthcare, education and training, religion, cultural norms and values, recreation and leisure and social interaction and experiences of racism.[427]

Within the CoE system, four conventions in particular support the rights of migrant children in different contexts: the ECHR, the ESC, the European Convention on the Legal Status of Migrant Workers and the European Convention on Nationality. This chapter mainly focuses on the implementation of ECHR provisions, notably Article 3 (protection against inhuman, degrading treatment), Article 5 (deprivation of liberty), and Article 8 (right to respect for private and family life), taken alone or in conjunction with Article 14 (non-discrimination). These provisions are used to support migrant, refugee and asylum seeking children's and their family members' rights to family reunification, access to justice and ongoing residence in the host state.

At the international level, a number of CRC provisions uphold children's rights in the context of migration and asylum and have informed the development of legal measures at the European level. Specifically, Article 7 protects children's right to birth registration, nationality, and parental care; Article 8 protects the child's right to identity, including nationality, name and family relations; Article 9 ensures that separated children should maintain contact with both parents where it is in their best interests; and Article 22 provides refugee children with the right to special protection and help. Further, the UN Convention Relating to the Status of Refugees[428] along with its 1967 Protocol are universally regarded as the centrepiece of international refugee protection.

The following sections focus on entry and residence (Section 9.1); age assessment (Section 9.2); family reunification for separated children (Section 9.3); detention (Section 9.4); expulsion (Section 9.5) and access to justice (Section 9.6).

428 UN, General Assembly, *Convention Relating to the Status of Refugees*, 28 July 1951, United Nations, Treaty Series, Vol. 189, p. 137.

9.1. Entry and residence

Key points

- EU nationals enjoy the right to freedom of movement within the EU.
- Decisions on child entry and residence should be taken in the framework of appropriate mechanisms and procedures and in the child's best interests.

Under EU law, the nature and scope of children's rights differs largely according to the nationality of the child and the child's parents and according to whether the child is migrating with his/her parents or independently.

The migration of EU nationals is regulated by various legal instruments. The rights granted to EU nationals are far-reaching and aim to stimulate optimum mobility across the EU. First, Article 21 of the TFEU provides that EU citizens and their family members have a right to move and reside freely within the territory of any EU Member State. Moreover, once they arrive in the host state, they have a right to be treated equally to nationals of that state in relation to their access to and conditions of work, social and welfare benefits, school, healthcare, etc.[429] Article 45 of the EU Charter of Fundamental Rights equally guarantees the freedom of movement of EU citizens.

Further, the rights of children who move with EU-national parents/carers are also governed by the Free Movement Directive.[430]This stipulates that family members have a right to enter and reside in the host state either with or following the primary EU migrant's move there (Article 5 (1)). Family members, for the purposes of this instrument, include any biological children of either the EU migrant or their spouse or partner, provided they are under the age of 21 or are "dependent" (Article 2 (2)). They may be both EU and non-EU nationals, provided the primary migrant with whom they have moved is an EU

429 Some restrictions have been imposed on migrants from Croatia, the most recent country to accede to the EU, for a transitional period up until June 2015, with the possibility for Member States of extending the period in which restrictions will be imposed until 2020.

430 Please note that relevant provisions of the directive also apply in the EEA. See further Agreement on the European Economic Area, 2 May 1992, Part III, Free Movement of Persons, Services and Capital and Agreement between the European Community and its Member Sates, on the one part, and the Swiss Confederation, on the other, on the free movement of persons, signed in Luxembourg on 21 June 1999, entered into force on 1 June 2002, OJ 2002 L 114/6.

national. For the first three months following their move, the family's right of residence is unconditional, but thereafter EU citizens who wish their children to remain with them in the host state must demonstrate that they have sufficient financial resources and comprehensive sickness insurance to support them (Article 7). Children and other family members automatically acquire permanent residence after a period of five consecutive years of residence in the host state with the EU citizen (Articles 16 (2) and 18). At that point, they are no longer subject to any resources/sickness insurance conditions.

The freedom of movement of third-country nationals who do not belong to the family of an EU migrant is subject to more restrictions. This area is partially regulated by EU law and partially regulated by national immigration laws.

In the context of international protection procedures, children are regarded as "vulnerable persons" whose specific situation Member States are required to take into account when implementing EU law.[431] This requires states to identify and accommodate any special provision that asylum-seeking children in particular might need when they enter the host state. Article 24 of the EU Charter of Fundamental Rights applies to the entry and residence requirements of the EU asylum *acquis* as it relates to children. It requires that in all actions relating to children, whether taken by public authorities or private institutions, EU Member States ensure that the best interests of the child are a primary consideration. More specifically, the best interests principle underpins the implementation of Directive 2013/32/EU on common procedures for granting and withdrawing international protection (Asylum Procedures Directive)[432] and the Regulation establishing the criteria and mechanisms for determining the Member State responsible for examining an application for international protection lodged in one of the Member States by a third-country national or a stateless person (Dublin Regulation) as they relate to children.[433] Both texts also contain specific guarantees for unaccompanied children, including their legal representation. The Regulation (562/2006) on the Schengen Borders Code

432 Directive 2013/32/EU of the European Parliament and of the Council of 26 June 2013 on common procedures for granting and withdrawing international protection (recast), 29 June 2013, L 180/60, Art. 25(6).

433 Regulation (EU) No. 604/2013 of the European Parliament and of the Council of 26 June 2013 establishing the criteria and mechanisms for determining the Member State responsible for examining an application for international protection lodged in one of the Member States by a third-country national or a stateless person (recast), OJ 2013 L. 180/31-180/59, Art. 6.

requires border guards to check that the persons accompanying children have parental care over them, especially where children are accompanied by only one adult and there are serious grounds for suspecting that the children may have been unlawfully removed from the custody of their legal guardian(s). In this case, the border guard must investigate further to detect any inconsistencies or contradictions in the information given. If children are travelling unaccompanied, border guards must ensure, by means of thorough checks on travel and supporting documents, that the children are not leaving the territory against the wishes of the person(s) responsible for their parental care.[434]

Under CoE law, states have the right, as a matter of well-established international law and subject to their treaty obligations, including the ECHR, to control the entry, residence and expulsion of aliens. The right to respect for private and family life in Article 8 of the ECHR is often invoked as a safeguard against expulsion in cases concerning children who otherwise would have been assessed as not in need of international protection, including subsidiary protection. Article 8 violations have been found in cases involving children, as forced separation from close family members is likely to have an acute impact on their education, social and emotional stability and identity.[435]

9.2. Age assessment[436]

Key points

- Age assessment procedures must take account of the child's rights.
- Age assessment refers to the procedures through which authorities seek to establish the legal age of a migrant to determine which immigration procedures and rules need to be followed.

Under EU law, Article 25 (5) of the Asylum Procedures Directive allows Member States to resort to medical examinations, but requires that these be performed

434 Regulation (562/2006) of the European Parliament and the Council of 15 March 2016 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code) Annex VII, 6.

435 ECtHR, *Şen v. the Netherlands*, No. 31465/96, 21 December 2001 (available in French); ECtHR, *Tuquabo-Tekle and Others v. the Netherlands*, No. 60665/00, 1 December 2005.

436 See also FRA and ECtHR (2014), Section 9.1.2.

"with full respect for the individual's dignity, shall be the least invasive examination, and shall be carried out by qualified medical professionals". This provision also requires that individuals are informed in a language they can understand that such an assessment may be carried out and their consent to examination should be obtained. The refusal to undergo age assessment cannot result in a rejection of the application for international protection.

There is significant variation in the nature and scope of age assessment methods applied across the EU.[437] In the UK for instance, the judiciary has reviewed domestic procedures on age assessment, and in the case of *Merton* it determined the minimum procedural requirements for assessing age when an individual claims to be an unaccompanied child.[438] Such requirements include, among others, the right of the asylum seeker to be informed about the reasons for rejection or objections of the interviewer.[439] National courts have also stated the need to apply the benefit of doubt in age assessment cases, although this has been interpreted by some national courts as a mere "sympathetic assessment of evidence" rather than a formal "benefit of doubt" principle.[440]

Under CoE law, there is no specific provision or ECtHR case law relating to children's rights in the context of age assessment procedures. However, particularly invasive practices used to this end might raise an issue under Articles 3 or 8 of the ECHR. Article 3 has been interpreted to include a broad range of scenarios that might be considered inhumane or degrading, including invasive physical examinations of children.[441] Under Article 8, applied to an immigration context, the authorities could legitimately interfere with a child's right to privacy and conduct age assessments if in accordance with the law and necessary to protect one of the legitimate aims listed in Article 8 (2) of the ECHR.

Under international law, Article 8 of the CRC obliges states to respect the child's right to identity. This implies an obligation to assist a child in asserting

his or her identity, which may involve confirming the child's age. Age assessment procedures, however, should be a last resort.

In any case, the best interests principle should underpin national procedures on age assessment. The UN Committee on the Rights of the Child affirms that age assessment should take into account the physical appearance of the child and his or her psychological maturity. The assessment must be conducted in a scientific, safe, child- and gender-sensitive and fair manner, avoiding any risk of violation of the physical integrity of the child, and giving due respect to human dignity.[442]

9.3. Family reunification for separated children[443]

Key points

- European-level provisions focus mainly on reuniting children safely with their parents, either in the host country or their country of origin.
- Preference will be given to the child's parents and/or primary carers when determining which family members should be reunited with the family.
- The child's best interests must guide family reunification cases.

Under EU law, the most notable instrument is the Family Reunification Directive, which requires Member States to authorise the entry and residence of the unaccompanied child's parents who are third-country nationals – in those situations where it is not in the child's best interest to join his/her parents abroad instead. In the absence of a parent, Member States have the discretion to authorise the entry and residence of the child's legal guardian or any other member of the family.[444] The definition and rights attached to 'family' are therefore more generous in the context of unaccompanied children than for most other categories of child migrants.

442 UN, Committee on the Rights of the Child, *General Comment No. 6 (2005): Treatment of unaccompanied and separated children outside their country of origin*, UN Doc. CRC/GC/2005/6, 1 September 2005, (V)(a)(31)(A).

443 See also FRA and ECtHR (2014), Section 5.3 on family reunification.

444 Arts. 10 (3) (a) and (b), respectively.

As to asylum-seeking children, the Qualification Directive emphasises the need to ensure, where possible, that an unaccompanied child is placed with adult relatives in the host state, that he or she remains with any siblings, and that absent family members are located in a sensitive and safe manner as soon as practicable (Article 31). The Reception Conditions Directive makes similar provisions for unaccompanied children who have not yet acquired refugee status (Article 24).

Council Directive 2001/55/EC on minimum standards for giving temporary protection in the event of a mass influx of displaced persons and on measures promoting a balance of efforts between Member States in receiving such persons and bearing the consequences thereof (Temporary Protection Directive) also seeks to expedite the reunification of family members (including children) who have been separated from one another following a sudden evacuation from their country of origin (Article 15).[445] However, this directive has to date not been applied; for it to be 'triggered', a Council decision is required – and such a decision has not yet been taken.

Article 24.3 of the Reception Conditions Directive (Recast) also requires that Member States start tracing the members of the unaccompanied child's family, where necessary. This is done with the assistance of international or other relevant organisations as soon as possible after an application for international protection is made, whilst protecting the child's best interests. In cases of a possible threat to the life or integrity of a child or his/her close relatives, particularly if they have remained in the country of origin, care must be taken to ensure that the collection, processing and circulation of information concerning them is undertaken on a confidential basis to avoid jeopardising their safety. Further, in accordance with Article 31 (5) of the Qualifications Directive (Recast), the granting of international protection to the child should not interfere with the start or continuation of the tracing process.

The Dublin Regulation provides, in addition, that if an unaccompanied child has a relative or relatives living in another Member State who can take care of him or her, Member States are obliged, where possible, to unite the child with them, unless this is contrary to the child's best interests (Article 8). In addition,

445 Council Directive 2001/55/EC of 20 July 2001 on minimum standards for giving temporary protection in the event of a mass influx of displaced persons and on measures promoting a balance of efforts between Member States in receiving such persons and bearing the consequences thereof, OJ 2001 L 212.

the Regulation contains an obligation to trace the relatives on the territory of Member States, while protecting the best interests of the child (Article 6). Furthermore, the Reception Conditions Directive contains an obligation to start tracing the members of the child's family, where necessary with the assistance of international or other relevant organisations (Article 24). The latter type of assistance is also envisaged under the Dublin Regulation (Article 6).

The best interests principle must always be applied when considering a decision concerning family reunification. For example, parents must be able to prove that they are capable of exercising their parental duties to the benefit of the child. National courts will find a child's return to his or her country of origin unlawful when authorities have failed to gather evidence that there are adequate arrangements for the child's reception and care in that country (Return Directive, Article 10 (2)).

Under CoE law, Article 8 of the ECHR does not allow migrant parents and their children an absolute right to choose where they want to live. National authorities can legitimately deport or refuse entry to family members provided there are no insurmountable obstacles to establishing family life elsewhere.[446] Such decisions must always be a proportionate response to wider public policy concerns, including the desire to deport or prevent the entry of a parent who has been involved in criminal activity.

Example: In *Şen v. Netherlands* the ECtHR confirmed that in striking a balance between the rights of the child/family and wider public policy interests, three key factors must be taken into account: the age of the children; their situation in the country of origin; and the degree to which they actually depend on their parents.

Example: The case of *Jeunesse v. the Netherlands*[447] concerns the Dutch authorities' refusal to allow a Surinamese woman married to a Dutch national, with whom she had three children, to reside in the Netherlands on the basis of her family life in the country. The ECtHR considered that the authorities had not paid enough attention to the impact of their re-

446 ECtHR, *Bajsultanov v. Austria*, No. 54131/10, 12 June 2012; ECtHR, *Latifa Benamar and Others v. the Netherlands*, Decision of inadmissibility, No. 43786/04, 5 April 2005.

447 ECtHR, *Jeunesse v. the Netherlands* [GC], No. 12738/10, 3 October 2014.

fusal on the applicant's children and their best interests. The ECtHR found a violation of Article 8 of the ECHR on account that a fair balance had not been struck between the personal interests of the applicant and her family in maintaining their family life in the Netherlands and the public order interests of the Government in controlling immigration.

Under international law, a child has the right not to be separated from his or her family unless separation is deemed to be in the child's best interests (Article 9 (1) CRC). Article 10 of the CRC provides that a child whose parents live in different countries should be allowed to move between those countries to stay in contact with them both, or to reunify, subject to national immigration law. The best interests principle, as enshrined in Article 3 of the CRC, underpins all decisions relating to family reunification with a child or unaccompanied child.[448]

9.4. Detention

Key points

- European law authorises the detention of children in an immigration context only as a measure of last resort.
- National authorities are obliged to place children in appropriate alternative accommodation.

Under EU law, Article 11 of the Reception Conditions Directive (Recast) requires that children should only be detained as a last measure and only if less coercive measures cannot be applied effectively. Such detention should be for the shortest period of time possible, and all efforts made to release those detained and to place them in a suitable accommodation. Where children are detained, they should have the possibility to engage in leisure activities, including play and recreational activities appropriate to their age. According to the same article, unaccompanied children too should only be detained in exceptional circumstances, and all efforts should be made to release them as soon as

448 According to UNICEF, in relation to claims to reunite the child with his/her family in the host state, national courts must also ensure that parents are not exploiting their children in order to obtain residence permits for that country. See UNICEF, Judicial implementation of Art. 3 of the CRC in Europe, p. 104. See also UNHCR (2008), *Guidelines on Determining the Best Interests of the Child*, May 2008.

possible. They should never be detained in prison accommodation, but rather be provided with accommodation in institutions equipped with personnel and age-appropriate facilities. Their accommodation should be separate from adults.

Article 17 of the Return Directive envisages the detention of children and families whose asylum application has been rejected subject to certain conditions. With regard to unaccompanied children, however, it requires that they be placed in institutions provided with staff and facilities which respond to the needs of persons of their age. There is as of yet no CJEU case law relating specifically to the detention of children.

Under CoE law, the detention of migrant children has been addressed in the context of Articles 3 and 5 of the ECHR.

> Example: *Mubilanzila Mayeka and Kaniki Mitunga v. Belgium*,[449] concerns an unaccompanied child held in detention. A five year old child was detained in a transit centre for adults for two months without appropriate support. The child had travelled from the Democratic Republic of Congo without the necessary travel papers in the hope of being reunited with her mother, who had obtained refugee status in Canada. The child was subsequently returned to the Democratic Republic of Congo, despite the fact that she had no family members waiting there to care for her. The ECtHR ruled that in the absence of any risk of the child seeking to evade the supervision of the Belgian authorities, detaining her in a closed centre for adults had been unnecessary. The ECtHR also noted that other measures – such as placing her in a specialised centre or with foster parents – could have been taken that would have been more conducive to the best interest of the child as enshrined in Article 3 of the CRC. The ECtHR found violations of Articles 3, 5 and 8 of the ECHR.

Other cases have highlighted the illegality of detention, even where the child in question was accompanied by a parent.

449 ECtHR, *Mubilanzila Mayeka and Kaniki Mitunga v. Belgium*, No. 13178/03, 12 October 2006.

Example: In *Muskhadzhiyeva and Others v. Belgium*,[450] the ECtHR ruled that the month-long detention in a closed transit centre of a mother and her four children, aged between seven months and seven years, constituted a violation of Article 3 of the ECHR. In reaching its conclusions, the Court drew attention to the fact that the centre was "ill-equipped to receive children", with serious consequences for their mental health.

Example: *Popov v. France*[451] concerns the administrative detention of a family for two weeks pending their deportation to Kazakhstan, confirms this ruling. The ECtHR found a violation of Article 3 of the ECHR insofar as the French authorities had not measured the inevitably harmful effects on the two children (who were five months and three years old) of being held in a detention centre in conditions that were "ill-adapted to the presence of children".[452] The Court also found a violation of Article 5 and Article 8 in respect of the whole family and referred to Article 37 of the CRC, which provides that "[e]very child deprived of liberty shall be treated with humanity and respect for the inherent dignity of the human person, and in a manner which takes into account the needs of persons of his or her age".[453]

Example: Similarly, in *Kanagaratnam and Others v. Belgium*,[454] the detention of an asylum-seeking mother and her three children in a closed centre for aliens in an irregular situation for four months amounted to a breach of Articles 3 and 5 of the ECHR. Despite the fact that the children were accompanied by their mother, the Court considered that, by placing them in a closed centre, the Belgian authorities had exposed them to feelings of anxiety and inferiority and had, in full knowledge of the facts, risked compromising their development. [455]

450 ECtHR, *Muskhadzhiyeva and Others v. Belgium*, No. 41442/07, 19 January 2010 (available in French).

452 *Ibid.*, para. 95.

453 *Ibid.*, para. 90.

454 ECtHR, *Kanagaratnam and Others v. Belgium*, No. 15297/09, 13 December 2011 (available in French).

455 The European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT), in its 19th General Report has described safeguards for irregular migrants deprived of their liberty, and additional safeguards for children; see further: *20 years of combating torture, 19th General Report of the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT)*, 1 August 2008 to 31 July 2009.

Under international law, Article 9 (4) of the CRC provides that when a child is detained, state authorities must inform the child's parents of his or her whereabouts.[456]

9.5. Expulsion[457]

Key points

- The vulnerability of migrant children to expulsion is intrinsically linked with their parents' residence status in the host state.
- The best interests principle should guide all decisions relating to the expulsion of immigrant children and their family/primary carers.
- Under EU law, there are circumstances in which migrant children can remain in a host state notwithstanding their parents' legal status, particularly with a view to completing their education or where establishing family life elsewhere would be difficult.

Under EU law, as with other areas of EU migration law, rules governing the expulsion of children differ according to their nationality, their parents' nationality and the context of their migration. Once a child obtains access to a Member State under EU free movement law, he/she is likely to be able to remain there, even if the EU migrant parent he/she originally moved with no longer qualifies for ongoing residence or decides to leave.

Specifically, under the Free Movement Directive**,** children and other family members can remain in the host state following the death of the EU citizen parent they initially moved with (Article 12 (2)), provided they lived in the host state for at least 12 months before their parent's death. Similarly, they can, in principle, remain in the host state following their parent's departure. However, in both cases, if the child/family member is a third-country national, their ongoing residence is contingent on their being able to demonstrate they have

456 On international safeguards for children in situation of detention see *Report of the Special Rapporteur on torture and other cruel, inhuman or degrading treatment or punishment*, 5 March 2015, A/HRC/28/68.

457 Otherwise referred to as return, removal, repatriation, extradition, or deportation, depending on the legal context. For the purposes of this chapter, the term expulsion will be used to define the lawful removal of a non-national or other person from a state. See also FRA and ECtHR (2014), Section 5.4 on maintaining the family – protection from expulsion.

enough money to support themselves. They must also have sickness insurance (Article 7).

The rules are even more permissive for children enrolled in education facilities in the host state. In such cases, they and their custodial parent or carer are entitled to remain in the host state following the death or departure of the primary EU migrant citizen, irrespective of the child's nationality (Article 12 (3)). While originally it was thought that this education-related concession only applied to children in families with sufficient money to support themselves,[458] later case law has confirmed that it extends to children in education who may be dependent on social welfare support.[459]

Furthermore, family members and particularly third-country national parents also enjoy a right to remain in the host state following divorce from the partner who was an EU citizen, if they have primary custody of the couple's children or have been awarded rights of access to the children that must be exercised in the host state (Articles 13 (2) (b) and 13 (2) (d)).

The CJEU has referred to a child's status as an EU citizen under Article 20 of the TFEU to grant the child's third-country national parents a permit to work and reside in the EU Member State of the child's citizenship. This enables the child to enjoy the rights attached to his/her status as an EU citizen, in so far as the child would otherwise have to leave the EU to accompany his/her parents.[460] Subsequent CJEU jurisprudence indicates, however, that "the mere fact that it might appear desirable to a national of a Member State, for economic reasons or in order to keep his family together in the territory of the Union, for the members of his family who do not have the nationality of a Member State to be able to reside with him in the territory of the Union, is not sufficient in itself to support the view that the Union citizen will be forced to leave Union territory if such a right is not granted".[461]

458 CJEU C-413/99, *Baumbast and R v. Secretary of State for the Home Department*, 17 September 2002.

459 CJEU C-480/08, *Maria Teixeira v. London Borough of Lambeth and Secretary of State for the Home Department*, 23 February 2010; CJEU C-310/08, *London Borough of Harrow v. Nimco Hassan Ibrahim and Secretary of State for the Home Department* [GC], 23 February 2010. The education of migrant children is considered further in Section 8.2.

460 CJEU, C-34/09, *Gerardo Ruiz Zambrano v. Office National de l'Emploi (ONEm)*, 8 March 2011.

461 CJEU, C-256/11, *Murat Dereci and Others v. Bundesministerium für Inneres* [GC], 15 November 2011, para. 68. See also CJEU, C-40/11, *Yoshikazu Iida v. Stadt Ulm*, 8 November 2012. See further, FRA and ECtHR (2014), pp. 125–127.

The Free Movement Directive explicitly provides that any exceptional expulsion of children should be in line with the provisions of the CRC (Recital 24). Moreover, Article 28 (3) (b) endorses children's immunity from expulsion unless it is deemed to be in their best interests and in accordance with the CRC.

As far as asylum seeking children whose claim has been rejected are concerned, the Return Directive specifies that the best interests of the child should inform decisions relating to the return of unaccompanied children (Article 10). Moreover, before removing an unaccompanied child from a Member State, the authorities of that Member State must be satisfied that the child will be returned to a member of his/her family, a nominated guardian or adequate reception facilities in the state of return (Article 10 (2)).

In circumstances where asylum seeking children are returned to another Member State to have their asylum claim assessed, the Dublin Regulation stipulates that the best interests principle must guide the application of such decisions (Article 6). Furthermore, the regulation provides a checklist of factors to assist the authorities' determination of what is in the child's best interests. This includes due account for the child's family reunification possibilities; the child's well-being and social development; safety and security considerations, in particular where there is a risk of the child being a victim of human trafficking; and the views of the child, in accordance with his or her age and maturity.

Example: In *The Queen, on the application of MA and Others v. Secretary of State for the Home Department*,[462] the CJEU had to determine which state was responsible in the case of an unaccompanied child who had submitted asylum applications in different EU Member States and who had no family or relatives in other EU Member States. The CJEU clarified that in the absence of a family member legally present in a Member State, the state in which the child is physically present is responsible for examining such a claim. In doing so, it relied on Article 24 (2) of the EU Charter of Fundamental Rights, whereby in all actions relating to children, the child's best interests are to be a primary consideration.

Under CoE law, states are, in principle, permitted to interfere with the right to respect for family life in accordance with Article 8 (2) of the ECHR.

462 CJEU, C-648/11, *The Queen, on the application of MA and Others v. Secretary of State for the Home Department*, 6 June 2013.

Example: *Gül v. Switzerland*[463] concerns an applicant who lived in Switzerland with his wife and daughter, who were all granted residence permits on humanitarian grounds. He also wished to bring to Switzerland their minor son, whom they had left behind in Turkey, but the Swiss authorities refused to grant him this request, mainly on the grounds that he had insufficient means to provide for his family. The ECtHR held that by leaving Turkey the applicant had himself caused the separation with his son. His recent visits to Turkey showed that his initial reasons for applying for political asylum in Switzerland were no longer valid. There were no obstacles preventing the family from establishing themselves in their country of origin, where their minor son had always lived. While acknowledging that their family's situation was very difficult from the human point of view, the Court found no breach of Article 8 of the ECHR.

Example: In *Üner v. The Netherlands*[464] it was confirmed that consideration should be given to the impact that expulsion would have on any children in a family when determining whether it was a proportionate response. This involved considering: "the best interests and well-being of the children, in particular the seriousness of the difficulties which any children [...] are likely to encounter in the country to which the applicant is to be expelled; and the solidity of social, cultural and family ties with the host country and with the country of destination".

Example: The case of *Tarakhel v. Switzerland*[465] concerns the refusal of the Swiss authorities to examine the asylum application of an Afghan couple and their six children, and their decision to send them back to Italy. The ECtHR found that, in view of the current situation regarding the reception system in Italy, and in the absence of detailed and reliable information concerning the specific facility of destination, the Swiss authorities did not possess sufficient assurances that, if returned to Italy, the applicants would be taken charge of in a manner adapted to the age of the children. The ECtHR therefore found that there would be a violation of Article 3 of the ECHR if the Swiss authorities were to send the applicants back to Italy under the Dublin II Reg-

463 ECtHR, *Gül v. Switzerland*, No. 23218/94, 19 February 1996.

464 *ECtHR*, *Üner v. The Netherlands* [GC], No. 46410/99, 18 October 2006, paras. 57–58. See also *Boultif v. Switzerland*, No. 54273/00, 2 August 2001.

465 ECtHR, *Tarakhel v. Switzerland* [GC], No. 29217/12, 4 November 2014.

ulation without having first obtained individual assurances from the Italian authorities that the applicants would be taken charge of in a manner adapted to the age of the children and that the family would be kept together.

Under international law, a state shall upon request provide the parent(s) or the child with essential information concerning the whereabouts of the absent family member(s) in instances of detention, imprisonment, exile, deportation or death, unless it would be detrimental to the well-being of the child (Article 9 (4) of the CRC).

9.6. Access to justice[466]

Key point

- Migrant children have the right to an effective remedy.

Under EU law, children's rights to access justice in an immigration context are set out in a range of different instruments. First, the right to an effective legal remedy and to a fair trial is set out in Article 47 of the EU Charter of Fundamental Rights. This includes a right to a fair and public hearing within a reasonable time by an independent and impartial tribunal, including having the possibility of advice, a defence and appropriate legal representation under Article 48. For child migrants, this is reinforced by a range of secondary legislative provisions. In particular, the Dublin Regulation obliges Member States to ensure that an unaccompanied child is represented by an appropriately qualified professional who has access to all of the relevant information in the child's file (Article 6). Parallel provisions are found in the Qualification Directive (Article 31) and in the Asylum Procedures Directive (Article 25). Children's right to legal representation is also supported by their right to access victim services and special confidential support services under Article 8 of Directive 2012/29/EU establishing minimum standards on the rights, support and protection of victims of crime (Victims' Directive).[467]

466 See also FRA and ECtHR (2014), Section 4.5 on legal assistance in asylum and return procedures.

467 Directive 2012/29/EU of the European Parliament and of the Council of 25 October 2012 establishing minimum standards on the rights, support and protection of victims of crime, OJ 2012 L 315/55.

Rights associated with access to justice are not without their limitations, however, and may be subject to certain age conditions. For example, the Asylum Procedures Directive allows Member States to "refrain from appointing a [legal] representative where the unaccompanied minor will in all likelihood reach the age of 18 before a decision at first instance is taken" (Article 25 (2)).

Under CoE law, the ECtHR ruled out the applicability of Article 6 (right to a fair trial) in cases concerning decisions on entry, stay and deportation of aliens.[468] However, Article 13 of the ECHR (the right to an effective remedy) may be relied on in certain circumstances.

Example: *Rahimi v. Greece*[469] concerns the conditions in which a migrant child from Afghanistan, who had entered Greece irregularly, was held in a detention centre and subsequently released with a view to his expulsion. In finding a violation of Article 13 of the ECHR, the ECtHR noted that the information brochure provided to the applicant did not indicate the procedure to be followed to make a complaint to the chief of police. Moreover, the applicant was not informed in a language which he understood of the available remedies he could use to complain about the conditions of his detention. Relying on the reports of the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT), the ECtHR noted the absence in Greece of an independent authority for the inspection of detention facilities of the law-enforcement agencies. It also noted that there was no impartial authority to make the remedy effective. Accordingly, it found violations of Article 3, Article 5 paragraphs 1 and 4, and Article 13 of the ECHR.

The ESC requires states to promote the legal (as well as social and economic) development of the family (Article 16). Moreover, Article 19 (1) requires states to maintain "adequate and free services" and to ensure that migrant workers and their families receive accurate information relating to emigration and immigration. A similar 'information' requirement (central to migrants' access to justice) is contained in Article 6 of the European Convention on the legal status of migrant workers, but the more extensive provisions governing "right

469 ECtHR, *Rahimi v. Greece*, No. 8687/08, 5 April 2011 (available in French).

of access to the courts and administrative authorities" (Article 26) are directed exclusively at migrant workers rather than their family members.[470]

In addition, it is worth noting that the CoE has developed very comprehensive guidelines on child-friendly justice, which set out how all justice and administrative proceedings, including immigration proceedings, should be adapted to meet the needs of children.[471]

Under international law, Article 37 of the CRC is particularly relevant for migrant children deprived of their liberty, as it ensures these children the right to prompt access to legal and other appropriate assistance, as well as the right to challenge the legality of the deprivation of their liberty before a court or other competent, independent and impartial authority, whose decision must furthermore be prompt.

Russia*, No. 1585/09, 2013 (disclosure of medical records) Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data

This chapter addresses European legislation and case law in the field of consumer and data protection. There is an abundance of legislation and case law at the EU level, as the TFEU expressly lays down the EU's competence in these matters. The CoE's contribution in this field is more limited. At treaty level there are two main conventions on media and data protection. The ECtHR has also decided on a number of cases concerning the data protection of individuals.

The following sections shall concentrate on specific aspects of consumer law relating to children (Section 10.1) and data protection (Section 10.2). For each of these issues, the general legal framework and its applicability for children is analysed, as well as the specific norms for the protection of children, where relevant.

10.1. Protection of children as consumers

Key points

- According to the CJEU, child consumers' best interests and the protection of their rights override requirements of public interest justifying limits to the free movement of goods, persons, services and capital.
- Children as consumers should be provided with relevant information so as to be able to consider all relevant facts and make an informed choice.
- Unfair commercial practices are those that do not comply with the principle of professional diligence and may influence adult and child consumers' transactional decisions.
- Children can be included in clinical trials only if the administered medicinal product is expected to be of direct benefit to them, thereby outweighing the risks.
- EU and CoE law limit the amount of marketing children may be exposed to, without banning it as such.
- Children are entitled to specific protection, which implies protection against any advertising as well as tele-shopping programmes which could cause moral or physical harm to them.
- The placement of products advertisements in children's programmes is forbidden.

10.1.1. Consumer rights

Under EU law, the main pillars of consumer protection are laid down in Article 169 (1) of the TFEU and Article 38 of the EU Charter of Fundamental Rights. The CJEU has recognised that the best interests of the child override requirements of public interest, justifying limits to the common market freedoms.

Example: The case of *Dynamic Medien*[472] concerns the sale over the internet in Germany of DVDs of Japanese cartoons. The cartoons had been approved for children over 15 years of age in the United Kingdom. They had not been rated as appropriate by the relevant German authority. The main question before the CJEU was whether the prohibition in Germany was contrary to the freedom of movement principle. The CJEU found that the

472 CJEU, C-244/06, *Dynamic Medien Vertriebs GmbH v. Avides Media AG*, 14 February 2008.

main purpose of the German law was to protect children from information that would be detrimental to their well-being. It ruled that the restriction on the freedom of movement of goods was not disproportionate as long as it did not go beyond what was necessary to attain the objective of protecting children pursued by the Member State concerned.

Example: The case of *Omega*[473] concerns the operation of a 'laserdrome' in Germany. The game played in the 'laserdrome' included hitting sensory targets placed on the jackets worn by players. The equipment for the game was supplied by a British company and both the game and the equipment had been lawfully marketed in the United Kingdom. The game was prohibited in Germany on the ground that it was contrary to fundamental values such as human dignity. The CJEU found that the restriction imposed by the German authorities was not contrary to EU law, as it had been duly justified on public policy grounds.

The most recent review process of the EU consumer law resulted in the adoption of the Consumer Rights Directive 2011/83/EU (CRD), which aims to fully harmonise national laws on distance-selling and off-premises contracts, as well as other types of consumer contracts.[474] The intention is to balance a high level of consumer protection and the competitiveness of enterprises. As per Article 3 (3) (a), the CRD is not applicable to contracts for social services, including social housing, childcare and support of families and persons permanently or temporarily in need, including of long-term care. Social services include services for children and youth, assistance services for families, single parents and older persons, and services for migrants. The CRD dedicates specific attention to pre-contractual information. It bases its 'information requirements' on the assumption that if consumers, including children, are provided with due information, they will be able to consider all relevant facts and make an informed choice.

473 CJEU, C-36/02, *Omega Spielhallen- und Automatenaufstellungs-GmbH v. Oberbürgermeisterin der Bundesstadt Bonn*, 14 October 2004.

474 Directive 2011/83/EU of the European Parliament and the Council of 25 October 2011 on consumer rights, amending Council Directive 93/13/EEC and Directive 1999/44/EC of the European Parliament and of the Council and repealing Council Directive 85/577/EEC and Directive 97/7/EC of the European Parliament and of the Council, OJ 2011 L 304/64 (it should have been implemented by 13 December 2013).

10.1.2. Unfair commercial practices on children

Under EU law, Directive 2005/29/EC, concerning unfair business-to-consumer commercial practices in the internal market (UCPD),[475] covers the totality of business-to-consumer transactions (whether operated offline or online, involving both goods and services). Children are included in the UCPD in the category of 'vulnerable consumers' (Article 5 (3)). Transactional decisions cannot be taken following harassment, coercion or undue influence or misleading information, and child consumers have the right to make these decisions freely. The directive prohibits product marketing and advertising activities which create confusion with another product or with a competitor's trademark, and requires that all the necessary information for consumers be provided to them in a clear and comprehensible manner, and at a suitable time to enable them to make a transactional decision (Articles 6 and 7).

10.1.3. Products' safety

Under EU law, there is a comprehensive framework to ensure that only safe and otherwise compliant products find their way on to the market. In particular, Directive 2001/95/EC on general product safety (GPSD) dedicates specific attention to the safety of children by including them in the category of consumers who can be particularly vulnerable to the risks posed by the products under consideration (Recital 8 of the GPSD). Therefore, the safety of the product needs to be assessed, taking into account all the relevant aspects, in particular the categories of consumers to which the product is destined.

Council Directive 87/357/EEC is a specific product safety directive on the approximation of the laws of the Member States concerning products which, appearing to be other than they are, endanger the health or safety of consumers.[476] It prohibits the marketing, importing and manufacturing of products that look like foodstuffs, but that are not edible. Member States must carry out checks to ensure that no such products are marketed. If a Member State bans

475 Directive 2005/29/EC of European Parliament and of the Council of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market and amending Council Directive 84/450/EEC, Directives 97/7/EC, 98/27/EC and 2002/65/EC of the European Parliament and of the Council and Regulation (EC) No. 2006/2004 of the European Parliament and of the Council, OJ 2005 L 149/22.

476 Council Directive 87/357/EEC of 25 June 1987 on the approximation of the laws of the Member States concerning products which, appearing to be other than they are, endanger the health or safety of consumers, OJ 1987 L 192/49.

a product under the terms of this directive, it must inform the Commission and provide details to inform the other Member States. The question of toy safety in particular is discussed in more detail under Section 10.1.6.

10.1.4. Clinical trials on children

Under EU law, Directive 2001/20/EC[477] on the approximation of national provisions relating to the implementation of 'good clinical practice' in the conduct of clinical trials on medicinal products for human use includes children among vulnerable persons who are incapable of giving legal consent to clinical trials (Recital 3). Children may only be included in clinical trials if they directly benefit from receiving the medicinal product and if such benefits outweigh the risks (Recital 3). Clinical trials should afford subjects the best possible protection (Article 4).

Similarly, Regulation (EU) No. 536/2014 on clinical trials on medicinal products for human use includes specific provisions for children in the vulnerable population category (Article 10 (1)). This regulation aims to gradually replace Directive 2001/20/EC.[478] It requires that applications for the authorisation of clinical trials involving children be carefully assessed. A child's legal representative must consent to a clinical trial taking place, as must the child if he/she is capable of forming an opinion (Article 29 (1) and (8)). The regulation lays down specific conditions for conducting safe clinical trials on children and ensuring their informed consent (Article 32). These conditions are that: no incentives are given to the subject except for compensation for expenses and loss of earnings directly related to the participation in the clinical trial; the clinical trial is intended to investigate treatments for a medical condition that only occurs in children; and there are scientific grounds for expecting that participation in the clinical trial will produce: a direct benefit for the minor concerned outweighing the risks and burdens involved; or some benefit for the population represented by the minor concerned and such a clinical trial will pose only minimal risk to, and will impose minimal burden on, the minor concerned in comparison with the standard treatment of the minor's condition. Only in emergency situations may

477 Directive 2001/20/EC of the European Parliament and of the Council of 4 April 2001 on the approximation of the laws, regulations and administrative provisions of the Member States relating to the implementation of good clinical practice in the conduct of clinical trials on medicinal products for human use, OJ 2001 L 121/34.

478 Regulation (EU) 536/2014 of the European Parliament and the Council of 16 April 2014 on clinical trials on medicinal products for human use, and repealing Directive 2001/20/EC, OJ 2014 L 158/1.

clinical trials be performed on children without having previously obtained their consent or the consent of their legal representatives (Article 35 (1)).

10.1.5. Food intended for infants and young children

Under EU law, Directive 2009/39/EC on foodstuffs intended for particular nutritional uses[479] focuses on the nutritional composition and safety of foods specifically manufactured for infants and young children under the age of 12 months. Its rules concern infant and follow-on formulae, processed cereal-based foods and baby foods and additives in foods for infants and young children. The directive aims to guarantee product safety and to provide the consumer with suitable products and appropriate information. It specifies, amongst other things, that a particular nutritional use shall fulfil the particular nutritional requirements of certain categories of persons, including those of infants or young children in good health (Article 1 (3) (c)).

10.1.6. Toy safety

Under EU law, Directive 2009/48/EC on the safety of toys (TSD)[480] defines toys in its Article 2 as "products designed or intended, whether or not exclusively, for use in play by children under 14 years of age".[481] Annex I provides a non-exhaustive list of items that are not considered toys, but that could be subject to confusion. Article 2 (2) also lists some toys that are excluded from its range of action. The TSD also reinforces health and safety standards by limiting the amounts of certain chemicals that may be contained in the material used for toys (Article 10).[482]

479 Directive 2009/39/EC of the European Parliament and of the Council of 6 May 2009 on foodstuffs intended for particular nutritional uses, OJ 2009 L 124/21.

480 Directive 2009/48/EC of the European Parliament and of the Council of 18 June 2009 on the safety of toys, OJ 2009 L 170.

481 *Ibid.*, Art. 2 (1).

482 The European Commission has also concluded 'voluntary agreements' with European toys industries/traders in order to improve toy safety. See further: http://ec.europa.eu/growth/sectors/toys/safety/index_en.htm.

10.1.7. Children and advertising

Under EU law, Directive 2010/13/EU on Audiovisual Media Services (AVMS Directive)[483] expanded the scope of legal regulation of the Directive 89/552/EEC on the coordination of certain provisions laid down by law, regulation or administrative action in Member States concerning the pursuit of television broadcasting activities (Television Without Frontiers (TWF) Directive). The AVMS Directive deals with the limitation of the amount, quality and content of marketing children may be exposed to, regulating the duration of advertisement (Articles 20, 24 and 27). It forbids product placement in children's programmes (Article 11) and authorises Member States to prohibit the display of sponsorship logos during programmes for children (Article 10 (4)).[484] The AVMS Directive balances the protection of children with other important democratic values, such as the freedom of expression, supporting the idea that such protection is possible through the essential involvement of parental responsibility (Recitals 48 and 59).

The effective implementation of the AVMS Directive is supplemented by the 1998[485] and 2006[486] recommendations on the protection of children and human dignity.

483 Directive 2010/13/EU of the European Parliament and the Council of 10 March 2010 on the coordination of certain provisions laid down by law, regulation or administrative action in Member States concerning the provision of audiovisual media services (Audiovisual Media Services Directive), OJ 2010 L 95/1.

484 For a more general overview of the functioning of the AMS Directive, please refer to: COM(2012) 203 final, Report from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions, on the application of Directive 2010/13/EU ('Audiovisual Media Service Directive'), Brussels, 4 May 2012 and SWD(2012) 125 final, Commission Staff Working Document attached to the First Report from the Commission to the European Parliament, the Council, The European Economic And Social Committee And The Committee of the Regions on the Application of Directive 2010/13/EU 'Audiovisual Media Services' accompanying the document, Brussels, 4 May 2012.

485 Council Recommendation 98/560/EC of 24 September 1998 on the development of the competitiveness of the European audiovisual and information services industry by promoting national frameworks aimed at achieving a comparable and effective level of protection of minors and human dignity, OJ 1998 L 270.

486 Recommendation 2006/952/EC of the European Parliament and of the Council of 20 December 2006 on the protection of minors and human dignity and on the right of reply in relation to the competitiveness of the European audiovisual and on-line information services industry, OJ 2006 L 378.

Under CoE law, the European Convention on Transfrontier Television[487] was the first international treaty to create a legal framework for the free circulation of transfrontier television programmes in Europe. It specifically protects children and youth (Article 7 (2)), for instance forbidding the screening of pornographic and violent material and of programmes inciting to racial hatred. It identifies advertising standards and regulates advertising time and advertising breaks.

10.2. Children and personal data protection

Key points

- Under EU and CoE law, personal data protection has been acknowledged as a fundamental right.
- The right to respect for private and family life, home and correspondence (Article 8 of the ECHR) includes the right to protection of personal data.
- Children have, among other rights relating to their personal data, the right to object to the processing of their data, except on compelling legitimate grounds.

10.2.1. European data protection law

Under EU law, the EU has competence to legislate on data protection matters (Article 16 of the TFEU).[488] Article 8 (2) of the EU Charter of Fundamental Rights contains key data protection principles (fair processing, consent or legitimate aim prescribed by law, right to access and rectification), whereas Article 8 (3) requires that compliance with data protection rules be subject to control by an independent authority. The right to the protection of personal data established in Article 8 may be limited in accordance with the law and for the respect of the principles of a democratic society such as the freedoms and rights of others (Article 52 of the Charter).[489]

487 Council of Europe, European Convention on Transfrontier Television, CETS No. 132, 1989. Amended according to the provisions of the Protocol, CETS No. 171, 2002.

488 For a general overview of European data protection law, see: FRA and CoE (2014).

489 CJEU, Joined cases C-468/10 and C-469/10, *Asociación Nacional de Establecimientos Financieros de Crédito (ASNEF) and Federación de Comercio Electrónico y Marketing Directo (FECEMD) v. Administración del Estado*, 24 November 2011, para. 48; CJEU, C-275/06, *Productores de Música de España (Promusicae) v. Telefónica de España SAU* [GC], 29 January 2008, para. 68.

Personal data protection has emerged as one of the key areas of European law relating to privacy. Directive 95/46/EC on the protection of individuals with regard to the processing of personal data and on the free movement of such data (Data Protection Directive)[490] is the main instrument in this field.

Because data processing is operated in closed spaces not open to the public, children as well as other data subjects are usually unaware of the processing of their own personal data. To counteract the vulnerability of data subjects, European law guarantees children (and other data subjects) specific individual rights, such as the right to be informed that their data are being collected, the right to access the stored data and to learn about the details of the processing operation, the right to object in case of unlawful processing, the rights to rectification, erasure and blocking of data.

Controllers of processing operations must provide adequate information with regard to processing of data (Articles 10 and 11 of the Data Protection Directive). Interpreted in a child-friendly manner, this implies that the language and the form of the information need to be adapted to the level of maturity and understanding of children. As a minimum requirement, the information must include the purpose of processing, as well as the identity and contact details of the controller (Articles 10 (a) and (b) of the Data Protection Directive).

The Data Protection Directive provides for the consent of data subjects, regardless of the sensitivity of the data processed (Articles 7, 8 and 14). A child-friendly consent procedure would entail taking into account the child's evolving capacities, progressively involving him or her. The first step entails a child being consulted by his/her legal representative prior to providing consent, before moving on to a parallel consent of the child and his or her legal representative, to the sole consent of the adolescent child.

Data subjects have the right to erasure of data, which entails the possibility of having their personal data removed or deleted upon their request, and also the right to object to the processing of their personal data. The latter has become increasingly important for children because of the massive amount of children's personal data circulated and available through social networking. Although the CJEU has not yet addressed cases concerning children, in a recent

490 Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data (Data Protection Directive), OJ 1995 L 281.

case concerning an adult applicant, it held that the right to object applies to data and information, "in particular where they appear to be inadequate, irrelevant or no longer relevant, or excessive in relation to those purposes and in the light of the time that has elapsed".[491] The CJEU also held that the applicability of the right to object needs to be balanced against other fundamental rights.

Under CoE law, the ECtHR has read the right to protection of personal data into Article 8 of the ECHR. The Court examines situations where the issue of data protection arises, including the interception of communications,[492] various forms of surveillance[493] and the protection against storage of personal data by public authorities.[494] Furthermore, the ECtHR ruled that national law must set out appropriate measures to ensure judicial remedies against infringements of data protection rights.

Example: In *K.U. v. Finland*,[495] the applicant was a child who complained that an advertisement of a sexual nature had been posted in his name on an internet dating site. The service provider refused to reveal the identity of the person who had posted the information because of confidentiality obligations under Finnish law. The applicant claimed that domestic law did not provide sufficient protection against the actions of a private person placing incriminating data about the applicant on the internet. The ECtHR held that states have positive obligations which involve adopting measures designed to secure respect for private life even in the sphere of relations between individuals. In the applicant's case, his practical and effective protection required that effective steps be taken to identify and prosecute the perpetrator. However, such protection was not afforded by the state, and the Court found a violation of Article 8 of the ECHR.[496]

491 CJEU, C-131/12, *Google Spain SL and Google Inc. v. Agencia Española de Protección de Datos (AEPD) and Mario Costeja González* [GC], 13 May 2014, para. 93.

492 See, for example: ECtHR, *Malone v. the United Kingdom*, No. 8691/79, 2 August 1984; ECtHR, *Copland v. the United Kingdom*, No. 62617/00, 3 April 2007.

493 See, for example: ECtHR, *Klass and Others v. Germany*, No. 5029/71, 6 September 1978; ECtHR, *Uzun v. Germany*, No. 35623/05, 2 September 2010.

494 See, for example: ECtHR, *Leander v. Sweden*, No. 9248/81, 26 March 1987; ECtHR, *S. and Marper v. the United Kingdom* [GC], Nos. 30562/04 and 30566/04, 4 December 2008.

495 ECtHR, *K.U. v. Finland*, No. 2872/02, 2 December 2008. See further Chapter 4.

496 FRA and CoE (2014), p. 122.

Example: *Avilkina and Others v. Russia*[497] concerns the disclosure of a two year old girl's medical files to the prosecutor, following his request to be informed about all refusals by Jehovah's Witnesses concerning blood transfusions. Acknowledging that the interests of a patient and the community as a whole in protecting the confidentiality of medical data might be outweighed by the interests of investigating crime, the Court noted that the applicant was not a suspect or accused in any criminal proceedings. In addition, the medical professionals providing treatment to the applicant could have applied for judicial authorisation for a blood transfusion, had they believed her to be in a life-threatening situation. In the absence of any pressing social need for requesting the disclosure of the confidential medical information concerning the applicant, the ECtHR found a violation of Article 8 of the ECHR.

Example: In *S. and Marper v. the United Kingdom*,[498] an eleven year old's fingerprints and DNA taken in relation with the suspicion of attempted robbery were retained without a time limit, even though he was ultimately acquitted. Given the nature and amount of personal information contained in cellular samples and DNA profiles, their retention in itself amounted to an interference with the first applicant's right to respect for private life. The core principles of the relevant instruments of the Council of Europe and the law and practice of the other contracting states require the retention of data to be proportionate in relation to the purpose of collection and limited in time, particularly in the police sector. The protection afforded by Article 8 of the ECHR would be unacceptably weakened if the use of modern scientific techniques in the criminal justice system were allowed at any cost and without carefully balancing their potential benefits against important private-life interests. In that respect, the blanket and indiscriminate nature of the power of retention in England and Wales was particularly striking, since it allowed data to be retained for an unlimited period of time and irrespective of the nature or gravity of the offence or of the age of the suspect. Retention could be especially harmful in the case of minors, given their special situation and the importance of their development and integration in society. In conclusion, the retention of data constituted a disproportionate interference with the applicant's right to respect for private life.

497 ECtHR, *Avilkina and Others v. Russia*, No. 1585/09, 6 June 2013.

498 ECtHR, *S. and Marper v. the United Kingdom* [GC], Nos. 30562/04 and 30566/04, 4 December 2008.

The Council of Europe Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data[499] (Convention 108) applies to all data processing carried out both in the private and public sectors, and protects the individual, children included, against abuses which may accompany the processing of personal data. Convention 108 has an additional protocol which regulates the establishment of supervisory authorities and cross-border flow of personal data to non-Parties to the convention.[500]

The principles laid down in Convention 108 related to the processing of personal data concern fair and lawful collection and automatic processing of data, stored for specified legitimate purposes and not for use for ends incompatible with those purposes, nor kept for longer than is necessary. They also concern the quality of the data. In the absence of proper legal safeguards, the processing of 'sensitive' data, such as on a person's race, politics, health, religion, sexual life or criminal record, is prohibited. The convention also enshrines the individual's right, children included, to know that information is stored on him or her and, if necessary, to have it corrected. Restrictions on the rights laid down in the convention are possible only when overriding interests, such as state security or defence, are at stake.

Under international law, the right to data protection is part of the child's right to privacy contained in Article 16 of the CRC. This article provides that a child shall not be subject to arbitrary or unlawful interference with his or her privacy, family, home or correspondence, nor to unlawful attacks on his or her honour and reputation. This right must be respected by everybody, including the child's legal representative.

Hungary*, No. 19400/11, 2012 (exclusion of family from the witness protection programme)

Children's rights in the context of juvenile justice proceedings concern children accused of, prosecuted for or sentenced for having committed criminal offences, as well as children who participate in justice or related proceedings as victims and/or witnesses. The position of children in the context of juvenile justice is regulated by general human rights provisions relevant to both adults and children.

This chapter presents an overview of the European norms relevant to children involved in judicial and alternative proceedings. It addresses fair trial guarantees, including effective participation and access to a lawyer, the rights of detained young offenders, including pre-trial detention (substantive and procedural safeguards), conditions of detention and protection against ill-treatment, and the protection of child witnesses and victims. Protection aspects are especially relevant for non-adversarial, alternative proceedings, which should be used whenever these may best serve the child's best interests.[501] In the case of children, objectives of criminal justice, such as social integration, education and prevention of re-offending, are basic principles that are valued.[502]

501 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*, 17 November 2010, para. 24.

502 See further, Council of Europe, Committee of Ministers (2008), Recommendation CM/Rec (2008)11 of the Committee of Ministers to member states on the European Rules for juvenile offenders subject to sanctions or measures, 5 November 2008, Part I.A.2.

11.1. Fair trial guarantees

Key points

- Children in criminal proceedings are entitled to be treated fairly and in a child-friendly manner.
- Court proceedings should be adjusted to children's needs to ensure their effective participation.
- Children have the right to access a lawyer from the initial stages of the criminal proceedings and from the first police interrogation.

While briefly outlining the general requirements for a fair trial at both the EU and CoE level, this section places particular emphasis on child-specific fair trial guarantees.

The right to a fair trial is a core pillar of a democratic society. Children suspected or accused of a crime have the right to a fair trial, and they benefit from the same guarantees as any other person in conflict with the law. Fair trial guarantees apply from the child's first interrogation and subsist during the trial. Children in conflict with the law are, however, particularly vulnerable and may therefore need additional protection. European bodies have developed specific requirements to ensure that these children's needs are effectively met.

Under EU law, several provisions of the EU Charter of Fundamental Rights establish basic rights of access to justice which sustain fair trial guarantees for both adults and children. Article 47 deals specifically with the right to an effective remedy and to fair trial, establishing requirements of particular relevance for children, such as the reasonability of time in having a fair and public hearing, and the rights to be defended, represented and advised as well as to legal aid. Similarly, the principles of legality and proportionality of criminal offences and penalties established in Article 49 are particularly relevant for children. In addition, several EU directives lay down specific fair trial guarantees in criminal proceedings: the Right to Interpretation and Translation Directive,[503] the Right

503 Directive 2010/64/EU of the European Parliament and of the Council of 20 October 2010 on the right to interpretation and translation in criminal proceedings, OJ 2010 L 280/1.

to Information Directive,[504] and the Access to a Lawyer Directive.[505] The first two directives do not include child-specific guarantees, although the Right to Information Directive contains provisions addressing the situation of vulnerable suspects or accused persons more generally. The child-related provisions of the Access to a Lawyer Directive are elaborated upon in Section 11.2.2.

Even in the absence of child-specific provisions, Member States must observe the EU Charter of Fundamental Rights when implementing the provisions of the aforementioned directives. Therefore, principles such as the child's best interests, enshrined in Article 24, should be given due weight in cases where children are the subject of any of the provisions of the directives. To date, no cases have been brought to the CJEU concerning the interpretation of Article 24 of the Charter in conjunction with one the mentioned directives.[506]

Of specific importance is the European Commission proposal for a directive on procedural safeguards for criminally suspected or accused children,[507] which aims to provide children mandatory access to a lawyer at all stages of criminal proceedings. It also provides that children should benefit from prompt information about their rights, the assistance of parents (or other appropriate persons) and questioning behind closed doors. In addition, children deprived of liberty should be entitled to receive appropriate education, guidance, training, and medical care, and to be kept separate from adults.[508]

Under CoE law, the ECHR fair trial guarantees are laid down in Article 6, which generates the most extensive case law of the ECtHR. Article 6 (1) of the ECHR includes some express fair trial guarantees: the right to a fair public hearing/

504 Directive 2012/13/EU of the European Parliament and of the Council of 22 May 2012 on the right to information in criminal proceedings, OJ 2012 L 142/1.

505 Directive 2013/48/EU of the European Parliament and of the Council of 22 October 2013 on the right of access to a lawyer in criminal proceedings and in European arrest warrant proceedings, and on the right to have a third party informed upon deprivation of liberty and to communicate with third persons and with consular authorities while deprived of liberty, OJ 2013 L 294/1.

506 The CJEU has dealt with the interpretation of Art. 24 in proceedings relating to international child abduction (see Section 5.4).

507 European Commission (2013), Proposal for a Directive of the European Parliament and of the Council on procedural safeguards for children suspected or accused in criminal proceedings, COM(2013) 822 final, Brussels, 27 November 2013.

508 See further Section 11.2. Of relevance for child protection can also be the European Commission (2013), Proposal for a Directive of the European Parliament and of the Council on provisional legal aid for suspects or accused persons deprived of liberty and legal aid in European arrest warrant proceedings, COM(2013) 824 final, Brussels, 27 November 2013.

pronouncement (unless it is contrary to, among others, the interests of juveniles); the right to a trial within reasonable time; the right to a trial by an independent and impartial tribunal; [509] and the right to a trial by a tribunal established by law. Inherent in the concept of a fair trial, the ECtHR has developed guarantees: equality of arms and adversarial proceedings; the right to remain silent; access to a lawyer; effective participation; presence at the hearing; and reasoned decisions. In addition, everyone must be presumed innocent until proven guilty, according to law (Article 6 (2) of the ECHR).

Everyone charged with a criminal offence shall have the following minimum rights: the right to be informed promptly about the charges in a language she/he understands (Article 6 (3) (a) of the ECHR); the right to have adequate time and facilities for the preparation of her/his defence (Article 6 (3) (b) of the ECHR); the right to have legal assistance of her/his own choosing (Article 6 (3) (c) of the ECHR); the right to examine or have witnesses examined (Article 6 (3) (d) of the ECHR); and the right to have the free assistance of an interpreter (Article 6 (3) (e) of the ECHR). These guarantees apply to adults and children alike. However, aspects of particular importance to children which have generated child-specific case law include the right to effective participation, as well as the right to access a lawyer. These two specific fair trial guarantees are therefore further elaborated upon in this chapter.

Of high importance for child suspects/accused are the CoE's *Guidelines on child friendly justice*.[510] Even if the guidelines are not legally binding, they represent a stepping stone in ensuring that justice proceedings, including those part of the criminal justice system, take into account the specific needs of children. They are built on existing ECtHR case law and other European and international legal standards, such as the UN Convention on the Rights of the Child. They are a useful tool for professionals dealing with children. According to Section I (1), the guidelines apply to children in judicial (criminal or non-criminal) proceedings or in alternatives to such proceedings. Of specific importance for children in criminal proceedings is the right to have the information on criminal charges explained to both the child and the parents in a way that they understand the exact charge (Section IV.A.1.5); the right to be questioned only in the presence of the lawyer/parents or a person of trust (Section C (30)); the right to

509 ECtHR, *Nortier v. the Netherlands*, No. 13924/88, 24 August 1993; ECtHR, *Adamkiewicz v. Poland*, No. 54729/00, 2 March 2010.

510 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*, 17 November 2010.

speedy proceedings (Section D (4)) and the right to child-sensitive interviews or hearings (Section D (5)).

In June 2014, PACE adopted a resolution on child-friendly juvenile justice, with which it underscores the need for a rights-based and child-specific treatment of children in conflict with the law.[511] PACE calls upon Member States to implement international human right standards regarding juvenile justice, including the CoE's Guidelines on child friendly justice, and to bring national laws and practice in conformity with these standards. PACE suggests using liberty deprivation only as a measure of last resort and for the shortest possible period of time, setting the minimum age of criminal responsibility at 14 years old, without allowing for exceptions in cases of serious offences, and establishing a specialised juvenile justice system, including diversion mechanisms, non-custodial measures and specialised professionals.

Under international law, Article 40 of the CRC acknowledges that every child alleged as, accused of, or recognised as having infringed penal law is entitled to be treated fairly and in a manner that takes into account his/her age. The key objective of juvenile justice according to Article 40 of the CRC is to reintegrate children in society, in which they can play a constructive role. Article 40 (2) of the CRC recognises children's right to a fair trial and that children have some additional entitlements, including the right to be assisted by parents, the right to appeal and the right to have their privacy fully protected at all stages of the proceedings.

Further, other instruments have developed the CRC principles of fair trial and the right to be treated in a child-specific way, including the use of liberty deprivation as a measure of last resort and only for the shortest appropriate period of time (see Article 37 (b) of the CRC). Of particular importance are the UN Standard Minimum Rules for the Administration of Juvenile Justice (Beijing Rules),[512] the UN Guidelines for the Prevention of Juvenile Delinquency (Riyadh Guidelines)[513] and the UN Rules for the Protection of Juveniles Deprived

511 Parliamentary Assembly of the Council of Europe, Resolution 2010 (2014), "Child-friendly juvenile justice: from rhetoric to reality".

of their Liberty (also known as the 'Havana Rules').[514] The Beijing Rules provide detailed guidance on the implementation of Article 40 of the CRC's fair trial requirements and child-specific treatment, including the aims of juvenile justice, protection of privacy, investigation and prosecution, pre-trial detention, adjudication and disposition, and institutional and non-institutional treatment. The Havana Rules concern the treatment of juveniles deprived of their liberty and include rules regarding the definition of liberty deprivation, police custody and pre-trial detention, juvenile institution conditions, disciplinary procedures, screening methods and the use of force or restraint, complaint mechanisms, inspection and monitoring mechanisms and the reintegration of juveniles. Finally, the Riyadh Guidelines provide detailed guidelines regarding policies aiming at the prevention of juvenile delinquency.

The UNCRC issued one General Comment (No. 10)[515] on children and juvenile justice, which offers detailed guidance on how to interpret and implement the CRC as far as juvenile justice is concerned. This comment deals with important juvenile justice principles, including the right to effective participation as part of the right to a fair trial (see further in Section 11.1.1), the use of deprivation of liberty as a measure of last resort and for the shortest appropriate period of time, the use of diversion and prevention of juvenile delinquency, the embedment of the best interests of the child principle and the principle of non-discrimination in the juvenile justice system, and age limits. The UNCRC recommends to set the minimum age of criminal responsibility at 12, or preferably higher. It also recommends to grant all children the right to be dealt with in the context of juvenile justice and prohibits transferring 16 and 17 year olds to the adult criminal system in cases of serious offences. Other general comments, e.g. regarding the right to be heard (which is connected to the right to participate effectively in justice proceedings), and the protection against all forms of violence, are also relevant for juvenile justice.[516]

11.1.1. Effective participation

Under EU law, Article 47 of the EU Charter of Fundamental Rights lays down similar guarantees to those provided under Article 6 of the ECHR, including the right to a fair and public hearing within a reasonable time by an independent and impartial tribunal, the right to legal representation and the right to effective remedies. The proposed directive on procedural safeguards for criminally suspected or accused children includes the right to effective participation, as well as the right to legal representation.[517]

Under CoE law, the ECtHR has elaborated under Article 6 specific requirements for ensuring children's effective participation in criminal trials. As a general rule, proceedings should ensure that account is taken of the child's age, level of maturity and emotional capacities.[518] Concrete examples of 'effective participation' requirements include the child's presence during the hearings, holding of *in camera* hearings, limited publicity, ensuring that the child understands what is at stake and limited formality of court sessions. So far the ECtHR has not held that setting the age of criminal responsibility too low constitutes in itself a violation of Article 6 of the ECHR. When assessing whether a child was able to participate effectively in the national proceedings the ECtHR looks at the concrete circumstances of each case.

Example: The case of *T. v. the United Kingdom*[519] concerns the murder of a two year old by two ten year olds. They were committed to public trial under big media attention. The court procedure was partly modified, in that shorter sessions were held, the applicant's parents were placed close to him, a playing area was available during breaks, etc. Nevertheless, the applicant and his co-accused were tried in an adult court, and most of the rigors of a criminal trial were preserved. The ECtHR held that the applicant had not been able to participate effectively in the proceedings due to the publicity of the sessions combined with the high level of media attention and to his limited capacity to instruct his lawyers and to provide adequate testimonies. His rights under Article 6 of the ECHR were therefore violated.

517 European Commission (2013), Proposal for a Directive of the European Parliament and of the Council on procedural safeguards for children suspected or accused in criminal proceedings, COM(2013) 822 final, Brussels, 27 November 2013.

518 ECtHR, *T. v. the United Kingdom* [GC], No. 24724/94, 16 December 1999, para. 61.

519 ECtHR, *T. v. the United Kingdom* [GC], No. 24724/94, 16 December 1999.

The recognition of the right to effective participation is also at the core of the Council of Europe's Guidelines on child-friendly justice. Justice for children, including juvenile justice, should be "accessible, age appropriate, speedy, diligent, adapted to and focused on the needs and rights of the child, respecting the rights of the child including the right to due process, to participate in and to understand the proceedings, to respect for private and family life and to integrity and dignity".[520] The guidelines provide specific guidance on how children should be treated during juvenile justice or other justice proceedings. Children should have access to court and judicial proceedings, and their rights to legal counsel and representation and to be heard and express their views should be safeguarded; undue delay should be avoided, proceedings should be organised in a child-friendly way (which affects the environment and language) and special safeguards should be in place to take and respond to evidence/statements provided by children.[521]

11.1.2. Access to a lawyer

Under EU law, the Access to a Lawyer Directive 2013/48/EU[522] – to be implemented by 27 November 2016 – includes direct references to children in Recitals 52 and 55 of its preamble, as well as in Article 5 (2)–(4). Pursuant to Recital 55 and Article 5 (2), if a child is deprived of liberty, the holder of parental responsibility shall be notified and be given reasons thereof, unless this would be contrary to the child's best interests. In the latter case, another appropriate adult shall be informed. According to Article 2, the directive applies from the moment suspects or accused are made aware of having committed a criminal offence until the conclusion of the proceedings by a final determination of guilt or innocence. Further, Article 3 (3) lays down that access to a lawyer includes the right of suspects/accused to meet and communicate with the lawyer in private, including before the first interrogation, the presence and effective participation of the lawyer during questioning and the lawyer's presence during several investigative or evidence gathering acts.

520 Council of Europe, Committee of Ministers (2010), *Guidelines on child friendly justice*, 17 November 2010, para. II. C.

521 *Ibid.*, Section D.

522 Directive 2013/48/EU of the European Parliament and of the Council of 22 October 2013 on the right of access to a lawyer in criminal proceedings and in European arrest warrant proceedings, and on the right to have a third party informed upon deprivation of liberty and to communicate with third persons and with consular authorities while deprived of liberty, OJ 2013 L 294/1.

Under CoE law, the ECtHR considers access to a lawyer to be one of the fundamental elements of the right to a fair trial.[523] Individuals charged with a criminal offence have the right to access a lawyer from the early stages of a police investigation. That right may be limited in exceptional circumstances, provided that the limitation does not unduly prejudice the rights of the accused. The ECtHR has found that this could occur when statements given without having had access to a lawyer are used for conviction.[524] The ECtHR's scrutiny of whether an applicant had effective access to a lawyer is stricter in cases involving children.[525]

Example: The case of *Panovits v. Cyprus*[526] concerns a 17 year old who was charged with murder and robbery. He was brought to the police station, accompanied by his father. He was then arrested and taken to a separate room for questioning, in the absence of the father or a lawyer. While the applicant was being questioned, his father was informed of the applicant's right to contact a lawyer. Several minutes later, the father was told that his son had meanwhile confessed to having committed the crime. The ECtHR found that, in view of his age, the applicant could not have been considered to be aware of his right to legal representation before making any statement. It was also unlikely that he could reasonably have appreciated the consequences of him being questioned without the assistance of a lawyer in criminal proceedings concerning a murder. Even though the authorities appeared to have at all times been willing to allow the applicant to be assisted by a lawyer if he so requested, they had failed to make him aware of his right to request the assignment of a lawyer free of charge if necessary. There was no evidence that the applicant or his father expressly and unequivocally waived their right to legal assistance. Consequently, the Court found a violation of Article 6 (3) (c) in conjunction with Article 6 (1) of the ECHR.

525 *Ibid.*, para. 60.

526 ECtHR, *Panovits v. Cyprus*, No. 4268/04, 11 December 2008.

11.2. Rights of young offenders in relation to detention

Key points

- Children may only be deprived of their liberty as a last resort and for the shortest appropriate period of time.
- If detained, children are to be treated age-appropriately and with respect for their dignity.
- Children should not be detained together with adults.

Every person has the right to liberty. Deprivation of liberty therefore constitutes an exception and includes any form of placement in an institution by decision of a judicial or administrative authority, from which the juvenile is not permitted to leave at will.[527] Given the importance of safeguarding the rights of the child, including their best interests, situations of liberty-deprivation should be considered from that particular angle when concerning children.

While detention occurs in various circumstances, this section focuses on children in contact with the criminal justice systems.

International instruments universally affirm that detention must be a measure of last resort. This means that state authorities faced with the question of placing a child in detention should first give adequate consideration to alternatives to protect the best interests of the child, as well as to further the reintegration of the child (Article 40 (1) of the CRC). Alternatives can include, for example: "care, guidance and supervision orders; counselling; probation; foster care; education and vocational training programmes" (Article 40 (4) of the CRC). Only where alternatives are not feasible should detention be considered. Moreover, detention should only be ordered for the shortest period of time and under appropriate substantive and procedural guarantees. In view of their age and vulnerability, children benefit from special rights and guarantees when placed in detention.

527 Rule 21.5 of Council of Europe, Committee of Ministers (2008), Recommendation CM/Rec(2008)11 on the European Rules for juvenile offenders subject to sanctions or measures, 5 November 2008.

11.2.1. Forms of detention (substantive and procedural guarantees)

Under EU law, the current legal framework for criminal justice proceedings does not include a binding instrument regarding the detention of children.

Under CoE law, Article 5 of the ECHR provides that everyone has the right to liberty. Detention is an exception which should be provided for by national law and should not be arbitrary. In addition, detention has to be justified under one of the six exhaustive situations listed under Articles 5 (1) (a) to (f). Detention of children in contact with the criminal justice system can be justified under paragraphs (a) detention after conviction by a competent court; (c) pre-trial detention; or (d) detention for the purpose of educational supervision in particular. The latter two shall be analysed, as they have given rise to specific duties on the part of the state authorities.

Pre-trial detention

'Pre-trial detention' refers to situations where individuals are taken into police custody on suspicion of having committed a criminal offence, or are held in remand. It starts when an individual is taken into custody and ends with the determination on the merits of the case by a court of first instance.[528] While children benefit from the same guarantees as adults, the ECtHR has laid down several additional principles to strengthen the position of children in domestic criminal proceedings.

The ECtHR has generally interpreted Article 5 (1) (c) and Article 5 (3) as requiring that a person be placed in pre-trial detention only if there is a reasonable suspicion of him/her having committed a criminal offence. Further, pre-trial detention should not exceed a reasonable time and should be reviewed at reasonable intervals. The longer the period of detention, the stronger the reasons put forward by the authorities to justify it need to be. According to ECtHR case law, a person charged with an offence must always be released pending trial, unless the state can show that there are "relevant and sufficient" reasons to justify the continued detention.[529]

528 ECtHR, *Idalov v. Russia* [GC], No. 5826/03, 22 May 2012, para. 112.

529 ECtHR, *Smirnova v. Russia*, No. 46133/99 and 48183/99, 24 July 2003, para. 58.

The ECtHR developed four basic acceptable reasons for refusing bail to the detainee in cases of pre-trial detention: the risks of absconding, of prejudicing the administration of justice, of committing further offences or of causing public disorder. In addition, the continuation of pre-trial detention should be strictly necessary, and the state must examine all the facts arguing for or against the existence of a genuine requirement of public interest justifying a continued deprivation of liberty.[530]

In cases involving children, the ECtHR mandates that state authorities should pay particular attention to the child's age when balancing the relevant arguments for and against pre-trial detention; it should be used as a measure of last resort and for the shortest possible period.[531] This implies that the authorities should consider alternatives to pre-trial detention.[532]Furthermore, state authorities should display special diligence in bringing children to trial within a reasonable time.[533]

Example: In *Nart v. Turkey*,[534] the 17 year old applicant was arrested on suspicion of having robbed a grocery shop. He was placed in pre-trial detention, in an adult prison, for 48 days. With particular reference to the fact that the applicant was a child, the ECtHR stated that "pre-trial detention of minors should be used only as a measure of last resort; it should be as short as possible and, where detention is strictly necessary, minors should be kept apart from adults".[535] In this particular case the authorities attempted to justify the pre-trial detention on the basis of the 'state of evidence', but the ECtHR found that this reason alone could not justify the length of the applicant's detention. Consequently, the ECtHR found a violation of Article 5 (3) of the ECHR.

530 *Ibid.*, paras. 58–59; ECtHR, *Ladent v. Poland*, No. 11036/03, 18 March 2008, para. 55.

531 ECtHR, *Korneykova v. Ukraine*, No. 39884/05, 19 January 2012, paras. 43–44. See also ECtHR, *Selçuk v. Turkey*, No. 21768/02, 10 January 2006, paras. 35–36; ECtHR, *J.M. v. Denmark*, No. 34421/09, 13 November 2012, para. 63.

532 ECtHR, *Dinç and Çakır v. Turkey*, No. 66066/09, 9 July 2013, para. 63 (available in French); ECtHR, *Güveç v. Turkey*, No. 70337/01, 20 January 2009, para. 108.

533 ECtHR, *Kuptsov and Kuptsova v. Russia*, No. 6110/03, 3 March 2011, para. 91.

534 ECtHR, *Nart v. Turkey*, No. 20817/04, 6 May 2008.

535 *Ibid.*, para. 31.

Detention for the purpose of educational supervision

This form of detention has been ordered in situations where the child has a particular need for educational supervision because of a disturbed personality and violent behaviour. Article 5 (1) (d) of the ECHR primarily targets forms of detention outside the scope of the juvenile justice system.

Example: The case of *Bouamar v. Belgium*[536] concerns the placement of a child in a remand prison on nine occasions for periods of around 15 days. The applicant was an adolescent considered to have a disturbed personality and violent behaviour. The Belgian Government submitted that he had been placed in the remand prison for the purpose of educational supervision. The ECtHR noted that interim placements in a remand prison are not in themselves contrary to Article 5 (1) (d), as long as the authorities pursue the purpose of placing the juvenile under educational supervision. However, the ECtHR found that in the applicant's case the authorities failed to show that they had the intention or possibility to place him in an institution where he could benefit from educational supervision. Consequently, the ECtHR found a violation of Article 5 (1) (d) of the ECHR.

Example: *D.G. v. Ireland*[537] concerns the placement of a violent child in a detention centre. The ECtHR held that the notion of 'educational supervision' should not be equated strictly with classroom teaching. Educational supervision entails many aspects of the exercise of parental rights by the local authority for the benefit and protection of the person concerned. The ECtHR held that it is permissible for domestic authorities to place juveniles in detention facilities on a temporary basis until suitable accommodation is found, as long as this happens speedily. In the applicant's case the speediness requirement was not met as he was only placed in a suitable accommodation more than six months after his release from detention. The ECtHR therefore found a violation of Article 5 (1) (d) of the ECHR.

536 ECtHR, *Bouamar v. Belgium*, No. 9106/80, 29 February 1988.

537 ECtHR, *D.G. v. Ireland*, No. 39474/98, 16 May 2002.

Appeals to detention, speediness of review and access to a lawyer

The ECtHR requires particular diligence from national authorities in cases involving children in detention. In addition to the guarantees mentioned above, state authorities must ensure that children have the right to challenge the lawfulness of the detention at reasonable intervals, and that they have access to a lawyer during the proceedings determining the lawfulness of their detention. Furthermore, these legal challenges need to be decided speedily by domestic courts. The ECtHR derives these procedural guarantees from the text of Article 5 (4) of the ECHR.

> Example: In *Bouamar v. Belgium*,[538] the ECtHR found a violation of Article 5 (4) because: the hearings for the determination of the applicant's detention took place in the absence of his lawyers; they were not decided speedily; there was no actual decision on the 'lawfulness of the detention', since the domestic courts dismissed the applicant's appeals as devoid of purpose.

11.2.2. Conditions of detention

Under EU law, Article 4 of the EU Charter of Fundamental Rights prohibits torture and inhuman or degrading treatment. However, as the Charter only applies within the scope of EU law, this provision has to be linked to another EU legal instrument dealing with detention in order to bind Member States in this respect. So far, there have not been any cases before the CJEU in relation to Article 4 of the Charter.

Under CoE law, the ECtHR found that detaining children together with adults might lead to a breach of Article 3[539] or Article 5 of the ECHR.[540] Further, lack of adequate medical care in detention could also raise issues under Article 3.[541] Other aspects which may potentially raise issues under Article 3 include available cell space, lighting, and recreational activities.[542] In assessing the compatibility of conditions of detention with the standards of Article 3 of

542 ECtHR, *Kuptsov and Kuptsova v. Russia*, No. 6110/03, 3 March 2011, para. 70.

the ECHR, the ECtHR often relies on the set of standards developed by the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT), which monitors prison conditions under the umbrella of the European Convention for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment by conducting site visits to CoE member states.[543]

Example: In *Güveç v. Turkey*,[544] a fifteen year old boy was arrested on suspicion of membership of the Kurdistan Working Party (PKK). He was detained by the State Security Court in a prison for adults for five years. The ECtHR observed that his detention contravened Turkish regulations and obligations under international treaties, including, among others, Article 37 (c) of the CRC, which requires that children are kept separately from adults. The Court also noted that the applicant began to have psychological problems in prison, as a result of which he repeatedly attempted to commit suicide. In addition, the authorities failed to provide the applicant with adequate medical care. Consequently, given the applicant's age, the length of his detention in prison together with adults, the failure of the authorities to provide adequate medical care for his psychological problems, and their failure to take steps to prevent his repeated attempts to commit suicide, the ECtHR had no doubt that the applicant was subjected to inhuman and degrading treatment. There had accordingly been a violation of Article 3 of the ECHR.

The ECSR has consistently interpreted Article 17 of the ESC to the effect that if children are detained or imprisoned, they should be separated from adults.

The CoE European Rules for juvenile offenders subject to sanctions or measures provide detailed guidance on conditions of detention. They also provide that juveniles should not be held in institutions for adults, but in institutions specially designed for them.[545]

543 See, for example, ECtHR, *Güveç v. Turkey*, No. 70337/01, 20 January 2009.

544 *Ibid*.

545 Council of Europe, Committee of Ministers (2008), CM/Rec(2008)11 on the European Rules for juvenile offenders subject to sanctions or measures, 5 November 2008, Rule 59.1.

Under international law, the CRC contains a separate provision on deprivation of liberty of children. which states that children must be separated from adults, unless it is not in their best interest to do so (Article 37 (c) of the CRC). This article also stipulates that children, in principle, have the right to maintain contact with their family through correspondence or visits.

11.2.3. Protection against abuse and ill-treatment

Under CoE law, the ECtHR has repeatedly held that domestic authorities are responsible for protecting persons in detention from death, abuse or ill-treatment caused by other inmates or the authorities themselves. States' obligations in this respect are particularly strong, since detainees are under the authority and control of the state.[546] In addition to taking reasonable measures to protect inmates, state authorities must also conduct effective investigations into arguable allegations of ill-treatment or death.

Example: The case of *Çoşelav v. Turkey* concerns the suicide of an adolescent in prison,[547] who had previously unsuccessfully attempted to commit suicide on several occasions. Following those attempts, the authorities transferred him from a wing for juveniles to a detention facility for adults. Having first established that the authorities knew or ought to have known of the existence of a real and immediate risk to the life of the applicants' son, the Court then noted that the authorities failed to take reasonable measures to prevent the risk of suicide. The ECtHR placed a strong emphasis on the age of the deceased and the fact that he had been detained together with adults. Consequently, the ECtHR found a violation of the substantive aspect of Article 2 of the ECHR. In addition, the Court also found a violation of the procedural limb of Article 2 due to the authorities' failure to conduct an effective investigation into the death of the applicants' son. The reasons supporting these findings include: the failure of the authorities to promptly inform the applicants of their son's death; the failure of the prosecution to examine the alleged failures in preventing the suicide; and the excessive length of the ensuing administrative proceeding.

11.3. Protection of child victims and witnesses

Key point

- Child victims and witnesses are entitled to protection against further victimisation, to recovery and reintegration and to effective participation in criminal and alternative proceedings.

Under both EU and CoE law, the position of child victims and witnesses has been recognised.

Under EU law, the Victim's Rights Directive 2012/29/EU[548] explicitly recognises the position of child victims. It provides that, when the victim is a child, his or her best interests are a primary consideration and must be assessed on an individual basis. In addition, a child-sensitive approach must prevail, which means the child's age, maturity, views, needs and concerns must be taken into account. Moreover, the directive aims to ensure that the child and the holder of parental responsibility (or another legal representative) will be informed of any measures or rights specifically focused on the child (Article 1 (2)). Child victims also have the right to be heard during criminal proceedings, and Member States must ensure that they can also provide evidence. Due account must be taken of the child's age and maturity (Article 10 (1)). Furthermore, the directive aims to protect the privacy and identity of child victims during criminal proceedings, to prevent secondary victimisation, among other reasons (Article 21 (1), see also Article 26). Moreover, the directive establishes a special provision on the right to protection of child victims during criminal proceedings (Article 24), which deals with the audiovisual recording of interviews with child victims and its use as evidence in criminal proceedings, the appointment of special representatives, and the right to legal representation in the child's own name if there is a conflict of interests between the child victim and the holders of parental responsibility. The directive furthermore contains various provisions for the protection of victims in general, such as access to victim support services. In the case of children or other vulnerable groups, specialist support

548 Directive 2012/29/EU of the European Parliament and of the Council of 25 October 2012 establishing minimum standards on the rights, support and protection of victims of crime, OJ 2012 L 315/55.

services should be made available (see Section 38 of the resolution accompanying the directive).[549]

Before being replaced by the Victims' Directive, Framework Decision 2001/220/JHA on the standing of victims in criminal proceedings covered among other things the participation of victims, their rights and fair treatment. It recognised the special position of vulnerable victims, although it did not explicitly refer to children. Pursuant to this framework decision, the CJEU has ruled that children can be qualified as vulnerable when taking into account their age and the offences of which they consider themselves to have been victims. This consequently entitles them to special measures of protection, such as hearing them outside the trial court and before the trial takes place.[550] The CJEU has also ruled that all measures taken to protect victims must be designed in a way that the accused still receives a fair trial. In other words, the protection of victims and witnesses may not jeopardise the right of the accused person to a fair trial (see also the examples of case law of the ECtHR).[551]

Example: In the *Pupino* case,[552] an Italian school teacher was prosecuted for maltreating a pupil. Under the Italian Code of Criminal Procedure, witnesses must, as a rule, testify in court during the trial. In certain circumstances, however, their evidence may be taken before a judge ahead of trial through a special procedure (*incidente probatorio*). In this case, the public prosecutor asked the national court to allow the testimonies of the young children given in advance as evidence, but the national court refused. For the first time, the CJEU gave its interpretation of some of the provisions relevant to the standing of children as victims and witnesses in criminal proceedings. It underscored that the Framework Decision 2001/220/JHA requires Member States to ensure the specific protection of vulnerable victims, which means that the national court must be able to authorise vulnerable victims to testify in a way that guarantees their protection, for example outside the trial and before it takes place. The CJEU stated: "However, independently of whether a victim's minority is as a general rule sufficient to classify such a victim as particularly vulnerable

549 See FRA (2014b), p. 36.

550 CJEU, C-105/03, *Criminal proceedings against Maria Pupino* [GC], 16 June 2005, para. 53.

551 CJEU, C-105/03, *Criminal proceedings against Maria Pupino* [GC], 16 June 2005. See also CJEU, C-507/10, *Criminal proceedings against X*, 21 December 2011.

552 CJEU, C-105/03, *Criminal proceedings against Maria Pupino* [GC], 16 June 2005.

within the meaning of the Framework Decision, it cannot be denied that where, as in this case, young children claim to have been maltreated, and maltreated, moreover, by a teacher, those children are suitable for such classification, having regard in particular to their age and to the nature and consequences of the offences of which they consider themselves to be a victim".[553] Furthermore, the CJEU ruled that all measures concerning the protection and prevention of secondary victimisation must be designed in such a way that the defendant is still granted a fair trial.[554]

Under CoE law, the ECtHR ruled that there is a duty of the state to protect victims' interests. This is true for victims who participate as witnesses in criminal proceedings. Their interests under ECHR provisions, such as Article 2 and Article 8, must be balanced against the interests of the defence.[555] The ECtHR has a number of rulings concerning sexual offences in which children testified against the alleged perpetrators. This case law shows that the Court recognised that criminal proceedings concerning sexual offences "are often conceived of as an ordeal by the victim, in particular when the latter was unwillingly confronted with the defendant" and that this was even more prominent when children were concerned.[556] Consequently, the Court accepted that in such cases certain measures may be taken for the purpose of protecting the child victims. However, it also noted that such measures may not jeopardise the adequate and effective exercise of the rights of the defence, and the judicial authorities may therefore be required to take measures which counterbalance the handicaps under which the defence operates.[557]

Example: In *Kovač v. Croatia*,[558] a 12 year old girl testified before an investigating judge that the applicant had committed indecent acts on her. The applicant had not been present or represented during the said testimony, nor was he given the opportunity to contest the victim's statement The ECtHR reiterated that, as a rule, all evidence must be provided in

558 ECtHR, *Kovač v. Croatia*, No. 503/05, 12 July 2007.

the presence of the accused at a public hearing with a view to adversarial arguments. If statements at the stage of the police inquiry or the judicial investigation are used as evidence, this is not in itself inconsistent with Article 6 of the ECHR, provided that the defendant is given an adequate and proper opportunity to challenge and question the witness concerned, either at the time of making the statements or at a later stage of the proceedings. In the applicant's case, the victim's statements were the only direct evidence of the facts held against the applicant, and this evidence was decisive in the court's decision to issue a guilty verdict. However, the applicant had been unable to contest or obtain a reply from the domestic courts concerning his complaint in that respect. What is more, the victim's actual statement had never been read out before the trial court. Instead, the judge merely noted that the victim upheld her statement made before the investigating judge. Therefore, the ECtHR concluded that the applicant had not been afforded a fair trial, a breach of Article 6 (1) in conjunction with Article 6 (3) (d) of the ECHR.

Example: In *S.N. v. Sweden*,[559] a ten-year-old boy testified to the police that he was sexually abused by the applicant. The boy was interviewed twice by a police inspector with significant experience in child abuse cases. The first interview was videotaped, the second audiotaped. The lawyer of the applicant did not attend the second interview, but agreed with the police-inspector on the issues that needed to be discussed. During the trial, the District Court played the recordings of the child's interviews, but did not examine him in person. The court ultimately convicted the applicant, relying almost entirely on the child's testimonies. The Court of Appeal upheld the conviction. It found that the police interviews provided sufficient evidence for the applicant's guilt to be established, even though it acknowledged that there was no technical evidence supporting the child's allegations, which were sometimes imprecise. The ECtHR accepted that, in sexual offence cases, cross-examination of a witness is not always possible and that, in such cases, witness testimonies should be treated with extreme care. Although the statements made by the child were virtually the sole evidence against the accused, the proceedings as a whole were fair. The videotape was shown during the trial and appeal hearings and the transcript of the second interview was read out before the District Court; the audiotape was also played before the Court of Appeal. This gave the

559 ECtHR, *S.N. v. Sweden*, No. 34209/96, 2 July 2002.

applicant sufficient opportunity to challenge the child's testimony and his credibility in the course of the criminal proceedings. Consequently, there had been no violation of Article 6 (3) (d) of the ECHR.

The case law of the ECtHR is not only about balancing the protection of child victims and the right of the defendant to a fair trial, but also about the protection of the right to life of witnesses and their families, including children, under Article 2 of the ECHR, as shown by the following example.

Example: *R.R. and Others v. Hungary*[560] concerns a prisoner who testified in open court about his drug-trafficking activities and who was, along with his wife and two children, put in the official witness-protection programme for risk of retribution. When the authorities realised that the prisoner was still in contact with criminal circles, they removed him and his family from the witness protection programme for having breached its terms. Under Article 2 of the ECHR, the family claimed that their exclusion from the witness-protection programme had put their lives at risk of mafia retribution. The Court accepted that the applicants' inclusion in the witness protection programme and the father's collaboration with the authorities meant that the applicants' lives had been at risk when the measure was originally put in place. As the cancellation of their protection by the programme was not motivated by a reduction of that risk, but by a breach of its terms, the Court was not persuaded that the authorities had proven that the risk had ceased to exist. Furthermore, it was not unreasonable to suppose that, following the withdrawal of the family's cover identities, their identities and whereabouts became accessible to anyone wishing to harm them. In that way, the authorities potentially exposed the family to a life-threatening danger, in breach of Article 2 of the ECHR.

Article 31 of the Lanzarote Convention indicates which general measures of protection Member States should take to protect the rights and interests of victims, including their special needs as witnesses, at all stages of investigations and criminal proceedings (Article 31 (1)). These measures include information about their rights as victims, the availability of services and the general progress of the investigation or proceedings, the protection of their privacy and safety (including information on the release of the person prosecuted or convicted) and the avoidance of contact between victims and perpetrators in

560 ECtHR, *R.R. and Others v. Hungary*, No. 19400/11, 4 December 2012.

court and law enforcement agency premises. In addition, Article 31 provides that victims must have access to legal aid (Article 31 (3)). The information provided must be adapted to children's age and maturity and be in a language he or she understands (Article 31 (6)).

The CoE's *Guidelines on child friendly justice*[561] also pay attention to the position of the child victim and witness, particularly when he or she gives evidence in judicial proceedings. The guidelines call upon member states to make "'[e]very effort […] for children to give evidence in the most favourable settings and under the most suitable conditions, having regard to their age, maturity and level of understanding and any communication difficulties they may have".[562] To this end, trained professionals should be involved, and, for example, audiovisual statements encouraged. Children should also have the opportunity to give evidence in criminal cases without the presence of the alleged perpetrator. The guidelines also recognise that this child-friendly approach should respect the right of other parties to contest the content of the child's statements. In addition, the guidelines provide that the privacy and family life of child witnesses should be protected (Section IV (a) (9)) and proceedings should preferably be held *in camera*.

Under international law, the position of child victims has been explicitly recognised in Article 39 of the CRC. This provision stipulates that States Parties must take all appropriate measures to promote physical and psychological recovery and social reintegration of child victims. This recovery and reintegration must take place in an environment which fosters the health, self-respect and dignity of the child.

It is also important to note that the UN has adopted the Guidelines on Justice in Matters involving Child Victims and Witnesses of Crime.[563] These guidelines call for child victims and witnesses to be treated in a "child-sensitive manner", which "denotes an approach that balances the child's right to protection and that takes into account the child's individual needs and views".[564] The guide-

564 *Ibid.*, para. 9 (d).

lines provide very detailed guidance on how to implement these aspects. The UN Committee on the Rights of the Child has also underscored the relevance of these UN Guidelines under Article 12 of the CRC (right to be heard) in its General Comment.[565] According to the committee, child victims and child witnesses of a crime must be given an opportunity to fully exercise their rights to freely express their views, which in particular "means that every effort has to be made to ensure that a child victim and/or witness is consulted on the relevant matters with regard to involvement in the case under scrutiny, and enabled to express freely, and in her or his own manner, views and concerns regarding her or his involvement in the judicial process".[566] The Committee also argues that "the right of the child victim and witness is [...] linked to the right to be informed about issues such as availability of health, psychological and social services, the role of a child victim and/or witness, the ways in which 'questioning' is conducted, existing support mechanisms in place for the child when submitting a complaint and participating in investigations and court proceedings, the specific places and times of hearings, the availability of protective measures, the possibilities of receiving reparation, and the provisions for appeal".[567]

United Kingdom, Upper Tribunal, *R (on the application of MK) v. Wolverhampton City Council* [2013] UKUT 00177 (IAC), 26 March 2013 167

How to find case law of the European Courts

European Court of Human Rights: HUDOC case law database

The **HUDOC database** provides free access to ECtHR case law: http://HUDOC.echr.coe.int.

The database is available in English and French and provides a user-friendly search engine that makes it easy to find case law.

Video tutorials and user manuals are available on the HUDOC **Help** page. For details and examples of how to use filters and search fields, the user can place the mouse pointer on the ? at the right of every search tool in the Hudoc interface.

The case law references in this handbook provide the reader with comprehensive information that will enable them to easily find the full text of the judgment or decision cited.

Before starting a search, please note that the default settings show the Grand Chamber and Chamber judgments in the order of the latest judgment published. To search in other collections such as decisions, the user should tick the appropriate box in the **Document Collections** field appearing on the upper left side of the screen.

The simplest way to find cases is by entering the application number into the **Application Number** field under the **Advanced Search** on the upper right side of the screen and then clicking the blue 'Search' button.

To access further case law pertaining to other issues, for example, children-related issues, the user can use the **Search field** indicated with a magnifying glass on the top right part of the screen. In the search field, the user can search in the text using a:

- single word (e.g. child)
- phrase (e.g. "migrant children")
- case title
- State
- Boolean phrase (e.g. child IN alternative care)

To help the user perform a text search, the **Simple Boolean search** is available by clicking on the arrow appearing inside the **Search field**. The Simple Boolean search offers six search possibilities: this exact word or phrase, all of these words, any of these words, none of these words, near these words, free Boolean search.

Once the search results appear, the user can easily narrow the results using the filters appearing in the **Filters** field on the left side of the screen, for example, "Language" or "State". Filters can be used individually or in combination to further narrow the results. The "Keywords" filter can be a useful tool, as it often comprises terms extracted from the text of the ECHR and is directly linked to the Court's reasoning and conclusions.

Example: Finding the Court's case law on the issue of expulsion of asylum seekers putting them at risk of torture or inhuman or degrading treatment or punishment under Article 3 ECHR

1) The user first enters the phrase "asylum seekers" into the **Search field** and clicks the blue **Search button**.

2) After the search results appear, the user then selects the "3" under the **Violation filter** in the **Filters field** to narrow the results to those related to a violation of Article 3.

3) The user can then select the relevant keywords under the **Keywords filter** to narrow the results to those relevant to Article 3, such as the keyword "(Art. 3) Prohibition of torture".

For more significant cases, a legal summary is available in HUDOC. The summary comprises a descriptive head note, a concise presentation of the facts and the law, with emphasis on points of legal interest. If a summary exists, a link **Legal Summaries** will appear in the results together with the link to the judgment text or decision. Alternatively, the user can search exclusively for legal summaries by ticking the "Legal Summaries" box in the **Document Collections** field.

If non-official translations of a given case have been published, a link **Language versions** will appear in the results together with the link to the judgment text or decision. HUDOC also provides links to third-party internet sites that host other translations of ECtHR case law. For more information, see "Language versions" under the HUDOC "Help" section.

Court of Justice of the European Union: CURIA case law database

The **CURIA case law database** provides free access to ECJ/CJEU case law: http://curia.europa.eu.

The search engine is available in all official EU languages.[568] The **language** can be selected on the upper right side of the screen. The search engine can be used to search for information in all documents related to concluded and pending cases by the Court of Justice, the General Court and the Civil Service Tribunal.

There is a **Help** section available at http://curia.europa.eu/common/juris/en/aideGlobale.pdf#. Each search box also has a help page that can be accessed by clicking the icon and contains useful information to help the user make the best possible use of the tool.

The simplest way to find a specific case is to enter the full case number into the search box entitled **Case number** and then clicking the green 'Search' button. It is also possible to search for a case using a part of the case number. For example, entering 122 in the 'Case number' field will find Case No. 122 for

568 Available since 30 April 2004: Spanish, Danish, German, Greek, English, French, Italian, Dutch, Portuguese, Finnish and Swedish; since 1 May 2004: Czech, Estonian, Latvian, Lithuanian, Hungarian, Polish, Slovak and Slovene; since 1 January 2007: Bulgarian and Romanian; since 30 April 2007: Maltese; since 31 December 2011: Irish; temporary derogations have been laid down by Regulation (EC) No. 920/2005 and Regulation (EU) No. 1257/2010. Secondary legislation in force at the date of accession is being translated into Croatian and will gradually be published in the Special edition of the Official Journal of the European Union.

cases from any year and before any of the three courts: Court of Justice, the General Court and/or the Civil Service Tribunal.

Alternatively, one can also use the **Name of parties** field to search with the common name of a case. This is usually the simplified form of the names of the parties to the case.

There are a total of 16 multi-functional search fields available to help narrow the search results. The different search fields are user-friendly and can be used in various combinations. The fields often have search lists that can be accessed by clicking the icon and selecting available search terms.

For more general searches, using the **Text** field produces results based on keyword searches in all documents published in the European Court Reports since 1954, and since 1994 for the European Court Reports – Staff Cases (ECR-SC).

For more subject-specific searches, the **Subject-matter** field can be used. This requires clicking the icon to the right of the field and selecting the relevant subject(s) from the list. The search results will then produce an alphabetised list of selected documents related to the legal questions dealt with in the decisions of the Court of Justice, the General Court, the Civil Service Tribunal and in the Opinions of the Advocates General.

The CURIA website also has additional case law tools:

Numerical access: this section is a collection of case information for any case brought before one of the three courts. The cases are listed by their case number and in the order in which they were lodged at the relevant registry. Cases can be consulted by clicking on their case number. The 'Numerical access' section is available at: http://curia.europa.eu/jcms/jcms/Jo2_7045/.

Digest of the case-law: this section offers a systematic classification of case law summaries on the essential points of law stated in the decision in question. These summaries are based as closely as possible on the actual wording of that decision. The 'Digest' section is available at: http://curia.europa.eu/jcms/jcms/Jo2_7046/.

Annotation of judgments: this section contains references to annotations by legal commentators relating to the judgments delivered by the three courts

since they were first established. The judgments are listed separately by court or tribunal in chronological order according to their case number, while the annotations by legal commentators are listed in chronological order according to their appearance. References appear in their original language. The 'Annotation of judgments' section is available at: http://curia.europa.eu/jcms/jcms/Jo2_7083/.

National case-law database: this external database can be accessed through the CURIA website. It offers access to relevant national case law concerning EU law. The database is based on a collection of case law from EU Member State national courts and/or tribunals. The information has been collected by a selective trawl of legal journals and direct contact with numerous national courts and tribunals. The 'National case-law database' is available in English and in French and is available at: http://curia.europa.eu/jcms/jcms/Jo2_7062/.

Non-discrimination	
Racial Equality Directive (2000/43/EC)	Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin, OJ L 180, 19.7.2000, pp. 22–26.
Employment Equality Directive (2000/78/EC)	Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation, OJ L 303, 2.12.2000, pp. 16–22.
Gender Goods and Services Directive (2004/113/EC)	Council Directive 2004/113/EC of 13 December 2004 implementing the principle of equal treatment between men and women in the access to and supply of goods and services, OJ L 373, 21.12.2004, pp. 37–43.
Family life and parental care	
Brussels II bis Regulation (EC) No. 2201/2003	Council Regulation (EC) No. 2201/2003 of 27 November 2003 concerning jurisdiction and the recognition and enforcement of judgments in matrimonial matters and the matters of parental responsibility, repealing Regulation (EC) No. 1347/2000, OJ L 338, 23.12.2003, pp. 1–29.
Maintenance Regulation (EC) No. 4/2009	Council Regulation (EC) No. 4/2009 of 18 December 2008 on jurisdiction, applicable law, recognition and enforcement of decisions and cooperation in matters relating to maintenance obligations, OJ L 7, 10.1.2009, pp. 1–79.
Mediation Directive (2008/52/EC)	Directive 2008/52/EC of the European Parliament and of the Council of 21 May 2008 on certain aspects of mediation in civil and commercial matters, OJ L 136, 24.5.2008, pp. 3–8.
Access to Justice Directive (2002/8/EC)	Council Directive 2002/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, OJ L 26, 31.1.2003, pp. 41–47.
Child protection against violence and exploitation	
Young Workers Directive (94/33/EC)	Council Directive 94/33/EC of 22 June 1994 on the protection of young people at work, OJ L 216, 20.8.1994, pp. 12–20.
Anti-Trafficking Directive (2011/36/EU)	Directive 2011/36/EU of the European Parliament and of the Council of 5 April 2011 on preventing and combating trafficking in human beings and protecting its victims, and replacing Council Framework Decision 2002/629/JHA, OJ L 101, 15.4.2011, pp. 1–11.

Directive on combating the sexual abuse and sexual exploitation of children and child pornography (2011/93/EU)	Directive 2011/93/EU of the European Parliament and of the Council of 13 December 2011 on combating the sexual abuse and sexual exploitation of children and child pornography, and replacing Council Framework Decision 2004/68/JHA, OJ L 335, 17.12.2011, pp. 1–14.
Victims' Directive (2012/29/EU)	Directive 2012/29/EU of the European Parliament and of the Council of 25 October 2012 establishing minimum standards on the rights, support and protection of victims of crime, and replacing Council Framework Decision 2001/220/JHA, OJ L 315, 14.11.2012, pp. 57–73.
Residence Permits for Victims of Anti-Trafficking Directive (2004/81/EC)	Council Directive 2004/81/EC of 29 April 2004 on the residence permit issued to third-country nationals who are victims of trafficking in human beings or who have been the subject of an action to facilitate illegal immigration, who cooperate with the competent authorities, OJ L 261, 6.8.2004, pp. 19–23.
Commission Decision 2007/698/EC	Commission Decision of 29 October 2007 amending Decision 2007/116/EC as regards the introduction of additional reserved numbers beginning with 116 (notified under document number C(2007) 5139) (Text with EEA relevance), OJ L 284, 30.10.2007, pp. 31–32.
Migration and asylum, including social rights of migrant children	
Asylum Procedures Directive (2013/32/EU)	Directive 2013/32/EU of the European Parliament and of the Council of 26 June 2013 on common procedures for granting and withdrawing international protection, OJ L 180, 29.6.2013, pp. 60–95.
Dublin Regulation (EU) No. 604/2013	Regulation (EU) No. 604/2013 of the European Parliament and of the Council of 26 June 2013 establishing the criteria and mechanisms for determining the Member State responsible for examining an application for international protection lodged in one of the Member States by a third-country national or a stateless person, OJ L 180, 29.6.2013, pp. 31–59.
Qualification Directive (2011/95/EU)	Directive 2011/95/EU of the European Parliament and of the Council of 13 December 2011 on standards for the qualification of third-country nationals or stateless persons as beneficiaries of international protection, for a uniform status for refugees or for persons eligible for subsidiary protection, and for the content of the protection granted, OJ L 337, 20.12.2011, pp. 9–26.
Regulation (EU) No. 492/2011	Regulation (EU) No. 492/2011 of the European Parliament and of the Council of 5 April 2011 on freedom of movement for workers within the Union Text with EEA relevance, OJ L 141, 27.5.2011, pp. 1–12.

Free Movement Directive (2004/38/EC)	Directive 2004/38/EC of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States amending Regulation (EEC) No. 1612/68 and repealing Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC (Text with EEA relevance), OJ L 158, 30.4.2004, pp. 77–123.
Council Directive 77/486/EEC on the education of the children of migrant workers	Council Directive 77/486/EEC of 25 July 1977 on the education of the children of migrant workers, OJ L 199, 6.8.1977, pp. 32–33.
Family Reunification Directive (2003/86/EC)	Council Directive 2003/86/EC of 22 September 2003 on the right to family reunification, OJ L 251, 3.10.2003, pp. 12–18.
Temporary Protection Directive (2001/55/EC)	Council Directive 2001/55/EC of 20 July 2001 on minimum standards for giving temporary protection in the event of a mass influx of displaced persons and on measures promoting a balance of efforts between Member States in receiving such persons and bearing the consequences thereof, OJ L 212, 7.8.2001, pp. 12–23.
Reception Conditions Directive (2013/33/EU)	Directive 2013/33/EU of the European Parliament and of the Council of 26 June 2013 laying down standards for the reception of applicants for international protection, OJ L 180, 29.6.2013, pp. 96–116.
Return Directive (2008/115/EC)	Directive 2008/115/EC of the European Parliament and of the Council of 16 December 2008 on common standards and procedures in Member States for returning illegally staying third-country nationals, OJ L 348, 24.12.2008, pp. 98–107.
Long-Term Residents Directive (2003/109/EC)	Council Directive 2003/109/EC of 25 November 2003 concerning the status of third-country nationals who are long-term residents, OJ L 16, 23.1.2004, pp. 44–53.
Schengen Borders Code Regulation (EC) No. 562/2006	Regulation (EC) No. 562/2006 of the European Parliament and of the Council o f15 March 2006 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code), OJ L 105, 13.4.2006, pp. 1–32.
Consumer and personal data protection	
Consumer Rights Directive (2011/83/EU)	Directive 2011/83/EU of the European Parliament and of the Council of 25 October 2011 on consumer rights, amending Council Directive 93/13/EEC and Directive 1999/44/EC of the European Parliament and of the Council and repealing Council Directive 85/577/EEC and Directive 97/7/EC of the European Parliament and of the Council Text with EEA relevance, OJ L 304, 22.11.2011, pp. 64–88.

Directive 87/357/EEC concerning products which, appearing to be other than they are, endanger the health or safety of consumers	Council Directive 87/357/EEC of 25 June 1987 on the approximation of the laws of the Member States concerning products which, appearing to be other than they are, endanger the health or safety of consumers, OJ L 192, 11.7.87, pp. 49–50.
Distance Selling Directive (97/7/EC)	Directive 97/7/EC of the European Parliament and of the Council of 20 May 1997 on the protection of consumers in respect of distance contracts – Statement by the Council and the Parliament re Article 6 (1) – Statement by the Commission re Article 3 (1), first indent, OJ L 144, 4.6.1997, pp. 19–27.
General Product Safety Directive (2001/95/EC)	Directive 2001/95/EC of the European Parliament and of the Council of 3 December 2001 on general product safety (Text with EEA relevance), OJ L 11, 15.1.2002, pp. 4–17.
Directive 2009/39/EC on foodstuffs intended for particular nutritional uses	Directive 2009/39/EC of the European Parliament and of the Council of 6 May 2009 on foodstuffs intended for particular nutritional uses (recast) (Text with EEA relevance), OJ L 124, 20.5.2009, pp. 21–29.
Toy Safety Directive (2009/48/EC)	Directive 2009/48/EC of the European Parliament and of the Council of 18 June 2009 on the safety of toys (Text with EEA relevance), OJ L 170, 30.6.2009, pp. 1–37.
Television Without Frontiers Directive (89/552/EEC)	Council Directive 89/552/EEC of 3 October 1989 on the coordination of certain provisions laid down by Law, Regulation or Administrative Action in Member States concerning the pursuit of television broadcasting activities, OJ L 298, 17.10.1989, pp. 23–30.
Audiovisual Media Services Directive (2010/13/EU)	Directive 2010/13/EU of the European Parliament and of the Council of 10 March 2010 on the coordination of certain provisions laid down by law, regulation or administrative action in Member States concerning the provision of audiovisual media services (Text with EEA relevance), OJ L 95, 15.4.2010, pp. 1–24.
Data Protection Directive (95/46/EC)	Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data, OJ L 281, 23.11.95, pp. 31–50.
Directive 2002/58/EC concerning the processing of personal data and the protection of privacy in the electronic communications sector	Directive 2002/58/EC of the European Parliament and of the Council of 12 July 2002 concerning the processing of personal data and the protection of privacy in the electronic communications sector (Directive on privacy and electronic communications), OJ L 201, 31.7.2002, pp. 37–47.

Unfair Business-to-Consumer Commercial Practices Directive (2005/29/EC)	Directive 2005/29/EC of the European Parliament and of the Council of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market and amending Council Directive 84/450/EEC, Directives 97/7/EC, 98/27/EC and 2002/65/EC of the European Parliament and of the Council and Regulation (EC) No. 2006/2004 of the European Parliament and of the Council ('Unfair Commercial Practices Directive') (Text with EEA relevance), OJ L 149, 11.6.2005, pp. 22–39.
Clinical Trials Directive (2001/20/EC)	Directive 2001/20/EC of the European Parliament and of the Council of 4 April 2001 on the approximation of the laws, regulations and administrative provisions of the Member States relating to the implementation of good clinical practice in the conduct of clinical trials on medicinal products for human use, OJ L 121, 1.5.2001, pp. 34–44.
Regulation 536/2014 on clinical trials on medicinal products for human use	Regulation (EU) No. 536/2014 of the European Parliament and of the Council of 16 April 2014 on clinical trials on medicinal products for human use, and repealing Directive 2001/20/EC (Text with EEA relevance), OJ L 158, 27.5.2014, pp. 1–76.
Criminal justice and alternative proceedings	
Right to Interpretation and Translation Directive (2010/64/EU)	Directive 2010/64/EU of the European Parliament and of the Council of 20 October 2010 on the right to interpretation and translation in criminal proceedings, OJ L 280, 26.10.2010, pp. 1–7.
Right to Information Directive (2012/13/EU)	Directive 2012/13/EU of the European Parliament and of the Council of 22 May 2012 on the right to information in criminal proceedings, OJ L 142, 1.6.2012, pp. 1–10.
Access to a Lawyer Directive (2013/48/EU)	Directive 2013/48/EU of the European Parliament and of the Council of 22 October 2013 on the right of access to a lawyer in criminal proceedings and in European arrest warrant proceedings, and on the right to have a third party informed upon deprivation of liberty and to communicate with third persons and with consular authorities while deprived of liberty, OJ L 294, 6.11.2013, pp. 1–12.
Charter of Fundamental Rights	Charter of Fundamental Rights of the European Union, OJ C 326, 26.10.2012, pp. 391–407.
Children with disabilities	
Council Decision 2010/48/EC	Council Decision 2010/48/EC concerning the conclusion, by the European Community, of the United Nations Convention on the Rights of Persons with Disabilities, OJ L 23, 27.1.2010, pp. 35–61.

A great deal of information on the European Union Agency for Fundamental Rights is available on the internet. It can be accessed through the FRA website at fra.europa.eu.

Further information on the case law of the European Court of Human Rights is available on the Court's website: echr.coe.int. The HUDOC search portal provides access to judgments and decisions in English and/or French, translations into additional languages, legal summaries, press releases and other information on the work of the Court.

How to obtain EU publications?

Free publications:

- one copy:
  via EU Bookshop (http://bookshop.europa.eu);
- more than one copy or posters/maps:
  from the European Union's representations (http://ec.europa.eu/represent_en.htm);
  from the delegations in non-EU countries (http://eeas.europa.eu/delegations/index_en.htm);
  by contacting the Europe Direct service (http://europa.eu/europedirect/index_en.htm) or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (*).

  (*) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

Priced publications:

- via EU Bookshop (http://bookshop.europa.eu);

How to obtain Council of Europe publications

Council of Europe Publishing produces works in all the Organisation's spheres of reference, including human rights, legal science, health, ethics, social affairs, the environment, education, culture, sport, youth and architectural heritage. Books and electronic publications from the extensive catalogue may be ordered online (http://book.coe.int/).

A virtual reading room enables users to consult excerpts from the main works just published or the full texts of certain official documents at no cost.

Information on, as well as the full text of, the Council of Europe Conventions is available from the Treaty Office website: http://conventions.coe.int/.

COUR EUROPÉENNE DES DROITS DE L'HOMME

COUNCIL OF EUROPE
CONSEIL DE L'EUROPE

Children are full-fledged holders of rights. They are beneficiaries of all human and fundamental rights and subjects of special regulations, given their specific characteristics. This handbook aims to illustrate how European law and case law accommodate the specific interests and needs of children. It also illustrates the importance of parents and guardians or other legal representatives and makes reference, where appropriate, to where rights and responsibilities are most prominently vested in children's carers. This handbook aims to raise awareness and improve the knowledge of the legal standards that protect and promote children's rights in Europe. It is a point of reference on both European Union (EU) and Council of Europe (CoE) law related to these subjects, explaining how each issue is regulated under EU law, including the Charter of Fundamental Rights of the European Union, as well as under the European Convention on Human Rights (ECHR), the European Social Charter (ESC) and other CoE instruments. The handbook is designed for non-specialist legal professionals, judges, public prosecutors, child protection authorities, and other practitioners and organisations responsible for ensuring the legal protection of the rights of the child. It explains key jurisprudence, summarising major rulings of both the Court of Justice of the European Union (CJEU) and the European Court of Human Rights (ECtHR).

Διαδικασίες στις οποίες ενδέχεται να εμπλακεί το παιδί

1. οινικές διαδικασίες

Η υποχρέωση του κράτους να προλαμβάνει και να τιμωρεί τη βία και την κακοποίηση εναντίον των ανηλίκων (πρωτογενής θυματοποίηση)

Άρθρα 3-7 CRC, Άρθρο 3 ECHR, Άρθρο 18 Λανζαρότε,
Άρθρα 2-10 Οδηγία 36, Άρθρα 3-17 Οδηγία 93

Πρόληψη

Εισαγωγή ποινικών αδικημάτων σχετικών με τη βία και την κακοποίηση παιδιών

Τιμωρία

Τιμωρία όσων ασκούν βία και κακοποίηση εναντίον ανηλίκων

2. Αστικές διαδικασίες

Όταν ο ένας ή και οι δύο γονείς ασκούν με άμεσο τρόπο κακοποίηση ή άλλως την έχουν επιτρέψει

Για τη διασφάλιση ενός ασφαλούς και ήσυχου οικογενειακού περιβάλλοντος

Άρθρο 9 CRC, Άρθρο 8 ECHR

Περιορισμοί για γονείς

- Video Baldelli
- Video Ceccarelli

Σχέσεις ανάμεσα σε ποινικές και αστικές διαδικασίες

carepath

Ποινικές διαδικασίες

Στόχος: η ταυτοποίηση και τιμωρία του δράστη σχετικά με την συμπεριφορά του απέναντι στο ανήλικο παιδί, εφόσον η συμπεριφορά αυτή αποτελεί έγκλημα.

Αστικές διαδικασίες

Στόχος: ο έλεγχος της καταλληλότητας της οικογένειας του παιδιού και η πρόληψη περαιτέρω τραυματισμού.

Οι διαδικασίες αυτές είναι ξεχωριστές και ανεξάρτητες → η συμπεριφορά που δεν αποτελεί έγκλημα μπορεί να θέσει σε κίνδυνο το οικογενειακό περιβάλλον, δικαιολογώντας την επέμβαση του δικαστή

3. Εξωδικαστικές διαδικασίες

Όταν η σχέση ανάμεσα σε αυτόν που ασκεί την κακοποίηση και τον ανήλικο φαίνεται να είναι αναστρέψιμη.

Άρθρο 13 Σύμβαση Στρασβούργου, Άρθρο 12 Οδηγία 29

Στόχος είναι να αποφευχθούν παρεμβατικές διαδικασίες, οι οποίες θα μπορούσαν τελικά να θέσουν σε κίνδυνο την αποκατάσταση προς σχέσης

- Μεσολάβηση
- Προσπάθεια συμβιβασμού
- Πρόσθετα μέτρα επαναπροσέγγισης

carepath

Το βέλτιστο συμφέρον του παιδιού

Αυτή η αρχή ισχύει για κάθε διαδικασία και απαιτεί η ψυχοσωματική ευημερία του παιδιού να μπαίνει πάνω από κάθε άλλο συμφέρον άξιο προστασίας

Άρθρο 3 CRC, Άρθρο 6 Σύμβαση Στρασβούργου

Ο δικαστής πρέπει να συγκεντρώνει τις απαραίτητες πληροφορίες για να γνωρίζει τα επίμαχα γεγονότα και το οικογενειακό περιβάλλον του παιδιού

Η απόφαση του δικαστή πρέπει πάντα να προσανατολίζεται προς την προστασία των συμφερόντων του ανηλίκου

- Video Ceccarelli
- Video Long

Δικαίωμα του παιδιού να το συμβουλεύονται

Ο δικαστής θα πρέπει να γνωρίζει τις απόψεις του παιδιού, οι οποίες πρέπει να λαμβάνονται υπόψη κατά τη λήψη απόφασης

Άρθρο 12 CRC, Άρθρο 3 Σύμβαση Στρασβούργου

Εγγυήσεις συμμετοχής για το παιδί

BUT

Μέτρα προστασίας για την αποφυγή «δευτερογενούς θυματοποίησης»

Εγγυήσεις συμμετοχής για το παιδί

1. Το δικαίωμα πληροφόρησης
    1. Άρθρο 31 Λανζαρότε, Άρθρο 3 Σύμβαση Στρασβούργου, Άρθρα 3-4 Οδηγία 29

Μόνο ένα παιδί με επαρκείς γνώσεις μπορεί να συμμετέχει με επικερδή τρόπο στη διαδικασία λήψης αποφάσεων

Σχετικά με τι;

- έννοια των διαδικασιών
- επίμαχα γεγονότα
- δικαιώματα και προστασία
- ο ρόλος του παιδιού
- πιθανές συνέπειες των απόψεων του

Ποιος;

- δικαστική αρχή
- δικηγόρος
- εκπρόσωπος
- εμπειρογνώμονας

Πώς;

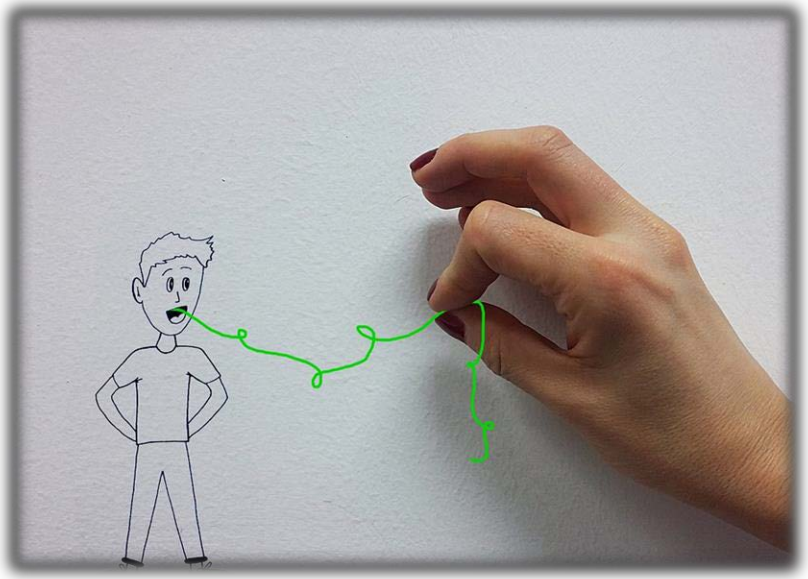
χρήση γλώσσας και εννοιών κατάλληλων για την ηλικία και την αντίληψη του παιδιού

2. Δικαίωμα ακρόασης σχετικά με τα επίμαχα γεγονότα

Μπορεί να ζητηθεί από τον ανήλικο να καταθέσει για γεγονότα που σχετίζονται με την απόφαση

Ποινικές διαδικασίες

Το παιδί ως μάρτυρας βίας και κακοποίησης προκειμένου να εξακριβωθεί η ενοχή του κατηγορουμένου



Αστικές διαδικασίες

Το παιδί ως μάρτυρας βίας και κακοποίησης προκειμένου να αξιολογηθεί η καταλληλόλητα της οικογένειας

Υψηλός κίνδυνος δευτερογενούς θυματοποίησης

- Video Ceccarelli
- Video Cibinel
- Video Long

3. Δικαίωμα ακρόασης πριν την απόφαση του δικαστή

Πριν την απόφαση, το παιδί έχει το δικαίωμα να εκφράσει τις απόψεις του πάνω σε θέματα που εξετάζονται κατά τη διαδικασία

Άρθρο 12 CRC, Άρθρο 3 Σύμβαση Στρασβούργου

Ποινικές διαδικασίες

- έναρξη των διαδικασιών
- προληπτικά μέτρα
- δικαστική επιτήρηση και άλλες ειδικές διαδικασίες
- αξιολόγηση αποδεικτικών στοιχείων

Αστικές διαδικασίες

- απομάκρυνση από την οικογένεια
- απομάκρυνση από έναν γονέα
- επιμέλεια παιδιού
- υιοθεσία

Εξώδικαστικές διαδικασίες

συναίνεση για μεσολάβηση ή προσπάθεια συμβιβασμού

Συχνά η γνώμη αντικαθίσταται από την ισχυρότερη εγγύηση συναίνεσης

Το βάρος της γνώμης εξαρτάται από την αντίληψη του παιδιού

Εργαλεία προστασίας κατά τις διαδικασίες

1. Πρόσωπα υποστήριξης

1. Άρθρο 12 CRC, Άρθρο 31 Λανζαρότε, Άρθρα 9-10 Σύμβαση Στρασβούργου, Άρθρο 24 Οδηγία 29

Εκπρόσωπος (εφόσον οι γονείς δεν είναι διαθέσιμοι ή έχουν σύγκρουση συμφερόντων)

Προσδιορίζει και προστατεύει τα συμφέροντα του παιδιού

Δικηγόρος

Υιοθετεί την πιο κατάλληλη νομική στρατηγική για την επίτευξη απόφασης σύμφωνα με τα συμφέροντα του παιδιού

Επαγγελματίες κοινωνικής μέριμνας και υγείας (ψυχολόγοι, ψυχίατροι, κοινωνικοί λειτουργοί)

- προστασία από δευτερογενή θυματοποίηση
- υποστήριξη του δικαστή, των γονέων και των δικηγόρων για την κατανόηση των αναγκών και της ευαισθησίας του παιδιού
- συμβολή ώστε να ξεπεραστεί το ψυχικό τραύμα που προήλθε από βία

Principles of recovery oriented mental health practice

From the perspective of the individual with mental illness, recovery means gaining and retaining hope, understanding of ones abilities and disabilities, engagement in an active life, personal autonomy, social identity, meaning and purpose in life, and a positive sense of self.

> *It is important to remember that recovery is not synonymous with cure. Recovery refers to both internal conditions experienced by persons who describe themselves as being in recovery—hope, healing, empowerment and connection—and external conditions that facilitate recovery—implementation of human rights, a positive culture of healing, and recovery-oriented services. (Jacobson and Greenley, 2001 p. 482)*

The purpose of principles of recovery oriented mental health practice is to ensure that mental health services are being delivered in a way that supports the recovery of mental health consumers.

1. UNIQUENESS OF THE INDIVIDUAL

Recovery oriented mental health practice:

- recognises that recovery is not necessarily about cure but is about having opportunities for choices and living a meaningful, satisfying and purposeful life, and being a valued member of the community
- accepts that recovery outcomes are personal and unique for each individual and go beyond an exclusive health focus to include an emphasis on social inclusion and quality of life
- empowers individuals so they recognise that they are at the centre of the care they receive.

2. REAL CHOICES

Recovery oriented mental health practice:

- supports and empowers individuals to make their own choices about how they want to lead their lives and acknowledges choices need to be meaningful and creatively explored
- supports individuals to build on their strengths and take as much responsibility for their lives as they can at any given time
- ensures that there is a balance between duty of care and support for individuals to take positive risks and make the most of new opportunities.

3. ATTITUDES AND RIGHTS

Recovery oriented mental health practice:

- involves listening to, learning from and acting upon communications from the individual and their carers about what is important to each individual
- promotes and protects individual's legal, citizenship and human rights
- supports individuals to maintain and develop social, recreational, occupational and vocational activities which are meaningful to the individual
- instils hope in an individual's future and ability to live a meaningful life.

4. DIGNITY AND RESPECT

Recovery oriented mental health practice:

- consists of being courteous, respectful and honest in all interactions
- involves sensitivity and respect for each individual, particularly for their values, beliefs and culture
- challenges discrimination and stigma wherever it exists within our own services or the broader community.

5. PARTNERSHIP AND COMMUNICATION

Recovery oriented mental health practice:

- acknowledges each individual is an expert on their own life and that recovery involves working in partnership with individuals and their carers to provide support in a way that makes sense to them
- values the importance of sharing relevant information and the need to communicate clearly to enable effective engagement
- involves working in positive and realistic ways with individuals and their carers to help them realise their own hopes, goals and aspirations.

6. EVALUATING RECOVERY

Recovery oriented mental health practice:

- ensures and enables continuous evaluation of recovery based practice at several levels
- individuals and their carers can track their own progress
- services demonstrate that they use the individual's experiences of care to inform quality improvement activities
- the mental health system reports on key outcomes that indicate recovery including (but not limited to) housing, employment, education and social and family relationships as well as health and well being measures.

These Recovery Principles have been adapted from the Hertfordshire Partnership NHS Foundation Trust Recovery Principles in the UK.

SPECIAL ARTICLE

How important are the common factors in psychotherapy? An update

Bruce E. Wampold

Department of Counseling Psychology, University of Wisconsin, Madison, WI, USA; Modum Bad Psychiatric Center, Vikersund, Norway

The common factors have a long history in the field of psychotherapy theory, research and practice. To understand the evidence supporting them as important therapeutic elements, the contextual model of psychotherapy is outlined. Then the evidence, primarily from meta-analyses, is presented for particular common factors, including alliance, empathy, expectations, cultural adaptation, and therapist differences. Then the evidence for four factors related to specificity, including treatment differences, specific ingredients, adherence, and competence, is presented. The evidence supports the conclusion that the common factors are important for producing the benefits of psychotherapy.

Key words: Common factors, contextual model, psychotherapy, alliance, empathy, expectations, cultural adaptation, therapist differences, specific ingredients

(World Psychiatry 2015;14:270–277)

The so-called common factors have a long history in psychiatry, originating with a seminal article by S. Rosenzweig in 1936 (1) and popularized by J. Frank in the various editions of his book *Persuasion and Healing* (2-4). During this period, the common factors have been both embraced and dismissed, creating some tension (5-9). The purpose of this paper is not to review or discuss the debate, but to provide an update, summarizing the evidence related to these factors.

To understand the evidence for the common factors, it is important to keep in mind that these factors are more than a set of therapeutic elements that are common to all or most psychotherapies. They collectively shape a theoretical model about the mechanisms of change in psychotherapy.

A particular common factor model, called the contextual model, has been recently proposed (8,10). Although there are other common factor models (e.g., 4,11), based on different theoretical propositions, the predictions made about the importance of various common factors are similar and the choice of the model does not affect conclusions about the impact of these factors. The contextual model is presented below, followed by a review of the evidence for the common factors imbedded in the model.

THE CONTEXTUAL MODEL

The contextual model posits that there are three pathways through which psychotherapy produces benefits. That is, psychotherapy does not have a unitary influence on patients, but rather works through various mechanisms. The mechanisms underlying the three pathways entail evolved characteristics of humans as the ultimate social species; as such, psychotherapy is a special case of a social healing practice.

Thus, the contextual model provides an alternative explanation for the benefits of psychotherapy to ones that emphasize specific ingredients that are purportedly beneficial for particular disorders due to remediation of an identifiable deficit (8).

The three pathways of the contextual model involve: a) the real relationship, b) the creation of expectations through explanation of disorder and the treatment involved, and c) the enactment of health promoting actions. Before these pathways can be activated, an initial therapeutic relationship must be established.

Initial therapeutic relationship

Before the work of therapy can begin, an initial bond between therapist and patient needs to be created. E. Bordin stated in 1979 that "some basic level of trust surely marks all varieties of therapeutic relationships, but when attention is directed toward the more protected recesses of inner experience, deeper bonds of trust and attachment are required and developed" (12, p. 254). The initial meeting of patient and therapist is essentially the meeting of two strangers, with the patient making a determination of whether the therapist is trustworthy, has the necessary expertise, and will take the time and effort to understand both the problem and the context in which the patient and the problem are situated.

The formation of the initial bond is a combination of bottom-up and top-down processing. Humans make very rapid determination (within 100 ms), based on viewing the face of another human, of whether the other person is trustworthy or not (13), suggesting that patients make very rapid judgments about whether they can trust their therapist. More than likely, patients make rapid judgments about the dress of the therapist, the arrangement and decorations of the room (e.g., diplomas on the wall), and other features of the therapeutic setting (14). However, patients come to therapy with expectations about the nature of psychotherapy as

well, due to prior experiences, recommendations of intimate or influential others, cultural beliefs, and so forth. The initial interaction between patient and therapist is critical, it seems, because more patients prematurely terminate from therapy after the first session than at any other point (15).

Pathway 1: The real relationship

The real relationship, defined psychodynamically, is "the personal relationship between therapist and patient marked by the extent to which each is genuine with the other and perceives/experiences the other in ways that befit the other" (16, p. 119). Although the psychotherapeutic relationship is influenced by general social processes, it is an unusual social relationship in that: a) the interaction is confidential, with some statutory limits (e.g., child abuse reporting), and b) disclosure of difficult material (e.g., of infidelity to a spouse, of shameful affect, and so forth) does not disrupt the social bond. Indeed, in psychotherapy, the patient is able to talk about difficult material without the threat that the therapist will terminate the relationship.

The importance of human connection has been discussed for decades, whether is it called attachment (17), belongingness (18), social support (19), or the lack of loneliness (20,21). In fact, perceived loneliness is a significant risk factor for mortality, equal to or exceeding smoking, obesity, not exercising (for those with chronic cardiac disease or for healthy individuals), environmental pollution, or excessive drinking (22-24). Psychotherapy provides the patient a human connection with an empathic and caring individual, which should be health promoting, especially for patients who have impoverished or chaotic social relations.

Pathway 2: Expectations

Research in a number of areas documents that expectations have a strong influence on experience (25). Indeed, the purported price of a bottle of wine influences rating of pleasantness as well as neural representations (26). The burgeoning research on the effects of placebos documents the importance of expectations, as placebos have robustly shown to alter reported experience as well as demonstrating physiological and neural mechanisms (27,28).

Expectations in psychotherapy work in several possible ways. Frank (4) discussed how patients present to psychotherapy demoralized not only because of their distress, but also because they have attempted many times and in many ways to overcome their problems, always unsuccessfully. Participating in psychotherapy appears to be a form of remoralization.

However, therapy has more specific effects on expectations than simple remoralization. According to the contextual model, patients come to therapy with an explanation for their distress, formed from their own psychological beliefs, which is sometimes called "folk psychology" (29-31). These beliefs, which are influenced by cultural conceptualizations of mental disorder but also are idiosyncratic, are typically not adaptive, in the sense that they do not allow for solutions. Psychotherapy provides an explanation for the patient's difficulties that is adaptive, in the sense that it provides a means to overcome or cope with the difficulties. The patient comes to believe that participating in and successfully completing the tasks of therapy, whatever they may be, will be helpful in coping with his or her problems, which then furthers for the patient the expectation that he or she has ability to enact what is needed. The belief that one can do what is necessary to solve his or her problem has been discussed in various ways, including discussions of mastery (4,32), self-efficacy (33), or response expectancies (25).

Critical to the expectation pathway is that patients believe that the explanation provided and the concomitant treatment actions will be remedial for their problems. Consequently, the patient and therapist will need to be in agreement about the goals of therapy as well as the tasks, which are two critical components of the therapeutic alliance (34,35). Hatcher and Barends described the alliance as "the degree to which the therapy dyad is engaged in collaborative, purposive work" (36, p. 293). Creating expectations in psychotherapy depends on a cogent theoretical explanation, which is provided to the patient and which is accepted by the patient, as well as on therapeutic activities that are consistent with the explanation, and that the patient believes will lead to control over his or her problems. A strong alliance indicates that the patient accepts the treatment and is working together with the therapist, creating confidence in the patient that the treatment will be successful.

Pathway 3: Specific ingredients

The contextual model stipulates that there exists a treatment, particularly one that the patient finds acceptable and that he or she thinks will be remedial for his or her problems, creating the necessary expectations that the patient will experience less distress. Every treatment that meets the conditions of the contextual model will have specific ingredients, that is, each cogent treatment contains certain well-specified therapeutic actions.

The question is how the specific ingredients work to produce the benefits of psychotherapy. Advocates of specific treatments argue that these ingredients are needed to remediate a particular psychological deficit. The contextual model posits that the specific ingredients not only create expectations (pathway 2), but universally produce some salubrious actions. That is, the therapist induces the patient to enact some healthy actions, whether that may be thinking about the world in less maladaptive ways and relying less on dysfunctional schemas (cognitive-behavioral treatments), improving interpersonal relations (interpersonal psychotherapy and some dynamic therapies), being more accepting

of one's self (self-compassion therapies, acceptance and commitment therapy), expressing difficult emotions (emotion-focused and dynamic therapies), taking the perspective of others (mentalization therapies), and so forth. The effect of lifestyle variables on mental health has been understated (37). A strong alliance is necessary for the third pathway as well as the second, as without a strong collaborative work, particularly agreement about the tasks of therapy, the patient will not likely enact the healthy actions.

According to the contextual model, if the treatment elicits healthy patient actions, it will be effective, whereas proponents of specific ingredients as remedial for psychological deficits predict that some treatments – those with the most potent specific ingredients – will be more effective than others (8).

EVIDENCE FOR VARIOUS COMMON FACTORS

Now that the contextual model has been briefly presented, attention is turned toward an update of the evidence for the common factors. Each factor reviewed is imbedded in the contextual model, although each of them is more generically considered atheoretically as an important one. As will be apparent, many of the common factors are not theoretically or empirically distinct.

To present the evidence succinctly and with as little bias and error as possible, we rely on meta-analyses of primary studies. Studies that examine the association of levels of a common factor and outcome are typically reported by some type of correlation statistic (such as Pearson's product-moment correlation), whereas studies that experimentally manipulate and compare conditions typically report some standardized mean difference (such as Cohen's d). For comparison purposes, correlational statistics are converted to Cohen's d. All meta-analyses reported aggregate statistics, corrected for bias, based on the effects of individual studies appropriated weighted. To understand the importance of effects, Cohen (38) classified a d of 0.2 as small, 0.5 as medium, and 0.8 as large. The evidence is summarized in Figure 1, where the effects of various common factors are compared to those of various specific factors.

Alliance

The alliance is composed of three components: the bond, the agreement about the goals of therapy, and the agreement about the tasks of therapy (12). As discussed above, alliance is a critical common factor, instrumental in both pathway 2 and pathway 3.

Alliance is the most researched common factor. Typically the alliance is measured early in therapy (at session 3 or 4) and correlated with final outcome. The most recent meta-analysis of the alliance included nearly 200 studies involving over 14,000 patients and found that the aggregate correlation between alliance and outcome was about .27, which is equivalent to a Cohen's d of 0.57 (39), surpassing the threshold for a medium sized effect.

There have been a number of criticisms of the conclusion that alliance is an important factor in psychotherapy (40), most of which have focused on the correlational nature of alliance research. However, each of the criticisms has been considered and has been found not to attenuate the importance of the alliance (see 8).

First, it could well be that early symptom relief causes a strong alliance at the third or fourth session – that is, early responders report better alliances and have better outcomes. To address this threat, early therapy progress must be statistically controlled or longitudinal research is needed to examine the association of alliance and symptoms over the course of therapy. The studies that have examined this question have found evidence to support either interpretation, but the better designed and more sophisticated studies are converging on the conclusion that the alliance predicts future change in symptoms after controlling for already occurring change.

Second, it could be that the correlation between alliance and outcome is due to the patients' contributions to the alliance. According to this line of thinking, some patients may come to therapy well prepared to form a strong alliance and it is these patients who also have a better prognosis, so the alliance-outcome association is due to the characteristics of the patients rather than to something that therapists provide to the patients. Disentangling the patient and therapist contributions involves the use of multilevel modeling. Recently, Baldwin et al (41) performed such an analysis and found that it was the therapist contribution which was important: more effective therapists were able to form a strong alliance across a range of patients. Patients' contribution did not predict outcome: patients who are able to form better alliances, perhaps because they have secure attachment histories, do not have better prognoses. Indeed, patients with poor attachment histories and chaotic interpersonal relationships may well benefit from a therapist who is able to form alliances with difficult patients. These results have been corroborated by meta-analyses (42).

Third, there may be a halo effect if the patient rates both the alliance and the outcome. However, meta-analyses have shown that the alliance-outcome association is robust even when alliance and outcome are rated by different people. It also appears that the alliance is equally strong for cognitive-behavioral therapies as it is for experiential or dynamic treatments, whether a manual is used to guide treatment or not, and whether the outcomes are targeted symptoms or more global measures.

There are other threats to validity of the alliance as a potent therapeutic factor, but the evidence for each of them is nonexistent or weak (8). The research evidence, by and large, supports the importance of the alliance as an important aspect of psychotherapy, as predicted by the contextual model.

As mentioned above, distinctions between certain common factors are difficult to make. A distinction has been

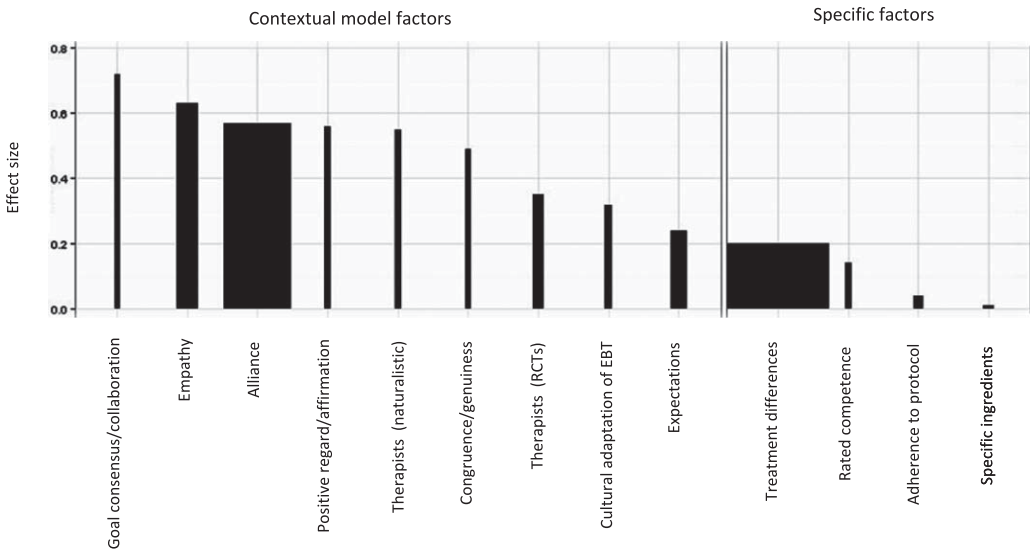

Figure 1 Effect sizes for common factors of the contextual model and specific factors. Width of bars is proportional to number of studies on which effect is based. RCTs – randomized controlled trials, EBT – evidence-based treatments

made between the bond, as defined as a component of the alliance, which is related to purposeful work, and the real relationship, which is focused on the transference-free genuine relationship (8,16). There is some evidence that the real relationship is related to outcome, after controlling for the alliance (16), and, although the evidence is not strong, it does support the first pathway of the contextual model.

A second construct related for the alliance is labeled goal consensus/collaboration. Although related to agreement about the goals and tasks for therapy, goal consensus/collaboration is measured with different instruments. As shown in Figure 1, the effect for goal consensus and collaboration is strong (d=0.72), based on a meta-analysis of 15 studies (43).

Empathy and related constructs

Empathy, a complex process by which an individual can be affected by and share the emotional state of another, assess the reasons for another's state, and identify with the other by adopting his or her perspective, is thought to be necessary for the cooperation, goal sharing, and regulation of social interaction. Such capacities are critical to infant and child rearing, as children, who are unable to care for themselves, signal to the caregiver that care is needed, a process that is then put to use to manage social relations among communities of adult individuals. Therapist expressed empathy is a primary common factor, critical to pathway 1 of the contextual model, but which also augments the effect of expectations.

The power of the empathy in healing was beautifully revealed in a study of placebo acupuncture for patients with irritable bowel syndrome (44). Patients with this syndrome were randomly assigned to a limited interaction condition, an augmented relationship condition, or treatment as usual (waiting list for acupuncture). In the limited interaction condition, the acupuncturist met with the patient briefly, but was not allowed to converse with him or her, and administered the sham acupuncture (a device that gives the sensation of having needles pierce the skin, but they do not). In the augmented relationship condition, the practitioner conversed with the patient about the symptoms, the relevance of lifestyle and relationships to irritable bowel syndrome, as well as the patient's understanding of the cause and meaning of her disorder. All this was done in a warm and friendly manner, using active listening, appropriate silences for reflection, and a communication of confidence and positive expectation. For the four dependent variables (global improvement, adequate relief, symptom severity, and quality of life), the two sham acupuncture conditions were superior to treatment as usual. However, the augmented relationship condition was superior to the limited interaction condition, particularly for quality of life.

The above study is noteworthy because it was an experimental demonstration of the importance of a warm, caring, empathic interaction within a healing setting. Unfortunately, experimental manipulation of empathy in psychotherapy studies is not possible, for design and ethical reasons. Nonetheless, there have been numerous studies (n=59) that have correlated ratings of therapist empathy with outcome, which have been meta-analytically summarized (45), resulting in a relatively large effect (d=0.63; see Figure 1). Constructs related to empathy have also been meta-analyzed and found to be related to outcome, including positive regard/affirmation (d=0.56, n=18; see Figure 1) (46) and congruence/genuineness (d=0.49, n=18; see Figure 1) (47).

It should be recognized that several of the threats to validity for the alliance are also present with regard to empathy. For example, it is clearly easier for a therapist to be warm and

caring toward a motivated, disclosing and cooperative patient than to one who is interpersonally aggressive, and the former types of patients will most likely have better outcomes than the latter, making the empathy/outcome correlation an artifact of patient characteristics rather than therapist action. Unfortunately, studies such as the ones conducted to rule out these threats to validity for the alliance have not been conducted for empathy and related constructs.

Expectations

Examining the role of expectations in psychotherapy is difficult. In medicine, expectations can be induced verbally and then physicochemical agents or procedures can be administered or not, making the two components (creation of expectations and the treatment) independent. In psychotherapy, creating the expectations, through explanation of the patient's disorder, presenting the rationale for the treatment, and participating in the therapeutic actions, is part of therapy. It is difficult to design experimental studies of expectations in psychotherapy (not impossible, but not yet accomplished in any important manner).

The typical way to assess the effect of expectations in psychotherapy is to correlate patient ratings of their expectations with outcomes, but we have seen that such correlational studies produce threats to validity. Furthermore, in many studies, expectations are measured *prior* to when the rationale for the treatment is provided to the patient, when it is the explanation given to the patient that is supposed to create the expectations. Assessing expectations after the explanation has been given (i.e., during the course of treatment) is also problematic, as those patients who have made significant progress in therapy will naturally respond that they think therapy will be helpful.

Despite the difficulties with investigating expectations in psychotherapy, this is a topic of much interest (48-50). Recently, a meta-analysis of expectations showed that there was a relatively small, but statistically significant, relationship between rated expectations and outcome ($d=0.24$, $n=46$; see Figure 1) (49). The best evidence for expectations in the context of healing is derived from studies of the placebo effect, where exquisite care has been taken to experimentally manipulate variables of interest and to control for threats to validity, by using physiological and neurological variables as well as subjective reports. A summary of this literature is beyond the scope of this article, but many excellent reviews are available (8,27,28).

Cultural adaptation of evidence-based treatments

The contextual model emphasizes that the explanation given for the patient's distress and the therapy actions must be acceptable to the patient. Acceptance is partly a function of consistency of the treatment with the patient's beliefs, particularly beliefs about the nature of mental illness and how to cope with the effects of the illness. This suggests that evidence-based treatments that are culturally adapted will be more effective for members of the cultural group for which the adapted treatment is designed. There are many ways to adapt treatments, including those involving language, cultural congruence of therapist and patient, cultural rituals, and explanations adapted to the "myth" of the group.

A recent meta-analysis demonstrated that adapting evidence-based treatments by using an explanation congruent with the cultural group's beliefs (i.e., using the cultural "myth" as the explanation) was more effective than unadapted evidence-based treatments, although the effect was modest ($d=0.32$, $n=21$; see Figure 1) (51).

Therapist effects

Therapist effects are said to exist if some therapists consistently achieve better outcomes with their patients than other therapists, regardless of the nature of the patients or the treatment delivered. Therapist effects have been studied in clinical trials and in naturalistic settings. In both designs, the measure of therapist effects is an intraclass correlation coefficient. Technically, this coefficient indexes the degree to which two patients from the same therapist have similar outcomes relative to two patients from two different therapists. To compare therapist effects to other common factors, the intraclass correlation coefficient is converted to Cohen's d.

The contextual model predicts that there will be differences among therapists *within* a treatment. That is, even though the therapists are delivering the same specific ingredients, some therapists will do so more skillfully and therefore achieve better outcomes than other therapists delivering the same treatment. Evidence for this conjecture is found in clinical trials. A meta-analysis of therapist effects in clinical trials found modest therapist effects ($d=0.35$, $n=29$; see Figure 1) (52). Keep in mind that the therapists in clinical trials generally are included because of their competence and then they are given extra training, supervised, and monitored. Moreover, the patients in such trials are homogeneous, as they have a designated diagnosis and are selected based on various inclusionary/exclusionary criteria. In such designs, patients are randomly assigned to therapists. Consequently, consistent differences among therapists in such trials, although modest, are instructive.

Not surprisingly, therapist effects in naturalistic settings are greater than in clinical trials. In the former settings, therapists are more heterogeneous, patients may not be randomly assigned to therapists, patients are heterogeneous, and so forth. A meta-analysis of therapist effects in such settings found a relatively large effect ($d=0.55$, $n=17$; see Figure 1) (52).

The finding of robust therapist effects raises the question about what are the characteristics or actions of more effective therapists. Recent research has begun to address this

question. Studies have shown that effective therapists (vis-à-vis less effective therapists) are able to form stronger alliances across a range of patients, have a greater level of facilitative interpersonal skills, express more professional self-doubt, and engage in more time outside of the actual therapy practicing various therapy skills (8).

SPECIFIC EFFECTS

Evidence for the common factors is also collected by examining the evidence for specific aspects of psychotherapy. The contextual model makes several predictions about specific effects, which will be discussed as each specific effect is considered.

Treatment differences

When pathway 3 of the contextual model was discussed earlier, it was emphasized that the model contends that all therapies with structure, given by empathic and caring therapists, and which facilitate the patient's engagement in behaviors that are salubrious, will have approximately equal effects. That is, the specific ingredients, discussed in pathway 3, are not critical because they remediate some psychological deficit.

The question of whether some treatments are superior to others has long been debated, with origins at the very beginning of the practice of psychotherapy (think about the disagreements amongst Freud, Adler and Jung, for example). Today, there are claims that some treatments, in general or for specific disorders, are more effective than others. Others, however, claim that there are no differences among psychotherapies, in terms of their outcomes.

The literature addressing this issue is immense and summarizing the results of relative efficacy is not possible. Nevertheless, the various meta-analyses for psychotherapies in general or for specific disorders, if they do find differences among various types of treatment, typically find at most differences of approximately d=0.20, the value shown in Figure 1.

Specific effects from dismantling studies

To many, the dismantling design is the most valid way to identify the effects of specific ingredients. In this design, a specific ingredient is removed from a treatment to determine how much more effective the treatment is in total compared to the treatment without the ingredient that is purportedly remedial for the psychological deficit.

Two meta-analyses have examined dismantling designs and both found minimal differences between the total treatment and the treatment without one or more critical ingredients (d=0.01, n=30, see Figure 1) (53,54). The most recent of these meta-analyses did find that adding an ingredient to an existing treatment increased the effect for targeted variables by a small amount (d=0.28) (53).

Adherence and competence

In clinical trials, it is required that adherence to the protocol and the competence at delivering the treatment are rated. This makes sense: if the goal is to make inferences about a particular treatment, then it is necessary to ensure that the treatment was delivered with the necessary components and not with extraneous components (i.e., with *adherence* to the protocol) and that the treatment components were delivered skillfully (i.e., given *competently*).

It would seem logical theoretically that adherence to the protocol and competence would be related to outcome. That is, for cases where the therapist followed the protocol and did so skillfully, there should be better outcomes. However, this is not the case. In a meta-analysis of adherence and competence (55), effects were small (d=0.04, n=28 for adherence; d=0.14, n=18 for competence; see Figure 1).

The results for adherence and competence demand further explanation. If the specific ingredients of a treatment are critical, then adherence should make a difference – actually delivering those ingredients should be related to outcome. There is evidence that rigid adherence to a protocol can attenuate the alliance and increase resistance to the treatment (i.e., failing to accept the treatment, a contextual model tenet) (8), and that flexibility in adherence is related to better outcomes (56), results consistent with prediction of the contextual model.

The findings for competence are a bit more difficult to understand. Competence in these trials typically is rated by experts in the treatment being given, based on watching therapy sessions. Why can't experts differentiate between "good" therapy and "bad" therapy? If this were indicative of experts' abilities to judge competence, then the notion of psychotherapy supervision would be turned upside down, because what is observed and evaluated would have no relation to outcomes – how could the supervisor then make a case for providing input to the supervisee? But the clue to the resolution of this mystery is found in the definition of competence. Most psychotherapy trials rate the competence *for a specific treatment*. That is, what is rated is the skill in providing the elements of the treatment protocol, rather than common factors, such as empathy, alliance, affirmation, and so forth – aspects of therapy that do predict outcome and seem to differentiate more effective therapists from less effective therapists.

CONCLUSIONS

Although the common factors have been discussed for almost a century, the focus of psychotherapy is typically on the development and dissemination of treatment models. If

not discounted, then the common factors are thought of as perhaps necessary, but clearly not sufficient. The evidence, however, strongly suggests that the common factors must be considered therapeutic and attention must be given to them, in terms of theory, research and practice.

One of the criticisms of the common factors is that they are an atheoretical collection of commonalities. In this paper, the contextual model was presented to convey a theoretical basis for these factors.

Trauma and Public Mental Health: A Focused Review

Rolf J. Kleber[1,2]*

[1] Utrecht University, Utrecht, Netherlands, [2] Arq Psychotrauma Expert Group, Diemen, Netherlands

Psychological trauma has developed into a very common concept in the scientific community, in mental health care, as well as in popular language and mass media. The purpose of this article is to show the relevance of the discipline of traumatic stress studies to the field of public mental health by examining central concepts and findings concerning trauma and its aftermath and examining implications for public mental health. Attention is paid to the diagnosis of posttraumatic stress disorder (PTSD) and the construct of resilience as well as to specific areas of public mental health activities. A public mental health perspective will help to develop preventive approaches to trauma and extend the impact of various forms of interventions. It will also make clear that trauma care will have to consider the community and the society at large.

Keywords: trauma, posttraumatic stress disorder, resilience, public mental health, war, disasters, violence

INTRODUCTION

Psychological trauma has developed into a very popular concept in the scientific community, in the world of mental health care, as well as in common language and mass media. The consequences of various shocking events—violence, disasters, acts of terrorism, accidents, and war—receive frequent and enduring attention. The number of scientific and clinical publications has increased enormously and in many media programs ample attention is paid to victims and others affected by these events. The purpose of this article is to show the relevance of the discipline of traumatic stress studies to the field of public mental health by examining central concepts and findings concerning trauma and its aftermath and examining implications for public mental health.

WHAT IS A TRAUMATIC EVENT?

Traumatic events involve the confrontation with war, violence, disasters, sudden loss, serious illness, and other overwhelming and disturbing events. According to the psychiatric classifications [of the *International Classification of Diseases* of the World Health Organization (ICD-11) and the *Diagnostic and Statistical Manual of Mental Disorders*, fifth edition (DSM-5)], a traumatic event is defined as the exposure to: death, threatened death, actual or threatened serious injury, or actual or threatened sexual violence (1, 2).

Phenomenologically such an event can be characterized by an extreme sense of powerlessness as well as a disruption of beliefs and expectations. The individual has lost control over the situation and is to a large extent a victim of the circumstances and/or other people (i.e. the perpetrator). In "Jenseits des Lustprinzips" (1920), Freud already posed: "the essence of a traumatic situation is an experience of helplessness that is brought about either externally or internally." At the same time, he or she is confronted with a shattering of basic assumptions. The self-evidence of one's life is gone. The sense of invulnerability,

the idea of the benevolence of the world, and the idea that other people can be trusted are devastated. The obvious certainties of life have disappeared. The images one holds of oneself and the environment no longer adequately fit the new situation. In the words of Janoff-Bulman (3), basic assumptions have been shattered.

Exposure to traumatic events is not rare, as has been consistently found in epidemiological studies. The World Mental Health Surveys of adults were carried out among nearly 70,000 participants from 24 countries ranging in economic status from low to high (4). These data showed that at some time in their life 70.4% of the respondents had experienced at least one type of a traumatic event. The specific rates were: 14% had experienced intimate partner or sexual violence, 34.3% accidents or injuries, 22.9% physical violence, 13.1% war-related events, 34.1% the unexpected or traumatic death of a loved one, and 35.7% experienced traumas that happened to loved ones (e.g., serious illness of a child). As Kessler et al. (4) stated, these findings make clear that it is rather normal to be exposed to a very upsetting event in one's lifetime.

RISE AND BLOOM OF THE CONCEPT OF POST-TRAUMATIC STRESS DISORDER

The concept of *posttraumatic stress disorder* (PTSD) is nowadays so much used that it dominates most thinking about the consequences of violence, disaster, and being a refugee. That development is quite unique as the attention for trauma was very meager just 40, 50 years ago. In the 1970s, the United States became increasingly confronted with the psychological and social difficulties of the nearly three million veterans who had fought in Vietnam. They suffered from nightmares, depression, relationship problems, et cetera. However, because of the ambivalent perspective on the Vietnam War, authorities and professionals were rather reluctant to acknowledge these difficulties, but the increasing concern led to the introduction of the term post-traumatic stress disorder in the anxiety disorders section of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-III) (5).

The diagnosis of PTSD is directly linked to experiencing or witnessing a traumatic event such as a natural disaster, a serious accident, a terrorist act, war/combat, rape, or other violent assault (criterion A). According to DSM-5 (1), PTSD consists of four categories of symptoms. Re-experiencing the traumatic event (criterion B) is manifested in symptoms such as intrusive memories, distressing dreams, flashbacks, or distress or physiological reactions upon exposure to cues of the trauma. The other categories are symptoms of avoidance of the reminders of the trauma (criterion C), alterations in memories or mood associated with the trauma (criterion D), and finally clear alterations in physiological arousal and reactivity [criterion E; see further Ref. (1)].

Recently a relatively different definition of PTSD has been introduced in the new version of the International Classification of Diseases of the World Health Organization (2018). It consists of three categories (reexperiencing, avoidance, hyperarousal) with only two core symptoms in each category. The definition may be more flexible to use (allowing for cultural variation and clinical judgment) but is less detailed and comprehensive. Empirical studies have found that prevalence rates may vary between the two classifications and there is often a lack of overlap (i.e., not the same individuals are classified as PTSD patients by the two classifications). This is a major concern for the field of traumatic stress studies. It is a challenge for future research to unravel the differences and to create order (6), as most research is conducted with the DSM definition while most countries in the world use instead ICD.

Prevalence figures for PTSD vary enormously, according to the nature of the events, various risk factors, the time of measurement, and the instruments used. In general, PTSD occurs more when an aggressor is involved (in the case interpersonal violence), for persistent and extended events (e.g., internment, sexual abuse) and for socially charged events (e.g., rape). Among Dutch veterans who were confronted with war violence during deployment in Iraq, the figures of current prevalence varied between 3 and 4% (7). Nine percent of American Vietnam veterans had current PTSD 20 years after the war (8). Figures on PTSD in studies of disasters (man-made, technological, as well as natural) varied mostly around 5% to 15% (9). The prevalence findings also fluctuated strongly in studies of sexual violence, although the rates are generally higher than after other events: between 3.7% and 65%. The already mentioned World Mental Health Surveys (4, 10) determined that intimate partner or sexual violence (such as rape) was a very frequent cause of PTSD. Nevertheless, the unexpected death of loved ones represented the most frequent cause of event-related psychopathology within the general population because of the high frequency with which people experience such a loss. About this last mentioned finding, it is relevant to remark that there is a close relationship between trauma and loss and consequently between PTSD and complicated grief, but they are not similar (11). The concepts of Persistent Complex Bereavement Disorder (1) and Prolonged Grief Disorder (2) as result of the death of a family member or a close friend are included in DSM-5 and ICD-11, respectively.

In a comprehensive and systematic analysis (12) prevalence rates of PTSD and depression were identified from 181 surveys comprising 81,866 refugees and other conflict-affected persons from 40 countries exposed to humanitarian emergencies. Again, rates of reported PTSD and depression showed large inter-survey variability. The prevalence estimates derived from the methodologically most robust surveys provided rates between 13% and 25% for PTSD, as assessed by Steel et al. (12). The risk of PTSD among refugees was increased by experiencing torture and sexual violence, having a higher age, being a woman, and through a long stay in different asylum seekers centers.

Despite the increased knowledge about PTSD and despite the positive results of therapeutic treatments for PTSD, there are various dilemmas and challenges. First, there is a large comorbidity, as most patients also suffer from depression, substance abuse, or other disorders (6). Furthermore, defining the borderline between normal and abnormal behavior after trauma is difficult. Moreover, although this is matter of heavy debate among researchers and clinicians, PTSD is sometimes an overstretched concept in the sense that normal responses to stressful life events are labelled as disorder. Difficulties of diverse groups—from refugees to veterans—are attributed too much or too easily to traumatic events and their resilience is underestimated (13).

IMPACT ON THE INDIVIDUAL

Regarding a public mental health perspective, it is highly relevant to understand that the majority of people exposed to serious live events does not develop disorders. However, this does not mean that they will not suffer from symptoms and difficulties. Most people will experience responses such as intrusions, nightmares, startle reactions, and numbness (14). Findings from large epidemiological studies of disaster victims have made this clear. In 2000 the Netherlands were confronted with a disastrous explosion of a fireworks container area in the middle of a neighborhood. A comprehensive and longitudinal study was conducted among the inhabitants. In the investigation of post-disaster reactions (15) it was found that most inhabitants suffered from various serious symptoms (especially depression, fears, re-experiences, physical symptoms) in the first 2 to 3 weeks after the explosion. At least 87% of the affected residents were highly affected in those first weeks after the disaster.

These responses can be considered functional and normal, as has been made clear in emotion theories (16). People are afraid that it will happen again. They do not feel safe anymore and are constantly alert for danger. They are angry because of the neglect of the responsible authorities or they feel rage in the direction of the perpetrator. They react easily irritated at remarks of other people. They blame themselves for being there at the moment of the disaster or having not done anything to prevent the situation. They feel despaired because of the death of loved ones and the loss of material goods. They have the impression that other people do not understand their distress and sorrow and feel estranged from others. Nevertheless, the intensity and frequency of these distressing and painful responses do not reach the level of disorder.

Although DSM-5 recognizes the possibility of the occurrence of Acute Stress Disorder (ASS) in the first days after an event, a diagnosis that overlaps with PTSD, this diagnosis is rarely used in clinical practice as well as research. Patients with ASS usually report numbness, problems with memory, sleep and concentration, irritability, fears, or anxiety and have frequent re-experiences of the event. The usefulness of acute stress disorder as a classification is controversial in the literature (17). The difference with normal reactions to a major life event and with PTSS, apart from the time criterion (ASS can only be used for disturbances in the first 4 weeks after the experience), is not yet confirmed adequately.

As mentioned above, the world does not make sense any more after such a traumatic experience. Already in the 1940s the psychiatrist and concentration camp survivor Victor Frankl stated that the search for meaning played a crucial role in adaptation to threatening events (18). Cognitive approaches to trauma (e.g., 19) state that successful processing of the traumatic experience takes place when new information (e.g., the implication of the traumatic experience) is assimilated into existing structures or models. Unsuccessful processing occurs when the trauma-related information is not integrated into existing beliefs concerning self-image and world views (20). In low control situations not amenable to direct repair or problem-solving, such as trauma, loss, and serious illness, meaning-making is often the most adaptive strategy. As Schok et al. (20) have argued, meaning can be created by answering the question why an event occurred and why it happened to the person. It can also be operationalized as considering the ways in which one's life changed because of the event and assessing the extent to which one has "made sense of" the experience. Research findings have indicated that these two processes of finding a cause for the extreme event and finding personal benefits in the traumatic experience play independent roles in adjustment after trauma (21, 22). Therefore, the attempt to find meaning discloses itself twofold: in searching for an answer to the question why it happened as well as in rethinking one's attitudes and priorities to restructure one's life along more satisfying lines (23).

IMPACT ON THE COMMUNITY

Violence, disasters, accidents, and war are also stressful events for the community. Consequently, the impact of traumatic events goes beyond those who are directly exposed to the event and affects close relationships, the social environment, and the society at large. A human being does not live in a vacuum. He or she is surrounded by others. And those others will be confronted with the traumatic event and its aftermath too. This holds true for an event that struck an individual, such as a rape. Others hear about the event, perceive the suffering of the victims, and must cope with the implications. Naturally, it holds also true for events that struck a large group of people. For instance, a disaster undermines the social fabric of a community. It can lead to dissolution of social networks and to forced or voluntary migration. Regarding the health care system, it can lead to a disruption of the provision of social services and an erosion of the health care infrastructure (24, 25).

On the other hand, the social environment can stimulate recovery after trauma. The perception of social support has been found to be an influential factor for the effects of traumatic events on the individual as well as the community. For instance, studies undertaken after disasters have shown that social support had a significant stress-buffering effect for post-traumatic problems. Furthermore, a comprehensive meta-analysis (26) has shown that lack of social support systems and lack of sharing of emotions are significant risk factors for mental health disturbances.

THE OTHER SIDE OF TRAUMA: RESILIENCE

The finding that most people confronted with extreme life events did not develop disturbances like PTSD created interest in the phenomenon of *resilience*. This concept has been widely used in recent years in the scientific and clinical world. Resilience refers to a dynamic process involving positive adaptation to one's circumstances in the face of significant adversity, as defined by Luthar and Cicchetti (27). However, there are various understandings of resilience [see Ref. (28)]. Resilience may be treated as a quality, a personal trait, a process, and an outcome. While, for example, some researchers conceive of resilience

as a multiply determined developmental process that is not fixed, others use measures of trait resilience, which favors the assumption that resilience is a personality attribute [see for the different views Ref. (29)].

Investigation of resilience can lead to useful avenues for intervention. The concept offers a different perspective on risk and protection. Focusing on what makes individuals strong rather that what makes them weak may aid to understand what helps them to maintain their mental health. Sleijpen and colleagues examined strategies of young refugees in dealing with negative experiences (28). Their findings revealed that young refugees living in the Netherlands were affected by memories of traumatic events experienced in their country of origin or during the flight, but that current stressors, especially for young people without a residence permit, played a more significant role in determining their psychological well-being. The participants in this study used the following four strategies to deal with traumatic experiences and current stressors: (1) acting autonomously, (2) performing at school, (3) perceiving support from peers and parents, and (4) participating in the new society. These strategies helped the young refugees to strengthen their sense of power and control, they gave them some distraction, and they supported or sustained their spirit within the family unit and the new society [see Ref. (28)].

PROLONGED AFTERMATH

For public mental health initiatives, it is important to realize on the one hand the significance of the resilience of people affected, but at the other hand also the fact that disturbances can last for a very long period. Difficulties do not always disappear in time. Sometimes they may last for a very long time. 10 years after the Enschede Fireworks disaster still 6.7% of a representative sample of the inhabitants of the neighborhood had an indication of chronic disaster-related PTSD (30). 40 years after the Vietnam War (31), prevalence rates of PTSD were 4.5% (male USA veterans) and 6.1% (female veterans). In the World Mental Health Surveys (4), it was also found that PTSD symptoms typically were quite persistent.

The long-term aftermath of trauma can be illustrated with the following research finding. A large community-based sample of child survivors from World War II was compared with a reference group from the Dutch population as well as with clinical groups (32). These children survived internment in the Japanese camps in the former colony of the Dutch East Indies (now Indonesia) during the period 1942–1945 (and afterwards). Most of them were forced to migrate to the Netherlands in the 1940s and 1950s. Long-term sequelae of the persecution were studied by standardized questionnaires on posttraumatic responses, general health, and dissociation. Compared with control individuals of the same age that lived through the German occupation in the Netherlands during World War II, the child survivors from the former Dutch Indies reported significantly more traumatic experiences and mental health disturbances approximately 50 years after the war. 23 percent of these now adult child survivors in the community sample had an indication of PTSD related to the events in World War II [see Ref. (32)].

These results underline the long-term aftermath of traumatic experiences. This conclusion is also relevant for the many war refugees who migrated to Europe in recent years. In the field of psychotraumatology, there has been a continuing debate about the extent to which diagnostic criteria for PTSD adequately cover the posttraumatic symptomatology experienced by individuals exposed to prolonged, repeated, and interpersonal traumatic events, such as occurring in situations of domestic violence, war, and torture (33). This symptomatology is more complex, more severe, and more invasive than that captured by the classic PTSD diagnosis. This manifestation of psychopathology is referred to as *complex PTSD* (CPTSD). In the 11th version of the ICD (2), this concept is added as a formal diagnosis comorbid to PTSD. It consists of impairments in three domains: difficulties in emotion regulation, negative beliefs about oneself, and difficulties in sustaining relationships. The concept is attractive as it focuses on personal changes due to the confrontation with enduring violence and oppression, but it is as such also rather (too) close to personality disorders while it is not clear whether the addition of this new diagnostic concept is really required beyond PTSD. Research is also still indecisive about these matters. Because of these reasons, a concept such as complex PTSD was not included in DSM-5.

PUBLIC HEALTH STRATEGIES

Public health strategies are aimed at preventing or diminishing mental health problems and addressing the causes of these conditions (see also 10). These strategies are active on multiple levels: individual, family, community, and society. Unfortunately, public health care of trauma is a rather underdeveloped area (see Magruder et al., 2107), especially in contrast to the field of treatment of trauma-related disorders, in particular PTSD. Psychotherapies of PTSD have been found successful, as has been shown by many RCT's (randomized controlled trials) and meta-analyses, in comparison with control groups and placebo treatments [e.g., Ref. (34)]. Most evidence has been found for trauma-focused cognitive behavioral therapy and Eye Movement Desensitization and Reprocessing (EMDR), and to a somewhat lesser extent Narrative Exposure Therapy and Brief Eclectic Psychotherapy for PTSD [e.g., Ref. (35)]. However, here we focus only on public health strategies relevant to trauma care. They are all explicitly aimed at preventing the emergence of health problems or preventing the aggravation of these difficulties.

Preventing adversity. First, although it is a truism, one should bear in mind that stopping or avoiding exposure to events that can be experienced as traumatic is a sensible public health strategy. If disasters, accidents, or wars can be prevented by concrete measures, the chance on traumatic experiences and on their negative consequences is, by definition, taken away.

Creating awareness and recognition. Secondly, creating awareness and acknowledgment concerning the impact of trauma on the population is a strategy by which difficulties can be prevented. Psycho-education with the help of brochures is an obvious example of this. Similarly, so-called silent journeys by a community after a violent crime in their neighborhood

and creating monuments ("lieux de memoire") are just as exemplary regarding recognition and appreciation for the people affected by trauma.

The increase of awareness through public health campaigns has been suggested for combatting child sexual abuse (36). Public health campaigns serve to help the identification of affected children and to facilitate the recognition of their difficulties by adults. Such services imply the awareness of the impact of traumatic experiences in diverse domains (individual, societal), the recognition of signs and symptoms, the integration of knowledge about trauma in public health programs, and the prevention of re-traumatization for their users. In this respect, technology-based interventions (e.g., online platforms, social media, mobile applications) can be advantageous. Such campaigns of awareness and recognition should be accompanied by mental health services with adequate interventions for abused persons looking for care. Nevertheless, despite their positive aims and effects, at the same time, all these campaigns may have a downside: they can lead to complications, such as the risks of promoting an unnecessary victim status and medicalizing complaints of the affected persons, resulting in a reduction of the potential for spontaneous recovery (36, 37).

Strengthening resilience. The third group of strategies is focused on bolstering resilience and stimulating self-efficacy. For example, training programs have been developed in the armies of the USA and several European countries to allow military soldiers to deal with the stress of war and to be more resistant to the intense and overwhelming events they will be confronted with.

Counseling. Fourth, counseling people confronted with traumatic events is a well-known intervention in the field of trauma care. Various forms of secondary preventive interventions providing practical care, support, and information have been designed for employees of organizations confronted with extreme events in the work setting, such as the police and banks, but also for victims of large-scale acts of terrorism. These interventions consist of a couple of protocolled sessions in the first 2 or 3 months after a calamity [see for an overview Ref. (38)]. They are considered as quite helpful, although controlled research is mostly lacking. This intervention should not be confused with so-called psychological debriefing, a typically single session of group counseling directly after a disaster or an act of violence. If this form of support is focused too much on the ventilation of emotions, debriefing has been found to have a negative impact: posttraumatic reactions and depressive feelings are worsened and very early exposure to the trauma material may interfere with natural recovery processes (9, 38).

Reconciliation. A related form of post-trauma care are large-scale programs to reconcile people after large-scale conflicts. For instance, a civil war divides families, communities, and nations, often pitting one neighbor against another. Distrust, resentment, and anger dominate post-war society, just as much as passivity and emotional numbness. That is why programs are designed to reconcile people (perpetrators and victims) and to restore trust, connectedness, and social cohesion.

Such truth and reconciliation efforts were conducted in Sierra Leone (39). Community-level forums in 200 villages were set up in which victims detailed war atrocities and perpetrators confessed to war crimes. Research using a randomized control trial among more than 2,000 individuals showed that reconciliation led to greater forgiveness of perpetrators and strengthened social capital: social networks were larger, and people contributed more to public goods in treated villages. However, there were also negative psychological costs next to the positive societal benefits. The reconciliation intervention also worsened psychological health, increasing depression, anxiety, and PTSD in the same villages. For a subset of villages, outcomes were measured 9 months and 31 months after the intervention. Results showed that both positive and negative effects persisted into the longer time horizon. These findings suggest that policy-makers should be careful with reconciliation processes and must find ways to restrict the emphasis on emotions.

Policy making. Finally, there is the overarching field of policy making, a rather underdeveloped topic in trauma care. As Magruder et al. (40) stated, public policies should be formulated to prevent traumatic events, to understand risk and protective factors, to provide early intervention services for individuals and communities at risk of post-trauma maladjustment, and to shape societal norms to eliminate stigma. Extra priorities for improving mental health include a focus on adequately training researchers and professionals, supporting international collaborations, and encouraging scientists to share their expertise with policymakers. Furthermore, integration of physical and mental health care is especially important, as trauma-exposed individuals often seek help in primary care rather than mental health settings. Consequently, posttraumatic disturbances may go undiagnosed.

FINALLY

A public mental health perspective will help to develop preventive approaches to trauma and extend the impact of various forms of interventions. It will also make clear that trauma care will have to consider the community and the society at large. The concept of trauma is an attractive concept. It refers to both spectacular and shocking events that receive huge attention, such as acts of terrorism and large-scale calamities. Something dramatic happens that could happen to anyone: the cause appears to be clear and the responsibility appears to lay elsewhere. One could argue that traumatic experiences show us the limits of our abilities to master our lives and that they defy our efforts to control the circumstances. However, the concept of trauma is also a dangerous concept. It is often used too easy and too quick. Not every stressful event is a traumatic experience and not every person confronted with war, disaster, or terror is traumatized. Overstretching the concept may create the risk of medicalization of regular difficulties of the afflicted people and ignoring the self-reliance and the adaptive skills of them.

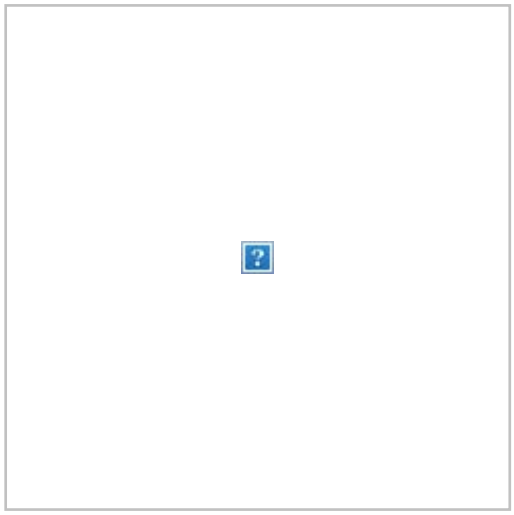
TRAUMA TYPES

When a child feels intensely threatened by an event he or she is involved in or witnesses, we call that event a trauma. There is a range of traumatic events or trauma types to which children and adolescents can be exposed.

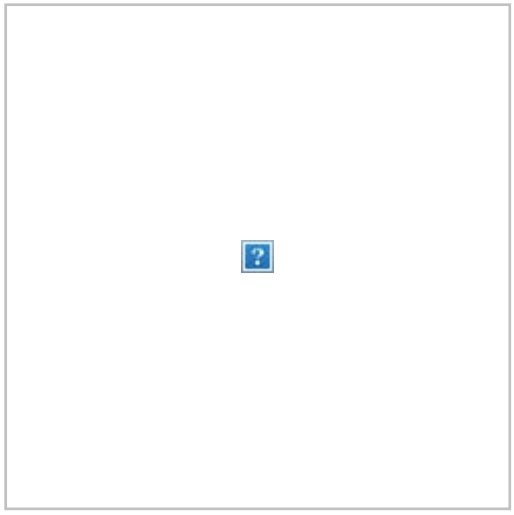
Bullying



Bullying is a deliberate and unsolicited action that occurs with the intent of inflicting social, emotional, physical, and/or psychological harm to someone who often is perceived as being less powerful.

view

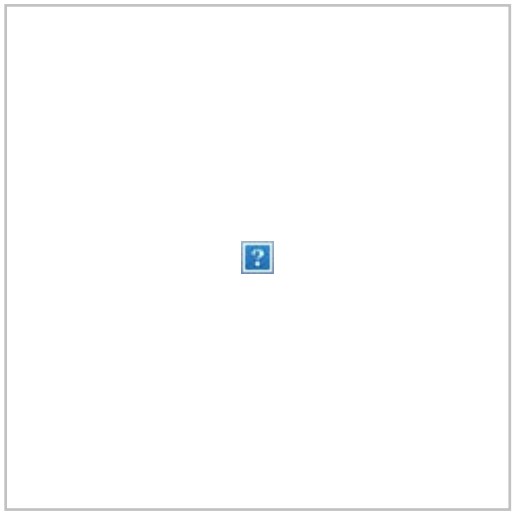
Community Violence



Community violence is exposure to intentional acts of interpersonal violence committed in public areas by individuals who are not intimately related to the victim.

view

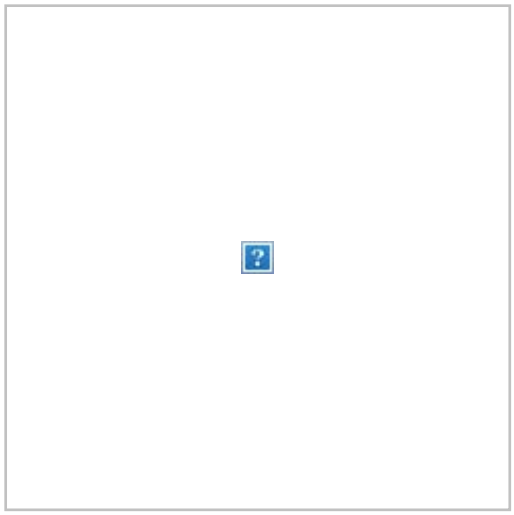
Complex Trauma



Complex trauma describes both children's exposure to multiple traumatic events—often of an invasive, interpersonal nature—and the wide-ranging, long-term effects of this exposure.

view

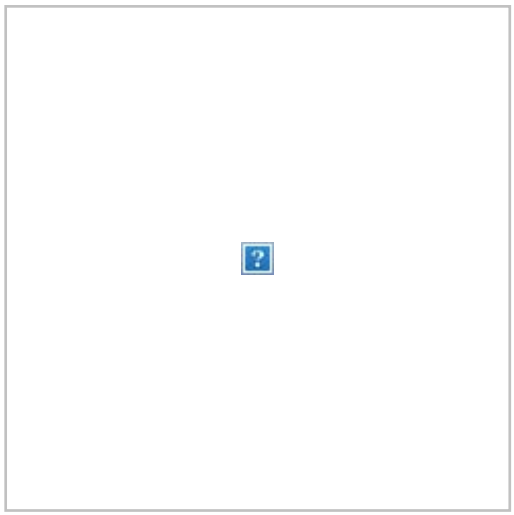
Disasters



Natural disasters include hurricanes, earthquakes, tornadoes, wildfires, tsunamis, and floods, as well as extreme weather events such as blizzards, droughts, extreme heat, and wind storms.

view

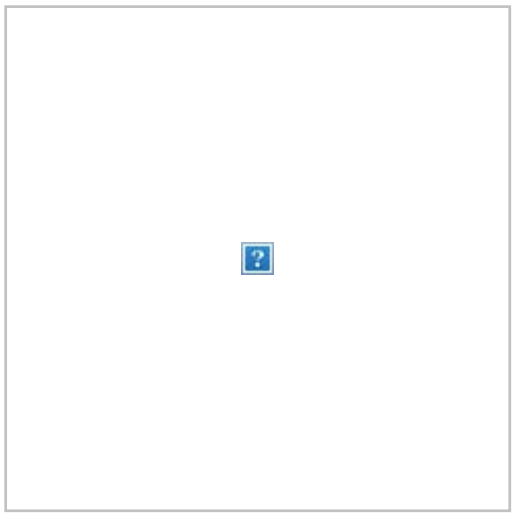
Early Childhood Trauma



Early childhood trauma generally refers to the traumatic experiences that occur to children aged 0-6.

view

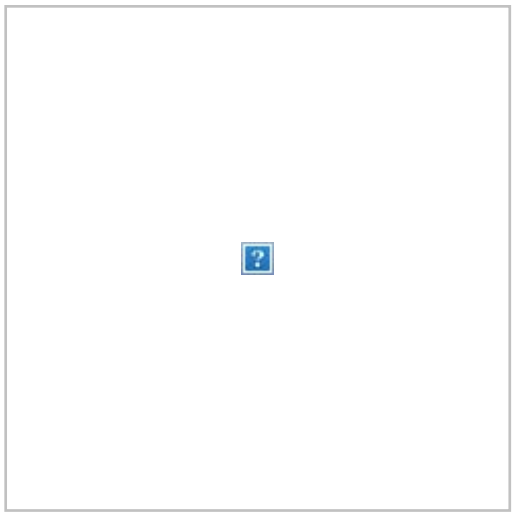
Intimate Partner Violence



Intimate Partner Violence (IPV), also referred to as domestic violence, occurs when an individual purposely causes harm or threatens the risk of harm to any past or current partner or spouse.

view

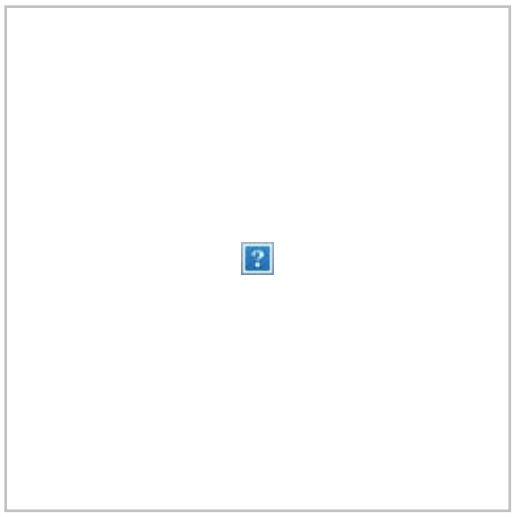
Medical Trauma



Pediatric medical traumatic stress refers to a set of psychological and physiological responses of children and their families to single or multiple medical events.

view

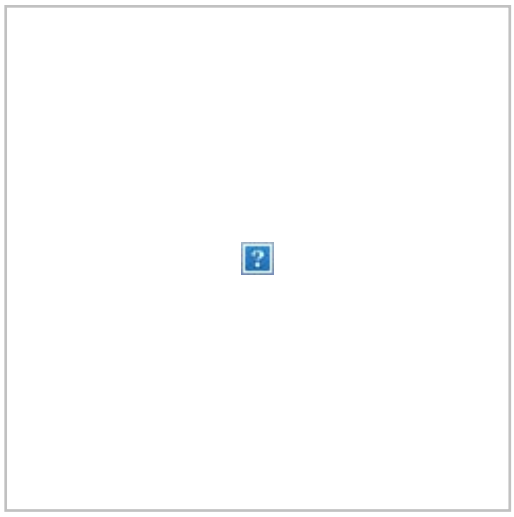
Physical Abuse



Physical abuse occurs when a parent or caregiver commits an act that results in physical injury to a child or adolescent.

view

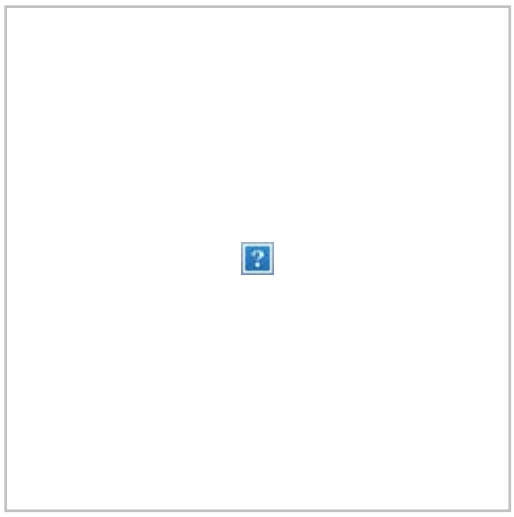
Refugee Trauma



Many refugees, especially children, have experienced trauma related to war or persecution that may affect their mental and physical health long after the events have occurred.

view

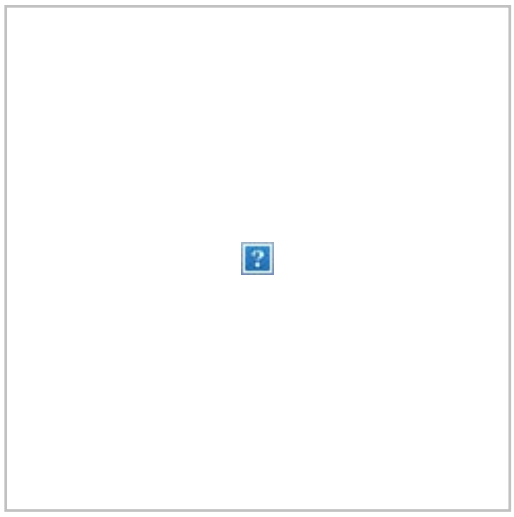
Sexual Abuse



Child sexual abuse is any interaction between a child and an adult (or another child) in which the child is used for the sexual stimulation of the perpetrator or an observer.

view

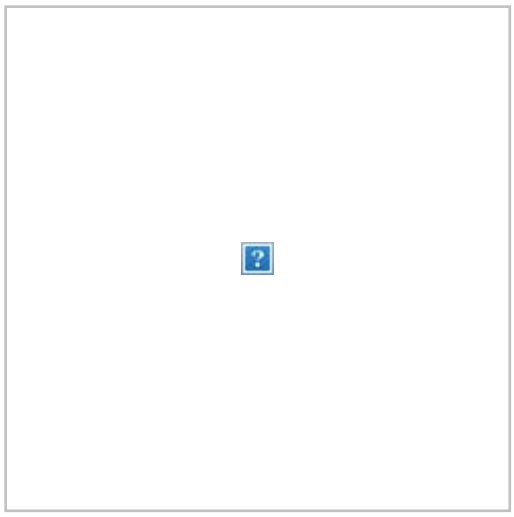
Terrorism and Violence



Families and children may be profoundly affected by mass violence, acts of terrorism, or community trauma in the form of shootings, bombings, or other types of attacks.

view

Traumatic Grief



While many children adjust well after a death, other children have ongoing difficulties that interfere with everyday life and make it difficult to recall positive memories of their loved ones.

Traumatic stress: effects on the brain

J. Douglas Bremner, MD

Brain areas implicated in the stress response include the amygdala, hippocampus, and prefrontal cortex. Traumatic stress can be associated with lasting changes in these brain areas. Traumatic stress is associated with increased cortisol and norepinephrine responses to subsequent stressors. Antidepressants have effects on the hippocampus that counteract the effects of stress. Findings from animal studies have been extended to patients with post-traumatic stress disorder (PTSD) showing smaller hippocampal and anterior cingulate volumes, increased amygdala function, and decreased medial prefrontal/anterior cingulate function. In addition, patients with PTSD show increased cortisol and norepinephrine responses to stress. Treatments that are efficacious for PTSD show a promotion of neurogenesis in animal studies, as well as promotion of memory and increased hippocampal volume in PTSD.

Effects of traumatic stress

Traumatic stressors such as early trauma can lead to post-traumatic stress disorder (PTSD), which affects about 8% of Americans at some time in their lives,[1] as well as depression,[2,3] substance abuse,[1,4] dissociation,[5] personality disorders,[6,7] and health problems.[8] For many trauma victims, PTSD can be a lifelong problem.[9] The President's New Freedom Commission Report highlights the importance of providing services for mental disorders related to early trauma.[10-12] However, the development of effective treatments is limited by gaps in knowledge about the underlying neurobiological mechanisms that mediate symptoms of trauma-related disorders like PTSD. This paper reviews preclinical and clinical studies on the effects of traumatic stress on the brain.

Normal development of the brain across the lifespan

To understand how traumatic stress occurring at different stages of the life cycle interacts with the developing brain, it is useful to review normal brain development. The normal human brain undergoes changes in structure and function across the lifespan from early childhood to late life. Understanding these normal developmental changes is critical for determining the difference between normal development and pathology, and how normal development and pathology interact.

Although the bulk of brain development occurs in utero, the brain continues to develop after birth. In the first 5 years of life there is an overall expansion of brain volume related to development of both gray matter and white

matter structures; however, from 7 to 17 years of age there is a progressive increase in white matter (felt to be related to ongoing myelination) and decrease in gray matter (felt to be related to neuronal pruning) while overall brain size stays the same.[13-16] Gray matter areas that undergo the greatest increases throughout this latter developmental epoch include frontal cortex and parietal cortex.[17,18] Basal ganglia decrease in size, while corpus callosum,[19,20] hippocampus, and amygdala[21-23] appear to increase in size during childhood, although there may be developmental sex-laterality effects for some of these structures.[24] Overall brain size is 10% larger in boys than girls during childhood.[24]

During the middle part of life (from age 20 to 70) there is a gradual decrease in caudate,[25] diencephalon,[25] and gray matter,[25,26] which is most pronounced in the temporal[27] and frontal cortex,[26] with enlargement of the ventricles[26,27] and no change in white matter.[25,26] Studies have not been able to document changes in hippocampal volume in normal populations during this period.[27] After menopause in women at about the age of 50, however, there are changes in reproductive hormones, such as decreased levels of estrogen. Since estrogen promotes neuronal branching in brain areas such as the hippocampus,[28] a loss of estrogen may lead to changes in neuronal structure. Although the effects of menopause on the brain have not been well studied, it is known that sex hormones also affect brain function and circuitry[29]; therefore, the changes in sex hormones with menopause will presumably affect brain function, as well as possibly structure. There is some evidence in super-elderly individuals (age >70) for modest reductions in hippocampal volume with late stages of aging.[27,30] More robust findings have included increased ventricular volume and reduction in gray matter, temporal lobe, and cerebellum volumes with normal aging, that begins before the age of 70.[25,27,31-33]

Therefore, trauma at different stages in life will presumably have different effects on brain development. The few studies that have looked at this issue do suggest that there are differences in the effects of trauma on neurobiology, depending on the stage of development at which the trauma occurs. Studies in this area, however, have been limited.

Neurobiology of PTSD

PTSD is characterized by specific symptoms, including intrusive thoughts, hyperarousal, flashbacks, nightmares, and sleep disturbances, changes in memory and concentration, and startle responses. Symptoms of PTSD are hypothesized to represent the behavioral manifestation of stress-induced changes in brain structure and function. Stress results in acute and chronic changes in neurochemical systems and specific brain regions, which result in long-term changes in brain "circuits," involved in the stress response.[34-37] Brain regions that are felt to play an important role in PTSD include hippocampus, amygdala, and medial prefrontal cortex. Cortisol and norepinephrine are two neurochemical systems that are critical in the stress response *(Figure 1)*.

The corticotropin-releasing factor (CRF)/hypothalamic-pituitary-adrenal (HPA) axis system plays an important role in the stress response. CRF is released from the hypothalamus, with stimulation of adrenocorticotropic hormone (ACTH) release from the pituitary, resulting in glucocorticoid (cortisol in man) release from the adrenal, which in turn has a negative feedback effect on the axis at the level of the pituitary, as well as central brain sites including hypothalamus and hippocampus. Cortisol has a number of effects which facilitate survival. In addition to its role in triggering the HPA axis, CRF acts centrally to mediate fear-related behaviors,[38] and triggers other neurochemical responses to stress, such as the noradrenergic system via the brain stem locus coeruleus.[39] Noradrenergic neurons release transmitter throughout the brain; this is associated with an increase in alerting and vigilance behaviors, critical for coping with acute threat.[40-42]

Studies in animals showed that early stress has lasting effects on the HPA axis and norepinephrine. A variety of early stressors resulted in increased glucocorticoid

response to subsequent stressors.[43-45] Maternally deprived rats had decreased numbers of glucocorticoid receptors in the hippocampus, hypothalamus, and frontal cortex.[46] Stressed animals demonstrated an inability to terminate the glucocorticoid response to stress,[47,48] as well as deficits in fast-feedback of glucocorticoids on the HPA axis, which could be related to decreased glucocorticoid receptor binding in the hippocampus.[49] Early postnatal adverse experiences increase hypothalamic CRF messenger ribonucleic acid (mRNA), median eminence CRF content, and stress-induced glucocorticoid[50] and ACTH release.[46] These effects could be mediated by an increase in synthesis of CRH mRNA following stress.[51] In nonhuman primates, adverse early experiences resulted in long-term effects on behaviors, as well as elevated levels of CRF in the cerebrospinal fluid.[52] Exposure to chronic stress results in potentiation of noradrenergic responsiveness to subsequent stressors and increased release of norepinephrine in the hippocampus and other brain regions.[42]

Preclinical and clinical studies have shown alterations in memory function following traumatic stress,[53] as well as changes in a circuit of brain areas, including hippocampus, amygdala, and medial prefrontal cortex, that mediate alterations in memory.[54] The hippocampus, a brain area involved in verbal declarative memory, is very sensitive to the effects of stress. Stress in animals is associated with damage to neurons in the CA3 region of the hippocampus (which may be mediated by hypercortisolemia, decreased brain-derived neurotrophic factor (BDNF), and/or elevated glutamate levels) and inhibition of neurogenesis.[55-60] High levels of glucocorticoids seen with stress were also associated with deficits in new learning.[61,62]

Antidepressant treatments have been shown to block the effects of stress and/or promote neurogenesis.[58,63-66] Animal studies have demonstrated several agents with

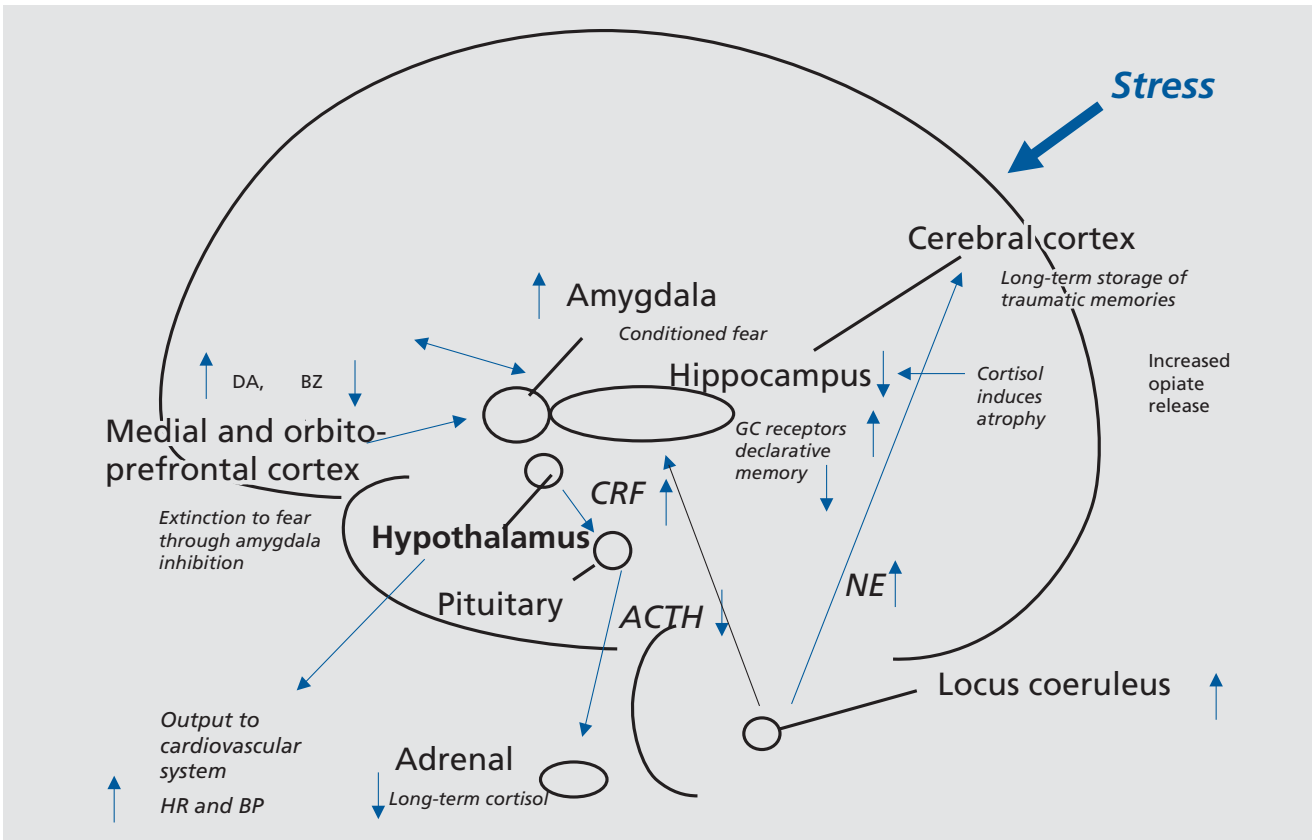

Figure 1. Lasting effects of trauma on the brain, showing long-term dysregulation of norepinephrine and cortisol systems, and vulnerable areas of hippocampus, amygdala, and medial prefrontal cortex that are affected by trauma. GC, glucocorticoid; CRF, corticotropin-releasing factor; ACTH, adrenocorticotropin hormone; NE, norepinephrine; HR, heart rate; BP, blood pressure; DA, dopamine; BZ, benzodiazapine; GC, glucocorticoid

potentially beneficial effects on stress-induced hippocampal damage. It has been found that phenytoin blocks the effects of stress on the hippocampus, probably through modulation of excitatory amino acid-induced neurotoxicity.[67] Other agents, including tianeptine, dihydroepiandosterone (DHEA), and fluoxetine have similar effects.[63,64,66,68-73] These medications may share a common mechanism of action through upregulation of cyclic adenosine monophosphate (cAMP) response element binding protein (CREB) that may lead to regulation of expression of specific target genes involved in structural modeling of the hippocampus. Such treatment effects on BDNF and trkB messenger ribonucleic acid (mRNA), can have long-term effects on brain structure and function. There is new evidence that neurogenesis is necessary for the behavioral effects of antidepressants,[74,75] although this continues to be a source of debate.[72,76]

The hippocampus demonstrates an unusual capacity for neuronal plasticity and regeneration. In addition to findings noted above related to the negative effects of stress on neurogenesis, it has recently been demonstrated that changes in the environment, eg, social enrichment or learning, can modulate neurogenesis in the dentate gyrus of the hippocampus, and slow the normal age-related decline in neurogenesis.[77,78] Rat pups that are handled frequently within the first few weeks of life (picking them up and then returning them to their mother) had increased type II glucocorticoid receptor binding which persisted throughout life, with increased feedback sensitivity to glucocorticoids, and reduced glucocorticoid-mediated hippocampal damage in later life.[79] These effects appear to be due to a type of "stress inoculation" from the mothers' repeated licking of the handled pups.[80] Considered together, these findings suggest that early in the postnatal period there is a naturally occurring brain plasticity in key neural systems that may "program" an organism's biological response to stressful stimuli. These findings may have implications for victims of childhood abuse.

Long-term dysregulation of the HPA axis is associated with PTSD, with low levels of cortisol found in chronic PTSD in many studies[81-86] and elevations in CRF.[82,87] Not all studies, however, have found lower cortisol levels in PTSD.[88-91] Exposure to a traumatic reminder appears to be associated with a potentiated release of cortisol in PTSD.[92]

The few studies of the effects of early stress on neurobiology conducted in clinical populations of traumatized children have generally been consistent with findings from animal studies. Research in traumatized children has been complicated by issues related to psychiatric diagnosis and assessment of trauma.[93] Some studies have not specifically examined psychiatric diagnosis, while others have focused on children with trauma and depression, and others on children with trauma and PTSD. Sexually abused girls (in which effects of specific psychiatric diagnosis were not examined) had normal baseline cortisol and blunted ACTH response to CRF,[94] while women with childhood abuse-related PTSD had hypercortisolemia.[95] Another study of traumatized children in which the diagnosis of PTSD was established showed increased levels of cortisol measured in 24-hour urines.[96] Emotionally neglected children from a Romanian orphanage had elevated cortisol levels over a diurnal period compared with controls.[97] Maltreated school-aged children with clinical-level internalizing problems had elevated cortisol compared with controls.[98] Depressed preschool children showed increased cortisol response to separation stress.[99] Adult women with a history of childhood abuse showed increased suppression of cortisol with low-dose (0.5 mg) dexamethasone.[100] Women with PTSD related to early childhood sexual abuse showed decreased baseline cortisol based on 24-hour diurnal assessments of plasma, and exaggerated cortisol response to stressors (traumatic stressors[101] more than neutral cognitive stressors).[102] We also found that patients with PTSD had less of an inhibition of memory function with synthetic cortisol (dexamethasone) than normal subjects.[103] Adult women with depression and a history of early childhood abuse had an increased cortisol response to a stressful cognitive challenge relative to controls,[104] and a blunted ACTH response to CRF challenge.[105] These findings show long-term changes in stress responsive systems. Early in development, stress is associated with increased cortisol and norepinephrine responsiveness, whereas with adulthood, resting cortisol may be normal or low, but there continues to be increased cortisol and norepinephrine responsiveness to stressors. In addition, early stress is associated with alterations in hippocampal morphology which may not manifest until adulthood, as well as increased amygdala function and decreased medial prefrontal function.

Cognitive function and brain structure in PTSD

Studies in PTSD are consistent with changes in cognition and brain structure. Multiple studies have demonstrated verbal declarative memory deficits in PTSD.[53,106-108]

Patients with PTSD secondary to combat[109-113] and childhood abuse[114,115] were found to have deficits in verbal declarative memory function based on neuropsychological testing. Studies, using a variety of measures (including the Wechsler Memory Scale, the visual and verbal components of the Selective Reminding Test, the Auditory Verbal Learning Test, Paired Associate Recall, the California Verbal New Learning Test, and the Rivermead Behavioral Memory Test), found specific deficits in verbal declarative memory function, with a relative sparing of visual memory and IQ.[109-113,115-124] These studies have been conducted in both patients with PTSD related to Vietnam combat,[109-113,116,119-121,123] rape,[117] the Holocaust,[124-126] adults with early childhood abuse,[115] and traumatized children.[118] One study in adult rape survivors showed that verbal declarative memory deficits are specifically associated with PTSD, and are not a nonspecific effect of trauma exposure.[117] Another study of women with early childhood sexual abuse in which some, but not all, of the patients had PTSD, showed no difference between abused and nonabused women,[127] while another study was not able to show a difference between Vietnam veterans with and without PTSD.[128] Other types of memory disturbances studied in PTSD include gaps in memory for everyday events (dissociative amnesia),[129] deficits in autobiographical memory,[130] an attentional bias for trauma-related material,[131-140] and frontal lobe-related impairments.[141] These studies suggest that traumas such as early abuse with associated PTSD result in deficits in verbal declarative memory. It is not clear if cognitive deficits in early abuse survivors are specific to PTSD and are not related to the nonspecific effects of abuse.

These effects were specific to verbal (not visual) memory, and were significant after controlling for IQ. Some of these studies used neuropsychological tests of declarative memory, such as the Wechsler Memory Scale (WMS) and Selective Reminding Test (SRT), that have been validated as sensitive to loss of neurons in the CA3 region of the hippocampus in epileptics who underwent hippocampal resection.[142,143] Vietnam veterans with PTSD were originally shown by us to have 8% smaller right hippocampal volume based on magnetic resonance imaging (MRI) relative to controls matched for a variety of factors such as alcohol abuse and education ($P<0.05$); smaller volume was correlated with deficits in verbal declarative memory function as measured with the Wechsler Memory Scale.[144] A second study from our group showed a 12% reduction in left hippocampal volume in 17 patients with childhood abuse-related PTSD compared with 17 case-matched controls, that was significant after controlling for confounding factors.[145] Smaller hippocampal volume was shown to be specific to PTSD within the anxiety disorders, and was not seen in panic disorder.[146] Gurvits et al[147] showed bilateral hippocampal volume reductions in combat-related PTSD compared with combat veterans without PTSD and normal controls. Combat severity was correlated with volume reduction. Stein et al[148] found a 5% reduction in left hippocampal volume. Other studies in PTSD have found smaller hippocampal volume and/or reductions in *N*-acetyl aspartate (NAA), a marker of neuronal integrity.[149-153] Studies in childhood[154-156] and new-onset[157,158] PTSD did not find hippocampal volume reduction, although reduced NAA (indicating loss of neuronal integrity) was found in medial prefrontal cortex in childhood PTSD.[159] In a recent meta-analysis we pooled data from all of the published studies and found smaller hippocampal volume for both the left and the right sides, equally in adult men and women with chronic PTSD, and no change in children.[160] More recent studies of holocaust survivors with PTSD did not find a reduction in hippocampal volume, although PTSD patients who developed PTSD in response to an initial trauma had smaller hippocampal volume compared with those who developed PTSD after repeated trauma, suggesting a possible vulnerability of smaller hippocampal volume.[161] Two independent studies have shown that PTSD patients have deficits in hippocampal activation while performing a verbal declarative memory task,[149,162] although it is unclear if this is a deficit in activation or higher hippocampal blood flow at baseline. Both hippocampal atrophy and hippocampal-based memory deficits reversed with treatment with the selective serotonin reuptake inhibitor (SSRI) paroxetine, which has been shown to promote neurogenesis (the growth of neurons) in the hippocampus in preclinical studies.[163] In addition, treatment with the anticonvulsant phenytoin led to an improvement in PTSD symptoms[164] and an increase in right hippocampal and right cerebral volume.[165] We hypothesize that stress-induced hippocampal dysfunction may mediate many of the symptoms of PTSD which are related to memory dysregulation, including both explicit memory deficits as well as fragmentation of memory in abuse survivors. It is unclear at the current time whether these changes are specific to PTSD, whether certain common environmental events (eg, stress) in different disorders lead to similar brain changes, or whether common genetic traits lead to similar outcomes.

The meaning of findings related to deficits in memory and the hippocampus in PTSD, and questions related to the relative contribution of genetic and environmental factors, has become an important topic in the field of PTSD and stress research. There are three possible models, taking into account genetic or environmental factors, which have been proposed to explain smaller hippocampal volume in PTSD: Model A (Environment), Model B (Environment and Genetic), and Model C (Genetic).[166-169] In Model C (Genetic), smaller hippocampal volume represents a premorbid risk factor for PTSD. In support of this model Pitman and colleagues[170] have demonstrated that lower premilitary IQ is associated with combat-related PTSD, as well as finding a correlation between PTSD symptoms and hippocampal volume in twin brothers.[151] Model A (Environment) states that stress leads to damage or inhibition of neurogenesis via hypercortisolemia, decreased BDNF, or increased glutamate. Model B (Environment/Genetic) states that a combination of environmental and genetic factors leads to deficits in hippocampal function and structure. Showing that an intervention like medication changes hippocampal volume and cognition would provide support for at least a partial contribution of the environment to the outcomes of interest.

In addition to the hippocampus, other brain structures have been implicated in a neural circuitry of stress, including the amygdala and prefrontal cortex. The amygdala is involved in memory for the emotional valence of events, and plays a critical role in the acquisition of fear responses. The medial prefrontal cortex includes the anterior cingulate gyrus (Brodmann's area [BA] 32) and subcallosal gyrus (area 25) as well as orbitofrontal cortex. Lesion studies demonstrated that the medial prefrontal cortex modulates emotional responsiveness through inhibition of amygdala function. Conditioned fear responses are extinguished following repeated exposure to the conditioned stimulus in the absence of the unconditioned (aversive, eg, electric shock) stimulus. This inhibition appears to be mediated by medial prefrontal cortical inhibition of amygdala responsiveness.

Animal studies also show that early stress is associated with a decrease in branching of neurons in the medial prefrontal cortex.[171] Rauch and colleagues found smaller volume of the anterior cingulate based on MRI measurements in PTSD[172]; we have replicated these findings in women with abuse and PTSD.[160] An important question is whether these effects are reversible with treatment.

Neural circuits in PTSD

Brain imaging studies have shown alterations in a circuit including medial prefrontal cortex (including anterior cingulate), hippocampus, and amygdala in PTSD. Many of these studies have used different methods to trigger PTSD symptoms (eg, using traumatic cues) and then look at brain function. Stimulation of the noradrenergic system with yohimbine resulted in a failure of activation in dorsolateral prefrontal, temporal, parietal, and orbitofrontal cortex, and decreased function in the hippocampus.[173] Exposure to traumatic reminders in the form of traumatic slides and/or sounds or traumatic scripts was associated with an increase in PTSD symptoms, decreased blood flow, and/or failure of activation in the medial prefrontal cortex/anterior cingulate, including Brodmann's area 25, or subcallosal gyrus, area 32 and 24, as measured with positron emission tomography (PET) or functional MRI (fMRI).[174-183] Other findings in studies of traumatic reminder exposure include decreased function in hippocampus,[176] visual association cortex,[176,180] parietal cortex,[176,179,180,184] and inferior frontal gyrus,[176,179,180,184] and increased function in amygdala,[181,184] posterior cingulate,[174,176,177,180] and parahippocampal gyrus.[174,176,178] Shin and colleagues found a correlation between increased amygdala function and decreased medial prefrontal function with traumatic reminders,[181] indicating a failure of inhibition of the amygdala by the medial prefrontal cortex that could account for increased PTSD symptoms with traumatic reminders. Other studies found increased amygdala and parahippocampal function and decreased medial prefrontal function during performance of an attention task,[182] increased posterior cingulate and parahippocampal gyrus and decreased medial prefrontal and dorsolateral prefrontal function during an emotional Stroop paradigm,[185] and increased amygdala function with exposure to masked fearful faces.[186] Retrieval of emotionally valenced words[187] (eg "rape-mutilate") in women with PTSD from early abuse resulted in decreases in blood flow in an extensive area which included orbitofrontal cortex, anterior cingulate, and medial prefrontal cortex (BA 25, 32, and 9), left hippocampus, and fusiform gyrus/inferior temporal gyrus, with increased activation in posterior cingulate, left inferior parietal cortex, left middle frontal gyrus, and visual association and motor cortex.[188] Another study found a failure of medial prefrontal cortical/anterior cingulate activation, and decreased visual association and parietal

cortex function, in women with abuse and PTSD relative to women with abuse without PTSD, during performance of the emotional Stroop task (ie, naming the color of a word such as "rape").[189] We recently found increased amygdala activation with classical fear conditioning (pairing a shock and a visual stimulus), and decreased medial prefrontal cortex function with extinction, in abuse-related PTSD.[190] The findings described above point to a network of related regions mediating symptoms of PTSD, including medial prefrontal cortex, anterior cingulate, hippocampus, amygdala, posterior cingulate, parietal, visual association, and dorsolateral prefrontal cortex.[191]

Fewer brain imaging studies have been performed in children with PTSD. Several studies have shown alterations in electroencephalogram (EEG) measures of brain activity in children with a variety of traumas who were not selected for diagnosis compared with healthy children. About half of the children in these studies had a psychiatric diagnosis. Abnormalities were located in the anterior frontal cortex and temporal lobe and were localized to the left hemisphere.[192,193] Two studies have found reductions in brain volume in children with trauma and PTSD symptoms.[154,155] One group did not find reductions in hippocampal volume, either at baseline or over a longitudinal period,[154,156] while another group found an 8.5% reduction in hippocampal volume that was not significant after controlling for smaller brain volumes in the PTSD group.[155] One study used single-voxel proton magnetic resonance spectroscopy (proton MRS) to measure relative concentration of NAA and creatinine (a marker of neuronal viability) in the anterior cingulate of 11 children with maltreatment-related PTSD and 11 controls. The authors found a reduction in the ratio of NAA to creatinine in PTSD relative to controls.[159] Studies have also found smaller size of the corpus callosum in children with abuse and PTSD relative to controls.[154] as well as larger volume of the superior temporal gyrus.[194] In a study of abused children in whom diagnosis was not specified, there was an increase in T2 relaxation time in the cerebellar vermis, suggesting dysfunction in this brain region.[195] The reason for differences in findings between adults and children are not clear; however, factors such as chronicity of illness or interaction between trauma and development may explain findings to date.

In summary, dysfunction of a circuit involving the medial prefrontal cortex, dorsolateral prefrontal cortex, and possibly hippocampus and amygdala during exposure to traumatic reminders may underlie symptoms of PTSD. These studies have primarily assessed neural correlates of traumatic remembrance, while little has been done in the way of utilizing cognitive tasks as probes of specific regions, such as memory tasks as probes of hippocampal function.

MRI assessment of brain abnormalities in PTSD and trauma spectrum disorders

Findings of smaller hippocampal volume appear to be associated with a range of trauma related psychiatric disorders, as long as there is the presence of psychological trauma. We have used MRI to show smaller hippocampal volume in PTSD,[144,145,149,196] depression,[197] depression with early abuse,[198] borderline personality disorder (BPD) with early abuse,[199] and Dissociative Identity Disorder (DID) with early abuse.[200] The greatest magnitude of difference was seen in the DID patients, who had unusually severe early childhood sexual abuse histories. We did not find changes in hippocampal volume in patients with panic disorder without a history of abuse (suggesting that findings are not generalized to other anxiety disorders).[201] We found smaller amygdala volume in BPD with early abuse[199] and increased amygdala volume in depression.[197,202] Patients with depression had smaller orbitofrontal cortex volume with no changes in anterior cingulate (BA 32) or medial prefrontal cortex (BA 25).[203] More recently, we found smaller anterior cingulate volume in women with abuse and PTSD relative to controls.[204]

Neural circuits in women with abuse and PTSD

We have used PET to study neural circuits of trauma-related disorders in women with early abuse and a variety of trauma spectrum mental disorders. Initially we studied women with abuse and PTSD.[54,205-208] We initially measured brain activation with a paragraph-encoding task in conjunction with PET O-15 water measurement of brain blood flow. Women with abuse and PTSD showed a failure of hippocampal activation during the memory task relative to controls.[149] Women with abuse and PTSD in this study also had smaller hippocampal volume measured with MRI relative to both women with abuse without PTSD and nonabused non-PTSD women. The failure of hippocampal activation was significant

after controlling differences in hippocampal volume as well as accuracy of encoding. In another study we measured neural correlates of exposure to a personalized script of childhood sexual abuse. Women with abuse and PTSD showed a failure of medial prefrontal and hippocampal activation relative to abused women without PTSD.[176] Women with abuse and PTSD also showed a failure of medial prefrontal and hippocampal function during recall of paired word associates with traumatic-emotional content (eg, "rape-mutilate"),[188] and decreased medial prefrontal function during an emotional Stroop task with trauma-content words.[209] Other studies showed a failure of medial prefrontal activation in women with BPD and early abuse during an abandonment script.[210] Women with BPD and abuse had increased psychophysiological responses to abandonment scripts relative to trauma scripts, while women with PTSD and abuse had the opposite pattern,[211] indicating differential responding in those two disorders in spite of the common exposure to early abuse.

In another project we studied 19 physically healthy women including women with a history of severe childhood sexual abuse and the diagnosis of current PTSD (N=8) and women without childhood abuse or PTSD (N=11).[212] All subjects underwent PET measurement of cerebral blood flow and psychophysiology measurement of heart rate and skin conductance during habituation, acquisition, and extinction conditions, on a single day, with scanning during a control condition on another day separated by 1 week from the active condition. Subjects were randomly assigned to undergo either the active condition or the control condition first (ie, active-control or control-active). Subjects were told at the beginning of the study that they would be exposed to electric shocks and viewing images on a screen during collection of PET and psychophysiology data. During habituation subjects were exposed to a blue square on a screen (conditioned stimulus [CS]), 4 seconds in duration, followed by 6 seconds of a blank screen. CS exposure was repeated eight times at regular intervals over 80 seconds in two separate blocks separated by 8 minutes. One PET image of brain blood flow was obtained starting from the beginning of each of the blocks. During active fear acquisition exposure to the blue square (CS) was paired with an electric shock to the forearm (unconditioned stimulus [UCS]). Subjects had 8 paired CS-UCS presentations at 10-second intervals for each of two blocks. With extinction subjects were again exposed to the blue squares (CS) without shock ("active" extinction). On a second day subjects went through the same procedure with electric shocks delivered randomly when the blue square was not present (unpaired CS-UCS) (an equal number as on day 1) during scans 3 and 4, which served as a control for active fear acquisition.

PTSD subjects had increased symptoms of anxiety, fear, dissociation, distress, substance use disorders (SUDs), and PTSD at all time points during both study days relative to non-PTSD. Acquisition of fear was associated with increased skin conductance (SC) responses to CS exposure during the active versus the control conditions in all subjects. There was increased SC for PTSD during the first CS-UCS presentation. Extinction of fear was associated with increased skin conductance (SC) responses to CS exposure during the active versus the control conditions in all subjects. When PTSD and non-PTSD subjects were examined separately, SC levels were significantly elevated in non-PTSD subjects undergoing extinction following the active compared with the control condition during session one.

PTSD subjects showed activation of the bilateral amygdala during fear acquisition compared with the control condition. Non-PTSD subjects showed an area of activation in the region of the left amygdala. When PTSD subjects and control subjects were directly compared, PTSD subjects showed greater activation of the left amygdala during the fear conditioning condition (pairing of US and CS) relative to the random shock control than healthy women. Other areas that showed increased activation with fear acquisition in PTSD included bilateral superior temporal gyrus (BA 22), cerebellum, bilateral inferior frontal gyrus (BA 44, 45), and posterior cingulate (BA 24). Fear acquisition was associated with decreased function in medial prefrontal cortex, visual association cortex, and medial temporal cortex, inferior parietal lobule function, and other areas. Extinction of fear responses was associated with decreased function in the orbitofrontal and medial prefrontal cortex (including subcallosal gyrus, BA 25, and anterior cingulate BA 32), visual association cortex, and other areas, in the PTSD subjects, but not in the controls. Amygdala blood flow with fear acquisition was negatively correlated with medial prefrontal blood flow with fear extinction (increased blood flow in amygdala correlated with decreased blood flow in medial prefrontal cortex) in all subjects (r=-0.48; P<0.05). Increased amygdala blood flow with fear acquisition was positively correlated with PTSD (r=0.45), anxiety (r=0.44) and disso-

ciative (r=0.80) symptom levels in PTSD (but not non-PTSD) subjects. There was a negative correlation between medial prefrontal blood flow during extinction and anxiety as measured with the Panic Attack Symptom Scale (PASS) during extinction in the PTSD group only, which was significant after correction for multiple comparisons (r=-0.90; P=0.006).[190] This study was consistent with increased amygdala function with fear acquisition, and decreased medial prefrontal (anterior cingulate) function during extinction in PTSD. This is consistent with the model of an overactive amygdala and a failure of medial prefrontal cortex to extinguish, or shut off, the amygdala, when the acute threat is no longer present.

Treatment of PTSD

Intervening soon after the trauma is critical for long-term outcomes, since with time traumatic memories become indelible and resistant to treatment.[213] Early treatments are not necessarily effective. For instance, studies have shown that Critical Incident Stress Debriefing (CISD) can be associated with a worsening of outcome relative to no treatment at all.[214] Pharmacological treatment of chronic PTSD has shown efficacy originally for imipramine,[215] amitriptyline,[216] and phenalzine,[215] and later for brofaramine,[217] paroxetine,[218,219] and sertraline.[220] Selective serotonin reuptake inhibitors (SSRIs) and tianeptine are now recommended as first-line treatment for PTSD.[221-226]

The utility of early treatment is also demonstrated by animal studies showing that pretreatment before stress with antidepressants reduces chronic behavioral deficits related to stress.[227,228] Antidepressants, including both norepinephrine and serotonin reuptake inhibitors, as well as gabapentine and phenytoin, promote nerve growth (neurogenesis) in the hippocampus, while stress inhibits neurogenesis.[63,64,66,69,71,75,229] This is important because hippocampal neurogenesis has been shown to be required for antidepressant response.[74]

Few studies have examined the effects of pharmacological treatment on brain structure and function in patients with trauma-related mental disorders. We studied a group of patients with depression and found no effect of fluoxetine on hippocampal volume, although there were increases in memory function[230] and hippocampal activation measured with PET during a memory encoding task. Depressed patients with a history of childhood trauma were excluded, and we subsequently have found hippocampal volume reductions at baseline in women with early abuse and depression but not in women with depression without early abuse;[198] this suggests that the study design of excluding patients with early trauma may account for the negative result. Other studies in depression showed that smaller hippocampal volume was a predictor of resistance to antidepressant treatment.[231] Smaller orbitofrontal cortex volume is associated with depression; one study in geriatric depression found smaller orbitofrontal cortex volume, while length of antidepressant exposure was correlated with larger orbitofrontal volume.[232]

Several studies have looked at functional brain imaging response to antidepressants in depression. Single photon-emission computed tomography (SPECT) blood flow studies in depression showed that antidepressants increased anterior cingulate, right putamen, and right thalamus function.[233] SPECT Xenon-133 studies showed reduced prefrontal function at baseline in depression, with treatment responders showing reduced perfusion in prefrontal cortex compared with nonresponders after treatment.[234] In a fluorodeoxyglucose (FDG) PET study of brain function patients with depression treated with fluoxetine who had a positive response to treatment had limbic and striatal decreases (subgenual cingulate, hippocampus, insula, and pallidum) and brain stem and dorsal cortical increases (prefrontal, parietal, anterior, and posterior cingulate) in function. Failed response was associated with a persistent 1-week pattern and absence of either subgenual cingulate or prefrontal changes.[235] Sertraline resulted in an increase in middle frontal gyrus activity in depression measured with PET FDG, as well as increased function in right parietal lobe and visual association cortex.[236] Successful paroxetine therapy of depression was associated with increased glucose metabolism measured with PET in dorsolateral, ventrolateral, and medial aspects of the prefrontal cortex, parietal cortex, and dorsal anterior cingulate. Areas of decreased metabolism were noted in both anterior and posterior insular regions (left) as well as right hippocampal and parahippocampal regions.[237] In another PET FDG study, at baseline, subjects with depression had higher normalized metabolism than controls in the prefrontal cortex (and caudate and thalamus), and lower metabolism in the temporal lobe. With treatment with paroxetine, subjects with depression had metabolic changes in the direction of normalization in these regions.[238] A PET FDG study of patients with depression and controls showed that at baseline, the mean metabolism was increased in the left and right lateral orbital cortex/ventrolateral prefrontal cortex (PFC), left amygdala,

and posterior cingulate cortex, and decreased in the subgenual anterior cingulate cortex (ACC) and dorsal medial/dorsal anterolateral PFC in depressives relative to controls. Following treatment with antidepressants, metabolism significantly decreased in the left amygdala and left subgenual ACC. The metabolic reduction in the amygdala and right subgenual ACC appeared largely limited to those subjects who both responded to treatment and remained well at 6 months' follow-up.[239] Another study showed that antidepressant treatment of depression resulted in a decrease in amygdala activation with emotional faces as measured with fMRI.[240] In summary, studies show changes in limbic and prefrontal cortical regions with successful antidepressant treatment of depression.

Fewer studies have looked at the effects of pharmacological treatment on the brain in anxiety disorders. One PET FDG study showed that caudate function decreased with treatment of obsessive compulsive disorder with antidepressants.[241] Paroxetine resulted in a decrease in glutamate/glutamine measured with magnetic resonance spectroscopy (MRS) in children with obsessive-compulsive disorder (OCD).[242] Patients with PTSD were shown to have an increase in hippocampal volume and memory function with paroxetine,[163] and increased right hippocampal and right cerebral volume with phenytoin.[165] No published studies have looked at the effects of pharmacological treatment on brain function in PTSD, or on sensitive markers of brain chemistry like NAA.

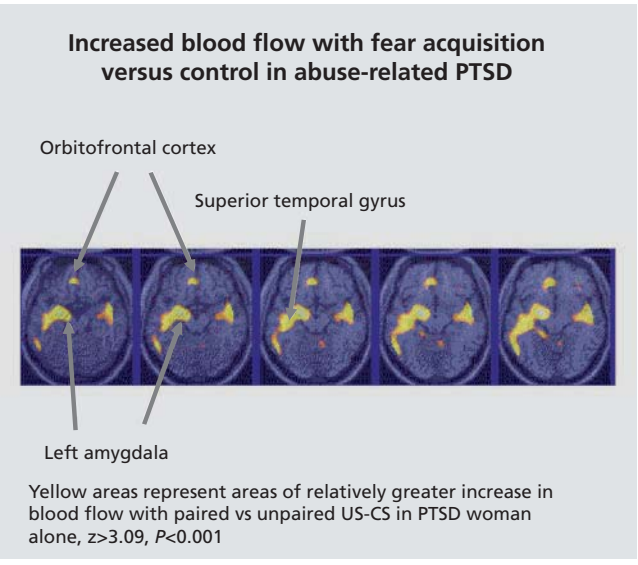

Figure 2. Neural correlates of fear conditioning in women with abuse and PTSD. There was increased amygdala activation with fear acquisition using a classical conditioning paradigm relative to non-PTSD abused women. PTSD, post-traumatic stress disorder

Brain biomarkers like NAA represent an objective marker of neural plasticity. To date psychiatry has relied on subjective reports as the gold standard. However, this is limited by self-reporting and the subjective interpretations of symptoms and response to treatment. Brain markers of antidepressant response may provide a complementary approach to assessing response to treatment, as well as providing insight into the mechanisms of treatment response. Our group is trying to look at mechanisms in the brain underlying treatment response in PTSD.

Effects of pharmacotherapy on brain function and structure in PTSD

We have begun to assess the effects of pharmacotherapy on brain structure and function in PTSD.[243] We recently assessed the effects of phenytoin on brain structure and function. Studies in animals show that phenytoin, which is used in the treatment of epilepsy and is known to modulate glutamatergic function, blocks the effects of stress on the hippocampus.[67] We studied nine patients with PTSD in an open-label function before and after treatment with phenytoin. Phenytoin resulted in a significant improvement in PTSD symptoms.[164] Phenytoin also resulted in increases in both right hippocampal volume and right hemisphere volume.[165] These findings indicate that phenytoin has an effects on PTSD symptoms as well as brain structure in PTSD patients.

We have assessed the effects of open-label paroxetine on memory and the hippocampus in PTSD. Male and female patients with symptoms of PTSD were medication-free for at least 4 weeks before participation in the study. Twenty-eight patients were found to be eligible and started the medication phase. Of the total patient sample five patients did not finish due to noncompliance; 23 patients completed the study.

Before patients started the medication phase, neuropsychological tests were administered, including the *Wechsler Adult Intelligence Scale – Revised*, WAIS-R (arithmetic, vocabulary, picture arrangement, and block design test), two subtests of the *Wechsler Memory Scale-Revised*, WMS-R, including logical memory (free recall of two story narratives, which represents verbal memory) and figural memory (which represents visual memory and involved reproduction of designs after a 6-second presentation); and the verbal and visual components of

the *Selective Reminding Test*, SRT.

Paroxetine was prescribed in the first visit after the pre-treatment assessments. All patients started open-label with a dose of 10 mg daily and were titrated up to 20 mg in 4 days.

Paroxetine treatment resulted in a mean 54% reduction in PTSD symptoms as measured with mean changes from baseline on the CAPS total score ($P<0.005$) among study completers. Improvement was equally strong on all symptom cluster scores (Re-experiencing, Avoidance/Numbing, Hyperarousal). Treatment also resulted in significant improvements in verbal declarative memory as measured with the WMS-R paragraph recall for delayed recall ($P<0.005$) and percent retention (80.2 to 91.1; $P=0.003$), but not immediate recall. Improvements were significant on all subscales of the Verbal Component of the SRT; including long-term recall and delayed recall.

Repeated measures ANOVA with side as the repeated measure showed a main effect for treatment related to a 4.6% increase in mean hippocampal volume (1857.3 mm^3 [SD 225.6] to 1906.2 mm^3, [SD 243.2]) with treatment (F=8.775 df=1. 36; $P=0.005$). Increased hippocampal volume was seen for both left (5.6%) (1807.6 mm^3 [SD 255.5] to 1909.3 mm^3 [SD 236.9]) and right (3.7%) (1906.9 mm^3 [SD 195.8] to 1976.7 mm^3 (SD 249.6]) hippocampus. There was no change in whole brain volume with treatment. Increase in hippocampal volume was significant after adding whole brain volume before and after treatment to the model.

Discussion

Traumatic stress has a broad range of effects on brain function and structure, as well as on neuropsychological components of memory. Brain areas implicated in the stress response include the amygdala, hippocampus, and prefrontal cortex. Neurochemical systems, including cortisol and norepinephrine, play a critical role in the stress response. These brain areas play an important role in the stress response. They also play a critical role in memory, highlighting the important interplay between memory and the traumatic stress response. Preclinical studies show that stress affects these brain areas. Furthermore, antidepressants have effects on the hippocampus that counteract the effects of stress. In fact, promotion of nerve growth (neurogenesis) in the hippocampus may be central to the efficacy of the antidepressants. Studies in patients with PTSD show alterations in brain areas implicated in animal studies, including the amygdala, hippocampus, and prefrontal cortex, as well as in neurochemical stress response systems, including cortisol and norepinephrine. Treatments that are efficacious for PTSD show a promotion of neurogenesis in animal studies, as well as promotion of memory and increased hippocampal volume in PTSD. Future studies are needed to assess neural mechanisms in treatment response in PTSD. ❑

Estrés traumático: efectos en la cerebro

El estrés traumático surte efectos muy diversos sobre la función y la estructura cerebrales. Las regiones cerebrales implicadas en la respuesta al estrés son la amígdala (núcleo amigdalino), el hipocampo y la corteza prefrontal. Los sistemas neuroquímicos, como el cortisol y la noradrenalina, desempeñan una misión crítica en la respuesta al estrés. Estas regiones cerebrales influyen sobre la respuesta al estrés y sobre la memoria, lo que subraya la interrelación entre la memoria y la respuesta al estrés traumático. Los antidepresivos actúan sobre el hipocampo y contrarrestan el efecto del estrés. Los estudios sobre pacientes con trastorno por estrés postraumático (TEPT) revelan alteraciones en las regiones cerebrales implicadas en los estudios con animales como la amígdala, el hipocampo y la corteza prefrontal, así como en los sistemas neuroquímicos de respuesta al estrés, entre ellos el cortisol y la noradrenalina. Los tratamientos con eficacia frente al TEPT promueven la neurogénesis en los estudios con animales y también aumentan la memoria, y el volumen hipocámpico en el TEPT. Se requieren nuevos estudios para evaluar los mecanismos neurales de la respuesta terapéutica en el TEPT.

Effets du stress traumatique sur le cerveau

Le stress traumatique exerce une grande variété d'effets sur la fonction et la structure cérébrales. Les aires cérébrales impliquées dans la réponse au stress comprennent l'amygdale, l'hippocampe et le cortex préfrontal. Les systèmes neurochimiques, incluant le cortisol et la norépinéphrine, jouent un rôle critique dans la réponse au stress. Ces aires cérébrales influent sur la mémoire et sur la réponse au stress traumatique, soulignant ainsi les interactions existant entre les deux. Les effets des antidépresseurs sur l'hippocampe compensent les effets du stress. Les études chez les patients atteints de trouble stress post-traumatique (ESPT) montrent des modifications des aires cérébrales impliquées au cours des études animales, telles l'amygdale, l'hippocampe et le cortex préfrontal, ainsi que des modifications des systèmes neurochimiques de réponse au stress comme le cortisol et la noradrénaline. Les traitements efficaces dans l'ESPT entraînent une activation de la neurogenèse chez l'animal de même qu'une amélioration de la mémoire et une augmentation du volume de l'hippocampe dans l'ESPT. Il faudra d'autres études pour évaluer les mécanismes neuronaux dans la réponse thérapeutique au cours de l'ESPT.

Contents

Consensus Panel ..... **vii**

KAP Expert Panel and Federal Government Participants ..... **ix**

What Is a TIP? ..... **xi**

Foreword ..... **xiii**

How This TIP Is Organized ..... **xv**

Terminology xvi

PART 1: A PRACTICAL GUIDE FOR THE PROVISION OF BEHAVIORAL HEALTH SERVICES **1**

Chapter 1—Trauma-Informed Care: A Sociocultural Perspective **3**

Scope of the TIP 4
Intended Audience 4
Before You Begin 4
Structure of the TIP 6
What Is Trauma? 7
Trauma Matters in Behavioral Health Services 7
Trauma-Informed Intervention and Treatment Principles 11
As You Proceed 32

Chapter 2—Trauma Awareness **33**

Types of Trauma 33
Characteristics of Trauma 46
Individual and Sociocultural Features 52

Chapter 3—Understanding the Impact of Trauma **59**

Sequence of Trauma Reactions 60
Common Experiences and Responses to Trauma 61
Subthreshold Trauma-Related Symptoms 75
Specific Trauma-Related Psychological Disorders 77
Other Trauma-Related and Co-Occurring Disorders 85

Chapter 4—Screening and Assessment 91

Screening and Assessment 92
Barriers and Challenges to Trauma-Informed Screening and Assessment 99
Cross-Cultural Screening and Assessment 103
Choosing Instruments 104
Trauma-Informed Screening and Assessment 106
Concluding Note 110

Chapter 5—Clinical Issues Across Services 111

Trauma-Informed Prevention and Treatment Objectives 111
Treatment Issues 127
Making Referrals to Trauma-Specific Services 135

Chapter 6—Trauma-Specific Services 137

Introduction 137
Trauma-Specific Treatment Models 139
Integrated Models for Trauma 147
Emerging Interventions 153
Concluding Note 155

PART 2: AN IMPLEMENTATION GUIDE FOR BEHAVIORAL HEALTH PROGRAM ADMINISTRATORS 157

Chapter 1—Trauma-Informed Organizations 159

Strategy #1: Show Organizational and Administrative Commitment to TIC 161
Strategy #2: Use Trauma-Informed Principles in Strategic Planning 162
Strategy #3: Review and Update Vision, Mission, and Value Statements 162
Strategy #4: Assign a Key Staff Member To Facilitate Change 163
Strategy #5: Create a Trauma-Informed Oversight Committee 163
Strategy #6: Conduct an Organizational Self-Assessment of Trauma-Informed Services ... 164
Strategy #7: Develop an Implementation Plan 164
Strategy #8: Develop Policies and Procedures To Ensure Trauma-Informed Practices and To Prevent Retraumatization 166
Strategy #9: Develop a Disaster Plan 166
Strategy #10: Incorporate Universal Routine Screenings 167
Strategy #11: Apply Culturally Responsive Principles 167
Strategy #12: Use Science-Based Knowledge 169
Strategy #13: Create a Peer-Support Environment 169
Strategy #14: Obtain Ongoing Feedback and Evaluations 170
Strategy #15: Change the Environment To Increase Safety 171
Strategy #16: Develop Trauma-Informed Collaborations 171

What Is a TIP?

Treatment Improvement Protocols (TIPs) are developed by the Substance Abuse and Mental Health Services Administration (SAMHSA) within the U.S. Department of Health and Human Services (HHS). Each TIP involves the development of topic-specific best practice guidelines for the prevention and treatment of substance use and mental disorders. TIPs draw on the experience and knowledge of clinical, research, and administrative experts of various forms of treatment and prevention. TIPs are distributed to facilities and individuals across the country. Published TIPs can be accessed via the Internet at http://store.samhsa.gov.

Although each consensus-based TIP strives to include an evidence base for the practices it recommends, SAMHSA recognizes that behavioral health is continually evolving, and research frequently lags behind the innovations pioneered in the field. A major goal of each TIP is to convey "front-line" information quickly but responsibly. If research supports a particular approach, citations are provided.

Foreword

The Substance Abuse and Mental Health Services Administration (SAMHSA) is the agency within the U.S. Department of Health and Human Services that leads public health efforts to advance the behavioral health of the nation. SAMHSA's mission is to reduce the impact of substance abuse and mental illness on America's communities.

The Treatment Improvement Protocol (TIP) series fulfills SAMHSA's mission to improve prevention and treatment of substance use and mental disorders by providing best practices guidance to clinicians, program administrators, and payers. TIPs are the result of careful consideration of all relevant clinical and health services research findings, demonstration experience, and implementation requirements. A panel of non-Federal clinical researchers, clinicians, program administrators, and patient advocates debates and discusses their particular area of expertise until they reach a consensus on best practices. This panel's work is then reviewed and critiqued by field reviewers.

The talent, dedication, and hard work that TIP panelists and reviewers bring to this highly participatory process have helped bridge the gap between the promise of research and the needs of practicing clinicians and administrators to serve, in the most scientifically sound and effective ways, people in need of behavioral health services. We are grateful to all who have joined with us to contribute to advances in the behavioral health field.

How This TIP Is Organized

This Treatment Improvement Protocol (TIP) is divided into three parts:

- Part 1: *A Practical Guide for the Provision of Behavioral Health Services*
- Part 2: *An Implementation Guide for Behavioral Health Program Administrators*
- Part 3: *A Review of the Literature*

Part 1 is for behavioral health service providers and consists of six chapters. Recurring themes include the variety of ways that substance abuse, mental health, and trauma interact; the importance of context and culture in a person's response to trauma; trauma-informed screening and assessment tools, techniques, strategies, and approaches that help behavioral health professionals assist clients in recovery from mental and substance use disorders who have also been affected by acute or chronic traumas; and the significance of adhering to a strengths-based perspective that acknowledges the resilience within individual clients, providers, and communities.

Chapter 1 lays the groundwork and rationale for the implementation and provision of trauma-informed services. It provides an overview of specific trauma-informed intervention and treatment principles that guide clinicians, other behavioral health workers, and administrators in becoming trauma informed and in creating a trauma-informed organization and workforce. Chapter 2 provides an overview of traumatic experiences. It covers types of trauma; distinguishes among traumas that affect individuals, groups, and communities; describes trauma characteristics; and addresses the socioecological and cultural factors that influence the impact of trauma. Chapter 3 broadly focuses on understanding the impact of trauma, trauma-related stress reactions and associated symptoms, and common mental health and substance use disorders associated with trauma. Chapter 4 provides an introduction to screening and assessment as they relate to trauma and is devoted to screening and assessment processes and tools that are useful in evaluating trauma exposure, its effects, and client intervention and treatment needs. Chapter 5 covers clinical issues that counselors and other behavioral health professionals may need to know and address when treating clients who have histories of trauma. Chapter 6 presents information on specific treatment models for trauma, distinguishing integrated models (which address substance use disorders, mental disorders, and trauma simultaneously) from those that treat trauma alone.

Advice to Counselors and/or Administrators boxes in Part 1 provide practical information for providers. Case illustrations, exhibits, and text boxes further illustrate information in the text by offering practical examples.

Part 2 provides an overview of programmatic and administrative practices that will help behavioral health program administrators increase the capacity of their organizations to deliver

trauma-informed services. Chapter 1 examines the essential ingredients, challenges, and processes in creating and implementing trauma-informed services within an organization. Chapter 2 focuses on key development activities that support staff members, including trauma-informed training and supervision, ethics, and boundaries pertinent to responding to traumatic stress, secondary trauma, and counselor self-care.

Advice to Administrators and/or Supervisors boxes in Part 2 highlight more detailed information that supports the organizational implementation of trauma-informed care (TIC). In addition, case illustrations, organizational activities, and text boxes reinforce the material presented within this section.

Part 3 is a literature review on TIC and behavioral health services and is intended for use by clinical supervisors, interested providers, and administrators. Part 3 has three sections: an analysis of the literature, links to select abstracts of the references most central to the topic, and a general bibliography of the available literature. To facilitate ongoing updates (performed periodically for up to 3 years from first publication), the literature review is only available online at the Substance Abuse and Mental Health Services Administration (SAMHSA) Publications Ordering Web page (http://store.samhsa.gov).

Terminology

Behavioral health: Throughout the TIP, the term "behavioral health" is used. Behavioral health refers to a state of mental/emotional being and/or choices and actions that affect wellness. Behavioral health problems include substance abuse or misuse, alcohol and drug addiction, serious psychological distress, suicide, and mental and substance use disorders. This includes a range of problems from unhealthy stress to diagnosable and treatable diseases like serious mental illness and substance use disorders, which are often chronic in nature but from which people can and do recover. The term is also used in this TIP to describe the service systems encompassing the promotion of emotional health, the prevention of mental and substance use disorders, substance use and related problems, treatments and services for mental and substance use disorders, and recovery support. Because behavioral health conditions, taken together, are the leading causes of disability burden in North America, efforts to improve their prevention and treatment will benefit society as a whole. Efforts to reduce the impact of mental and substance use disorders on America's communities, such as those described in this TIP, will help achieve nationwide improvements in health.

Client/consumer: In this TIP, the term "client" means anyone who seeks or receives mental health or substance abuse services. The term "consumer" stands in place of "client" in content areas that address consumer participation and determination. It is not the intent of this document to ignore the relevance and historical origin of the term "consumer" among individuals who have received, been subject to, or are seeking mental health services. Instead, we choose the word "client," given that this terminology is also commonly used in substance abuse treatment services. Note: This TIP also uses the term "participant(s)" instead of "client(s)" for individuals, families, or communities seeking or receiving prevention services.

Complex trauma: This manual adopts the National Child Traumatic Stress Network (NCTSN) definition of complex trauma. The term refers to the pervasive impact, including developmental

consequences, of exposure to multiple or prolonged traumatic events. According to the NCTSN Web site (http://www.nctsn.org/trauma-types), complex trauma typically involves exposure to sequential or simultaneous occurrences of maltreatment, "including psychological maltreatment, neglect, physical and sexual abuse, and domestic violence…. Exposure to these initial traumatic experiences—and the resulting emotional dysregulation and the loss of safety, direction, and the ability to detect or respond to danger cues—often sets off a chain of events leading to subsequent or repeated trauma exposure in adolescence and adulthood" (NCTSN, 2013).

Co-occurring disorders: When an individual has one or more mental disorders as well as one or more substance use disorders (including substance abuse), the term "co-occurring" applies. Although people may have a number of health conditions that co-occur, including physical problems, the term "co-occurring disorders," in this TIP, refers to substance use and mental disorders.

Cultural responsiveness and cultural competence: This TIP uses these terms interchangeably, with "responsiveness" applied to services and systems and "competence" applied to people, to refer to "a set of behaviors, attitudes, and policies that…enable a system, agency, or group of professionals to work effectively in cross-cultural situations" (Cross, Bazron, Dennis, & Isaacs, 1989, p. 13). Culturally responsive behavioral health services and culturally competent providers "honor and respect the beliefs, languages, interpersonal styles, and behaviors of individuals and families receiving services…. [C]ultural competence is a dynamic, ongoing developmental process that requires a long-term commitment and is achieved over time" (U.S. Department of Health and Human Services, 2003, p. 12).

Evidence-based practices: There are many different uses of the term "evidence-based practices." One of the most widely accepted is that of Chambless and Hollon (1998), who say that for a treatment to be considered evidence based, it must show evidence of positive outcomes based on peer-reviewed randomized controlled trials or other equivalent strong methodology. A treatment is labeled "strong" if criteria are met for what Chambless and Hollon term "well-established" treatments. To attain this level, rigorous treatment outcome studies conducted by independent investigators (not just the treatment developer) are necessary. Research support is labeled "modest" when treatments attain criteria for what Chambless and Hollon call "probably efficacious treatments." To meet this standard, one well-designed study or two or more adequately designed studies must support a treatment's efficacy. In addition, it is possible to meet the "strong" and "modest" thresholds through a series of carefully controlled single-case studies. An evidence-based practice derived from sound, science-based theories incorporates detailed and empirically supported procedures and implementation guidelines, including parameters of applications (such as for populations), inclusionary and exclusionary criteria for participation, and target interventions.

Promising practices: Even though current clinical wisdom, theories, and professional and expert consensus may support certain practices, these practices may lack support from studies that are scientifically rigorous in research design and statistical analysis; available studies may be limited in number or sample size, or they may not be applicable to the current setting or population. This TIP refers to such practices as "promising."

Recovery: This term denotes a process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential. Major dimensions that support a life in recovery, as defined by SAMHSA, include:

- ***Health:*** overcoming or managing one's disease(s) as well as living in a physically and emotionally healthy way.
- ***Home:*** a stable and safe place to live.
- ***Purpose:*** meaningful daily activities, such as a job, school, volunteerism, family caretaking, or creative endeavors, and the independence, income, and resources to participate in society.
- ***Community:*** relationships and social networks that provide support, friendship, love, and hope.

Resilience: This term refers to the ability to bounce back or rise above adversity as an individual, family, community, or provider. Well beyond individual characteristics of hardiness, resilience includes the process of using available resources to negotiate hardship and/or the consequences of adverse events. This TIP applies the term "resilience" and its processes to individuals across the life span.

Retraumatization: In its more literal translation, "retraumatization" means the occurrence of traumatic stress reactions and symptoms after exposure to multiple events (Duckworth & Follette, 2011). This is a significant issue for trauma survivors, both because they are at increased risk for higher rates of retraumatization, and because people who are traumatized multiple times often have more serious and chronic trauma-related symptoms than those with single traumas. In this manual, the term not only refers to the effect of being exposed to multiple events, but also implies the process of reexperiencing traumatic stress as a result of a current situation that mirrors or replicates in some way the prior traumatic experiences (e.g., specific smells or other sensory input; interactions with others; responses to one's surroundings or interpersonal context, such as feeling emotionally or physically trapped).

Secondary trauma: Literature often uses the terms "secondary trauma," "compassion fatigue," and "vicarious traumatization" interchangeably. Although compassion fatigue and secondary trauma refer to similar physical, psychological, and cognitive changes and symptoms that behavioral health workers may encounter when they work specifically with clients who have histories of trauma, vicarious trauma usually refers more explicitly to specific cognitive changes, such as in worldview and sense of self (Newell & MacNeil, 2010). This publication uses "secondary trauma" to describe trauma-related stress reactions and symptoms resulting from exposure to another individual's traumatic experiences, rather than from exposure directly to a traumatic event. Secondary trauma can occur among behavioral health service providers across all behavioral health settings and among all professionals who provide services to those who have experienced trauma (e.g., healthcare providers, peer counselors, first responders, clergy, intake workers).

Substance abuse: Throughout the TIP, the term "substance abuse" has been used to refer to both substance abuse and substance dependence. This term was chosen partly because behavioral health professionals commonly use the term substance abuse to describe any excessive use of addictive substances. In this TIP, the term refers to the use of alcohol as well as other substances of abuse. Readers should attend to the context in which the term occurs to determine what possible range of meanings it covers; in most cases, it will refer to all varieties of substance-related

disorders as found in *Diagnostic and Statistical Manual of Mental Disorders,* Fifth Edition (American Psychiatric Association, 2013a).

Trauma: In this text, the term "trauma" refers to experiences that cause intense physical and psychological stress reactions. It can refer to "a single event, multiple events, or a set of circumstances that is experienced by an individual as physically and emotionally harmful or threatening and that has lasting adverse effects on the individual's physical, social, emotional, or spiritual well-being" (SAMHSA, 2012, p. 2). Although many individuals report a single specific traumatic event, others, especially those seeking mental health or substance abuse services, have been exposed to multiple or chronic traumatic events. See the "What Is Trauma" section in Part 1, Chapter 1, for a more indepth definition and discussion of trauma.

Trauma-informed: A trauma-informed approach to the delivery of behavioral health services includes an understanding of trauma and an awareness of the impact it can have across settings, services, and populations. It involves viewing trauma through an ecological and cultural lens and recognizing that context plays a significant role in how individuals perceive and process traumatic events, whether acute or chronic. In May 2012, SAMHSA convened a group of national experts who identified three key elements of a trauma-informed approach: "(1) realizing the prevalence of trauma; (2) recognizing how trauma affects all individuals involved with the program, organization, or system, including its own workforce; and (3) responding by putting this knowledge into practice" (SAMHSA, 2012, p 4).

Trauma-informed care: TIC is a strengths-based service delivery approach "that is grounded in an understanding of and responsiveness to the impact of trauma, that emphasizes physical, psychological, and emotional safety for both providers and survivors, and that creates opportunities for survivors to rebuild a sense of control and empowerment" (Hopper, Bassuk, & Olivet, 2010, p. 82). It also involves vigilance in anticipating and avoiding institutional processes and individual practices that are likely to retraumatize individuals who already have histories of trauma, and it upholds the importance of consumer participation in the development, delivery, and evaluation of services.

Trauma-specific treatment services: These services are evidence-based and promising practices that facilitate recovery from trauma. The term "trauma-specific services" refers to prevention, intervention, or treatment services that address traumatic stress as well as any co-occurring disorders (including substance use and mental disorders) that developed during or after trauma.

Trauma survivor: This phrase can refer to anyone who has experienced trauma or has had a traumatic stress reaction. Knowing that the use of language and words can set the tone for recovery or contribute to further retraumatization, it is the intent of this manual to put forth a message of hope by avoiding the term "victim" and instead using the term "survivor" when appropriate.

Part 1: A Practical Guide for the Provision of Behavioral Health Services

1 Trauma-Informed Care: A Sociocultural Perspective

IN THIS CHAPTER

- Scope of the TIP
- Intended Audience
- Before You Begin
- Structure of the TIP
- What Is Trauma?
- Trauma Matters in Behavioral Health Services
- Trauma Informed Intervention and Treatment Principles
- As You Proceed

Many individuals who seek treatment in behavioral health settings have histories of trauma, but they often don't recognize the significant effects of trauma in their lives; either they don't draw connections between their trauma histories and their presenting problems, or they avoid the topic altogether. Likewise, treatment providers may not ask questions that elicit a client's history of trauma, may feel unprepared to address trauma-related issues proactively, or may struggle to address traumatic stress effectively within the constraints of their treatment program, the program's clinical orientation, or their agency's directives.

By recognizing that traumatic experiences and their sequelae tie closely into behavioral health problems, front-line professionals and community-based programs can begin to build a trauma-informed environment across the continuum of care. Key steps include meeting client needs in a safe, collaborative, and compassionate manner; preventing treatment practices that retraumatize people with histories of trauma who are seeking help or receiving services; building on the strengths and resilience of clients in the context of their environments and communities; and endorsing trauma-informed principles in agencies through support, consultation, and supervision of staff.

This Treatment Improvement Protocol (TIP) begins by introducing the scope, purpose, and organization of the topic and describing its intended audience. Along with defining trauma and trauma-informed care (TIC), the first chapter discusses the rationale for addressing trauma in behavioral health services and reviews trauma-informed intervention and treatment principles. These principles serve as the TIP's conceptual framework.

Scope of the TIP

Many individuals experience trauma during their lifetimes. Although many people exposed to trauma demonstrate few or no lingering symptoms, those individuals who have experienced repeated, chronic, or multiple traumas are more likely to exhibit pronounced symptoms and consequences, including substance abuse, mental illness, and health problems. Subsequently, trauma can significantly affect how an individual engages in major life areas as well as treatment.

This TIP provides evidence-based and best practice information for behavioral health service providers and administrators who want to work more effectively with people who have been exposed to acute and chronic traumas and/or are at risk of developing traumatic stress reactions. Using key trauma-informed principles, this TIP addresses trauma-related prevention, intervention, and treatment issues and strategies in behavioral health services. The content is adaptable across behavioral health settings that service individuals, families, and communities—placing emphasis on the importance of coordinating as well as integrating services.

Intended Audience

This TIP is for behavioral health service providers, prevention specialists, and program administrators—the professionals directly responsible for providing care to trauma survivors across behavioral health settings, including substance abuse and mental health services. This TIP also targets primary care professionals, including physicians; teams working with clients and communities who have experienced trauma; service providers in the criminal justice system; and researchers with an interest in this topic.

Before You Begin

This TIP endorses a trauma-informed model of care; this model emphasizes the need for behavioral health practitioners and organizations to recognize the prevalence and pervasive impact of trauma on the lives of the people they serve and develop trauma-sensitive or trauma-responsive services. This TIP provides key information to help behavioral health practitioners and program administrators become trauma aware and informed, improve screening and assessment processes, and implement science-informed intervention strategies across settings and modalities in behavioral health services. Whether provided by an agency or an individual provider, trauma-informed services may or may not include trauma-specific services or trauma specialists (individuals who have advanced training and education to provide specific treatment interventions to address traumatic stress reactions). Nonetheless, TIC anticipates the role that trauma can play across the continuum of care—establishing integrated and/or collaborative processes to address the needs of traumatized individuals and communities proactively.

Individuals who have experienced trauma are at an elevated risk for substance use disorders, including abuse and dependence; mental health problems (e.g., depression and anxiety symptoms or disorders, impairment in relational/social and other major life areas, other distressing symptoms); and physical disorders and conditions, such as sleep disorders. This TIP focuses on specific types of prevention (Institute of Medicine et al., 2009): selective prevention, which targets people who are at risk for developing social, psychological, or other conditions as a result of trauma or who are at greater risk for experiencing trauma due to behavioral health disorders or conditions; and indicated prevention, which targets people who display early signs of trauma-related

symptoms. This TIP identifies interventions, including trauma-informed and trauma-specific strategies, and perceives treatment as a means of prevention—building on resilience, developing safety and skills to negotiate the impact of trauma, and addressing mental and substance use disorders to enhance recovery.

This TIP's target population is adults. Beyond the context of family, this publication does not examine or address youth and adolescent responses to trauma, youth-tailored trauma-informed strategies, or trauma-specific interventions for youth or adolescents, because the developmental and contextual issues of these populations require specialized interventions. Providers who work with young clients who have experienced trauma should refer to the resource list in Appendix B. This TIP covers TIC, trauma characteristics, the impact of traumatic experiences, assessment, and interventions for persons who have had traumatic experiences. Considering the vast knowledge base and specificity of individual, repeated, and chronic forms of trauma, this TIP does not provide a comprehensive overview of the unique characteristics of each type of trauma (e.g., sexual abuse, torture, war-related trauma, murder). Instead, this TIP provides an overview supported by examples. For more information on several specific types of trauma, please refer to TIP 36, *Substance Abuse Treatment for Persons With Child Abuse and Neglect Issues* (Center for Substance Abuse Treatment [CSAT], 2000b), TIP 25, *Substance Abuse Treatment and Domestic Violence* (CSAT, 1997b), TIP 51, *Substance Abuse Treatment: Addressing the Specific Needs of Women* (CSAT, 2009d), and the planned TIP, *Reintegration-Related Behavioral Health Issues in Veterans and Military Families* (Substance Abuse and Mental Health Services Administration [SAMHSA], planned f).

This TIP, *Trauma-Informed Care in Behavioral Health Services*, is guided by SAMHSA's Strategic Initiatives described in *Leading Change: A Plan for SAMHSA's Roles and Actions 2011–2014* (SAMHSA, 2011b). Specific to Strategic Initiative #2, Trauma and Justice, this TIP addresses several goals, objectives, and actions outlined in this initiative by providing behavioral health practitioners, supervisors, and administrators with an introduction to culturally responsive TIC.

Specifically, the TIP presents fundamental concepts that behavioral health service providers can use to:

- Become trauma aware and knowledgeable about the impact and consequences of traumatic experiences for individuals, families, and communities.
- Evaluate and initiate use of appropriate trauma-related screening and assessment tools.
- Implement interventions from a collaborative, strengths-based approach, appreciating the resilience of trauma survivors.
- Learn the core principles and practices that reflect TIC.
- Anticipate the need for specific trauma-informed treatment planning strategies that support the individual's recovery.
- Decrease the inadvertent retraumatization that can occur from implementing standard organizational policies, procedures, and interventions with individuals, including clients and staff, who have experienced trauma or are exposed to secondary trauma.
- Evaluate and build a trauma-informed organization and workforce.

The consensus panelists, as well as other contributors to this TIP, have all had experience as substance abuse and mental health counselors, prevention and peer specialists, supervisors, clinical directors, researchers, or administrators working with individuals, families, and

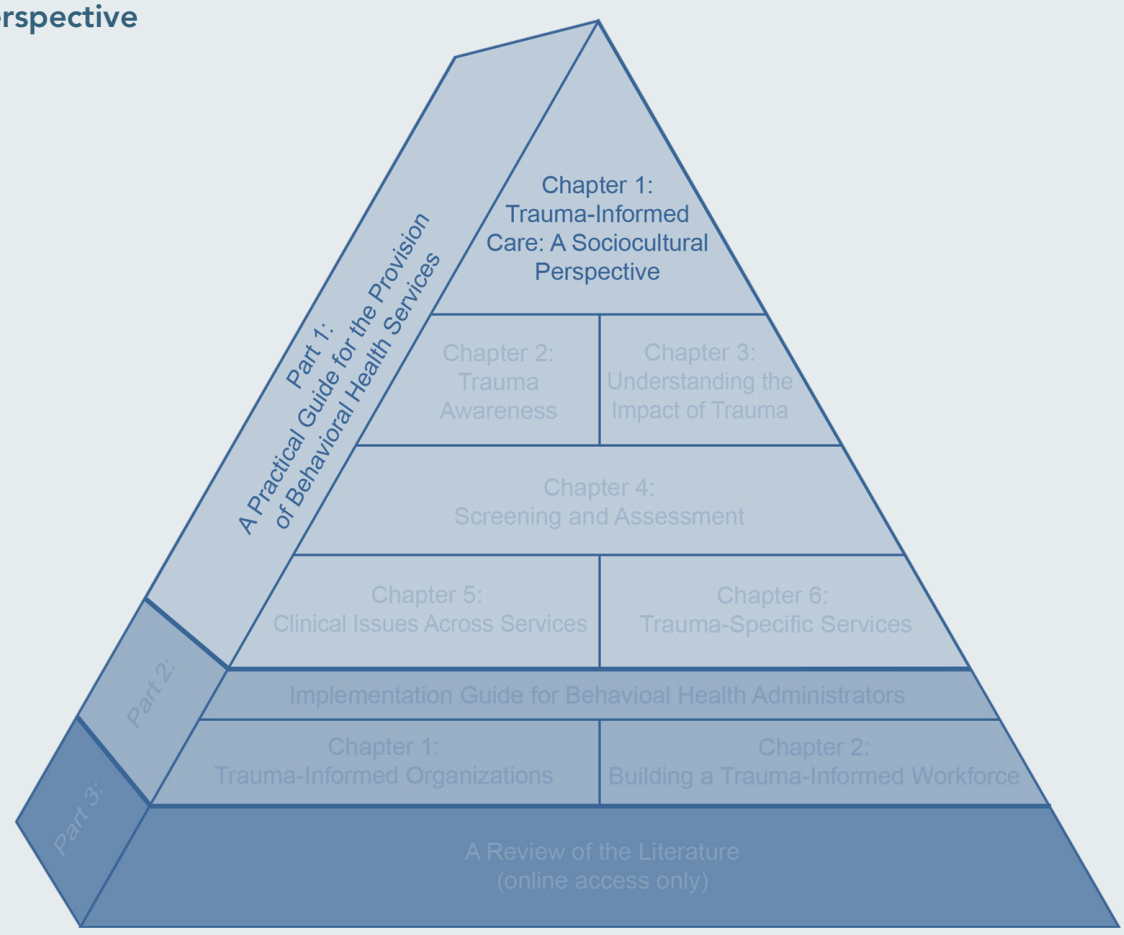
communities who have experienced trauma. The material presented in this TIP uses the wealth of their experience in addition to the available published resources and research relevant to this topic. Throughout the consensus process, the panel members were mindful of the strengths and resilience inherent in individuals, families, and communities affected by trauma and the challenges providers face in addressing trauma and implementing TIC.

Structure of the TIP

Using a TIC framework (Exhibit 1.1-1), this TIP provides information on key aspects of trauma, including what it is; its consequences; screening and assessment; effective prevention, intervention, and treatment approaches; trauma recovery; the impact of trauma on service providers; programmatic and administrative practices; and trauma resources.

Note: To produce a user-friendly but informed document, the first two parts of the TIP include minimal citations. If you are interested in the citations associated with topics covered in Parts 1 and 2, please consult the review of the literature provided in Part 3 (available online at http://store.samhsa.gov). Parts 1 and 2 are easily read and digested on their own, but it is highly recommended that you read the literature review as well.

Exhibit 1.1-1: TIC Framework in Behavioral Health Services—Sociocultural Perspective



What Is Trauma?

According to SAMHSA's Trauma and Justice Strategic Initiative, "trauma results from an event, series of events, or set of circumstances that is experienced by an individual as physically or emotionally harmful or threatening and that has lasting adverse effects on the individual's functioning and physical, social, emotional, or spiritual well-being" (SAMHSA, 2012, p. 2). Trauma can affect people of every race, ethnicity, age, sexual orientation, gender, psychosocial background, and geographic region. A traumatic experience can be a single event, a series of events, and/or a chronic condition (e.g., childhood neglect, domestic violence). Traumas can affect individuals, families, groups, communities, specific cultures, and generations. It generally overwhelms an individual's or community's resources to cope, and it often ignites the "fight, flight, or freeze" reaction at the time of the event(s). It frequently produces a sense of fear, vulnerability, and helplessness.

See Appendix C to read about the history of trauma and trauma interventions.

Often, traumatic events are unexpected. Individuals may experience the traumatic event directly, witness an event, feel threatened, or hear about an event that affects someone they know. Events may be human-made, such as a mechanical error that causes a disaster, war, terrorism, sexual abuse, or violence, or they can be the products of nature (e.g., flooding, hurricanes, tornadoes). Trauma can occur at any age or developmental stage, and often, events that occur outside expected life stages are perceived as traumatic (e.g., a child dying before a parent, cancer as a teen, personal illness, job loss before retirement).

It is not just the event itself that determines whether something is traumatic, but also the individual's experience of the event. Two people may be exposed to the same event or series of events but experience and interpret these events in vastly different ways. Various biopsychosocial and cultural factors influence an individual's immediate response and long-term reactions to trauma. For most, regardless of the severity of the trauma, the immediate or enduring effects of trauma are met with resilience—the ability to rise above the circumstances or to meet the challenges with fortitude.

For some people, reactions to a traumatic event are temporary, whereas others have prolonged reactions that move from acute symptoms to more severe, prolonged, or enduring mental health consequences (e.g., posttraumatic stress and other anxiety disorders, substance use and mood disorders) and medical problems (e.g., arthritis, headaches, chronic pain). Others do not meet established criteria for posttraumatic stress or other mental disorders but encounter significant trauma-related symptoms or culturally expressed symptoms of trauma (e.g., somatization, in which psychological stress is expressed through physical concerns). For that reason, even if an individual does not meet diagnostic criteria for trauma-related disorders, it is important to recognize that trauma may still affect his or her life in significant ways. For more information on traumatic events, trauma characteristics, traumatic stress reactions, and factors that heighten or decrease the impact of trauma, see Part 1, Chapter 2, "Trauma Awareness," and Part 1, Chapter 3, "Understanding the Impact of Trauma."

Trauma Matters in Behavioral Health Services

The past decade has seen an increased focus on the ways in which trauma, psychological distress, quality of life, health, mental illness,

and substance abuse are linked. With the attacks of September 11, 2001, and other acts of terror, the wars in Iraq and Afghanistan, disastrous hurricanes on the Gulf Coast, and sexual abuse scandals, trauma has moved to the forefront of national consciousness.

Trauma was once considered an abnormal experience. However, the first National Comorbidity Study established how prevalent traumas were in the lives of the general population of the United States. In the study, 61 percent of men and 51 percent of women reported experiencing at least one trauma in their lifetime, with witnessing a trauma, being involved in a natural disaster, and/or experiencing a life-threatening accident ranking as the most common events (Kessler et al., 1999). In Wave 2 of the National Epidemiologic Survey on Alcohol and Related Conditions, 71.6 percent of the sample reported witnessing trauma, 30.7 percent experienced a trauma that resulted in injury, and 17.3 percent experienced psychological trauma (El-Gabalawy, 2012). For a thorough review of the impact of trauma on quality of life and health and among individuals with mental and substance use disorders, refer to Part 3 of this TIP, the online literature review.

Rationale for TIC

Integrating TIC into behavioral health services provides many benefits not only for clients, but also for their families and communities, for behavioral health service organizations, and for staff. Trauma-informed services bring to the forefront the belief that trauma can pervasively affect an individual's well-being, including physical and mental health. For behavioral health service providers, trauma-informed practice offers many opportunities. It reinforces the importance of acquiring trauma-specific knowledge and skills to meet the specific needs of clients; of recognizing that individuals may be affected by trauma regardless of its acknowledgment; of understanding that trauma likely affects many clients who are seeking behavioral health services; and of acknowledging that organizations and providers can retraumatize clients through standard or unexamined policies and practices. TIC stresses the importance of addressing the client individually rather than applying general treatment approaches.

TIC provides clients more opportunities to engage in services that reflect a compassionate perspective of their presenting problems. TIC can potentially provide a greater sense of safety for clients who have histories of trauma and a platform for preventing more serious consequences of traumatic stress (Fallot & Harris, 2001). Although many individuals may not identify the need to connect with their histories, trauma-informed services offer clients a chance to explore the impact of trauma, their strengths and creative adaptations in managing traumatic histories, their resilience, and the relationships among trauma, substance use, and psychological symptoms.

Two Influential Studies That Set the Stage for the Development of TIC

The Adverse Childhood Experiences Study (Centers for Disease Control and Prevention, 2013) was a large epidemiological study involving more than 17,000 individuals from United States; it analyzed the long-term effects of childhood and adolescent traumatic experiences on adult health risks, mental health, healthcare costs, and life expectancy.

The Women, Co-Occurring Disorders and Violence Study (SAMHSA, 2007) was a large multisite study focused on the role of interpersonal and other traumatic stressors among women; the interrelatedness of trauma, violence, and co-occurring substance use and mental disorders; and the incorporation of trauma-informed and trauma-specific principles, models, and services.

Implementing trauma-informed services can improve screening and assessment processes, treatment planning, and placement while also decreasing the risk for retraumatization. The implementation may enhance communication between the client and treatment provider, thus decreasing risks associated with misunderstanding the client's reactions and presenting problems or underestimating the need for appropriate referrals for evaluation or trauma-specific treatment. Organizational investment in developing or improving trauma-informed services may also translate to cost effectiveness, in that services are more appropriately matched to clients from the outset. TIC is an essential ingredient in organizational risk management; it ensures the implementation of decisions that will optimize therapeutic outcomes and minimize adverse effects on the client and, ultimately, the organization. A key principle is the engagement of community, clients, and staff. Clients and staff are more apt to be empowered, invested, and satisfied if they are involved in the ongoing development and delivery of trauma-informed services.

An organization also benefits from work development practices through planning for, attracting, and retaining a diverse workforce of individuals who are knowledgeable about trauma and its impact. Developing a trauma-informed organization involves hiring and promotional practices that attract and retain individuals who are educated and trained in trauma-informed practices on all levels of the organization, including board as well as peer support appointments. Trauma-informed organizations are invested in their staff and adopt similar trauma-informed principles, including establishing and providing ongoing support to promote TIC in practice and in addressing secondary trauma and implementing processes that reinforce the safety of the staff. Even though investing in a trauma-informed workforce does not necessarily guarantee trauma-informed practices, it is more likely that services will evolve more proficiently to meet client, staff, and community needs.

Advice to Counselors: The Importance of TIC

The history of trauma raises various clinical issues. Many counselors do not have extensive training in treating trauma or offering trauma-informed services and may be uncertain of how to respond to clients' trauma-related reactions or symptoms. Some counselors have experienced traumas themselves that may be triggered by clients' reports of trauma. Others are interested in helping clients with trauma but may unwittingly cause harm by moving too deeply or quickly into trauma material or by discounting or disregarding a client's report of trauma. Counselors must be aware of trauma-related symptoms and disorders and how they affect clients in behavioral health treatment.

Counselors with primary treatment responsibilities should also have an understanding of how to recognize trauma-related reactions, how to incorporate treatment interventions for trauma-related symptoms into clients' treatment plans, how to help clients build a safety net to prevent further trauma, how to conduct psychoeducational interventions, and when to make treatment referrals for further evaluations or trauma-specific treatment services. All treatment staff should recognize that traumatic stress symptoms or trauma-related disorders should not preclude an individual from mental health or substance abuse treatment and that all co-occurring disorders need to be addressed on some level in the treatment plan and setting. For example, helping a client in substance abuse treatment gain control over trauma-related symptoms can greatly improve the client's chances of substance abuse recovery and lower the possibility of relapse (Farley, Golding, Young, Mulligan, & Minkoff, 2004; Ouimette, Ahrens, Moos, & Finney, 1998). In addition, assisting a client in achieving abstinence builds a platform upon which recovery from traumatic stress can proceed.

Trauma and Substance Use Disorders

Many people who have substance use disorders have experienced trauma as children or adults (Koenen, Stellman, Sommer, & Stellman, 2008; Ompad et al., 2005). Substance abuse is known to predispose people to higher rates of traumas, such as dangerous situations and accidents, while under the influence (Stewart & Conrod, 2003; Zinzow, Resnick, Amstadter, McCauley, Ruggiero, & Kilpatrick, 2010) and as a result of the lifestyle associated with substance abuse (Reynolds et al., 2005). In addition, people who abuse substances and have experienced trauma have worse treatment outcomes than those without histories of trauma (Driessen et al., 2008; Najavits et al., 2007). Thus, the process of recovery is more difficult, and the counselor's role is more challenging, when clients have histories of trauma. A person presenting with both trauma and substance abuse issues can have a variety of other difficult life problems that commonly accompany these disorders, such as other psychological symptoms or mental disorders, poverty, homelessness, increased risk of HIV and other infections, and lack of social support (Mills, Teesson, Ross, & Peters, 2006; Najavits, Weiss, & Shaw, 1997). Many individuals who seek treatment for substance use disorders have histories of one or more traumas. More than half of women seeking substance abuse treatment report one or more lifetime traumas (Farley, Golding, Young, Mulligan, & Minkoff, 2004; Najavits et al., 1997), and a significant number of clients in inpatient treatment also have subclinical traumatic stress symptoms or posttraumatic stress disorder (PTSD; Falck, Wang, Siegal, & Carlson, 2004; Grant et al., 2004; Reynolds et al., 2005).

Trauma and Mental Disorders

People who are receiving treatment for severe mental disorders are more likely to have histories of trauma, including childhood physical and sexual abuse, serious accidents, homelessness, involuntary psychiatric hospitalizations, drug overdoses, interpersonal violence, and other forms of violence. Many clients with severe mental disorders meet criteria for PTSD; others with serious mental illness who have histories of trauma present with psychological symptoms or mental disorders that are commonly associated with a history of trauma, including anxiety symptoms and disorders, mood disorders (e.g., major depression, dysthymia, bipolar disorder; Mueser et al., 2004), impulse control disorders, and substance use disorders (Kessler, Chiu, Demler, & Walters, 2005).

Traumatic stress increases the risk for mental illness, and findings suggest that traumatic stress increases the symptom severity of mental illness (Spitzer, Vogel, Barnow, Freyberger & Grabe, 2007). These findings propose that traumatic stress plays a significant role in perpetuating and exacerbating mental illness and suggest that trauma often precedes the development of mental disorders. As with trauma and substance use disorders, there is a bidirectional relationship; mental illness increases the risk of experiencing trauma, and trauma increases the risk of developing psychological symptoms and mental disorders. For a more comprehensive review of the interactions among traumatic stress, mental illness, and substance use disorders, refer to Part 3 of this TIP, the online literature review.

Trauma-Informed Intervention and Treatment Principles

TIC is an intervention and organizational approach that focuses on how trauma may affect an individual's life and his or her response to behavioral health services from prevention through treatment. There are many definitions of TIC and various models for incorporating it across organizations, but a "trauma-informed approach incorporates three key elements: (1) *realizing* the prevalence of trauma; (2) *recognizing* how trauma affects all individuals involved with the program, organization, or system, including its own workforce; and (3) *responding* by putting this knowledge into practice" (SAMHSA, 2012, p. 4).

TIC begins with the first contact a person has with an agency; it requires all staff members (e.g., receptionists, intake personnel, direct care staff, supervisors, administrators, peer supports, board members) to recognize that the individual's experience of trauma can greatly influence his or her receptivity to and engagement with services, interactions with staff and clients, and responsiveness to program guidelines, practices, and interventions. TIC includes program policies, procedures, and practices to protect the vulnerabilities of those who have experienced trauma and those who provide trauma-related services. TIC is created through a supportive environment and by redesigning organizational practices, with consumer participation, to prevent practices that could be retraumatizing (Harris & Fallot, 2001c; Hopper et al., 2010). The ethical principle, "first, do no harm," resonates strongly in the application of TIC.

> "A program, organization, or system that is trauma informed realizes the widespread impact of trauma and under stands poten tial paths for healing; recognizes the signs and symptoms of trauma in staff, clients, and others involved with the system; and responds by fully integrating knowledge about trauma into policies, procedures, practices, and settings."
>
> (SAMHSA, 2012, p. 4)

TIC involves a commitment to building competence among staff and establishing programmatic standards and clinical guidelines that support the delivery of trauma-sensitive services. It encompasses recruiting, hiring, and retaining competent staff; involving consumers, trauma survivors, and peer support specialists in the planning, implementation, and evaluation of trauma-informed services; developing collaborations across service systems to streamline referral processes, thereby securing trauma-specific services when appropriate; and building a continuity of TIC as consumers move from one system or service to the next. TIC involves reevaluating each service delivery component through a trauma-aware lens.

The principles described in the following subsections serve as the TIP's conceptual

Advice to Counselors: Implementing Trauma-Informed Services

Recognizing that trauma affects a majority of clients served within public health systems, the National Center for Trauma-Informed Care (NCTIC) has sought to establish a comprehensive framework to guide systems of care in the development of trauma-informed services. If a system or program is to support the needs of trauma survivors, it must take a systematic approach that offers trauma-specific diagnostic and treatment services, as well as a trauma-informed environment that is able to sustain such services, while fostering positive outcomes for the clients it serves. NCTIC also offers technical assistance in the implementation of trauma-informed services. For specific administrative information on TIC implementation, refer to Part 2, Chapters 1 and 2, of this TIP.

framework. These principles comprise a compilation of resources, including research, theoretical papers, commentaries, and lessons learned from treatment facilities. Key elements are outlined for each principle in providing services to clients affected by trauma and to populations most likely to incur trauma. Although these principles are useful across all prevention and intervention services, settings, and populations, they are of the utmost importance in working with people who have had traumatic experiences.

Promote Trauma Awareness and Understanding

Foremost, a behavioral health service provider must recognize the prevalence of trauma and its possible role in an individual's emotional, behavioral, cognitive, spiritual, and/or physical development, presentation, and well-being. Being vigilant about the prevalence and potential consequences of traumatic events among clients allows counselors to tailor their presentation styles, theoretical approaches, and intervention strategies from the outset to plan for and be responsive to clients' specific needs. Although not every client has a history of trauma, those who have substance use and mental disorders are more likely to have experienced trauma. Being trauma aware does not mean that you must assume everyone has a history of trauma, but rather that you anticipate the possibility from your initial contact and interactions, intake processes, and screening and assessment procedures.

Even the most standard behavioral health practices can retraumatize an individual exposed to prior traumatic experiences if the provider implements them without recognizing or considering that they may do harm. For example, a counselor might develop a treatment plan recommending that a female client—who has been court mandated to substance abuse treatment and was raped as an adult—attend group therapy, but without considering the implications, for her, of the fact that the only available group at the facility is all male and has had a low historical rate of female participation. Trauma awareness is an essential strategy for preventing this type of retraumatization; it reinforces the need for providers to reevaluate their usual practices.

> "Trauma informed care embraces a perspective that highlights adaptation over symptoms and resilience over pathology."
>
> (Elliot, Bjelajac, Fallot, Markoff, & Reed, 2005, p. 467)

Becoming trauma aware does not stop with the recognition that trauma can affect clients; instead, it encompasses a broader awareness that traumatic experiences as well as the impact of an individual's trauma can extend to significant others, family members, first responders and other medical professionals, behavioral health workers, broader social networks, and even entire communities. Family members frequently experience the traumatic stress reactions of the individual family member who was traumatized (e.g., angry outbursts, nightmares, avoidant behavior, other symptoms of anxiety, overreactions or underreactions to stressful events). These repetitive experiences can increase the risk of secondary trauma and symptoms of mental illness among the family, heighten the risk for externalizing and internalizing behavior among children (e.g., bullying others, problems in social relationships, health-damaging behaviors), increase children's risk for developing posttraumatic stress later in life, and lead to a greater propensity for traumatic stress reactions across generations of the family. Hence, prevention and intervention services can provide education and age-appropriate programming tailored to develop coping skills and support systems.

So too, behavioral health service providers can be influenced by exposure to trauma-related affect and content when working with clients. A trauma-aware workplace supports supervision and program practices that educate all direct service staff members on secondary trauma, encourages the processing of trauma-related content through participation in peer-supported activities and clinical supervision, and provides them with professional development opportunities to learn about and engage in effective coping strategies that help prevent secondary trauma or trauma-related symptoms. It is important to generate trauma awareness in agencies through education across services and among all staff members who have any direct or indirect contact with clients (including receptionists or intake and admission personnel who engage clients for the first time within the agency). Agencies can maintain a trauma-aware environment through ongoing staff training, continued supervisory and administrative support, collaborative (i.e., involving consumer participation) trauma-responsive program design and implementation, and organizational policies and practices that reflect accommodation and flexibility in attending to the needs of clients affected by trauma.

Recognize That Trauma-Related Symptoms and Behaviors Originate From Adapting to Traumatic Experiences

A trauma-informed perspective views trauma-related symptoms and behaviors as an individual's best and most resilient attempt to manage, cope with, and rise above his or her experience of trauma. Some individuals' means of adapting and coping have produced little difficulty; the coping and adaptive strategies of others have worked in the past but are not working as well now. Some people have difficulties in one area of life but have effectively negotiated and functioned in other areas.

Individuals who have survived trauma vary widely in how they experience and express traumatic stress reactions. Traumatic stress reactions vary in severity; they are often measured by the level of impairment or distress that clients report and are determined by the multiple factors that characterize the trauma itself, individual history and characteristics, developmental factors, sociocultural attributes, and available resources. The characteristics of the trauma and the subsequent traumatic stress reactions can dramatically influence how individuals respond to the environment, relationships, interventions, and treatment services, and those same characteristics can also shape the assumptions that clients/consumers make about their world (e.g., their view of others, sense of safety), their future (e.g., hopefulness, fear of a foreshortened future), and themselves (e.g., feeling resilient, feeling incompetent in regulating emotions). The breadth of these effects may be observable or subtle.

Once you become aware of the significance of traumatic experiences in clients' lives and begin to view their presentation as adaptive, your identification and classification of their presenting symptoms and behaviors can shift from a "pathology" mindset (i.e., defining clients strictly from a diagnostic label, implying that something is wrong with them) to one of resilience—a mindset that views clients' presenting difficulties, behaviors, and emotions as responses to surviving trauma. In essence, you will come to view traumatic stress reactions as *normal* reactions to *abnormal* situations. In embracing the belief that trauma-related reactions are adaptive, you can begin relationships with clients from a hopeful, strengths-based stance that builds upon the belief that their responses to traumatic experiences reflect creativity, self-preservation, and determination.

This will help build mutual and collaborative therapeutic relationships, help clients identify what has worked and has not worked in their attempts to deal with the aftermath of trauma from a nonjudgmental stance, and develop intervention and coping strategies that are more likely to fit their strengths and resources. This view of trauma prevents further retraumatization by not defining traumatic stress reactions as pathological or as symptoms of pathology.

View Trauma in the Context of Individuals' Environments

Many factors contribute to a person's response to trauma, whether it is an individual, group, or community-based trauma. Individual attributes, developmental factors (including protective and risk factors), life history, type of trauma, specific characteristics of the trauma, amount and length of trauma exposure, cultural meaning of traumatic events, number of losses associated with the trauma, available resources (internal and external, such as coping skills and family support), and community reactions are a few of the determinants that influence a person's responses to trauma across time. Refer to the "View Trauma Through a Sociocultural Lens" section later in this chapter for more specific information highlighting the importance of culture in understanding and treating the effects of trauma.

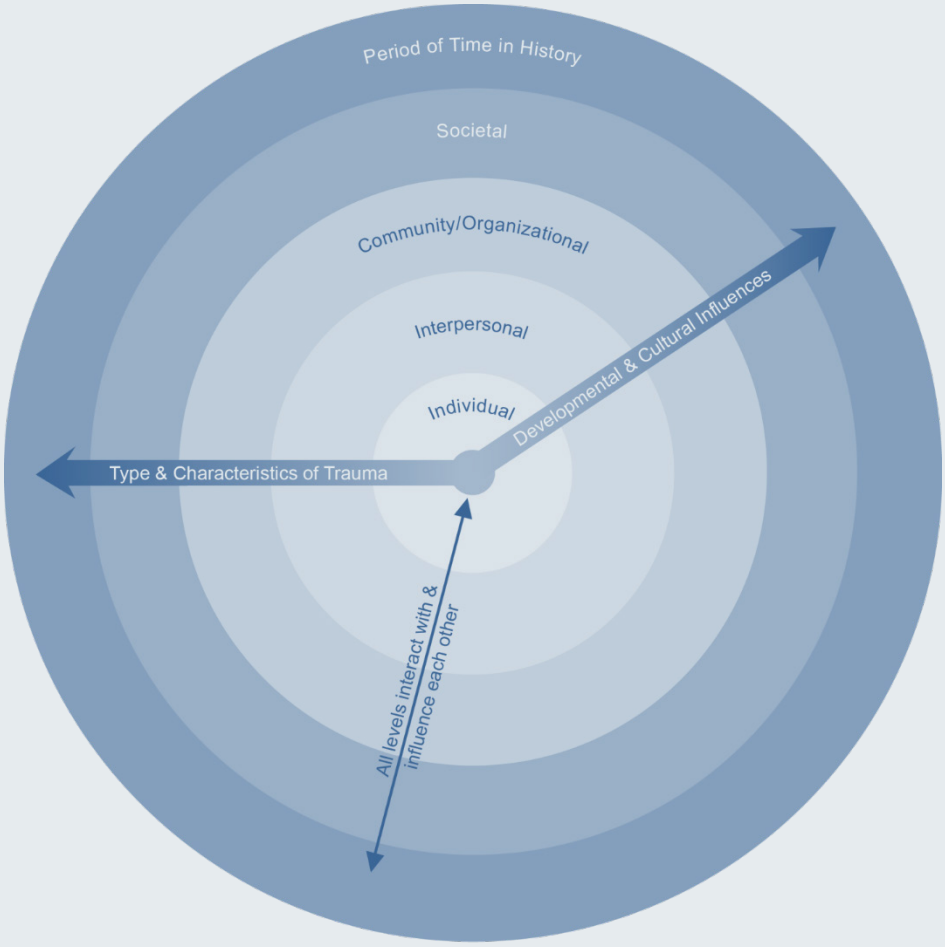
Trauma cannot be viewed narrowly; instead, it needs to be seen through a broader lens—a contextual lens integrating biopsychosocial, interpersonal, community, and societal (the degree of individualistic or collective cultural values) characteristics that are evident preceding and during the trauma, in the immediate and sustained response to the event(s), and in the short- and long-term effects of the traumatic event(s), which may include housing availability, community response, adherence to or maintenance of family routines and structure, and level of family support.

To more adequately understand trauma, you must also consider the contexts in which it occurred. Understanding trauma from this angle helps expand the focus beyond individual characteristics and effects to a broader systemic perspective that acknowledges the influences of social interactions, communities, governments, cultures, and so forth, while also examining the possible interactions among those various influences. Bronfenbrenner's (1979) and Bronfenbrenner and Ceci's (1994) work on ecological models sparked the development of other contextual models. In recent years, the social-ecological framework has been adopted in understanding trauma, in implementing health promotion and other prevention strategies, and in developing treatment interventions (Centers for Disease Control and Prevention, 2009). Here are the three main beliefs of a social-ecological approach (Stokols, 1996):

- Environmental factors greatly influence emotional, physical, and social well-being.
- A fundamental determinant of health versus illness is the degree of fit between individuals' biological, behavioral, and sociocultural needs and the resources available to them.
- Prevention, intervention, and treatment approaches integrate a combination of strategies targeting individual, interpersonal, and community systems.

This TIP uses a social-ecological model to explore trauma and its effects (Exhibit 1.1-2). The focus of this model is not only on negative attributes (risk factors) across each level, but also on positive ingredients (protective factors) that protect against or lessen the impact of trauma. This model also guides the inclusion of certain targeted interventions in this text, including selective and indicated

Exhibit 1.1-2: A Social-Ecological Model for Understanding Trauma and Its Effects



prevention activities. In addition, culture, developmental processes (including the developmental stage or characteristics of the individual and/or community), and the specific era when the trauma(s) occurred can significantly influence how a trauma is perceived and processed, how an individual or community engages in help-seeking, and the degree of accessibility, acceptability, and availability of individual and community resources.

Depending on the developmental stage and/or processes in play, children, adolescents, and adults will perceive, interpret, and cope with traumatic experiences differently. For example, a child may view a news story depicting a traumatic event on television and believe that the trauma is recurring every time they see the scene replayed. Similarly, the era in which one lives and the timing of the trauma can greatly influence an individual or community response. Take, for example, a pregnant woman who is abusing drugs and is wary of receiving medical treatment after being beaten in a domestic dispute. She may fear losing her children or being arrested for child neglect. Even though a number of States have adopted policies focused on the importance of treatment for pregnant women who are abusing drugs and of the accessibility of prenatal care, other States have approached this issue from a criminality standpoint (e.g., with child welfare and criminal laws) in the past few decades. Thus, the traumatic event's timing is a significant

component in understanding the context of trauma and trauma-related responses.

The social-ecological model depicted in Exhibit 1.1-2 provides a systemic framework for looking at individuals, families, and communities affected by trauma in general; it highlights the bidirectional influence that multiple contexts can have on the provision of behavioral health services to people who have experienced trauma (see thin arrow). Each ring represents a different system (refer to Exhibit 1.1-3 for examples of specific factors within each system). The innermost ring represents the individual and his or her biopsychosocial characteristics. The "Interpersonal" circle embodies all immediate relationships including family, friends, peers, and others. The "Community/Organizational" band represents social support networks, workplaces, neighborhoods, and institutions that directly influence the individual and his/her relationships. The "Societal" circle signifies the largest system—State and Federal policies and laws, such as economic and healthcare policies, social norms, governmental systems, and political ideologies. The outermost ring, "Period of Time in History," reflects the significance of the period of time during which the event occurred; it influences each other level represented in the circle. For example, making a comparison of society's attitudes and responses to veterans' homecomings across different wars and conflicts through time shows that homecoming environments can have either a protective or a negative effect on healing from the psychological and physical wounds of war, depending on the era in question. The thicker arrows in the figure represent the key influences of culture, developmental characteristics, and the type and characteristics of the trauma. All told, the context of traumatic events can significantly influence both initial and sustained responses to trauma; treatment needs; selection of prevention, intervention, and other treatment

Exhibit 1.1-3: Understanding the Levels Within the Social-Ecological Model of Trauma and Its Effects

Individual Factors	Interpersonal Factors	Community and Organizational Factors	Societal Factors	Cultural and Developmental Factors	Period of Time in History
Age, biophysical state, mental health status, temperament and other personality traits, education, gender, coping styles, socioeconomic status	Family, peer, and significant other interaction patterns, parent/family mental health, parents' history of trauma, social network	Neighborhood quality, school system and/or work environment, behavioral health system quality and accessibility, faith-based settings, transportation availability, community socioeconomic status, community employment rates	Laws, State and Federal economic and social policies, media, societal norms, judicial system	Collective or individualistic cultural norms, ethnicity, cultural subsystem norms, cognitive and maturational development	Societal attitudes related to military service members' homecomings, changes in diagnostic understanding between DSM-III-R* and DSM-5**

***Diagnostic and Statistical Manual of Mental Disorders,* Fifth Edition (APA, 2013a)

Case Illustration: Marisol

Marisol is a 28-year-old Latina woman working as a barista at a local coffee shop. One evening, she was driving home in the rain when a drunk driver crossed into her lane and hit her head on. Marisol remained conscious as she waited to be freed from the car and was then transported to the hospital. She sustained fractures to both legs. Her recovery involved two surgeries and nearly 6 months of rehabilitation, including initial hospitalization and outpatient physical therapy.

She described her friends and family as very supportive, saying that they often foresaw what she needed before she had to ask. She added that she had an incredible sense of gratitude for her employer and coworkers, who had taken turns visiting and driving her to appointments. Although she was able to return to work after 9 months, Marisol continued experiencing considerable distress about her inability to sleep well, which started just after the accident. Marisol describes repetitive dreams and memories of waiting to be transported to the hospital after the crash. The other driver was charged with driving under the influence (DUI), and it was reported that he had been convicted two other times for a DUI misdemeanor.

Answering the following questions will help you see how the different levels of influence affect the impact and outcome of the traumatic event Marisol experienced, as well as her responses to that event:

1. Based on the limited information provided in this illustration, how might Marisol's personality affect the responses of her family and friends, her coworkers, and the larger community?
2. In what ways could Marisol's ethnic and cultural background influence her recovery?
3. What societal factors could play a role in the car crash itself and the outcomes for Marisol and the other driver?

Explore the influence of the period of time in history during which the scenario occurs—compare the possible outcomes for both Marisol and the other driver if the crash occurred 40 years ago versus in the present day.

strategies; and ways of providing hope and promoting recovery.

Minimize the Risk of Retraumatization or Replicating Prior Trauma Dynamics

Trauma-informed treatment providers acknowledge that clients who have histories of trauma may be more likely to experience particular treatment procedures and practices as negative, reminiscent of specific characteristics of past trauma or abuse, or retraumatizing—feeling as if the past trauma is reoccurring or as if the treatment experience is as dangerous and unsafe as past traumas. For instance, clients may express feelings of powerlessness or being trapped if they are not actively involved in treatment decisions; if treatment processes or providers mirror specific behavior from the clients' past experiences with trauma, they may voice distress or respond in the same way as they did to the original trauma. Among the potentially retraumatizing elements of treatment are seclusion or "time-out" practices that isolate individuals, mislabeling client symptoms as personality or other mental disorders rather than as traumatic stress reactions, interactions that command authority, treatment assignments that could humiliate clients (such as asking a client to wear a sign in group that reflects one of their treatment issues, even if the assignment centers on positive attributes of the client), confronting clients as resistant, or presenting treatment as conditional upon conformity to the provider's beliefs and definitions of issues.

Clients' experiences are unique to the specific traumas they have faced and the surrounding

circumstances before, during, and after that trauma, so remember that even seemingly safe and standard treatment policies and procedures, including physical plant operations (e.g., maintenance, grounds, fire and safety procedures), may feel quite the contrary for a client if one or more of those elements is reminiscent of his or her experience of trauma in some way. Examples include having limited privacy or personal space, being interviewed in a room that feels too isolating or confining, undergoing physical examination by a medical professional of the same sex as the client's previous perpetrator of abuse, attending a group session in which another client expresses anger appropriately in a role play, or being directed not to talk about distressing experiences as a means of deescalating traumatic stress reactions.

Although some treatment policies or procedures are more obviously likely to solicit distress than others, *all* standard practices should be evaluated for their potential to retraumatize a client; this cannot be done without knowing the specific features of the individual's history of trauma. Consider, for instance, a treatment program that serves meals including entrees that combine more than one food group. Your client enters this program and refuses to eat most of the time; he expresses anger toward dietary staff and claims that food choices are limited. You may initially perceive your client's refusal to eat or to avoid certain foods as an eating disorder or a behavioral problem. However, a trauma-aware perspective might change your assumptions; consider that this client experienced neglect and abuse surrounding food throughout childhood (his mother forced him to eat meals prepared by combining anything in the refrigerator and cooking them together).

Advice to Counselors and Administrators: Sending the Right Message About Trauma

How often have you heard "We aren't equipped to handle trauma" or "We don't have time to deal with reactions that surface if traumatic experiences are discussed in treatment" from counselors and administrators in behavioral health services? For agencies, staff members, and clients, these statements present many difficulties and unwanted outcomes. For a client, such comments may replicate his or her earlier encounters with others (including family, friends, and previous behavioral health professionals) who had difficulty acknowledging or talking about traumatic experiences with him or her. A hands-off approach to trauma can also reinforce the client's own desire to avoid such discussions. Even when agencies and staff are motivated in these sentiments by a good intention—to contain clients' feelings of being overwhelmed—such a perspective sends strong messages to clients that their experiences are not important, that they are not capable of handling their trauma-associated feelings, and that dealing with traumatic experiences is simply too dangerous. Statements like these imply that recovery is not possible and provide no structured outlet to address memories of trauma or traumatic stress reactions.

Nevertheless, determining how and when to address traumatic stress in behavioral health services can be a real dilemma, especially if there are no trauma-specific philosophical, programmatic, or procedural processes in place. For example, it is difficult to provide an appropriate forum for a client to address past traumas if no forethought has been given to developing interagency and intra-agency collaborations for trauma-specific services. By anticipating the need for trauma-informed services and planning ahead to provide appropriate services to people who are affected by trauma, behavioral health service providers and program administrators can begin to develop informed intervention strategies that send a powerful, positive message:

- Both clients and providers can competently manage traumatic experiences and reactions.
- Providers are interested in hearing clients' stories and attending to their experiences.
- Recovery is possible.

As a treatment provider, you cannot consistently predict what may or may not be upsetting or retraumatizing to clients. Therefore, it is important to maintain vigilance and an attitude of curiosity with clients, inquiring about the concerns that they express and/or present in treatment. Remember that certain behaviors or emotional expressions can reflect what has happened to them in the past.

Foremost, a trauma-informed approach begins with taking practical steps to reexamine treatment strategies, program procedures, and organizational polices that could solicit distress or mirror common characteristics of traumatic experiences (loss of control, being trapped, or feeling disempowered). To better anticipate the interplay between various treatment elements and the more idiosyncratic aspects of a particular client's trauma history, you can:

- Work with the client to learn the cues he or she associates with past trauma.
- Obtain a good history.
- Maintain a supportive, empathetic, and collaborative relationship.
- Encourage ongoing dialog.
- Provide a clear message of availability and accessibility throughout treatment.

In sum, trauma-informed providers anticipate and respond to potential practices that may be perceived or experienced as retraumatizing to clients; they are able to forge new ways to respond to specific situations that trigger a trauma-related response, and they can provide clients with alternative ways of engaging in a particularly problematic element of treatment.

Create a Safe Environment

The need to create a safe environment is not new to providers; it involves an agency-wide effort supported by effective policies and procedures. However, creating safety within a trauma-informed framework far exceeds the standard expectations of physical plant safety (e.g., facility, environmental, and space-related concerns), security (of staff members, clients, and personal property), policies and procedures (including those specific to seclusion and restraint), emergency management and disaster planning, and adherence to client rights. Providers must be responsive and adapt the environment to establish and support clients' sense of physical and emotional safety.

Beyond anticipating that various environmental stimuli within a program may generate strong emotions and reactions in a trauma survivor (e.g., triggers such as lighting, access to exits, seating arrangements, emotionality within a group, or visual or auditory stimuli) and implementing strategies to help clients cope with triggers that evoke their experiences with trauma, other key elements in establishing a safe environment include consistency in client interactions and treatment processes, following through with what has been reviewed or agreed upon in sessions or meetings, and dependability. Mike's case illustration depicts ways in which the absence of these key elements could erode a client's sense of safety during the treatment process.

Neither providers nor service processes are always perfect. Sometimes, providers

Case Illustration: Mike

From the first time you provide outpatient counseling to Mike, you explain that he can call an agency number that will put him in direct contact with someone who can provide further assistance or support if he has emotional difficulty after the session or after agency hours. However, when he attempts to call one night, no one is available despite what you've described. Instead, Mike is directed by an operator to either use his local emergency room if he perceives his situation to be a crisis or to wait for someone on call to contact him. The inconsistency between what you told him in the session and what actually happens when he calls makes Mike feel unsafe and vulnerable.

unintentionally relay information inaccurately or inconsistently to clients or other staff members; other times, clients mishear something, or extenuating circumstances prevent providers from responding as promised. Creating safety is not about getting it right all the time; it's about how consistently and forthrightly you handle situations with a client when circumstances provoke feelings of being vulnerable or unsafe. Honest and compassionate communication that conveys a sense of handling the situation together generates safety. It is equally important that safety extends beyond the client. Counselors and other behavioral health staff members, including peer support specialists, need to be able to count on the agency to be responsive to and maintain their safety within the environment as well. By incorporating an organizational ethos that recognizes the importance of practices that promote physical safety and emotional well-being, behavioral health staff members may be more likely to seek support and supervision when needed and to comply with clinical and programmatic practices that minimize risks for themselves and their clients.

Beyond an attitudinal promotion of safety, organizational leaders need to consider and create avenues of professional development and assistance that will give their staff the means to seek support and process distressing circumstances or events that occur within the agency or among their clientele, such as case consultation and supervision, formal or informal processes to debrief service providers about difficult clinical issues, and referral processes for client psychological evaluations and employee assistance for staff. Organizational practices are only effective if supported by unswerving trauma awareness, training, and education among staff. Jane's case illustration shows the impact of a minor but necessary postponement in staff orientation for a new hire—not an unusual circumstance in behavioral health programs that have heavy caseloads and high staff turnover.

Identify Recovery From Trauma as a Primary Goal

Often, people who initiate or are receiving mental health or substance abuse services don't identify their experiences with trauma as a significant factor in their current challenges or problems. In part, this is because people who have been exposed to trauma, whether once or repeatedly, are generally reluctant to revisit it. They may already feel stuck in repetitive memories or experiences, which may add to their existing belief that any intervention will make matters worse or, at least, no better. For some clients, any introduction to their trauma-related memories or minor cues reminiscent of the trauma will cause them to experience strong, quick-to-surface emotions, supporting their belief that addressing trauma is dangerous and that they won't be able to handle the

Case Illustration: Jane

Jane, a newly hired female counselor, had a nephew who took his own life. The program that hired her was short of workers at the time; therefore, Jane did not have an opportunity to engage sufficiently in orientation outside of reviewing the policies and procedure manual. In an attempt to present well to her new employer and supervisor, she readily accepted client assignments without considering her recent loss. By not immersing herself in the program's perspective and policies on staff well-being, ethical and clinical considerations in client assignments, and how and when to seek supervision, Jane failed to engage in the practices, heavily supported by the agency, that promoted safety for herself and her clients. Subsequently, she felt emotionally overwhelmed at work and would often abruptly request psychiatric evaluation for clients who expressed any feelings of hopelessness out of sheer panic that they would attempt suicide.

emotions or thoughts that result from attempting to do so. Others readily view their experiences of trauma as being in the past; as a result, they engage in distraction, dissociation, and/or avoidance (as well as adaptation) due to a belief that trauma has little impact on their current lives and presenting problems. Even individuals who are quite aware of the impact that trauma has had on their lives may still struggle to translate or connect how these events continue to shape their choices, behaviors, and emotions. Many survivors draw no connection between trauma and their mental health or substance abuse problems, which makes it more difficult for them to see the value of trauma-informed or trauma-specific interventions, such as creating safety, engaging in psychoeducation, enhancing coping skills, and so forth.

As a trauma-informed provider, it is important that you help clients bridge the gap between their mental health and substance-related issues and the traumatic experiences they may have had. All too often, trauma occurs before substance use and mental disorders develop; then, such disorders and their associated symptoms and consequences create opportunities for additional traumatic events to occur. If individuals engage in mental health and substance abuse treatment without addressing the role that trauma has played in their lives, they are less likely to experience recovery in the long run. For example, a person with a history of trauma is more likely to have anxiety and depressive symptoms, use substances to self-medicate, and/or relapse after exposure to trauma-related cues. Thus, collaboration within and between behavioral health agencies is necessary to make integrated, timely, trauma-specific interventions available from the beginning to clients/consumers who engage in substance abuse and mental health services.

Support Control, Choice, and Autonomy

Not every client who has experienced trauma and is engaged in behavioral health services wants, or sees the need for, trauma-informed or trauma-specific treatment. Clients may think that they've already dealt with their trauma adequately, or they may believe that the effects of past trauma cause minimal distress for them. Other clients may voice the same sentiments, but without conviction—instead using avoidant behavior to deter distressing symptoms or reactions. Still others may struggle to see the role of trauma in their presenting challenges, not connecting their past traumatic experiences with other, more current difficulties (e.g., using substances to self-medicate strong emotions). Simply the idea of acknowledging trauma-related experiences and/or stress reactions may be too frightening or overwhelming for some clients, and others may fear that their reactions will be dismissed. On the other hand, some individuals want so much to dispense with their traumatic experiences and reactions that they hurriedly and repeatedly disclose their experiences before establishing a sufficiently safe environment or learning effective coping strategies to offset distress and other effects of retraumatization.

As these examples show, not everyone affected by trauma will approach trauma-informed services or recognize the impact of trauma in their lives in the same manner. This can be challenging to behavioral health service providers who are knowledgeable about the impact of trauma and who perceive the importance of addressing trauma and its effects with clients. As with knowing that different clients may be at different levels of awareness or stages of change in substance abuse treatment services, you should acknowledge that people affected by trauma

present an array of reactions, various levels of trauma awareness, and different degrees of urgency in their need to address trauma.

Appreciating clients' perception of their presenting problems and viewing their responses to the impact of trauma as adaptive—even when you believe their methods of dealing with trauma to be detrimental—are equally important elements of TIC. By taking the time to engage with clients and understand the ways they have perceived, adjusted to, and responded to traumatic experiences, providers are more likely to project the message that clients possess valuable personal expertise and knowledge about their own presenting problems. This shifts the viewpoint from "Providers know best" to the more collaborative "Together, we can find solutions."

How often have you heard from clients that they don't believe they can handle symptoms that emerge from reexperiencing traumatic cues or memories? Have you ever heard clients state that they can't trust themselves or their reactions, or that they never know when they are going to be triggered or how they are going to react? How confident would you feel about yourself if, at any time, a loud noise could initiate an immediate attempt to hide, duck, or dive behind something? Traumatic experiences have traditionally been described as exposure to events that cause intense fear, helplessness, horror, or feelings of loss of control. Participation in behavioral health services should not mirror these aspects of traumatic experience. Working collaboratively to facilitate clients' sense of control and to maximize clients' autonomy and choices throughout the treatment process, including treatment planning, is crucial in trauma-informed services.

For some individuals, gaining a sense of control and empowerment, along with understanding traumatic stress reactions, may be pivotal ingredients for recovery. By creating opportunities for empowerment, counselors and other behavioral health service providers help reinforce, clients' sense of competence, which is often eroded by trauma and prolonged traumatic stress reactions. Keep in mind that treatment strategies and procedures that prioritize client choice and control need not focus solely on major life decisions or treatment planning; you can apply such approaches to common tasks and everyday interactions between staff and consumers. Try asking your clients some of the following questions (which are only a sample of the types of questions that could be useful):

- What information would be helpful for us to know about what happened to you?
- Where/when would you like us to call you?
- How would you like to be addressed?
- Of the services I've described, which seem to match your present concerns and needs?
- From your experience, what responses from others appear to work best when you feel overwhelmed by your emotions?

Likewise, organizations need to reinforce the importance of staff autonomy, choice, and sense of control. What resources can staff members access, and what choices are available to them, in processing emotionally charged content or events in treatment? How often do administrators and supervisors seek out feedback on how to handle problematic situations (e.g., staff rotations for vacations, case consultations, changes in scheduling)? Think about the parallel between administration and staff members versus staff members and clients; often, the same philosophy, attitudes, and behaviors conveyed to staff members by administrative practices are mirrored in staff–client interactions. Simply stated, if staff members do not feel empowered, it will be a challenge for them to value the need for client empowerment. (For more information on administrative and workforce development issues, refer to Part 2, Chapters 1 and 2.)

Case Illustration: Mina

Mina initially sought counseling after her husband was admitted to an intensive outpatient drug and alcohol program. She was self-referred for low-grade depression, resentment toward her spouse, and codependency. When asked to define "codependency" and how the term applied to her, she responded that she always felt guilty and responsible for everyone in her family and for events that occurred even when she had little or no control over them.

After the intake and screening process, she expressed interest in attending group sessions that focused primarily on family issues and substance abuse, wherein her presenting concerns could be explored. In addition to describing dynamics and issues relating to substance abuse and its impact on her marriage, she referred to her low mood as frozen grief. During treatment, she reluctantly began to talk about an event that she described as life changing: the loss of her father. The story began to unfold in group; her father, who had been 62 years old, was driving her to visit a cousin. During the ride, he had a heart attack and drove off the road. As the car came to stop in a field, she remembered calling 911 and beginning cardiopulmonary resuscitation while waiting for the ambulance. She rode with the paramedics to the hospital, watching them work to save her father's life; however, he was pronounced dead soon after arrival.

She always felt that she never really said goodbye to her father. In group, she was asked what she would need to do or say to feel as if she had revisited that opportunity. She responded in quite a unique way, saying, "I can't really answer this question; the lighting isn't right for me to talk about my dad." The counselor encouraged her to adjust the lighting so that it felt "right" to her. Being invited to do so turned out to be pivotal in her ability to address her loss and to say goodbye to her father on her terms. She spent nearly 10 minutes moving the dimmer switch for the lighting as others in the group patiently waited for her to return to her chair. She then began to talk about what happened during the evening of her father's death, their relationship, the events leading up to that evening, what she had wanted to say to him at the hospital, and the things that she had been wanting to share with him since his death.

Weeks later, as the group was coming to a close, each member spoke about the most important experiences, tools, and insights that he or she had taken from participating. Mina disclosed that the group helped her establish boundaries and coping strategies within her marriage, but said that the event that made the most difference for her had been having the ability to adjust the lighting in the room. She explained that this had allowed her to control something over which she had been powerless during her father's death. To her, the lighting had seemed to stand out more than other details at the scene of the accident, during the ambulance ride, and at the hospital. She felt that the personal experience of losing her father and needing to be with him in the emergency room was marred by the obtrusiveness of staff, procedures, machines, and especially, the harsh lighting. She reflected that she now saw the lighting as a representation of this tragic event and the lack of privacy she had experienced when trying to say goodbye to her father. Mina stated that this moment in group had been the greatest gift: "…to be able to say my goodbyes the way I wanted… I was given an opportunity to have some control over a tragic event where I couldn't control the outcome no matter how hard I tried."

Create Collaborative Relationships and Participation Opportunities

This trauma-informed principle encompasses three main tenets. First, **ensure that the provider–client relationship is collaborative**, regardless of setting or service. Agency staff members cannot make decisions pertaining to interventions or involvement in community services autocratically; instead, they should develop trauma-informed, individualized care plans and/or treatment plans collaboratively with the client and, when appropriate, with family and caregivers. The nonauthoritarian approach that characterizes TIC views clients

as the experts in their own lives and current struggles, thereby emphasizing that clients and providers can learn from each other.

The second tenet is to **build collaboration beyond the provider–client relationship**. Building ongoing relationships across the service system, provider networks, and the local community enhances TIC continuity as clients move from one level of service to the next or when they are involved in multiple services at one time. It also allows you to learn about resources available to your clients in the service system or community and to connect with providers who have more advanced training in trauma-specific interventions and services.

The third tenet emphasizes the need to **ensure client/consumer representation and participation in behavioral health program development, planning, and evaluation as well as in the professional development of behavioral health workers**. To achieve trauma-informed competence in an organization or across systems, clients need to play an active role; this starts with providing program feedback. However, consumer involvement should not end there; rather, it should be encouraged throughout the implementation of trauma-informed services. So too, clients, potential clients, their families, and the community should be invited to participate in forming any behavioral health organization's plans to improve trauma-informed competence, provide TIC, and design relevant treatment services and organizational policies and procedures.

Trauma-informed principles and practices generated without the input of people affected by trauma are difficult to apply effectively. Likewise, staff trainings and presentations should include individuals who have felt the impact of trauma. Their participation reaches past the purely cognitive aspects of such education to offer a personal perspective on the strengths and resilience of people who have experienced trauma. The involvement of trauma survivors in behavioral health education lends a human face to subject matter that is all too easily made cerebral by some staff members in an attempt to avoid the emotionality of the topic.

Consumer participation also means giving clients/consumers the chance to obtain State training and certification, as well as employment in behavioral health settings as peer specialists. Programs that incorporate peer support services reinforce a powerful message—that provider–consumer partnership is important, and that consumers are valued. Peer support specialists are self-identified individuals who have progressed in their own recovery from alcohol dependence, drug addiction, and/or a mental disorder and work within behavioral health programs or at peer support centers to assist others with similar disorders and/or life experiences. Tasks and responsibilities may include leading a peer support group; modeling effective coping, help-seeking, and self-care strategies; helping clients practice new skills or monitor progress; promoting positive self-image to combat clients' potentially negative feelings about themselves and the discrimination they may perceive in the program or community; handling case management tasks; advocating for program changes; and representing a voice of hope that views recovery as possible.

Familiarize the Client With Trauma-Informed Services

Without thinking too much about it, you probably know the purpose of an intake process, the correct way to complete a screening device, the meaning of a lot of the jargon specific to behavioral health, and your program's expectations for client participation; in fact, maybe you're already involved in facilitating these processes in behavioral health services every day, and they've become almost

automatic for you. This can make it easy to forget that nearly everything clients and their families encounter in seeking behavioral health assistance is new to them. Thus, introducing clients to program services, activities, and interventions in a manner that *expects* them to be unfamiliar with these processes is essential, regardless of their clinical and treatment history. Beyond addressing the unfamiliarity of services, educating clients about each process—from first contact all the way through recovery services—gives them a chance to participate actively and make informed decisions across the continuum of care.

Familiarizing clients with trauma-informed services extends beyond explaining program services or treatment processes; it involves explaining the value and type of trauma-related questions that may be asked during an intake process, educating clients about trauma to help normalize traumatic stress reactions, and discussing trauma-specific interventions and other available services (including explanations of treatment methodologies and of the rationale behind specific interventions). Developmentally appropriate psychoeducation about trauma-informed services allows clients to be informed participants.

Incorporate Universal Routine Screenings for Trauma

Screening universally for client histories, experiences, and symptoms of trauma at intake can benefit clients and providers. Most providers know that clients can be affected by trauma, but universal screening provides a steady reminder to be watchful for past traumatic experiences and their potential influence upon a client's interactions and engagement with services across the continuum of care. Screening should guide treatment planning; it alerts the staff to potential issues and serves as a valuable tool to increase clients' awareness of the possible impact of trauma and the importance of addressing related issues during treatment.

Nonetheless, screenings are only as useful as the guidelines and processes established to address positive screens (which occur when clients respond to screening questions in a way that signifies possible trauma-related symptoms or histories). Staff should be trained to use screening tools consistently so that all clients are screened in the same way. Staff members also need to know how to score screenings and when specific variables (e.g., race/ethnicity, native language, gender, culture) may influence screening results. For example, a woman who has been sexually assaulted by a man may be wary of responding to questions if a male staff member or interpreter administers the screening or provides translation services. Likewise, a person in a current abusive or violent relationship may not acknowledge the interpersonal violence in fear of retaliation or as a result of disconnection or denial of his or her experience, and he or she may have difficulty in processing and then living between two worlds—what is acknowledged in treatment versus what is experienced at home.

In addition, staff training on using trauma-related screening tools needs to center on how and when to gather relevant information after the screening is complete. Organizational policies and procedures should guide staff members on how to respond to a positive screening, such as by making a referral for an indepth assessment of traumatic stress, providing the client with an introductory psychoeducational session on the typical biopsychosocial effects of trauma, and/or coordinating care so that the client gains access to trauma-specific services that meet his or her needs. Screening tool selection is an important ingredient in incorporating routine, universal screening practices into behavioral health services. Many screening tools are available, yet they differ in format

and in how they present questions. Select tools based not just on sound test properties, but also according to whether they encompass a broad range of experiences typically considered traumatic and are flexible enough to allow for an individual's own interpretation of traumatic events. For more information on screening and assessment of trauma and trauma-related symptoms and effects, see Chapter 4, "Screening and Assessment," in this TIP.

View Trauma Through a Sociocultural Lens

To understand how trauma affects an individual, family, or community, you must first understand life experiences and cultural background as key contextual elements for that trauma. As demonstrated in Exhibit 1.1-2, many factors shape traumatic experiences and individual and community responses to it; one of the most significant factors is culture. It influences the interpretation and meaning of traumatic events, individual beliefs regarding personal responsibility for the trauma and subsequent responses, and the meaning and acceptability of symptoms, support, and help-seeking behaviors. As this TIP proceeds to describe the differences among cultures pertaining to trauma, remember that there are numerous cross-cutting factors that can directly or indirectly influence the attitudes, beliefs, behaviors, resources, and opportunities within a given culture, subculture, or racial and/or ethnic group (Exhibit 1.1-4). For an indepth

Exhibit 1.1-4: Cross-Cutting Factors of Culture

Culture and Trauma

- Some populations and cultures are more likely than others to experience a traumatic event or a specific type of trauma.
- Rates of traumatic stress are high across all diverse populations and cultures that face military action and political violence.
- Culture influences not only whether certain events are perceived as traumatic, but also how an individual interprets and assigns meaning to the trauma.
- Some traumas may have greater impact on a given culture because those traumas represent something significant for that culture or disrupt cultural practices or ways of life.
- Culture determines acceptable responses to trauma and shapes the expression of distress. It significantly influences how people convey traumatic stress through behavior, emotions, and thinking immediately following a trauma and well after the traumatic experience has ceased.
- Traumatic stress symptoms vary according to the type of trauma within the culture.
- Culture affects what qualifies as a legitimate health concern and which symptoms warrant help.
- In addition to shaping beliefs about acceptable forms of help-seeking behavior and healing practices, culture can provide a source of strength, unique coping strategies, and specific resources.

exploration of these cross-cutting cultural factors, refer to the planned TIP, *Improving Cultural Competence* (SAMHSA, planned c).

When establishing TIC, it is vital that behavioral health systems, service providers, licensing agencies, and accrediting bodies build culturally responsive practices into their curricula, standards, policies and procedures, and credentialing processes. The implementation of culturally responsive practices will further guide the treatment planning process so that trauma-informed services are more appropriate and likely to succeed.

Use a Strengths-Focused Perspective: Promote Resilience

Fostering individual strengths is a key step in prevention when working with people who have been exposed to trauma. It is also an essential intervention strategy—one that builds on the individual's existing resources and views him or her as a resourceful, resilient survivor. Individuals who have experienced trauma develop many strategies and/or behaviors to adapt to its emotional, cognitive, spiritual, and physical consequences. Some behaviors may be effective across time, whereas others may eventually produce difficulties and disrupt the healing process. Traditionally, behavioral health services have tended to focus on presenting problems, risk factors, and symptoms in an attempt to prevent negative outcomes, provide relief, increase clients' level of functioning, and facilitate healing. However, focusing too much on these areas can undermine clients' sense of competence and hope. Targeting only presenting problems and symptoms does not provide individuals with an opportunity to see their own resourcefulness in managing very stressful and difficult experiences. It is important for providers to engage in interventions using a balanced approach that targets the strengths clients have

> "Trauma informed care recognizes symptoms as originating from adaptations to the traumatic event(s) or context. Validating resilience is important even when past coping behaviors are now causing problems. Understanding a symptom as an adaptation reduces a survivor's guilt and shame, increases their self esteem and provides a guideline for developing new skills and resources to allow new and better adaptation to the current situation."
>
> (Elliot et al., 2005, p. 467)

Advice to Counselors and Administrators: Using Strengths-Oriented Questions

Knowing a client's strengths can help you understand, redefine, and reframe the client's presenting problems and challenges. By focusing and building on an individual's strengths, counselors and other behavioral health professionals can shift the focus from "What is wrong with you?" to "What has worked for you?" It moves attention away from trauma-related problems and toward a perspective that honors and uses adaptive behaviors and strengths to move clients along in recovery.

Potential strengths-oriented questions include:

- The history that you provided suggests that you've accomplished a great deal since the trauma. What are some of the accomplishments that give you the most pride?
- What would you say are your strengths?
- How do you manage your stress today?
- What behaviors have helped you survive your traumatic experiences (during and afterward)?
- What are some of the creative ways that you deal with painful feelings?
- You have survived trauma. What characteristics have helped you manage these experiences and the challenges that they have created in your life?
- If we were to ask someone in your life, who knew your history and experience with trauma, to name two positive characteristics that help you survive, what would they be?
- What coping tools have you learned from your _____ (fill in: cultural history, spiritual practices, athletic pursuits, etc.)?
- Imagine for a moment that a group of people are standing behind you showing you support in some way. Who would be standing there? It doesn't matter how briefly or when they showed up in your life, or whether or not they are currently in your life or alive.
- How do you gain support today? (Possible answers include family, friends, activities, coaches, counselors, other supports, etc.)
- What does recovery look like for you?

developed to survive their experiences and to thrive in recovery. A strengths-based, resilience-minded approach lets trauma survivors begin to acknowledge and appreciate their fortitude and the behaviors that help them survive.

Foster Trauma-Resistant Skills

Trauma-informed services build a foundation on which individuals can begin to explore the role of trauma in their lives; such services can also help determine how best to address and tailor interventions to meet their needs. Prevention, mental health, and substance abuse treatment services should include teaching clients about how trauma can affect their lives; these services should also focus on developing self-care skills, coping strategies, supportive networks, and a sense of competence. Building trauma-resistant skills begins with normalizing the symptoms of traumatic stress and helping clients who have experienced trauma connect the dots between current problems and past trauma when appropriate.

Nevertheless, TIC and trauma-specific interventions that focus on skill-building should not do so at the expense of acknowledging individual strengths, creativity in adapting to trauma, and inherent attributes and tools clients possesses to combat the effects of trauma. Some theoretical models that use skill-building strategies base the value of this approach on a deficit perspective; they assume that some individuals lack the necessary tools to manage specific situations and, because of this deficiency, they encounter problems that others with effective skills would not experience. This type of perspective further assumes that, to recover, these individuals must learn new coping skills and behavior. TIC, on the other hand, makes the assumption that clients

Advice to Administrators: Self-Assessment for Trauma-Informed Systems

NCTIC has developed a self-assessment package for trauma-informed systems to help administrators structurally incorporate trauma into programs and services. The self-assessment can be used by systems of care to guide quality improvement with the goal of establishing fully trauma-informed treatment and recovery efforts (NCTIC, Center for Mental Health Services, 2007). Behavioral health treatment program administrators can use these materials and NCTIC as resources for improvement in delivering TIC.

are the experts in their own lives and have learned to adapt and acquire skills to survive. The TIC approach honors each individual's adaptations and acquired skills, and it helps clients explore how these may not be working as well as they had in the past and how their current repertoire of responses may not be as effective as other strategies.

Demonstrate Organizational and Administrative Commitment to TIC

Becoming a trauma-informed organization requires administrative guidance and support across all levels of an agency. Behavioral health staff will not likely sustain TIC practices without the organization's ongoing commitment to support professional development and to allocate resources that promote these practices. An agency that wishes to commit to TIC will benefit from an organizational assessment of how staff members identify and manage trauma and trauma-related reactions in their clients. Are they trauma aware—do they recognize that trauma can significantly affect a client's ability to function in one or more areas of his or her life? Do the staff members understand that traumatic experiences and trauma-related reactions can greatly influence clients' engagement, participation, and response to services?

Agencies need to embrace specific strategies across each level of the organization to create trauma-informed services; this begins with staff education on the impact of trauma among clients. Other agency strategies that reflect a trauma-informed infrastructure include, but are not limited to:

- Universal screening and assessment procedures for trauma.
- Interagency and intra-agency collaboration to secure trauma-specific services.
- Referral agreements and networks to match clients' needs.
- Mission and value statements endorsing the importance of trauma recognition.
- Consumer- and community-supported committees and trauma response teams.
- Workforce development strategies, including hiring practices.
- Professional development plans, including staff training/supervision focused on TIC.
- Program policies and procedures that ensure trauma recognition and secure trauma-informed practices, trauma-specific services, and prevention of retraumatization.

TIC requires organizational commitment, and often, cultural change. For more information on implementing TIC in organizations, see Part 2, Chapter 1 of this TIP.

Develop Strategies To Address Secondary Trauma and Promote Self-Care

Secondary trauma is a normal occupational hazard for mental health and substance abuse professionals, particularly those who serve populations that are likely to include survivors of trauma (Figley, 1995; Klinic Community Health Centre, 2008). Behavioral health staff members who experience secondary trauma present a range of traumatic stress reactions

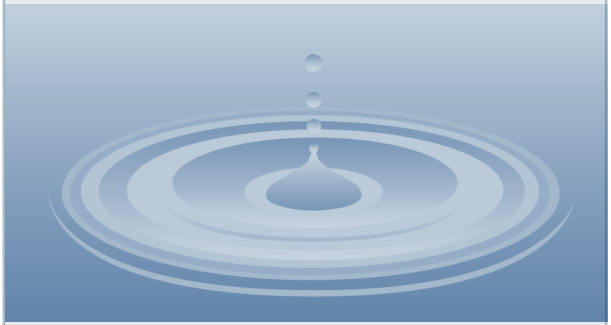
and effects from providing services focused on trauma or listening to clients recount traumatic experiences. So too, when a counselor has a history of personal trauma, working with trauma survivors may evoke memories of the counselor's own trauma history, which may increase the potential for secondary traumatization.

The range of reactions that manifest with secondary trauma can be, but are not necessarily, similar to the reactions presented by clients who have experienced primary trauma. Symptoms of secondary trauma can produce varying levels of difficulty, impairment, or distress in daily functioning; these may or may not meet diagnostic thresholds for acute stress, posttraumatic stress, or adjustment, anxiety, or mood disorders (Bober & Regehr, 2006). Symptoms may include physical or psychological reactions to traumatic memories clients have shared; avoidance behaviors during client interactions or when recalling emotional content in supervision; numbness, limited emotional expression, or diminished affect; somatic complaints; heightened arousal, including insomnia; negative thinking or depressed mood; and detachment from family, friends, and other supports (Maschi & Brown, 2010).

Working daily with individuals who have been traumatized can be a burden for counselors and other behavioral health service providers, but all too often, they blame the symptoms resulting from that burden on other stressors at work or at home. Only in the past 2 decades have literature and trainings begun paying attention to secondary trauma or compassion fatigue; even so, agencies often do not translate this knowledge into routine prevention practices. Counselors and other staff members may find it difficult to engage in activities that could ward off secondary trauma due to time constraints, workload, lack of agency resources, and/or an organizational culture that disapproves of help-seeking or provides inadequate staff support. The demands of providing care to trauma survivors cannot be ignored, lest the provider become increasingly impaired and less effective. Counselors with unacknowledged secondary trauma can cause harm to clients via poorly enforced boundaries, missed appointments, or even abandonment of clients and their needs (Pearlman & Saakvitne, 1995).

Essential components of TIC include organizational and personal strategies to address

The Impact of Trauma



Trauma is similar to a rock hitting the water's surface. The impact first creates the largest wave, which is followed by ever-expanding, but less intense, ripples. Likewise, the influence of a given trauma can be broad, but generally, its effects are less intense for individuals further removed from the trauma; eventually, its impact dissipates all around. For trauma survivors, the impact of trauma can be far-reaching and can affect life areas and relationships long after the trauma occurred. This analogy can also broadly describe the recovery process for individuals who have experienced trauma and for those who have the privilege of hearing their stories. As survivors reveal their trauma-related experiences and struggles to a counselor or another caregiver, the trauma becomes a shared experience, although it is not likely to be as intense for the caregiver as it was for the individual who experienced the trauma. The caregiver may hold onto the trauma's known and unknown effects or may consciously decide to engage in behaviors that provide support to further dissipate the impact of this trauma and the risk of secondary trauma.

Advice to Counselors: Decreasing the Risk of Secondary Trauma and Promoting Self-Care

- **Peer support.** Maintaining adequate social support will help prevent isolation and depression.
- **Supervision and consultation.** Seeking professional support will enable you to understand your own responses to clients and to work with them more effectively.
- **Training.** Ongoing professional training can improve your belief in your abilities to assist clients in their recoveries.
- **Personal therapy.** Obtaining treatment can help you manage specific problems and become better able to provide good treatment to your clients.
- **Maintaining balance.** A healthy, balanced lifestyle can make you more resilient in managing any difficult circumstances you may face.
- **Setting clear limits and boundaries with clients.** Clearly separating your personal and work life allows time to rejuvenate from stresses inherent in being a professional caregiver.

secondary trauma and its physical, cognitive, emotional, and spiritual consequences. In agencies and among individual providers, it is key for the culture to promote acceptability, accessibility, and accountability in seeking help, accessing support and supervision, and engaging in self-care behaviors in and outside of the agency or office. Agencies should involve staff members who work with trauma in developing informal and formal agency practices and procedures to prevent or address secondary trauma. Even though a number of community-based agencies face fiscal constraints, prevention strategies for secondary trauma can be intertwined with the current infrastructure (e.g., staff meetings, education, case consultations and group case discussions, group support, debriefing sessions as appropriate, supervision). For more information on strategies to address and prevent secondary trauma, see Part 2, Chapter 2 of this TIP.

Provide Hope—Recovery Is Possible

What defines recovery from trauma-related symptoms and traumatic stress disorders? Is it the total absence of symptoms or consequences? Does it mean that clients stop having nightmares or being reminded, by cues, of past trauma? When clients who have experienced trauma enter into a helping relationship to address trauma specifically, they are often looking for a cure, a remission of symptoms, or relief from the pain as quickly as possible. However, they often possess a history of unpredictable symptoms and symptom intensity that reinforces an underlying belief that recovery is not possible. On one hand, clients are looking for a message that they can be cured, while on the other hand, they have serious doubts about the likely success of any intervention.

Clients often express ambivalence about dealing with trauma even if they are fully aware of trauma's effects on their lives. The idea of living with more discomfort as they address the past or as they experiment with alternative ways of dealing with trauma-related symptoms or consequences is not an appealing prospect, and it typically elicits fear. Clients may interpret the uncomfortable feelings as dangerous or unsafe even in an environment and relationship that is safe and supportive.

How do you promote hope and relay a message that recovery is possible? First, maintain consistency in delivering services, promoting and providing safety for clients, and showing respect and compassion within the client–provider relationship. Along with clients' commitment to learning how to create safety for themselves, counselors and agencies need

to be aware of, and circumvent, practices that could retraumatize clients. Projecting hope and reinforcing the belief that recovery is possible extends well beyond the practice of establishing safety; it also encompasses discussing what recovery means and how it looks to clients, as well as identifying how they will know that they've entered into recovery in earnest.

Providing hope involves projecting an attitude that recovery is possible. This attitude also involves viewing clients as competent to make changes that will allow them to deal with trauma-related challenges, providing opportunities for them to practice dealing with difficult situations, and normalizing discomfort or difficult emotions and framing these as manageable rather than dangerous. If you convey this attitude consistently to your clients, they will begin to understand that discomfort is not a signal to avoid, but a sign to engage—and that behavioral, cognitive, and emotional responses to cues associated with previous traumas are a normal part of the recovery process. It's not the absence of responses to such triggers that mark recovery, but rather, how clients experience and manage those responses. Clients can also benefit from interacting with others who are further along in their recovery from trauma. Time spent with peer support staff or sharing stories with other trauma survivors who are well on their way to recovery is invaluable—it sends a powerful message that recovery is achievable, that there is no shame in being a trauma survivor, and that there is a future beyond the trauma.

As You Proceed

This chapter has established the foundation and rationale of this TIP, reviewed trauma-informed concepts and terminology, and provided an overview of TIC principles and a guiding framework for this text. As you proceed, be aware of the wide-ranging responses to trauma that occur not only across racially and ethnically diverse groups but also within specific communities, families, and individuals. Counselors, prevention specialists, other behavioral health workers, supervisors, and organizations all need to develop skills to create an environment that is responsive to the unique attributes and experiences of each client. As you read this TIP, remember that many cross-cutting factors influence the experiences, help-seeking behaviors, intervention responses, and outcomes of individuals, families, and populations who have survived trauma. Single, multiple, or chronic exposures to traumatic events, as well as the emotional, cognitive, behavioral, and spiritual responses to trauma, need to be understood within a social-ecological framework that recognizes the many ingredients prior to, during, and after traumatic experiences that set the stage for recovery.

2 Trauma Awareness

IN THIS CHAPTER

- Types of Trauma
- Characteristics of Trauma
- Individual and Sociocultural Features

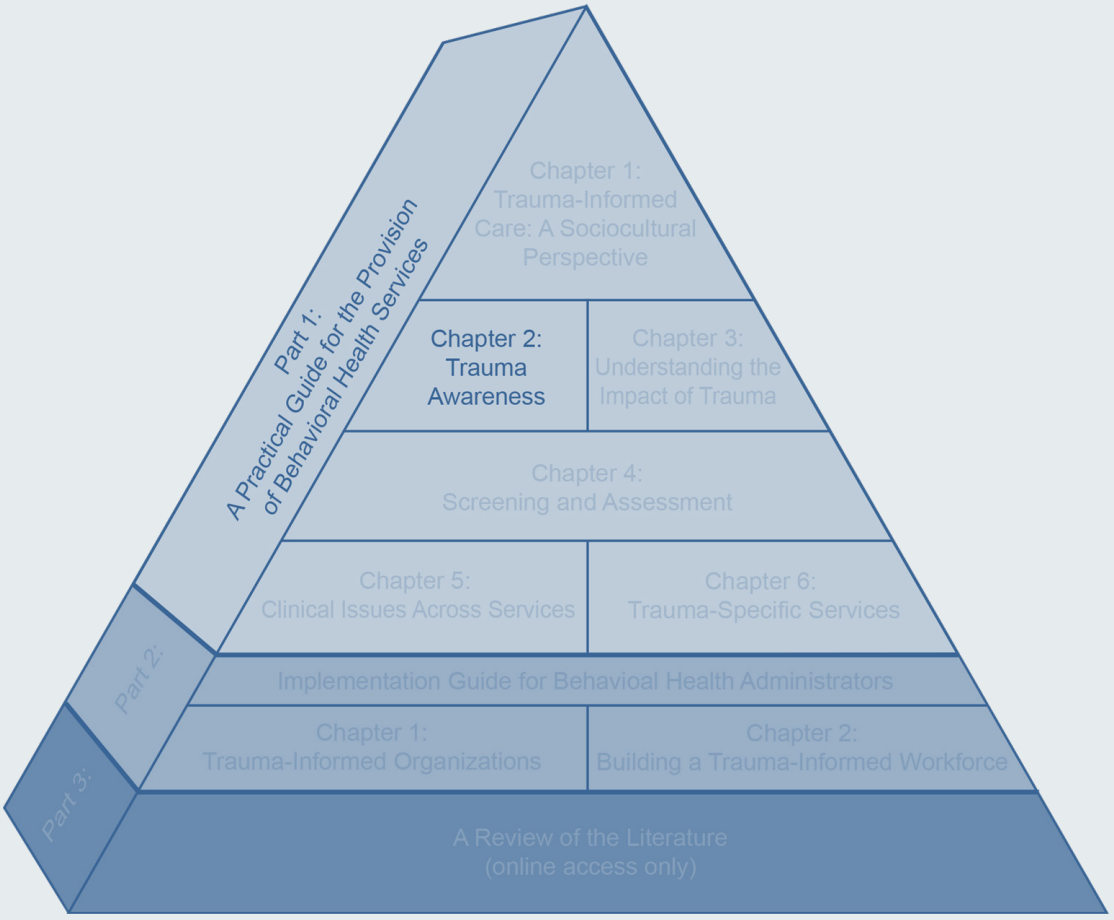
Traumatic experiences typically do not result in long-term impairment for most individuals. It is normal to experience such events across the lifespan; often, individuals, families, and communities respond to them with resilience. This chapter explores several main elements that influence why people respond differently to trauma. Using the social-ecological model outlined in Part 1, Chapter 1, this chapter explores some of the contextual and systemic dynamics that influence individual and community perceptions of trauma and its impact. The three main foci are: types of trauma, objective and subjective characteristics of trauma, and individual and sociocultural features that serve as risk or protective factors.

This chapter's main objective is to highlight the key characteristics of traumatic experiences. Trauma-informed behavioral health service providers understand that many influences shape the effects of trauma among individuals and communities—it is not just the event that determines the outcome, but also the event's context and the resultant interactions across systems.

Types of Trauma

The following section reviews various forms and types of trauma. It does not cover every conceivable trauma that an individual, group, or community may encounter. Specific traumas are reviewed only once, even when they could fit in multiple categories of trauma. Additionally, the order of appearance does not denote a specific trauma's importance or prevalence, and there is no lack of relevance implied if a given trauma is not specifically addressed in this Treatment Improvement Protocol (TIP). The intent is to give a broad perspective of the various categories and types of trauma to behavioral health workers who wish to be trauma informed.

TIC Framework in Behavioral Health Services—Trauma Awareness



Natural or Human-Caused Traumas

The classification of a trauma as natural or caused by humans can have a significant impact on the ways people react to it and on the types of assistance mobilized in its aftermath (see Exhibit 1.2-1 for trauma examples). Natural traumatic experiences can directly affect a small number of people, such as a tree falling on a car during a rainstorm, or many people and communities, as with a hurricane. Natural events, often referred to as "acts of God," are typically unavoidable. Human-caused traumas are caused by human failure (e.g., technological catastrophes, accidents, malevolence) or by human design (e.g., war). Although multiple factors contribute to the severity of a natural or human-caused trauma, traumas perceived as intentionally harmful often make the event more traumatic for people and communities.

For information on resources to prepare States, Territories, and local entities to deliver effective mental health and substance abuse responses during disasters, contact the Substance Abuse and Mental Health Services Administration's (SAMHSA's) Disaster Technical Assistance Center:

Exhibit 1.2-1: Trauma Examples

Caused Naturally	Caused by People	
	Accidents, Technological Catastrophes	Intentional Acts
Tornado	Train derailment	Arson
Lightning strike	Roofing fall	Terrorism
Wildfire	Structural collapse	Sexual assault and abuse
Avalanche	Mountaineering accident	Homicides or suicides
Physical ailment or disease	Aircraft crash	Mob violence or rioting
Fallen tree	Car accident due to malfunction	Physical abuse and neglect
Earthquake	Mine collapse or fire	Stabbing or shooting
Dust storm	Radiation leak	Warfare
Volcanic eruption	Crane collapse	Domestic violence
Blizzard	Gas explosion	Poisoned water supply
Hurricane	Electrocution	Human trafficking
Cyclone	Machinery-related accident	School violence
Typhoon	Oil spill	Torture
Meteorite	Maritime accident	Home invasion
Flood	Accidental gun shooting	Bank robbery
Tsunami	Sports-related death	Genocide
Epidemic		Medical or food tampering
Famine		
Landslide or fallen boulder		

How survivors of natural trauma respond to the experience often depends on the degree of devastation, the extent of individual and community losses, and the amount of time it takes to reestablish daily routines, activities, and services (e.g., returning to school or work, being able to do laundry, having products to buy in a local store). The amount, accessibility, and duration of relief services can significantly influence the duration of traumatic stress reactions as well as the recovery process.

Alongside the disruption of daily routines, the presence of community members or outsiders in affected areas may add significant stress or create traumatic experiences in and of themselves. Examples include the threat of others stealing what remains of personal property, restrictions on travel or access to property or living quarters, disruption of privacy within shelters, media attention, and subsequent exposure to repetitive images reflecting the devastation. Therefore, it isn't just the natural disaster or event that can challenge an individual or community; often, the consequences of the event and behavioral responses from others within and outside the community play a role in pushing survivors away from effective coping or toward resilience and recovery.

Human-caused traumas are fundamentally different from natural disasters. They are either intentional, such as a convenience store robbery at gunpoint, or unintentional, such as the technological accident of a bridge collapse (as occurred in Minneapolis, Minnesota, in 2007; U.S. Fire Administration, 2007). The subsequent reactions to these traumas often depend on their intentionality. However, a person or group of people is typically the target of the survivors' anger and blame. Survivors of an unintentionally human-caused traumatic event may feel angry and frustrated because of the lack of protection or care offered by the responsible party or government, particularly if there has been a perceived act of omission. After intentional human-caused acts, survivors often struggle to understand the

Case Illustrations: Quecreek Mine Flood and Greensburg's Tornado

Quecreek Mine Flood

The year following the rescue of nine miners from the Quecreek mine in western Pennsylvania in 2002 was a difficult one for residents of Somerset County. The dazzle of publicity surrounding a handful of workers from a small town, tension between miners and rescuers, and animosity over money for movie and book deals, in addition to the trauma itself, resulted in a rescuer's suicide, a number of miners having trauma-related symptoms, and several rescuers needing to seek treatment for posttraumatic stress disorder (PTSD; Goodell, 2003).

Greensburg's Tornado

Greensburg, a small town in southern Kansas, was hit by a large tornado in 2007 that killed 11 residents and leveled 95 percent of the town while causing severe damage to the remaining 5 percent. Families and community members experienced significant grief and traumatic stress after the disaster. Yet today, Greensburg is rebuilding with a focus on being "green"—that is, environmentally responsible—from design to construction and all the way through demolition. This town has the highest number of Leadership in Energy and Environmental Design–certified buildings in the world. A reality television show about the town's reinvention ran for three seasons, demonstrating the town's residents and business owners working with local government and various corporations to make their home an even better place than it was before the tornado.

motives for performing the act, the calculated or random nature of the act, and the psychological makeup of the perpetrator(s).

Individual, Group, Community, and Mass Traumas

In recognizing the role of trauma and understanding responses to it, consider whether the trauma primarily affected an individual and perhaps his or her family (e.g., automobile accident, sexual or physical assault, severe illness); occurred within the context of a group (e.g., trauma experienced by first responders or those who have seen military combat) or community (e.g., gang-related shootings); transpired within a certain culture; or was a large-scale disaster (e.g., hurricane, terrorist attack). This context can have significant implications for whether (and how) people experience shame as a result of the trauma, the kinds of support and compassion they receive, whether their experiences are normalized or diminished by others, and even the kinds of services they are offered to help them recover and cope.

Individual trauma

An individual trauma refers to an event that only occurs to one person. It can be a single event (e.g., mugging, rape, physical attack, work-related physical injury) or multiple or prolonged events (e.g., a life-threatening illness, multiple sexual assaults). Although the trauma directly affects just one individual, others who know the person and/or are aware of the trauma will likely experience emotional repercussions from the event(s) as well, such as recounting what they said to the person before the event, reacting in disbelief, or thinking that it could just as easily have happened to them, too.

Survivors of individual trauma may not receive the environmental support and concern that members of collectively traumatized groups and communities receive. They are less likely to reveal their traumas or to receive validation of their experiences. Often, shame distorts their perception of responsibility for the trauma. Some survivors of individual traumas, especially those who have kept the trauma secret, may not receive needed comfort and

Advice to Counselors: Working With Clients Who Have Experienced Individual Traumas

In working with clients who have histories of individual trauma, counselors should consider that:

- Empathy, or putting oneself in the shoes of another, is more potent than sympathy (expressing a feeling of sorrow for another person).
- Some clients need to briefly describe the trauma(s) they have experienced, particularly in the early stages of recovery. Strategies that focus on reexperiencing the trauma, retrieving feelings related to the trauma, and bringing past experiences to the forefront should only be implemented if trauma-specific treatment planning and services are available.
- Understanding the trauma, especially in early recovery, should begin with educating the client about and normalizing trauma-related symptoms, creating a sense of safety within the treatment environment, and addressing how trauma symptoms may interfere with the client's life in the present.
- It is helpful to examine how the trauma affects opportunities to receive substance abuse and/or mental health treatment as well as treatment for and recovery from the trauma itself (e.g., by limiting one's willingness to share in or participate in group counseling).
- Identifying and exploring strengths in the client's history can help the client apply those strengths to his or her ability to function in the present.

acceptance from others; they are also are more likely to struggle with issues of causation (e.g., a young woman may feel unduly responsible for a sexual assault), to feel isolated by the trauma, and to experience repeated trauma that makes them feel victimized.

Physical injuries

Physical injuries are among the most prevalent individual traumas. Millions of emergency room (ER) visits each year relate directly to physical injuries. Most trauma patients are relatively young; about 70 percent of injury-related ER cases are people younger than 45 years old (McCaig & Burt, 2005). Dedicated ER hospital units, known as "trauma centers," specialize in physical traumas such as gunshot wounds, stabbings, and other immediate physical injuries. The term "trauma" in relation to ERs does not refer to psychological trauma, which is the focus of this TIP, yet physical injuries can be associated with psychological trauma. Sudden, unexpected, adverse health-related events can lead to extensive psychological trauma for patients and their families.

Excessive alcohol use is the leading risk factor for physical injuries; it's also the most promising target for injury prevention. Studies consistently connect injuries and substance use (Gentilello, Ebel, Wickizer, Salkever, & Rivara, 2005); nearly 50 percent of patients admitted to trauma centers have injuries attributable to alcohol abuse and dependence (Gentilello et al., 1999). One study found that two thirds of ambulatory assault victims presenting to an ER had positive substance use urinalysis results; more than half of all victims had PTSD 3 months later (Roy-Byrne et al.,

Acute stress disorder (ASD) prevalence among patients at medical trauma centers is very high, making trauma related disorders some of the most common complications seen in physically injured patients. Clients who have sustained serious injuries in car crashes, fires, stabbings, shootings, falls, and other events have an increased likelihood of developing trauma related mental disorders. Research suggests that PTSD and/or problem drinking is evident in nearly 50 percent of patients 1 year after discharge from trauma surgical units.

(Zatzick, Jurkovich, Gentilello, Wisner, & Rivara, 2002)

2004). Nearly 28 percent of patients whose drinking was identified as problematic during an ER visit for a physical injury will have a new injury within 1 year (Gentilello et al., 2005). For further information, see TIP 16, *Alcohol and Other Drug Screening of Hospitalized Trauma Patients* (Center for Substance Abuse Treatment [CSAT], 1995a).

Group trauma

The term "group trauma" refers to traumatic experiences that affect a particular group of people. This TIP intentionally distinguishes group trauma from mass trauma to highlight the unique experiences and characteristics of trauma-related reactions among small groups. These groups often share a common identity and history, as well as similar activities and concerns. They include vocational groups who specialize in managing traumas or who routinely place themselves in harm's way—for example, first responders, a group including police and emergency medical personnel. Some examples of group trauma include crews and their families who lose members from a commercial fishing accident, a gang whose members experience multiple deaths and injuries, teams of firefighters who lose members in a roof collapse, responders who attempt to save flood victims, and military service members in a specific theater of operation.

Survivors of group trauma can have different experiences and responses than survivors of individual or mass traumas. Survivors of group trauma, such as military service members and first responders, are likely to experience repeated trauma. They tend to keep the trauma experiences within the group, feeling that others outside the group will not understand; group outsiders are generally viewed as intruders. Members may encourage others in the group to shut down emotionally and repress their traumatic experiences—and there are some occupational roles that necessitate the repression of reactions to complete a mission or to be attentive to the needs at hand. Group members may not want to seek help and may discourage others from doing so out of fear that it may shame the entire group. In this environment, members may see it as a violation of group confidentiality when a member seeks assistance outside the group, such as by going to a counselor.

Group members who have had traumatic experiences in the past may not actively support traumatized colleagues for fear that acknowledging the trauma will increase the risk of repressed trauma-related emotions surfacing. However, groups with adequate resources for helping group members can develop a stronger and more supportive environment for handling subsequent traumas. These main group features influence the course of short- and long-term adjustments, including the development of traumatic stress symptoms associated with mental and substance use disorders.

Certain occupational groups are at greater risk of experiencing trauma—particularly multiple traumas. This TIP briefly reviews two main groups as examples in the following sections: first responders and military service members. For more detailed information on the impact of trauma and deployment, refer to the planned TIP, *Reintegration-Related Behavioral Health Issues in Veterans and Military Families* (SAMHSA, planned f).

First responders

First responders are usually emergency medical technicians, disaster management personnel, police officers, rescue workers, medical and behavioral health professionals, journalists, and volunteers from various backgrounds. They also include lifeguards, military personnel, and clergy. Stressors associated with the kinds of traumatic events and/or disasters first responders are likely to experience include

exposure to toxic agents, feeling responsible for the lives of others, witnessing catastrophic devastation, potential exposure to gruesome images, observing human and animal suffering and/or death, working beyond physical exhaustion, and the external and internal pressure of working against the clock.

Military service members

Military personnel are likely to experience numerous stressors associated with trauma. Service members who have repeatedly deployed to a war zone are at a greater risk for traumatic stress reactions (also known as combat stress reaction or traumatic stress injury), other military personnel who provide support services are also at risk for traumatic stress and secondary trauma (refer to the glossary portion of the "How This TIP Is Organized" section that precedes Part 1, Chapter 1, of this TIP). So too, service members who anticipate deployment or redeployment may exhibit psychological symptoms associated with traumatic stress. Some stressors that military service members may encounter include working while physically exhausted, exposure to gunfire, seeing or knowing someone who has been injured or killed, traveling in areas known for roadside bombs and rockets, extended hypervigilance, fear of being struck by an improvised explosive device, and so forth.

Trauma affecting communities and cultures

Trauma that affects communities and cultures covers a broad range of violence and atrocities that erode the sense of safety within a given community, including neighborhoods, schools, towns, and reservations. It may involve violence in the form of physical or sexual assaults, hate crimes, robberies, workplace or gang-related violence, threats, shootings, or stabbings—for example, the school shooting at Virginia Polytechnic Institute and State University in 2007. It also includes actions that attempt to dismantle systemic cultural practices, resources, and identities, such as making boarding school attendance mandatory for Native American children or placing them in non-Native foster homes. Cultural and/or community-based trauma can also occur via indifference or limited responsiveness to specific communities or cultures that are facing a potential catastrophe. Cultural traumas are events that, whether intentionally or not, erode the heritage of a culture—as with prejudice, disenfranchisement, and health inequities (e.g., late prenatal care, inability to afford medications, limited access to culturally appropriate health education, vicinity and quality of affordable medical services), among other examples.

"The excitement of the season had just begun, and then, we heard the news, oil in the water, lots of oil killing lots of water. It is too shocking to understand. Never in the millennium of our tradition have we thought it possible for the water to die, but it is true."

—Chief Walter Meganack, Port Graham, 1989

Of all the groups negatively affected by the Exxon Valdez oil spill, in many ways Alaska Natives were the most devastated. The oil spill destroyed more than economic resources; it shook the core cultural foundation of Native life. Alaska Native subsistence culture is based on an intimate relationship with the environment. Not only does the environment have sacred qualities for Alaska Natives; their survival also depends on the well-being of the ecosystem and the maintenance of cultural norms of subsistence. The spill directly threatened the well-being of the environment, disrupted subsistence behavior, and severely disturbed the sociocultural milieu of Alaska Natives.

Source: Gill & Picou, 1997, pp. 167–168.

Historical trauma

Historical trauma, known also as generational trauma, refers to events that are so widespread as to affect an entire culture; such events also have effects intense enough to influence generations of the culture beyond those who experienced them directly. The enslavement, torture, and lynching of African Americans; the forced assimilation and relocation of American Indians onto reservations; the extermination of millions of Jews and others in Europe during World War II; and the genocidal policies of the Hutus in Rwanda and the Khmer Rouge in Cambodia are examples of historical trauma.

In the past 50 years, research has explored the generational effects of the Holocaust upon survivors and their families. More recent literature has extended the concept of historical or generational trauma to the traumatic experiences of Native Americans. Reduced population, forced relocation, and acculturation are some examples of traumatic experiences that Native people have endured across centuries, beginning with the first European presence in the Americas. These tragic experiences have led to significant loss of cultural identity across generations and have had a significant impact on the well-being of Native communities (Whitbeck, Chen, Hoyt, & Adams, 2004). Data are limited on the association of mental and substance use disorders with historical trauma among Native people, but literature suggests that historical trauma has repercussions across generations, such as depression, grief, traumatic stress, domestic violence, and substance abuse, as well as significant loss of cultural knowledge, language, and identity (Gone, 2009). Historical trauma can increase the vulnerability of multiple generations to the effects of traumas that occur in their own lifetimes.

Mass trauma

Mass traumas or disasters affect large numbers of people either directly or indirectly. It is beyond the scope of this TIP to cover any specific disaster in detail; note, however, that mass traumas include large-scale natural and human-caused disasters (including intentional acts and accidents alike). Mass traumas may involve significant loss of property and lives as well as the widespread disruption of normal routines and services. Responding to such traumas often requires immediate and extensive resources that typically exceed the capacity of the affected communities, States, or countries in which they occur. Recent examples of such large-scale catastrophes include:

- In January 2010, a massive earthquake hit Haiti, killing hundreds of thousands of people and leaving over a million homeless.
- A nuclear reactor meltdown in the Ukraine in 1986 resulted in a technological and environmental disaster that affected tens of millions of people.
- The tsunami in the Indian Ocean in 2005 left hundreds of thousands dead in nine countries.

One factor that influences an individual's response to trauma is his or her ability to process one trauma before another trauma occurs. In mass traumas, the initial event causes considerable destruction, the consequences of which may spawn additional traumas and other stressful events that lead to more difficulties and greater need for adjustments among survivors, first responders, and disaster relief agencies. Often, a chain reaction occurs. Take, for example, Hurricane Katrina and its impact on the people of Louisiana and other coastal States. After the initial flooding, people struggled to obtain basic needs, including food, drinking water, safe shelter, clothing, medicines, personal hygiene items, and so forth, all as concern mounted about the safety of children and

other relatives, friends, and neighbors. In this and similar cases, the destruction from the initial flooding led to mass displacement of families and communities; many people had to relocate far from New Orleans and other badly affected areas, while also needing to gain financial assistance, reinitiate work to generate income, and obtain stable housing. People could not assimilate one stressor before another appeared.

Nevertheless, mass traumas can create an immediate sense of commonality—many people are "in the same boat," thus removing much of the isolation that can occur with other types of trauma. People can acknowledge their difficulties and receive support, even from strangers. It is easier to ask for help because blame is often externalized; large-scale disasters are often referred to as "acts of God" or, in cases of terrorism and other intentional events, as acts of "evil." Even so, survivors of mass trauma often encounter an initial rally of support followed by quickly diminishing services and dwindling care. When the disaster fades from the headlines, public attention and concern are likely to decrease, leaving survivors struggling to reestablish or reinvent their lives without much outside acknowledgment.

The experience of mass trauma can lead to the development of psychological symptoms and substance use at either a subclinical or a diagnostic level (refer to Part 3 of this TIP, available online, for more information highlighting the relationship between trauma and behavioral health problems). Likewise, one of the greatest risks for traumatic stress reactions after a mass tragedy is the presence of preexisting mental and co-occurring disorders, and individuals who are in early recovery from substance use disorders are at greater risk for such reactions as well. Nonetheless, people are amazingly resilient, and most will not develop long-term mental or substance use disorders after an event; in fact, most trauma-related symptoms will resolve in a matter of months (Keane & Piwowarczyk, 2006).

Interpersonal Traumas

Interpersonal traumas are events that occur (and typically continue to reoccur) between people who often know each other, such as spouses or parents and their children. Examples include physical and sexual abuse, sexual assault, domestic violence, and elder abuse.

Intimate partner violence

Intimate partner violence (IPV), often referred to as domestic violence, is a pattern of actual or threatened physical, sexual, and/or emotional abuse. It differs from simple assault in that multiple episodes often occur and the perpetrator is an intimate partner of the victim. Trauma associated with IPV is normally ongoing. Incidents of this form of violence are rarely isolated, and the client may still be in contact with and encountering abuse from the perpetrator while engaged in treatment.

Intimate partners include current and former spouses, boyfriends, and girlfriends. The majority of all nonfatal acts of violence and intimate partner homicides are committed against women; IPV accounts for over 20 percent of nonfatal violence against women but only 3.6 percent of that committed against men (Catalano, 2012). Children are the hidden casualties of IPV. They often witness the assaults or threats directly, within earshot, or by being exposed to the aftermath of the violence (e.g., seeing bruises and destruction of property, hearing the pleas for it to stop or the promises that it will never happen again).

Substance abuse, particularly involving alcohol, is frequently associated with IPV. It is the presence of alcohol-related problems in either partner, rather than the level of alcohol consumption itself, that is the important factor.

Drinking may or may not be the cause of the violence; that said, couples with alcohol-related disorders could have more tension and disagreement within the relationship in general, which leads to aggression and violence. The consumption of alcohol during a dispute is likely to decrease inhibitions and increase impulsivity, thus creating an opportunity for an argument to escalate into a physical altercation. More information on domestic violence and its effects on partners and families, as well as its connection with substance use and trauma-related disorders, is available in TIP 25, *Substance Abuse Treatment and Domestic Violence* (CSAT, 1997b), and from the National Online Resource Center on Violence Against Women (http://www.vawnet.org/).

Developmental Traumas

Developmental traumas include specific events or experiences that occur within a given developmental stage and influence later development, adjustment, and physical and mental health. Often, these traumas are related to adverse childhood experiences (ACEs), but they can also result from tragedies that occur outside an expected developmental or life stage (e.g., a child dying before a parent, being diagnosed with a life-threatening illness as a young adult) or from events at any point in the life cycle that create significant loss and have life-altering consequences (e.g., the death of a significant other in the later years that leads to displacement of the surviving partner).

Adverse childhood experiences

Some people experience trauma at a young age through sexual, physical, or emotional abuse and neglect. The Adverse Childhood Experiences Study (Felitti et al., 1998) examined the effects of several categories of ACEs on adult health, including physical and emotional abuse; sexual abuse; a substance-dependent parent; an incarcerated, mentally ill, or suicidal household member; spousal abuse between parents; and divorce or separation that meant one parent was absent during childhood. The National Comorbidity Studies examined the prevalence of trauma and defined childhood adversities as parental death, parental divorce/separation, life-threatening illness, or extreme economic hardship in addition to the childhood experiences included in the Adverse Childhood Experiences Study (Green et al., 2010).

ACEs can negatively affect a person's well-being into adulthood. Whether or not these experiences occur simultaneously, are time-limited, or recur, they set the stage for increased vulnerability to physical, mental, and substance use disorders and enhance the risk

Child Neglect

Child neglect occurs when a parent or caregiver does not give a child the care he or she needs according to his or her age, even though that adult can afford to give that care or is offered help to give that care. Neglect can mean not providing adequate nutrition, clothing, and/or shelter. It can mean that a parent or caregiver is not providing a child with medical or mental health treatment or is not giving prescribed medicines the child needs. Neglect can also mean neglecting the child's education. Keeping a child from school or from special education can be neglect. Neglect also includes exposing a child to dangerous environments (e.g., exposure to domestic violence). It can mean poor supervision for a child, including putting the child in the care of someone incapable of caring for children. It can mean abandoning a child or expelling him or her from home. Lack of psychological care, including emotional support, attention, or love, is also considered neglect—and it is the most common form of abuse reported to child welfare authorities.

Source: dePanfilis, 2006.

for repeated trauma exposure across the life span. Childhood abuse is highly associated with major depression, suicidal thoughts, PTSD, and dissociative symptoms. So too, ACEs are associated with a greater risk of adult alcohol use. When a person experiences several adverse events in childhood, the risk of his or her heavy drinking, self-reported alcohol dependence, and marrying a person who is alcohol dependent is two to four times greater than that of a person with no ACEs (Dube, Anda, Felitti, Edwards, & Croft, 2002).

A detailed examination of the issues involved in providing substance abuse treatment to survivors of child abuse and neglect is the subject of TIP 36, *Substance Abuse Treatment for Persons With Child Abuse and Neglect Issues* (CSAT, 2000b).

Political Terror and War

Political terror and war are likely to have lasting consequences for survivors. In essence, anything that threatens the existence, beliefs, well-being, or livelihood of a community is likely to be experienced as traumatic by community members. Whether counselors are working with an immigrant or refugee enclave in the United States or in another country, they should be aware of local events, local history, and the possibility that clients have endured trauma. (For international information about the clinical, historical, and theoretical aspects of trauma and terrorism, see Danieli, Brom, & Sills, 2005.) Terrorism is a unique subtype of human-caused disasters. The overall goal of terrorist attacks is to maximize the uncertainty, anxiety, and fear of a large community, so the responses are often epidemic and affect large numbers of people who have had direct or indirect exposure to an event (Silver et al., 2004; Suvak, Maguen, Litz, Silver, & Holman, 2008). Terrorism has a variety of results not common to other disasters, such as reminders of the unpredictability of terrorist acts; increases in security measures for the general population; intensified suspicion about a particular population, ethnicity, or culture; and heightened awareness and/or arousal.

Refugees

According to the World Refugee Survey, there are an estimated 12 million refugees and asylum seekers, 21 million internally displaced people, and nearly 35 million uprooted people (U.S. Committee for Refugees and Immigrants, 2006). Many of these people have survived horrendous ordeals with profound and lasting effects for individuals and whole populations. In addition to witnessing deaths by execution, starvation, or beatings, many survivors have experienced horrific torture.

Refugees are people who flee their homes because they have experienced or have a reasonable fear of experiencing persecution. They

Torture and Captivity

Torture traumatizes by taking away an individual's personhood. To survive, victims have to give up their sense of self and will. They become the person the torturer designs or a nonperson, simply existing. Inevitably, the shame of the victim is enormous, because the focus of torture is to humiliate and degrade. As a result, victims often seek to hide their trauma and significant parts of their selfhood long after torture has ended and freedom has been obtained. According to Judith Herman, "the methods of establishing control over another person are based upon the systematic, repetitive infliction of psychological trauma. They are organized techniques of disempowerment and disconnection. Methods of psychological control are designed to instill terror and helplessness and to destroy the victim's sense of self in relation to others."

Source: Herman, 1997, p. 77.

differ from immigrants who willingly leave their homes or homeland to seek better opportunities. Although immigrants may experience trauma before migrating to or after reaching their new destination, refugees will often have greater exposure to trauma before migration. Refugees typically come from war-torn countries and may have been persecuted or tortured. Consequently, greater exposure to trauma, such as torture, before migrating often leads to more adjustment-related difficulties and psychological symptoms after relocation (Steel et al., 2009).

Refugees typically face substantial difficulties in assimilating into new countries and cultures. Moreover, the environment can create a new set of challenges that may include additional exposure to trauma and social isolation (Miller et al., 2002). These as well as additional factors influence adjustment, the development of mental illness (including PTSD), and the occurrence of substance use disorders. Additional factors that influence outcomes after relocation include receptivity of the local community, along with opportunities for social support and culturally responsive services.

Among refugee populations in the United States, little research is available on rates of mental illness and co-occurring substance use disorders and traumatic stress among refugee populations. Substance use patterns vary based on cultural factors as well as assimilation, yet research suggests that trauma increases the risk for substance use among refugees after war-related experiences (Kozarić-Kovačić, Ljubin, & Grappe, 2000). Therefore, providers should expect to see trauma-related disorders among refugees who are seeking treatment for a substance use disorder and greater prevalence of substance use disorders among refugees who seek behavioral health services.

Vietnamese Refugees

"Wars always have consequences, both immediate and remote, and the consequences are often tragic. One tragic circumstance often caused by war is the forceful, disorganized, and uncontrollable mass movement of both civilians and soldiers trying to escape the horrors of the wars or of an oppressive regime.…

"Vietnamese communists, by taking power in the North in 1954 and then in the South in 1975, caused two major upheavals in the Land of the Small Dragon, as Vietnam was once called. The first Vietnam War led to the 1954 exodus during which 1 million people fled from the North to the South. The second Vietnam War resulted in the dispersion, from 1975-1992, of approximately 2 million Vietnamese all over the world. These significant, unplanned, and uncoordinated mass movements around the world not only dislocated millions of people, but also caused thousands upon thousands of deaths at sea.…

"The second and third wave of refugees from 1976 onward went through a more difficult time. They had to buy their way out and to hide from soldiers and the police who hunted them down. After catching them, the police either asked for brides or threw the escapees into jails. Those who evaded police still had to face engine failures, sea storms, pirates…They then had to survive overcrowded boats for days or weeks, during which food and water could not be replenished and living conditions were terrible… Many people died from exhaustion, dehydration, and hunger. Others suffered at the hands of terrifying pirates… After the sea ordeal came the overcrowded camps where living conditions were most often substandard and where security was painfully lacking.…

"In the United States, within less than 3 decades, the Vietnamese population grew from a minority of perhaps 1,000 persons to the second largest refugee group behind Cubans."

System-Oriented Traumas: Retraumatization

Retraumatization occurs when clients experience something that makes them feel as though they are undergoing another trauma. Unfortunately, treatment settings and clinicians can create retraumatizing experiences, often without being aware of it, and sometimes clients themselves are not consciously aware that a clinical situation has actually triggered a traumatic stress reaction. Agencies that anticipate the risk for retraumatization and actively work on adjusting program policies and procedures to remain sensitive to the histories and needs of individuals who have undergone past trauma are likely to have more success in providing care, retaining clients, and achieving positive outcomes.

Staff and agency issues that can cause retraumatization include:

- Being unaware that the client's traumatic history significantly affects his or her life.
- Failing to screen for trauma history prior to treatment planning.
- Challenging or discounting reports of abuse or other traumatic events.
- Using isolation or physical restraints.
- Using experiential exercises that humiliate the individual.
- Endorsing a confrontational approach in counseling.
- Allowing the abusive behavior of one client toward another to continue without intervention.
- Labeling behavior/feelings as pathological.
- Failing to provide adequate security and safety within the program.
- Limiting participation of the client in treatment decisions and planning processes.
- Minimizing, discrediting, or ignoring client responses.
- Disrupting counselor–client relationships by changing counselors' schedules and assignments.
- Obtaining urine specimens in a nonprivate setting.

Advice to Counselors: Addressing Retraumatization

- Anticipate and be sensitive to the needs of clients who have experienced trauma regarding program policies and procedures in the treatment setting that might trigger memories of trauma, such as lack of privacy, feeling pushed to take psychotropic medications, perceiving that they have limited choices within the program or in the selection of the program, and so forth.
- Attend to clients' experiences. Ignoring clients' behavioral and emotional reactions to having their traumatic memories triggered is more likely to increase these responses than decrease them.
- Develop an individual coping plan in anticipation of triggers that the individual is likely to experience in treatment based on his or her history.
- Rehearse routinely the coping strategies highlighted in the coping plan. If the client does not practice strategies prior to being triggered, the likelihood of being able to use them effectively upon triggering is lessened. For example, it is far easier to practice grounding exercises in the absence of severe fear than to wait for that moment when the client is reexperiencing an aspect of a traumatic event. (For more information on grounding exercises, refer to *Seeking Safety: A Treatment Manual for PTSD and Substance Abuse*; Najavits, 2002a, pp. 125–131.)
- Recognize that clinical and programmatic efforts to control or contain behavior in treatment can cause traumatic stress reactions, particularly for trauma survivors for whom being trapped was part of the trauma experience.
- Listen for the specific trigger that seems to be driving the client's reaction. It will typically help both the counselor and client understand the behavior and normalize the traumatic stress reactions.
- Make sure that staff and other clients do not shame the trauma survivor for his or her behavior, such as through teasing or joking about the situation.
- Respond with consistency. The client should not get conflicting information or responses from different staff members; this includes information and responses given by administrators.

- Having clients undress in the presence of others.
- Inconsistently enforcing rules and allowing chaos in the treatment environment.
- Imposing agency policies or rules without exceptions or an opportunity for clients to question them.
- Enforcing new restrictions within the program without staff–client communication.
- Limiting access to services for ethnically diverse populations.
- Accepting agency dysfunction, including lack of consistent, competent leadership.

Characteristics of Trauma

The following section highlights several selected characteristics of traumatic experiences that influence the effects of traumatic stress. Objective characteristics are those elements of a traumatic event that are tangible or factual; subjective characteristics include internal processes, such as perceptions of traumatic experiences and meanings assigned to them.

Objective Characteristics

Was it a single, repeated, or sustained trauma?

Trauma can involve a single event, numerous or repeated events, or sustained/chronic experiences. A *single trauma* is limited to a single point in time. A rape, an automobile accident, the sudden death of a loved one—all are examples of a single trauma. Some people who experience a single trauma recover without any specific intervention. But for others—especially those with histories of previous trauma or mental or substance use disorders, or those for whom the trauma experience is particularly horrific or overwhelming—a single trauma can result in traumatic stress symptoms and trauma- and stress-related disorders. Single traumas do not necessarily have a lesser psychological impact than repeated traumas. After the terrorist attacks on September 11, 2001—a significant single trauma—many Manhattan residents experienced intrusive memories and sleep disruption whether they were at the site of the attacks or watched television coverage of it (Ford & Fournier, 2007; Galea et al., 2002).

A series of traumas happening to the same person over time is known as *repeated trauma*. This can include repeated sexual or physical assaults, exposure to frequent injuries of others, or seemingly unrelated traumas. Military personnel, journalists covering stories of mass tragedies or prolonged conflicts, and first responders who handle hundreds of cases each year typify repeated trauma survivors. Repetitive exposure to traumas can have a cumulative effect over one's lifetime. A person who was assaulted during adolescence, diagnosed with a life-threatening illness in his or her thirties, and involved in a serious car accident later in life has experienced repeated trauma.

Some repeated traumas are sustained or chronic. Sustained trauma experiences tend to wear down resilience and the ability to adapt. Some examples include children who endure ongoing sexual abuse, physical neglect, or emotional abuse; people who are in violent relationships; and people who live in chronic poverty. Individuals in chronically stressful, traumatizing environments are particularly susceptible to traumatic stress reactions, substance use, and mental disorders.

Bidirectional relationships exist between trauma and substance use as well as trauma and mental illness. For example, abuse of alcohol and drugs increases the risk of a traumatic experience and creates greater vulnerability to the effects of trauma; substance abuse reduces a person's ability to take corrective and remedial actions that might reduce the impact of the trauma. Likewise, traumatic stress leads to a greater likelihood of

Case Illustration: Yourself

Think of a time that was particularly stressful (but not traumatic) in your life. Revisit this period as an observer watching the events unfold and then ask yourself, "What made this time particularly stressful?" It is likely that a part of your answer will include the difficulty of managing one situation before another circumstance came along demanding your time. Stressful times denote being bombarded with many things at one time, perceived or actual, without sufficient time or ability to address them emotionally, cognitively, spiritually, and/or physically. The same goes for trauma—rapid exposure to numerous traumas one after another lessens one's ability to process the event before the next onslaught. This creates a cumulative effect, making it more difficult to heal from any one trauma.

substance abuse that, in turn, increases the risk for additional exposure to trauma. Paralleling this bidirectional relationship, mental illness increases vulnerability to the effects of trauma and raises the risk for substance use disorders and for encountering additional traumatic events. So too, early exposure to ACEs is associated with traumatic stress reactions and subsequent exposure to trauma in adult years.

People who have encountered multiple and longer doses of trauma are at the greatest risk for developing traumatic stress. For example, military reservists and other military service members who have had multiple long tours of duty are at greater risk for traumatic stress reactions (see the planned TIP, *Reintegration-Related Behavioral Health Issues in Veterans and Military Families;* SAMHSA, planned f). In addition, people are more likely to encounter greater impairment and distress from trauma if that trauma occurs with significant intensity and continues sporadically or unceasingly for extended periods.

Was there enough time to process the experience?

A particularly severe pattern of ongoing trauma, sometimes referred to as "cascading trauma," occurs when multiple traumas happen in a pattern that does not allow an individual to heal from one traumatic event before another occurs. Take, for example, California residents—they repeatedly face consecutive and/or simultaneous natural disasters including fires, landslides, floods, droughts, and earthquakes. In other cases, there is ample time to process an event, but processing is limited because people don't have supportive relationships or environments that model preventive practices. This can lead to greater vulnerability to traumas that occur later in life.

How many losses has the trauma caused?

Trauma itself can create significant distress, but often, the losses associated with a trauma have more far-reaching effects. For instance, a child may be forced to assume adult responsibilities, such as serving as a confidant for a parent who is sexually abusing him or her, and lose the opportunity of a childhood free from adult worries. In another scenario, a couple may initially feel grateful to have escaped a house fire, but they may nevertheless face significant community and financial losses months afterward. In evaluating the impact of trauma, it is helpful to access and discuss the losses associated with the initial trauma. The number of losses greatly influences an individual's ability to bounce back from the tragedy.

In the case illustration on the next page, Rasheed's losses cause him to disconnect from his wife, who loves and supports him. Successful confrontation of losses can be difficult if the losses compound each other, as with Rasheed's loss of his friend, his disability, his employment struggles, and the threats to his marriage and liberty. People can cite a specific

Case Illustration: Rasheed

Rasheed was referred to an employee assistance program by his employer. He considered quitting his job, but his wife insisted he talk to a counselor. He is a 41-year-old auto mechanic who, 4 years ago, caused a head-on collision while attempting to pass another vehicle. A close friend, riding in the passenger's seat, was killed, and two young people in the other vehicle were seriously injured and permanently disabled. Rasheed survived with a significant back injury and has only been able to work sporadically. He was convicted of negligent homicide and placed on probation because of his physical disability. He is on probation for another 4 years, and if he is convicted of another felony during that time, he will have to serve prison time for his prior offense.

While still in the hospital, Rasheed complained of feeling unreal, numb, and disinterested in the care he received. He did not remember the crash but remembers waking up in the hospital 2 days later. He had difficulty sleeping in the hospital and was aware of feelings of impending doom, although he was unaware of the legal charges he would later face. He was diagnosed with ASD.

He was discharged from the hospital with a variety of medications, including pain pills and a sleep aid. He rapidly became dependent on these medications, feeling he could not face the day without the pain medication and being unable to sleep without sleep medicine in larger doses than had been prescribed. Within 3 months of the accident, he was "doctor shopping" for pain pills and even had a friend obtain a prescription for the sleeping medication from that friend's doctor. In the 4 intervening years, Rasheed's drug use escalated, and his blunted emotions and detachment from friends became more profound. He became adept at obtaining pain pills from a variety of sources, most of them illegal. He fears that if he seeks treatment for the drug problem, he will have to admit to felony offenses and will probably be imprisoned. He also does not believe he can manage his life without the pain pills.

In the past 2 years, he has had recurring dreams of driving a car on the wrong side of the road and into the headlights of an oncoming vehicle. In the dream, he cannot control the car and wakes up just before the vehicles crash. At unusual times—for instance, when he is just awakening in the morning, taking a shower, or walking alone—he will feel profound guilt over the death of his friend in the accident. He becomes very anxious when driving in traffic or when he feels he is driving faster than he should. His marriage of 18 years has been marked by increasing emotional distance, and his wife has talked about separating if he does not do something about his problem. He has been unable to work consistently because of back pain and depression. He was laid off from one job because he could not concentrate and was making too many mistakes.

The counselor in the employee assistance program elicited information on Rasheed's drug use, although she suspected Rasheed was minimizing its extent and effects. Knowledgeable about psychological trauma, the counselor helped Rasheed feel safe enough to talk about the accident and how it had affected his life. She was struck by how little Rasheed connected his present difficulties to the accident and its aftermath. The counselor later commented that Rasheed talked about the accident as if it had happened to someone else. Rasheed agreed to continue seeing the counselor for five additional visits, during which time a plan would be made for Rasheed to begin treatment for drug dependence and PTSD.

event as precipitating their trauma, or, in other cases, the specific trauma can symbolize a series of disabling events in which the person felt his or her life was threatened or in which he or she felt emotionally overwhelmed, psychologically disorganized, or significantly disconnected from his or her surroundings. It will be important for Rasheed to understand how his losses played a part in his abuse of prescription medications to cope with symptoms associated with traumatic stress and loss, (e.g., guilt, depression, fear). If not addressed, his trauma could increase his risk for relapse.

Was the trauma expected or unexpected?

When talking about a trauma, people sometimes say they didn't see it coming. Being unprepared, unaware, and vulnerable often increases the risk of psychological injury, but these are common components of most traumas, given that most traumatic events do occur without warning (e.g., car crashes, terrorist attacks, sexual assaults). People with substance use disorders, mental illness, and/or cognitive disabilities may be especially vulnerable in that they may attend less or have competing concerns that diminish attention to what is going on around them, even in high-risk environments. However, most individuals attempt to gain some control over the tragedy by replaying the moments leading up to the event and processing how they could have anticipated it. Some people perseverate on these thoughts for months or years after the event.

Sometimes, a trauma is anticipated but has unexpected or unanticipated consequences, as in the case of Hurricane Katrina. Learning about what is likely to happen can reduce traumatization. For instance, training military personnel in advance of going to combat overseas prepares them to handle traumas and can reduce the impact of trauma.

Were the trauma's effects on the person's life isolated or pervasive?

When a trauma is isolated from the larger context of life, a person's response to it is more likely to be contained and limited. For instance, military personnel in combat situations can be significantly traumatized by what they experience. On return to civilian life or noncombat service, some are able to isolate the traumatic experience so that it does not invade ordinary, day-to-day living. This does not mean that the combat experience was not disturbing or that it will not resurface if the individual encounters an experience that triggers memories of the trauma; it just means that the person can more easily leave the trauma in the past and attend to the present.

Conversely, people who remain in the vicinity of the trauma may encounter greater challenges in recovery. The traumatic event intertwines with various aspects of the person's daily activities and interactions, thus increasing the possibility of being triggered by surrounding cues and experiencing subsequent psychological distress. However, another way to view this potential dilemma for the client is to reframe it as an opportunity—the repetitive exposure to trauma-related cues may provide vital guidance as to when and which treatment and coping techniques to use in the delivery of trauma-informed and trauma-specific behavioral health services.

Who was responsible for the trauma and was the act intentional?

If the severity of a trauma is judged solely by whether the act was intentional or not, events that reflect an intention to harm would be a primary indicator in predicting subsequent difficulties among individuals exposed to this form of trauma. For most survivors, there is an initial disbelief that someone would conceivably intend to harm others, followed by considerable emotional and, at times, behavioral investment in somehow making things right again or in making sense of a senseless, malicious act. For instance, in the wake of the World Trade Center attacks in New York City, people responded via renewed patriotism, impromptu candlelight vigils, attacks on people of Arab and Muslim descent, and unprecedented donations and willingness to wait in long lines to donate blood to the Red Cross. Each example is a response that in some way attempts to right the perceived wrong or attach new meaning to the event and subsequent consequences.

When terrible things happen, it is human nature to assign blame. Trauma survivors can become heavily invested in assigning blame or finding out who was at fault, regardless of the type of trauma. Often, this occurs as an attempt to make sense of, give meaning to, and reestablish a sense of predictability, control, and safety after an irrational or random act. It is far easier to accept that someone, including oneself, is at fault or could have done something different than it is to accept the fact that one was simply in the wrong place at the wrong time.

For some trauma survivors, needing to find out why a trauma occurred or who is at fault can become a significant block to growth when the individual would be better served by asking, "What do I need to do to heal?" Behavioral health professionals can help clients translate what they have learned about responsibility in recovery to other aspects of their lives. For instance, someone in treatment for co-occurring disorders who has internalized that becoming depressed or addicted was not his or her fault, but that recovery *is* a personal responsibility, can then apply the same principle to the experience of childhood abuse and thereby overcome negative judgments of self (e.g., thinking oneself to be a bad person who deserves abuse). The individual can then begin to reassign responsibility by attaching the blame to the perpetrator(s) while at the same time assuming responsibility for recovery.

Was the trauma experienced directly or indirectly?

Trauma that happens to someone directly seems to be more damaging than witnessing trauma that befalls others. For example, it is usually more traumatic to be robbed at gunpoint than to witness someone else being robbed or hearing someone tell a story about being robbed. Yet, sometimes, experiencing another's pain can be equally traumatic. For instance, parents often internalize the pain and suffering of their children when the children are undergoing traumatic circumstances (e.g., treatments for childhood cancer).

There are two ways to experience the trauma of others. An individual may witness the event, such as seeing someone killed or seriously injured in a car accident, or may learn of an event that happened to someone, such as a violent personal assault, suicide, serious accident, injury, or sudden or unexpected death. For many people, the impact of the trauma will depend on a host of variables, including their proximity to the event as eyewitnesses, the witnesses' response in the situation, their relationship to the victims, the degree of helplessness surrounding the experience, their exposure to subsequent consequences, and so on.

Case Illustration: Frank

Frank entered substance abuse treatment with diagnoses of co-occurring PTSD and substance use disorder. While on a whitewater kayak trip with his wife, her kayak became pinned on a rock, and Frank could only watch helplessly as she drowned. His drinking had increased markedly after the accident. He acknowledged a vicious cycle of sleep disturbance with intrusive nightmares followed by vivid memories and feelings of terror and helplessness after he awoke. He drank heavily at night to quiet the nightmares and memories, but heavy alcohol consumption perpetuated his trouble sleeping. He withdrew from contact with many of his old "couple friends" and his wife's family, with whom he had been close. At treatment entry, he described his life as "going to work and coming home." The trauma occurred 3 years before he sought treatment, but Frank continued to feel numb and disconnected from the world. His only emotion was anger, which he tried to keep in check. Integrated treatment for PTSD and substance abuse helped him sleep and taught him coping skills to use when the memories arose; it fostered his engagement and retention in long-term care for both disorders.

The effects of traumas such as genocide and internment in concentration camps can be felt across generations—stories, coping behaviors, and stress reactions can be passed across generational lines far removed from the actual events or firsthand accounts. Known as historical trauma, this type of trauma can affect the functioning of families, communities, and cultures for multiple generations.

What happened since the trauma?

In reviewing traumatic events, it is important to assess the degree of disruption after the initial trauma has passed, such as the loss of employment, assets, community events, behavioral health services, local stores, and recreational areas. There is typically an initial rally of services and support following a trauma, particularly if it is on a mass scale. However, the reality of the trauma's effects and their disruptiveness may have a more lasting impact. The deterioration of normalcy, including the disruption of day-to-day activities and the damage of structures that house these routines, will likely erode the common threads that provide a sense of safety in individual lives and communities. Hence, the degree of disruption in resuming normal daily activities is a significant risk factor for substance use disorders, subclinical psychological symptoms, and mental disorders. For example, adults displaced from their homes because of Hurricanes Katrina or Rita had significantly higher rates of past-month cigarette use, illicit drug use, and binge drinking than those who were not displaced (Office of Applied Studies, 2008).

Subjective Characteristics

Psychological meaning of trauma

An important clinical issue in understanding the impact of trauma is the meaning that the survivor has attached to the traumatic experience. Survivors' unique cognitive interpretations of an event—that is, their beliefs and assumptions—contribute to how they process, react to, cope with, and recover from the trauma. Does the event represent retribution for past deeds committed by the individual or his or her family? How does the individual attach meaning to his or her survival? Does he or she believe that it is a sign of a greater purpose not yet revealed? People who attempt to share their interpretation and meaning of the event can feel misunderstood and sometimes alienated (Paulson & Krippner, 2007; Schein, Spitz, Burlingame, & Muskin, 2006).

> It is important to remember that what happened is not nearly as important as what the trauma means to the individual.

People interpret traumatic events in vastly different ways, and many variables shape how an individual assigns meaning to the experience (framing the meaning through culture, family beliefs, prior life experiences and learning, personality and other psychological features, etc.). Even in an event that happens in a household, each family member may interpret the experience differently. Likewise, the same type of event can occur at two different times in a person's life, but his or her interpretation of the events may differ considerably because of developmental differences acquired between events, current cognitive and emotional processing skills, availability of and access to environmental resources, and so forth.

Disruption of core assumptions and beliefs

Trauma often engenders a crisis of faith (Frankl, 1992) that leads clients to question basic assumptions about life. Were the individual's core or life-organizing assumptions (e.g., about safety, perception of others, fairness, purpose of life, future dreams) challenged or disrupted during or after the traumatic event? (See the seminal work,

Resilience: Connection and Continuity

Research suggests that reestablishing ties to family, community, culture, and spiritual systems is not only vital to the individual, but it also influences the impact of the trauma upon future generations. For example, Baker and Gippenreiter (1998) studied the descendants of survivors of Joseph Stalin's purge. They found that families who were able to maintain a sense of connection and continuity with grandparents directly affected by the purge experienced fewer negative effects than those who were emotionally or physically severed from their grandparents. Whether the grandparents survived was less important than the connection the grandchildren felt to their pasts.

Shattered Assumptions, by Janoff-Bulman, 1992.) For example, some trauma survivors see themselves as irreparably wounded or beyond the possibility of healing. The following case illustration (Sonja) explores not only the importance of meaning, but also the role that trauma plays in altering an individual's core assumptions—the very assumptions that provide meaning and a means to organize our lives and our interactions with the world and others.

Cultural meaning of trauma

Counselors should strive to appreciate the cultural meaning of a trauma. How do cultural interpretations, cultural support, and cultural responses affect the experience of trauma? It is critical that counselors do not presume to understand the meaning of a traumatic experience without considering the client's cultural context. Culture strongly influences the perceptions of trauma. For instance, a trauma involving shame can be more profound for a person from an Asian culture than for someone from a European culture. Likewise, an Alaska Native individual or community, depending upon their Tribal ancestry, may believe that the traumatic experience serves as a form of retribution. Similarly, the sudden death of a family member or loved one can be less traumatic in a culture that has a strong belief in a positive afterlife. It is important for counselors to recognize that their perceptions of a specific trauma could be very different from their clients' perceptions. Be careful not to judge a client's beliefs in light of your own value system. For more information on culture and how to achieve cultural competence in providing behavioral health services, see SAMHSA's planned TIP, *Improving Cultural Competence* (SAMHSA, planned c).

Individual and Sociocultural Features

A wide variety of social, demographic, environmental, and psychological factors influence a person's experience of trauma, the severity of traumatic stress reactions following the event, and his or her resilience in dealing with the short- and long-term environmental, physical, sociocultural, and emotional consequences. This section addresses a few known factors that influence the risk of trauma along with the development of subclinical and diagnostic traumatic stress symptoms, such as mood and anxiety symptoms and disorders. It is not meant to be an exhaustive exploration of these factors, but rather, a brief presentation to make counselors and other behavioral health professionals aware that various factors influence risk for and protection against traumatic stress and subsequent reactions. (For a broader perspective on such factors, refer to Part 1, Chapter 1.)

Individual Factors

Several factors influence one's ability to deal with trauma effectively and increase one's risk for traumatic stress reactions. Individual factors pertain to the individual's genetic, biological, and psychological makeup and history as they influence the person's experience and

Case Illustration: Sonja

Sonja began to talk about how her life was different after being physically assaulted and robbed in a parking lot at a local strip mall a year ago. She recounts that even though there were people in the parking lot, no one came to her aid until the assailant ran off with her purse. She sustained a cheekbone fracture and developed visual difficulties due to the inflammation from the fracture. She recently sought treatment for depressive symptoms and reported that she had lost interest in activities that typically gave her joy. She reported isolating herself from others and said that her perception of others had changed dramatically since the attack.

Sonja had received a diagnosis of major depression with psychotic features 10 years earlier and received group therapy at a local community mental health center for 3 years until her depression went into remission. She recently became afraid that her depression was becoming more pronounced, and she wanted to prevent another severe depressive episode as well as the use of psychotropic medications, which she felt made her lethargic. Thus, she sought out behavioral health counseling.

As the sessions progressed, and after a psychological evaluation, it was clear that Sonja had some depressive symptoms, but they were subclinical. She denied suicidal thoughts or intent, and her thought process was organized with no evidence of hallucinations or delusions. She described her isolation as a reluctance to shop at area stores. On one hand, Sonja was self-compassionate about her reasons for avoidance, but on the other hand, she was concerned that the traumatic event had altered how she saw life and others. "I don't see people as very caring or kind, like I used to prior to the event. I don't trust them, and I feel people are too self-absorbed. I don't feel safe, and this bothers me. I worry that I'm becoming paranoid again. I guess I know better, but I just want to have the freedom to do what I want and go where I want."

Two months after Sonja initiated counseling, she came to the office exclaiming that things can indeed change. "You won't believe it. I had to go to the grocery store, so I forced myself to go the shopping center that had a grocery store attached to a strip mall. I was walking by a coffee shop, quickly browsing the items in the front window, when a man comes out of the shop talking at me. He says, 'You look like you need a cup of coffee.' What he said didn't register immediately. I looked at him blankly, and he said it again. 'You look like you need a cup of coffee. I'm the owner of the shop, and I noticed you looking in the window, and we have plenty of brewed coffee left before we close the shop. Come on in, it's on the house.' So I did! From that moment on, I began to see people differently. He set it right for me—I feel as if I have myself back again, as if the assault was a sign that I shouldn't trust people, and now I see that there is some goodness in the world. As small as this kindness was, it gave me the hope that I had lost."

For Sonja, the assault changed her assumptions about safety and her view of others. She also attached meaning to the event. She believed that the event was a sign that she shouldn't trust people and that people are uncaring. Yet these beliefs bothered her and contradicted how she saw herself in the world, and she was afraid that her depressive symptoms were returning.

For an inexperienced professional, her presentation may have ignited suspicions that she was beginning to present with psychotic features. However, it is common for trauma survivors to experience changes in core assumptions immediately after the event and to attach meaning to the trauma. Often, a key ingredient in the recovery process is first identifying the meaning of the event and the beliefs that changed following the traumatic experience. So when you hear a client say "I will never see life the same," this expression should trigger further exploration into how life is different, what meaning has been assigned to the trauma, and how the individual has changed his or her perception of self, others, and the future.

(Continued on the next page.)

Case Illustration: Sonja (continued)

Sometimes, reworking the altered beliefs and assumptions occurs with no formal intervention, as with Sonja. In her situation, a random stranger provided a moment that challenged an assumption generated from the trauma. For others, counseling may be helpful in identifying how beliefs and thoughts about self, others, and the world have changed since the event and how to rework them to move beyond the trauma. It is important to understand that the meaning that an individual attaches to the event(s) can either undermine the healing process (e.g., believing that you should not have survived, feeling shame about the trauma, continuing to engage in high-risk activities) or pave the road to recovery (e.g., volunteering to protect victim rights after being sexually assaulted). The following questions can help behavioral health staff members introduce topics surrounding assumptions, beliefs, interpretations, and meanings related to trauma:

- In what ways has your life been different since the trauma?
- How do you understand your survival? (This is an important question for clients who have been exposed to ACEs or cumulative trauma and those who survived a tragedy when others did not.)
- Do you believe that there are reasons that this event happened to you? What are they?
- What meaning does this experience have for you?
- Do you feel that you are the same person as before the trauma? In what ways are you the same? In what ways do you feel different?
- How did this experience change you as a person? Would you like to return to the person you once were? What would you need to do, or what would need to happen, for this to occur?
- Did the traumatic experience change you in a way that you don't like? In what ways?
- How do you view others and your future differently since the trauma?
- What would you like to believe now about the experience?

interpretation of, as well as his or her reactions to, trauma. However, many factors influence individual responses to trauma; it is not just individual characteristics. Failing to recognize that multiple factors aside from individual attributes and history influence experiences during and after trauma can lead to blaming the victim for having traumatic stress.

History of prior psychological trauma

People with histories of prior psychological trauma appear to be the most susceptible to severe traumatic responses (Nishith, Mechanic, & Resick, 2000; Vogt, Bruce, Street, & Stafford, 2007), particularly if they have avoided addressing past traumas. Because minimization, dissociation, and avoidance are common defenses for many trauma survivors, prior traumas are not always consciously available, and when they are, memories can be distorted to avoid painful affects. Some survivors who have repressed their experiences deny a history of trauma or are unable to explain their strong reactions to present situations.

Remember that the effects of trauma are cumulative; therefore, a later trauma that outwardly appears less severe may have more impact upon an individual than a trauma that occurred years earlier. Conversely, individuals who have experienced earlier traumas may have developed effective coping strategies or report positive outcomes as they have learned to adjust to the consequences of the trauma(s). This outcome is often referred to as posttraumatic growth or psychological growth.

Clients in behavioral health treatment who have histories of trauma can respond negatively to or seem disinterested in treatment efforts. They may become uncomfortable in groups that emphasize personal sharing; likewise, an individual who experiences brief bouts of dissociation (a reaction of some trauma survivors) may be misunderstood by others in treatment and seen as uninterested. Providers need to

attend to histories, adjust treatment to avoid retraumatization, and steer clear of labeling clients' behavior as pathological.

History of resilience

Resilience—the ability to thrive despite negative life experiences and heal from traumatic events—is related to the internal strengths and environmental supports of an individual. Most individuals are resilient despite experiencing traumatic stress. The ability to thrive beyond the trauma is associated with individual factors as well as situational and contextual factors. There are not only one or two primary factors that make an individual resilient; many factors contribute to the development of resilience. There is little research to indicate that there are specific traits predictive of resilience; instead, it appears that more general characteristics influence resilience, including neurobiology (Feder, Charney, & Collins, 2011), flexibility in adapting to change, beliefs prior to trauma, sense of self-efficacy, and ability to experience positive emotions (Bonanno & Mancini, 2011).

History of mental disorders

The correlations among traumatic stress, substance use disorders, and co-occurring mental disorders are well known. According to the *Diagnostic and Statistical Manual of Mental Disorders*, Fifth Edition (American Psychiatric Association, 2013a), traumatic stress reactions are linked to higher rates of mood, substance-related, anxiety, trauma, stress-related, and other mental disorders, each of which can precede, follow, or emerge concurrently with trauma itself. A co-occurring mental disorder is a significant determinant of whether an individual can successfully address and resolve trauma as it emerges from the past or occurs in the present. Koenen, Stellman, Stellman, and Sommer (2003) found that the risk of developing PTSD following combat trauma was higher for individuals with preexisting conduct disorder, panic disorder, generalized anxiety disorder, and/or major depression than for those without preexisting mental disorders. For additional information on comorbidity of trauma and other mental disorders, see TIP 42, *Substance Abuse Treatment for Persons With Co-Occurring Disorders* (CSAT, 2005c).

Sociodemographic Factors

Demographic variables are not good predictors of who will experience trauma and subsequent traumatic stress reactions. Gender, age, race and ethnicity, sexual orientation, marital status, occupation, income, and education can all have some influence, but not enough to determine who should or should not receive screening for trauma and traumatic stress symptoms. The following sections cover a few selected variables. (For more information, please refer to Part 3 of this TIP, the online literature review.)

Gender

In the United States, men are at greater risk than women for being exposed to stressful events. Despite the higher prevalence among men, lifetime PTSD occurs at about twice the rate among women as it does in men. Less is known about gender differences with subclinical traumatic stress reactions. There are also other gender differences, such as the types of trauma experienced by men and women. Women are more likely to experience physical and sexual assault, whereas men are most likely to experience combat and crime victimization and to witness killings and serious injuries (Breslau, 2002; Kimerling, Ouimette, & Weitlauf, 2007; Tolin & Foa, 2006). Women in military service are subject to the same risks as men and are also at a greater risk for military sexual trauma. Men's traumas often occur in public; women's are more likely to take place in private settings. Perpetrators of traumas against men are often strangers, but women are more likely to know the perpetrator.

Age

In general, the older one becomes, the higher the risk of trauma—but the increase is not dramatic. Age is not particularly important in predicting exposure to trauma, yet at no age is one immune to the risk. However, trauma that occurs in the earlier and midlife years appears to have greater impact on people for different reasons. For younger individuals, the trauma can affect developmental processes, attachment, emotional regulation, life assumptions, cognitive interpretations of later experiences, and so forth (for additional resources, visit the National Child Traumatic Stress Network; http://www.nctsn.org/). For adults in midlife, trauma may have a greater impact due to the enhanced stress or burden of care that often characterizes this stage of life—caring for their children and their parents at the same time. Older adults are as likely as younger adults to recover quickly from trauma, yet they may have greater vulnerabilities, including their ability to survive without injury and their ability to address the current trauma without psychological interference from earlier stressful or traumatic events. Older people are naturally more likely to have had a history of trauma because they have lived longer, thus creating greater vulnerability to the effects of cumulative trauma.

Race, ethnicity, and culture

The potential for trauma exists in all major racial and ethnic groups in American society, yet few studies analyze the relationship of race and ethnicity to trauma exposure and/or traumatic stress reactions. Some studies show that certain racial and ethnic groups are at greater risk for specific traumas. For example, African Americans experienced higher rates of overall violence, aggravated assault, and robbery than Whites but were as likely to be victims of rape or sexual assault (Catalano, 2004). Literature reflects that diverse ethnic, racial, and cultural groups are more likely to experience adverse effects from various traumas and to meet criteria for posttraumatic stress (Bell, 2011).

Sexual orientation and gender identity

Lesbian, gay, bisexual, and transgender individuals are likely to experience various forms of trauma associated with their sexual orientation, including harsh consequences from families and faith traditions, higher risk of assault from casual sexual partners, hate crimes, lack of legal protection, and laws of exclusion (Brown, 2008). Gay and bisexual men as well as transgender people are more likely to experience victimization than lesbians and bisexual women. Dillon (2001) reported a trauma exposure rate of 94 percent among lesbian, gay,

Resilience: Cultural, Racial, and Ethnic Characteristics

The following list highlights characteristics that often nurture resilience among individuals from diverse cultural, racial, and ethnic groups:

- Strong kinship bonds
- Respect for elders and the importance of extended family
- Spirituality and religious practices (e.g., shrine visitations or the use of traditional healers)
- Value in friendships and warm personal relationships
- Expression of humor and creativity
- Instilling a sense of history, heritage, and historical traditions
- Community orientation, activities, and socialization
- Strong work ethic
- Philosophies and beliefs about life, suffering, and perseverance

"Fortune owes its existence to misfortune, and misfortune is hidden in fortune."

–Lao-Tzu teaching, Taoism (Wong & Wong, 2006)

and bisexual individuals; more than 40 percent of respondents experienced harassment due to their sexual orientation. Heterosexual orientation is also a risk for women, as women in relationships with men are at a greater risk of being physically and sexually abused.

People who are homeless

Homelessness is typically defined as the lack of an adequate or regular dwelling, or having a nighttime dwelling that is a publicly or privately supervised institution or a place not intended for use as a dwelling (e.g., a bus station). The U.S. Department of Housing and Urban Development (HUD) estimates that between 660,000 and 730,000 individuals were homeless on any given night in 2005 (HUD, 2007). Two thirds were unaccompanied persons; the other third were people in families. Adults who are homeless and unmarried are more likely to be male than female. About 40 percent of men who are homeless are veterans (National Coalition for the Homeless, 2002); this percentage has grown, including the number of veterans with dependent children (Kuhn & Nakashima, 2011).

Rates of trauma symptoms are high among people who are homeless (76 to 100 percent of women and 67 percent of men; Christensen et al., 2005; Jainchill, Hawke, & Yagelka, 2000), and the diagnosis of PTSD is among the most prevalent non-substance use Axis I disorders (Lester et al., 2007; McNamara, Schumacher, Milby, Wallace, & Usdan, 2001). People who are homeless report high levels of trauma (especially physical and sexual abuse in childhood or as adults) preceding their homeless status; assault, rape, and other traumas frequently happen while they are homeless. Research suggests that many women are homeless because they are fleeing domestic violence (National Coalition for the Homeless, 2002). Other studies suggest that women who are homeless are more likely to have histories of childhood physical and sexual abuse and to have experienced sexual assault as adults. A history of physical and/or sexual abuse is even more common among women who are homeless and have a serious mental illness.

Youth who are homeless, especially those who live without a parent, are likely to have experienced physical and/or sexual abuse. Between 21 and 42 percent of youth runaways report having been sexually abused before leaving their homes; for young women, rates range from 32 to 63 percent (Administration on Children, Youth and Families, 2002). Additionally, data reflect elevated rates of substance abuse for youth who are homeless and have histories of abuse.

More than half of people who are homeless have a lifetime prevalence of mental illness and substance use disorders. Those who are homeless have higher rates of substance abuse (84 percent of men and 58 percent of women), and substance use disorders, including alcohol and drug abuse/dependence, increase with longer lengths of homelessness (North, Eyrich, Pollio, & Spitznagel, 2004).

For more information on providing trauma-informed behavioral health services to clients who are homeless, and for further discussion of the incidence of trauma in this population, see TIP 55-R, *Behavioral Health Services for People Who Are Homeless* (SAMHSA, 2013b).

3 Understanding the Impact of Trauma

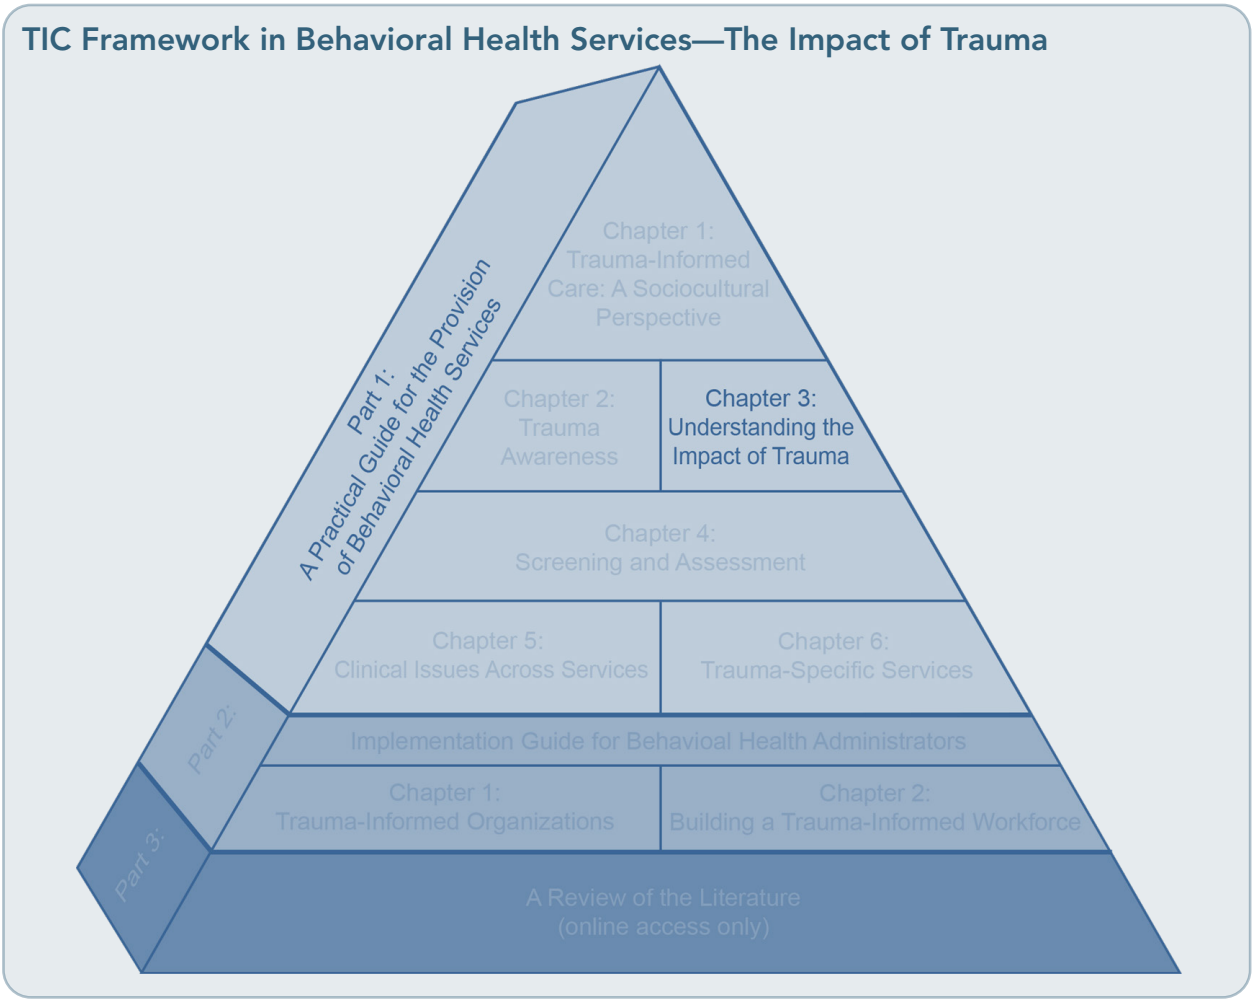
IN THIS CHAPTER

- Sequence of Trauma Reactions
- Common Experiences and Responses to Trauma
- Subthreshold Trauma Related Symptoms
- Specific Trauma Related Psychological Disorders
- Other Trauma Related and Co Occurring Disorders

Trauma-informed care (TIC) involves a broad understanding of traumatic stress reactions and common responses to trauma. Providers need to understand how trauma can affect treatment presentation, engagement, and the outcome of behavioral health services. This chapter examines common experiences survivors may encounter immediately following or long after a traumatic experience.

Trauma, including one-time, multiple, or long-lasting repetitive events, affects everyone differently. Some individuals may clearly display criteria associated with posttraumatic stress disorder (PTSD), but many more individuals will exhibit resilient responses or brief subclinical symptoms or consequences that fall outside of diagnostic criteria. The impact of trauma can be subtle, insidious, or outright destructive. How an event affects an individual depends on many factors, including characteristics of the individual, the type and characteristics of the event(s), developmental processes, the meaning of the trauma, and sociocultural factors.

This chapter begins with an overview of common responses, emphasizing that traumatic stress reactions are normal reactions to abnormal circumstances. It highlights common short- and long-term responses to traumatic experiences in the context of individuals who may seek behavioral health services. This chapter discusses psychological symptoms not represented in the *Diagnostic and Statistical Manual of Mental Disorders,* Fifth Edition (DSM-5; American Psychiatric Association [APA], 2013a), and responses associated with trauma that either fall below the threshold of mental disorders or reflect resilience. It also addresses common disorders associated with traumatic stress. This chapter explores the role of culture in defining mental illness, particularly PTSD, and ends by addressing co-occurring mental and substance-related disorders.



Sequence of Trauma Reactions

Survivors' immediate reactions in the aftermath of trauma are quite complicated and are affected by their own experiences, the accessibility of natural supports and healers, their coping and life skills and those of immediate family, and the responses of the larger community in which they live. Although reactions range in severity, even the most acute responses are natural responses to manage trauma—they are not a sign of psychopathology. Coping styles vary from action oriented to reflective and from emotionally expressive to reticent. Clinically, a response style is less important than the degree to which coping efforts successfully allow one to continue necessary activities, regulate emotions, sustain self-esteem, and maintain and enjoy interpersonal contacts. Indeed, a past error in traumatic stress psychology, particularly regarding group or mass traumas, was the assumption that all survivors need to express emotions associated with trauma and talk about the trauma; more recent research indicates that survivors who choose not to process their trauma are just as psychologically healthy as

Foreshortened future: Trauma can affect one's beliefs about the future via loss of hope, limited expectations about life, fear that life will end abruptly or early, or anticipation that normal life events won't occur (e.g., access to education, ability to have a significant and committed relationship, good opportunities for work).

those who do. The most recent psychological debriefing approaches emphasize respecting the individual's style of coping and not valuing one type over another.

Initial reactions to trauma can include exhaustion, confusion, sadness, anxiety, agitation, numbness, dissociation, confusion, physical arousal, and blunted affect. Most responses are normal in that they affect most survivors and are socially acceptable, psychologically effective, and self-limited. Indicators of more severe responses include continuous distress without periods of relative calm or rest, severe dissociation symptoms, and intense intrusive recollections that continue despite a return to safety. Delayed responses to trauma can include persistent fatigue, sleep disorders, nightmares, fear of recurrence, anxiety focused on flashbacks, depression, and avoidance of emotions, sensations, or activities that are associated with the trauma, even remotely. Exhibit 1.3-1 outlines some common reactions.

Common Experiences and Responses to Trauma

A variety of reactions are often reported and/or observed after trauma. Most survivors exhibit immediate reactions, yet these typically resolve without severe long-term consequences. This is because most trauma survivors are highly resilient and develop appropriate coping strategies, including the use of social supports, to deal with the aftermath and effects of trauma. Most recover with time, show minimal distress, and function effectively across major life areas and developmental stages. Even so, clients who show little impairment may still have subclinical symptoms or symptoms that do not fit diagnostic criteria for acute stress disorder (ASD) or PTSD. Only a small percentage of people with a history of trauma show impairment and symptoms that meet criteria for trauma-related stress disorders, including mood and anxiety disorders.

The following sections focus on some common reactions across domains (emotional, physical, cognitive, behavioral, social, and developmental) associated with singular, multiple, and enduring traumatic events. These reactions are often normal responses to trauma but can still be distressing to experience. Such responses are not signs of mental illness, nor do they indicate a mental disorder. Traumatic stress-related disorders comprise a specific constellation of symptoms and criteria.

Emotional

Emotional reactions to trauma can vary greatly and are significantly influenced by the individual's sociocultural history. Beyond the initial emotional reactions during the event, those most likely to surface include anger, fear, sadness, and shame. However, individuals may encounter difficulty in identifying any of these feelings for various reasons. They might lack experience with or prior exposure to emotional expression in their family or community. They may associate strong feelings with the past trauma, thus believing that emotional expression is too dangerous or will lead to feeling out of control (e.g., a sense of "losing it" or going crazy). Still others might deny that they have any feelings associated with their traumatic experiences and define their reactions as numbness or lack of emotions.

Emotional dysregulation

Some trauma survivors have difficulty regulating emotions such as anger, anxiety, sadness, and shame—this is more so when the trauma occurred at a young age (van der Kolk, Roth, Pelcovitz, & Mandel, 1993). In individuals who are older and functioning well

Exhibit 1.3-1: Immediate and Delayed Reactions to Trauma

Immediate Emotional Reactions	Delayed Emotional Reactions
Numbness and detachment Anxiety or severe fear Guilt (including survivor guilt) Exhilaration as a result of surviving Anger Sadness Helplessness Feeling unreal; depersonalization (e.g., feeling as if you are watching yourself) Disorientation Feeling out of control Denial Constriction of feelings Feeling overwhelmed	Irritability and/or hostility Depression Mood swings, instability Anxiety (e.g., phobia, generalized anxiety) Fear of trauma recurrence Grief reactions Shame Feelings of fragility and/or vulnerability Emotional detachment from anything that requires emotional reactions (e.g., significant and/or family relationships, conversations about self, discussion of traumatic events or reactions to them)
Immediate Physical Reactions	**Delayed Physical Reactions**
Nausea and/or gastrointestinal distress Sweating or shivering Faintness Muscle tremors or uncontrollable shaking Elevated heartbeat, respiration, and blood pressure Extreme fatigue or exhaustion Greater startle responses Depersonalization	Sleep disturbances, nightmares Somatization (e.g., increased focus on and worry about body aches and pains) Appetite and digestive changes Lowered resistance to colds and infection Persistent fatigue Elevated cortisol levels Hyperarousal Long-term health effects including heart, liver, autoimmune, and chronic obstructive pulmonary disease
Immediate Cognitive Reactions	**Delayed Cognitive Reactions**
Difficulty concentrating Rumination or racing thoughts (e.g., replaying the traumatic event over and over again) Distortion of time and space (e.g., traumatic event may be perceived as if it was happening in slow motion, or a few seconds can be perceived as minutes) Memory problems (e.g., not being able to recall important aspects of the trauma) Strong identification with victims	Intrusive memories or flashbacks Reactivation of previous traumatic events Self-blame Preoccupation with event Difficulty making decisions Magical thinking: belief that certain behaviors, including avoidant behavior, will protect against future trauma Belief that feelings or memories are dangerous Generalization of triggers (e.g., a person who experiences a home invasion during the daytime may avoid being alone during the day) Suicidal thinking
Immediate Behavioral Reactions	**Delayed Behavioral Reactions**
Startled reaction Restlessness Sleep and appetite disturbances Difficulty expressing oneself Argumentative behavior Increased use of alcohol, drugs, and tobacco Withdrawal and apathy Avoidant behaviors	Avoidance of event reminders Social relationship disturbances Decreased activity level Engagement in high-risk behaviors Increased use of alcohol and drugs Withdrawal

(Continued on the next page.)

Exhibit 1.3-1: Immediate and Delayed Reactions to Trauma (continued)

Immediate Existential Reactions	Delayed Existential Reactions
Intense use of prayer	Questioning (e.g., "Why me?")
Restoration of faith in the goodness of others (e.g., receiving help from others)	Increased cynicism, disillusionment
Loss of self-efficacy	Increased self-confidence (e.g., "If I can survive this, I can survive anything")
Despair about humanity, particularly if the event was intentional	Loss of purpose
Immediate disruption of life assumptions (e.g., fairness, safety, goodness, predictability of life)	Renewed faith
	Hopelessness
	Reestablishing priorities
	Redefining meaning and importance of life
	Reworking life's assumptions to accommodate the trauma (e.g., taking a self-defense class to reestablish a sense of safety)

Sources: Briere & Scott, 2006b; Foa, Stein, & McFarlane, 2006; Pietrzak, Goldstein, Southwick, & Grant, 2011.

prior to the trauma, such emotional dysregulation is usually short lived and represents an immediate reaction to the trauma, rather than an ongoing pattern. Self-medication—namely, substance abuse—is one of the methods that traumatized people use in an attempt to regain emotional control, although ultimately it causes even further emotional dysregulation (e.g., substance-induced changes in affect during and after use). Other efforts toward emotional regulation can include engagement in high-risk or self-injurious behaviors, disordered eating, compulsive behaviors such as gambling or overworking, and repression or denial of emotions; however, not all behaviors associated with self-regulation are considered negative. In fact, some individuals find creative, healthy, and industrious ways to manage strong affect generated by trauma, such as through renewed commitment to physical activity or by creating an organization to support survivors of a particular trauma.

Traumatic stress tends to evoke two emotional extremes: feeling either too much (overwhelmed) or too little (numb) emotion. Treatment can help the client find the optimal level of emotion and assist him or her with appropriately experiencing and regulating difficult emotions. In treatment, the goal is to help clients learn to regulate their emotions without the use of substances or other unsafe behavior. This will likely require learning new coping skills and how to tolerate distressing emotions; some clients may benefit from mindfulness practices, cognitive restructuring, and trauma-specific desensitization approaches, such as exposure therapy and eye movement desensitization and reprocessing (EMDR; refer to Part 1, Chapter 6, for more information on trauma-specific therapies).

Numbing

Numbing is a biological process whereby emotions are detached from thoughts, behaviors, and memories. In the following case illustration, Sadhanna's numbing is evidenced by her limited range of emotions associated with interpersonal interactions and her inability to associate any emotion with her history of abuse. She also possesses a belief in a foreshortened future. A prospective longitudinal study (Malta, Levitt, Martin, Davis, & Cloitre, 2009) that followed the development of PTSD in disaster workers highlighted the importance of understanding and appreciating numbing as a traumatic stress reaction. Because numbing

Case Illustration: Sadhanna

Sadhanna is a 22-year-old woman mandated to outpatient mental health and substance abuse treatment as the alternative to incarceration. She was arrested and charged with assault after arguing and fighting with another woman on the street. At intake, Sadhanna reported a 7-year history of alcohol abuse and one depressive episode at age 18. She was surprised that she got into a fight but admitted that she was drinking at the time of the incident. She also reported severe physical abuse at the hands of her mother's boyfriend between ages 4 and 15. Of particular note to the intake worker was Sadhanna's matter-of-fact way of presenting the abuse history. During the interview, she clearly indicated that she did not want to attend group therapy and hear other people talk about their feelings, saying, "I learned long ago not to wear emotions on my sleeve."

Sadhanna reported dropping out of 10th grade, saying she never liked school. She didn't expect much from life. In Sadhanna's first weeks in treatment, she reported feeling disconnected from other group members and questioned the purpose of the group. When asked about her own history, she denied that she had any difficulties and did not understand why she was mandated to treatment. She further denied having feelings about her abuse and did not believe that it affected her life now. Group members often commented that she did not show much empathy and maintained a flat affect, even when group discussions were emotionally charged.

symptoms hide what is going on inside emotionally, there can be a tendency for family members, counselors, and other behavioral health staff to assess levels of traumatic stress symptoms and the impact of trauma as less severe than they actually are.

Physical

Diagnostic criteria for PTSD place considerable emphasis on psychological symptoms, but some people who have experienced traumatic stress may present initially with physical symptoms. Thus, primary care may be the first and only door through which these individuals seek assistance for trauma-related symptoms. Moreover, there is a significant connection between trauma, including adverse childhood experiences (ACEs), and chronic health conditions. Common physical disorders and symptoms include somatic complaints; sleep disturbances; gastrointestinal, cardiovascular, neurological, musculoskeletal, respiratory, and dermatological disorders; urological problems; and substance use disorders.

Somatization

Somatization indicates a focus on bodily symptoms or dysfunctions to express emotional distress. Somatic symptoms are more likely to occur with individuals who have traumatic stress reactions, including PTSD. People from certain ethnic and cultural backgrounds may initially or solely present emotional distress via physical ailments or concerns. Many individuals who present with somatization are likely unaware of the connection between their emotions and the physical symptoms that they're experiencing. At times, clients may remain resistant to exploring emotional content and remain focused on bodily complaints as a means of avoidance. Some clients may insist that their primary problems are physical even when medical evaluations and tests fail to confirm ailments. In these situations, somatization may be a sign of a mental illness. However, various cultures approach emotional distress through the physical realm or view emotional and physical symptoms and well-being as one. It is important not to assume that clients with physical complaints are using somatization as a means to express emotional pain; they may have specific conditions or disorders that require medical attention. Foremost, counselors need to refer for medical evaluation.

Advice to Counselors: Using Information About Biology and Trauma

- Educate your clients:
  - Frame reexperiencing the event(s), hyperarousal, sleep disturbances, and other physical symptoms as physiological reactions to extreme stress.
  - Communicate that treatment and other wellness activities can improve both psychological and physiological symptoms (e.g., therapy, meditation, exercise, yoga). You may need to refer certain clients to a psychiatrist who can evaluate them and, if warranted, prescribe psychotropic medication to address severe symptoms.
  - Discuss traumatic stress symptoms and their physiological components.
  - Explain links between traumatic stress symptoms and substance use disorders, if appropriate.
  - Normalize trauma symptoms. For example, explain to clients that their symptoms are not a sign of weakness, a character flaw, being damaged, or going crazy.
- Support your clients and provide a message of hope—that they are not alone, they are not at fault, and recovery is possible and anticipated.

Biology of trauma

Trauma biology is an area of burgeoning research, with the promise of more complex and explanatory findings yet to come. Although a thorough presentation on the biological aspects of trauma is beyond the scope of this publication, what is currently known is that exposure to trauma leads to a cascade of biological changes and stress responses. These biological alterations are highly associated with PTSD, other mental illnesses, and substance use disorders. These include:

- Changes in limbic system functioning.
- Hypothalamic–pituitary–adrenal axis activity changes with variable cortisol levels.
- Neurotransmitter-related dysregulation of arousal and endogenous opioid systems.

As a clear example, early ACEs such as abuse, neglect, and other traumas affect brain development and increase a person's vulnerability to encountering interpersonal violence as an adult and to developing chronic diseases and other physical illnesses, mental illnesses, substance-related disorders, and impairment in other life areas (Centers for Disease Control and Prevention, 2012).

Hyperarousal and sleep disturbances

A common symptom that arises from traumatic experiences is hyperarousal (also called hypervigilance). Hyperarousal is the body's way of remaining prepared. It is characterized by sleep disturbances, muscle tension, and a lower threshold for startle responses and can persist years after trauma occurs. It is also one of the primary diagnostic criteria for PTSD.

Hyperarousal is a consequence of biological changes initiated by trauma. Although it

Case Illustration: Kimi

Kimi is a 35-year-old Native American woman who was group raped at the age of 16 on her walk home from a suburban high school. She recounts how her whole life changed on that day. "I never felt safe being alone after the rape. I used to enjoy walking everywhere. Afterward, I couldn't tolerate the fear that would arise when I walked in the neighborhood. It didn't matter whether I was alone or with friends—every sound that I heard would throw me into a state of fear. I felt like the same thing was going to happen again. It's gotten better with time, but I often feel as if I'm sitting on a tree limb waiting for it to break. I have a hard time relaxing. I can easily get startled if a leaf blows across my path or if my children scream while playing in the yard. The best way I can describe how I experience life is by comparing it to watching a scary, suspenseful movie—anxiously waiting for something to happen, palms sweating, heart pounding, on the edge of your chair."

serves as a means of self-protection after trauma, it can be detrimental. Hyperarousal can interfere with an individual's ability to take the necessary time to assess and appropriately respond to specific input, such as loud noises or sudden movements. Sometimes, hyperarousal can produce overreactions to situations perceived as dangerous when, in fact, the circumstances are safe.

Along with hyperarousal, sleep disturbances are very common in individuals who have experienced trauma. They can come in the form of early awakening, restless sleep, difficulty falling asleep, and nightmares. Sleep disturbances are most persistent among individuals who have trauma-related stress; the disturbances sometimes remain resistant to intervention long after other traumatic stress symptoms have been successfully treated. Numerous strategies are available beyond medication, including good sleep hygiene practices, cognitive rehearsals of nightmares, relaxation strategies, and nutrition.

Cognitive

Traumatic experiences can affect and alter cognitions. From the outset, trauma challenges the just-world or core life assumptions that

Cognitions and Trauma

The following examples reflect some of the types of cognitive or thought-process changes that can occur in response to traumatic stress.

Cognitive errors: Misinterpreting a current situation as dangerous because it resembles, even remotely, a previous trauma (e.g., a client overreacting to an overturned canoe in 8 inches of water, as if she and her paddle companion would drown, due to her previous experience of nearly drowning in a rip current 5 years earlier).

Excessive or inappropriate guilt: Attempting to make sense cognitively and gain control over a traumatic experience by assuming responsibility or possessing survivor's guilt, because others who experienced the same trauma did not survive.

Idealization: Demonstrating inaccurate rationalizations, idealizations, or justifications of the perpetrator's behavior, particularly if the perpetrator is or was a caregiver. Other similar reactions mirror idealization; traumatic bonding is an emotional attachment that develops (in part to secure survival) between perpetrators who engage in interpersonal trauma and their victims, and Stockholm syndrome involves compassion and loyalty toward hostage takers (de Fabrique, Van Hasselt, Vecchi, & Romano, 2007).

Trauma-induced hallucinations or delusions: Experiencing hallucinations and delusions that, although they are biological in origin, contain cognitions that are congruent with trauma content (e.g., a woman believes that a person stepping onto her bus is her father, who had sexually abused her repeatedly as child, because he wore shoes similar to those her father once wore).

Intrusive thoughts and memories: Experiencing, without warning or desire, thoughts and memories associated with the trauma. These intrusive thoughts and memories can easily trigger strong emotional and behavioral reactions, as if the trauma was recurring in the present. The intrusive thoughts and memories can come rapidly, referred to as flooding, and can be disruptive at the time of their occurrence. If an individual experiences a trigger, he or she may have an increase in intrusive thoughts and memories for a while. For instance, individuals who inadvertently are retraumatized due to program or clinical practices may have a surge of intrusive thoughts of past trauma, thus making it difficult for them to discern what is happening now versus what happened then. Whenever counseling focuses on trauma, it is likely that the client will experience some intrusive thoughts and memories. It is important to develop coping strategies before, as much as possible, and during the delivery of trauma-informed and trauma-specific treatment.

help individuals navigate daily life (Janoff-Bulman, 1992). For example, it would be difficult to leave the house in the morning if you believed that the world was not safe, that all people are dangerous, or that life holds no promise. Belief that one's efforts and intentions can protect oneself from bad things makes it less likely for an individual to perceive personal vulnerability. However, traumatic events—particularly if they are unexpected—can challenge such beliefs.

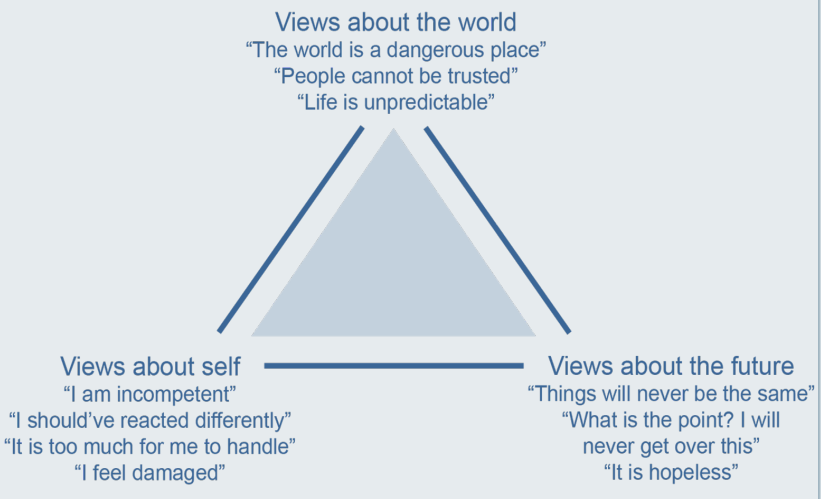
Let's say you always considered your driving time as "your time"—and your car as a safe place to spend that time. Then someone hits you from behind at a highway entrance. Almost immediately, the accident affects how you perceive the world, and from that moment onward, for months following the crash, you feel unsafe in any car. You become hypervigilant about other drivers and perceive that other cars are drifting into your lane or failing to stop at a safe distance behind you. For a time, your perception of safety is eroded, often leading to compensating behaviors (e.g., excessive glancing into the rearview mirror to see whether the vehicles behind you are stopping) until the belief is restored or reworked. Some individuals never return to their previous belief systems after a trauma, nor do they find a way to rework them—thus leading to a worldview that life is unsafe. Still, many other individuals are able to return to organizing core beliefs that support their perception of safety.

Many factors contribute to cognitive patterns prior to, during, and after a trauma. Adopting Beck and colleagues' cognitive triad model (1979), trauma can alter three main cognitive patterns: thoughts about self, the world (others/environment), and the future. To clarify, trauma can lead individuals to see themselves as incompetent or damaged, to see others and the world as unsafe and unpredictable, and to see the future as hopeless—believing that personal suffering will continue, or negative outcomes will preside for the foreseeable future (see Exhibit 1.3-2). Subsequently, this set of cognitions can greatly influence clients' belief in their ability to use internal resources and external support effectively. From a cognitive–behavioral perspective, these cognitions have a bidirectional relationship in sustaining or contributing to the development of depressive and anxiety symptoms after trauma. However, it is possible for cognitive patterns to help protect against debilitating psychological symptoms as well. Many factors contribute to cognitive patterns prior to, during, and after a trauma.

Feeling different

An integral part of experiencing trauma is feeling different from others, whether or not the trauma was an individual or group experience. Traumatic experiences typically feel surreal and challenge the necessity and value of mundane activities of daily life. Survivors

Exhibit 1.3-2: Cognitive Triad of Traumatic Stress



often believe that others will not fully understand their experiences, and they may think that sharing their feelings, thoughts, and reactions related to the trauma will fall short of expectations. However horrid the trauma may be, the *experience* of the trauma is typically profound.

The type of trauma can dictate how an individual feels different or believes that they are different from others. Traumas that generate shame will often lead survivors to feel more alienated from others—believing that they are "damaged goods." When individuals believe that their experiences are unique and incomprehensible, they are more likely to seek support, if they seek support at all, only with others who have experienced a similar trauma.

Triggers and flashbacks

Triggers

A trigger is a stimulus that sets off a memory of a trauma or a specific portion of a traumatic experience. Imagine you were trapped briefly in a car after an accident. Then, several years later, you were unable to unlatch a lock after using a restroom stall; you might have begun to feel a surge of panic reminiscent of the accident, even though there were other avenues of escape from the stall. Some triggers can be identified and anticipated easily, but many are subtle and inconspicuous, often surprising the individual or catching him or her off guard. In treatment, it is important to help clients identify potential triggers, draw a connection between strong emotional reactions and triggers, and develop coping strategies to manage those moments when a trigger occurs. A trigger is any sensory reminder of the traumatic event: a noise, smell, temperature, other physical sensation, or visual scene. Triggers can generalize to any characteristic, no matter how remote, that resembles or represents a previous trauma, such as revisiting the location where the trauma occurred, being alone, having your children reach the same age that you were when you experienced the trauma, seeing the same breed of dog that bit you, or hearing loud voices. Triggers are often associated with the time of day, season, holiday, or anniversary of the event.

Flashbacks

A flashback is reexperiencing a previous traumatic experience as if it were actually happening in that moment. It includes reactions that often resemble the client's reactions during the trauma. Flashback experiences are very brief and typically last only a few seconds, but the emotional aftereffects linger for hours or longer. Flashbacks are commonly initiated by a trigger, but not necessarily. Sometimes, they occur out of the blue. Other times, specific physical states increase a person's vulnerability to reexperiencing a trauma, (e.g., fatigue, high

Advice to Counselors: Helping Clients Manage Flashbacks and Triggers

If a client is triggered in a session or during some aspect of treatment, help the client focus on what is happening in the here and now; that is, use grounding techniques. Behavioral health service providers should be prepared to help the client get regrounded so that they can distinguish between what is happening now versus what had happened in the past (see Covington, 2008, and Najavits, 2002b, 2007b, for more grounding techniques). Offer education about the experience of triggers and flashbacks, and then normalize these events as common traumatic stress reactions. Afterward, some clients need to discuss the experience and understand why the flashback or trigger occurred. It often helps for the client to draw a connection between the trigger and the traumatic event(s). This can be a preventive strategy whereby the client can anticipate that a given situation places him or her at higher risk for retraumatization and requires use of coping strategies, including seeking support.

Source: Green Cross Academy of Traumatology, 2010.

stress levels). Flashbacks can feel like a brief movie scene that intrudes on the client. For example, hearing a car backfire on a hot, sunny day may be enough to cause a veteran to respond as if he or she were back on military patrol. Other ways people reexperience trauma, besides flashbacks, are via nightmares and intrusive thoughts of the trauma.

Dissociation, depersonalization, and derealization

Dissociation is a mental process that severs connections among a person's thoughts, memories, feelings, actions, and/or sense of identity. Most of us have experienced dissociation—losing the ability to recall or track a particular action (e.g., arriving at work but not remembering the last minutes of the drive). Dissociation happens because the person is engaged in an automatic activity and is not paying attention to his or her immediate environment. Dissociation can also occur during severe stress or trauma as a protective element whereby the individual incurs distortion of time, space, or identity. This is a common symptom in traumatic stress reactions.

Dissociation helps distance the experience from the individual. People who have experienced severe or developmental trauma may have learned to separate themselves from distress to survive. At times, dissociation can be very pervasive and symptomatic of a mental disorder, such as dissociative identity disorder (DID; formerly known as multiple personality disorder). According to the DSM-5, "dissociative disorders are characterized by a disruption of and/or discontinuity in the normal integration of consciousness, memory, identity, emotion, perception, body representation, motor control, and behavior" (APA, 2013a, p. 291). Dissociative disorder diagnoses are closely associated with histories of severe childhood trauma or pervasive, human-caused, intentional trauma, such as that experienced by concentration camp survivors or victims of ongoing political imprisonment, torture, or long-term isolation. A mental health professional, preferably with significant training in working with dissociative disorders and with trauma, should be consulted when a dissociative disorder diagnosis is suspected.

Potential Signs of Dissociation

- Fixed or "glazed" eyes
- Sudden flattening of affect
- Long periods of silence
- Monotonous voice
- Stereotyped movements
- Responses not congruent with the present context or situation
- Excessive intellectualization

(Briere, 1996a)

The characteristics of DID can be commonly accepted experiences in other cultures, rather than being viewed as symptomatic of a traumatic experience. For example, in non-Western cultures, a sense of alternate beings within oneself may be interpreted as being inhabited by spirits or ancestors (Kirmayer, 1996). Other experiences associated with dissociation include depersonalization—psychologically "leaving one's body," as if watching oneself from a distance as an observer or through derealization, leading to a sense that what is taking place is unfamiliar or is not real.

If clients exhibit signs of dissociation, behavioral health service providers can use grounding techniques to help them reduce this defense strategy. One major long-term consequence of dissociation is the difficulty it causes in connecting strong emotional or physical reactions with an event. Often, individuals may believe that they are going crazy because they are not in touch with the nature of their reactions. By educating clients on the resilient qualities of dissociation while also emphasizing that it prevents them from addressing or

validating the trauma, individuals can begin to understand the role of dissociation. All in all, it is important when working with trauma survivors that the intensity level is not so great that it triggers a dissociative reaction and prevents the person from engaging in the process.

Behavioral

Traumatic stress reactions vary widely; often, people engage in behaviors to manage the aftereffects, the intensity of emotions, or the distressing aspects of the traumatic experience. Some people reduce tension or stress through avoidant, self-medicating (e.g., alcohol abuse), compulsive (e.g., overeating), impulsive (e.g., high-risk behaviors), and/or self-injurious behaviors. Others may try to gain control over their experiences by being aggressive or subconsciously reenacting aspects of the trauma.

Behavioral reactions are also the consequences of, or learned from, traumatic experiences. For example, some people act like they can't control their current environment, thus failing to take action or make decisions long after the trauma (learned helplessness). Other associate elements of the trauma with current activities, such as by reacting to an intimate moment in a significant relationship as dangerous or unsafe years after a date rape. The following sections discuss behavioral consequences of trauma and traumatic stress reactions.

Reenactments

A hallmark symptom of trauma is reexperiencing the trauma in various ways. Reexperiencing can occur through reenactments (literally, to "redo"), by which trauma survivors repetitively relive and recreate a past trauma in their present lives. This is very apparent in children, who play by mimicking what occurred during the trauma, such as by pretending to crash a toy airplane into a toy building after seeing televised images of the terrorist attacks on the World Trade Center on September 11, 2001. Attempts to understand reenactments are very complicated, as reenactments occur for a variety of reasons. Sometimes, individuals reenact past traumas to master them. Examples of reenactments include a variety of behaviors: self-injurious behaviors, hypersexuality, walking alone in unsafe areas or other high-risk behaviors, driving recklessly, or involvement in repetitive destructive relationships (e.g., repeatedly getting into romantic relationships with people who are abusive or violent), to name a few.

Self-harm and self-destructive behaviors

Self-harm is any type of intentionally self-inflicted harm, regardless of the severity of injury or whether suicide is intended. Often, self-harm is an attempt to cope with emotional or physical distress that seems overwhelming or to cope with a profound sense of dissociation or being trapped, helpless, and "damaged" (Herman, 1997; Santa Mina & Gallop, 1998). Self-harm is associated with past childhood sexual abuse and other forms of trauma as well as substance abuse. Thus,

Resilient Responses to Trauma

Many people find healthy ways to cope with, respond to, and heal from trauma. Often, people automatically reevaluate their values and redefine what is important after a trauma. Such resilient responses include:

- Increased bonding with family and community.
- Redefined or increased sense of purpose and meaning.
- Increased commitment to a personal mission.
- Revised priorities.
- Increased charitable giving and volunteerism.

Case Illustration: Marco

Marco, a 30-year-old man, sought treatment at a local mental health center after a 2-year bout of anxiety symptoms. He was an active member of his church for 12 years, but although he sought help from his pastor about a year ago, he reports that he has had no contact with his pastor or his church since that time. Approximately 3 years ago, his wife took her own life. He describes her as his soulmate and has had a difficult time understanding her actions or how he could have prevented them.

In the initial intake, he mentioned that he was the first person to find his wife after the suicide and reported feelings of betrayal, hurt, anger, and devastation since her death. He claimed that everyone leaves him or dies. He also talked about his difficulty sleeping, having repetitive dreams of his wife, and avoiding relationships. In his first session with the counselor, he initially rejected the counselor before the counselor had an opportunity to begin reviewing and talking about the events and discomfort that led him to treatment.

In this scenario, Marco is likely reenacting his feelings of abandonment by attempting to reject others before he experiences another rejection or abandonment. In this situation, the counselor will need to recognize the reenactment, explore the behavior, and examine how reenactments appear in other situations in Marco's life.

addressing self-harm requires attention to the client's reasons for self-harm. More than likely, the client needs help recognizing and coping with emotional or physical distress in manageable amounts and ways.

Among the self-harm behaviors reported in the literature are cutting, burning skin by heat (e.g., cigarettes) or caustic liquids, punching hard enough to self-bruise, head banging, hair pulling, self-poisoning, inserting foreign objects into bodily orifices, excessive nail biting, excessive scratching, bone breaking, gnawing at flesh, interfering with wound healing, tying off body parts to stop breathing or blood flow, swallowing sharp objects, and suicide. Cutting and burning are among the most common forms of self-harm.

Self-harm tends to occur most in people who have experienced repeated and/or early trauma (e.g., childhood sexual abuse) rather than in those who have undergone a single adult trauma (e.g., a community-wide disaster or a serious car accident). There are strong associations between eating disorders, self-harm, and substance abuse (Claes &Vandereycken, 2007; for discussion, see Harned, Najavits, & Weiss, 2006). Self-mutilation is also associated with (and part of the diagnostic criteria for) a number of personality disorders, including borderline and histrionic, as well as DID, depression, and some forms of schizophrenia; these disorders can co-occur with traumatic stress reactions and disorders.

It is important to distinguish self-harm that is suicidal from self-harm that is not suicidal and to assess and manage both of these very serious dangers carefully. Most people who engage in self-harm are not doing so with the intent to kill themselves (Noll, Horowitz, Bonanno, Trickett, & Putnam, 2003)—although self-harm can be life threatening and can escalate into suicidality if not managed therapeutically. Self-harm can be a way of getting attention or manipulating others, but most often it is not. Self-destructive behaviors such as substance abuse, restrictive or binge eating, reckless automobile driving, or high-risk impulsive behavior are different from self-harming behaviors but are also seen in clients with a history of trauma. Self-destructive behaviors differ from self-harming behaviors in that there may be no immediate negative impact of the behavior on the individual; they differ from suicidal behavior in that there is no intent to cause death in the short term.

Advice to Counselors: Working With Clients Who Are Self-Injurious

Counselors who are unqualified or uncomfortable working with clients who demonstrate self-harming, self-destructive, or suicidal or homicidal ideation, intent, or behavior should work with their agencies and supervisors to refer such clients to other counselors. They should consider seeking specialized supervision on how to manage such clients effectively and safely and how to manage their feelings about these issues. The following suggestions assume that the counselor has had sufficient training and experience to work with clients who are self-injurious. To respond appropriately to a client who engages in self-harm, counselors should:

- Screen the client for self-harm and suicide risk at the initial evaluation and throughout treatment.
- Learn the client's perspective on self-harm and how it "helps."
- Understand that self-harm is often a coping strategy to manage the intensity of emotional and/or physical distress.
- Teach the client coping skills that improve his or her management of emotions without self-harm.
- Help the client obtain the level of care needed to manage genuine risk of suicide or severe self-injury. This might include hospitalization, more intensive programming (e.g., intensive outpatient, partial hospitalization, residential treatment), or more frequent treatment sessions. The goal is to stabilize the client as quickly as possible, and then, if possible, begin to focus treatment on developing coping strategies to manage self-injurious and other harmful impulses.
- Consult with other team members, supervisors, and, if necessary, legal experts to determine whether one's efforts with and conceptualization of the self-harming client fit best practice guidelines. See, for example, Treatment Improvement Protocol (TIP) 42, *Substance Abuse Treatment for Persons With Co-Occurring Disorders* (Center for Substance Abuse Treatment [CSAT], 2005c). Document such consultations and the decisions made as a result of them thoroughly and frequently.
- Help the client identify how substance use affects self-harm. In some cases, it can increase the behavior (e.g., alcohol disinhibits the client, who is then more likely to self-harm). In other cases, it can decrease the behavior (e.g., heroin evokes relaxation and, thus, can lessen the urge to self-harm). In either case, continue to help the client understand how abstinence from substances is necessary so that he or she can learn more adaptive coping.
- Work collaboratively with the client to develop a plan to create a sense of safety. Individuals are affected by trauma in different ways; therefore, safety or a safe environment may mean something entirely different from one person to the next. Allow the client to define what safety means to him or her.

Counselors can also help the client prepare a safety card that the client can carry at all times. The card might include the counselor's contact information, a 24-hour crisis number to call in emergencies, contact information for supportive individuals who can be contacted when needed, and, if appropriate, telephone numbers for emergency medical services. The counselor can discuss with the client the types of signs or crises that might warrant using the numbers on the card. Additionally, the counselor might check with the client from time to time to confirm that the information on the card is current.

TIP 50, *Addressing Suicidal Thoughts and Behaviors in Substance Abuse Treatment* (CSAT, 2009a), has examples of safety agreements specifically for suicidal clients and discusses their uses in more detail. There is no credible evidence that a safety agreement is effective in preventing a suicide attempt or death. Safety agreements for clients with suicidal thoughts and behaviors should only be used as an adjunct support accompanying professional screening, assessment, and treatment for people with suicidal thoughts and behaviors. Keep in mind that safety plans or agreements may be perceived by the trauma survivor as a means of controlling behavior, subsequently replicating or triggering previous traumatic experiences.

All professionals—and in some States, anyone—could have ethical and legal responsibilities to those clients who pose an imminent danger to themselves or others. Clinicians should be aware of the pertinent State laws where they practice and the relevant Federal and professional regulations.

However, as with self-harming behavior, self-destructive behavior needs to be recognized and addressed and may persist—or worsen—without intervention.

Consumption of substances

Substance use often is initiated or increased after trauma. Clients in early recovery—especially those who develop PTSD or have it reactivated—have a higher relapse risk if they experience a trauma. In the first 2 months after September 11, 2001, more than a quarter of New Yorker residents who smoked cigarettes, drank alcohol, or used marijuana (about 265,000 people) increased their consumption. The increases continued 6 months after the attacks (Vlahov, Galea, Ahern, Resnick, & Kilpatrick, 2004). A study by the Substance Abuse and Mental Health Services Administration (SAMHSA, Office of Applied Studies, 2002) used National Survey on Drug Use and Health data to compare the first three quarters of 2001 with the last quarter and reported an increase in the prevalence rate for alcohol use among people 18 or older in the New York metropolitan area during the fourth quarter.

Interviews with New York City residents who were current or former cocaine or heroin users indicated that many who had been clean for 6 months or less relapsed after September 11, 2001. Others, who lost their income and could no longer support their habit, enrolled in methadone programs (Weiss et al., 2002). After the Oklahoma City bombing in 1995, Oklahomans reported double the normal rate of alcohol use, smoking more cigarettes, and a higher incidence of initiating smoking months and even years after the bombing (Smith, Christiansen, Vincent, & Hann, 1999).

Self-medication

Khantzian's self-medication theory (1985) suggests that drugs of abuse are selected for their specific effects. However, no definitive pattern has yet emerged of the use of particular substances in relation to PTSD or trauma symptoms. Use of substances can vary based on a variety of factors, including which trauma symptoms are most prominent for an individual and the individual's access to particular substances. Unresolved traumas sometimes lurk behind the emotions that clients cannot allow themselves to experience. Substance use and abuse in trauma survivors can be a way to self-medicate and thereby avoid or displace difficult emotions associated with traumatic experiences. When the substances are withdrawn, the survivor may use other behaviors to self-soothe, self-medicate, or avoid emotions. As likely, emotions can appear after abstinence in the form of anxiety and depression.

Avoidance

Avoidance often coincides with anxiety and the promotion of anxiety symptoms. Individuals begin to avoid people, places, or situations to alleviate unpleasant emotions, memories, or circumstances. Initially, the avoidance works, but over time, anxiety increases and the perception that the situation is unbearable or dangerous increases as well, leading to a greater need to avoid. Avoidance can be adaptive, but it is also a behavioral pattern that reinforces perceived danger without testing its validity, and it typically leads to greater problems across major life areas (e.g., avoiding emotionally oriented conversations in an intimate relationship). For many individuals who have traumatic stress reactions, avoidance is commonplace. A person may drive 5 miles longer to avoid the road where he or she had an accident. Another individual may avoid crowded places in fear of an assault or to circumvent strong emotional memories about an earlier assault that took place in a crowded area. Avoidance can come in many forms. When people can't tolerate strong affects associated with traumatic memories, they avoid, project,

deny, or distort their trauma-related emotional and cognitive experiences. A key ingredient in trauma recovery is learning to manage triggers, memories, and emotions without avoidance—in essence, becoming desensitized to traumatic memories and associated symptoms.

Social/Interpersonal

A key ingredient in the early stage of TIC is to establish, confirm, or reestablish a support system, including culturally appropriate activities, as soon as possible. Social supports and relationships can be protective factors against traumatic stress. However, trauma typically affects relationships significantly, regardless of whether the trauma is interpersonal or is of some other type. Relationships require emotional exchanges, which means that others who have close relationships or friendships with the individual who survived the trauma(s) are often affected as well—either through secondary traumatization or by directly experiencing the survivor's traumatic stress reactions. In natural disasters, social and community supports can be abruptly eroded and difficult to rebuild after the initial disaster relief efforts have waned.

Survivors may readily rely on family members, friends, or other social supports—or they may avoid support, either because they believe that no one will be understanding or trustworthy or because they perceive their own needs as a burden to others. Survivors who have strong emotional or physical reactions, including outbursts during nightmares, may pull away further in fear of being unable to predict their own reactions or to protect their own safety and that of others. Often, trauma survivors feel ashamed of their stress reactions, which further hampers their ability to use their support systems and resources adequately.

Many survivors of childhood abuse and interpersonal violence have experienced a significant sense of betrayal. They have often encountered trauma at the hands of trusted caregivers and family members or through significant relationships. This history of betrayal can disrupt forming or relying on supportive relationships in recovery, such as peer supports and counseling. Although this fear of trusting others is protective, it can lead to difficulty in connecting with others and greater vigilance in observing the behaviors of others, including behavioral health service providers. It is exceptionally difficult to override the feeling that someone is going to hurt you, take advantage of you, or, minimally, disappoint you. Early betrayal can affect one's ability to develop attachments, yet the formation of supportive relationships is an important antidote in the recovery from traumatic stress.

Developmental

Each age group is vulnerable in unique ways to the stresses of a disaster, with children and the elderly at greatest risk. Young children may display generalized fear, nightmares, heightened arousal and confusion, and physical symptoms, (e.g., stomachaches, headaches). School-age children may exhibit symptoms such as aggressive behavior and anger, regression to behavior seen at younger ages, repetitious traumatic play, loss of ability to concentrate, and worse school performance. Adolescents may display depression and social withdrawal, rebellion, increased risky activities such as sexual acting out, wish for revenge and action-oriented responses to trauma, and sleep and eating disturbances (Hamblen, 2001). Adults may display sleep problems, increased agitation, hypervigilance, isolation or withdrawal, and increased use of alcohol or drugs. Older adults may exhibit increased withdrawal and isolation, reluctance to leave home, worsening of chronic illnesses, confusion, depression, and fear (DeWolfe & Nordboe, 2000b).

Neurobiological Development: Consequences of Early Childhood Trauma

Findings in developmental psychobiology suggest that the consequences of early maltreatment produce enduring negative effects on brain development (DeBellis, 2002; Liu, Diorio, Day, Francis, & Meaney, 2000; Teicher, 2002). Research suggests that the first stage in a cascade of events produced by early trauma and/or maltreatment involves the disruption of chemicals that function as neurotransmitters (e.g., cortisol, norepinephrine, dopamine), causing escalation of the stress response (Heim, Mletzko, Purselle, Musselman, & Nemeroff, 2008; Heim, Newport, Mletzko, Miller, & Nemeroff, 2008; Teicher, 2002). These chemical responses can then negatively affect critical neural growth during specific sensitive periods of childhood development and can even lead to cell death.

Adverse brain development can also result from elevated levels of cortisol and catecholamines by contributing to maturational failures in other brain regions, such as the prefrontal cortex (Meaney, Brake, & Gratton, 2002). Heim, Mletzko et al. (2008) found that the neuropeptide oxytocin—important for social affiliation and support, attachment, trust, and management of stress and anxiety—was markedly decreased in the cerebrospinal fluid of women who had been exposed to childhood maltreatment, particularly those who had experienced emotional abuse. The more childhood traumas a person had experienced, and the longer their duration, the lower that person's current level of oxytocin was likely to be and the higher her rating of current anxiety was likely to be.

Using data from the Adverse Childhood Experiences Study, an analysis by Anda, Felitti, Brown et al. (2006) confirmed that the risk of negative outcomes in affective, somatic, substance abuse, memory, sexual, and aggression-related domains increased as scores on a measure of eight ACEs increased. The researchers concluded that the association of study scores with these outcomes can serve as a theoretical parallel for the effects of cumulative exposure to stress on the developing brain and for the resulting impairment seen in multiple brain structures and functions.

The National Child Traumatic Stress Network (http://www.nctsn.org) offers information about childhood abuse, stress, and physiological responses of children who are traumatized. Materials are available for counselors, educators, parents, and caregivers. There are special sections on the needs of children in military families and on the impact of natural disasters on children's mental health.

Subthreshold Trauma-Related Symptoms

Many trauma survivors experience symptoms that, although they do not meet the diagnostic criteria for ASD or PTSD, nonetheless limit their ability to function normally (e.g., regulate emotional states, maintain steady and rewarding social and family relationships, function competently at a job, maintain a steady pattern of abstinence in recovery). These symptoms can be transient, only arising in a specific context; intermittent, appearing for several weeks or months and then receding; or a part of the individual's regular pattern of functioning (but not to the level of DSM-5 diagnostic criteria). Often, these patterns are termed "subthreshold" trauma symptoms. Like PTSD, the symptoms can be misdiagnosed as depression, anxiety, or another mental illness. Likewise, clients who have experienced trauma may link some of their symptoms to their trauma and diagnose themselves as having PTSD, even though they do not meet all criteria for that disorder.

Combat Stress Reaction

A phenomenon unique to war, and one that counselors need to understand well, is combat stress reaction (CSR). CSR is an acute anxiety reaction occurring during or shortly after participating in military conflicts and wars as well as other operations within the war zone, known as the theater. CSR is not a formal diagnosis, nor is it included in the DSM-5 (APA, 2013a). It is similar to acute stress

Case Illustration: Frank

Frank is a 36-year-old man who was severely beaten in a fight outside a bar. He had multiple injuries, including broken bones, a concussion, and a stab wound in his lower abdomen. He was hospitalized for 3.5 weeks and was unable to return to work, thus losing his job as a warehouse forklift operator. For several years, when faced with situations in which he perceived himself as helpless and overwhelmed, Frank reacted with violent anger that, to others, appeared grossly out of proportion to the situation. He has not had a drink in almost 3 years, but the bouts of anger persist and occur three to five times a year. They leave Frank feeling even more isolated from others and alienated from those who love him. He reports that he cannot watch certain television shows that depict violent anger; he has to stop watching when such scenes occur. He sometimes daydreams about getting revenge on the people who assaulted him.

Psychiatric and neurological evaluations do not reveal a cause for Frank's anger attacks. Other than these symptoms, Frank has progressed well in his abstinence from alcohol. He attends a support group regularly, has acquired friends who are also abstinent, and has reconciled with his family of origin. His marriage is more stable, although the episodes of rage limit his wife's willingness to commit fully to the relationship. In recounting the traumatic event in counseling, Frank acknowledges that he thought he was going to die as a result of the fight, especially when he realized he had been stabbed. As he described his experience, he began to become very anxious, and the counselor observed the rage beginning to appear.

After his initial evaluation, Frank was referred to an outpatient program that provided trauma-specific interventions to address his subthreshold trauma symptoms. With a combination of cognitive–behavioral counseling, EMDR, and anger management techniques, he saw a gradual decrease in symptoms when he recalled the assault. He started having more control of his anger when memories of the trauma emerged. Today, when feeling trapped, helpless, or overwhelmed, Frank has resources for coping and does not allow his anger to interfere with his marriage or other relationships.

reaction, except that the precipitating event or events affect military personnel (and civilians exposed to the events) in an armed conflict situation. The terms "combat stress reaction" and "posttraumatic stress injury" are relatively new, and the intent of using these new terms is to call attention to the unique experiences of combat-related stress as well as to decrease the shame that can be associated with seeking behavioral health services for PTSD (for more information on veterans and combat stress reactions, see the planned TIP, *Reintegration-Related Behavioral Health Issues for Veterans and Military Families*; SAMHSA, planned f).

Although stress mobilizes an individual's physical and psychological resources to perform more effectively in combat, reactions to the stress may persist long after the actual danger has ended. As with other traumas, the nature of the event(s), the reactions of others, and the survivor's psychological history and resources affect the likelihood and severity of CSR. With combat veterans, this translates to the number, intensity, and duration of threat factors; the social support of peers in the veterans' unit; the emotional and cognitive resilience of the service members; and the quality of military leadership. CSR can vary from manageable and mild to debilitating and severe. Common, less severe symptoms of CSR include tension, hypervigilance, sleep problems, anger, and difficulty concentrating. If left untreated, CSR can lead to PTSD.

Common causes of CSR are events such as a direct attack from insurgent small arms fire or a military convoy being hit by an improvised explosive device, but combat stressors encompass a diverse array of traumatizing events, such as seeing grave injuries, watching others

Advice to Counselors: Understanding the Nature of Combat Stress

Several sources of information are available to help counselors deepen their understanding of combat stress and postdeployment adjustment. Friedman (2006) explains how a prolonged combat-ready stance, which is adaptive in a war zone, becomes hypervigilance and overprotectiveness at home. He makes the point that the "mutual interdependence, trust, and affection" (p. 587) that are so necessarily a part of a combat unit are different from relationships with family members and colleagues in a civilian workplace. This complicates the transition to civilian life. *Wheels Down: Adjusting to Life After Deployment* (Moore & Kennedy, 2011) provides practical advice for military service members, including inactive or active duty personnel and veterans, in transitioning from the theater to home.

The following are just a few of the many resources and reports focused on combat-related psychological and stress issues:

- *Invisible Wounds of War: Psychological and Cognitive Injuries, Their Consequences, and Services to Assist Recovery* (Tanielian & Jaycox, 2008)
- *On Killing* (Grossman, 1995), an indepth analysis of the psychological dynamics of combat
- *Haunted by Combat* (Paulson & Krippner, 2007), which contains specific chapters on Reserve and National Guard troops and female veterans
- *Treating Young Veterans: Promoting Resilience Through Practice and Advocacy* (Kelly, Howe-Barksdale, & Gitelson, 2011)

die, and making on-the-spot decisions in ambiguous conditions (e.g., having to determine whether a vehicle speeding toward a military checkpoint contains insurgents with explosives or a family traveling to another area). Such circumstances can lead to combat stress. Military personnel also serve in noncombat positions (e.g., healthcare and administrative roles), and personnel filling these supportive roles can be exposed to combat situations by proximity or by witnessing their results.

Specific Trauma-Related Psychological Disorders

Part of the definition of trauma is that the individual responds with intense fear, helplessness, or horror. Beyond that, in both the short term and the long term, trauma comprises a range of reactions from normal (e.g., being unable to concentrate, feeling sad, having trouble sleeping) to warranting a diagnosis of a trauma-related mental disorder. Most people who experience trauma have no long-lasting disabling effects; their coping skills and the support of those around them are sufficient to help them overcome their difficulties, and their ability to function on a daily basis over time is unimpaired. For others, though, the symptoms of trauma are more severe and last longer. The most common diagnoses associated with trauma are PTSD and ASD, but trauma is also associated with the onset of other mental disorders—particularly substance use disorders, mood disorders, various anxiety disorders, and personality disorders. Trauma also typically exacerbates symptoms of preexisting disorders, and, for people who are predisposed to a mental disorder, trauma can precipitate its onset. Mental disorders can occur almost simultaneously with trauma exposure or manifest sometime thereafter.

Acute Stress Disorder

ASD represents a normal response to stress. Symptoms develop within 4 weeks of the trauma and can cause significant levels of distress. Most individuals who have acute stress reactions never develop further impairment or PTSD. Acute stress disorder is highly associated with the experience of one specific trauma rather than the experience of long-term exposure to chronic traumatic stress. Diagnostic criteria are presented in Exhibit 1.3-3.

Exhibit 1.3-3: DSM-5 Diagnostic Criteria for ASD

A. Exposure to actual or threatened death, serious injury, or sexual violation in one (or more) of the following ways:
   1. Directly experiencing the traumatic event(s).
   2. Witnessing, in person, the event(s) as it occurred to others.
   3. Learning that the event(s) occurred to a close family member or close friend. **Note:** In cases of actual or threatened death of a family member or friend, the event(s) must have been violent or accidental.
   4. Experiencing repeated or extreme exposure to aversive details of the traumatic event(s) (e.g., first responders collecting human remains, police officers repeatedly exposed to details of child abuse). **Note:** This does not apply to exposure through electronic media, television, movies, or pictures, unless this exposure is work related.

B. Presence of nine (or more) of the following symptoms from any of the five categories of intrusion, negative mood, dissociation, avoidance, and arousal, beginning or worsening after the traumatic event(s) occurred:

Intrusion Symptoms:
   1. Recurrent, involuntary, and intrusive distressing memories of the traumatic event(s). **Note:** In children, repetitive play may occur in which themes or aspects of the traumatic event(s) are expressed.
   2. Recurrent distressing dreams in which the content and/or affect of the dream are related to the event(s). **Note:** In children, there may be frightening dreams without recognizable content.
   3. Dissociative reactions (e.g., flashbacks), during which the individual feels or acts as if the traumatic event(s) were recurring. Such reactions may occur on a continuum, with the most extreme expression being a complete loss of awareness of present surroundings. **Note:** In children, trauma-specific reenactment may occur in play.
   4. Intense or prolonged psychological distress or marked physiological reactions in response to internal or external cues that symbolize or resemble an aspect of the traumatic event(s).

Negative Mood:
   5. Persistent inability to experience positive emotions (e.g., inability to experience happiness, satisfaction, or loving feelings).

Dissociative Symptoms:
   6. An altered sense of the reality of one's surroundings or oneself (e.g., seeing oneself from another's perspective, being in a daze, time slowing).
   7. Inability to remember an important aspect of the traumatic event(s) (typically due to dissociative amnesia and not to other factors, such as head injury, alcohol, or drugs).

Avoidance Symptoms:
   8. Efforts to avoid distressing memories, thoughts, or feelings about or closely associated with the traumatic event(s).
   9. Efforts to avoid external reminders (e.g., people, places, conversations, activities, objects, situations) that arouse distressing memories, thoughts, or feelings about or closely associated with the traumatic event(s).

Arousal Symptoms:
   10. Sleep disturbance (e.g., difficulty falling or staying asleep, restless sleep).
   11. Irritable behavior and angry outbursts (with little or no provocation), typically expressed as verbal or physical aggression toward people or objects.
   12. Hypervigilance.
   13. Problems with concentration.
   14. Exaggerated startle response.

(Continued on the next page.)

Exhibit 1.3-3: DSM-5 Diagnostic Criteria for ASD (continued)

C. Duration of the disturbance (symptoms in Criterion B) is 3 days to 1 month after trauma exposure. **Note:** Symptoms typically begin immediately after the trauma, but persistence for at least 3 days and up to a month is needed to meet disorder criteria.

D. The disturbance causes clinically significant distress or impairment in social, occupational, or other important areas of functioning.

E. The disturbance is not attributable to the physiological effects of a substance (e.g., medication or alcohol) or another medical condition (e.g., mild traumatic brain injury) and is not better explained by brief psychotic disorder.

Source: APA, 2013a, pp. 280–281.

The primary presentation of an individual with an acute stress reaction is often that of someone who appears overwhelmed by the traumatic experience. The need to talk about the experience can lead the client to seem self-centered and unconcerned about the needs of others. He or she may need to describe, in repetitive detail, what happened, or may seem obsessed with trying to understand what happened in an effort to make sense of the experience. The client is often hypervigilant and avoids circumstances that are reminders of the trauma. For instance, someone who was in a serious car crash in heavy traffic can become anxious and avoid riding in a car or driving in traffic for a finite time afterward. Partial amnesia for the trauma often accompanies ASD, and the individual may repetitively question others to fill in details. People with ASD symptoms sometimes seek assurance from others that the event happened in the way they remember, that they are not "going crazy" or "losing it," and that they could not have prevented the event. The next case illustration demonstrates the time-limited nature of ASD.

Differences between ASD and PTSD

It is important to consider the differences between ASD and PTSD when forming a diagnostic impression. The primary difference is the amount of time the symptoms have been present. ASD resolves 2 days to 4 weeks after an event, whereas PTSD continues beyond the 4-week period. The diagnosis of ASD can change to a diagnosis of PTSD if the condition is noted within the first 4 weeks after the event, but the symptoms persist past 4 weeks.

ASD also differs from PTSD in that the ASD diagnosis requires 9 out of 14 symptoms from five categories, including intrusion, negative mood, dissociation, avoidance, and arousal. These symptoms can occur at the time of the trauma or in the following month. Studies indicate that dissociation at the time of trauma is a good predictor of subsequent PTSD, so the inclusion of dissociative symptoms makes it more likely that those who develop ASD will later be diagnosed with PTSD (Bryant & Harvey, 2000). Additionally, ASD is a transient disorder, meaning that it is present in a person's life for a relatively short time and then passes. In contrast, PTSD typically becomes a primary feature of an individual's life. Over a lengthy period, PTSD can have profound effects on clients' perceptions of safety, their sense of hope for the future, their relationships with others, their physical health, the appearance of psychiatric symptoms, and their patterns of substance use and abuse.

There are common symptoms between PTSD and ASD, and untreated ASD is a possible predisposing factor to PTSD, but it is unknown whether most people with ASD are likely to develop PTSD. There is some suggestion that, as with PTSD, ASD is more

Case Illustration: Sheila

Two months ago, Sheila, a 55-year-old married woman, experienced a tornado in her home town. In the previous year, she had addressed a long-time marijuana use problem with the help of a treatment program and had been abstinent for about 6 months. Sheila was proud of her abstinence; it was something she wanted to continue. She regarded it as a mark of personal maturity; it improved her relationship with her husband, and their business had flourished as a result of her abstinence.

During the tornado, an employee reported that Sheila had become very agitated and had grabbed her assistant to drag him under a large table for cover. Sheila repeatedly yelled to her assistant that they were going to die. Following the storm, Sheila could not remember certain details of her behavior during the event. Furthermore, Sheila said that after the storm, she felt numb, as if she was floating out of her body and could watch herself from the outside. She stated that nothing felt real and it was all like a dream.

Following the tornado, Sheila experienced emotional numbness and detachment, even from people close to her, for about 2 weeks. The symptoms slowly decreased in intensity but still disrupted her life. Sheila reported experiencing disjointed or unconnected images and dreams of the storm that made no real sense to her. She was unwilling to return to the building where she had been during the storm, despite having maintained a business at this location for 15 years. In addition, she began smoking marijuana again because it helped her sleep. She had been very irritable and had uncharacteristic angry outbursts toward her husband, children, and other family members.

As a result of her earlier contact with a treatment program, Sheila returned to that program and engaged in psychoeducational, supportive counseling focused on her acute stress reaction. She regained abstinence from marijuana and returned shortly to a normal level of functioning. Her symptoms slowly diminished over a period of 3 weeks. With the help of her counselor, she came to understand the link between the trauma and her relapse, regained support from her spouse, and again felt in control of her life.

prevalent in women than in men (Bryant & Harvey, 2003). However, many people with PTSD do not have a diagnosis or recall a history of acute stress symptoms before seeking treatment for or receiving a diagnosis of PTSD.

Effective interventions for ASD can significantly reduce the possibility of the subsequent development of PTSD. Effective treatment of ASD can also reduce the incidence of other co-occurring problems, such as depression, anxiety, dissociative disorders, and compulsive behaviors (Bryant & Harvey, 2000). Intervention for ASD also helps the individual develop coping skills that can effectively prevent the recurrence of ASD after later traumas.

Although predictive science for ASD and PTSD will continue to evolve, both disorders are associated with increased substance use and mental disorders and increased risk of relapse; therefore, effective screening for ASD and PTSD is important for all clients with these disorders. Individuals in early recovery—lacking well-practiced coping skills, lacking environmental supports, and already operating at high levels of anxiety—are particularly susceptible to ASD. Events that would not normally be disabling can produce symptoms of intense helplessness and fear, numbing and depersonalization, disabling anxiety, and an inability to handle normal life events. Counselors should be able to recognize ASD and treat it rather than attributing the symptoms to a client's lack of motivation to change, being "dry drunk" (for those in substance abuse recovery), or being manipulative.

Posttraumatic Stress Disorder

The trauma-related disorder that receives the greatest attention is PTSD; it is the most

Case Illustration: Michael

Michael is a 62-year-old Vietnam veteran. He is a divorced father of two children and has four grandchildren. Both of his parents were dependent on alcohol. He describes his childhood as isolated. His father physically and psychologically abused him (e.g., he was beaten with a switch until he had welts on his legs, back, and buttocks). By age 10, his parents regarded him as incorrigible and sent him to a reformatory school for 6 months. By age 15, he was using marijuana, hallucinogens, and alcohol and was frequently truant from school.

At age 19, Michael was drafted and sent to Vietnam, where he witnessed the deaths of six American military personnel. In one incident, the soldier he was next to in a bunker was shot. Michael felt helpless as he talked to this soldier, who was still conscious. In Vietnam, Michael increased his use of both alcohol and marijuana. On his return to the United States, Michael continued to drink and use marijuana. He reenlisted in the military for another tour of duty.

His life stabilized in his early 30s, as he had a steady job, supportive friends, and a relatively stable family life. However, he divorced in his late 30s. Shortly thereafter, he married a second time, but that marriage ended in divorce as well. He was chronically anxious and depressed and had insomnia and frequent nightmares. He periodically binged on alcohol. He complained of feeling empty, had suicidal ideation, and frequently stated that he lacked purpose in his life.

In the 1980s, Michael received several years of mental health treatment for dysthymia. He was hospitalized twice and received 1 year of outpatient psychotherapy. In the mid-1990s, he returned to outpatient treatment for similar symptoms and was diagnosed with PTSD and dysthymia. He no longer used marijuana and rarely drank. He reported that he didn't like how alcohol or other substances made him feel anymore—he felt out of control with his emotions when he used them. Michael reported symptoms of hyperarousal, intrusion (intrusive memories, nightmares, and preoccupying thoughts about Vietnam), and avoidance (isolating himself from others and feeling "numb"). He reported that these symptoms seemed to relate to his childhood abuse and his experiences in Vietnam. In treatment, he expressed relief that he now understood the connection between his symptoms and his history.

commonly diagnosed trauma-related disorder, and its symptoms can be quite debilitating over time. Nonetheless, it is important to remember that PTSD symptoms are represented in a number of other mental illnesses, including major depressive disorder (MDD), anxiety disorders, and psychotic disorders (Foa et al., 2006). The DSM-5 (APA, 2013a) identifies four symptom clusters for PTSD: presence of intrusion symptoms, persistent avoidance of stimuli, negative alterations in cognitions and mood, and marked alterations in arousal and reactivity. Individuals must have been exposed to actual or threatened death, serious injury, or sexual violence, and the symptoms must produce significant distress and impairment for more than 4 weeks (Exhibit 1.3-4).

Certain characteristics make people more susceptible to PTSD, including one's unique personal vulnerabilities at the time of the traumatic exposure, the support (or lack of support) received from others at the time of the trauma and at the onset of trauma-related symptoms, and the way others in the person's environment gauge the nature of the traumatic event (Brewin, Andrews, & Valentine, 2000).

People with PTSD often present varying clinical profiles and histories. They can experience symptoms that are activated by environmental triggers and then recede for a period of time. Some people with PTSD who show mostly psychiatric symptoms (particularly depression and anxiety) are misdiagnosed and go untreated for their primary condition. For many people, the trauma experience and diagnosis

Exhibit 1.3-4: DSM-5 Diagnostic Criteria for PTSD

Note: The following criteria apply to adults, adolescents, and children older than 6 years. For children 6 years and younger, see the DSM-5 section titled "Posttraumatic Stress Disorder for Children 6 Years and Younger" (APA, 2013a).

A. Exposure to actual or threatened death, serious injury, or sexual violence in one (or more) of the following ways:
   1. Directly experiencing the traumatic event(s).
   2. Witnessing, in person, the event(s) as it occurred to others.
   3. Learning that the traumatic event(s) occurred to a close family member or close friend. In cases of actual or threatened death of a family member or friend, the event(s) must have been violent or accidental.
   4. Experiencing repeated or extreme exposure to aversive details of the traumatic event(s) (e.g., first responders collecting human remains; police officers repeatedly exposed to details of child abuse). **Note:** Criterion A4 does not apply to exposure through electronic media, television, movies, or pictures, unless this exposure is work related.

B. Presence of one (or more) of the following intrusion symptoms associated with the traumatic event(s), beginning after the traumatic event(s) occurred:
   1. Recurrent, involuntary, and intrusive distressing memories of the traumatic event(s). **Note:** In children older than 6 years, repetitive play may occur in which themes or aspects of the traumatic event(s) are expressed.
   2. Recurrent distressing dreams in which the content and/or affect of the dream are related to the traumatic event(s). **Note:** In children, there may be frightening dreams without recognizable content.
   3. Dissociative reactions (e.g., flashbacks) in which the individual feels or acts as if the traumatic event(s) were recurring. (Such reactions may occur on a continuum, with the most extreme expression being a complete loss of awareness of present surroundings.) **Note:** In children, trauma-specific reenactment may occur in play.
   4. Intense or prolonged psychological distress at exposure to internal or external cues that symbolize or resemble an aspect of the traumatic event(s).
   5. Marked physiological reactions to internal or external cues that symbolize or resemble an aspect of the traumatic event(s).

C. Persistent avoidance of stimuli associated with the traumatic event(s), beginning after the traumatic event(s) occurred, as evidenced by one or both of the following:
   1. Avoidance of or efforts to avoid distressing memories, thoughts, or feelings about or closely associated with the traumatic event(s).
   2. Avoidance of or efforts to avoid external reminders (people, places, conversations, activities, objects, situations) that arouse distressing memories, thoughts, or feelings about or closely associated with the traumatic event(s).

D. Negative alterations in cognitions and mood associated with the traumatic event(s), beginning or worsening after the traumatic event(s) occurred, as evidenced by two (or more) of the following:
   1. Inability to remember an important aspect of the traumatic event(s) (typically due to dissociative amnesia, and not to other factors such as head injury, alcohol, or drugs).
   2. Persistent and exaggerated negative beliefs or expectations about oneself, others, or the world (e.g., "I am bad," "No one can be trusted," "The world is completely dangerous," "My whole nervous system is permanently ruined").
   3. Persistent, distorted cognitions about the cause or consequences of the traumatic event(s) that lead the individual to blame himself/herself or others.
   4. Persistent negative emotional state (e.g., fear, horror, anger, guilt, or shame).
   5. Markedly diminished interest or participation in significant activities.
   6. Feelings of detachment or estrangement from others.
   7. Persistent inability to experience positive emotions (e.g., inability to experience happiness, satisfaction, or loving feelings).

(Continued on the next page.)

Exhibit 1.3-4: DSM-5 Diagnostic Criteria for PTSD (continued)

E. Marked alterations in arousal and reactivity associated with the traumatic event(s), beginning or worsening after the traumatic event(s) occurred, as evidenced by two (or more) of the following:
   1. Irritable behavior and angry outbursts (with little or no provocation), typically expressed as verbal or physical aggression toward people or objects.
   2. Reckless or self-destructive behavior.
   3. Hypervigilance.
   4. Exaggerated startle response.
   5. Problems with concentration.
   6. Sleep disturbance (e.g., difficulty falling or staying asleep or restless sleep).

F. Duration of the disturbance (Criteria B, C, D and E) is more than 1 month.

G. The disturbance causes clinically significant distress or impairment in social, occupational, or other important areas of functioning.

H. The disturbance is not attributable to the physiological effects of a substance (e.g., medication, alcohol) or another medical condition.

Specify whether:

With dissociative symptoms: The individual's symptoms meet the criteria for posttraumatic stress disorder, and in addition, in response to the stressor, the individual experiences persistent or recurrent symptoms of either of the following:

1. **Depersonalization:** Persistent or recurrent experiences of feeling detached from, and as if one were an outside observer of, one's mental processes or body (e.g., feeling as though one were in a dream; feeling a sense of unreality of self or body or of time moving slowly).
2. **Derealization:** Persistent or recurrent experiences of unreality of surroundings (e.g., the world around the individual is experienced as unreal, dreamlike, distant, or distorted). **Note**: To use this subtype, the dissociative symptoms must not be attributable to the physiological effects of a substance (e.g., blackouts, behavior during alcohol intoxication) or another medical condition (e.g., complex partial seizures).

Specify whether:

With delayed expression: If the full diagnostic criteria are not met until at least 6 months after the event (although the onset and expression of some symptoms may be immediate).

Source: APA, 2013a, pp. 271–272.

are obscured by co-occurring substance use disorder symptoms. The important feature of PTSD is that the disorder becomes an orienting feature of the individual's life. How well the person can work, with whom he or she associates, the nature of close and intimate relationships, the ability to have fun and rejuvenate, and the way in which an individual goes about confronting and solving problems in life are all affected by the client's trauma experiences and his or her struggle to recover.

Posttraumatic stress disorder: Timing of symptoms

Although symptoms of PTSD usually begin within 3 months of a trauma in adulthood, there can be a delay of months or even years before symptoms appear for some people. Some people may have minimal symptoms after a trauma but then experience a crisis later in life. Trauma symptoms can appear suddenly, even without conscious memory of the original trauma or without any overt provocation. Survivors of abuse in childhood can have a delayed response triggered by something that happens to them as adults. For example, seeing a movie about child abuse can trigger symptoms related

Advice to Counselors: Helping Clients With Delayed Trauma Responses

Clients who are experiencing a delayed trauma response can benefit if you help them to:

- Create an environment that allows acknowledgment of the traumatic event(s).
- Discuss their initial recall or first suspicion that they were having a traumatic response.
- Become educated on delayed trauma responses.
- Draw a connection between the trauma and presenting trauma-related symptoms.
- Create a safe environment.
- Explore their support systems and fortify them as needed.
- Understand that triggers can precede traumatic stress reactions, including delayed responses to trauma.
- Identify their triggers.
- Develop coping strategies to navigate and manage symptoms.

to the trauma. Other triggers include returning to the scene of the trauma, being reminded of it in some other way, or noting the anniversary of an event. Likewise, combat veterans and survivors of community-wide disasters may seem to be coping well shortly after a trauma, only to have symptoms emerge later when their life situations seem to have stabilized. Some clients in substance abuse recovery only begin to experience trauma symptoms when they maintain abstinence for some time. As individuals decrease tension-reducing or self-medicating behaviors, trauma memories and symptoms can emerge.

Culture and posttraumatic stress

Although research is limited across cultures, PTSD has been observed in Southeast Asian, South American, Middle Eastern, and Native American survivors (Osterman & de Jong, 2007; Wilson & Tang, 2007). As Stamm and Friedman (2000) point out, however, simply observing PTSD does not mean that it is the "best conceptual tool for characterizing posttraumatic distress among non-Western individuals" (p. 73). In fact, many trauma-related symptoms from other cultures do not fit the DSM-5 criteria. These include somatic and psychological symptoms and beliefs about the origins and nature of traumatic events. Moreover, religious and spiritual beliefs can affect how a survivor experiences a traumatic event and whether he or she reports the distress. For example, in societies where attitudes toward karma and the glorification of war veterans are predominant, it is harder for war veterans to come forward and disclose that they are emotionally overwhelmed or struggling. It would be perceived as inappropriate and possibly demoralizing to focus on the emotional distress that he or she still bears. (For a review of cultural competence in treating trauma, refer to Brown, 2008.)

Methods for measuring PTSD are also culturally specific. As part of a project begun in 1972, the World Health Organization (WHO) and the National Institutes of Health (NIH) embarked on a joint study to test the cross-cultural applicability of classification systems for various diagnoses. WHO and NIH identified apparently universal factors of psychological disorders and developed specific instruments to measure them. These instruments, the Composite International Diagnostic Interview and the Schedules for Clinical Assessment in Neuropsychiatry, include certain criteria from the DSM (Fourth Edition, Text Revision; APA, 2000a) as well as criteria from the International Statistical Classification of Diseases and Related Health Problems, 10th revision (ICD-10; Exhibit 1.3-5).

Exhibit 1.3-5: ICD-10 Diagnostic Criteria for PTSD

A. The patient must have been exposed to a stressful event or situation (either brief or long-lasting) of exceptionally threatening or catastrophic nature, which would be likely to cause pervasive distress in almost anyone.

B. There must be persistent remembering or "reliving" of the stressor in intrusive "flashbacks," vivid memories, or recurring dreams, or in experiencing distress when exposed to circumstances resembling or associated with the stressor.

C. The patient must exhibit an actual or preferred avoidance of circumstances resembling or associated with the stressor, which was not present before exposure to the stressor.

D. Either of the following must be present:
   1. Inability to recall, either partially or completely, some important aspects of the period of exposure to the stressor.
   2. Persistent symptoms of increased psychological sensitivity and arousal (not present before exposure to the stressor), shown by any two of the following:
      a. Difficulty in falling or staying asleep.
      b. Irritability or outbursts of anger.
      c. Difficulty in concentrating.
      d. Exaggerated startle response.

E. Criteria B, C, and D must all be met within 6 months of the stressful event or at the end of a period of stress. (For some purposes, onset delayed more than 6 months can be included, but this should be clearly specified.)

Source: WHO, 1992.

Complex trauma and complex traumatic stress

When individuals experience multiple traumas, prolonged and repeated trauma during childhood, or repetitive trauma in the context of significant interpersonal relationships, their reactions to trauma have unique characteristics (Herman, 1992). This unique constellation of reactions, called complex traumatic stress, is not recognized diagnostically in the DSM-5, but theoretical discussions and research have begun to highlight the similarities and differences in symptoms of posttraumatic stress versus complex traumatic stress (Courtois & Ford, 2009). Often, the symptoms generated from complex trauma do not fully match PTSD criteria and exceed the severity of PTSD. Overall, literature reflects that PTSD criteria or subthreshold symptoms do not fully account for the persistent and more impairing clinical presentation of complex trauma. Even though current research in the study of traumatology is prolific, it is still in the early stages of development. The idea that there may be more diagnostic variations or subtypes is forthcoming, and this will likely pave the way for more client-matching interventions to better serve those individuals who have been repeatedly exposed to multiple, early childhood, and/or interpersonal traumas.

Other Trauma-Related and Co-Occurring Disorders

The symptoms of PTSD and other mental disorders overlap considerably; these disorders often coexist and include mood, anxiety,

The term "**co occurring disorders**" refers to cases when a person has one or more mental disorders as well as one or more substance use disorders (including sub stance abuse). Co occurring disorders are common among individuals who have a history of trauma and are seeking help.

Advice to Counselors: Universal Screening and Assessment

Only people specifically trained and licensed in mental health assessment should make diagnoses; trauma can result in complicated cases, and many symptoms can be present, whether or not they meet full diagnostic criteria for a specific disorder. Only a trained assessor can distinguish accurately among various symptoms and in the presence of co-occurring disorders. However, behavioral health professionals without specific assessment training can still serve an important role in screening for possible mental disorders using established screening tools (CSAT, 2005c; see also Chapter 4 of this TIP). In agencies and clinics, it is critical to provide such screenings systematically—for each client—as PTSD and other co-occurring disorders are typically underdiagnosed or misdiagnosed.

substance use, and personality disorders. Thus, it's common for trauma survivors to be underdiagnosed or misdiagnosed. If they have not been identified as trauma survivors, their psychological distress is often not associated with previous trauma, and/or they are diagnosed with a disorder that marginally matches their presenting symptoms and psychological sequelae of trauma. The following sections present a brief overview of some mental disorders that can result from (or be worsened by) traumatic stress. PTSD is not the only diagnosis related to trauma nor its only psychological consequence; trauma can broadly influence mental and physical health in clients who already have behavioral health disorders.

People With Mental Disorders

MDD is the most common co-occurring disorder in people who have experienced trauma and are diagnosed with PTSD. A well-established causal relationship exists between stressful events and depression, and a prior history of MDD is predictive of PTSD after exposure to major trauma (Foa et al., 2006).

Many survivors with severe mental disorders function fairly well following trauma, including disasters, as long as essential services aren't interrupted. For others, additional mental health supports may be necessary. For more information, see *Responding to the Needs of People With Serious and Persistent Mental Illness in Times of Major Disaster* (Center for Mental Health Services, 1996).

Co-occurrence is also linked with greater impairment and more severe symptoms of both disorders, and the person is less likely to experience remission of symptoms within 6 months.

Generalized anxiety, obsessive–compulsive, and other anxiety disorders are also associated with PTSD. PTSD may exacerbate anxiety disorder symptoms, but it is also likely that preexisting anxiety symptoms and anxiety disorders increase vulnerability to PTSD. Preexisting anxiety primes survivors for greater hyperarousal and distress. Other disorders, such as personality and somatization disorders, are also associated with trauma, but the history of trauma is often overlooked as a significant factor or necessary target in treatment.

The relationship between PTSD and other disorders is complex. More research is now examining the multiple potential pathways among PTSD and other disorders and how various sequences affect clinical presentation. TIP 42, *Substance Abuse Treatment for Persons With Co-Occurring Disorders* (CSAT, 2005c), is valuable in understanding the relationship of substance use to other mental disorders.

People With Substance Use Disorders

There is clearly a correlation between trauma (including individual, group, or mass trauma) and substance use as well as the presence of posttraumatic stress (and other trauma-related disorders) and substance use disorders. Alcohol and drug use can be, for some, an effort to

Co-Occurring PTSD and Other Mental Disorders

- Individuals with PTSD often have at least one additional diagnosis of a mental disorder.
- The presence of other disorders typically worsens and prolongs the course of PTSD and complicates clinical assessment, diagnosis, and treatment.
- The most common co-occurring disorders, in addition to substance use disorders, include mood disorders, various anxiety disorders, eating disorders, and personality disorders.
- Exposure to early, severe, and chronic trauma is linked to more complex symptoms, including impulse control deficits, greater difficulty in emotional regulation and establishing stable relationships, and disruptions in consciousness, memory, identity, and/or perception of the environment (Dom, De, Hulstijn, & Sabbe, 2007; Waldrop, Back, Verduin, & Brady, 2007).
- Certain diagnostic groups and at-risk populations (e.g., people with developmental disabilities, people who are homeless or incarcerated) are more susceptible to trauma exposure and to developing PTSD if exposed but less likely to receive appropriate diagnosis and treatment.
- Given the prevalence of traumatic events in clients who present for substance abuse treatment, counselors should assess all clients for possible trauma-related disorders.

manage traumatic stress and specific PTSD symptoms. Likewise, people with substance use disorders are at higher risk of developing PTSD than people who do not abuse substances. Counselors working with trauma survivors or clients who have substance use disorders have to be particularly aware of the possibility of the other disorder arising.

Timeframe: PTSD and the onset of substance use disorders

Knowing whether substance abuse or PTSD came first informs whether a causal relationship exists, but learning this requires thorough assessment of clients and access to complete data on PTSD; substance use, abuse, and dependence; and the onset of each. Much current research focuses solely on the age of onset of substance use (not abuse), so determining causal relationships can be difficult.

The relationship between PTSD and substance use disorders is thought to be bidirectional and cyclical: substance use increases trauma risk, and exposure to trauma escalates substance use to manage trauma-related symptoms. Three other causal pathways described by Chilcoat and Breslau's seminal work (1998) further explain the relationship between PTSD and substance use disorders:

1. The "self-medication" hypothesis suggests that clients with PTSD use substances to manage PTSD symptoms (e.g., intrusive memories, physical arousal). Substances such as alcohol, cocaine, barbiturates, opioids, and amphetamines are frequently abused in attempts to relieve or numb emotional pain or to forget the event.
2. The "high-risk" hypothesis states that drug and alcohol use places people who use substances in high-risk situations that increase their chances of being exposed to events that lead to PTSD.
3. The "susceptibility" hypothesis suggests that people who use substances are more susceptible to developing PTSD after exposure to trauma than people who do not. Increased vulnerability may result from failure to develop effective stress management strategies, changes in brain chemistry, or damage to neurophysiological systems due to extensive substance use.

PTSD and substance abuse treatment

PTSD can limit progress in substance abuse recovery, increase the potential for relapse, and complicate a client's ability to achieve success in various life areas. Each disorder can mask or hide the symptoms of the other, and both need

Case Illustration: Maria

Maria is a 31-year-old woman diagnosed with PTSD and alcohol dependence. From ages 8 to 12, she was sexually abused by an uncle. Maria never told anyone about the abuse for fear that she would not be believed. Her uncle remains close to the family, and Maria still sees him on certain holidays. When she came in for treatment, she described her emotions and thoughts as out of control. Maria often experiences intrusive memories of the abuse, which at times can be vivid and unrelenting. She cannot predict when the thoughts will come; efforts to distract herself from them do not always work. She often drinks in response to these thoughts or his presence, as she has found that alcohol can dull her level of distress. Maria also has difficulty falling asleep and is often awakened by nightmares. She does not usually remember the dreams, but she wakes up feeling frightened and alert and cannot go back to sleep.

Maria tries to avoid family gatherings but often feels pressured to go. Whenever she sees her uncle, she feels intense panic and anger but says she can usually "hold it together" if she avoids him. Afterward, however, she describes being overtaken by these feelings and unable to calm down. She also describes feeling physically ill and shaky. At these times, she often isolates herself, stays in her apartment, and drinks steadily for several days. Maria also reports distress pertaining to her relationship with her boyfriend. In the beginning of their relationship, she found him comforting and enjoyed his affection, but more recently, she has begun to feel anxious and unsettled around him. Maria tries to avoid sex with him, but she sometimes gives in for fear of losing the relationship. She finds it easier to have sex with him when she is drunk, but she often experiences strong feelings of dread and disgust reminiscent of her abuse. Maria feels guilty and confused about these feelings.

to be assessed and treated if the individual is to have a full recovery. There is a risk of misinterpreting trauma-related symptoms in substance abuse treatment settings. For example, avoidance symptoms in an individual with PTSD can be misinterpreted as lack of motivation or unwillingness to engage in substance abuse treatment; a counselor's efforts to address substance abuse–related behaviors in early recovery can likewise provoke an exaggerated response from a trauma survivor who has profound traumatic experiences of being trapped and controlled. Exhibit 1.3-6 lists important facts about PTSD and substance use disorders for counselors.

Sleep, PTSD, and substance use

Many people have trouble getting to sleep and/or staying asleep after a traumatic event; consequently, some have a drink or two to help them fall asleep. Unfortunately, any initially helpful effects are likely not only to wane quickly, but also to incur a negative rebound effect. When someone uses a substance before going to bed, "sleep becomes lighter and more easily disrupted," and rapid eye movement sleep (REM) "increases, with an associated increase in dreams and nightmares," as the effects wear off (Auerbach, 2003, p. 1185).

People with alcohol dependence report multiple types of sleep disturbances over time, and it is not unusual for clients to report that they cannot fall asleep without first having a drink. Both REM and slow wave sleep are reduced in clients with alcohol dependence, which is also associated with an increase in the amount of time it takes before sleep occurs, decreased overall sleep time, more nightmares, and reduced sleep efficiency. Sleep during withdrawal is "frequently marked by severe insomnia and sleep fragmentation…a loss of restful sleep and feelings of daytime fatigue. Nightmares and vivid dreams are not uncommon" (Auerbach, 2003, pp. 1185–1186).

Confounding changes in the biology of sleep that occur in clients with PTSD and substance use disorders often add to the problems of

Exhibit 1.3-6: PTSD and Substance Use Disorders: Important Treatment Facts

Profile Severity

- PTSD is one of the most common co-occurring mental disorders found in clients in substance abuse treatment (CSAT, 2005c).
- People in treatment for PTSD tend to abuse a wide range of substances, including opioids, cocaine, marijuana, alcohol, and prescription medications.
- People in treatment for PTSD and substance abuse have a more severe clinical profile than those with just one of these disorders.
- PTSD, with or without major depression, significantly increases risk for suicidality (CSAT, 2009a).

Gender Differences

- Rates of trauma-related disorders are high in men and women in substance abuse treatment.
- Women with PTSD and a substance use disorder most frequently experienced rape or witnessed a killing or injury; men with both disorders typically witnessed a killing or injury or were the victim of sudden injury or accident (Cottler, Nishith, & Compton, 2001).

Risk of Continued Cycle of Violence

- While under the influence of substances, a person is more vulnerable to traumatic events (e.g., automobile crashes, assaults).
- Perpetrators of violent assault often are under the influence of substances or test positive for substances at the time of arrest.

Treatment Complications

- It is important to recognize and help clients understand that becoming abstinent from substances does not resolve PTSD; in fact, some PTSD symptoms become worse with abstinence for some people. Both disorders must be addressed in treatment.
- Treatment outcomes for clients with PTSD and a substance use disorder are worse than for clients with other co-occurring disorders or who only abuse substances (Brown, Read, & Kahler, 2003).

recovery. Sleep can fail to return to normal for months or even years after abstinence, and the persistence of sleep disruptions appears related to the likelihood of relapse. Of particular clinical importance is the vicious cycle that can also begin during "slips"; relapse initially improves sleep, but continued drinking leads to sleep disruption. This cycle of initial reduction of an unpleasant symptom, which only ends up exacerbating the process as a whole, can take place for clients with PTSD as well as for clients with substance use disorders. There are effective cognitive–behavioral therapies and nonaddictive pharmacological interventions for sleep difficulties.

4 Screening and Assessment

IN THIS CHAPTER

- Screening and Assessment
- Barriers and Challenges to Trauma Informed Screening and Assessment
- Cross Cultural Screening and Assessment
- Choosing Instruments
- Trauma Informed Screening and Assessment
- Concluding Note

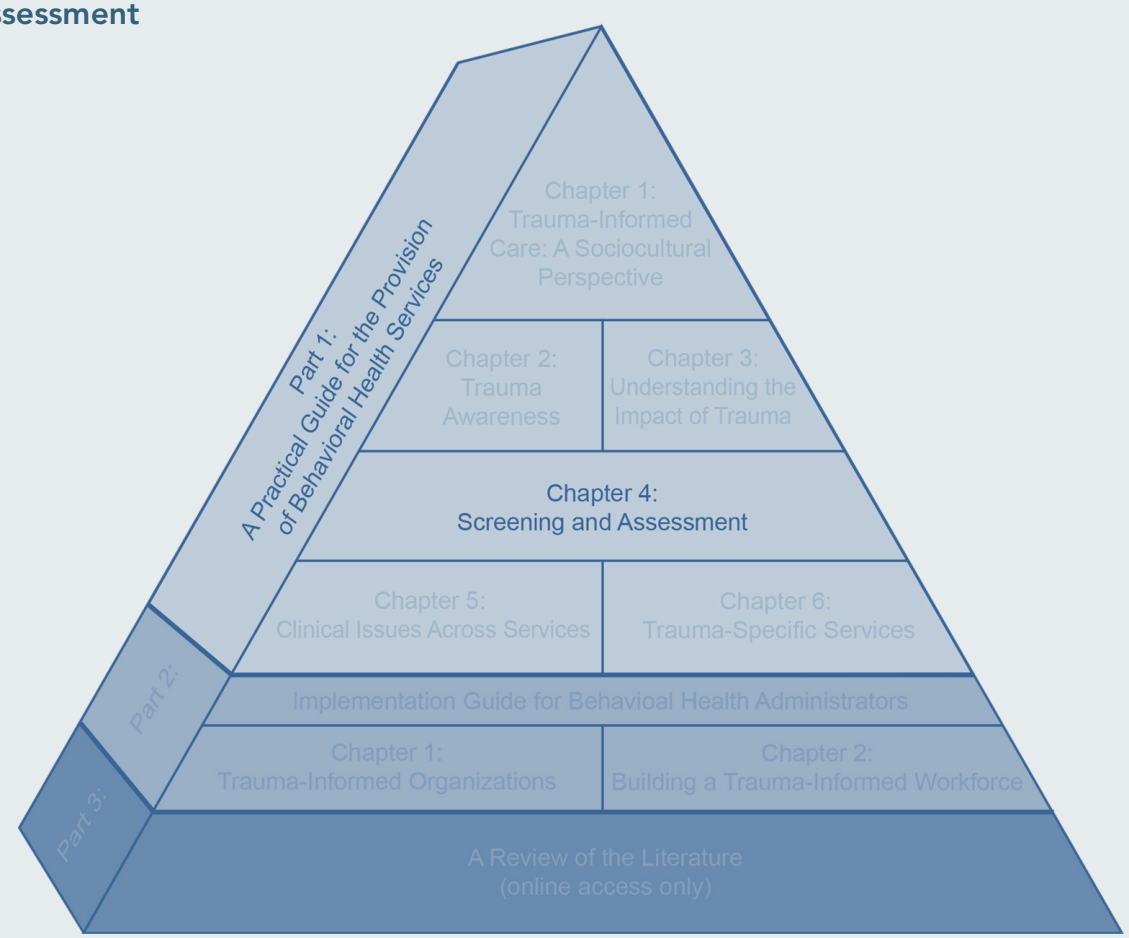
Why screen universally for trauma in behavioral health services? Exposure to trauma is common; in many surveys, more than half of respondents report a history of trauma, and the rates are even higher among clients with mental or substance use disorders. Furthermore, behavioral health problems, including substance use and mental disorders, are more difficult to treat if trauma-related symptoms and disorders aren't detected early and treated effectively (Part 3, Section 1, of this Treatment Improvement Protocol [TIP], available online, summarizes research on the prevalence of trauma and its relationship with other behavioral health problems).

Not addressing traumatic stress symptoms, trauma-specific disorders, and other symptoms/disorders related to trauma can impede successful mental health and substance abuse treatment. Unrecognized, unaddressed trauma symptoms can lead to poor engagement in treatment, premature termination, greater risk for relapse of psychological symptoms or substance use, and worse outcomes. Screening can also prevent misdiagnosis and inappropriate treatment planning. People with histories of trauma often display symptoms that meet criteria for other disorders.

Without screening, clients' trauma histories and related symptoms often go undetected, leading providers to direct services toward symptoms and disorders that may only partially explain client presentations and distress. Universal screening for trauma history and trauma-related symptoms can help behavioral health practitioners identify individuals at risk of developing more pervasive and severe symptoms of traumatic stress. Screening, early identification, and intervention serves as a prevention strategy.

Screening to identify clients who have histories of trauma and experience trauma related symptoms is a prevention strategy.

Trauma-Informed Care Framework in Behavioral Health Services—Screening and Assessment



The chapter begins with a discussion of screening and assessment concepts, with a particular focus on trauma-informed screening. It then highlights specific factors that influence screening and assessment, including timing and environment. Barriers and challenges in providing trauma-informed screening are discussed, along with culturally specific screening and assessment considerations and guidelines. Instrument selection, trauma-informed screening and assessment tools, and trauma-informed screening and assessment processes are reviewed as well. For a more research-oriented perspective on screening and assessment for traumatic stress disorders, please refer to the literature review provided in Part 3 of this TIP, which is available online.

Screening and Assessment

Screening

The first two steps in screening are to determine whether the person has a history of trauma and whether he or she has trauma-related symptoms. Screening mainly obtains answers to "yes" or "no" questions: "Has this client experienced a trauma in the past?" and "Does this client at this time warrant further assessment regarding trauma-related symptoms?" If someone acknowledges a trauma history, then further screening is necessary to determine whether trauma-related symptoms are present. However, the presence of such symptoms does not necessarily say anything about their severity, nor does a positive screen indicate that a disorder actually exists. Positive

Screening is often the first contact between the client and the treatment provider, and the client forms his or her first impression of treatment during this intake process. Thus, how screening is conducted can be as important as the actual information gathered, as it sets the tone of treatment and begins the relationship with the client.

screens only indicate that assessment or further evaluation is warranted, and negative screens do not necessarily mean that an individual doesn't have symptoms that warrant intervention.

Screening procedures should always define the steps to take after a positive or negative screening. That is, the screening process establishes precisely how to score responses to screening tools or questions and clearly defines what constitutes a positive score (called a "cut-off score") for a particular potential problem. The screening procedures detail the actions to take after a client scores in the positive range. Clinical supervision is helpful—and sometimes necessary—in judging how to proceed.

Trauma-informed screening is an essential part of the intake evaluation and the treatment planning process, but it is not an end in itself. Screening processes can be developed that allow staff without advanced degrees or graduate-level training to conduct them, whereas assessments for trauma-related disorders require a mental health professional trained in assessment and evaluation processes. The most important domains to screen among individuals with trauma histories include:

- Trauma-related symptoms.
- Depressive or dissociative symptoms, sleep disturbances, and intrusive experiences.
- Past and present mental disorders, including typically trauma-related disorders (e.g., mood disorders).
- Severity or characteristics of a specific trauma type (e.g., forms of interpersonal violence, adverse childhood events, combat experiences).
- Substance abuse.
- Social support and coping styles.
- Availability of resources.
- Risks for self-harm, suicide, and violence.
- Health screenings.

Assessment

When a client screens positive for substance abuse, trauma-related symptoms, or mental disorders, the agency or counselor should follow up with an assessment. A positive screening calls for more action—an assessment that determines and defines presenting struggles to develop an appropriate treatment plan and to make an informed and collaborative decision about treatment placement. Assessment determines the nature and extent of the client's problems; it might require the client to respond to written questions, or it could involve a clinical interview by a mental health or substance abuse professional qualified to assess the client and arrive at a diagnosis. A clinical assessment delves into a client's past and current experiences, psychosocial and cultural history, and assets and resources.

Assessment protocols can require more than a single session to complete and should also use multiple avenues to obtain the necessary clinical information, including self-assessment tools, past and present clinical and medical records, structured clinical interviews, assessment measures, and collateral information from significant others, other behavioral health professionals, and agencies. Qualifications for conducting assessments and clinical interviews are more rigorous than for screening. Advanced degrees, licensing or certification, and special training in administration, scoring, and interpretation of specific assessment instruments and interviews are often

Advice to Counselors: Screening and Assessing Clients

- Ask all clients about any possible history of trauma; use a checklist to increase proper identification of such a history (see the online Adverse Childhood Experiences Study Score Calculator [http://acestudy.org/ace_score] for specific questions about adverse childhood experiences).
- Use only validated instruments for screening and assessment.
- Early in treatment, screen all clients who have histories of exposure to traumatic events for psychological symptoms and mental disorders related to trauma.
- When clients screen positive, also screen for suicidal thoughts and behaviors (see TIP 50, *Addressing Suicidal Thoughts and Behaviors in Substance Abuse Treatment*; Center for Substance Abuse Treatment [CSAT], 2009a).
- Do not delay screening; do not wait for a period of abstinence or stabilization of symptoms.
- Be aware that some clients will not make the connection between trauma in their histories and their current patterns of behavior (e.g., alcohol and drug use and/or avoidant behavior).
- Do not require clients to describe emotionally overwhelming traumatic events in detail.
- Focus assessment on how trauma symptoms affect clients' current functioning.
- Consider using paper-and-pencil instruments for screening and assessment as well as self-report measures when appropriate; they are less threatening for some clients than a clinical interview.
- Talk about how you will use the findings to plan the client's treatment, and discuss any immediate action necessary, such as arranging for interpersonal support, referrals to community agencies, or moving directly into the active phase of treatment. It is helpful to explore the strategies clients have used in the past that have worked to relieve strong emotions (Fallot & Harris, 2001).
- At the end of the session, make sure the client is grounded and safe before leaving the interview room (Litz, Miller, Ruef, & McTeague, 2002). Readiness to leave can be assessed by checking on the degree to which the client is conscious of the current environment, what the client's plan is for maintaining personal safety, and what the client's plans are for the rest of the day.

required. Counselors must be familiar with (and obtain) the level of training required for any instruments they consider using.

For people with histories of traumatic life events who screen positive for possible trauma-related symptoms and disorders, thorough assessment gathers all relevant information necessary to understand the role of the trauma in their lives; appropriate treatment objectives, goals, planning, and placement; and any ongoing diagnostic and treatment considerations, including reevaluation or follow-up.

Overall, assessment may indicate symptoms that meet diagnostic criteria for a substance use or mental disorder or a milder form of symptomatology that doesn't reach a diagnostic level—or it may reveal that the positive screen was false and that there is no significant cause for concern. Information from an assessment is used to plan the client's treatment. The plan can include such domains as level of care, acute safety needs, diagnosis, disability, strengths and skills, support network, and cultural context. Assessments should reoccur throughout treatment. Ongoing assessment during treatment can provide valuable information by revealing further details of trauma history as clients' trust in staff members grows and by gauging clients' progress.

Timing of Screening and Assessment

As a trauma-informed counselor, you need to offer psychoeducation and support from the outset of service provision; this begins with explaining screening and assessment and with proper pacing of the initial intake and evaluation process. The client should understand the screening process, why the specific questions are important, and that he or she may choose to delay a response or to not answer a question

at all. Discussing the occurrence or consequences of traumatic events can feel as unsafe and dangerous to the client as if the event were reoccurring. It is important not to encourage avoidance of the topic or reinforce the belief that discussing trauma-related material is dangerous, but be sensitive when gathering information in the initial screening. Initial questions about trauma should be general and gradual. Taking the time to prepare and explain the screening and assessment process to the client gives him or her a greater sense of control and safety over the assessment process.

Clients with substance use disorders

No screening or assessment of trauma should occur when the client is under the influence of alcohol or drugs. Clients under the influence are more likely to give inaccurate information. Although it's likely that clients in an active phase of use (albeit not at the assessment itself) or undergoing substance withdrawal can provide consistent information to obtain a valid screening and assessment, there is insufficient data to know for sure. Some theorists state that no final assessment of trauma or posttraumatic stress disorder (PTSD) should occur during these early phases (Read, Bollinger, & Sharkansky, 2003), asserting that symptoms of withdrawal can mimic PTSD and thus result in overdiagnosis of PTSD and other trauma-related disorders. Alcohol or drugs can also cause memory impairment that clouds the client's history of trauma symptoms. However, Najavits (2004) and others note that underdiagnosis, not overdiagnosis, of trauma and PTSD has been a significant issue in the substance abuse field and thus claim that it is essential to obtain an initial assessment early, which can later be modified if needed (e.g., if the client's symptom pattern changes). Indeed, clinical observations suggest that assessments for both trauma and PTSD—even during active use or withdrawal—appear robust (Coffey, Schumacher, Brady, & Dansky, 2003). Although some PTSD symptoms and trauma memories can be dampened or increased to a degree, their overall presence or absence, as assessed early in treatment, appears accurate (Najavits, 2004).

Conduct Assessments Throughout Treatment

Ongoing assessments let counselors:

- Track changes in the presence, frequency, and intensity of symptoms.
- Learn the relationships among the client's trauma, presenting psychological symptoms, and substance abuse.
- Adjust diagnoses and treatment plans as needed.
- Select prevention strategies to avoid more pervasive traumatic stress symptoms.

The Setting for Trauma Screening and Assessment

Advances in the development of simple, brief, and public-domain screening tools mean that at least a basic screening for trauma can be done in almost any setting. Not only can clients be screened and assessed in behavioral health treatment settings; they can also be evaluated in the criminal justice system, educational settings, occupational settings, physicians' offices, hospital medical and trauma units, and emergency rooms. Wherever they occur, trauma-related screenings and subsequent assessments can reduce or eliminate wasted resources, relapses, and, ultimately, treatment failures among clients who have histories of trauma, mental illness, and/or substance use disorders.

Creating an effective screening and assessment environment

You can greatly enhance the success of treatment by paying careful attention to how you approach the screening and assessment process. Take into account the following points:

- ***Clarify for the client what to expect in the screening and assessment process.*** For example, tell the client that the screening and assessment phase focuses on identifying issues that might benefit from treatment. Inform him or her that during the trauma screening and assessment process, uncomfortable thoughts and feelings can arise. Provide reassurance that, if they do, you'll assist in dealing with this distress—but also let them know that, even with your assistance, some psychological and physical reactions to the interview may last for a few hours or perhaps as long as a few days after the interview, and be sure to highlight the fact that such reactions are normal (Read et al., 2003).
- ***Approach the client in a matter-of-fact, yet supportive, manner.*** Such an approach helps create an atmosphere of trust, respect, acceptance, and thoughtfulness (Melnick & Bassuk, 2000). Doing so helps to normalize symptoms and experiences generated by the trauma; consider informing clients that such events are common but can cause continued emotional distress if they are not treated. Clients may also find it helpful for you to explain the purpose of certain difficult questions. For example, you could say, "Many people have experienced troubling events as children, so some of my questions are about whether you experienced any such events while growing up." Demonstrate kindness and directness in equal measure when screening/assessing clients (Najavits, 2004).
- ***Respect the client's personal space.*** Cultural and ethnic factors vary greatly regarding the appropriate physical distance to maintain during the interview. You should respect the client's personal space, sitting neither too far from nor too close to the client; let your observations of the client's comfort level during the screening and assessment process guide the amount of distance. Clients with trauma may have particular sensitivity about their bodies, personal space, and boundaries.
- ***Adjust tone and volume of speech to suit the client's level of engagement and degree of comfort in the interview process.*** Strive to maintain a soothing, quiet demeanor. Be sensitive to how the client might hear what you have to say in response to personal disclosures. Clients who have been traumatized may be more reactive even to benign or well-intended questions.
- ***Provide culturally appropriate symbols of safety in the physical environment.*** These include paintings, posters, pottery, and other room decorations that symbolize the safety of the surroundings to the client population. Avoid culturally inappropriate or insensitive items in the physical environment.
- ***Be aware of one's own emotional responses to hearing clients' trauma histories.*** Hearing about clients' traumas may be very painful and can elicit strong emotions. The client may interpret your reaction to his or her revelations as disinterest, disgust for the client's behavior, or some other inaccurate interpretation. It is important for you to monitor your interactions and to check in with the client as necessary. You may also feel emotionally drained to the point that it interferes with your ability to accurately listen to or assess clients. This effect of exposure to traumatic stories, known as secondary traumatization, can result in symptoms similar to those experienced by the client (e.g., nightmares, emotional numbing); if necessary, refer to a colleague for assessment (Valent, 2002). Secondary traumatization is addressed in greater detail in Part 2, Chapter 2, of this TIP.
- ***Overcome linguistic barriers via an interpreter.*** Deciding when to add an interpreter requires careful judgment. The interpreter should be knowledgeable of behavioral

health terminology, be familiar with the concepts and purposes of the interview and treatment programming, be unknown to the client, and be part of the treatment team. Avoid asking family members or friends of the client to serve as interpreters.

- ***Elicit only the information necessary for determining a history of trauma and the possible existence and extent of traumatic stress symptoms and related disorders.*** There is no need to probe deeply into the details of a client's traumatic experiences at this stage in the treatment process. Given the lack of a therapeutic relationship in which to process the information safely, pursuing details of trauma can cause retraumatization or produce a level of response that neither you nor your client is prepared to handle. Even if a client wants to tell his or her trauma story, it's your job to serve as "gatekeeper" and preserve the client's safety. Your tone of voice when suggesting postponement of a discussion of trauma is very important. Avoid conveying the message, "I really don't want to hear about it." Examples of appropriate statements are:
  - "Your life experiences are very important, but at this early point in our work together, we should start with what's going on in your life currently rather than discussing past experiences in detail. If you feel that certain past experiences are having a big effect on your life now, it would be helpful for us to discuss them as long as we focus on your safety and recovery right now."
  - "Talking about your past at this point could arouse intense feelings—even more than you might be aware of right now. Later, if you choose to, you can talk with your counselor about how to work on exploring your past."
  - "Often, people who have a history of trauma want to move quickly into the details of the trauma to gain relief. I understand this desire, but my concern for you at this moment is to help you establish a sense of safety and support before moving into the traumatic experiences. We want to avoid retraumatization—meaning, we want to establish resources that weren't available to you at the time of the trauma before delving into more content."
- ***Give the client as much personal control as possible during the assessment by:***
  - Presenting a rationale for the interview and its stress-inducing potential, making clear that the client has the right to refuse to answer any and all questions.
  - Giving the client (where staffing permits) the option of being interviewed by someone of the gender with which he or she is most comfortable.
  - Postponing the interview if necessary (Fallot & Harris, 2001).
- ***Use self-administered, written checklists rather than interviews when possible to assess trauma.*** Traumas can evoke shame, guilt, anger, or other intense feelings that can make it difficult for the client to report them aloud to an interviewer. Clients are more likely to report trauma when they use self-administered screening tools; however, these types of screening instruments only guide the next step. Interviews should coincide with self-administered tools to create a sense of safety for the client (someone is present as he or she completes the screening) and to follow up with more indepth data gathering after a self-administered screening is complete. The Trauma History Questionnaire (THQ) is a self-administered tool (Green, 1996). It has been used successfully with clinical and nonclinical populations, including medical patients, women who have experienced domestic violence, and people with serious mental illness (Hooper, Stockton,

Krupnick, & Green, 2011). Screening instruments (including the THQ) are included in Appendix D of this TIP.

- ***Interview the client if he or she has trouble reading or writing or is otherwise unable to complete a checklist.*** Clients who are likely to minimize their trauma when using a checklist (e.g., those who exhibit significant symptoms of dissociation or repression) benefit from a clinical interview. A trained interviewer can elicit information that a self-administered checklist does not capture. Overall, using both a self-administered questionnaire and an interview can help achieve greater clarity and context.
- ***Allow time for the client to become calm and oriented to the present if he or she has very intense emotional responses when recalling or acknowledging a trauma.*** At such times, avoid responding with such exclamations as "I don't know how you survived that!" (Bernstein, 2000). If the client has difficulty self-soothing, guide him or her through grounding techniques (Exhibit 1.4-1), which are particularly useful—perhaps even critical—to achieving a successful

Exhibit 1.4-1: Grounding Techniques

Grounding techniques are important skills for assessors and all other behavioral health service providers who interact with traumatized clients (e.g., nurses, security, administrators, clinicians). Even if you do not directly conduct therapy, knowledge of grounding can help you defuse an escalating situation or calm a client who is triggered by the assessment process. Grounding strategies help a person who is overwhelmed by memories or strong emotions or is dissociating; they help the person become aware of the here and now. A useful metaphor is the experience of walking out of a movie theater. When the person dissociates or has a flashback, it's like watching a mental movie; grounding techniques help him or her step out of the movie theater into the daylight and the present environment. The client's task is not only to hold on to moments from the past, but also to acknowledge that what he or she was experiencing is from the past. Try the following techniques:

1. **Ask the client to state what he or she observes.**
   Guide the client through this exercise by using statements like, "You seem to feel very scared/angry right now. You're probably feeling things related to what happened in the past. Now, you're in a safe situation. Let's try to stay in the present. Take a slow deep breath, relax your shoulders, put your feet on the floor; let's talk about what day and time it is, notice what's on the wall, etc. What else can you do to feel okay in your body right now?"
2. **Help the client decrease the intensity of affect.**
   - "Emotion dial": A client imagines turning down the volume on his or her emotions.
   - Clenching fists can move the energy of an emotion into fists, which the client can then release.
   - Guided imagery can be used to visualize a safe place.
   - Distraction (see #3 below).
   - Use strengths-based questions (e.g., "How did you survive?" or "What strengths did you possess to survive the trauma?").
3. **Distract the client from unbearable emotional states.**
   - Have the client focus on the external environment (e.g., name red objects in the room).
   - Ask the client to focus on recent and future events (e.g., "to do" list for the day).
   - Help the client use self-talk to remind himself or herself of current safety.
   - Use distractions, such as counting, to return the focus to current reality.
   - Somatosensory techniques (toe-wiggling, touching a chair) can remind clients of current reality.
4. **Ask the client to use breathing techniques.**
   - Ask the client to inhale through the nose and exhale through the mouth.
   - Have the client place his or her hands on his or her abdomen and then watch the hands go up and down while the belly expands and contracts.

Source: Melnick & Bassuk, 2000.

interview when a client has dissociated or is experiencing intense feelings in response to screening and/or interview questions.

- ***Avoid phrases that imply judgment about the trauma.*** For example, don't say to a client who survived Hurricane Katrina and lost family members, "It was God's will," or "It was her time to pass," or "It was meant to be." Do not make assumptions about what a person has experienced. Rather, listen supportively without imposing personal views on the client's experience.
- ***Provide feedback about the results of the screening.*** Keep in mind the client's vulnerability, ability to access resources, strengths, and coping strategies. Present results in a synthesized manner, avoiding complicated, overly scientific jargon or explanations. Allow time to process client reactions during the feedback session. Answer client questions and concerns in a direct, honest, and compassionate manner. Failure to deliver feedback in this way can negatively affect clients' psychological status and severely weaken the potential for developing a therapeutic alliance with the client.
- ***Be aware of the possible legal implications of assessment.*** Information you gather during the screening and assessment process can necessitate mandatory reporting to authorities, even when the client does not want such information disclosed (Najavits, 2004). For example, you can be required to report a client's experience of child abuse even if it happened many years ago or the client doesn't want the information reported. Other legal issues can be quite complex, such as confidentiality of records, pursuing a case against a trauma perpetrator and divulging information to third parties while still protecting the legal status of information used in prosecution, and child custody issues (Najavits, 2004). It's essential that you know the laws in your State, have an expert legal consultant available, and access clinical supervision.

Barriers and Challenges to Trauma-Informed Screening and Assessment

Barriers

It is not necessarily easy or obvious to identify an individual who has survived trauma without screening. Moreover, some clients may deny that they have encountered trauma and its effects even after being screened or asked direct questions aimed at identifying the occurrence of traumatic events. The two main barriers to the evaluation of trauma and its related disorders in behavioral health settings are clients not reporting trauma and providers overlooking trauma and its effects.

Concerning the first main barrier, some events will be experienced as traumatic by one person but considered nontraumatic by another. A history of trauma encompasses not only the experience of a potentially traumatic event, but also the person's responses to it and the meanings he or she attaches to the event. Certain situations make it more likely that the client will not be forthcoming about traumatic events or his or her responses to those events. Some clients might not have ever thought of a particular event or their response to it as traumatic and thus might not report or even recall the event. Some clients might feel a reluctance to discuss something that they sense might bring up uncomfortable feelings (especially with a counselor whom they've only recently met). Clients may avoid openly discussing traumatic events or have difficulty recognizing or articulating their experience of trauma for other reasons, such as feelings of shame, guilt, or fear of retribution by others associated with the event (e.g., in cases of interpersonal or

Common Reasons Why Some Providers Avoid Screening Clients for Trauma

Treatment providers may avoid screening for traumatic events and trauma-related symptoms due to:

- A reluctance to inquire about traumatic events and symptoms because these questions are not a part of the counselor's or program's standard intake procedures.
- Underestimation of the impact of trauma on clients' physical and mental health.
- A belief that treatment of substance abuse issues needs to occur first and exclusively, before treating other behavioral health disorders.
- A belief that treatment should focus solely on presenting symptoms rather than exploring the potential origins or aggravators of symptoms.
- A lack of training and/or feelings of incompetence in effectively treating trauma-related problems (Salyers, Evans, Bond, & Meyer, 2004).
- Not knowing how to respond therapeutically to a client's report of trauma.
- Fear that a probing trauma inquiry will be too disturbing to clients.
- Not using common language with clients that will elicit a report of trauma (e.g., asking clients if they were abused as a child without describing what is meant by abuse).
- Concern that if disorders are identified, clients will require treatment that the counselor or program does not feel capable of providing (Fallot & Harris, 2001).
- Insufficient time for assessment to explore trauma histories or symptoms.
- Untreated trauma-related symptoms of the counselor, other staff members, and administrators.

domestic violence). Still others may deny their history because they are tired of being interviewed or asked to fill out forms and may believe it doesn't matter anyway.

A client may not report past trauma for many reasons, including:

- Concern for safety (e.g., fearing more abuse by a perpetrator for revealing the trauma).
- Fear of being judged by service providers.
- Shame about victimization.
- Reticence about talking with others in response to trauma.
- Not recalling past trauma through dissociation, denial, or repression (although genuine blockage of all trauma memory is rare among trauma survivors; McNally, 2003).
- Lack of trust in others, including behavioral health service providers.
- Not seeing a significant event as traumatic.

Regarding the second major barrier, counselors and other behavioral health service providers may lack awareness that trauma can significantly affect clients' presentations in treatment and functioning across major life areas, such as relationships and work. In addition, some counselors may believe that their role is to treat only the presenting psychological and/or substance abuse symptoms, and thus they may not be as sensitive to histories and effects of trauma. Other providers may believe that a client should abstain from alcohol and drugs for an extended period before exploring trauma symptoms. Perhaps you fear that addressing a clients' trauma history will only exacerbate symptoms and complicate treatment. Behavioral health service providers who hold biases may assume that a client doesn't have a history of trauma and thus fail to ask the "right" questions, or they may be uncomfortable with emotions that arise from listening to client experiences and, as a result, redirect the screening or counseling focus.

Challenges

Awareness of acculturation and language

Acculturation levels can affect screening and assessment results. Therefore, indepth discussions may be a more appropriate way to gain an understanding of trauma from the client's point of view. During the intake, prior to trauma screening, determine the client's history of

Common Assessment Myths

Several common myths contribute to underassessment of trauma-related disorders (Najavits, 2004):

- ***Myth #1: Substance abuse itself is a trauma.*** However devastating substance abuse is, it does not meet the *Diagnostic and Statistical Manual of Mental Disorders*, Fifth Edition (DSM-5; American Psychiatric Association [APA], 2013a), criteria for trauma per se. Nevertheless, high-risk behaviors that are more likely to occur during addiction, such as interpersonal violence and self-harm, significantly increase the potential for traumatic injury.
- ***Myth #2: Assessment of trauma is enough.*** Thorough assessment is the best way to identify the existence and extent of trauma-related problems. However, simply identifying trauma-related symptoms and disorders is just the first step. Also needed are individualized treatment protocols and action to implement these protocols.
- ***Myth #3: It is best to wait until the client has ended substance use and withdrawal to assess for PTSD.*** Research does not provide a clear answer to the controversial question of when to assess for PTSD; however, Najavits (2004) and others note that underdiagnosis of trauma and PTSD has been more significant in the substance abuse field than overdiagnosis. Clinical experience shows that the PTSD diagnosis is rather stable during substance use or withdrawal, but symptoms can become more or less intense; memory impairment from alcohol or drugs can also cloud the symptom picture. Thus, it is advisable to establish a tentative diagnosis and then reassess after a period of abstinence, if possible.

migration, if applicable, and primary language. Questions about the client's country of birth, length of time in this country, events or reasons for migration, and ethnic self-identification are also appropriate at intake. Also be aware that even individuals who speak English well might have trouble understanding the subtleties of questions on standard screening and assessment tools. It is not adequate to translate items simply from English into another language; words, idioms, and examples often don't translate directly into other languages and therefore need to be adapted. Screening and assessment should be conducted in the client's preferred language by trained staff members who speak the language or by professional translators familiar with treatment jargon.

Awareness of co-occurring diagnoses

A trauma-informed assessor looks for psychological symptoms that are associated with trauma or simply occur alongside it. Symptom screening involves questions about past or present mental disorder symptoms that may indicate the need for a full mental health assessment. A variety of screening tools are available, including symptom checklists. However, you should only use symptom checklists when you need information about how your client is currently feeling; don't use them to screen for specific disorders. Responses will likely change from one administration of the checklist to the next.

Basic mental health screening tools are available. For example, the Mental Health Screening Form-III screens for present or past symptoms of most mental disorders (Carroll & McGinley, 2001); it is available at no charge from Project Return Foundation, Inc. and is also reproduced in TIP 42, *Substance Abuse Treatment for Persons With Co-Occurring Disorders* (CSAT, 2005c). Other screening tools, such as the Beck Depression Inventory II and the Beck Anxiety Inventory (Beck, Wright, Newman, & Liese, 1993), also screen broadly for mental and substance use disorders, as well as for specific disorders often associated with trauma. For further screening information and resources on depression and suicide, see TIP 48, *Managing Depressive Symptoms in Substance Abuse Clients During Early Recovery* (CSAT, 2008), and TIP 50, *Addressing Suicidal Thoughts and Behaviors in Substance Abuse Treatment* (CSAT, 2009a).

For screening substance use disorders, see TIP 11, *Simple Screening Instruments for Outreach for Alcohol and Other Drug Abuse and Infectious Diseases* (CSAT, 1994); TIP 24, *A Guide to Substance Abuse Services for Primary Care Clinicians* (CSAT, 1997a); TIP 31, *Screening and Assessing Adolescents for Substance Use Disorders* (CSAT, 1999c); TIP 42, *Substance Abuse Treatment for Persons With Co-Occurring Disorders* (CSAT, 2005c); and TIP 51, *Substance Abuse Treatment: Addressing the Specific Needs of Women* (CSAT, 2009d).

A common dilemma in the assessment of trauma-related disorders is that certain trauma symptoms are also symptoms of other disorders. Clients with histories of trauma typically present a variety of symptoms; thus, it is important to determine the full scope of symptoms and/or disorders present to help improve treatment planning. Clients with trauma-related and substance use symptoms and disorders are at increased risk for additional Axis I and/or Axis II mental disorders (Brady, Killeen, Saladin, Dansky, & Becker, 1994; Cottler, Nishith, & Compton, 2001). These symptoms need to be distinguished so that other presenting subclinical features or disorders do not go unidentified and untreated. To accomplish this, a comprehensive assessment of the client's mental health is recommended.

Misdiagnosis and underdiagnosis

Many trauma survivors are either misdiagnosed (i.e., given diagnoses that are not accurate) or underdiagnosed (i.e., have one or more diagnoses that have not been identified at all). Such diagnostic errors could result, in part, from the fact that many general instruments to evaluate mental disorders are not sufficiently sensitive to identify posttraumatic symptoms and can misclassify them as other disorders, including personality disorders or psychoses. Intrusive posttraumatic symptoms, for example, can show up on general measures as indicative of hallucinations or obsessions. Dissociative symptoms can be interpreted as indicative of schizophrenia. Trauma-based cognitive symptoms can be scored as evidence for paranoia or other delusional processes (Briere, 1997). Some of the most common misdiagnoses in clients with PTSD and substance abuse are:

- ***Mood and anxiety disorders.*** Overlapping symptoms with such disorders as major depression, generalized anxiety disorder, and bipolar disorder can lead to misdiagnosis.
- ***Borderline personality disorder.*** Historically, this has been more frequently diagnosed than PTSD. Many of the symptoms, including a pattern of intense interpersonal relationships, impulsivity, rapid and unpredictable mood swings, power struggles in the treatment environment, underlying anxiety and depressive symptoms, and transient, stress-related paranoid ideation or severe dissociative symptoms overlap. The effect of this misdiagnosis on treatment can be particularly negative; counselors often view clients with a borderline personality diagnosis as difficult to treat and unresponsive to treatment.
- ***Antisocial personality disorder.*** For men and women who have been traumatized in childhood, "acting out" behaviors, a lack of empathy and conscience, impulsivity, and self-centeredness can be functions of trauma and survival skills rather than true antisocial characteristics.
- ***Attention deficit hyperactivity disorder (ADHD).*** For children and adolescents, impulsive behaviors and concentration problems can be diagnosed as ADHD rather than PTSD.

It is possible, however, for clients to legitimately have any of these disorders in addition to trauma-related disorders. Given the overlap of posttraumatic symptoms with those of other disorders, a wide variety of diagnoses often needs to be considered to avoid misidentifying

other disorders as PTSD and vice versa. A trained and experienced mental health professional will be required to weigh differential diagnoses. TIP 42 (CSAT, 2005c) explores issues related to differential diagnosis.

Cross-Cultural Screening and Assessment

Many trauma-related symptoms and disorders are culture specific, and a client's cultural background must be considered in screening and assessment (for review of assessment and cultural considerations when working with trauma, see Wilson & Tang, 2007). Behavioral health service providers must approach screening and assessment processes with the influences of culture, ethnicity, and race firmly in mind. Cultural factors, such as norms for expressing psychological distress, defining trauma, and seeking help in dealing with trauma, can affect:

- How traumas are experienced.
- The meaning assigned to the event(s).
- How trauma-related symptoms are expressed (e.g., as somatic expressions of distress, level of emotionality, types of avoidant behavior).
- Willingness to express distress or identify trauma with a behavioral health service provider and sense of safety in doing so.
- Whether a specific pattern of behavior, emotional expression, or cognitive process is considered abnormal.
- Willingness to seek treatment inside and outside of one's own culture.
- Response to treatment.
- Treatment outcome.

When selecting assessment instruments, counselors and administrators need to choose,

Culture-Specific Stress Responses

Culture-bound concepts of distress exist that don't necessarily match diagnostic criteria. Culture-specific symptoms and syndromes can involve physical complaints, broad emotional reactions, or specific cognitive features. Many such syndromes are unique to a specific culture but can broaden to cultures that have similar beliefs or characteristics. Culture-bound syndromes are typically treated by traditional medicine and are known throughout the culture. Cultural concepts of distress include:

- ***Ataques de nervios.*** Recognized in Latin America and among individuals of Latino descent, the primary features of this syndrome include intense emotional upset (e.g., shouting, crying, trembling, dissociative or seizure-like episodes). It frequently occurs in response to a traumatic or stressful event in the family.
- ***Nervios.*** This is considered a common idiom of distress among Latinos; it includes a wide range of emotional distress symptoms including headaches, nervousness, tearfulness, stomach discomfort, difficulty sleeping, and dizziness. Symptoms can vary widely in intensity, as can impairment from them. This often occurs in response to stressful or difficult life events.
- ***Susto.*** This term, meaning "fright," refers to a concept found in Latin American cultures, but it is not recognized among Latinos from the Caribbean. *Susto* is attributed to a traumatic or frightening event that causes the soul to leave the body, thus resulting in illness and unhappiness; extreme cases may result in death. Symptoms include appetite or sleep disturbances, sadness, lack of motivation, low self-esteem, and somatic symptoms.
- ***Taijin kyofusho.*** Recognized in Japan and among some American Japanese, this "interpersonal fear" syndrome is characterized by anxiety about and avoidance of interpersonal circumstances. The individual presents worry or a conviction that his or her appearance or social interactions are inadequate or offensive. Other cultures have similar cultural descriptions or syndromes associated with social anxiety.

Sources: APA, 2013, pp. 833–837; Briere & Scott, 2006b.

whenever possible, instruments that are culturally appropriate for the client. Instruments that have been normed for, adapted to, and tested on specific cultural and linguistic groups should be used. Instruments that are not normed for the population are likely to contain cultural biases and produce misleading results. Subsequently, this can lead to misdiagnosis, overdiagnosis, inappropriate treatment plans, and ineffective interventions. Thus, it is important to interpret all test results cautiously and to discuss the limitations of instruments with clients from diverse ethnic populations and cultures. For a review of cross-cultural screening and assessment considerations, refer to the planned TIP, *Improving Cultural Competence* (Substance Abuse and Mental Health Services Administration, planned c).

Choosing Instruments

Numerous instruments screen for trauma history, indicate symptoms, assess trauma-related and other mental disorders, and identify related clinical phenomena, such as dissociation. One instrument is unlikely to meet all screening or assessment needs or to determine the existence and full extent of trauma symptoms and traumatic experiences. The following sections present general considerations in selecting standardized instruments.

Purpose

Define your assessment needs. Do you need a standardized screening or assessment instrument for clinical purposes? Do you need information on a specific aspect of trauma, such as history, PTSD, or dissociation? Do you wish to make a formal diagnosis, such as PTSD? Do you need to determine quickly whether a client has experienced a trauma? Do you want an assessment that requires a clinician to administer it, or can the client complete the instrument himself or herself? Does the instrument match the current and specific diagnostic criteria established in the DSM-5?

Population

Consider the population to be assessed (e.g., women, children, adolescents, refugees, disaster survivors, survivors of physical or sexual violence, survivors of combat-related trauma, people whose native language is not English); some tools are appropriate only for certain populations. Is the assessment process developmentally and culturally appropriate for your client? Exhibit 1.4-2 lists considerations in choosing a screening or assessment instrument for trauma and/or PTSD.

Instrument Quality

An instrument should be psychometrically adequate in terms of sensitivity and specificity or reliability and validity as measured in several ways under varying conditions. Published research offers information on an instrument's psychometric properties as well as its utility in both research and clinical settings. For further information on a number of widely used trauma evaluation tools, see Appendix D and Antony, Orsillo, and Roemer's paper (2001).

The DSM-5 and Updates to Screening and Assessment Instruments

The recent publication of the DSM-5 (APA, 2013a) reflects changes to certain diagnostic criteria, which will affect screening tools and criteria for trauma-related disorders. Criterion A2 (specific to traumatic stress disorders, acute stress, and posttraumatic stress disorders), included in the fourth edition (text revision) of the DSM (DSM-IV-TR; APA, 2000a), has been eliminated; this criterion stated that the individual's response to the trauma needs to involve intense fear, helplessness, or horror. There are now four cluster symptoms, not three: reexperiencing, avoidance, arousal, and persistent negative alterations in cognitions and mood. Changes to the DSM-5 were made to symptoms within each cluster. Thus, screening will need modification to adjust to this change (APA, 2012b).

Exhibit 1.4-2: Key Areas of Trauma Screening and Assessment

Trauma
Key question: Did the client experience a trauma?

Examples of measures: Life Stressor Checklist-Revised (Wolfe & Kimerling, 1997); Trauma History Questionnaire (Green, 1996); Traumatic Life Events Questionnaire (Kubany et al., 2000).

Note: A good trauma measure identifies events a person experienced (e.g., rape, assault, accident) and also evaluates other trauma-related symptoms (e.g., presence of fear, helplessness, or horror).

Acute Stress Disorder (ASD) and PTSD
Key question: Does the client meet criteria for ASD or PTSD?

Examples of measures: Clinician-Administered PTSD Scale (CAPS; Blake et al., 1990); Modified PTSD Symptom Scale (Falsetti, Resnick, Resnick, & Kilpatrick, 1993); PTSD Checklist (Weathers, Litz, Herman, Huska, & Keane, 1993); Stanford Acute Stress Reaction Questionnaire (Cardena, Koopman, Classen, Waelde, & Spiegel, 2000).

Note: A PTSD diagnosis requires the person to meet criteria for having experienced a trauma; some measures include this, but others do not and require use of a separate trauma measure. The CAPS is an interview; the others listed are self-report questionnaires and take less time.

Other Trauma-Related Symptoms
Key question: Does the client have other symptoms related to trauma? These include depressive symptoms, self-harm, dissociation, sexuality problems, and relationship issues, such as distrust.

Examples of measures: Beck Depression Inventory II (Beck, 1993; Beck et al., 1993); Dissociative Experiences Scale (Bernstein & Putnam, 1986; Carlson & Putnam, 1993); Impact of Event Scale (measures intrusion and avoidance due to exposure to traumatic events; Horowitz, Wilner, & Alvarez, 1979; Weiss & Marmar, 1997); Trauma Symptom Inventory (Briere, 1995); Trauma Symptom Checklist for Children (Briere, 1996b); Modified PTSD Symptom Scale (Falsetti et al., 1993).

Note: These measures can be helpful for clinical purposes and for outcome assessment because they gauge *levels* of symptoms. Trauma-related symptoms are broader than diagnostic criteria and thus useful to measure, even if the patient doesn't meet criteria for any specific diagnoses.

Other Trauma-Related Diagnoses
Key question: Does the client have other disorders related to trauma? These include mood disorders, anxiety disorders besides traumatic stress disorders, and dissociative disorders.

Examples of measures: Mental Health Screening Form III (Carroll & McGinley, 2001); The Mini-International Neuropsychiatric Interview (M.I.N.I.) Structured Clinical Interview for DSM-IV-TR, Patient Edition (First, Spitzer, Gibbon, & Williams, revised 2011); Structured Clinical Interview for DSM-IV-TR, Non-Patient Edition (First, Spitzer, Gibbon, & Williams, revised 2011a).

Note: For complex symptoms and diagnoses such as dissociation and dissociative disorders, interviews are recommended. Look for measures that incorporate DSM-5 criteria.

Sources: Antony et al., 2001; Najavits, 2004.

Practical Issues

Is the instrument freely and readily available, or is there a fee? Is costly and extensive training required to administer it? Is the instrument too lengthy to be used in the clinical setting? Is it easily administered and scored with accompanying manuals and/or other training materials? How will results be presented to or used with the client? Is technical support available for difficulties in administration, scoring, or interpretation of results? Is special equipment required such as a microphone, a video camera, or a touch-screen computer with audio?

Trauma-Informed Screening and Assessment

The following sections focus on initial screening. For more information on screening and assessment tools, including structured interviews, see Exhibit 1.4-2. Screening is only as good as the actions taken afterward to address a positive screen (when clients acknowledge that they experience symptoms or have encountered events highlighted within the screening). Once a screening is complete and a positive screen is acquired, the client then needs referral for a more indepth assessment to ensure development of an appropriate treatment plan that matches his or her presenting problems.

Establish a History of Trauma

A person cannot have ASD, PTSD, or any trauma-related symptoms without experiencing trauma; therefore, it is necessary to inquire about painful, difficult, or overwhelming past experiences. Initial information should be gathered in a way that is minimally intrusive yet clear. Brief questionnaires can be less threatening to a client than face-to-face interviews, but interviews should be an integral part of any screening and assessment process. If the client initially denies a history of trauma (or minimizes it), administer the questionnaire later or delay additional trauma-related questions until the client has perhaps developed more trust in the treatment setting and feels safer with the thoughts and emotions that might arise in discussing his or her trauma experiences.

The Stressful Life Experiences (SLE) screen (Exhibit 1.4-3) is a checklist of traumas that also considers the client's view of the impact of those events on life functioning. Using the SLE can foster the client–counselor relationship. By going over the answers with the client, you can gain a deep understanding of your client, and the client receives a demonstration of your sensitivity and concern for what the client has experienced. The National Center for PTSD Web site offers similar instruments (http://www.ptsd.va.gov/professional/pages/assessments/assessment.asp).

In addition to broad screening tools that capture various traumatic experiences and symptoms, other screening tools, such as the Combat Exposure Scale (Keane et al., 1989) and the Intimate Partner Violence Screening Tool (Exhibit 1.4-4), focus on acknowledging a specific type of traumatic event.

Screen for Trauma-Related Symptoms and Disorders in Clients With Histories of Trauma

This step evaluates whether the client's trauma resulted in subclinical or diagnosable disorders. The counselor can ask such questions as, "Have you received any counseling or therapy? Have you ever been diagnosed or treated for a psychological disorder in the past? Have you ever been prescribed medications for your emotions in the past?" Screening is typically conducted by a wide variety of behavioral health service providers with different levels of training and education; however, all

Exhibit 1.4-3: SLE Screening

Please fill in the number that best represents how much the following statements describe your experiences. You will need to use two scales, one for how well the statement describes your experiences and one for how stressful you found this experience. The two scales are below.

Describes your Experience:

0	1	2	3	4	5	6	7	8	9	10
Did not experience this	a little like my experiences				somewhat like my experiences					exactly like my experiences

Stressfulness of Experience:

0	1	2	3	4	5	6	7	8	9	10
Not at all stressful	not very stressful				somewhat stressful					extremely stressful

Describes your Experience	Life Experience	Stressfulness Then		Stressfulness Now
	I have witnessed or experienced a natural disaster; like a hurricane or earthquake.			
	I have witnessed or experienced a human made disaster like a plane crash or industrial disaster.			
	I have witnessed or experienced a serious accident or injury.			
	I have witnessed or experienced chemical or radiation exposure happening to me, a close friend or a family member.			
	I have witnessed or experienced a life threatening illness happening to me, a close friend or a family member.			
	I have witnessed or experienced the death of my spouse or child.			
	I have witnessed or experienced the death of a close friend or family member (other than my spouse or child).			
	I or a close friend or family member has been kidnapped or taken hostage.			
	I or a close friend or family member has been the victim of a terrorist attack or torture.			
	I have been involved in combat or a war or lived in a war affected area.			
	I have seen or handled dead bodies other than at a funeral.			
	I have felt responsible for the serious injury or death of another person.			
	I have witnessed or been attacked with a weapon other than in combat or family setting			
	As a child/teen I was hit, spanked, choked or pushed hard enough to cause injury			
	As an adult, I was hit, choked or pushed hard enough to cause injury.			
	As an adult or child, I have witnessed someone else being choked, hit, spanked, or pushed hard enough to cause injury.			
	As a child/teen I was forced to have unwanted sexual contact.			
	As an adult I was forced to have unwanted sexual contact.			
	As a child or adult I have witnessed someone else being forced to have unwanted sexual contact			
	I have witnessed or experienced an extremely stressful event not already mentioned. Please Explain:_____ _____

individuals who administer screenings, regardless of education level and experience, should be aware of trauma-related symptoms, grounding techniques, ways of creating safety for the client, proper methods for introducing screening tools, and the protocol to follow when a positive screen is obtained. (See Appendix D for information on specific instruments.) Exhibit 1.4-5 is an example of a screening instrument for trauma symptoms, the Primary Care PTSD (PC-PTSD) Screen. Current research (Prins et al., 2004) suggests that the optimal cutoff score for the PC-PTSD is 3. If sensitivity is of greater concern than efficiency, a cutoff score of 2 is recommended.

Exhibit 1.4-5: PC-PTSD Screen

In your life, have you ever had any experience that was so frightening, horrible, or upsetting that, *in the past month*, you…

1. Have had nightmares about it or thought about it when you did not want to?
   YES NO
2. Tried hard not to think about it or went out of your way to avoid situations that reminded you of it?
   YES NO
3. Were constantly on guard, watchful, or easily startled?
   YES NO
4. Felt numb or detached from others, activities, or your surroundings?
   YES NO

Another instrument that can screen for traumatic stress symptoms is the four-item self-report SPAN, summarized in Exhibit 1.4-6, which is derived from the 17-item Davidson Trauma Scale (DTS). SPAN is an acronym for the four items the screening addresses: startle, physiological arousal, anger, and numbness. It was developed using a small, diverse sample of adult patients (N=243; 72 percent women; 17.4 percent African American; average age = 37 years) participating in several clinical studies, including a family study of rape trauma, combat veterans, and Hurricane Andrew survivors, among others.

The SPAN has a high diagnostic accuracy of 0.80 to 0.88, with sensitivity (percentage of true positive instances) of 0.84 and specificity (percentage of true negative instances) of 0.91 (Meltzer-Brody, Churchill, & Davidson, 1999). SPAN scores correlated highly with the full DTS (r = 0.96) and other measures, such as the Impact of Events Scale (r = 0.85) and the Sheehan Disability Scale (r = 0.87).

The PTSD Checklist (Exhibit 1.4-7), developed by the National Center for PTSD, is in the public domain. Originally developed for combat veterans of the Vietnam and Persian

Exhibit 1.4-6: The SPAN

The SPAN instrument is a brief screening tool that asks clients to identify the trauma in their past that is most disturbing to them currently. It then poses four questions that ask clients to rate the frequency and severity with which they have experienced, in the past week, different types of trauma-related symptoms (startle, physiological arousal, anger, and numbness).

To order this screening instrument, use the following contact information:
Multi-Health Systems, Inc.
P.O. Box 950
North Tonawanda, NY
14120-0950
Phone: 800-456-3003

Exhibit 1.4-7: The PTSD Checklist

Instructions to Client: Below is a list of problems and complaints that people sometimes have in response to stressful experiences. Please read each one carefully and circle the number that indicates how much you have been bothered by that problem *in the past month*.

1. Repeated, disturbing memories, thoughts, or images of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
2. Repeated, disturbing dreams of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
3. Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
4. Feeling very upset when something reminded you of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
5. Having physical reactions (e.g., heart pounding, trouble breathing, sweating) when something reminded you of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
6. Avoiding thinking about or talking about a stressful experience or avoiding having feelings related to it?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
7. Avoiding activities or situations because they reminded you of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
8. Trouble remembering important parts of a stressful experience?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
9. Loss of interest in activities that you used to enjoy?
   1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
10. Feeling distant or cut off from other people?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
11. Feeling emotionally numb or being unable to have loving feelings for those close to you?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
12. Feeling as if your future will somehow be cut short?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
13. Trouble falling or staying asleep?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
14. Feeling irritable or having angry outbursts?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
15. Having difficulty concentrating?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
16. Being "super-alert" or watchful or on guard?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely
17. Feeling jumpy or easily startled?
    1. Not at all 2. A little bit 3. Moderately 4. Quite a bit 5. Extremely

Source: Weathers et al., 1993. Material used is in the public domain.

Gulf Wars, it has since been validated on a variety of noncombat traumas (Keane, Brief, Pratt, & Miller, 2007). When using the checklist, identify a specific trauma first and then have the client answer questions in relation to that one specific trauma.

Other Screening and Resilience Measures

Along with identifying the presence of trauma-related symptoms that warrant assessment to determine the severity of symptoms as well as whether or not the individual possesses subclinical symptoms or has met criteria for a trauma-related disorder, clients should receive other screenings for symptoms associated with trauma (e.g., depression, suicidality). It is important that screenings address both external and internal resources (e.g., support systems, strengths, coping styles). Knowing the client's strengths can significantly shape the treatment planning process by allowing you to use strategies that have already worked for the client and incorporating strategies to build resilience (Exhibit 1.4-8).

Exhibit 1.4-8: Resilience Scales

A number of scales with good psychometric properties measure resilience:

- Resilience Scale (Wagnild & Young, 1993)
- Resilience Scale for Adults (Friborg, Hjemdal, Rosenvinge, & Martinussen, 2003)
- Connor Davidson Resilience Scale, 25-,10-, and 2-Item (Connor & Davidson, 2003; Campbell-Sills & Stein, 2007; Vaishnavi, Connor, & Davidson, 2007, respectively)
- Dispositional Resilience Scale, 45-,30-, 15-item forms (Bartone, Roland, Picano, &Williams, 2008)

Preliminary research shows improvement of individual resilience through treatment interventions in other populations (Lavretsky, Siddarth, & Irwin, 2010).

Screen for suicidality

All clients—particularly those who have experienced trauma—should be screened for suicidality by asking, "In the past, have you ever had suicidal thoughts, had intention to commit suicide, or made a suicide attempt? Do you have any of those feelings now? Have you had any such feelings recently?" Behavioral health service providers should receive training to screen for suicide. Additionally, clients with substance use disorders and a history of psychological trauma are at heightened risk for suicidal thoughts and behaviors; thus, screening for suicidality is indicated. See TIP 50, *Addressing Suicidal Thoughts and Behaviors in Substance Abuse Treatment* (CSAT, 2009a). For additional descriptions of screening processes for suicidality, see TIP 42 (CSAT, 2005c).

Concluding Note

Screenings are only beneficial if there are follow-up procedures and resources for handling positive screens, such as the ability to review results with and provide feedback to the individual after the screening, sufficient resources to complete a thorough assessment or to make an appropriate referral for an assessment, treatment planning processes that can easily incorporate additional trauma-informed care objectives and goals, and availability and access to trauma-specific services that match the client's needs. Screening is only the first step!

5 Clinical Issues Across Services

IN THIS CHAPTER

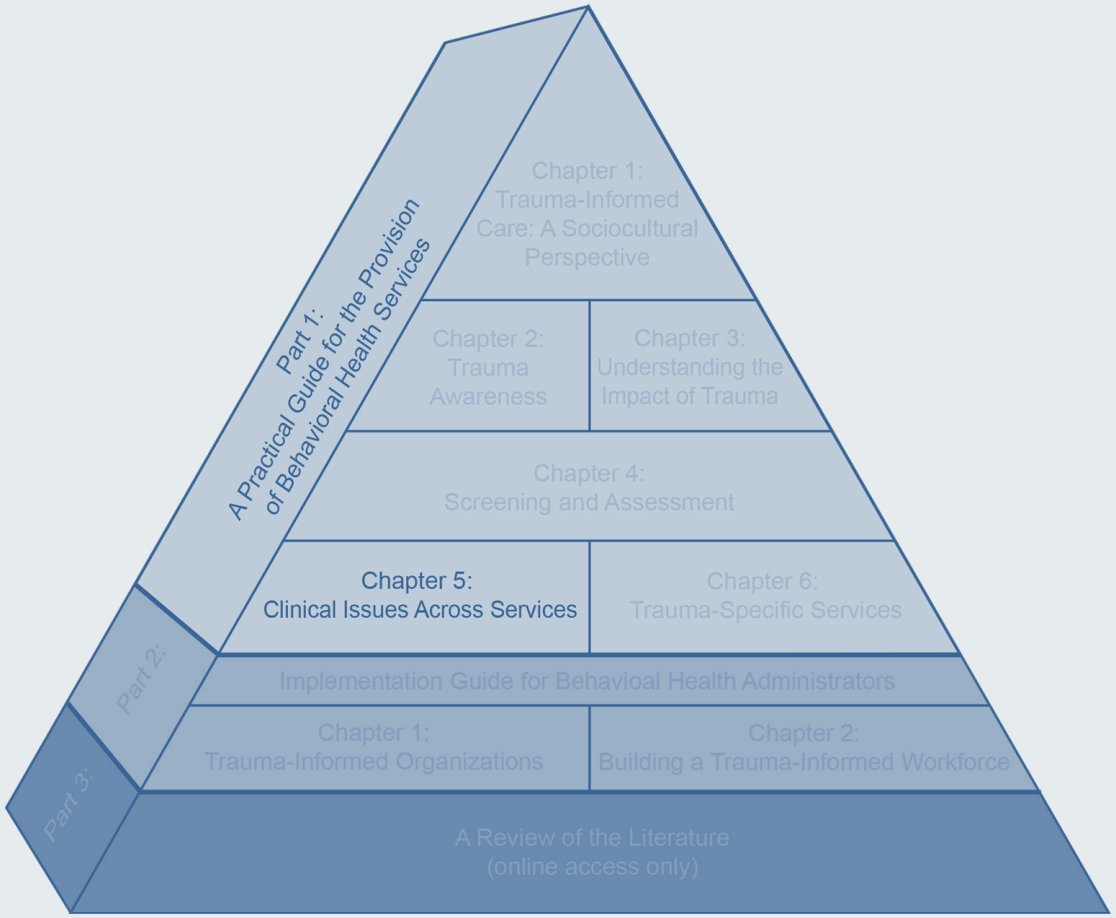
- Trauma Informed Prevention and Treatment Objectives
- Treatment Issues
- Making Referrals to Trauma Specific Services

Many clients in behavioral health treatment may have histories of trauma, so counselors should be prepared to help them address issues that arise from those histories. This chapter begins with a thorough discussion of trauma-informed prevention and treatment objectives along with practical counselor strategies. Specific treatment issues related to working with trauma survivors in a clinical setting are discussed as well, including client engagement, pacing and timing, traumatic memories, and culturally appropriate and gender-responsive services. The chapter ends with guidelines for making referrals to trauma-specific services.

Trauma-Informed Prevention and Treatment Objectives

Trauma-informed care (TIC) not only focuses on identifying individuals who have histories of trauma and traumatic stress symptoms; it also places considerable effort in creating an environment that helps them recognize the impact of trauma and determine the next course of action in a safe place. For some individuals, psychoeducation and development or reinforcement of coping strategies will be the most suitable and effective strategy, whereas others may request or warrant a referral for more trauma-specific interventions (see Part 1, Chapter 6, of this Treatment Improvement Protocol [TIP]). Although research is limited in the area of building resilience to prevent exacerbation of trauma symptoms and traumatic stress disorders, TIC also focuses on prevention strategies to avoid retraumatization in treatment, to promote resilience, and to prevent the development of trauma-related disorders. The following sections highlight key trauma-informed prevention and treatment objectives.

TIC Framework in Behavioral Health Services—Clinical Issues Across Services



Establish Safety

Beyond identifying trauma and trauma-related symptoms, the initial objective of TIC is establishing safety. Borrowing from Herman's (1992) conceptualization of trauma recovery, safety is the first goal of treatment. Establishing safety is especially crucial at the outset of trauma-informed treatment and often becomes a recurrent need when events or therapeutic changes raise safety issues, such as a change in treatment staffing due to vacations.

In the context of TIC, safety has a variety of meanings. Perhaps most importantly, the client has to have some degree of ***safety from trauma symptoms***. Recurring intrusive nightmares; painful memories that burst forth seemingly without provocation; feelings of sadness, anger, shame, or being overwhelmed; or not having control over sudden disconnections from others make moment-to-moment living feel unsafe. Clients might express feeling unsafe through statements such as, "I can't control my feelings," or, "I just space out and disconnect from the world for no reason," or, "I'm afraid to go to sleep because of the nightmares." The intense feelings that accompany trauma can also make clients feel unsafe. They may wake up in the morning feeling fine but become immobilized by depression as the day progresses. Clients with histories of trauma may experience panicky feelings of being trapped or abandoned. An early effort in trauma treatment is thus helping the client

Advice to Counselors: Strategies To Promote Safety

Strategy #1: Teach clients how and when to use grounding exercises when they feel unsafe or overwhelmed.

Strategy #2: Establish some specific routines in individual, group, or family therapy (e.g., have an opening ritual or routine when starting and ending a group session). A structured setting can provide a sense of safety and familiarity for clients with histories of trauma.

Strategy #3: Facilitate a discussion on safe and unsafe behaviors. Have clients identify, on paper, behaviors that promote safety and behaviors that feel unsafe for them today.

Strategy #4: Refer to *Seeking Safety: A Treatment Manual for PTSD and Substance Abuse* (Najavits, 2002a). This menu-based manual covers an array of treatment topics, including the core concept of safety. Each topic consists of several segments, including preparing for the session, session format, session content, handouts, and guidelines.

Strategy #5: Encourage the development of a safety plan. Depending on the type of trauma, personal safety can be an issue; work with the client to develop a plan that will help him or her feel in control and prepared for the unexpected. If the trauma was a natural or human-caused disaster, encourage thinking about how family and friends will respond and connect in the event of another crisis. If sexual abuse or rape was the event, encourage thinking about future steps that could help make the client safer. There is a delicate balance between preparation and the realization that one cannot prepare for all possible traumatic events. Nonetheless, an action plan can help the client regain a sense of environmental balance.

gain more control over trauma symptoms (and be able to label them as such) by learning more about the client and helping him or her develop new coping skills to handle symptoms when they arise and stay more grounded when flooded with feelings or memories.

A second aspect is ***safety in the environment***. Trauma reactions can be triggered by sudden loud sounds (e.g., television at high volume, raised voices), tension between people, certain smells, or casual touches that are perceived as invasions of physical boundaries. The vulnerability of exposing one's history in the treatment setting can manifest in the client as feeling physically vulnerable and unsafe in the treatment environment. Sudden or inadequately explained treatment transitions, such as moving from one level of treatment to another or changing counselors, can also evoke feelings of danger, abandonment, or instability. Early in treatment, trauma survivors generally value routine and predictability. The counselor should recognize these needs and respond appropriately by offering information in advance, providing nonshaming responses to a client's reactions to stimuli in his or her environment, and helping the client build a daily structure that feels safe.

A third aspect of safety is ***preventing a recurrence of trauma***. People with histories of trauma and substance abuse are more likely to engage in high-risk behaviors and to experience subsequent traumas. Early treatment should focus on helping clients stop using unsafe coping mechanisms, such as substance abuse, self-harm, and other self-destructive behaviors, and replacing them with safe and healthy coping strategies. Helping clients learn to protect themselves in reasonable ways is a positive goal of treatment.

Prevent Retraumatization

A key objective in TIC is to prevent retraumatization generated by intervention and treatment practices and policies. Unfortunately, treatment settings and clinicians can

Advice to Counselors: Strategies To Prevent Retraumatization

Strategy #1: Be sensitive to the needs of clients who have experienced trauma regarding behaviors in the treatment setting that might trigger memories of the trauma.

Strategy #2: Do not ignore clients' symptoms and demands when clients with trauma histories act out in response to triggered trauma memories; doing so may replicate the original traumatic experience.

Strategy #3: Be mindful that efforts to control and contain a client's behaviors in treatment can produce an abnormal reaction, particularly for trauma survivors for whom being trapped was part of the trauma experience.

Strategy #4: Listen for specific triggers that seem to be driving the client's reaction. An important step in recovery is helping the client identify these cues and thereby reach a better understanding of reactions and behaviors.

unintentionally create retraumatizing experiences (for a review of traumas that can occur when treating serious mental illness, see Frueh et al., 2005). For instance, compassionate inquiry into a client's history can seem similar to the interest shown by a perpetrator many years before. Direct confrontation by counselors about behaviors related to substance abuse can be seen, by someone who has been repeatedly physically assaulted, as provocation building up to assault. Counselor and program efforts to help clients constrain destructive behaviors can be interpreted as efforts to control and dominate the individual. Intrusive shaming or insensitive behavior demonstrated by another client in the program can threaten a trauma survivor whose boundaries have been disregarded in the past—thus making the experience of treatment feel dangerous rather than safe. Some staff and agency issues that can result in retraumatization include:

- Disrespectfully challenging reports of abuse or other traumatic events.
- Discounting a client's report of a traumatic event.
- Using isolation.
- Using physical restraints.
- Allowing the abusive behavior of one client toward another to continue without intervention.
- Labeling intense rage and other feelings as pathological.
- Minimizing, discrediting, or ignoring client responses.
- Disrupting counselor–client relationships by changing counselors' schedules and assignments.
- Obtaining urine specimens in a nonprivate and/or disrespectful manner.
- Having clients undress in the presence of others.
- Being insensitive to a client's physical or emotional boundaries.
- Inconsistently enforcing rules and allowing chaos in the treatment environment.
- Applying rigid agency policies or rules without an opportunity for clients to question them.
- Accepting agency dysfunction, including a lack of consistent, competent leadership.

Provide Psychoeducation

Trauma-informed education informs clients about traumatic stress and trauma-related symptoms and disorders as well as the related consequences of trauma exposure. It focuses on giving information to clients to help normalize presenting symptoms, to highlight potential short-term and long-term consequences of trauma and various paths to recovery, and to underscore the message that recovery is possible. Education frequently takes place prior to or immediately following an initial screening as a way to prepare clients

Advice to Counselors: Strategies To Implement Psychoeducation

Strategy #1: Remember that this may be the client's first experience with treatment. It's easy to use program or clinical jargon when you're around it every day, but most individuals who seek help are unfamiliar with clinical language, how the program works, and treatment objectives. Psychoeducation begins with understanding the client's expectations and reasons for seeking help, followed by educating the client and other family members about the program. Remember that this is all new for them.

Strategy #2: After obtaining acknowledgment of a trauma history, provide an overview of common symptoms and consequences of traumatic stress, regardless of whether the client affirms having trauma-related symptoms. It is equally important to educate the client on resilience factors associated with recovery from trauma (Wessely et al., 2008). A trauma-informed perspective provides a message that trauma reactions are normal responses to an abnormal situation.

Strategy #3: Develop a resource box that provides an array of printed or multimedia educational materials that address the program, specific symptoms and tools to combat trauma-related symptoms, treatment options and therapy approaches, advantages of peer support, and steps in developing specific coping strategies.

Strategy #4: Develop a rotating educational group that matches services and client schedules to complement treatment. Remember that education can play a pivotal role in enhancing motivation, in normalizing experiences, and in creating a sense of safety as individuals move further into treatment. For some survivors, education can be a powerful intervention or prevention strategy.

for hearing results or to place the screening and subsequent assessment findings in proper context. Education in and of itself, however, does not necessarily constitute a stand-alone treatment; rather, it can be conceptualized as a first step and/or component of more comprehensive treatment. Nonetheless, education may be a prevention and intervention strategy for individuals who have histories of trauma without current consequences or symptoms and/or those who have reported a resolution of past trauma(s). For example, some clients may have significantly delayed onset of traumatic stress symptoms. In this scenario, earlier education can enhance recognition of symptoms and ease the path of seeking treatment.

Some clients do not recognize the link between their current difficulties and their trauma histories; education can help them understand the possible origin of their difficulties. Psychoeducation presents trauma-related symptoms that follow a trauma as normal reactions. By identifying the source of clients' current difficulties and framing them as normal thoughts, emotions, and behaviors in response to trauma, many trauma survivors report a reduction in the intensity of the difficulties or symptoms. Often, a client will express relief that his or her reactions are normal. You may find the U.S. Department of Veterans Affairs (VA) National Center on PTSD's educational handouts on traumatic stress reactions useful.

Psychoeducation goes beyond the identification of traumatic stress symptoms and/or learning about the psychological, cognitive, and physical impacts of trauma. Numerous curricula are available that use psychoeducation as a first-line or complementary approach to trauma-specific therapies to enhance coping strategies in key areas, including safety, emotional regulation, help-seeking, avoidant behavior, and so forth. An example is S.E.L.F., a trauma-informed psychoeducational group curriculum with educational components related to trauma recovery in the following

Case Illustration: Linda

Linda served as an Army nurse in an evacuation hospital in Vietnam. She reported her postdeployment adjustment as difficult and isolating but denied any significant symptoms of traumatic stress throughout her life. Four years ago, Linda sought treatment for alcohol dependence; during the intake, she recalls denying trauma-related symptoms. "I distinctly remember the session," she recounts. "The counselor first took my history but then gave information on typical symptoms and reactions to trauma. I thought, 'Why do I need to hear this? I've survived the worst trauma in my life.' I didn't see the value of this information. Then 3 weeks ago, I began to have recurrent nightmares, the same graphic type I occasionally had when I was in Vietnam. Since then, I've been very anxious, reliving horrible scenes that I'd experienced as a nurse and postponing going to bed in fear of having the dreams again. I didn't understand it. I am 70 years old, and the war happened a long time ago. Then I began putting it together. Recently, the emergency helicopter flight pattern and approach to the area's hospital changed. I began hearing the helicopter periodically in my living room, and it reminded me of Vietnam. I knew then that I needed help; I couldn't stop shaking. I felt as if I was losing control of my emotions. I remembered how the intake counselor took the time to explain common symptoms of trauma. That's why I'm here today."

"This might not sound like a big deal, but for many people relationships have become all about getting: telling your problem story and then getting help with it. There is little, if any, emphasis placed on giving back. That's a big deal!!! Service relationships are like a one way street and both people's roles are clearly defined. But in 'regular' relationships in your community, people give and take all the time. No one is permanently on the taking side or the giving side. This exchange contributes to people feeling ok about being vulnerable (needing help) as well as confident about what they're offering. For many of us, being the role of 'getter' all the time has shaken our confidence, making us feel like we have nothing worthwhile to contribute. Peer support breaks that all down. It gets complicated somewhat when one of us is paid, but modeling this kind of relationship in which both of us learn, offers us the real practice we need to feel like a 'regular' community member as opposed to an 'integrated mental patient'."

(Mead, 2008, p.7)

areas: creating **S**afety, regulating **E**motions, addressing **L**oss, and redefining the **F**uture (Bloom, Foderaro, & Ryan, 2006).

Offer Trauma-Informed Peer Support

Living with a history of trauma can be isolating and consuming. The experience of trauma can reinforce beliefs about being different, alone, and marred by the experience. At times, behavioral health treatment for trauma-related effects can inadvertently reinforce these beliefs. Simply engaging in treatment or receiving specialized services (although warranted) can further strengthen clients' beliefs that there is something wrong with them. Formalized peer support can enhance the treatment experience. Treatment plus peer support can break the cycle of beliefs that reinforce traumatic stress (e.g., believing that one is permanently damaged; that nobody could understand; that no one should or could tolerate one's story). Peer support provides opportunities to form mutual relationships; to learn how one's history shapes perspectives of self, others, and the future; to move beyond trauma; and to mirror and learn alternate coping strategies. Peer support defines recovery as an

Advice to Counselors: Strategies To Enhance Peer Support

Strategy #1: Provide education on what peer support is and is not. Roles and expectations of peer support can be confusing, so providing clarification in the beginning can be quite useful. It is important to provide initial education about peer support and the value of using this resource.

Strategy #2: Use an established peer support curriculum to guide the peer support process. For example, *Intentional Peer Support: An Alternative Approach* (Mead, 2008) is a workbook that highlights four main tasks for peer support: building connections, understanding one's worldview, developing mutuality, and helping each other move toward set desires and goals. This curriculum provides extensive materials for peer support staff members as well as for the individuals seeking peer support.

interactive process, not as a definitive moment wherein someone fixes the "problem."

Normalize Symptoms

Symptoms of trauma can become serious barriers to recovery from substance use and mental disorders, including trauma-related ones. Counselors should be aware of how trauma symptoms can present and how to respond to them when they do appear. A significant step in addressing symptoms is normalizing them. People with traumatic stress symptoms need to know that their symptoms are not unique and that their reactions are common to their experience(s). Often, normalizing symptoms gives considerable relief to clients who may have thought that their symptoms signified some pervasive, untreatable mental disorder.

Advice to Counselors: Strategies To Normalize Symptoms

Strategy #1: Provide psychoeducation on the common symptoms of traumatic stress.

Strategy #2: Research the client's most prevalent symptoms specific to trauma, and then provide education to the client. For example, an individual who was conscious and trapped during or as a result of a traumatic event will more likely be hypervigilant about exits, plan escape routes even in safe environments, and have strong reactions to interpersonal and environmental situations that are perceived as having no options for avoidance or resolution (e.g., feeling stuck in a work environment where the boss is emotionally abusive).

Strategy #3: First, have the client list his or her symptoms. After each symptom, ask the client to list the negative and positive consequences of the symptom. Remember that symptoms serve a purpose, even if they may not appear to work well or work as well as they had in the past. Focus on how the symptoms have served the client in a positive way (see Case Illustration: Hector). This exercise can be difficult, because clients as well as counselors often don't focus on the value of symptoms.

Case Illustration: Hector

Hector was referred to a halfway house specializing in co-occurring disorders after inpatient treatment for methamphetamine dependence and posttraumatic stress disorder (PTSD). In the halfway house, he continued to feel overwhelmed with the frequency and intensity of flashbacks. He often became frustrated, expressing anger and a sense of hopelessness, followed by emotional withdrawal from others in the house. Normalization strategy #3 was introduced in the session. During this exercise, he began to identify many negative aspects of flashbacks. He felt that he couldn't control the occurrence of flashbacks even though he wanted to, and he realized that he often felt shame afterward. In the same exercise, he was also urged to identify positive aspects of flashbacks. Although this was difficult, he realized that flashbacks were clues about content that he needed to address in trauma-specific treatment. "I realized that a flashback, for me, was a billboard advertising what I needed to focus on in therapy."

Identify and Manage Trauma-Related Triggers

Many clients who have traumatic stress are caught off guard with intrusive thoughts, feelings, sensations, or environmental cues of the trauma. This experience can be quite disconcerting, but often, the individual does not draw an immediate connection between the internal or external trigger and his or her reactions. At other times, the trigger is so potent that the individual is unable to discern the present trigger from the past trauma and begins to respond as if the trauma is reoccurring.

Key steps in identifying triggers are to reflect back on the situation, surroundings, or sensations prior to the strong reaction. By doing so, you and your client may be able to determine the connections among these cues, the past trauma(s), and the client's reaction. Once the cue is identified, discuss the ways in which it is connected to past trauma. For some cues, there will be an obvious and immediate connection (e.g., having someone say "I love you" in a significant relationship as an adult and connecting this to an abuser who said the same thing prior to a sexual assault). Other

Advice to Counselors: Strategies To Identify and Manage Trauma-Related Triggers

Strategy #1: Use the Sorting the Past From the Present technique for cognitive realignment (Blackburn, 1995) to help separate the current situation from the past trauma. Identify one trigger at a time, and then discuss the following questions with the client:

- When and where did you begin to notice a reaction?
- How does this situation remind you of your past history or past trauma?
- How are your reactions to the current situation similar to your past reactions to the trauma(s)?
- How was this current situation different from the past trauma?
- How did you react differently to the current situation than to the previous trauma?
- How are you different today (e.g., factors such as age, abilities, strength, level of support)?
- What choices can you make that are different from the past and that can help you address the current situation (trigger)?

After reviewing this exercise several times in counseling, put the questions on a card for the client to carry and use outside of treatment. Clients with substance use disorders can benefit from using the same questions (slightly reworded) to address relapse triggers.

Strategy #2: After the individual identifies the trigger and draws connections between the trigger and past trauma, work with him or her to establish responses and coping strategies to deal with triggers as they occur. Initially, the planned responses will not immediately occur after a trigger, but with practice, the planned responses will move closer to the time of the trigger. Some strategies include an acronym that reflects coping strategies (Exhibit 1.5-1), positive self-talk generated by cognitive–behavioral covert modeling exercises (rehearsal of coping statements), breathing retraining, and use of support systems (e.g., calling someone).

Strategy #3: Self-monitoring is any strategy that asks a client to observe and record the number of times something happens, to note the intensity of specific experiences, or to describe a specific behavioral, emotional, or cognitive phenomenon each time it occurs. For individuals with histories of trauma, triggers and flashbacks can be quite frightening, intense, and powerful. Even if the client has had just one or two triggers or flashbacks, he or she may perceive flashbacks as happening constantly. Often, it takes time to recover from these experiences. Using self-monitoring and asking the client to record each time a trigger occurs, along with describing the trigger and its intensity level (using a scale from 1–10), clients and counselors will gain an understanding of the type of triggers present and the level of distress that each one produces. Moreover, the client may begin to see that the triggers don't actually happen all the time, even though they may seem to occur frequently.

Exhibit 1.5-1: The OBSERVATIONS Coping Strategy

- Take a moment to just ***Observe*** what is happening. Pay attention to your body, your senses, and your environment.
- Focus on your ***Breathing***. Allow your feelings and sensations to wash over you. Breathe.
- Name the ***Situation*** that initiated your response. In what way is this situation familiar to your past? How is it different?
- Remember that ***Emotions*** come and go. They may be intense now, but later they will be less so. Name your feelings.
- ***Recognize*** that this situation does not define you or your future. It does not dictate how things will be, nor is it a sign of things to come. Even if it is familiar, it is only one event.
- ***Validate*** your experience. State, at least internally, what you are feeling, thinking, and experiencing.
- ***Ask*** for help. You don't have to do this alone. Seek support. Other people care for you. Let them!
- ***This*** too shall pass. Remember: There are times that are good and times that are not so good. This hard time will pass.
- ***I*** can handle this. Name your strengths. Your strengths have helped you survive.
- Keep an ***Open*** mind. Look for and try out new solutions.
- ***Name*** strategies that have worked before. Choose one and apply it to this situation.
- Remember you have survived. You are a ***Survivor***!

cues will not be as obvious. With practice, the client can begin to track back through what occurred immediately before an emotional, physical, or behavioral reaction and then examine how that experience reminds him or her of the past.

Draw Connections

Mental health and substance abuse treatment providers have historically underestimated the effects of trauma on their clients for many reasons. Some held a belief that substance

Advice to Counselors: Strategies To Help Clients Draw Connections

Strategy #1: Writing about trauma can help clients gain awareness of their thoughts, feelings, and current experiences and can even improve physical health outcomes (Pennebaker, Kiecolt-Glaser, & Glaser, 1988; Smyth, Hockemeyer, & Tulloch, 2008). Although this tool may help some people draw connections between current experiences and past traumas, it should be used with caution; others may find that it brings up too much intense trauma material (especially among vulnerable trauma survivors with co-occuring substance abuse, psychosis, and current domestic violence). Journal writing is safest when you ask clients to write about present-day specific targets, such as logging their use of coping strategies or identifying strengths with examples. Writing about trauma can also be done via key questions or a workbook that provides questions centered upon trauma experiences and recovery.

Strategy #2: Encourage clients to explore the links among traumatic experiences and mental and substance use disorders. Recognition that a mental disorder or symptom developed after the trauma occurred can provide relief and hope that the symptoms may abate if the trauma is addressed. Ways to help clients connect substance use with trauma histories include (Najavits, 2002b; Najavits, Weiss, & Shaw, 1997):

- Identifying how substances have helped "solve" trauma or PTSD symptoms in the short term (e.g., drinking to get to sleep).
- Teaching clients how trauma, mental, and substance use disorders commonly co-occur so that they will not feel so alone and ashamed about these issues.
- Discussing how substance abuse has impeded healing from trauma (e.g., by blocking feelings and memories).
- Helping clients recognize trauma symptoms as triggers for relapse to substance use and mental distress.
- Working on new coping skills to recover from trauma and substance abuse at the same time.
- Recognizing how both trauma and substance abuse often occur in families through multiple generations.

abuse should be addressed before attending to any co-occurring conditions. Others did not have the knowledge and training to evaluate trauma issues or were uncomfortable or reluctant to discuss these sensitive issues with clients (Ouimette & Brown, 2003). Similarly, in other behavioral health settings, clinicians sometimes address trauma-related symptoms but do not have experience or training in the treatment of substance abuse.

So too, people who have histories of trauma will often be unaware of the connection between the traumas they've experienced and their traumatic stress reactions. They may notice depression, anger, or anxiety, or they may describe themselves as "going crazy" without being able to pinpoint a specific experience that produced the trauma symptoms. Even if clients recognize the events that precipitated their trauma symptoms, they may not understand how others with similar experiences can have different reactions. Thus, a treatment goal for trauma survivors is helping them gain awareness of the connections between their histories of trauma and subsequent consequences. Seeing the connections can improve clients' ability to work on recovery in an integrated fashion.

Teach Balance

You and your clients need to walk a thin line when addressing trauma. Too much work focused on highly distressing content can turn a desensitization process into a session whereby the client dissociates, shuts down, or becomes emotionally overwhelmed. On the other hand, too little focus by the client or counselor can easily reinforce avoidance and confirm the client's internal belief that it is too dangerous to deal with the aftermath of the trauma. Several trauma-specific theories offer guidelines on acceptable levels of distress associated with the traumatic content that the therapy addresses. For example, some traditional desensitization processes start at a very low level of subjective distress, gradually working up through a hierarchy of trauma memories and experiences until those experiences produce minimal reactions when paired with some coping strategy, such as relaxation training. Other desensitization processes start at a higher level of intensity to provide more rapid extinction of traumatic associations and to decrease the risk of avoidance—a behavior that reinforces traumatic stress.

> The Subjective Units of Distress Scale (SUDS) uses a 0 10 rating scale, with 0 representing content that causes no or minimal distress and 10 representing content that is exceptionally distressing and overwhelming.
>
> (Wolpe & Abrams, 1991)

Working with trauma is a delicate balancing act between the development and/or use of coping strategies and the need to process the traumatic experiences. Individuals will choose different paths to recovery; it's a myth that every traumatic experience needs to be expressed and every story told. For some individuals, the use of coping skills, support, and spirituality are enough to recover. Regardless of theoretical beliefs, counselors must teach

Advice to Counselors: Strategy To Teach Balance

Strategy #1: Teach and use the SUDS in counseling. This scale can be useful from the outset as a barometer for the client and counselor to measure the level of distress during and outside of sessions. It provides a common language for the client and counselor, and it can also be used to guide the intensity of sessions. SUDS can tangibly show a client's progress in managing experiences. Without a scale, it is more difficult to grasp that a distressing symptom or circumstance is becoming less and less severe without some repeated measure.

coping strategies as soon as possible. Retraumatization is a risk whenever clients are exposed to their traumatic histories without sufficient tools, supports, and safety to manage emotional, behavioral, and physical reactions.

Build Resilience

Survivors are resilient! Often, counselors and clients who are trauma survivors focus on the negative consequences of trauma while failing to recognize the perseverance and attributes that have helped them survive. It is natural to focus on what's not working rather than what has worked. To promote growth after trauma and establish a strengths-based approach, focus on building on clients' resilience. Current resilience theories claim that building or reinforcing resilience prevents further development of trauma-related symptoms and disorders. The following *Advice to Counselors* box is adapted from the American Psychological Association's 2003 statement on resilience.

Advice to Counselors: Strategies To Build Resilience

Strategy #1: Help clients reestablish personal and social connections. Access community and cultural resources; reconnect the person to healing resources such as mutual-help groups and spiritual supports in the community.

Strategy #2: Encourage the client to take action. Recovery requires activity. Actively taking care of one's own needs early in treatment can evolve into assisting others later on, such as by volunteering at a community organization or helping military families.

Strategy #3: Encourage stability and predictability in the daily routine. Traumatic stress reactions can be debilitating. Keeping a daily routine of sleep, eating, work, errands, household chores, and hobbies can help the client see that life continues. Like exercise, daily living skills take time to take hold as the client learns to live through symptoms.

Strategy #4: Nurture a positive view of personal, social, and cultural resources. Help clients recall ways in which they successfully handled hardships in the past, such as the loss of a loved one, a divorce, or a major illness. Revisit how those crises were addressed.

Strategy #5: Help clients gain perspective. All things pass, even when facing very painful events. Foster a long-term outlook; help clients consider stress and suffering in a spiritual context.

Strategy #6: Help maintain a hopeful outlook. An optimistic outlook enables visions of good things in life and can keep people going even in the hardest times. There are positive aspects to everyone's life. Taking time to identify and appreciate these enhances the client's outlook and helps him or her persevere.

Strategy #7: Encourage participation in peer support, 12-Step, and other mutual-help programs.

Address Sleep Disturbances

Sleep disturbances are one of the most enduring symptoms of traumatic stress and are a particularly common outcome of severe and prolonged trauma. Sleep disturbances increase one's risk of developing traumatic stress; they significantly alter physical and psychological processes, thus causing problems in daytime functioning (e.g., fatigue, cognitive difficulty, excessive daytime sleepiness). People with sleep disturbances have worse general health and quality of life. The cardiovascular and immune systems, among others, may be affected as well. Sleep disturbances can worsen traumatic stress symptoms and interfere with healing by impeding the brain's ability to process and consolidate traumatic memories (Caldwell & Redeker, 2005).

Sleep disturbances vary among trauma survivors and can include decreased ability to stay asleep, frequent awakenings, early morning unintentional awakening, trouble falling asleep, poor quality of sleep, and disordered

Advice to Counselors: Strategies To Conduct a Sleep Intervention

Strategy #1: Conduct a sleep history assessment focused first on the client's perception of his or her sleep patterns. Assess whether there is difficulty initiating or staying asleep, a history of frequent or early morning awakenings, physically restless sleep, sleepwalking, bedtime aversion, and/or disruptive physical and emotional states upon awakening (e.g., confusion, agitation, feeling unrested). Also determine total sleep time, pattern of nightmares, and use of medications, alcohol, and/or caffeine (see Moul, Hall, Pikonis, & Buysse, 2004, for a review of self-report measures).

Strategy #2: Use a sleep hygiene measure to determine the presence of habits that typically interfere with sleep (e.g., falling asleep while watching television). The National Sleep Foundation Web site (http://www.sleepfoundation.org) provides simple steps for promoting good sleep hygiene.

Strategy #3: Provide education on sleep hygiene practices. Introduce clients to the idea that practicing good sleep hygiene is one step toward gaining control over their sleep disturbances.

Strategy #4: Reassess sleep patterns and history during the course of treatment. Sleep patterns often reflect current client status. For example, clients who are struggling are more likely to have disturbed sleep patterns; sleep disturbances significantly influence clients' mental health status.

Strategy #5: Use interventions such as nightmare rehearsals to target recurrent nightmares. There are numerous examples of imagery-based nightmare rehearsals. Clients may be instructed to rehearse repetitively the recurrent nightmare a few hours before bedtime. In this instruction, the client either rehearses the entire nightmare with someone or visualizes the nightmare several times to gain control over the material and become desensitized to the content. Other strategies involve imagining a change in the outcome of the nightmare (e.g., asking the client to picture getting assistance from others, even though his or her original nightmare reflects dealing with the experience alone).

breathing during sleep (Caldwell & Redeker, 2005). Most traumatic stress literature focuses on nightmares, insomnia, and frequent awakenings. These disturbances are connected to two main symptoms of traumatic stress: hyperarousal (which causes difficulty in falling and remaining asleep) and reexperiencing the trauma (e.g., through recurrent nightmares). Other sleep disturbances trauma survivors report include sleep avoidance or resistance to sleep (see Case Illustration: Selena), panic awakenings, and restless or unwanted body movements (e.g., hitting your spouse unintentionally in bed while asleep; Habukawa, Maeda, & Uchimura, 2010).

Case Illustration: Selena

Selena initially sought treatment for ongoing depression (dysthymia). During treatment, she identified being sexually assaulted while attending a party at college. At times, she blames herself for the incident because she didn't insist that she and her girlfriends stay together during the party and on the way back to their dorm afterward. Selena reported that she only had two drinks that night: "I could never manage more than two drinks before I wanted to just sleep, so I never drank much socially." She was assaulted by someone she barely knew but considered a "big brother" in the brother fraternity of her sorority. "I needed a ride home. During that ride, it happened," she said. For years thereafter, Selena reported mild bouts of depression that began lasting longer and increasing in number. She also reported nightmares and chronic difficulty in falling asleep. In therapy, she noted avoiding her bed until she's exhausted, saying, "I don't like going to sleep; I know what's going to happen." She describes fear of sleeping due to nightmares. "It's become a habit at night. I get very involved in playing computer games to lose track of time. I also leave the television on through the night because then I don't sleep as soundly and have fewer nightmares. But I'm always exhausted."

Build Trust

Some traumatic experiences result from trusting others (e.g., interpersonal trauma). In other cases, trust was violated during or after the traumatic experience, as in cases when help was late to arrive on the scene of a natural disaster. This lack of trust can leave individuals alienated, socially isolated, and terrified of developing relationships. Some feel that the trauma makes them different from others who haven't had similar experiences. Sometimes, a client's trust issues arise from a lack of trust in self—for instance, a lack of trust in one's perceptions, judgment, or memories. People who have also experienced severe mental or substance use disorders may have difficulty trusting others because, during the course of their illness, they felt alienated or discriminated against for behaviors and emotions generated by or associated with the disorders.

Some client groups (e.g., gay, lesbian, and bisexual clients; people from diverse cultures; those with serious mental illness) evidence significant mistrust because their trust has been repeatedly violated in the past. Traumatic experiences then compound this mistrust. Mistrust can come from various sources, is usually unstated, and, if left unaddressed, can impede treatment. For example, some clients leave treatment early or do not engage in potentially beneficial treatments. Others avoid issues of trust and commitment by leaving treatment when those issues begin to arise.

Establishing a safe, trusting relationship is paramount to healing—yet this takes time in the counseling process. Counselors and other behavioral health professionals need to be consistent throughout the course of treatment; this includes maintaining consistency in the parameters set for availability, attendance, and level of empathy. Trust is built on behavior shown inside and outside of treatment; you should immediately address any behavior that may even slightly injure the relationship (e.g., being 5 minutes late for an appointment, not responding to a phone message in a timely manner, being distracted in a session).

Advice to Counselors: Strategies To Build Trust

Strategy #1: Clients can benefit from a support or counseling group composed of other trauma survivors. By comparing themselves with others in the group, they can be inspired by those who are further along in the recovery process and helpful to those who are not faring as well as they are. These groups also motivate clients to trust others by experiencing acceptance and empathy.

Strategy #2: Use conflicts that arise in the program as opportunities. Successful negotiation of a conflict between the client and the counselor is a major milestone (van der Kolk, McFarlane, & Van der Hart, 1996). Helping clients understand that conflicts are healthy and inevitable in relationships (and that they can be resolved while retaining the dignity and respect of all involved) is a key lesson for those whose relationship conflicts have been beset by violence, bitterness, and humiliation.

Strategy #3: Prepare clients for staff changes, vacations, or other separations. Some clients may feel rejected or abandoned if a counselor goes on vacation or is absent due to illness, especially during a period of vulnerability or intense work. A phone call to the client during an unexpected absence can reinforce the importance of the relationship and the client's trust. You can use these opportunities in treatment to help the client understand that separation is part of relationships; work with the client to view separation in a new light.

Strategy #4: Honor the client–counselor relationship, and treat it as significant and mutual. You can support the development of trust by establishing clear boundaries, being dependable, working with the client to define explicit treatment goals and methods, and demonstrating respect for the client's difficulty in trusting you and the therapeutic setting.

Support Empowerment

Strong feelings of powerlessness can arise in trauma survivors seeking to regain some control of their lives. Whether a person has survived a single trauma or chronic trauma, the survivor can feel crushed by the weight of powerlessness. Mental illness and substance abuse, too, can be disempowering; clients may feel that they've lost control over their daily lives, over a behavior such as drug use, or over powerful emotions such as fear, sadness, or anger. Empowerment means helping clients feel greater power and control over their lives, as long as such control is within safe and healthy bounds. A key facet of empowerment is to help clients build on their strengths. Empowerment is more than helping clients discover what they "should" do; it is also helping them take the steps they feel ready to take.

Case Illustration: Abby

Abby, a 30-year-old, nervous-looking woman, is brought by her parents to a community mental health clinic near their home in rural Indiana. During the intake process, the counselor learns that Abby is an Army Reservist who returned from 12 months of combat duty 3 years ago. The war experience changed her in many ways. Her deployment pulled her away from veterinary school as well as the strong emotional support of family, friends, and fellow classmates. She got along with her unit in Iraq and had no disciplinary problems. While there, she served as a truck driver in the Sunni Triangle. Her convoy was attacked often by small arms fire and was once struck by an improvised explosive device. Although Abby sustained only minor injuries, two of her close friends were killed. With each successive convoy, her level of fear and foreboding grew, but she continued performing as a driver.

Since returning to the United States, she has mostly stayed at home and has not returned to school, although she is helping out on the farm with various chores. Abby has isolated herself from both family members and lifelong friends, saying she doesn't think others can understand what she went through and that she prefers being alone. She reports to her parents and the counselor that she is vaguely afraid to be in cars and feels most comfortable in her room or working alone, doing routine tasks, at home. Abby also says that she now understands how fragile life can be.

She has admitted to her parents that she drinks alcohol on a regular basis, something she did not do before her deployment, and that on occasion, she has experienced blackouts. Abby feels she needs a drink before talking with strangers or joining in groups of friends or family. She confided to her father that she isolates herself so that she can drink without having to explain her drinking to others.

The counselor recognizes Abby's general sense of lacking internal control and feeling powerless over what will happen to her in the future. He adopts a motivational interviewing style to establish rapport and a working alliance with Abby. During sessions, the counselor asks Abby to elaborate on her strengths; he reinforces strengths that involve taking action in life, positive self-statements, and comments that deal with future plans. He also introduces Abby to an Iraq War veteran who came home quite discouraged about putting his life together but has done well getting reintegrated. The counselor urges Abby go to the local VA center so that she can meet and bond with other recently returned veterans. He also encourages Abby to attend Alcoholics Anonymous meetings, emphasizing that she won't be pressured to talk or interact with others more than she chooses to.

The counselor continues to see Abby every week and begins using cognitive–behavioral techniques to help her examine some of her irrational fears about not being able to direct her life. He asks Abby to keep a daily diary of activities related to achieving her goals of getting back to school and reestablishing a social network. In each session, Abby reviews her progress using the diary as a memory aid, and the counselor reinforces these positive efforts. After 4 months of treatment, Abby reenrolls in college and is feeling optimistic about her ability to achieve her career plans.

Advice to Counselors: Strategies To Support Empowerment

Strategy #1: Offer clients information about treatment; help them make informed choices. Placing appropriate control for treatment choices in the hands of clients improves their chances of success.

Strategy #2: Give clients the chance to collaborate in the development of their initial treatment plan, in the evaluation of treatment progress, and in treatment plan updates. Incorporate client input into treatment case consultations and subsequent feedback.

Strategy #3: Encourage clients to assume an active role in how the delivery of treatment services occurs. An essential avenue is regularly scheduled and structured client feedback on program and clinical services (e.g., feedback surveys). Some of the most effective initiatives to reinforce client empowerment are the development of peer support services and the involvement of former clients in parts of the organizational structure, such as the advisory board or other board roles.

Strategy #4: Establish a sense of self-efficacy in clients; their belief in their own ability to carry out a specific task successfully—is key. You can help clients come to believe in the possibility of change and in the hope of alternative approaches to achieving change. Supporting clients in accepting increasing responsibility for choosing and carrying out personal change can facilitate their return to empowerment (Miller & Rollnick, 2002).

Acknowledge Grief and Bereavement

The experience of loss is common after traumas, whether the loss is psychological (e.g., no longer feeling safe) or physical (e.g., death of a loved one, destruction of community, physical impairment). Loss can cause public displays of grief, but it is more often a private experience. Grieving processes can be emotionally overwhelming and can lead to increased substance use and other impulsive behaviors as a way to manage grief and other feelings associated with the loss. Even for people who experienced trauma years prior to treatment, grief is still a common psychological issue. Delayed or absent reactions of acute grief can cause exhaustion, lack of strength, gastrointestinal symptoms, and avoidance of emotions.

Risk factors of chronic bereavement (grief lasting more than 6 months) can include:

- Perceived lack of social support.
- Concurrent crises or stressors (including reactivation of PTSD symptoms).
- High levels of ambivalence about the loss.
- An extremely dependent relationship prior to the loss.
- Loved one's death resulting from disaster: unexpected, untimely, sudden, and shocking (New South Wales Institute of Psychiatry & Centre for Mental Health, 2000).

Advice to Counselors: Strategies To Acknowledge and Address Grief

Strategy #1: Help the client grieve by being present, by normalizing the grief, and by assessing social supports and resources.

Strategy #2: When the client begins to discuss or express grief, focus on having him or her voice the losses he or she experienced due to trauma. Remember to clarify that losses include internal experiences, not just physical losses.

Strategy #3: For a client who has difficulty connecting feelings to experiences, assign a feelings journal in which he or she can log and name each feeling he or she experiences, rate the feeling's intensity numerically, and describe the situation during which the feeling occurred. The client may choose to share the journal in an individual or group session.

Strategy #4: Note that some clients benefit from developing a ritual or ceremony to honor their losses, whereas others prefer offering time or resources to an association that represents the loss.

Monitor and Facilitate Stability

Stability refers to an ongoing psychological and physical state whereby one is not overwhelmed by disruptive internal or external stimuli (Briere & Scott, 2006b). It's common for individuals to have an increase in symptoms, distress, or impairment when dealing with the impact of their trauma or talking about specific aspects of their trauma. There is a thin line that the client and counselor need to negotiate and then walk when addressing trauma. Too much work focused on highly distressing content can turn a desensitization process into a session that causes the client to dissociate, shut down, or become emotionally overwhelmed. On the other hand, too little focus by the client or counselor can easily reinforce avoidance and confirm the client's internal belief that it is too dangerous to deal with the aftermath of the trauma.

Advice to Counselors: Strategies To Monitor and Facilitate Stability

Strategy #1: If destabilization occurs during the intake process or treatment, stop exploring the material that triggered the reaction, offer emotional support, and demonstrate ways for the client to self-soothe.

Strategy #2: Seek consultation from supervisors and/or colleagues (e.g., to explore whether a new case conceptualization is needed at this point).

Strategy #3: Refer the client for a further assessment to determine whether a referral is necessary for trauma-specific therapy or a higher level of care, or use of multiple levels of care (e.g., intensive outpatient care, partial hospitalization, residential treatment).

Strategy #4: Focus on coping skills and encourage participation in a peer support program.

Strategy #5: When a client becomes agitated and distressed, carefully explore with the client what is causing this state. When such feelings arise because of current threats in the client's life or environment, it is dangerous to halt or soothe away responses that act as warning signals (Pope & Brown, 1996). When a client is in a situation involving domestic violence, lives in a dangerous neighborhood, or has run out of money for food, he or she requires direct and concrete assistance rather than simple emotional support.

Managing Destabilization

When a client becomes destabilized during a session, you can respond in the following manner: "Let's slow down and focus on helping you be and feel safe. What can we do to allow you to take care of yourself at this moment? Then, when you feel ready, we can decide what to focus on next."

Clients should have some psychological stability to engage in trauma-related work. An important distinction can be made between a normative increase in symptoms (e.g., the typical up-and-down course of traumatic stress reactions or substance abuse) and destabilization (dangerous, significant decrease in functioning). Signs of destabilization include (Green Cross Academy of Traumatology, 2007; Najavits, 2002b):

- Increased substance use or other unsafe behavior (e.g., self-harm).
- Increased psychiatric symptoms (e.g., depression, agitation, anxiety, withdrawal, anger).
- Increased symptoms of trauma (e.g., severe dissociation).
- Helplessness or hopelessness expressed verbally or behaviorally.
- Difficulty following through on commitments (e.g., commitment to attend treatment sessions).
- Isolation.
- Notable decline in daily activities (e.g., self-care, hygiene, care of children or pets, going to work).

Treatment Issues

The treatment environment itself can significantly affect how clients experience traumatic stress and how the client responds to treatment. Some specific issues related to working with trauma survivors in a clinical setting are discussed in the following sections.

Client Engagement

A lack of engagement in treatment is the client's inability to make progress toward treatment goals, deal with important topics in treatment, or complete treatment. Clients who have histories of trauma will express ambivalence about treatment similarly to others, except that clients who have traumatic stress can feel more "stuck" and perceive themselves as having fewer options. In addition, clients may be avoiding engagement in treatment because it is one step closer to addressing their trauma. You should attend to the client's motivation to change, implement strategies that address ambivalence toward treatment, and use approaches that help clients overcome avoidant behavior.

Advice to Counselors: Strategies To Foster Engagement

Strategy #1: According to Mahalik (2001), the standard method of handling clients' lack of engagement is exploring it with them, clarifying the situation through discussion with them, reinterpreting (e.g., from "can't" to "won't" to "willing"), and working through the situation toward progress.

Strategy #2: To improve engagement into treatment, try motivational interviewing and enhancement techniques. For additional information on such techniques, see TIP 35, *Enhancing Motivation for Change in Substance Abuse Treatment* (Center for Substance Abuse Treatment [CSAT], 1999b).

Pacing and Timing

Although your training or role as a counselor may prohibit you from providing trauma-specific services, you must still be prepared for the fact that clients are not as focused on when or where it is most appropriate to address trauma—they want relief, and most lay and professional people have been taught that the only path to recovery is disclosure. Some clients are reluctant to talk about anything associated with their histories of trauma. Other clients immediately want to delve into the memories of their trauma without developing a safe environment. The need to gain any relief for the traumatic stress pushes some individuals to disclose too quickly, without having the necessary support and coping skills to manage the intensity of their memories. Clients who enter treatment and immediately disclose past trauma often don't return because the initial encounter was so intense or because they experienced considerable emotional distress for several days afterward and/or in anticipation of the next session.

Proper pacing of sessions, disclosure, and intensity is paramount. Clients who immediately disclose without proper safety nets are actually retraumatizing themselves by reliving the experience without adequate support—often placing themselves in the same circumstances that occurred during the actual traumas they experienced. Although you should not adamantly direct clients not to talk about what happened, it is important to discuss with the clients, even if you have to interrupt them empathically and respectfully, the potential consequences of disclosing too soon and too fast. Ask whether they have done this before, and then inquire about the outcome. Reinforce with clients that trauma heals when there are support, trust, and skills in place to manage the memories of the traumatic experiences. Ideally, disclosure begins after these elements are secured, but realistically, it is a

Advice to Counselors: Strategies To Establish Appropriate Pacing and Timing

Strategy #1: Frequently discuss and request feedback from clients about pacing and timing. Moving too quickly into discussion of the trauma can increase the risk of dissociation, overactivation of memories, and feeling overwhelmed.

Strategy #2: Use the SUDS as a barometer of intensity to determine the level of work.

Strategy #3: Slowly increase the speed of interventions and continually adjust the intensity of interventions; move in and out of very intense work, or use strategies that decrease the intensity when necessary. One approach that typically decreases the intensity of traumatic memories is to ask the individual to imagine that he or she is seeing the scene through a window or on a television screen. This helps decrease intensity and the risk of dissociation. It provides an opportunity for the client to view the trauma from a different perspective and a strategy to use outside of treatment to shift from reliving the trauma to observing it from a neutral position.

Strategy #4: Monitor clients to ensure that treatment does not overwhelm their internal capacities, retraumatize them, or result in excessive avoidance; make sure therapy occurs in the "therapeutic window" (Briere & Scott, 2006b).

Strategy #5: Be alert to signs that discussions of trauma, including screening, assessment, and intake processes, are going too fast. Mild to moderate signs are:
- Missing counseling appointments after discussions of important material.
- Periods of silence.
- Dissociation.
- Misunderstanding what are usually understandable concepts.
- Redirecting the focus of the discussion when certain issues arise.
